Strolling with my venerable and esteemed colleague, Prof. Stephen Elliott, one afternoon, through a field on the banks of the river Ashley, we came upon a negro basking in the sun, the most ancient-looking personage I have ever seen. Our attempts, with his aid, to calculate his age, were of course conjectural; but we were satisfied that he was far above one hundred. Bald, toothless, nearly blind, bent almost horizontally, and scarcely capable of locomotion, he was absolutely alone in the world, living by permission upon a piece, from which the generation to which his master and fellow-servant belonged, had long since disappeared. He expressed many an earnest wish for death, and declared, emphatically, that he "was afraid God Almighty had forgotten him."

(To be continued.)

## ONWARD!

**FRENCH SANITARY CONGRESS.**—A Sanitary Congress sat last winter at Paris, with the view of deliberating on the establishment of uniform legislation for all the countries on the shores of the Mediterranean, on the subject of quarantine regulations. As a result of the consultations, M. David was sent to Vienna to negotiate with the Austrian government. The French proposals have been favourably received, and it is probable that some general international laws may be agreed on as to this subject of common importance.

**THE THAMES TUNNEL.**—A project is on foot to complete the approaches to the Thames Tunnel on both sides of the river. A very large traffic is constantly going on between the Surrey side of the Thames and Wapping, Limehouse, Poplar, &c., all of which has now to be conveyed an unnecessary circuit of nearly six miles. London-bridge would be relieved of a great portion of this traffic by the opening of such a communication, which would also give to Southwark and its outlying districts a short and easy access to and from the East and West India Dock Railway terminus, and thence to the whole network of railways north of the Thames.

**DECREASE OF INTemperance IN EDINBURGH.**—We are glad to observe that the Lord Provost of Edinburgh reports a change for the better in the intemperance laid to the charge of the Scottish capital. His lordship states that he had called a meeting of the justices of the peace, and also of the spirit-dealers, to whom he had represented the national scandal produced by intemperance. As a result of this appeal, it appears that whereas on Sunday April 25th, there were 200 drinking-shops open within the city, the Sunday after the meeting there were only 91, the next 77, and the next 66, in a population of about 60,000 within the city boundaries.

**A CARBONIC-ACID GAS ENGINE.**—Years since we pointed attention to a piece of common marble as a hopeful source of useful power in place of steam, where fuel was scarce, but sulphuric or other acid abundant. In marble—a carbonate of lime,—or in carbonate of soda, we have an abundance of "fixed air," as carbonic-acid gas was once called,—air fixed, but easily set free,—a sort of bottled wind,—wherever cylinders might be filled, and machinery worked. The idea has been lately realized, we know not with what success, by a Mr. J. F. Lockstein, who has patented certain apparatus for obtaining power by the use of carbonic-acid gas, generated, as he prefers, from carbonate of soda, in solution, by means of sulphuric acid, but also from other carbonates, such as that of lime, and by means of other acids besides the sulphuric. The products are in many cases so valuable as to greatly economise the working power. The operation of the acids on the apparatus is of course guarded against, in this case, by protection with platinum or gold. Enamelled iron, such as acid conserves are made in for household use, would be cheaper than either gold or platinum.—*Athenæum*

**OBSERVATORY AT GREENWICH.**—By far the most important work connected with the Observatory during the past year, has been the effecting a galvanic connection with London and the Continent. To this most important object the Astronomer Royal devoted much time and attention. It appears that four insulated wires are now laid in the ground, at depths varying from three to five feet, at a line commencing at the ground-floor of the north dome (now called the galvanic room), across the front court, along the centres of the great avenues of the park, and across Blackheath, to the Lewisham station; from which point two wires are carried, sometimes on poles and sometimes in grooved boards, to the London-bridge terminus, where the connections will be made either with the long Dover wires communicating with the Continent, or with the wires which extend to the Central Telegraph Station. In connection with this work is the transmission of accurate Greenwich mean time, by galvanic signals, to London and elsewhere. For this purpose a clock has been constructed, possessing the two properties of exhibiting accurate time and completing galvanic circuits at certain determinate instants of that time. Mr. Shephard undertook the construction of such a clock. The former condition is obtained by a mechanical action on the pendulum, and the latter by breaking the galvanic circuit at three places.

**ELECTRICITY APPLIED TO THE CAPTURE OF WHALES.**—The *New Bedford* (U.S.) *Mercury* gives an account of some interesting experiments, illustrating the effect of electricity to facilitate the capture of the whale. The most prominent features of this new method are thus described:—"Every whale, at the moment of being struck by the harpoon, is rendered powerless, as by a stroke of lightning, and, therefore, his subsequent escape or loss, except by sinking, is wholly impracticable; and the process of lancing and securing him is entirely unattended with danger. The arduous labour involved in a long chase in the capture of a whale is superseded, and, consequently, the inconvenience and danger of the boats losing sight of or becoming separated from the ship is avoided. One or two boats only would be required to be lowered at a time, and therefore a less number both of officers and men than heretofore employed, would be ample for the purposes of the voyage. The electricity is conveyed to the body of the whale from an electro-galvanic battery contained in the boat, by means of a metallic wire attached to the harpoon, and so arranged as to reconduct the electric current from the whale through the sea to the machine. The machine itself is simple and compact in construction, enclosed in a strong chest weighing about 360 lbs., and occupying a space in the boat of about 3½ feet long, by 2 feet in width, and the same in height. It is capable of throwing into the body of the whale eight tremendous strokes of electricity in a second, or 360 strokes in a minute, paralyzing in an instant the muscles of the whale, and depriving it of all power of motion, if not actually of life."

## POETICAL QUOTATIONS.

## BIGOTRY

The slaves of custom and established usage,  
With pack-horse constancy we keep the road,  
Crooked or straight, through quagmire or thorny bolls,  
True to the jingling of our leader's bells.—*Kepler's Traveller*

To follow foolish precedents, and walk  
With both our eyes, is easier than to think.—*Shelley*

My soul had drawn  
Light from the Book whose words are graved in light;  
There at the well-head had I found the dawn,  
And day, and noon, of freedom:—but too bright  
It shines on that which man to man hath given,  
And call'd the truth—the very truth from heaven,  
And therefore seeks he, in his brother's sight  
To cast the mote,—and therefore strives to blind  
With his strong chain to earth, what is not  
Earth's—the Mind.—*Mrs. Hemans*

## BIRDS

But like the birds, give it nature's happy commuters,  
That haunt in woods, in meads, and flow'ry gardens,  
Rife the sweets and taste the choicest fruits,  
Yet scorn to ask the lordly owner's leave.—*Rose's Last Penitent*

Up springs the lark,  
Shrill voice d, and loud, the messenger of morn,  
 Ere yet the shadows fly, he mounts his light  
Amid the dawning clouds, and from their haunts  
Call up the tuneful nations.—*Thomson's Seasons*

Every copse  
Deep tangled, tree irregular, and bush  
Binding with dewy moisture o'er the heads  
Of the coy choristers that lodge within,  
Are prodigal of harmony. The thrush  
And wood lark, and the kind contending throng  
Superior heard, run through the sweetest length  
Of notes when listening Philomela deigns  
To let them go, and purposes in thought  
Late, to make her night excel the day.—*Idid*

Ten thousand warblers cheer the day, and one  
The live-long night—nor the alone whose notes  
Nice finger d art must emulate in vain,  
But cawing rooks, and kites that swim sublime  
In still repeated circles, screaming loud,  
The jay, the pie, and even the boddy owl  
That hails the rising moon, have chains for none.—*Couper's Lark*

I found sung the lark the awaken'd mind  
Beheld him twinkling in the morning light,  
And wish'd for wings and liberty like his.—*Southey's Thalaba*

A light broke in upon my soul—  
It was the croon of a bird,  
It ceased—and then it came again,  
The sweetest song ear ever heard.—*Byron*

See the enfranchised bird, who wildly springs  
With a keen sparkle in his glowing eye,  
And a strong effort in his quivering wings  
Up to the blue vault of the happy sky.—*Mrs. Norton*

I am the swan, whose majesty prevailing  
O'er breezy water, on Locarno's lake,  
Bears him on, while proudly sailing  
He leaves behind a moon-illumined wake,  
Behold! the mantling spirit of reserve  
Fashions his neck into a goodly curve;  
An arch thrown back between luxuriant wings  
Of white-garniture, like fir-tree boughs,  
To which, on some unruffled morning clings  
A flaky weight of winter's purest snow.—*Wardsworth*

There from a neighbouring thicket the mockers-bird, wildest of singers,  
Swung aloft on a willow spray that hung o'er the water,  
Shook from his little throat such floods of delicious music,  
That the whole air and the woods and the waves seem'd to listen.  
—*Longfellow's Evangeline*

This great solitude is quick with life;  
And birds that scarce have learn'd the steps of man  
Are here.—*Bryant*

# CHARADE

Without my first not man nor beast could live

It was my second who my first did give

A third man assumes my second name,

And to my first makes his restless claim

Oh! luckless they who feel the harsh control,

When collar letterless proves my grasping,  
w/o

## PASTIME

### Optical Deception

Picture a jar of a good size & ch as that is for j l i s s in place on the bottom n at the side furthest from you a single coin next it, but towards the center a shilling move to a little distance so that the eye may be directed to the jar but not sufficient to observe the coins. Let water now be poured gently which is it is in the jar will cause both the piece to appear without approaching nearer to the jar, or moving it towards you both the pieces will become visible. This phenomenon is owing to the refraction of the rays of light on entering a denser medium for while the vessel is empty, the rays proceed in a straight line but by the density of the water when full they become refracted or bent towards the coins, and consequently they become visible. It is from the same cause that ponds &c (where the bottoms can be seen) appear shallower than they actually are, and the reason why a waterman's oar appears crooked when in the water.

### REBUSES

A woven web of little fame,  
Four letters will compose my name  
Cut off my head and you will see  
A thing not much unlike to thee  
But if you take my tail instead  
You'll have a knock upon the head;  
Transpose my headless trunk, and you  
Will place before your wondering view  
A fragrant flower of purple hue  
Transpose my whole, and then appears  
What every man in England wears  
Above his eyes and nose and ears

I am myself, and no one else, 'tis true,  
Yet when you name me I shall then be you  
Invite a friend to dine with you—and see!  
Even while you ask him you are changed to me.

## TRANSFIGURED PLAYING CARDS.

THE TWO OF DIAMONDS—A FENCING FOIL.

### CAPITAL CITIES IN EUROPE ENIGMATICALLY EXPRESSED

- 1 To contend and a woman's name reversed
- 2 Frantic, and to redeem
- 3 A lock, and to stop.
- 4 Equivalence, and a verb
- 5 A verb, two-thirds of barren, and a mother
- 6 Hostility, and a cutting instrument
- 7 Behold, a consonant, and a Spanish title
- 8 One half of to wander and a personal pronoun
- 9 A vowel, an adverb, and a consonant
- 10 Firm, a preposition, and two thirds of a nation
- 11 A godly person, a man's name, and a corporated town
- 12 One-half of a publisher, a consonant, and a corporated town.
- 13 A follower of Christ, and a vowel.
- 14 A verb, a consonant, and to stop
- 15 A stem three fourths of a cave, and a consonant.
- 16 A verb, a consonant and two-thirds of denial.
- 17 Two thirds of rough, to give for a price minus a letter, and a consonant.
- 18 A consonant a verb, and three-fourths of captivity
- 19 A consonant, not closed, a name for an old woman, a vowel, and a consonant
- 20 A short sleep, and smaller minus a letter

## ANSWERS TO THE PASTIME OF LAST EVENING

Page 573

### PICTORIAL CHARADE—Saw dust

ENIGMAS—1 The Letter I 2 ALPHABET 3 The Letter h 4 BLACKBURN  
CONUNDRUMS—1 Because it makes the end bend. 2 Because he cat out the wood which is under his feet (sandwiches under his feet) 3 Because the young are seen to gambol (gambol) and many of the old ones are black legs. 4 Who is a diving bell. 5 He is a Jew (Jewell) 6 Isar (S. Sir) 7 Iron (I run). 8 It is a brig of Highs (also) 9 The emperor issues his manifestos, while the emperor manifests too without his horse (issues) 10 When long experience has made him sage 11 Because it has lost its heart 12 Because he has overcome the TITAN!

### PROBLEM—117 feet, 9 inches

Solution  
10 square chains = 1 square acre  
1 chain in length = 22 yards  
1 square chain = 484 square yards  
1 square acre = 4840 square yards  
43560 square feet

Now the expression for the area of a circle

$$A = \pi R^2$$

$$43560 = \pi R^2$$

$$43560 = 3.14159 R^2$$

$$R^2 = \frac{43560}{3.14159}$$

$$R^2 = 13865.94$$

$$R = \sqrt{13865.94}$$

$$R = 117.75$$

$$R = \text{length of cord required}$$

TRANSPOSITION—Euros, 1000, 1000, 1000

## OUR CORNER CUPBOARD!

**PHONOGRAPHY.**—A lady-boy out in Indiana spells Andrew Jackson thus: *Ar-Jaxn*.

**HIGHLY OF THE MIND.**—Calling a man standing in the street, opprobrious nick-names from a third storey window.

**DR. SOUTH** began a sermon on *Sabbath*. "The wages of sin is death," as follows:—"The wages, indeed, that a man can't live by."

**A GENTLEMAN** who was relating an accident he had met with from a fall was asked by a surgeon, if it was near the *vertebra* that he had been hurt? "No, sir," was the reply, *Not near the Observatory.*"

**QUIRISUS ENGLISH.**—"Our busses," said a conductor in our hearing, "runs a quarter arter, art arter, quarter to, and at!" In English this means "every quarter of an hour."

**A VERY tall gentleman** after eating some trifles in a pastrycook's shop, went away, saying, "I've been long enough here." An Irish porter, hearing him, said, "By my sowl, you're long enough anywhere."

**AN Irish officer**, a thousand miles at sea in the Atlantic, observing three fine vessels right ahead of his own, called out to some friends who were pacing the quarter-deck, "My boys, what a landscape!"

**A G. VILLENIA** seeing the town-crier of Bristol one market-day standing unemployed, asked him the reason. "O," replied he, "I can't cry to-day, my wife is dead."

**LADY S.**—*She* was complaining one morning at breakfast, that the tea was very bad, and said she was quite sure the water did not boil; "Nay," said she, "the urn didn't even hiss when it was brought in." "No," said Sir W. E., "it was *fact-urn*."

**STRANGE, Moore, and Wright** were notorious punsters, were, on a certain occasion dining together when Moore observed, "There is but one knave among us, and that's *Strange*." "Oh no," said Wright, "there is one *Moore*." "Ay," said Strange, "that's *Wright*."

**JEFFRIES** examining an old fellow with a long beard, told him he supposed he had a conscience quite as long as that natural ornament of his visage. "Does your lordship measure consciences by beards?" said the man; "that is strange, seeing you are yourself shaven."

"I REALLY can't sing, believe me, sir," was the reply of a young lady to the repeated requests of an empty cup. "I am rather inclined to believe, madam," rejoined he, with a smirk, "that you are fishing for compliments." "No, sir," exclaimed the lady, "I never fish in so shallow a stream."

**AN outside passenger** by a coach had his hat blown over a bridge, and carried away by the stream. "Is it not very singular," said he to a gentleman who was seated beside him, "that my hat took that direction?" "Not at all," replied the latter; "it is natural that a *beaver* should take to the water."

**MR. FOX** having applied to a shopkeeper in Westminster for his vote and interest, the man produced a halter, with which he said he was ready to oblige him. The orator immediately replied, "I return you thanks, my friend for your very polite offer; but I should be sorry to deprive you of so valuable a family-piece."

**A GENTLEMAN** having called a ticket porter to carry a message, asked his name; he said it was Russel. "And pray," said the gentleman, jocularly, "is your coat of arms the same as the Duke of Bedford's?" "As to our arms, your honour," says the porter, "I believe they are much alike; but there is a great difference between our coats."

**DR. BEEBYWAX** in his "Essay on Woman," remarks with some truth, that "beauties generally die old maids." "They set such a value on themselves," he says, "that they don't find a purchaser until the market is closed. Out of a dozen beauties, who have come out within the last eighteen years, eleven are still single. They spend their days in working green dogs on yellow wool—while their evenings are devoted to low spirits and French novels."

In England, if two are conversing together,  
The subject begins with the state of the weather;  
And ever the same, both with young and with old,  
'Tis either too hot, or either too cold;  
'Tis either too wet, or either too dry;  
The glass is too low, or else 'tis too high;  
But if all had their wishes once jumbled together,  
Sure *Patience* itself could not live in such weather.

"How do I look Pompey?" said a young dandy to his servant, as he finished dressing. "Elegant, massa; you look as bold as a lion." "Bold as a lion, Pompey. How do you know? You never saw a lion." "Oh, yes, massa, I seed one down to Massa Jenks, in his stable." "Down to Jenks, Pompey? Why you great fool, Jenks hasn't got a lion. That's a jake!" "Can't help it, massa, you look just like him!"

**ROBERT BURNS**, being informed that a little girl, in the company where he was, had been rudely designated "howlet face" by a gentleman present, on account of a certain disagreeable peculiarity in her visage, which reminded him of an owl; he immediately wrote this verse, and handed it to the person concerned:—

"And did he ca' ye Howlet-face,  
The vile unseemly spectre?  
Your face has been a looking-glass,  
In which did see his picture."

## OUR MEMORANDUM BOOK!

**Flat-top.**—The negro philosophers of Congo affirm, that the world was made by hundreds of angels, excepting their own country, which the Supreme Being constructed himself, that it might be superior to all. And he took great pains with the inhabitants, and made them very black and beautiful; and when he had finished the first man, he was well pleased with him, and smothered him over the face, and beat his nose, and the nose of all his descendants, became flat.—*Washington*.

## A GOOD SONG.

'Tis well to walk with a cheerful heart,  
Wherever our lot may fall;  
With a friendly glance and a kind hand,  
And a gentle word for all;  
Since life is a thorny and difficult path,  
Where toil is the portion of man,  
We all should endeavour, while passing along,  
To make it as smooth as we can.

## TO-DAY AND TO-MORROW.

To-day, man lives in pleasure, wealth, and pride;  
To-morrow, poor—of life itself denied.  
To-day, lays plans for many years to come;  
To-morrow, sinks into the silent tomb.  
To-day, his food is dressed in dainty forms;  
To-morrow, is himself a feast for worms.  
To-day, he's clad in gaudy, rich array;  
To-morrow, shrouded for a bed of clay.  
To-day, enjoys his balls, built to his mind;  
To-morrow, in a coffin is confined.  
To-day, he floats on honour's lofty wave;  
To-morrow, leaves his title for a grave.  
To-day, his beauteous visage we extol;  
To-morrow, loathsome in the sight of all.  
To-day, he has delusive dreams of heaven;  
To-morrow, cries too late to be forgiven.  
To-day, he lives in hopes as light as air;  
To-morrow, dies in anguish and despair.

## APHORISMS FROM THE CHINESE, RESPECTING MEDICINE.

1. He who doth not love tea, covets wine.
2. Honour the dead, as you would honour them if they were alive.
3. If the excesses of debauchery make great havoc of the body, the vexations of the body make still greater.
4. In China are more tutors than scholars, and more physicians than patients.
5. Not one in ten thousand dies by poison, yet the bare mention strikes with horror. What multitudes by intemperance! yet, how little is it feared.
6. See that moth, which flies incessantly round the candle—it is consumed! Man of pleasure, behold thine own image.
7. Temperance is the best physic.
8. The life of man is a fever, in which very cold fits are followed by others equally hot.
9. The man who hath never been sick, doth not know the value of health.
10. The man who is pointed at with the finger, never dies of a disease.
11. The medicine that doth not cause the patient to wink (sleep), never cures him.
12. When a family rises early in the morning, conclude the house to be well governed.

**MEALS OF CREATION.**—The fossils (remains of organized bodies) are the medals of creation. We collect with care, and decipher with diligence and skill all the medals struck by the hand of man. We arrange them in drawers, analogous to the disposition and arrangement of the strata of the earth. We may place the oldest medals in the lowest drawer, perhaps those of Egypt, Babylon, Assyria, Persia; then, in another drawer above the first, the medals of Palestine, ancient Greece, and then of Rome; then of the middle ages of Europe, and then of more modern times; ending at last with those of our own era and country; all arranged in successive drawers in an ascending series. In the same manner are arranged the medals of the creation; the successive strata, beginning at the bottom and ending at the top, correspond to the drawers in the supposed arrangement of artificial medals, and they are equally true expositors of the action of living beings that have flourished in successive ages. The natural medals, however, are more authentic expositors of truth than those stamped by the hand of man. None of the former were dictated by pride or vanity; none by the mandates of a cruel and wicked dynasty; but all those in the strata were struck off by the hand of the infinite Creator, like the metal law revealed to Moses, they contain the thoughts of God recorded on imperishable tables of stone. They are not like human records, liable to error, perversion, suppression, or mutilation; but stand as another Bible, equally entitled to credit, and representing the proper foundation of the written book, in the demonstration of the truths of natural religion, upon which, as its only basis, revealed religion stands.

### Editor's Note-Book.

#### DOMESTIC HINTS, No. 12.—

**Manner of taking Exercise.**—Three principal points in the manner of taking exercise are necessary to be attended to, viz. 1. The kind of exercise.

2. The proper time for exercise.

3. The duration of it. With respect to the kinds of exercise, the various species of it may be divided into active and passive. Among the first, which admit of being considerably diversified, may be enumerated, walking, running, leaping, swimming, riding, fencing, the military exercise, different sorts of athletic games, &c. Among the latter, or passive kinds of exercise, may be comprised riding in a carriage, sailing, friction, swinging, &c. The first, or active exercises, are more beneficial to youth, to the middle-aged, to the robust in general, and particularly to the corpulent and the plethoric. The second, or passive kinds of exercise, on the contrary, are better calculated for children, old, dry, and emaciated persons of a delicate and debilitated constitution; and particularly to the asthmatic and consumptive. With regard to the time at which exercise is most proper, it, in fact, depends on such a variety of contingent circumstances, that it does not admit of being regulated by any general rules, and must therefore be selected from the observations made on the effects of air, food, drink, &c. With respect to the duration of exercise, there are other particulars, relative to a greater or less degree of fatigue attending the different species, and utility of it in certain states of the mind and body, which must determine this consideration as well as the preceding. That exercise is to be preferred which, with a view to brace and strengthen the body, we are most accustomed to, as any unusual one may be attended with a contrary effect. Exercise should always be begun and finished gradually, never abruptly. Exercise in the open air has many advantages, or that used within doors. To continue exercise until a profuse perspiration or a great degree of weariness takes place, is far from being wholesome. In the forenoon, when the stomach is not too much distended, muscular motion is both agreeable and healthful; it strengthens digestion, and heats the body less than with a full stomach; and a good appetite after it, is a proof that it has not been carried to excess. But, at the same time, it should be understood, that it is not advisable to take violent exercise immediately before a meal, as digestion might thereby be retarded. Neither should we sit down to a substantial dinner or supper immediately on returning from a fatiguing walk, at a time when the blood is heated, and the body in a state of perspiration from previous exertion, as the worst consequences may arise, especially where cooling dishes, salad, or a glass of cold drink is begun with. Exercise is always hurtful after meals, from its impeding digestion, by propelling those fluids too much towards the surface of the body, which are designed for the solution of the food in the stomach.

**BRAND CHAIRS.**—H. JACKSON.—They were first introduced in London in 1634, when Sir Sanders Duncomb obtained the sole privilege to let, use, and hire a number of them for 16 years. The first one was seen in England (says Hume) in the reign of James I., and was used by the Duke of Buckingham, to the great indignation of the people, who exclaimed, that he employed his fellow creatures to do the service of brutes. In 1661 they were taxed. Gray says:

"Let not the chairman with assuming stride,  
Press near the wall and rudely thrust thy side;  
The laws have set him bounds: his servile feet  
Should ne'er encroach where poets defend the street."

An Irishman once got into one of these vehicles to go to a wedding, and finding the bottom out, was hurried through the mud and dirt; when he got down and asked how he liked it, he said, "Why faith I might as well have walked but for the name of the thing."

**TELESCOPES.**—W. S. J.—It is said that the use of telescopes was first discovered by one Hanssen, a spectacle-maker at Middleburgh, in Holland, whose children playing in the shop casually placed a concave and a convex glass in such a position, that by looking through them at the weathercock, it appeared much larger and nearer than usual, and by their exclamations of surprise excited the attention of their father, who soon obtained great credit for this valuable discovery.

**TO PAINT THE GLASSES OF MAGIC LANTERNS.**—S. JORDAN.—Draw on a paper the subject you desire to paint. Lay it on a table or any flat surface, and place the glass over it; then draw the outlines with a very fine pencil in varnish mixed with black paint, and when dry fill up the other parts in their proper colours. Transparent colours must be used for this purpose, such as Carmine, lake, Prussian blue, verdigris, sulphate of iron, tincture of Brazil wood, gamboge, &c., and these must be tempered with a strong white varnish, to prevent their peeling off. Then shade them with black or with bistre, mixed with the same varnish.

**THE PATH TO DISTINCTION.**—The gold fever has decidedly reached us from the Antipodes, and the earnest thoughts of millions are now directed to the vast El Dorado, now displaying its treasures to the world. Many are bewildered by the glowing descriptions made from thence by successful emigrants, and the prospect of a speedy realization of wealth, overcomes all consideration of the hardships and perils which beset the adventurer in his quest. Others, less ambitious of riches, prefer wending their steps quietly and serenely through the vale of life in their own country, labouring earnestly and contentedly, remembering what Shakespeare says of wealth and pampered ease:—

"What is man,  
If the chief good and market of his time  
Be but to sleep and feed? A beast!—no more.  
Sure He that made us with such large discourse,  
Looking before and after, gave us not  
That capability and God-like reason,  
To rust in us unused!"

Enterprise and talent will command success everywhere, and a common observer can hardly fail to perceive that, at present, the most certain road to distinction, is the discovery or creation of a new want in mankind, and of the means to gratify it. Many and various are the ways by which a man may lift himself into notice and the following may perhaps, suggest

AN EASY STEP TO ADVANCEMENT.

**ORIGIN OF THE WORD YANKEE.**—G. THOMPSON.—Yankee is the Indian corruption of the word English—Yongloose, Yangleese, Yanklees, and finally Yankee. It got in general use as a term of reproach, thus. About the year 1713, one Jonathan Hastings, a farmer, at Cambridge, in New England, used the word Yankee as a cant word to express excellence, as a Yankee (good) horse, Yankee elder, &c. The students at the College having frequent intercourse with Jonathan, and hearing him employ the word on all occasions, when he intended to express his approbation, applied it sarcastically, and called him Yankee Jonathan. It soon became a cant phrase among the collegians to designate a simple, weak, and awkward person; from College it spread over the country, till, from its currency in New England, it was at length taken up and applied to the New Englanders generally, as a term of reproach. It was in consequence of this that the song called Yankee Doodle was composed.

**DEFINITION OF A GENTLEMAN.**—S. B.—Moderation, decorum, and neatness, distinguish the gentleman; he is at all times affable, diffident, and studious to please. Intelligent and polite, his behaviour is pleasant and graceful. When he enters the dwelling of an inferior, he endeavours to hide, if possible, the difference between their rank in life; ever willing to assist those around him, he is neither unkind, haughty, nor overbearing. In the mansions of the rich, the correctness of his mind induces him to bend to etiquette, but not to stoop to adulation; correct principle cautions him to avoid the gaming-table, inebriety, or any other folly that could occasion him self-reproach. Pleased with the pleasures of reflection, he rejects to see the gaieties of society, and is fastidious upon no point of little import.—Appear only to be a gentleman, and the shadow will bring upon you contempt; be a gentleman, and its honours will remain even after you are dead.

**COMMUNICATIONS RECEIVED.**—J. JOHNSON (the patronage of the Royal Navy is lodged solely with the Lords Commissioners of the Admiralty, and principally with the first lord). EXPERIMENT (casualtyhouse is a peculiar

substance, obtained by exposing crucibles to a sudden raide of about 1000 Fahr., when it is converted into vapour, which is a most refractory material, and condensed into a transparent volatile liquid). A DOMESTIC (Minding one's business is usually called domesticity, on account of belonging to the household). DOMESTIC (Helen's Bishopric is a street). H. (oil-cloth is a paper to be wetted, if it can possibly be avoided, but should merely be rubbed with a flannel, and polished with a brush of moderate hardness). H. CONWALL (picture-frames may be cleaned by means of soap on a soft brush, to be used very gently, then to be washed and wiped off, and the frame to be dried by placing it near the fire, after which the gilding must receive its polish by a brush dry and very soft, dipped in powder of bread crumbs). JOHNSON (the fundamental principles of chess are very simple, and consist:—1. In discovering the tactical or weak point of the adversary's position. 2. In a rapid concentration and skilful direction of the mass of your forces upon that tactical point). B. SHAWON (insects may be removed from plants by a judicious use of the following mixture:—take a pound of American pearls, or of any other alkali, to which add four pounds of slaked quick-lime, dissolving the whole in five gallons of water). NAVIS (the first double-decked ship built in England was of 1,000 tons burthen, by order of Henry VIII., in 1509. It was called the Great Harry, and cost £14,000). J. WALTON (to preserve the colour of dry sea-weeds, use the following receipt:—In two thirds of a small phial of turpentine, dissolve two or three small lumps of gum mastic. This solution should be carefully brushed over the sea-weeds). A VASANTARIAN (our correspondent may be very sincere in his peculiar opinions, but we are not in favour of extreme notions. Moderation should govern our desires and pleasures, and enable us to appreciate as we ought, the bounties of Nature:—

"Man's rich with little, were his judgment true:  
Nature is frugal, and her wants are few:—  
Those few wants answered, brings sincere delights:  
But fools create themselves new appetites.")

LEWA (the most essential requisite in preserving the hair in perfect order). L. (it was Dr. Franklin who suggested that a person might swim from Dover to Calais by the aid of a kite. The American philosopher added, however, that the packet boat is still preferable). DEXTERA (a good German paste for birds may be made thus:—take the crumb of well baked stale white bread, and having soaked it in clean water for half an hour, squeeze out the moisture, and add to the bread two-thirds of the same quantity of well-sifted barley meal; then pour boiling milk over the mixture, and stir it well together. W. W. (proctors are the attorneys in ecclesiastical courts). JEVANS (the ordinary qualifications for a clerk are, a quick plain handwriting, thorough knowledge of arithmetic, and quickness in applying it; but an acquaintance with the modern European languages, especially French and German, will give a man great advantages). H. DWIGHT (water may be restored from a tainted state by filtering it through charcoal). CHASLEY (the manuscript is declined). NEXO (the line alluded to is by Pope, and occurs in the following verse from the "Essay on Man 2":—

"Pleasures are ever in our hands or eyes,  
And when in act they cease, in prospect rise:—  
All spread their charms, but charm not all alike;  
On different senses different objects strike:  
Hence different passions more or less inflame,  
As strong or weak, the organs of the frame;  
And hence one master passion in the breast,  
Like Aaron's serpent, swallows all the rest.")

STUDENT (those who intend embracing the medical profession, should become acquainted with Latin and Greek, and be able to construe Cicero, Sallust, Tacitus, Virgil, and Horace, before leaving school. The Apothecary Company will often reject a candidate notwithstanding he may have a tolerable knowledge of physics and anatomy, if he is deficient in classical knowledge). CURIO (papers are declined). CYRICK (ventriloquism is derived from two Latin words *cyren*, the belly, and *loquor*, to speak. This art depends on the organs of speech being very perfect, but requires no organisation different from that which is commonly found in man).

"At a sign from the lieutenant, the waggon moved off, followed by Catharina and Vernon in silence."

## CAROLINE AND CATHARINA.

(Continued from page 580.)

"A country which has four invading armies within its bosom," said Bonaro sternly, "is quite sufficiently cursed, without receiving maledictions from its enemies."

"You are right," said Hugh frankly, "forgive my impatience. I fear we must dismount. Come, there is no time to lose!"

They all sprang to the ground.

"Hush!" said Catharina, holding up her finger. "We are pursued!"

A moment afterwards they could hear the hasty footsteps of many horses, beating the ground but a few hundred yards in their rear, and rapidly approaching them.

"Hurry! hurry!" Hugh exclaimed. "Let us get up the bank! They cannot take that path with their mustangs!"

A heavy scramble followed, and hurrying feet were audible behind. A volley of muskets was fired, and the horsemen rushed forward almost against the precipice. A ball struck Hugh in the shoulder, his hold gave way, and he rolled helplessly down to the bottom, at the very feet of his enemies. Catharina saw him fall and sprang towards him; but her father seized her by the arm and hurried her away up the mountain. Allen did not perceive that his friend was not with them, for several moments; and when he rushed back to see him, two stout lancers were holding him upon his horse, and the party

were galloping down the ravine—their speed apparently accelerated by the sound of two guns, which came reverberating from the other side of the ridge.

"Es un Americano!" asked the captain of the lancers. "Bind him and come on quick! We shall be too late!"

Away rode the party, and in three minutes they turned a point and were hid from view. Hugh was a prisoner in the hands of Minon's cavalry.

Allen turned and rejoined Bonaro and his daughter. To the frantic question of the latter for Hugh, he shook his head, and the three hurried away up the mountain. As they neared the top of the ridge they began to hear musketry; and when they stood among the pines on the summit, the setting sun was pouring a torrent of light on the battle-field of Buena Vista.

## CHAPTER XXV.

"Our bugles sang truce, for the night-sound had lowered,  
And the sentinel stars set their watch in the sky."—CAMPELLE.

"If we are marked to die, we are enough  
To do our country loss, and if to live,  
The fewer men, the greater share of honour."—SHAKESPEARE.

"My plots fall short, like darts which rash hands throw."—SIR R. HOWARD.

It was the evening of Monday, the twenty-second day of February, 1847, with one exception, the greatest of our national anniversaries! General Taylor had fallen back on the day before, from Agua Nueva, and was now

posted, with five thousand men, at the *rancho* of Buena Vista, about five miles from Saltillo, the pass of Angastura being held by one regiment (the first Illinois foot), one mile further south, on the San Luis road. In front of this position, at the distance of about two miles, lay General Santa Anna, with twenty thousand men—an army which he had been four months organizing and equipping, and with which he confidently expected completely to overthrow the scanty force before him.

From the point at which our friends reached the summit of the ridge, the mountain descended rapidly, and was cut up by the action of rains into ravines and ridges, which gradually widened as they approached the plateau. When the declivity ended the plain commenced; but entirely across this plain several of the ravines continued, until they discharged themselves into the valley, where the broken plateau suddenly terminated in rough precipitous spurs. Along the points of these spurs, which extended into the valley like the fingers of a hand, ran the San Luis road, and beyond that was the valley proper—cut up into a honeycomb, by deep and crooked *arroyos* or ditches, often forty feet deep and wholly impassable. At the foot of the declivity, the ground was about three hundred feet above the level of the valley, but by a regular slope it reached a level at the road of not more than half that elevation. Upon this plateau, between two deep ravines, Taylor's force was drawn up; its right at the Pass of Angastura on the road covered by one regiment thrown across the *arroyos*, and its left at the highest point of the plain, immediately under the declivity of the ridge. Santa Anna was at Encantada; his infantry massed in dark bodies upon some wheat fields, in a dip in the ground, out of the range of the American shot; and his cavalry flanked them upon both right and left; while a battery of sixteen pounders was erected on a height directly in front of the left.

Immediately upon reaching the *rancho* of Encantada, Santa Anna had perceived that Taylor's line was not long enough to cover the height on his left; and at once appreciating the vital importance of the point, he had sent Ampudia's light brigade to occupy it. If this height could be gained and held, he would have a plunging shot upon the American line, which he would rake from left to right. A battalion of rifles was sent to resist the movement, which promised to turn the left, and here the battle was opened. The musketry our friends had heard, was the conflict between these forces—each gradually climbing the mountain in the effort to out-flank the other, and slowly approaching each other, as the ravine which divided them grew narrower. Had they continued thus, they would, at last, have met face to face at the head of the ravine, near the top of the ridge; but night was now approaching, and the fire began to diminish. A shell was thrown from O'Brien's battery among the masses of infantry, and a few shots were fired from a battery of heavy guns established on his right by Santa Anna; but it was evident that no battle was to be fought till the morning. Both parties were fatigued, and needed rest to prepare them for the conflict of the following day. The Mexicans had marched near thirty miles since morning; and the Americans, having marched on the day before from Agua Nueva, had been up the most of the night, creating such defenses as the shortness of the time allowed. The position might have been made impregnable—two thousand men could have made it so in five days—but there were no five days to spare, and there was no other advantage to trust to than the natural roughness of the ground. The neglect to occupy the heights upon the left, had almost neutralized even this; and stubborn courage was the best ground for hope.

"The arbitrement" bade fair "to be a bloody one;" and, as if by mutual consent, it was adjourned to the morning. When our friends gazed down upon the plain, each army was withdrawing to its lines—the shots on the mountain were gradually becoming fewer, and, as the sun went down, and the shades of evening began to fall, a stillness as peaceful as ever settled upon the beautiful valley. This was broken by rich, deep strains of music, which came floating, mellowed by the distance, to the very top of the mountain. Both armies were drawn up for evening parade; and many a heart beat proudly in response to the solemn strains, which the morrow saw cold and still, and many a foot trod lightly to the stirring tune, and bore its owner to the field, but brought him not away! The parade was over, the piquets were posted, the watchfires built, and the mantle of night enshrouded the hosts.

Our friends gazed in silence upon the striking spectacle before them, until the view became indistinct; daylight went slowly out, and the fires began to assume a brighter hue. Catharina had seated herself upon a rock, and was singing in low, mournful tones, while her eyes wandered uninterested, by the gay banners, and regardless of the flashing arms. Her father was leaning with folded arms against a pine, and looking regretfully upon the pomp beneath; while Vernon had thrown himself, weary and exhausted upon the ground, though he still watched eagerly the movements of the masses below.

"To-morrow promises to be a bloody day, said Bonaro, at last breaking silence. "I wish we could reach the city."

"Can you not go to the camp with me?" asked Vernon. But the old man shook his head and pointed to Catharina, who sat absorbed in her own meditations.

"And besides," said he, "it is a place as unfit for me as for her."

"I think it doubtful whether you could pass the lines at this hour," rejoined Vernon, "and to be stopped at a guardhouse would not be pleasant, much less to pass the night in it."

"But can we not pass here to the right?"

"I think not—the lines seem to cover the whole valley; and to-night no one will be permitted to pass, I am sure."

"Then we must pass the night on the mountain," said Bonaro; "for I cannot think of exposing Catharina to insult."

"Let us seek some shelter, then," said Allen; "this wind begins to feel cold."

The day had been warm, pleasant, and bright; but as the sun went down, the wind began to rise, and break in large fleecy drifts from the mass of vapour about the summit of the western ridges, cold, pale clouds began to float across the valley. The pines waved painfully in the blast, and each moment their sighing grew louder. Clouds of dust were hurried along the plain, and soon a keen, cold mist began to drive through the air. The wind continued to rise, and the fleecy clouds grew thicker and darker; and in the valley the mist became a rain. The moon was visible at intervals, as the heavy vapours were broken by the fast-increasing gale, and driven rapidly along the sky; and the silver orb seemed hastening to her setting to avoid the sight of blood. An occasional flash broke the gloom upon the mountain side; and now and then as the wind lulled, could be heard the rolling of artillery-wagons, and the tramp of horsemen assuming their positions. Watchfires were here and there visible, now blazing high, and anon almost extinguished by a gust of wind. It was a chill, comfortless night, and the armies bivouacked upon the ground.

"Come, Catharina," said Bonaro, rousing her, "we must find some place of shelter." He took her by the arm, and, following Vernon, led her some distance down the mountain.

"You are not going to the camp?" she asked.

"No, not to-night," he replied. "Can you pass a night on the mountain with Mr. Vernon and me?"

"Oh yes," she replied; "it will not hurt me if you can endure it. But what will Senor Vernon do?"

"I shall remain with you, senora," said the latter, "to protect you if any of our men should climb the mountain. I wish you had a better protector, or, what were still better, that you needed no protection."

They passed on in silence for nearly a quarter of a mile, when they came to the break in the rocks at the head of the ravine across which the skirmishers were fighting. The water, where it plunged down the rocks, had washed deep into the mountain, making a chasm with almost perpendicular sides; and at the bottom the rock was worn into a kind of basin, deeper than the bed of the ravine below. Having carefully descended to this shelter, they found themselves entirely protected from the wind, and beyond the reach of even the mist. On climbing about, too, Vernon found a great quantity of dry branches, and several trunks of pines, which the water had washed down; and in a few minutes he had a cheerful fire blazing up against the rock. He took care to build it so that it could be seen only from above, and from a very narrow space on the plain. They had nothing to eat except the remnants of their very frugal dinner, and no extra clothing but the ordinary Mexican blanket which each of the men carried over his shoulders. One of these was given to Catharina, and beneath the other the two men were soon sound asleep. The situation was too novel to Catharina to allow of her sleeping speedily, and she was far too anxious about Hugh to lose her consciousness, until nature should sink beneath fatigue. For an hour or two she leaned upon her arm, quietly and unobtrusively feeding the fire with the twigs which lay beside it. She gazed thoughtfully and sadly into the blaze; but her spirit was wandering, and she knew not where she was. Even anxiety, however, at last gives way to fatigue. She ceased to place the twigs within the blaze, her hand sank upon the *serape* in which she was wrapped, her head drooped upon her arm, and her eyes closed. Once or twice she opened them for a moment, but at last they closed in quiet, dreamless sleep. The fire went gradually down; a little blaze sprang up from the end of a twig, and lit up the cavern for a few moments—a wandering breath of air extinguished it, and the travel-worn party were at rest.

In the meantime, Thorpe paced quietly up and down his regimental parade-ground, revolving, even at that hour, his tortuous schemes. He was playing for a high stake. The hand of Cara Talbot once his, her wealth would elevate him above the necessity of professional labour. He would be at liberty to bend all the power of his strong mind to the pursuit of high political distinction; and no man, conscious of his mental energy, could doubt of complete success. His dearest ambition was to be enrolled among the distinguished, to be recognized among the master-minds which create and control opinion. This end he was determined to accomplish; and when a mind of his force determines, let the weak and irresolute stand aside! He made but one mistake; but alas! that was a vital one! He had an end in view, and he saw clearly what it was. To its accomplishment he brought strong will, intense activity, and superior intellect. But he forgot, or rather he never knew, that honesty and sincerity are indispensable to success; that, if they were not,—if, by crooked policy and superior intelligence, he at last triumphed—his victory would be worthless, because he could not feel that it had been merited.

The first step was wealth. He had nearly secured this, when an intruder—those who interfere with the schemes of bad men are all intruders—had stepped between him and what he considered his. He had prepared a scheme to recover his footing, when another intruder had turned his engine to his own destruction. This last he was resolved to destroy; for he had the additional spur of self-defence to urge him on; and it was over his efforts to do so that he was now brooding.

In one of the turns of his walk, he approached a fire, around which were assembled several soldiers, talking to another who was in charge of a prisoner just taken. The men stood back as Thorpe approached, and he caught a sight of the Mexican's face. He wore his arm in a sling, and his face seemed to have been burnt by powder; while his short-cropped hair was matted and matted apparently by fire. One glance satisfied Thorpe who stood before him; but not a sign did he give of his recognition.

"Where was he taken?" he asked calmly of the soldier.

"At the moment on the roof, sir," said the soldier.

"What are you going to do with him?"

"The colonel ordered me to take him to the right flank guard."

Thorpe said no more; but a glance of his expressive eye gave a sign to the Mexican, and he turned away.

About an hour afterwards, he slowly approached the rancho in which the guard were quartered, and asked for the captain commanding. That officer presented himself.

"I come from General Wool," commenced Thorpe, "to make an effort to get some information from a prisoner."

"Be good enough to walk this way, then," said the captain, leading him into a room without fire or candle, adjoining the guard-room. The Mexican raised himself from a corner as the door opened, and when a candle was brought, he sat leaning against the wall.

"Do you wish to be alone with him, colonel?" asked the captain.

"Such are my orders?" said the colonel, and the officers retired.

"What does this mean?" Thorpe commenced, as soon as the door was closed. "Have you had a fight for it?"

"It means," said the Mexican, "that your work is done at last, and well done, too:—*Garracho!*"

"Tell me how it was," said Thorpe smiling. "You seem to have been near enough to see it all."

"I was," he replied with a grimace, "a little too near."

He then proceeded to narrate all the events which had taken place at Rinconada, with which the reader is acquainted, and concluded by announcing that the final explosion had killed not only Manning, but Vernon, Bonaro and his daughter, and all who were in or near the house, together with seven men who were posted to cut off their retreat. He further stated that only himself and three others, of more than thirty men, had escaped being blown into eternity; and that, of the four, he was the least hurt.

"A fortunate explosion," said Thorpe coolly, "though like all good fortunes, not complete. I don't see why the other four could not have been blown to the devil, as well as the thirty—especially since the most guilty of the whole party was one of them." This was spoken in English; but the man smiled as if he understood it, and made no reply.

"Well," said Thorpe, after a pause, resuming the Spanish, "I suppose you have got yourself taken prisoner in order to ask for your reward?"

"*Si Señor*," the man replied.

"If you keep your own counsel you shall have it as soon as I can get you liberated—probably the day after to-morrow." The fellow attempted to speak, but Thorpe waved his hand and passed out.

"Can you get anything out of him?" asked the captain.

"Nothing of importance," he replied; and in a few minutes afterwards he was slumbering calmly upon his bed.

## CHAPTER XXVI.

"The absent danger greater still appears,  
Less fears he, who is near the thing he fears."—DANIEL.

"I shall desire you, sir, to give me leave  
To have free speech with you."—SHAKESPEARE.

THE eve of a battle, viewed from a peaceful fireside, is a serious thought. The reflection that on the morrow the "brittle thread of life may be snapped"—that we may be called upon to prove the "dread unknown," without warning and by violence—that the air will be filled with random missiles, any one of which may send us, "with all our imperfections on our heads," before a tribunal from which there is no appeal—would seem to be a thought to temper and subdue our minds. But, generally, it is not so. Those upon whom devolves the responsibility of ordering the battle, and those to whom the thought of death always comes clothed in terrors, feel anxiety for the coming day. But those upon whom rests the labour of the conflict, those who will have to bear the "burthen and the heat of the day," seldom exhibit anything like consciousness of the grave concerns of the morrow.

There is something in the very thought of deadly conflict and mortal risks to come, which exhilarates the spirits and defeats the gravity of reflection. If those who are to perish were already marked and known, it would be far different—for all who were doomed, and all who were to be saved, would be alike gloomy. But the risk is to be encountered by all alike: each man of the whole host must take his chance. And it is precisely because there is a chance, that hope is more active than at any other time. Some one of each group, some one perhaps of each couple, must go down: but which is it? It may be you, or it may be I. In all human probability, at least one of each group will escape; but who it is none can tell. When it is not known who it is, neither can it be known who it is not. Each hopes that he will be among the fortunate. Instinct teaches him to even believe that he will escape, though not to hope that his companion will perish. Uncertainty and danger combine to elevate the spirits; and when one inexperienced would expect prayer and preparation and sober reflection, all is mirth and gaiety and reckless folly.

Such was the case in the American camp at Buena Vista; and as Thorpe returned along the lines, he saw assembled at each fire a noisy group of careless soldiers, talking in no sombre tones of the expected victory of the morrow. Not one of them seemed to think of the possibility of death; not one seemed to reflect that he might, ere another sun should set, be lying cold and stiff, with his feet to the foe; not one of them seemed to give the smallest weight to the overwhelming numbers of their enemies; and all were apparently as sure of the success of their arms, as if the crown were already placed upon the victor. Nor was this mere bravado, assumed to cover trepi-

dation or apprehension; it was a cool, settled, and logical conclusion; to which each man had arrived by his own course of reasoning.

Most men reason from the past to the future; most men do so even unconsciously. Whatever has been frequently and uninterruptedly, is likely to continue to be. There may be a turning point, but we never have reason to believe that it has actually arrived, until it has passed. Our arms had been victorious in every field; they had not been checked anywhere for a single day: the tide of conquest had rolled, like the waters of a mighty river, almost without a ripple; whatever had attempted to oppose its progress, had been remorselessly swept away; who was to say that here, upon this elevated plain, men who had marched fifteen hundred miles to battle, were to be the first American army defeated in Mexico? They could not, and they would not believe it!

Physical force, numerical power, is absolutely necessary; but "the race is not always to the swift, nor the battle to the strong;" there is something else necessary also—may even more necessary than strength of numbers. Moral force is a far greater power than gunpowder or masses of men; the prestige of victory, the power which carried Napoleon over half Europe as upon a flowing tide, nerves the arm of the soldier, steadies his courage, gives him faith, and wins the day!

Had a single column of all that traversed Mexico been seriously checked—had a single fight been lost, the armies sent to invade that country had never returned, except as did the wrecks of the grand army of Russia! Victory was not only important, but it was vitally necessary to every column. Had the movement of Arista, in Taylor's rear, before Palo Alto, been successful, Texas would have been overrun. Had the battle of Monterey been lost, the valley of the Rio Grande would have been swept of every American. Had the battle of Buena Vista been a defeat, the posts from Saltillo to Brazos would have been taken in detail, the army would have been cut to pieces, and we would have lost every advantage we had gained. Santa Anna would, moreover, have been able to return to Cerro Gordo, with an army having the immense advantage of being victorious, and not defeated; the best army raised in Mexico during the war, would have been an unit, instead of being di-organized, fragmentary, and disheartened. Scott would have been repulsed from Cerro Gordo, even if he had ever got so far, and, perhaps, to-day we would have been still striving to plant the "stars and stripes" upon the domes of the "Halls of the Montezumas!"

And so, too, of Scott's unparalleled march from Vera Cruz to Mexico—the best executed military march in modern times. A single defeat would have ruined him—a single check to the tide, and the ebb would have carried him into the sea. It was only the prestige of the American name which kept down the population of the country; it was fear that opened the roads, and kept the people at home. That once destroyed, and not a pass, not a delfe nor a bridge on the road would have been left undefended—not a rock, not a tree would have been without its concealed defender, to annoy and harass the wayworn soldier—not a cliff, not a precipice, nor a mountain under which the road led them, but would have served as a secure height, from which rocks and missiles of every kind would have been showered down upon a defeated and retreating army. We needed "the fortune which, like a star, moves ever onward;" and it was a blessing, both to us and to our enemies, that we had it.

It was the consciousness of this fortune which elevated the morale of our armies; and, at the time of which we speak, it was even stronger than it has been since; for then it was an enthusiasm, not a calculation. Men went into battle shouting and casting their hats into the air, at the sight of an enemy whom they considered already vanquished; and with the stern passions of the conflict, was mingled a compassion for his misfortune, even before it had befallen him. To such a dangerous pitch of self-confidence were the Americans worked up, that they considered it a kind of presumption in the Mexicans to dream of resisting them; and they pitied their blindness while they chastised their folly. It must not be denied that this was a state of feeling by no means desirable; for in such circumstances men are more easily panic-struck than at any other time. A serious resistance, approaching an equal contest, astonishes as well as checks them; and nothing will make men fly so quick as taking them by surprise. And this fortifies our remarks above; for it made uninterrupted success, which alone could prevent panic, still more important.

But we wander from our story.

A large fire was burning in front of the regimental encampment, as Col. Thorpe passed in; and around the fire sat several officers. The wind was blowing cold and gusty, swaying the blaze to and fro, and covering each in his turn with dust and ash. They were, however, all protected by Mexican blankets, which they wore close around their necks; and none of them were so unused to dust as to be made uncomfortable. They were talking rather more seriously than the groups of soldiers near them; for each felt a degree of responsibility resting on his own shoulders; especially a thin-faced brevet-second-lieutenant, who was solemnly smoking a very dirty pipe. The major, a heavy, square-set man, of about forty, with high cheek bones, and exceedingly small eyes, was giving the group an account of his arduous campaigns in Indian wars on the western frontier; and as he narrated story after story of hand-to-hand fights, and interminable marches through bogs and forests, he took especial pains to depreciate by comparison the hardships of the present expedition. The narrow-faced lieutenant, who had never smelt gunpowder, listened with an attention only equalled by his assiduity to his black clay pipe. And as the major's stories gradually approached the breathless point, the whiffs became longer and deeper, and the lieutenant's eyes gradually rose from the fire, where they had been resting, with a gaze of deepening interest. The other officers were older men, and did not, therefore, think it necessary to believe all the old soldier might think proper to

tell them. He had, however, too much the reputation of a fire-eater, to allow of their questioning his veracity; and they, therefore, listened attentively, and gazed gravely into the fire—except when a gust of wind blew the blaze into their faces, and made them suddenly spring back.

The conversation—if so it could be called, where there was only one speaker—at last flagged, as such conversations will; and one of the group took advantage of the close of a more than usually bloody story, to draw his blanket round him, and retire to his quarters. He stopped at the door of his tent, and gazed up the mountain. The fires in the camp had gone down, the groups of soldiers had gradually dispersed, and the host was as still as death. A solitary fire, far up the mountain, visible from the line in which he stood alone, attracted his notice. It was small and distant—so small as to appear almost like a lonely star in the gloom—but now and then it blazed up brighter, as if some one were feeding it with fuel; and the thought that far up the mountain, above the lines of soldiers who were slumbering below, some solitary watcher lay waiting for the morrow, had an indescribable interest for him. Had he known who was there, his interest would have been doubled; for it was a conjecture about the fate of Manning and Vernon which had commenced the conversation at the fire.

Lieutenant Clayton, to whom we have already introduced the reader, had but a few days before returned from the States, where he had been on furlough to recover his health; and he had now in his trunk letters for both the missing. One of them was from Cara Talbot, announcing to Allen that her father accused him of forgery, and calling upon him to return and clear up the calumny. Clayton had taken charge of this letter from the hand of Cara herself. He was an old admirer of hers, and a man of kindly feelings and superior mind. He was a lawyer, too, of considerable eminence, though of indolent habits; and had been induced to join the expedition for the sake of novelty. He had formed this resolution too late to secure a high position, and had therefore contented himself with a simple lieutenancy, whose freedom from responsibility pleased him better than the honour of a higher post. The army was full of men of this sort; he was merely one of a very numerous class, who left respectable positions and lucrative business, to share in the privations and dangers of an arduous campaign.

Clayton's calm, thoughtful and acute mind had penetrated Cara's feelings in an interview of only a few minutes. He saw through her agitation and eagerness to hear from Vernon; and having heard the story of the forgery, which old Manning had taken care to circulate, he at once divined the reason why Cara was so anxious to have him advise Vernon to return without delay. But, although he had himself been once ambitious of an interest in her heart, the discovery that she loved Allen, only increased his desire to serve him; and he had returned to the army, determined not only to deliver Cara's letter, but to do all in his power to serve Allen also. When he reached Saltillo our friends were absent on their unlucky reconnaissance; and their protracted absence, after the return of the party, had forced their friends to the conclusion that they were either killed or taken. Other letters brought by him had contained the story of the forgery; and it soon became generally known in the camp. From being canvassed among so many men it became another story; the gossips of the camp began to doubt whether he was dead; they began to suspect that he had purposely escaped to the enemy; and some even went so far as to say that our friend Hugh had gone over with him.

Clayton and Hugh's friends combatted these rumours as well as they could; but they might as well have combatted the "Northerners," that swept the valley where they lay. From being a mere surmise, the story became first a conjecture, then a rumour, then a piece of news, then a matter of certainty to all who did not know the circumstances. It was even said that authentic intelligence had been received at Headquarters, that our unlucky friends had been seen cheek by jowl with General Minon, at Encarnacion. Rumours in a camp fly almost as fast and increase almost as rapidly as in a small town; and the second day after the surmise was breathed at the Right-Flank Guard-house, it was told at the Left-Flank as a positive certainty, together with the channel through which the information had been received, and the precise spot where the deserters had been seen.

In one particular Clayton was disposed to agree with the story-mongers; that our friends were not dead or taken. He knew them both, and was unwilling to believe that two men, as determined and wary, would fall into a snare. But their protracted absence had almost overcome his hopes. Anxiety took the place of hope, and fear for their fate succeeded. They had now been gone more than four weeks, and no news of them had been received. The army had moved several times between Agua Nueva and Buena Vista, and it was now at the latter place with the enemy before it. Clayton had at last given up seeing the wanderers, and, gloomy and dejected, he had on that very day placed their letters in his trunk, there to remain until his return home.

Let not the reader think it strange that Clayton—a man whose intimacy with our friends was not such as to bring him hitherto clearly within the compass of our story—should take so much interest in their fortunes, when they were already almost forgotten by those far more near to them. Clayton was a generous and feeling man—not a man of violent passions and burning impulses—in his heart was the true "milk of human kindness." In his calm way, he loved Cara Talbot, and he knew she loved Allen Vernon. He did not, as many men would have done, rejoice at the misfortune which he now believed had befallen his rival—such absurd and inconsistent jealousy was no part of his nature. He was eminently unselfish, as we shall have occasion to show. He loved Cara Talbot, and so wished her to be happy. He knew that, were Vernon lost, she would not be so; and, therefore, felt interested in his safety. Manning he knew, also, as a frank, generous, straightforward soldier, and warm, manly friend. He was of this stamp

himself—~~and~~ that such should be so few!—and a sympathy in ~~misfortune~~ makes strong friendship.

He stood, then, at the door of his tent, gazing at the fire far up the mountain, and thinking—strange coincidences!—of him who lay beside that beacon, slumbering heavily after the fatigues of the day. There was nothing strange or unusual in a fire on the mountain—not a night had passed, perhaps for months, without the same appearance; but now, it shone calm and lonely over a field where slept nearly thirty thousand men: it burned above the plain which the morrow would see covered with wounded and slain, and its calm, solitary light seemed strange and almost unearthly. What could any one be doing there at such a time? he thought; and who would dare to build a fire so near both armies?

He was leaning against the tent-pole, and puzzling himself with these questions, when some one came round the corner of the *marquise*, and stopped, as if wishing to avoid observation, or seeking some one within.

"Who goes there?" asked Clayton, sharply.

"Corporal Brady, sir," said the man, advancing with a salute, "and I was looking for you."

"Come in, then," said Clayton, entering the tent.

"I cannot stay, sir," said the corporal. "I am on guard, and have permission to be absent only a few minutes. I wanted to have come sooner, but was on duty, and have just been relieved. If you will walk to the guard-house with me, sir," he continued, cautiously advancing, and speaking in a low tone, "I think I can get you some tidings of our friends, Manning and Vernon."

"Can you?" exclaimed Clayton. "Lead on, then—I'll go with you, at once."

The corporal turned in silence, and walked rapidly back towards the guard, eagerly followed by Clayton.

## CHAPTER XXVII.

"Thou art a traitor and a miscreant."—SHAKESPEARE.

"By heaven there's treason in his aspect."—SHRILEY.

"Foul deeds will rise,

Though all the earth o'erwhelm them, to men's eyes."—SHAKESPEARE.

"I OVERHEARD a conversation," said the corporal, as they approached the guard, "between Colonel Thorpe—"

"Ha!" exclaimed Clayton.

"You suspect him?" said the corporal, stopping on the brink of a little stream which crossed the road.

"Yes," said the lieutenant; "and I saw him at the guard to-night."

"It was there," said Brady, "that I overheard the conversation between him and a prisoner we have."

"How?"

"I was standing by," said the corporal, "when Thorpe asked the captain to see his prisoner. He said he had orders from the general; but I noticed that he showed no written order; and we all know General Wool well enough to be sure that he would have given such an order in black and white."

"But the captain of the guard did not think so," said Clayton.

"True, sir," answered the other. "But he respects the colonel too highly to question him—more highly, I think, than he deserves."

"Well?"

"I thought," continued Brady, "that something was wrong; and if not, at most, no harm could come of my hearing their conference—being an officer of the guard, you know, sir—"

"Never mind your apology, but go on with your story," said Clayton.

"Well," said the corporal, in a low voice, "I went round here to the right, on the canal, and stood at the window while the colonel held a long conversation with a Mexican prisoner brought in to-night by the picket. He seems a low fellow, and is all burnt and singed—"

"Pass over the description—I will see him myself," said Clayton.

"Well," said Brady, again, "he told Thorpe a long story about his having besieged, and finally blown up a house containing several persons, and among others—"

"Vernon and Manning," said Clayton.

"Precisely, sir," said the corporal; "but I will take you to him, and you can talk with him."

So saying he crossed the rivulet, and turned to the right.

"Who goes there?" cried a sentinel.

The corporal answered; and having given the countersign, he led Clayton across a little court towards the room in which the prisoner was confined. Here he was hailed by another sentinel, whom he passed in the same manner, and pushing open the door, he and Clayton stood in the presence of the Mexican.

"Come, *hombre*," said the corporal, shaking the prisoner roughly, "get up! Here is an officer who wishes to speak to you." He lit a candle as he spoke, and set it down near the *hombre*, so as to exhibit his begrimed and repulsive features.

"I want to talk with you," Clayton began, "about the success of your expedition into the mountains."

The fellow started, but recovered his composure in a moment.

"What expedition, señor?" he asked.

"You understand me well enough," said Clayton, impatiently. "I do not come to you for the purpose of entrapping you, but only to reward you for any little information you can give me. You see," he proceeded confidentially, while the Mexican's small black eye searched his face—"you see, Colonel Thorpe and I are playing a little game, in which each is anxious to

be victor. Not that either of us cares, particularly, about the life or death of the men you have been pursuing; but each of us wishes to succeed. We have a little wager depending upon it, too; and he says he has won it. It may be so; but I do not believe it. He refers me to you, and I want to know before I pay the money."

"Colonel Thorpe's account is the true one," said the Mexican, coldly. "I can say no more to you than I have said to him."

"Well," said Clayton, "are they really dead?"

"They are dead," said he, doggedly.

"But in that case, *amigo mio*," said the lieutenant, smiling, "I have lost; and I can make it really worth while to you to give a different account."

"I can give no account but the true one," said the Mexican firmly.

"Of course not," said Clayton; "but, on reflection, now, do you not think you have been mistaken? Do not fear losing your reward from Thorpe—I will not say a word to him about it till you have got it and gone; but I can give you more than five hundred dollars—my bet is a large one."

"I cannot help it," said the other, after a moment's reflection; "what I have told is the truth."

"And you really blew them all up?" said Clayton.

"*Si, señor*," he replied, and betook himself to the floor.

"We must try some other way," said the lieutenant in English. "Can you get a rope and a trusty man in here, corporal?"

"In five minutes, sir," replied the latter, and passed out, leaving Clayton alone with the assassin. The latter sat upon the floor under the little window mentioned before, and the former paced for a few moments up and down the little room. A noise without attracted his attention, and he stepped to the door to look out. At the same moment a "hist!" was cautiously whispered at the window, and the Mexican stealthily rose to his feet. A face was thrust into the opening which he knew at once.

"Have you told him anything?" asked the whisper.

"No, señor," replied the other, in the same tone—"nothing."

"What is that?" exclaimed Clayton, turning suddenly round, attracted by the voices.

"Traitor!" hissed the voice outside; and the Mexican sprang back and fell to the floor, transfixed by a long lance. Clayton lifted him from the ground and drew the steel from his breast, but before he could do so the Mexican was dead!

"Run, Brady!" he exclaimed to the corporal who now entered, "and arrest any one you catch in the rear of the house. Come here," he added to the soldier who entered with Brady; "help me to lift this man upon the bench."

Brady comprehended in a moment; but he was compelled to make a considerable circuit to reach the rear of the *ranchito*; and before he could do so the murderer had escaped. Not a human being was to be seen—not even a footstep was to be heard. He inquired of the nearest sentinel, but he had seen no one, except the corporal himself. He returned, without making any discovery, to the room where Clayton and the soldier were with the corpse.

The murderer's hand had been true to his purpose: the Mexican was dead; and already the blood from the wide wound was beginning to run more sluggishly. The assassin had gone to his final account, with his sins fresh upon his head—even with the signs upon his face. The hand of justice had stricken him in the moment of his treachery, and one crime was made the retribution for another.

"The murderer has become the victim," said Clayton, surveying the rapidly-stiffening corpse. "If we were better Christians we would regret it more. We can do no more than lay the clay in the ground;—God must judge him and us! There are many, perhaps, whom he will precede but a few hours."

"Will you explain the matter to the captain of the guard?" asked the corporal.

"I will explain it to the general," answered the lieutenant; and turning mournfully from the corpse, he walked away.

There is something in the contemplation of sudden death which will make any man pause to think; how much more thoughtful are we made by the sight of a death, whose suddenness we think only an element of just retribution. And yet, we think again; we feel that, if a part of the criminality of murder consists in sending a sinful mortal to the bar of heaven unprepared, hurrying another sinner into the world of spirits cannot wipe out the blood. "Thou shalt not murder!" God has so commanded. "Thou shalt not cut short the term which I have allotted as the probation of every man! Thou art not of my council, and thou canst not tell when that term must end. Thou shalt not cut short the term of any man's probation! If you let him live now, he may live for ever!"

(To be continued.)

DINNER UPON A LARGE SCALE.—Doctor Shaw, who published his travels into Africa and Egypt, gives the following account of a family dinner prepared by the Emperor of Morocco. At the top there was fish, consisting of a young whale boiled, and a few sturgeons and porpoises fried, round it. At the bottom the hind-quarter of an elephant. On one side a brace of lions fricasseed; on the other side the neck of a camel made *kubab* (as the Doctor calls it), or, in plain English, *kabob'd*. The second course—A brace of ostriches roasted. On one side a griffin and a dish of cranes and storks; on the other a potted crocodile. There was no butcher's meat, but a roasted buffalo at the side-table. The doctor says he only picked the short ribs of a lion, which, to use his own expression, was a delicious morsel. What can we say to brother Jonathan after this?

## ENGLISH NAMES.

NAMES were first used amongst men for distinction. The Jews gave names at their circumcision, the Romans on the ninth day after their children's birth, and the Christians at their baptism; which names were generally intended to denote the future good wishes or hope of parents towards their children.

English names of baptism are generally either Saxon,—as Edmund, Edward, Edwin, Gilbert, Henry, Leonard, Robert, Richard, Walter, William, &c.; or from the Bible and Testament,—as Abraham, Isaac, Jacob, John, Thomas, James, &c.; or it sometimes consists of the mother's surname, or occasionally of two Christian names, which is still customary in other countries, especially in Germany.

The French called names superadded to the Christian names, surnames, that is, *super nomina*.

The Hebrews, Greeks, and other nations of antiquity, did not add surnames to their families, but counted thus: for example, the Hebrews, Melchior Ben Addi—Addi Ben Casan, &c.; the Welsh, Hugh ap Owen, Owen ap Rhese; the Irish, Neal mac Con—Con mac Dermot, &c.

As Christian names were given to distinguish persons, so surnames were used for the distinction of families.

About A.D. 1000, the French began to take surnames, with *de* prefixed for a place, and *le* prefixed for some other qualifications. The English also adopted the use of surnames, but it was not until the reign of Edward the First that they became general.

Offices of honour have given rise to many surnames; for example, the Duke of Ormond and his descendant took the surname of Butler, their ancestor, Edward Fitz-Theobald, having been made Butler of Ireland; and again, John, Count Tancarville, of Normandy, being made chamberlain to the king of England, about six hundred years since, his descendants still bear the same coat of arms, by the name of Chamberlain.

At first the English gentry took the names of their birthplaces, or habitations, for surnames, as Thomas of Aston, or East-town; John of Sutton, or South-town; and, as they altered their habitation, so they changed their surname. When they afterwards became the lords of manors, they styled themselves Thomas Aston of Aston, John Sutton of Sutton.

Among the Saxons, the common people added for surname their fathers' names, with *son* at the end thereof,—as Thomas Johnson, Robert Richardson. They often took their father's nickname, or abbreviated name, with the addition of an *s*, as Gibbs, the nickname of Gilbert; Hobs, of Robert; Nick, of Nicholas; Bates, of Bartholomew; Sams, of Samuel; Hodges, of Roger; whence Gibson, Hobson, Nickson, Batson, Sampson, Hodson, &c. Many were surnamed from their trades, as Smith, Joyner, Weaver, Walker, God, &c.; or from their employments, as Porter, Steward, Shepherd, Carter, Spencer, Cook, Butler, Kemp; or from their places of abode, as Underwood, Underhill, also Atwood, Atwell, Athill; or from their colours or complexions, as Fairfax, Pigot, Blunt, or Bland; and from birds and beasts, as Arundel, Corbet, Wren, Finch, Woodcock, Lamb, Fox, Moyle, &c.

The Norman descendants in this country, about 200 years after the Conquest, also took their fathers' Christian names for surnames, with *Fitz* or *Fils* prefixed, as Robert Fitz-William, Henry Fitz-Gerard; afterwards Williamson, Gerardson, &c.

The Welsh were the last to adopt surnames, which they did chiefly by dropping the *a* in *ap*, and annexing the consonant to their fathers' Christian names; as, instead of Evan ap Rice, Evan Price; and for ap Howel, Powl; ap Hughes, Pughe; ap Rogers, Progers, &c.

The most ancient families in this country are such as have taken their surnames from places in Normandy, or England and Scotland, as Evreng, Chaworth, Seymour, Nevil, Montague, Mohun, Biroa, Bruges, Clifton, Berkley, Arcy, Stourton, Morley, Courtney, Grandison, Hastings, &c., which formerly had *de* prefixed, but now made one word, as Devereux, Darcy, &c.

## THE TRUE GENTLEMAN.

His he whose every thought and deed  
By rule of virtue moves;  
Whose generous tongue disdains to speak  
The thing his heart disapproves.

Who never did a slander forge,  
His neighbour's fame to wound;  
Nor hearken to a false report,  
By malice whisper'd round.

Who vice, in all its pomp and power,  
Can treat with just neglect;

And piety, though clothed in rags,  
Religiously respect.

Who to his plighted words and trust  
Has ever firmly stood;  
And, though he promised to his loss,  
He makes his promise good.

Whose soul in usury disdains  
His treasure to employ;  
Whom no reward can ever bribe,  
The guiltless to destroy.

MUSIC.—The art of music, whose power has been acknowledged by the most profound thinkers of all ages, is of later growth than her sisters, poetry, sculpture and painting; and its means of communicating ideas are also less positive and direct; but the principles which govern its manifestations are strictly analogous, and we recognize in its very vagueness that yearning after the infinite, that feeling for ineffable loveliness, which, defying, by the electrical rapidity of its action upon the mind, the slow deductions of reason and all powers of analysis, approaches the Divine in its bright mystery, and dispensible influence upon our sentiments and emotions.

## THE VICAR OF WAKEFIELD.

(Continued from page 586.)

## CHAPTER XXXI.

## FORMER BENEVOLENCE NOW REPAID WITH UNEXPECTED INTEREST.

Mr. THORNHILL made his appearance with a smile, which he seldom wanted, and was going to embrace his uncle, which the other repulsed with an air of disdain.

"No fawning, sir, at present," cried the Baronet, with a look of severity, "the only way to my heart is by the road of honour: but here I only see complicated instances of falsehood, cowardice, and oppression. How is it, sir, that this poor man, for whom I know you professed a friendship, is used thus hardly? His daughter vilely seduced, as a recompense for his hospitality, and he himself thrown into prison, perhaps but for resenting the insult? His son, too, whom you feared to face as a man—"

"Is it possible, sir," interrupted his nephew, "that my uncle could object that as a crime, which his repeated instructions alone have persuaded me to avoid?"

"Your rebuke," cried Sir William, "is just; you have acted in this instance prudently and well, though not quite as your father would have done: my brother, indeed, was the soul of honour; but then—Yes, you have acted, in this instance, perfectly right, and it has my warmest approbation."

"And I hope," said his nephew, "that the rest of my conduct will not be found to deserve censure. I appeared, sir, with this gentleman's daughter, at some places of public amusement: thus, what was levity, scandal called by a harsher name, and it was reported that I had debauched her. I waited on her father in person, willing to clear the thing to his satisfaction, and he received me only with insult and abuse. As for the rest, with regard to his being here, my attorney and steward can best inform you, as I commit the management of business entirely to them. If he has contracted debts, and is unwilling, or even unable to pay them, it is their business to proceed in this manner; and I see no hardship or injustice in pursuing the most legal means of redress."

"If this," cried Sir William, "be as you have stated it, there is nothing unpardonable in your offence; and though your conduct might have been more generous in not suffering this gentleman to be oppressed by subordinate tyranny, yet it has been at least equitable."

"He cannot contradict a single particular," replied the Squire; "I defy him to do so; and several of my servants are ready to attest what I say. Thus, sir," continued he, finding that I was silent, for in fact I could not contradict him; "thus, sir, my own innocence is vindicated: but though at your entreaty, I am ready to forgive this gentleman every other offence, yet his attempts to lessen me in your esteem, excite a resentment that I cannot govern; and this, too, at a time when his son was actually preparing to take away my life;—thus, I say, was such guilt, that I am determined to let the law take its course. I have here the challenge that was sent me, and two witnesses to prove it: one of my servants has been wounded dangerously; and even though my uncle himself should dissuade me, which I know he will not, yet I will see public justice done, and he shall suffer for it."

"Thou monster!" cried my wife, "hast thou not had vengeance enough already, but must my poor boy feel thy cruelty? I hope that good Sir William will protect us; for my son is as innocent as a child: I am sure he is, and never did harm to man."

"Madam," replied the good man, "your wishes for his safety are not greater than mine; but I am sorry to find his guilt too plain; and if my nephew persists—"

But the appearance of Jenkinson and the gaoler's two servants now called off our attention, who entered, hauling in a tall man, very genteelly dressed, and answering the description already given of the ruffian who had carried off my daughter.

"Here," cried Jenkinson, pulling him in, "here we have him; and if ever there was a candidate for Tyburn, this is one."

The moment Mr. Thornhill perceived the prisoner, and Jenkinson who had him in custody, he seemed to shrink back with terror. His face became pale with conscious guilt, and he would have withdrawn; but Jenkinson, who perceived his design, stopped him.

"What, Squire," cried he, "are you ashamed of your two old acquaintances, Jenkinson and Baxter? but this is the way that all great men forget their friends, though I am resolved we will not forget you. Our prisoner, please your honour," continued he, turning to Sir William, "has already confessed all. This is the gentleman reported to be so dangerously wounded. He declares that it was Mr. Thornhill who first put him upon this affair; that he gave him the clothes he now wears, to appear like a gentleman; and furnished him with the post-chaise. The plan was laid between them, that he should carry off the young lady to a place of safety, and that there he should threaten and terrify her; but Mr. Thornhill was to come in in the meantime, as if by accident, to her rescue; and that they should fight awhile, and then he was to run off, by which Mr. Thornhill would have the better opportunity of gaining her affections himself, under the character of her defender."

Sir William remembered the coat to have been worn by his nephew, and all the rest the prisoner himself confirmed by a more circumstantial account, concluding that Mr. Thornhill had often declared to him that he was in love with both sisters at the same time.

"Heavens!" cried Sir William, "what a viper have I been fostering in my bosom! And so fond of public justice, too, as he seemed to be! But

he shall have it; secure him, Mr. Gaoler!—yet, hold; I fear there is not legal evidence to detain him."

Upon this, Mr. Thornhill, with the utmost humility, expressed that two such abandoned wretches might not be admitted as evidence against him, but that his servants should be examined.

"Your servants!" replied Sir William, "wretch! call them yours no longer: but come, let us hear what these fellows have to say; let his butler be called."

When the butler was introduced, he soon perceived, by his former master's looks, that all his power was now over.

"Tell me," cried Sir William, sternly, "have you ever seen your master and that fellow, dressed up in his clothes, in company together?"

"Yes, please your honour," cried the butler, "a thousand times: he was the man that always brought him his ladies."

"How," interrupted young Mr. Thornhill, "this to my face!"

"Yes," replied the butler, "or to any man's face. To tell you a truth, Mr. Thornhill, I never either loved or liked you, and I don't care if I tell you now a piece of my mind."

"Now, then," cried Jenkinson, "tell his honour whether you know anything of me."

"I can't say," replied the butler, "that I know much good of you. The night that gentleman's daughter was deluded to our house, you were one of them."

"So, then," cried Sir William, "I find you have brought a very fine witness to prove your innocence: Thou staid to humanity! to associate with such wretches! But," continuing his examination, "you tell me, Mr. Butler, that this was the person who brought him this old gentleman's daughter?"

"No, please your honour," replied the butler, "he did not bring her, for the Squire himself undertook that business; but he brought the priest that pretended to marry them."

"It is but too true," cried Jenkinson, "I cannot deny it; that was the employment assigned me, and I confess it to my confusion."

"Good heavens!" exclaimed the Baronet, "how every new discovery of his villany alarms me! All his guilt is now too plain, and I find his prosecution was dictated by tyranny, cowardice, and revenge. At my request, Mr. Gaoler, set this young officer, now your prisoner, free, and trust to me for the consequences. I'll make it my business to set the affair in a proper light to my friend the Magistrate, who has committed him. But where is the unfortunate young lady herself? Let her appear to confront this wretch: I long to know by what arts he has seduced her. Entreat her to come in. Where is she?"

"Ah, sir," said I, "that question stings me to the heart: I was once, indeed, happy in a daughter, but her miseries—"

Another interruption here prevented me; for who should make her appearance but Miss Arabella Wilmot, who was next day to have been married to Mr. Thornhill. Nothing could equal her surprise at seeing Sir William and his nephew here before her; for her arrival was quite accidental. It happened that she and the old gentleman her father were passing through the town on their way to her aunt's, who had insisted that her nuptials with Mr. Thornhill should be consummated at her house; but stopping for refreshment, they put up at an inn at the other end of the town. It was there, from the window, that the young lady happened to observe one of my little boys playing in the street, and instantly sending a footman to bring the child to her, she learnt from him some account of our misfortunes; but was still kept ignorant of young Mr. Thornhill's being the cause. Though her father made several remonstrances on the impropriety of going to a prison to visit us, yet they were ineffectual: she desired the child to conduct her, which he did, and it was thus she surprised us at a juncture so unexpected.

Nor can I go on without a reflection on those accidental meetings, which, though they happen every day, seldom excite our surprise but upon some extraordinary occasion. To what a fortuitous concurrence do we not owe every pleasure and convenience of our lives! How many seeming accidents must unite before we can be clothed or fed! The peasant must be disposed to labour, the shower must fall, the wind fill the merchant's sail, or numbers must want the usual supply.

We all continued silent for some moments, while my charming pupil, which was the name I generally gave this young lady, united in her looks compassion and astonishment, which gave new finishing to her beauty.

"Indeed, my dear Mr. Thornhill," cried she to the Squire, who she supposed was come here to succour, and not to oppress us, "I take it a little unkindly that you should come here without me, or never inform me of the situation of a family so dear to us both: you know I should take as much pleasure in contributing to the relief of my reverend old master here, whom I shall ever esteem, as you can. But I find that, like your uncle, you take a pleasure in doing good in secret."

"He find a pleasure in doing good!" cried Sir William, interrupting her. "No, my dear, his pleasures are as base as he is. You see in him, madam, as complete a villain as ever disgraced humanity. A wretch who, after having deluded this poor man's daughter, after plotting against the innocence of her sister, has thrown the father into prison, and the eldest son into fetters, because he had the courage to face her betrayer. And give me leave, madam, now to congratulate you upon an escape from the embraces of such a monster."

"O goodness!" cried the lovely girl, "how have I been deceived! Mr. Thornhill informed me for certain that this gentleman's eldest son, Captain Primrose, was gone off to America with his new-married lady."

"My sweetest aunt," cried my wife, "he has told you nothing but falsehoods. My son George never left the kingdom, nor never was married."

Though you have forsaken him, he has always loved you too well to think of anybody else; and I have heard him say, he would die a bachelor for your sake."

She then proceeded to expatiate upon the sincerity of her son's passion. She set his duel with Mr. Thornhill in a proper light; soon launched the made a rapid digression to the 'Squire's debaucheries, his profligate marriages, and ended with a most insulting picture of his cowardice.

"Good Heaven!" cried Miss Wilmot, "how very near I have been to the brink of ruin! Ten thousand falsehoods has this gentleman told me: he had at least art enough to persuade me, that my promise to the only man I esteemed was no longer binding, since he had been unfaithful. By his falsehoods I was taught to detect one equally brave and generous."

But by this time my son was freed from the encumbrances of justice, as the person supposed to be wounded was detected to be an impostor. Mr. Jenkinson, also, who had acted as his valet-de-chambre, had dressed up his hair, and furnished him with whatever was necessary to make a genteel appearance. He now, therefore, entered handsomely dressed in his regimentals; and without vanity (for I am above it) he appeared as handsome a fellow as ever wore a military dress. As he entered, he made Miss Wilmot a modest and distant bow, for he was not as yet acquainted with the change which the eloquence of his mother had wrought in his favour. But no decorums could restrain the impatience of his blushing mistress to be forgiven. Her tears, her looks, all contributed to discover the real sensations of her heart, for having forgotten her former promise, and having suffered herself to be deluded by an impostor. My son appeared amazed at her condescension, and could scarcely believe it real.

"Sure, madam," cried he, "this is but delusion! I can never have merited this! To be blessed thus is to be too happy."

"No, sir," replied she; "I have been deceived, basely deceived, else nothing could have ever made me unjust to my promise. You know my friendship; you have long known it: but forget what I have done; and, as you once had my warmest vows of constancy, you shall now have them repeated; and be assured, that if your Arabella cannot be yours, she shall never be another's."

"And no other's you shall be," cried Sir William, "if I have any influence with your father."

This hint was sufficient for my son Moses, who immediately flew to the inn where the old gentleman was, to inform him of every circumstance that had happened. But in the meantime the 'Squire, perceiving that he was on every side undone, now finding that no hopes were left from flattery or dissimulation, concluded that his wisest way would be to turn and face his pursuers. Thus, laying aside all shame, he appeared the open hardy villain.

"I find, then," cried he, "that I am to expect no justice here; but I am resolved it shall be done me. You shall know, sir," turning to Sir William, "I am no longer a poor dependent upon your favours; I scorn them. Nothing can keep Miss Wilmot's fortune from me, which, I thank her father's providence, is pretty large. The articles and a bond for her fortune are signed, and safe in my possession. It was her fortune, not her person, that induced me to wish for this match; and possessed of the one, let who will take the other."

This was an alarming blow. Sir William was sensible of the justice of his claims, for he had been instrumental in drawing up the marriage-articles himself. Miss Wilmot, therefore, perceiving that her fortune was irretrievably lost, turning to my son, she asked if the loss of fortune could lessen her value to him?

"Though fortune," said she, "is out of my power, at least I have my hand to give."

"And that, madam," cried her real lover, "was, indeed, all that you ever had to give; at least all that I ever thought worth the acceptance. And I now protest, my Arabella, by all that's happy, your want of fortune this moment increases my pleasure, as it serves to convince my sweet girl of my sincerity."

Mr. Wilmot now entering, he seemed not a little pleased at the danger his daughter had just escaped, and readily consented to a dissolution of the match. But finding that her fortune, which was secured to Mr. Thornhill by bond, would not be given up, nothing could exceed his disappointment. He now saw that his money must all go to enrich one who had no fortune of his own. He could bear his being a rascal, but to want an equivalent to his daughter's fortune was wormwood. He sat, therefore, for some minutes employed in the most mortifying speculations, till Sir William attempted to lessen his anxiety.

"I must confess, sir," cried he, "that your present disappointment does not entirely displease me. Your immoderate passion for wealth is now justly punished. But though the young lady cannot be rich; she has still a competence sufficient to give content. Here you see an honest young soldier, who is willing to take her without fortune: they have long loved each other; and for the friendship I bear his father, my interest shall not be wanting in his promotion. Leave, then, that ambition which disappoints you, and for once admit that happiness which courts your acceptance."

"Sir William," replied the old gentleman, "be assured I never yet forced her inclinations, nor will I now. If she still continues to love this young gentleman, let her have him with all my heart. There is still, thank Heaven, some fortune left, and your promise will make it something more. Only let my old friend here (meaning me) give me a promise of settling six thousand pounds upon my girl, if ever he should come to his fortune, and I am ready to give up the first to join them together."

As it now remained with me to make the young couple happy, I readily gave a promise of making the settlement he required, which, to one who had

such little expectations as I was no great favour. We had now, therefore, the satisfaction of seeing them fly into each other's arms in transport.

"After all my misfortunes," cried my son George, "to be thus rewarded! Sure this is more than I could ever have presumed to hope for! To be possessed of all that's good, and after such an interval of pain! My warmest wishes could never rise so high!"

"Yes, my George," returned his lovely bride, "now let the wretch take my fortune; since you are happy without it, so am I. O what an exchange have I made from the basest of men to the dearest, best!—Let him enjoy our fortune; I now can be happy even in indigence."

"And I promise you," cried the 'Squire, with a malicious grin, "that I shall be very happy with what you despise."

"Hold, hold! sir," cried Jenkinson, "there are two words to that bargain. As for that lady's fortune, sir, you shall never touch a single penny of it. Pray, your honour," continued he, to Sir William, "can the 'Squire have this lady's fortune, if he be married to another?"

"How can you make such a simple demand?" replied the baronet, "doubtedly he cannot."

"I am sorry for that," cried Jenkinson; "for as this gentleman and I have been old fellow-sporters, I have a friendship for him. But I must declare, well as I love him, that this contract is not worth a tobacco-stopper for he is married already."

"You lie, like a rascal," returned the 'Squire, who seemed roused by this insult; "I never was legally married to any woman."

"Indeed, begging your honour's pardon," replied the other, "you were; and I hope you will show a proper return of friendship to your own honest Jenkinson, who brings you a wife; and, if the company restrain their curiosity a few minutes, they shall see her."

So saying, he went off with his usual celerity, and left us all unable to form any probable conjecture as to his design.

"Ay, let him go," cried the 'Squire; "whatever else I may have done, I defy him there. I am too old now to be frightened with squibs."

"I am surprised," said the baronet, "what the fellow can intend by this. Some low piece of humour, I suppose."

"Perhaps, sir," replied I, "he may have a more serious meaning. For when we reflect on the various schemes this gentleman has laid to seduce innocence, perhaps some one, more artful than the rest, has been found able to deceive him. When we consider what numbers he has ruined, how many parents now feel with anguish the infamy and the contamination which he has brought into their families, it would not surprise me if some one of them—Amazement! Do I see my lost daughter? Do I hold her? It is, it is my life, my happiness! I thought thee lost, my Olivia, yet still I hold thee—and still thou shalt live to bless me."

The warmest transports of the fondest lover were not greater than mine, when I saw him introduce my child, and held my daughter in my arms, whose silence only spoke her raptures.

"And art thou returned to me, my darling," cried I, "to be my comfort in age?"

"That she is," cried Jenkinson; "and make much of her, for she is your own honourable child, and as honest a woman as any in the whole room, let the other be who she will. And as for you, 'Squire, as sure as you stand there, this young lady is your lawful wedded wife. And to convince you that I speak nothing but truth, here is the license by which you were married together."

So saying, he put the license into the Baronet's hands, who read it, and found it perfect in every respect.

"And now, gentlemen," continued he, "I find you are surprised at all this; but a few words will explain the difficulty. That there 'Squire of renown, for whom I have a great friendship (but that's between ourselves), has often employed me in doing odd little things for him. Among the rest, he commissioned me to procure him a false license and a false priest, in order to deceive this young lady. But as I was very much his friend, what did I do, but went and got a true license and a true priest, and married them both as fast as the cloth could make them. Perhaps you'll think it was generosity that made me do all this: but no, to my shame I confess it, my only design was to keep the license, and let the 'Squire know that I could prove it upon him whenever I thought proper, and to make him come down whenever I wanted money."

A burst of pleasure now seemed to fill the whole apartment; our joy reached even to the common room, where the prisoners themselves sympathized,

"And shook their chains  
In transport and rude harmony."

Happiness was expanded upon every face, and even Olivia's cheek seemed flushed with pleasure. To be thus restored to reputation, to friends and fortune at once, was a rapture sufficient to stop the progress of decay, and restore former health and vivacity. But perhaps among all there was not one who felt sincerer pleasure than I. Still holding the dear loved child in my arms, I asked my heart if these transports were not delusion.

"How could you," cried I, turning to Mr. Jenkinson, "how could you add to my miseries by the story of her death? But it matters not; my pleasure at finding her again is more than a recompense for the pain."

"As to your question," replied Jenkinson, "that is easily answered. I thought the only probable means of freeing you from prison, was by abetting to the 'Squire, and consenting to his marriage with the other young lady. But these you had vowed never to grant, while your daughter was living; there was therefore no other method to bring things to bear, but by persuading you that she was dead. I prevailed on your wife to join in the deceit, and we have not had a fit opportunity of undeceiving you till now."

In the whole assembly there now appeared only two faces that did not glow with transport. Mr. Thornhill's assurance had entirely forsaken him: he now saw the gulf of infamy and want before him, and trembled to take the plunge. He therefore fell on his knees before his uncle, and in a voice of pining misery implored compassion. Sir William was going to spurn him away, but at my request he raised him, and, after pausing a few moments,

"Thy vices, crimes, and ingratitude," cried he, "deserve no tenderness; yet thou shalt not be entirely forsaken—a bare competence shall be supplied to support the wants of life, but not its follies. This young lady, thy wife, shall be put in possession of a third part of that fortune which once was thine, and from her tenderness alone thou art to expect any extraordinary supplies for the future."

He was going to express his gratitude for such kindness in a set speech; but the Baronet prevented him, by bidding him not aggravate his meanness, which was already but too apparent. He ordered him at the same time to be gone, and from all his former domestics to choose one, such as he should think proper, which was all that should be granted, to attend him.

As soon as he left us, Sir William very politely stepped up to his new niece with a smile, and wished her joy. His example was followed by Miss Wilmot and her father. My wife too kissed her daughter with much affection; as, to use her own expression, she was now made an honest woman of. Sophia and Moses followed in turn, and even our benefactor Jenkinson desired to be admitted to that honour. Our satisfaction seemed scarcely capable of increase. Sir William, whose greatest pleasure was in doing good, now looked round with a countenance open as the sun, and saw nothing but joy in the looks of all except that of my daughter Sophia, who, for some reasons we could not comprehend, did not seem perfectly satisfied.

"I think now," cried he, with a smile, "that all the company except one or two seem perfectly happy. There only remains an act of justice for me to do. You are sensible, sir," continued he, turning to me, "of the obligations we both owe Mr. Jenkinson, and it is but just we should both reward him for it. Miss Sophia will, I am sure, make him very happy, and he shall have from me five hundred pounds as her fortune; and upon this I am sure they can live very comfortably together. Come, Miss Sophia, what say you to this match of my making? Will you have him?"

My poor girl seemed almost sinking into her mother's arms at the hideous proposal.

"Have him, sir," cried she, faintly: "no, sir, never!"

"What," cried he again, "not have Mr. Jenkinson, your benefactor, a handsome young fellow, with five hundred pounds, and good expectations?"

"I beg, sir," returned she, scarcely able to speak, "that you'll desist, and not make me so very wretched."

"Was ever such obstinacy known?" cried he again, "to refuse a man whom the family has such infinite obligations to, who has preserved your sister, and who has five hundred pounds! What! not have him?"

"No, sir, never!" replied she, angrily, "I'd sooner die first."

"If that be the case then," cried he, "if you will not have him—I think I must have you myself."

And so saying, he caught her to his breast with ardour.

"My loveliest, my most sensible of girls," cried he, "how could you ever think your own Burchell could deceive you, or that Sir William Thornhill could ever cease to admire a mistress who loved him for himself alone? I have for some years sought for a woman, who, a stranger to my fortune, could think that I had merit as a man. After having tried in vain, even amongst the pert and the ugly, how great at last must be my rapture to have made a conquest over such sense and such heavenly beauty."

Then turning to Jenkinson.

"As I cannot, sir, part with this young lady myself, for she has taken a fancy to the cut of my face, all the recompense I can make is to give you her fortune: and you may call upon my steward to-morrow for five hundred pounds."

Thus we had all our compliments to repeat, and Lady Thornhill underwent the same round of ceremony that her sister had done before. In the meantime, Sir William's gentleman appeared to tell us that the equipages were ready to carry us to the inn, where everything was prepared for our reception. My wife and I led the van, and left those gloomy mansions of sorrow. The generous Baronet ordered forty pounds to be distributed among the prisoners, and Mr. Wilmot, induced by his example, gave half that sum. We were received below by the shouts of the villagers, and I saw and shook by the hand two or three of my honest parishioners, who were among the number. They attended us to our inn, where a sumptuous entertainment was provided, and coarser provisions were distributed in great quantities among the populace.

After supper, as my spirits were exhausted by the alternation of pleasure and pain which they had sustained during the day, I asked permission to withdraw; and leaving the company in the midst of their mirth, as soon as I found myself alone, I poured out my heart in gratitude to the Giver of joy as well as of sorrow, and then slept undisturbed till morning.

## CHAPTER XXXII.

### THE CONCLUSION.

The next morning, as soon as I awoke, I found my eldest son sitting by my bed-side, who came to increase my joy with another turn of fortune in my favour. First having pleased me from the settlement that I had made the day before in his favour, he let me know that my merchant, who had failed in town, was arrested at Antwerp, and there had given up effects to a much greater amount than what was due to his creditors. My boy's gene-

rosity pleased me almost as much as this unlooked-for good fortune; but I had some doubts whether I ought in justice to accept his offer. While I was pondering upon this, Sir William entered the room, to whom I communicated my doubts. His opinion was, that as my son was already possessed of a very affluent fortune by his marriage, I might accept his offer without hesitation. His business, however, was to inform me, that as he had the night before sent for the license, and expected them every hour, he hoped that I would not refuse my assistance in making all the company happy that morning. A footman entered while we were speaking, to tell us that the messenger was returned; and as I was by this time ready, I went down, where I found the whole company as merry as affluence and innocence could make them. However, as they were now preparing for a very solemn ceremony, their laughter entirely displeased me. I told them of the grave, becoming, and sublime deportment they should assume upon this mystical occasion, and read them two homilies, and a thesis of my own composing, in order to prepare them. Yet they still seemed perfectly refractory and ungovernable. Even as we were going along to church, to which I led the way, all gravity had quite forsaken them, and I was often tempted to turn back in indignation. In church, a new dilemma arose, which promised no easy solution. This was, which couple should be married first. My son's bride warmly insisted that Lady Thornhill (that was to be) should take the lead; but this the other refused with equal ardour, protesting she would not be guilty of such rudeness for the world. The argument was supported for some time between both with equal obstinacy and good-breeding. But as I stood all this time with my book ready, I was at last quite tired of the contest; and shutting it,

"I perceive," cried I, "that none of you have a mind to be married, and I think we had as good go back again; for I suppose there will be no business done here to-day."

This at once reduced them to reason. The Baronet and his lady were first married, and then my son and his lovely partner.

I had previously that morning given orders that a coach should be sent for my honest neighbour Flamborough and his family; by which means upon our return to the inn, we had the pleasure of finding the two Miss Flamboroughs alighted before us. Mr. Jenkinson gave his hand to the eldest, and my son Moses led up the other (and I have since found that he has taken a real liking to the girl, and my consent and bounty he shall have whenever he thinks proper to demand them). We were no sooner returned to the inn, but numbers of my parishioners, hearing of my success, came to congratulate me; but among the rest were those who rose to rescue me, and whom I formerly rebuked with such sharpness. I told the story to Sir William, my son-in-law, who went out and reproved them with great severity; but, finding them quite disheartened by his harsh reproof, he gave them half-a-guinea a piece to drink his health, and raise their dejected spirits.

Soon after this we were called to a very genteel entertainment, which was dressed by Mr. Thornhill's cook. And it may not be improper to observe, with respect to that gentleman, that he now resides, in quality of companion, at a relation's house, being very well liked, and seldom sitting at the side-table, except when there is no room at the other; for they make no stranger of him. His time is pretty much taken up in keeping his relation, who is a little melancholy, in spirits, and in learning to blow the French horn. My eldest daughter, however, still remembers him with regret; and she has even told me, though I make a great secret of it, that when he reforms she may be brought to relent. But to return, for I am not apt to digress thus: when were to sit down to dinner our ceremonies were going to be renewed. The question was, whether my eldest daughter, as being a matron, should not sit above the two young brides; but the debate was cut short by my son George, who proposed that the company should sit indiscriminately, every gentleman by his lady. This was received with great approbation by all, except my wife, who, I could perceive, was not perfectly satisfied, as she expected to have had the pleasure of sitting at the head of the table, and carving the meat for all the company. But, notwithstanding this, it is impossible to describe our good-humour. I can't say whether we had more wit among us now than usual; but I am certain we had more laughing, which answered the end as well. One jest I particularly remember: old Mr. Wilmot drinking to Moses, whose head was turned another way, my son replied,

"Madam, I thank you."

Upon which the old gentleman, winking upon the rest of the company, observed, that he was thinking of his mistress: at which jest I thought the two Miss Flamboroughs would have died with laughing. As soon as dinner was over, according to my old custom, I requested that the table might be taken away, to have the pleasure of seeing all my family assembled once more by a cheerful fire-side. My two little ones sat upon each knee, the rest of the company by their partners. I had nothing now on this side of the grave to wish for; all my cares were over; my pleasure was unspeakable. It now only remained, that my gratitude in good fortune should exceed my former submission in adversity.

## END OF THE VICAR OF WAKEFIELD.

THE THREE TEACHERS.—To my question, how he could, at his age, have mastered so many attainments, his reply was, that with his three teachers, "every thing might be learned, common sense alone excepted, the peculiar and rarest gifts of Providence. These three teachers were, *Necessity, Habit, and Time*. At starting in life, *Necessity* told him, if he hoped to live he must labour; *Habit* turned the labour into an indigence; and *Time* gave every man an hour for every thing, unless he chose to yawn it away.—*Salathiel*.

DANIEL DEFOE.

DANIEL DEFOE, or Foe, as the name was sometimes spelt, was born in London in the year 1661, in the parish of St. Giles's, Cripplegate. His father, James Foe, was a butcher; and his grandfather, Daniel, the first person among his ancestors of whom any thing is positively known, was a substantial yeoman, who farmed his own estate at Elton, in Northamptonshire. The old gentleman kept a pack of hounds, which indicated both his wealth and his principles as a royalist; for the Puritans did not allow of the sports of the field, though his grandson (*contra bonos mores*) sometimes indulged in them. In alluding to this circumstance, Defoe says, "I remember my grandfather had a huntsman, who used the same familiarity (that of giving party names to animals) with his dogs; and he had his Roundhead and his Cavalier, his Goring and his Waller; and all the generals in both armies were hounds in his pack, till, the times turning, the old gentleman was fain to scatter his pack, and make them up of more dog-like surnames." It was probably from this relative that Defoe inherited a freehold estate, of which he was not a little vain; and which seems to have influenced his opinions in his theory of the right of popular election, and of the British constitution. His father was a person of a different cast—a rigid Dissenter; and from him his son appears to have imbibed the grounds of his opinions and practice. He was living at an advanced age in 1705. The following curious memorandum, signed by him at this period, throws some light on his character, as well as on that of the times:—"Sarah Pierce lived with us about fifteen or sixteen years since, about two years, and behaved herself so well, that we recommended her to Mr. Cave, that godly minister, which we should not have done, had not her conversation been according to the gospel. From my lodgings, at the Bell, in Broad-street, having lately left my house in Throgmorton-street, October 10, 1705. Witness my hand, JAMES FOE."

Young Defoe was brought up for the ministry, and educated with this view at the Dissenting Academy of Mr. Charles Morton, at Newington Green, where Mr. Samuel Wesley, the father of the celebrated John Wesley, and who afterwards wrote against the Dissenters, was brought up with him. Whether from an unsettled inclination, or his father's inability to supply the necessary expenses, he never finished his education here. He not long after joined in Monmouth's rebellion in 1685, and narrowly escaped being taken prisoner with the rest of the duke's followers. It is supposed he owed his safety to his being a native of London, and his person not being known in the West of England, where that movement chiefly took place. He now applied himself to business, and became a kind of hose factor. He afterward set up a Dutch-tile manufactory at Tibbury, in Essex, and derived great profit from it; but his being sentenced to the pillory for his "Shortest Way with the Dissenters," (one of the truest, ablest, and most reasonable pamphlets ever published), and the heavy fine and imprisonment that followed, involved him in distress and difficulty ever after. He occasionally, indeed, seemed to be emerging from obscurity, and to hold his head above water for a time, (and at one period had built himself a handsome house at Stoke Newington, which is still to be seen there), but this show of prosperity was of short continuance; all of a sudden, we find him immersed in poverty and law as deeply as ever; and it would appear that with all his ability and industry, however he might be fortified to serve his country, or delight mankind, he was not one of those who are born to make their fortunes—either from a careless, imprudent disposition, that squanders away its advantages, or a sanguine and restless temper, that constantly abandons a successful pursuit for some new and gilded project. Defoe took an active and enthusiastic part in the Revolution

of 1688, and was personally known to King William, of whom he was a sort of idolater, and evinced a spirit of knight-errantry in defence of his character and memory whenever it was attacked. He was released from prison (after lying there two years) by the interference and friendship of Harley, who introduced him to Queen Anne, by whom he was employed on several confidential missions, and more particularly in effecting the Union with Scotland. His personal obligations to Harley fettered his politics during the four last years of Queen Anne, and threw a cloud over his popularity in the following reign, but fixed no stain upon his character, except in the insinuations and slanders of his enemies, whether of his own or the opposite party. It was not till after he had retired from the battle, covered with scars and bruises, but without a single trophy or reward, in acknowledgment of his indefatigable and undeniable services in defence of the cause he had all his life espoused—when he was nearly sixty years of age, and struck down by a fit of apoplexy—that he thought of commencing novel writer, for his amusement and subsistence. The most popular of his novels, "Robinson Crusoe," was published in the year 1719, and he poured others from his pen, for the remaining ten or twelve years of his life, as fast, and with as little apparent effort, as he had formerly done lampoons, reviews, and pamphlets.

To say nothing of the incessant war he waged with crying abuses, with priestcraft and tyranny, and the straight line of consistency and principle which he followed from the beginning to the end of his career—he was a powerful though unpolished satirist in verse, (as his "True-born Englishman" sufficiently proves);—was master of an admirable prose style;—in his "Review," (a periodical paper which was published three times a week for nine years together), led the way to that class of essay-writing, and those dramatic sketches of common life and manners, which were afterwards so happily perfected by Steele and Addison;—in his "Essays on Trade," anticipated many of those broad and liberal principles which are regarded as modern discoveries;—in his moral essays, and some of his novels, undoubtedly set the example of that minute description and perplexing casuistry, of which Richardson so successfully availed himself;—was among the first to advocate the intellectual equality, and the necessity of improvements in the education of women;—suggested the project of saving banks, and an asylum for idiots;—among other notable services and claims to attention, by his thoughts on the best mode of watching and lighting the streets of the metropolis, might be considered as the author of the modern system of police; and even in party matters, and the heats and rancorous differences of jarring sects, generally seized on that point of view which displayed most moderation and good sense, and in his favourite conclusions and arguments, was half a century before his contemporaries, who, for that reason, made common cause against him.

Notwithstanding the number and success of his publications, Defoe, we lament to add, had to struggle with pecuniary difficulties, heightened by domestic afflictions. To the last, when on the brink of death, he was on the verge of a jail; and the ingratitude and ill-behaviour of his son in embezzling some property which Defoe had made over for the benefit of his sisters and mother, completed his distress. He was supported in these painful circumstances by the assistance and advice of Mr. Baker, who had married his youngest daughter, Sophia.

"From this scene of sorrow," says Mr. Wilson, "we must now hasten to an event, that dropped before it the dark curtain of time. Having received a wound that was incurable, there is too much reason to fear that the anguish arising from it sunk deep in his spirits, and hastened the crisis that, in a few months, brought his troubles to a final close. The time of his death has been variously stated; but it took place upon the 24th of April, 1731, when he was about seventy years of age, having been born in the year 1661. Cibber and others state that he died at his house at Islington; but this is incorrect. The parish of St. Giles, Cripplegate, in which he drew his first breath, was also destined to receive his last. This we learn from the parish register, which has been searched for the purpose; and farther informs us, that he went off in a lethargy. He was buried from thence, upon the 26th of April, in Tindal's burying-ground, now most known by the name of Bunhill-fields. The entry in the register, written probably by some ignorant person, who made a strange blunder of his name, is as follows:—'1731. April 26. Mr. Dubow, Cripplegate.' His wife did not long survive him."

#### WONDERFUL FORCE OF HABIT; OR, THE POWER OF MUSCULAR MOTION.

"It certainly is curious," said the first-lieutenant, assuming much gravity of countenance, "and happened when I was junior luff of the old *Sharknose*. We were running into Rio Janeiro man-o'-war fashion, with a pennant as long as a purser's account at the mast-head, and the spanking ensign hoisted at the gaff end, with a fly that would have swept all the sheep off the Isle of Wight. Away we gallop'd along, when a shot from Santa Cruz, the three-decked battery of the entrance, came slap into our bows. 'Tell 'em we're pretty well, thankye,' shouted the skipper; and our jolly first, who took his meaning literally, pointed the fokstle gun, clapped the match to the priming, and off went the messenger, which struck the sentry, who was pacing his post, right between the shoulders, and whipt off his head as clean as you would snap a carrot. He was a stout made, powerful-looking man, and by sheer muscular motion, as I said before, his head flew up from his body at least a fathom and a half, and actually descended upon the point of his bayonet, where it stuck fast, and the unfortunate fellow walked the whole length of the rampart in that way; nor was it till he had got to the turn end was steering round to come back again, that he discovered the loss of his head, when, according to the most approved practice in similar surgical cases, he fell to the ground. It was sheer muscular motion, gentlemen,—sheer muscular motion."

# THE HOME COMPANION

## IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS;

BEING

A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.

PRICE ONE PENNY. ALWAYS ON SALE.

WEEKLY ISSUE OF THE FAMILY FRIEND.

On SATURDAY, the 3rd of JULY, was published No. I. of the NEW SERIES of THE FAMILY FRIEND; with which Number will be presented a Beautiful STEEL ENGRAVING, by C. BULLS, after a Painting by W. COLLINS, R.A., entitled

"PARTING WITH A LITTLE FAMILY FRIEND."

This number will also have a new Title-page, by FRANKLIN. There will be no alteration in the Size, Shape or Price of "THE FRIEND," its present neat and economical form being much approved. For the convenience of those who have not taken in or completed the OLD SERIES, it is suggested that Orders should be given to Booksellers to supply

1st. THE WHOLE SERIES, BOUND, PRICE 15s.; OR

2nd. A VOLUME MONTHLY, PRICE 2s. 6d.; OR

3rd. THREE NUMBERS MONTHLY, PRICE 2s. EACH.

By this arrangement, Subscribers may become possessed of the OLD SERIES by a method adapted to their own convenience. Back Numbers and Volumes, for completing Sets, should be ordered immediately.

London: HOULSTON and STONEMAN, 65, PATERNOSTER-ROW; and all Booksellers.

### DEATH.

(Continued from page 587.)

We cannot wonder that the ancients should believe, "Whom the gods love, die young," and are ready to say, with Southey himself, subsequently, like poor Swift, a melancholy example of the truth of his poetical exclamation,

"They who reach  
Gray hairs die piecemeal."

Sacred history informs us, that, in the infancy of the world, the physiological tendency to death was far less urgently and early developed than it is now. When the change took place is not stated; if it occurred gradually, the downward progress has been long since arrested. All records make the journey of life, from the time of Job and the early patriarchs, much the same as the pilgrim of to-day is destined to travel. Threescore and ten was, when Cheops built his pyramid, as it is now, a long life. Legends, antique and modern, do indeed tell us of tribes that, like Riley's Arabs and the serfs of Middle Russia, and the Ashantees and other Africans, live two or three centuries; but these are travellers' stories, unconfirmed. The various statistical tables that have been in modern times made up from materials more or less authentic, and the several inquiries into the general subject of longevity, seem to lead to the gratifying conclusion that there is rather an increase of the average or mean duration of civilized life. In 1806, Duvillard fixed the average duration of life in France at twenty-eight years; in 1846, Bousquet estimates it at thirty-three. Mallet calculated that the average life of the Genevese had extended ten years in three generations. In Farr's fifth report (for 1844), the "probable duration," the "expectation of life" in England, is placed above forty; a great improvement within half a century. It is curious, if it be true, that the extreme term seems to lessen as the average thus increases. Mallet is led to this opinion from the fact, among others, that in Geneva, coincident with the generally favourable change above-mentioned, there has not been a single centenarian within twenty-seven years; such instances of longevity having been formerly no rarer there than elsewhere.

Birds and fishes are said to be the longest lived of animals. For the longevity of the latter, ascertained in fish-ponds, Bacon gives the whimsical reason that, in the moist element which surrounds them, they are protected from exsiccation of the vital juices, and thus preserved. This idea corresponds very well with the stories told of the uncalculated ages of some of the inhabitants of the bayous of Louisiana, and of the happy ignorance of that region, where a traveller once found a withered and antique corpse—so goes the tale—sitting propped in an arm-chair among his posterity, who could not comprehend why he slept so long and so soundly.

But the Hollanders and Burmese do not live especially long; and the Arab, always lean and wiry, leads a protracted life amidst his arid sands. Nor can we thus account for the lengthened age of the crow, the raven, and the eagle, which are said to hold out for two or three centuries.

There is the same difference among shrubs and trees, of which some are annual, some of still more brief existence, and some almost eternal. The venerable oak bids defiance to the storms of a thousand winters; and the Indian baobab is set down as a contemporary at least of the Tower of Babel,

having probably braved, like the more transient, though long-enduring olive, the very waters of the great deluge.

It will be delightful to know—will Science ever discover for us—what constitutes the difference thus impressed upon the long and short-lived races of the organized creation? Why must the fragrant shrub or gorgeous flower-plant die immediately after performing its function of continuing the species, and the pretty ephemeron languish into non-existence just as it flutters through its genial hour of love, and grace, and enjoyment; while the banyan, and the chestnut, the tortoise, the vulture, and the carp, formed of the same primary material elements, and subsisting upon the very same resources of nutrition and supply, outlast them so indefinitely?

Death from old age, from natural decay—usually spoken of as death without disease—is most improperly termed by writers an euthanasia. Alas! how far otherwise is the truth! Old age itself is, with the rarest exceptions, exceptions which I have never had the good fortune to meet with anywhere—old age itself is a protracted and terrible disease.

During its whole progress, Death is making gradual encroachments upon the domain of life. Function after function undergoes impairment, and is less and less perfectly carried on, while organ after organ suffers atrophy and other changes, unfitting it for the performance of offices to which it was originally designed. I will not go over the gloomy detail of the observed modifications occurring in every part of the frame, now a noble ruin, majestic even in decay. The lungs admit and vivify less blood; the heart often diminishes in size, and always acts more slowly, and the arteries frequently ossify; nutrition is impeded, and assimilation deteriorated; senile marasmus follows, "and the seventh age falls into the lean and shaggy pantaloon;" and last, and worst of all, the brain, and indeed the whole nervous tissue, shrink in size and weight, undergoing at the same time more or less change of structure and composition. As the skull cannot contract on its contents, the shrinking of the brain occasions a great increase of the fluid within the subarachnoid space. Communication with the outer world, now about to be cut off entirely, becomes limited and less intimate. The eyes grow dim; the ear loses its aptitude for harmony, and soon ceases to appreciate sound; odours yield no fragrance; flavours affect not the indifferent palate; and even the touch appreciates only harsh and coarse impressions. The locomotive power is lost; the capillaries refuse to circulate the dark, thick blood; the extremities retain no longer their vital warmth; the breathing slow and oppressed, more and more difficult, at last terminates for ever with a deep expiration. This tedious process is rarely accomplished in the manner indicated without interruption; it is usually, nay, as far as my experience has gone, always brought to an abrupt close by the supervention of some positive malady. In our climate this is, in the larger proportion, an affection of the respiratory apparatus, bronchitis, or pneumonia. It will, of course, vary with the original or constitutional predisposition of the individual, and somewhat in relation to locality and season. Many aged persons die of apoplexy and its kindred cerebral maladies; not a few of diarrhoea; a winter epidemic of influenza is apt to be fatal to them in large numbers everywhere.

When we regard death pathologically, that is, as the result of violence and destructive disease, it is evident that the phenomena presented will vary relatively to the contingencies effective in producing it. It is obviously out of place here to recount them, forming as they do a vast collection of instructive facts, the basis indeed of an almost separate science, Morbid Anatomy.

There are many of the phenomena of death, however, that are common to all forms and modes of death, or are rarely wanting; these are highly interesting objects of study in themselves, and assume a still greater importance when we consider them in the light of signs or tokens of the extinction of life. It seems strange that it has been found difficult to agree upon any such signs short of molecular change or putrefactive decomposition, that shall be pronounced absolutely certain, and calculated entirely to relieve us from the horrible chance of premature interment of a body yet living. The flaccidity of the cornea is dwelt on by some; others trust rather to the *rigor mortis*, the rigid stiffness of the limbs and trunk supervening upon the cold relaxation which attends generally the last moments. This rigidity is not understood or explained satisfactorily. It is possible that, as Matteucci has proved, the changes in all the tissues, chiefly chemical or chemico-vital, are the source from whence is generated the "nervous force" during life; so, after death, the similar changes, now purely chemical, may, for a brief period, continue to generate the same or a similar force, which is destined to expand itself simply upon the muscular fibres, in disposing them to contract. There is a vague analogy here with the effect of galvanism upon bodies recently dead, which derives some little force from the fact that the bodies least disposed to respond to the stimulus of galvanism are those which form the exceptions to the almost universal exhibition of rigidity—those, namely, which have been killed by lightning, and by blows on the pit of the stomach. Some poisons, too, leave the corpse quite flaccid and flexible.

The researches of Dr. Bennett Dowler, of New Orleans, have presented us with results profoundly impressive, startling, and instructive. He has, with almost unequalled zeal, availed himself of opportunities of performing autopsy at a period following death of unprecedented promptness, that is, within a few minutes after the last struggle, and employed them with an intelligent curiosity and to admirable purpose.

I have said that, in physiological death, the natural decay of advancing age, there is a gradual encroachment of death upon life; so here, in premature death from violent diseases, the contrasted analogy is offered of life maintaining its ground far amidst the destructive changes of death. Thus, in cholera asphyxia, the body, for an indefinite period after all other signs of life have ceased, is agitated by horrid spasms, and violently contorted. We learn from Dr. Dowler that it is not only in these frightful manifestations, and in the cold stiffness of the familiar *rigor mortis*, that we are to track this

tenacious muscular contraction as the last vital sign, but that in all, or almost all cases we shall find it lingering, not in the heart, anciently considered in its right ventricle the *ultimum moriens*, nor in any other internal fibres, but in the muscles of the limbs, the biceps most obstinately. This muscle will contract, even after the arm with the scapula has been torn from the trunk, upon receiving a sharp blow, so as to raise the forearm from the table, to a right angle with the upper arm.

We also learn from him the curious fact that the generation of animal heat, which physiologists have chosen to point out as a function most purely vital, does not cease upon the supervention of obvious or apparent death. There is, he tells us, a steady development for some time of what he terms "post-mortem calorificity," by which the heat is carried not only above the natural or normal standard, but to a height rarely equalled in the most sthenic or inflammatory forms of disease. He has seen it reach  $115^{\circ}$  of Fahr., higher than Hunter ever met with it, in his experiments made for the purpose of exciting it; higher than it has been noted even in scarlatina,  $112^{\circ}$ . I think, being the ultimate limit observed in that disease of pungent external heat; and far beyond the natural heat of the central parts of the healthy body, which is  $97^{\circ}$  or  $98^{\circ}$ . Nor is it near the centre, or at the trunk; that the post-mortem warmth is greatest, but, for some unknown reason, at the inner part of the thigh, about the lower margin of its upper third. I scarcely know any fact in nature more incomprehensible or inexplicable than this. We were surprised when it was first told us, that, in the Asiatic pestilence, the body of the livid victim was often colder before than after death; but this I think is easily understood. The profluvia of cholera, and its profound capillary stagnation, concur in carrying off all the heat generated, and in preventing or impeding the development of animal heat. No vital actions, no changes necessary to the production of caloric, can proceed without the minute circulation which has been checked by the asphyxiated condition of the subject, while the fluids leave the body through every outlet, and evaporation chills the whole exposed and relaxed surface. Yet the lingering influence of a scarcely perceptible vitality prevents the purely chemical changes of putrefactive decomposition, which commence instantly upon the extinction of this feeble resistance, and caloric is evolved by the processes of ordinary decay.

In the admirable liturgy of the churches of England and of Rome, there is a fervent prayer for protection against "battle, murder, and sudden death." From death uncontrived, unarranged, unprepared for, may Heaven in mercy deliver us! But if ever ready, as we should be for the inevitable event, the most kindly mode of infliction must surely be that which is most prompt and brief. To die unconsciously, as in sleep, or by apoplexy, or lightning, or overwhelming violence, as in the catastrophe of the Princeton, this is the true Euthanasia. "Cæsar," says Suetonius, "finem vitæ commodissimum, repentinum inopinatumque prætulit." Montaigne who quotes this, renders it, "La moins préméditée et la plus courte." "Mortes repentina," reasons Pliny, "hoc est summa vite felicitas," "Emori nolo," exclaims Cicero, "sed me esse mortuum nihil estimo."

Sufferers by various modes of execution were often, in the good old times of our merciless ancestors, denied as long as possible the privilege of dying, and the Indians of North America utter a scalding howl of disappointment when a victim thus prematurely escapes from their ingenious malignity. The *coup de grace* was a boon unspeakably desired by the poor wretch broken on the wheel, or stretched upon the accursed cross, and forced to linger on with mangled and bleeding limbs, amidst all the cruel torments of thirst and fever, through hours and even days that must have seemed interminable.

The progress of civilization, and a more enlightened humanity, have put an end to all these atrocities, and substituted the gallows, the garrote, and the guillotine, which inflict deaths so sudden that many have questioned whether they necessarily imply any consciousness of physical suffering. These are, however, by no means, the most instantaneous modes of putting an end to life and its manifestations. In the hanged, as in the drowned and otherwise suffocated, there is a period of uncertainty, during which the subject is, as we know recoverable; we dare not pronounce him insensible. He who has seen an ox "pithed" in the slaughter-house, or a game cock in all the flush and excitement of battle "gassed" in the occiput or back of the neck, will contrast the immediate stiffness and relaxation of the flaccid body with the prolonged and convulsive struggles of the decapitated bird, with a sort of curious anxiety to know how long and in what degree sensibility may linger in the head and in the trunk when severed by the sharp axe. The history of the guillotine offers many incidents calculated to throw a doubt on the subject, and the inquiries of Seguret and Sue seem to prove the existence of post-mortem passion and emotion.

Among the promptest modes of extinguishing life is the electric fluid. A flash of lightning will destroy the coagulability of the blood, as well as the contractility of the muscular fibre; the dead body remaining flexible. A blow on the epigastrium kills instantly, with the same results. Soldiers fall sometimes in battle without a wound; the impulse of a cannon-ball passing near the pit of the stomach is here supposed to be the cause of death. The effect in these two last instances is ascribed by some to "a shock given to the semilunar ganglion, and the communication of the impression to the heart;" but this is insufficient to account either for the quickness of the occurrence, or the peculiar changes impressed upon the solids and fluids. Others are of opinion that the whole set of respiratory nerves is paralyzed through the violent shock given to the phrenic, "thus shutting up," as one writer expresses it, "the fountain of all the sympathetic actions of the system." This hypothesis is liable also to the objections urged above; and we must acknowledge the suddenness and character of the results described to be as yet unexplained, and in the present state of our knowledge altogether inexplicable.

On the field of battle, it has been observed that the countenances of those killed by gun-shot wounds are usually placid; while those who perish by the sword, bayonet, pike, or lance, offer viages distorted by pain, or by emotions of anger or indignation. Persons differ much among themselves as to the amount and kind of suffering they occasion. We know of none which are absolutely free from the risk of inflicting severe distress. Prussic acid gives perhaps the briefest death which we have occasion to observe. I have seen it, as Taylor states, kill an animal, when applied to the tongue or the eye, almost before the hand which offered it could be removed. Yet in the case of Tawell, tried for the murder of Sarah Hart, by this means, there was abundant testimony that many, on taking it, had time to utter a loud and peculiar scream of anguish; and in a successful attempt at suicide made by a physician of New York city, we have a history of appalling suffering and violent convulsion. So I have seen in suicide with opium, which generally gives an easy and soporose death resembling that of apoplexy, one or two instances in which there were very great and long-protracted pain and sickness.

Medical writers have agreed, very generally, that "the death-struggle," the agony of death, as it has long been termed, is not what it appears, a stage of suffering. I am not satisfied—I say it reluctantly—I am not satisfied with these consolatory views, so ingeniously and plausibly advocated by Wilson, Philip, and Symonds, Hufeland, and Hoffman. I would they were true! But all the symptoms look like tokens or expressions of distress; we may hope that they are not always such in reality; but how can this be proved? Those who, having seemed to die, recovered afterwards and declared that they had undergone no pain, do not convince me of the fact any more than the somnambulist, who upon awaking, assures me that he has not dreamed; at all, after a whole night of action, and connected thought, and effected purpose. His memory retains no traces of the questionable past; like that of the epileptic, who forgets the whole train of events, and is astonished after a horrible fit to find his tongue bitten, and his face and limbs bruised and swollen.

Nay, some have proceeded to the paradoxical extreme of suggesting that certain modes of death are attended with pleasurable sensations, as for instance, hanging; and a late reviewer, who regards this sombre topic with a most cheerful eye, gives us instances which he considers in point. I have seen many men hung, forty at least—a strangely large number. In all, there were evidences of suffering, as far as could be judged by external appearances. It once happened that a certain set were slowly executed, owing to a maladroit arrangement of the scaffold upon which they stood, which gave way only at one end. The struggles of such as were half supported were dreadful, and those of them who could speak earnestly begged that their agonies should be put an end to.

In former, nay, even in recent times, we are told that pirates and robbers have resorted to half-hanging to extort confession as to hidden treasures. Is it possible that they can have so much mistaken the means they employ as thus to use pleasurable appliances for the purposes of torture?

The mistake of most reasoners on the subject, Winslow and Hufeland more especially, consists in this, that they fix their attention exclusively upon the final moments of dissolution. But the act of dying may be in disease, as we know it to be in many modes of violence, impalement for example, or crucifixion, very variously protracted and progressive. "Insensibly as we enter life," says Hufeland, "equally insensibly do we leave it. Man can have no sensation of dying." Here the insensibility of death completed, that is, of the dead body, is strangely predicated of the moribund while still living. This transitive condition, to use the graphic language of the American writer whom we have already more than once quoted, is "a terra incognita, where vitality, extinguished in some tissues, smouldering in others, and disappearing gradually from all, resembles the region of a volcano, whose eruptions subsiding, leave the surface covered with cinders and ashes, concealing the rents and lesions which have on all sides scarred and disfigured the face of nature."

Besides this, we have no right to assume, as Hufeland has here done, the insensibility of the child at birth. It is subject to disease before birth; as soon as it draws a breath, it utters loud cries and sobs. To pronounce all its actions "mechanical, instinctive, necessary, automatic," in fact, is a very easy solution of the question; but I think neither rational nor conclusive. If you prick it or burn it, you regard its cries as proving sensibility to pain; but on the application of air to its delicate and hitherto protected skin, and the distension of its hitherto quiet lung, the same cry you say is mechanical and inexpressive. So Leibnitz explained, to his own satisfaction, the struggles and moans of the lower animals as automatic, being embarrassed with metaphysical and moral difficulties on the score of their intelligence and liability to suffering. But no one now espouses his theory, and we must accept, whether we can explain them or not, the facts that the lower animals are liable to pain during their entire existence, and that the heritage of their master is, from and during birth to the last moment of languishing vitality, a sad legacy of woe and suffering.

But I recoil from further discussion of a topic so full of awe and solemn interest, and conclude this prosaic "Thanatopsis" with the Miltonian strain of Bryant:

"So live, that, when thy summons comes to join  
The innumerable caravan, that moves  
To the pale realm of shade, where each shall take  
His chamber in the silent halls of death,  
Thou go not like the quarry slave at night,  
Scourged to his dungeon; but, sustained and soothed  
By an unfaltering trust, approach thy grave,  
Like one who wraps the drapery of his couch  
About him, and lies down to pleasant dreams."

## ONWARD!

**A "COMMERCIAL CREDIT MUTUAL ASSURANCE SOCIETY."**—A society for mutual assurance against bad debts is now in operation in the City. It is said to be based on principles similar to those which have already been in operation for some years in Paris. The society gives to the assured the full benefit of all the premiums; thus differing from a proprietary society raising a capital and giving to shareholders, instead of the assured, all the profit arising therefrom.

**REVOLVING WARDROBE.**—This contrivance has been made by Mr. Johnston, of Gloucester. It can be made to contain any number of hooks, from twelve upwards, on each of which a dress of any kind can be hung: by pulling a cord the whole of these revolve, so that the particular dress required can be at once removed without disturbing the others. Underneath is a space for hat or handboxes, &c. which also revolves with the hooks. This seems to be just an adaptation of the idea of a revolving desk for business papers, &c., such as appeared at the International Exhibition.

**THE AUSTRALIAN GOLD DIGGINGS.**—The Council of the Society of Arts have appointed a deputation to wait upon the Director of the Government School of Mines with a request that the professors of that School would undertake a series of lectures on the gold formations of Australia, and the modes of separating and distinguishing the precious metals. These lectures are intended to serve as the medium of conveying instruction to those emigrating to Australia. The proposition, we understand, has been fully entertained by the professors, and arrangements are being made for at once carrying into full effect the suggestion of the Society of Arts.

**THE METROPOLITAN SOCIETY FOR IMPROVING THE DWELLINGS OF THE INDUSTRIOUS CLASSES.**—The new Report of this Society shows that it is gradually working itself into a safe financial position. The dividend for the past year is announced at three per cent. When it is considered that the managers of this Society had a new experiment to make—old prejudices to overcome—many interests to reconcile,—that they had a considerable machinery to get together—novel forms of dwellings to study—a population to introduce to superior habits,—it will appear of hopeful augury that the dividend should already be so large.

**STREET ORDERLIES.**—We are glad to observe the extension of a good and useful social scheme, in the employment of some of the boys of the Ragged School Shoeblack Brigade as street messengers. At the Stock Exchange, the Duke of Wellington's statue in the city, Leicester-square, and the Strand opposite Hungerford-market, these young messengers have begun to ply their vocation with the red livery and badge of the Society, which is answerable to the amount of £3 for the safe carriage of booked parcels. The industrial department of the Ragged School Union is conducted with much good sense as well as benevolence; and we hope this new scheme will meet with the encouragement which it deserves.

**PROGRESS IN IRELAND.**—We are glad to find that a stream of visitors is setting in towards the sister island; and the reports from some who have been there are likely to increase it. They are unanimous in their admiration of the scenery, and acknowledgement of the cordiality they found. It is said that Mr. Dargan has made an offer to the Committee of the Royal Dublin Society to expend £10,000, or, if necessary, £20,000, in the erection of a building in connection with, or upon, their grounds, for the purposes of a grand National Exhibition, the profits incidental to the admission of the public to be derived by him, and the articles and products exhibited to comprise those of native growth, cultivation, and workmanship, and, in addition to these, such foreign products as may be available and productive in Ireland. Those who have seen the Crystal Palace may be indisposed to look at anything Irish: indeed this feeling has prevailed more with Irishmen than with those of England. There are those who sneer at the products of the land that gave them birth, and from which they derive their means of existence, and forget that it is less laudable to patronise and praise the manufactures of a prosperous nation, than to prop up, encourage and sustain the infantine and struggling arts and manufactures of their own country.

**RE-ERECTION OF THE CRYSTAL PALACE AT SYDENHAM.**—The astonishing project of re-erecting the Crystal Palace at Sydenham, on a much grander scale than before, is no longer a "castle in the air," but a substantial verity. A Company is formed, with means to carry out the scheme in its fullest integrity; a sum of £400,000 is lodged in cash at the bankers, to begin with; and the Brighton Railway Directors have engaged to lay down a network of lines to and from everywhere, for the conveyance hither and thither of all sorts of visitors at the least possible trouble and expense. The services of the original Crystal Palace architect, builder, and decorator being secured, the men, the money, and the materials are now provided; and it is confidently announced that this new wonder of the world will be opened to the public on the 1st May, 1853. The roof of the building is to be arched throughout, and there are to be three transepts. The two outer transepts are to be of the same size as the original transept, but the centre one is to be as high again—high enough to take in the monument on Fish-street-hill,—and there is to be a fountain beneath it, throwing water to a height exceeding that of the Nelson column. The interior is to be divided into temperate and tropical conditions of climate and vegetation; and some of the principal countries of the world—China, Egypt, Nineveh, &c.—are to be represented with a reality never before conceived. We should like to have seen it erected along the river front of Battersea Park, but as its enormous proportions will render it a conspicuous object for many miles round, and there are to be abundant facilities for getting to it, we see no reason to object to the site that has been fixed upon.

## POETICAL QUOTATIONS.

## BIRTHDAY.

Alas! this day  
First gave me birth, and (which is strange to tell)  
The fates e'er since, as watching its return,  
Have caught it as it flew, and mark'd it deep  
With something great; extremes of good or ill.—*Young's Busiris.*

If any white-wing'd power above  
My joys and griefs survey,  
The day when thou wert born, my love,—  
He surely bless'd that day.  
And duly shall my raptur'd song,  
And gladly shall my eyes  
Still bless this day's return, so long  
As thou shalt see it rise.—*Campbell.*

My birthday! O, beloved mother!  
My heart is with thee o'er the seas,  
I did not think to count another,  
Before I wept upon thy knees.—*Willis.*

## BLINDNESS.

Where am I now?  
I thought the way to death had been so broad,  
Tho' I were blind, I could not miss the road.  
Death's lodgings such perpetual darkness have,  
And I seem nothing but a walking grave.  
*Sir Robert Howard's Vestal Virgin.*

These eyes, though clear,  
To outward view, of blemish or of spot,  
Bereft of light, their seeing have forgot;  
Nor to their idle orbs doth sight appear  
Of sun, or moon, or star, throughout the year,  
Or man, or woman. Yet I argue not  
Against heaven's hand or will, nor bate a jot  
Of heart or hope; but still bear up and steer  
Right onward. What supports me, dost thou ask?  
The conscience friend, to have lost them overplied  
In liberty's defence, my noble task,  
Of which all Europe rings from side to side.  
This might lead me through the world's vain mask  
Content, though blind, had I no better guide.—*Milton.*

O loss of sight, of thee I most complain!  
Blind among enemies, O worse than chains,  
Dungeons, or beggary, or decrepid age!  
Light, the prime work of God, to me's extinct,  
And all her various objects of delight  
Annul'd which might in part my grief have eased.  
*Milton's Samson Agonistes.*

Ye have a world of light,  
Where love in the loved rejoices;  
But the blind man's home is the house of night,  
And its beings are empty voices.—*Bulwer.*

I ken the night and day,  
For all ye may believe,  
And often in my spirit lies  
A clear light as of mid-day skies;  
And splendours on my vision rise,  
Like gorgeous hues of eve.—*Mary Howitt.*

## BLUNTNESS.

This is some fellow,  
Who, having been prais'd for bluntness, doth affect  
A saucy roughness, and constrains the garb,  
Quite from his nature: he can't flatter, he!—  
An honest mind and plain,—he must speak truth;  
An they will take it, so; if not, he's plain.  
These kind of knaves I know, which in this plainness  
Harbour more craft, and far corrupter ends,  
Than twenty silly ducking observants,  
That stretch their duty nicely.—*Shakespeare's Lear.*

This rudeness is a sauce to his good wit,  
Which gives men stomach to digest his words  
With better appetite.—*Shakespeare's Julius Caesar.*

I have neither wit, nor words, nor worth,  
Nor actions, nor utterance, nor the power of speech,  
To stir men's blood: I only speak right on.—*Ibid.*

CHARADE.

My *first* are off, and swift pursue  
The deer that bounds the long grass through.  
My *second* marks the trusty steward,  
Who, when that deer is well secured,  
To cheer his lord's far-distant friend  
By venison feasts, the deer will send.  
See with what glee the kind old soul,  
To send the gift, constructs my *whole*.

PARLOUR PASTIME.

Optical Illusion.—Augmentation.

TAKE a large glass of a conical figure, that is, narrow at bottom and wide at top, similar to an ale or cider glass, in which put a half sovereign (or other piece), and fill the glass three-fourths full of water; place a piece of paper on it, and then a plate; invert it quickly, that the water may not get out; by looking sideways at the glass you will perceive a sovereign at the bottom, and higher up the half one, floating near the surface. This phenomenon arises from seeing the piece through the conical surface of the water at the side of the glass, and through the flat surface at the top of the water, at the same time; for the conical surface dilates the rays, and makes the piece appear larger; but by the flat surface the rays are only refracted, by which the piece is seen higher up in the glass, but of its natural size. That this is the cause will be further evident by filling the glass with water; there being no surface at the top to refract, the large piece only is visible.

RIDDLE.

I'm with the humble and the haughty,  
Moth and monarch feel my power;  
Earth could never do without me,  
I'm in the sunshine and the shower.  
Would you know my occupation?  
'Tis I who help to make your thread  
Should you seek my habitation  
I think you'll find me in your head.—F. T. M.

ARITHMETICAL QUESTION.

WHEN wheat was 8s. a bushel and rye 5s., a man wished to fill his sack with a mixture of wheat and rye for the money he had in his purse. If he bought 15 bushels of wheat, and laid out the remainder of his money in rye, his sack would not be full by 3 bushels; but if he bought 15 bushels of rye, and then filled his sack with wheat, he would have 15s. left. How much of each kind must he purchase to lay out all his money and fill his sack?—H. BENSON.

TRANSFIGURED PLAYING CARDS.

THE SEVEN OF HEARTS.—HEARTS SET UPON VARIOUS OBJECTS.

THE NAMES OF TWENTY CELEBRATED ENGLISH POETS.

1. Three-fourths of a machine, and a weight.
2. A metal and its artificer.
3. The gipsy's home, and a domestic convenience.
4. A pronoun feminine, and part of a farmer's wealth.
5. A domestic animal, and half an individual.
6. Idle things, and true merit.
7. What all have been, or still are.
8. To use cruelly, and to fasten together.
9. A pronoun masculine, and an improper plural.
10. Two-fifths of an amphibious creature, and a path.
11. A merry old soul, and the top of a mountain.
12. The home of thousands, and two-thirds of a priceless treasure.
13. What the Thames never was, and a robber's abode.
14. Two-thirds of a Christian name, and a near relation.
15. A cage in the Zoological-gardens, and a nice joint.
16. Half a nut, and half a visitor.
17. A friend at the breakfast table, and half a machine.
18. The ornament of summer, and part of a landscape.
19. An unpleasant wild fruit, and an auxiliary verb.
20. A painful sore, and a great multiplier.—J. J. REYNOLDS.

REBUS.

Two fair round legs I have of my own,  
Yet I never can manage to go alone;  
If you cut off my tail I am nearly the same,  
Only lighter in body and shorter in name;  
But cut off my head and you then will degrade me  
From that which I am to the spirit that made me.  
I am spelt with four letters, now take out the third,  
What remains is a trap for a mouse or a bird.

ANSWERS TO THE PASTIME OF LAST EVENING.

PICTORIAL CHARADE.—LAND-LORD.

REBUSES.—1. TAP, APE, TAP, PEA, PATE. 2. The Letter I.

ENIGMAS.—1. Vienna. 2. Madrid. 3. Dublin. 4. Paris. 5. Amsterdam. 6. Warsaw. 7. London. 8. Rome. 9. Athens. 10. Constantinople. 11. St. Petersburg. 12. Edinburgh. 13. Christiana. 14. Berlin. 15. Stockholm. 16. Bern. 17. Brussels. 18. Lisbon. 19. Copenhagen. 20. Naples.—W. W.

## OUR CORNER CUPBOARD!

DR. R—maintained that poverty was a virtue. "That," replied Mr. Canning, "is literally speaking a virtue of necessity."

Give every man thine ear, but few thy voice;  
Take each man's censure, but reserve thy judgment.

TIME, with all its celerity, moves slowly on to him whose whole employment is to watch its flight.

THERE is no "simple interest" in Knowledge. Whatever fund you have in that bank, go on increasing, by interest upon interest, till the bank fails.

"See thou thy credit keep"—'tis quickly gone;  
'Tis gain'd by many actions, but 'tis lost by one."

"I wish you would pay a little attention, sir," exclaimed a stage-manager to a careless actor. "Well, sir, so I am paying as little as I can," was the calm reply.

A COMPLETE miser is said to be a happy man; but Dr. Johnson remarks that a man who spends and saves is the happiest man, because he has both enjoyments.

A BIOGRAPHY of Robespierre, which appeared in an Irish paper, concludes in the following ludicrous manner:—"This extraordinary man left no children behind him except his brother, who was killed at the same time."

A YANKEE editor remarked, in a polemical article, that though he would not call his opponent a liar, he must say, that if the gentleman had intended to state what was utterly false, he had been remarkably successful in his attempt.

"IMITATORS are but a servile kind of cattle," says the poet; "or at best the keepers of cattle for other men; they have nothing which is properly their own; that is a sufficient mortification for me, while I am translating Virgil."

## FOR A WATCH-CASE.

LIFE'S but a transient span:  
Then, with a fervent prayer each night,  
Wind up the days, and set them right,  
Vain mortal man!

THEODORE HOOK being told of the marriage of a political opponent, exclaimed, "I am very glad, indeed, to hear it." Then suddenly added, with a feeling of compassionate forgiveness, "and yet I don't see why I should, poor fellow, for he never did me much harm."

A LADY made a Christmas present to an old servant a few days before it might have been expected. It was gratefully received, with the following Hibernian expression of thanks: "I am very much obliged to you, indeed, ma'am; and wish you many returns of the season before it comes!"

JOE MILLER going one day along the Strand, an impudent Derby captain came swaggering up to him, and thrust between him and the wall. "I don't use to give the wall," said he, "to every jakanapes." "But I do," said Joe, and so made way for him.

A LADY who went to consult Mr. Abernethy, began to describe her complaint, which was what he very much disliked. Among other things she said, "Whenever I lift my arm, it pains me exceedingly." "Why, then, ma'am," answered Mr. A., "you are a great fool for doing so."

ANOTHER lady consulted Mr. A. "You know my usual fee," said he. Two guineas were instantly laid on the table. He put them in his pocket, and pulling forth a sixpence, put it into her hand: "There," said he "go and buy a skipping-rope, for all your illness proceeds from want of exercise."

IN a country playhouse, after the play was over, and most wretchedly performed, an actor came upon the stage to give out the next play. "Pray," said a gentleman, "what is the name of the piece you have played to-night?" "The 'Stage-Couch,' sir." "Then let me know when you perform it again, that I may be an outside passenger."

## ON ONE ONLY.

BENEATH this monumental stone lie  
The mortal relics of one *Only*!  
Yes, of one *Only*! for, *Only*, he  
Reats here—and *Only*, here, is *Yes*  
From ills—to which *Only*, in this life,  
Could *Only* look for cares and strife.

AN eminent barrister had a case sent to him for an opinion. The case stated was the most preposterous and improbable that ever occurred to the mind of man, and concluded by asking, whether, under such circumstances, an action would lie? He took his pen, and wrote, "Yes, if the witnesses will lie too; but not otherwise."

A PARSON reading the first line or so of a chapter in the Bible, the clerk, by some mistake or other, read it after him. The parson read as follows:—"Moses was an austere man, and made atonement for the sins of his people." The clerk, misunderstanding him, spoke thus:—"Moses was an oyster-man, and made ointment for the sins of his people."

AN ignorant Dutchman, passing a number of railroad-tracks in the course of a day's journey, and never having seen any before, was nonplussed to account for their use. At length, after examining one of them for about twenty-five minutes, and scratching his head, quite bald, he ejaculated, "They must be iron chains, to keep der ertquakes from breaking up der road!"

## OUR MEMORANDUM BOOK!

THE DRUNKARD'S CHARACTER.—(From a Volume of Pamphlets, lettered, "Miscellaneous Sheets," presented by King George III. to the British Museum. The date is 1646.)—"A drunkard is the annoyance of modesty; the trouble of civility; the spoil of wealth; the distraction of reason. He is only the brewer's agent; the tavern and alehouse benefactor; the beggar's companion; the constable's trouble. He is his wife's woe; his children's sorrow; his neighbour's scoff; his own shame. In summer he is a tub of swill, a spirit of sleep, a picture of a beast, and a monster of a man."

"This world is not so bad a world  
As some would like to make it,  
But whether, good, or whether bad,  
Depends on how we take it.  
For if we fret and scold all day,  
From dewy morn till even,  
This world will be 'er afford to man  
A foretaste here of Heaven."

NATURE'S GENTLEMEN.—The Indians are great imitators, and possess a nice tact in adopting the customs and manners of those with whom they associate. An Indian is Nature's gentleman—never familiar, averse, or vulgar. If he takes a meal with you, he waits to see how you make use of the implements on the table, and the manner in which you eat; which he imitates with a grave decorum, as if he had been accustomed to the same usages from childhood. He never attempts to help himself, or demand more food, but waits patiently until you perceive what he requires. I was perfectly astonished at this innate politeness, for it seems natural to all Indians with whom I have had any dealings.—*Life in Canada*.

THE LONDON DRAY-HORSE.—During the reign of George IV. eight of these, coal-black and sleek as satin, we sent as presents to the Shah of Persia. With European potentates and splendour of royalty, "the dread and fear of kings" is much enhanced by rapid lightning-like velocity; in the East it all depends on swiftness; even the solemn elephant is too quick for state. When the Shah beheld these animals put to their paces, which neither blandishments nor bullying could stimulate beyond a heavy walk, he clapped his hands in ecstacy, and shouted three times "Bismillah!" They were instantly invested with high dignities, lodged in stalls of state, proclaimed sacred, and howstriding and bristling denounced against all who looked on them without permission. The charger of Caligula, who was created consul, and fed with gilded oats in an ivory manger, was treated with less distinguished honour. The breed has been perpetuated in the royal stables of Isfahan, as the Hanoverian crown-colours are preserved in the Royal Mews.

INTRODUCTION OF VEGETABLES, FLOWERS, &c., INTO ENGLAND.—The advantages arising from the exploration of foreign regions are scarcely to be enumerated. To the discovery of America by the illustrious Columbus, we owe the introduction of that truly useful root, the potato. The pear, the peach, the apricot, and the quince, were respectively brought into Europe from Epirus, Carthage, Armenia, and Syria, and by degrees into England. Cherries are of very ancient date with us, being conveyed into Britain from Rome, A.D. 55. In the king of Saxony's museum, at Dresden, there is a cherry-stone, upon which, aided by a microscope, more than a hundred faces can be distinguished. Dr. Oliver was shown a cherry-stone in Holland with one hundred and twenty-four heads upon it; and all so perfect, that every one might be seen with the greatest ease by the naked eye. Melons were originally brought from Armenia. According to Mr. Andrews, fruit was very rare in England in the reign of king Henry VII.; that gentleman informs us, that apples were then not less than one or two shillings each; a red rose, two shillings; and that a man and woman received eight shillings and fourpence for a small quantity of strawberries. Cabbage, carrots, &c., were introduced about the year 1547. Previous to this period, Queen Catherine, of Arragon, first consort of Henry VIII., when she wanted a salad, was compelled to send to Holland or Flanders on purpose. About this time, apricots, gooseberries, pippins, and artichokes, were first cultivated. The currant-tree came from Zante, and was planted in England, A.D. 1583. Coselettues were brought from the island of Cos, near Rhodes, in the Mediterranean. Asparagus, beans, peas, and cauliflowers, were introduced in the beginning of the reign of Charles II. Nor can we claim the jessamine, the holly, the tulip, &c., &c., for the jessamine came from the East Indies; the holly and the tulip from the Levant; the tube-rose from Java and Ceylon; the carnation and pink from Italy; and the narcissus from Switzerland. Thus it appears that nuts, acorns, crabs, and a few wild berries, were almost all the variety of vegetable food indigenous to our island.

ORDERS RECEIVED, BY  
MAXWELL & CO.

## ADVERTISEMENTS.

[31, NICHOLAS-LANE, LOMBARD  
STREET, LONDON.

**CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY.** Persons of all ages, and in every station, may secure with this Society, and the assured can reside in any part of Europe, the Holy Land, Egypt, Madeira, the Cape, Australia, New Zealand, and in most parts of North and South America, without EXTRA CHARGE.

### FIFTH DIVISION OF PROFITS.

The FIFTH BONUS was declared in January last, and the amount varied with the different ages, from 24 to 35 per cent. on the premiums paid, during the last five years; or from 25 to 312 10s. per cent. on the sum assured.

The small share of profit available in future among the Shareholders being now provided for, without trenching on the amount made by the regular business, the ASSURED will hereafter derive all the benefits obtainable from a Mutual Office, with, at the same time, complete freedom from liability, secured by means of an ample Proprietary Capital—thus combining, in the same office, ALL THE ADVANTAGES OF BOTH SYSTEMS.

The Fund invested for the security and benefit of the Assured exceeds £850,000; and the Income is now upwards of £136,000 per annum.

Every description of Assurance may be effected, and for any sum from £50 to £10,000.

A copy of the last Report, setting forth full particulars, with a Prospectus, can now be obtained of any of the Society's Agents, or by addressing a line to

W. H. PINCKARD, Resident Secretary.

99, Great Russell street, Bloomsbury, London.

**METROPOLITAN and GENERAL FREEHOLD LAND SOCIETY.**—(Enrolled under 6 and 7 William IV., cap. 32.)

### PRESIDENTS.

### TWENTY-FIVE ELEGANT GOLD

WATCHES to be GIVEN AWAY with the ENGLISHWOMAN'S DOMESTIC MAGAZINE, published Monthly, price Two pence. Nos. I., II., and III., are now ready. The great success which has attended the sale of the ENGLISHWOMAN'S DOMESTIC MAGAZINE, has determined the Proprietors on substituting Watches of greater value than was at first intended. On reference to the Certificate below, it will be perceived that the Watches are ordered of Mr. Bennett, the eminent Watch and Clock-maker to Her Majesty. The name of so eminent a maker is the best guarantee we can offer for the superiority of our intended New Year's Gift. For further particulars, see the Work itself.

CERTIFICATE OF MR. JOHN BENNETT, 65, CHAPMAN, LONDON.

"I hereby certify, that the twenty-five gold watches, ordered of me by the Proprietors of the 'Englishwoman's Domestic Magazine,' shall be of the London-made lever construction, jewelled in four holes, and of superior quality in design and workmanship, of the full value of fifteen guineas. Each one will be accompanied with a written guarantee.

(Signed) "JOHN BENNETT, F.R.A.S."

"Manufacturer to the Royal Observatory, the Queen's Board of Ordnance, and the Admiralty."

Clarke and Co., Foreign Booksellers, 148, Fleet-street, and may be had of all Booksellers and Dealers in Periodicals.

### TO EMIGRANTS AND VOYAGERS.

### MOORE AND BUCKLEY'S PATENT

CONCENTRATED MILK will be found a great desideratum, as it supplies Fresh Milk at all times. It is preserved in hermetically sealed tins, which will keep sweet in the hottest climate many days after being opened; each tin producing seven times the quantity of pure milk.

The milk is most admirable; none should go to sea without it—"Captain Cunningham, H. M. S. Assistance, 25th October, 1851."

Consumers of Cocoa and Chocolate are invited to try MOORE AND BUCKLEY'S COCOA AND MILK, AND CHOCOLATE AND MILK, which are combinations of the finest Trinidad Coconos and the choicest English and French Chocolates with the Patent Concentrated Milk, in hermetically sealed tins. These delicious preparations are wholly free from the admixtures so common in the packet cocoa, and, considering their quality, are equally inexpensive; for example, a breakfast cup of Pure Cocoa, combined with Milk and Sugar, can be had at the cost of a Penny, by merely adding boiling water.

The Prize Medal at the GREAT EXHIBITION was awarded to these preparations.

MOORE AND BUCKLEY'S INFANT'S FOOD is a combination of the Concentrated Milk with pure Farina, and will be found a light and nourishing diet for Invalids as well as Infants, requiring only boiling water for its instant preparation.

The whole of the above are prepared under the immediate inspection of Mr. Moore, the Patentee, who was for many years the ordinary medical attendant of the Royal Family, in London.

The finest FRENCH CHOCOLATES imported, and in every variety.

MOORE AND BUCKLEY, Ranton Abbey Farm and Works, Staffordshire; Wholesale Depot, 4, Upper East Smithfield, London. Sold by all the Provision Merchants, and most of the respectable Grocers and Chemists in the Kingdom.

### ANDERSON'S PORTABLE SPRING

PRESSURE SPECTACLES that never shift their position, but when removed from the face immediately collapse. Double eye-glasses to open and close with one hand only, to fix on the nose or place before the eyes at the option of the wearer. Inventions of the utmost importance. Sold by Messrs. HARRIS AND SON, 52, Great Russell-street, London; and all appointed Agents throughout the Kingdom.

### PUBLIC ANNOUNCEMENT.

BETHEL WARE.

Manufacturer, 217, Tottenham Court-road, London.

**CALDWELL'S SOIREE'S DANSTANTES, EVERY EVENING, FROM 8 TO 12.**

Admission, 6d. per Quarter, 2s. 1s.

### SPLENDID NEW BALL-ROOM, with all

the Arrangements complete—Musical Director, Mr. J. Bradley, of the Royal Italian Opera, Covent-garden. Mr. Caldwell guarantees to teach any Lady or Gentleman unacquainted with the Routine of the Ball-room to enter with grace and freedom, and to take part in this fashionable Amusement, in Six Private Lessons, for 2s. 1s.

"Costly thy habit as thy purse can buy,

But not express'd in fancy—rich, not gaudy;

For the apparel oft proclaims the man."—*Hamlet.*

### EVERY WELL-DRESSED MAN KNOWS

how difficult it is to be a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste being equally required, the eye of the observer is pleased with its graceful effect, and the comfort of the wearer is secured. Hence it is that a new feel—"at home" during the first days of a new garment, and so many are apparently content to accept its forms, however costly, that never can become adapted to their forms. To remedy so manifest a deficiency in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connexion has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates.—F. FOX, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

### SMART YOUNG MEN.—For your HATS

go to PARKER'S noted Wholesale and Retail Hat Warehouses, opposite Shoreditch Church, where you can select from Fifty different Shapes of the best Style and Workmanship in London. A first-class Hat, in every prime shape, 2s. 6d. You are respectfully invited to select your shape from the window.—Note, PARKER'S, 127 and 128, opposite Shoreditch Church, and City-road, one door from Old-street.

### A GREAT LUXURY.

### PAYNE'S ROYAL OSBORNE SAUCE,

prepared by Her Majesty's Chemist, in the Isle of Wight, specially patronised by the Royal Yacht Squadron, exhibited and used at the Great Exhibition of 1851, is considered the premier sauce for fish, game, hot and cold meats, soups, gravies, &c.

"We have tasted, and relished, many piquant sauces, but the Royal Osborne beats them all."—*Sun, April 24, 1851.*

Sold wholesale by Rumsey, 3, Queen-street place, London; retail, by Fortnum and Mason, and sauce-venders generally.

### TEETH.

120, Strand, and 55, Connaught-terrace, Hyde-park.

Teeth, 5s. each; a complete Set, 25.

### MR. JONES, Inventor and Manufacturer

of IMPROVED ARTIFICIAL TEETH. They are permanent, never change colour, break, or decay, and are better adapted for Articulation and Mastication than any hitherto in use. Attendance from 10 till 6.

### BEAUTIFUL HAIR, WHISKERS, EYEBROWS, &c.,

MAY be with certainty obtained by using a

very small portion of ROSALIE COUPELLE'S PARISIAN POMADE every morning, instead of any oil or other preparation. A fortnight's use will, in most instances, show its surprising properties in producing and curling Whiskers, Hair, &c., at any age, from whatever cause deficient; as also checking greyness, &c. Persons who have been deceived by imitations of this Pomade, pulled off by so-called "Testimonials," as spurious as the article they represent, will do well to make ONE TRIAL of the only genuine preparation. Price 2s. per pot. Sent free by post, with instructions, &c., on receipt of 2d. postage stamps, by Madame COUPELLE, Ely place, Holford, London, where she may be consulted daily, from 2 till 5. Testimonials—Dr. Erasmus Wilson: "It is undoubtedly the best preparation known."—Mr. Yates, hair-dresser, Malton: "The young man has now a good pair of whiskers; I want you to send me two pots for other customers."

### MOAT'S PILLS.

### THE best Vegetable Tonic and Aperient

Medicine, by W. C. MOAT, Surgeon and Apothecary, formerly the Painter with the late Mr. Morrison, the Hygienist. For persons whose occupation and mode of living induce frequent disarrangement of the digestive organs, a reliable Medicine is a necessary of life. Mr. Moat's Pills fulfil this requirement. Sold at Mr. Moat's Establishment, 34, Strand, London; and by all Vendors of Medicine; with directions affixed, in English, Welsh, Spanish, French, German, or Dutch.

### HOLLOWAY'S OINTMENT AND PILLS,

a certain cure for Scurvy, Leprosy, Scrofula, and all Diseases of the Skin.—The heurloous, wearisome, deflection of spirits, and other oppressions usually attendant on those who suffer from diseases of the skin, are speedily removed by the use of Holloway's Ointment and Pills. The efficacy of these medicines, in correcting the bad habits of the body, and in curing complaints of the class above mentioned, stands unrivalled (and in many parts abused, where the malady is so prevalent, the cure is unwarrantably) the purifying properties of the Pills, and the gentle effect of the Ointment has of the skin, render them superior to any other remedy. Sold by all druggists, and at Professor Holloway's Establishment, 244, Strand, London.

## Editor's Note-Book.

### DOMESTIC HINTS. No. 13.—

*Temperance.*—"It," observed a writer, "men lived uniformly in a healthy climate, were possessed of strong and vigorous frames, were descended from healthy parents,

were educated in a hardy and active manner, were possessed of excellent natural dispositions, were placed in comfortable situations in life, were engaged only in healthy occupations, were happily connected in marriage, and kept their passions in due subjection, there would be little occasion for medical rules."—All this is very excellent and desirable; but, unfortunately, for mankind, unattainable. Man must be something more than man, to be able to connect the different links of this harmonious chain—to consolidate this *summus bonus* of earthly felicity into one uninterrupted whole. For, independent of all regularity or irregularity of diet, passions, and other subliminary circumstances, contingencies and connections, relative or absolute, thousands are visited by diseases and precipitated into the grave, independent of accident, to whom no particular vice could attach, and with whom the appetite never overstepped the boundaries of temperance. Do we not hear almost daily, of instances of men living near to, and even upwards of a century? We cannot account for this, either because of such men we know but few who have lived otherwise than the world around them; and we have known many who have lived in habitual intemperance for forty or fifty years without interruption, and without much apparent inconvenience. The assertion has been made by those who have attained a great age, (Parr, and Henry Jenkins, for instance,) that they adopted no particular arts for the preservation of their health; consequently, it might be inferred that the duration of life has no dependence on manners or customs, or the quality of particular food. This, however, is an error of no common magnitude. Peasants, labourers, and other hard-working people, more especially those whose occupations require them to be much in the open air, may be considered as following a regulated system of moderation; and hence the higher degree of health which prevails among them and their families. They also observe rules; and those, which it is still more recommended by Old Parr, are remarkable for good sense; namely, "keep your head cool by temperance, your feet warm by exercise; rise early, and go soon to bed; and if you are inclined to get fat, keep your eyes open, and your mouth shut." In other words, sleep moderately, and be abstemious in diet;—excellent admonitions, more especially to those inclined to corpulence. The advantages to be derived from a regular mode of living, with a view to the preservation of health and life, are nowhere better exemplified than in the precepts and practice of Plutarch, whose rules for this purpose are excellent; and by observing them himself, he maintained his bodily strength, and mental faculties unimpaired, to a very advanced age. Galien is a still stronger proof of the advantages of a regular plan, by means of which he reached the great age of 160 years, without having ever experienced disease. His advice to the reader of his "Treatise on Health," is as follows:—"I beseech all persons who shall read this work, not to forsake themselves to a level with the brutes, or the rabble, by gratifying their sloth, or by eating and drinking extravagantly whatever pleases their palates, or by indulging their appetites of every kind. But whether they understand physic or not, let them consult their reason, and observe what agrees, and what does not agree with them, that, like wise men, they may adhere to the use of such things as conduce to their health, and forbear everything which, by their own experience, they find to do them hurt; and let them be assured, that, by a diligent observation and practice of this rule, they may enjoy a good share of health, and seldom stand in need of physic or physicians."

**ORIGIN OF THE PHRASE "SPICE AND SPAN NEW."**—W. SIMPSON (Butler, in his "Hydriphra," says, "Mr. Ray observes, that this proverbial phrase, according to Mr. Howell, comes from *spice*, an ear of corn; but rather, says he, as I am informed from a better author, *spike* is a sort of nail, and *span* the *ship* of a boat; so that it is all one as to say, *every ship and nail is new*. But I am humbly of opinion, that it rather comes from *spike*, which signifies a nail; and a nail in measure is

the sixteenth part of a yard; and *span*, which is in measure a quarter of a yard, or nine inches; and all that is meant by it, when applied to a new suit of clothes is, that it has been just measured from the piece by the *nail* and *span*."

**TO MAKE SHREBBET.**—O. W. (take nine Seville oranges and three lemons; grate off the yellow from the rinds, and put the raspings into a gallon of water, with three pounds of double-refined sugar, and boil it to a candy height; then take it off the fire, and add the pulp of the oranges and lemons; keep stirring it until it is almost cold, then put it into a vessel for use.)

**PUNCTUATION.**—One of the most essential points in composition is correct punctuation, and yet it is surprising to observe the indifference with which this subject is regarded by writers generally. We have frequently heard lazy scribblers rail at such "nicety," and yet the consequences of this neglect are sometimes too serious to be ridiculed. An instance of this occurs in the following extract from the *Times* of September, 1818:—"A contract made for lighting the town of Liverpool, had been rendered void by the misplacing of a comma in the advertisement, which reads thus:—'The lamps at present are about 4,050 in number, and have in general two spouts each, composed of not less than twenty threads of cotton.' The contractor would have proceeded to furnish each lamp with the said twenty threads; but this being but half the usual quantity, the commissioners discovered that the difference arose from the comma following, instead of preceding, the word *each*." The parties agreed to annul the contract, and a new one is now ordered." This is one out of numberless examples that might be recorded to prove the importance of correct punctuation. Formerly it was not the custom to pay much attention to this subject. But the facility given by the reason why punctuation was omitted in statutes and legal instruments.

"Old laws have not been suffered to be pointed." To leave the sense at large the more disjointed. And furnish lawyers with the greater ease. To turn and wind them any way they please. But we have no excuse now that the schoolmaster is abroad, and the means of education are opened to all. We therefore, recommend our correspondents to pay especial attention to this subject, and habituate themselves accordingly to

### AN EXTRACT FROM PARR.

**MARY-LE-BONE.**—J. LITERA.—The modern name of Mary-le-bone is a corruption; it was originally written Mary-le-bone, or Mary-le-bone, from the circumstance of its being built on a brook, which still runs from Hendon Bridge and New-road, through Allport's building, although now it is of course dried over. A *bone* is a brook; and it is a very common termination of the names of English streets and towns. Holborn was originally called *Oldbourne*, from its standing on a brook. We have also Eastbourne, Sittingbourne, &c. In the time of Elizabeth it was called *Marybone*; and it is so distinguished by Lady Wortley Montagu (a century later) in the following line:

"And dukes at Marybone bowl time away."

**COMMUNICATIONS RECEIVED.**—EUREAK (the verses alluded to are not original. The author, we believe, is an American.)—JERVIS (four correspondents are surprised that we have not answered three questions proposed to us some weeks past. Two inquiries of a similar nature have been answered in previous numbers of the HOME COMPASS, to which reference can easily be made; and the third question is so frivolous that we decline noticing it.)—W. (the name of "bridgegroom" was formerly given to the newly married man, because it was customary for him to wait at table on his bride and friends on his wedding-day.)—DULCROCH (the foundation-stone of this London University was laid April 30, 1827, by the Duke of Sussex.)—W. HANNAH (our correspondent should remember the old proverb:

"They who battle in May,  
Will soon be laid in clay;  
They who bathe in June  
Will sing a merry tune."

June, July, and August, are usually the best months for

this healthy amusement.)—G. LEE (if one boat is crossing the water, and another coming with the tide, the one coming with the tide must keep astern of the other, and have a good look-out ahead.)—PARRIS (the great body of students in every college are what are called pensioners. They pay for their commons, chambers, tuition, &c. These expenses may be covered by £150, provided the student is frugal and steady.)—A. E. I. (the "Thin-men's Price-Book" can probably be obtained through any bookseller.) JAFFA (the box grows wild on Box-hill near Dorking, and in some few other places in England. The box-wood used in wood-engraving is imported either from France or Turkey.) MUMMIS (bread should never be eaten new, as in such a state it swells like a sponge in the stomach, and proves very indigestible. Care should also be taken to obtain bread that has been well baked. Unless all its parts are intimately mixed, and the fixed air expelled, it will be apt in very small quantities to produce indigestion.) RUSSEIA (the committee of Australian colonists declare that for industrious sober, married couples, suitable for farm, servants and shepherds, the demand may be said to be unlimited.) QUARRIES (petrol angling continues from February to October.) PISTACHIO (circulating libraries for the lower orders have been tried with some success, we believe. Such means for eradicating the evil effects of those publications, are well worthy encouragement.) CYRUS (papers are declined.) T. B. (questions of mere individual interest should be avoided. Our wish is to amuse and instruct our readers generally.) J. WILSON (a garden pond may be kept in good order, when large enough, by means of awans, two of which will be sufficient for a piece of water when once thoroughly cleaned.) MARIA (the very oldest Chinese porcelain is a pure white, without any colour whatever, sometimes with figured-raised in relief. The earliest colour laid on was the blue.) H. SANDERS (good coffee cannot produce ill effects. The idea that coffee is a poison is absurd. It was with reference to this opinion that Fontenelle once said, "If the berry is a poison, it must be a very slow one, for it has been above eighty years killing me." Our correspondent will find the adulterations of food ably treated upon in the sixth volume of the FAMILY FAIRY.) MAYOR LEE (pearls may be cleaned by soaking them in hot water, in which bran has been boiled with a little tartar and alum, rubbing them gently between the hands until the object is attained, when the pearls may be rinsed in lukewarm water, and laid in a convenient dark place to cool.) TIMOTHY (riddles are of the highest antiquity, the oldest on record is in the Book of Judges xiv. 14-18. We are told by Plutarch that the girls in his time worked at netting and sewing, and the most ingenious "made riddles." J. SAINSBURY (the lines on "London" are tolerable, but at this joyous season of the year we should prefer an eulogy of country life. The denizens of the Great Metropolis would be too glad to exchange their dusty streets for green lanes and fertile fields:

"The world is too much with us, late and soon,  
Getting and spending; we lay waste our powers,  
Little there is in Nature that is ours."

**DEATH OF NELSON.** (the words of this famous song were written by S. J. Arnold, in the opera of the "Americans." The music was composed by Brahms. A correct version may be obtained by our correspondent in No. 1. of the "Universal Vocalist," sold by all booksellers.)—M. J. (the sea-sickness arises from a depressing effect upon the brain, produced by the motion of the vessel. The only remedy for it is to lie perfectly still with the head low.) IMBUISTIVK (the timber mentioned in Scripture is the musical instrument now known as the tambourine.) D. GLASSGOW (glass may be thus chemically distributed: 1. Soluble glass; silicate of potash or soda. 2. Crown glass; silicate of potash and lime. 3. Common window glass; silicate of soda and lime. 4. Bottle glass; silicate of soda, lime, alumina, and iron. 5. Flint glass, silicate of potash and lead.) THOMAS (the wren is the smallest bird found in Britain. He has a fine sweet voice which lasts several months in the year, and is much stronger than could be imagined for so small a bird.) A POOR MAN (to obtain a situation as reporter to a paper, it is requisite to have a recommendation from a person of some standing to the editor. Some reporters take notes in the school shorthand, and others do not, but use abbreviations peculiar to themselves.)

[PRICE ONE PENNY.]

"He stooped down to the little mound, and with his finger lightly struck away first one point, then the other, of its divided summit."

## PICCIOLA; OR, THE PRISON FLOWER.

### BOOK I. CHAPTER I.

COUNT CHARLES VERMONT DE CHARNEY, whose name perhaps still retains a place in the memories of his learned contemporaries, and may certainly be found inscribed in the registers of the Imperial Police, was endowed by nature with extraordinary facility in acquiring knowledge. But his superior abilities were trained in schools where he contracted a tendency to disputation. He argued much more than he observed. In fact, his education was better calculated to produce a *learned* man than a philosopher; and such was its result.

At the age of twenty-five he was master of seven languages; but unlike many estimable polyglots, who seemed to have given themselves the trouble of studying different idioms, only to prove their ignorance and insufficiency before foreigners, as well as their own countrymen (for a person may be a fool in several languages), the Count de Charney made these studies only preparations for others, which he regarded as far more important. If he had many servants in the service of his understanding, each of them at least had

his own occupations, his own portion of duty to perform. With the Germans he studied metaphysics; with the Italians and English, politics and legislation; with all, history, which he could examine even in its earliest sources, thanks to his knowledge of the Hebrew, Greek, and Roman tongues.

Accordingly he entirely devoted himself to these grave speculations, not neglecting the accessory sciences that related to them. But soon dismayed at the horizon which was enlarging before him, finding himself stumble at every step in the labyrinth in which he was involved, fatigued with always vainly pursuing a doubtful truth, he began to regard history as one great traditional lie, and endeavoured to reconstruct it on a new basis. He formed another romance at which the learned laughed from envy, and the world from ignorance.

Political and legislative sciences presented something more certain; but they seemed to require so many reforms in Europe! And when he endeavoured to fix on some to begin with, he found abuses so rooted in the social edifice—so many existing things were based and fixed on a false principle, that he was discouraged; for he felt neither sufficient power, nor sufficient insensibility to attempt in other countries to overturn those prejudices which the revolutionary hurricane had been unable to destroy amongst the French.

He also considered how many good men, possessed of perhaps equal learning and good intentions, entertained theories directly opposed to his own opinions. Suppose he should throw all the four quarters of the globe into confusion by a doubt! This reflection humbled him more even than the incongruities of history, and placed him in painful perplexity.

Metaphysics still remained.

This is the world of ideas. These disorders seem less fearful, for ideas clash without noise in imaginary spaces. There he no longer risked the reproach of others; but he lost his own.

But it was in this study, beyond all others, that obscurity and confusion became but the more palpable the further he advanced, analysing, discussing and arguing, into the depths of science. He sought in vain to lay hold upon Truth; but she always fled at his approach,—vanished under his steps,—and mocking seemed to dance before his eyes, like a wandering fire that attracts but to mislead. He saw her bright before him, and she was extinguished before his eyes, to reappear again where he least expected her. Indefatigable and persevering, he armed himself with patience, and followed her with prudent caution, to seize her in her sanctuary, and suddenly she disappeared; he endeavoured to hasten his steps to overtake her, and at his first movement he had passed over her. He thought at last he had caught her! She was under his hand, in his grasp! and she glided away between his fingers, dividing and multiplying herself on different points. Twenty truths shone once around the horizon of his understanding; deceiving beacons which set his reason at defiance! Tossed between Bossuet and Spinoza, between deism and atheism, vibrating between spiritualists, sensualists, animalists, ontologists, eclectists, and materialists, he was seized with an immense doubt, which he at length resolved by a universal negation.

Setting aside the innate ideas and revelations of theologians, the all-sufficing reason and pre-established harmony of Leibnitz, the Perception and Reflection of Locke, the Objective and Subjective of Kant, sceptics, dogmatists, and empirics, realists and nominalists, observation and experience, sentiment and evidence, the science of particular things, and the power of universals, he fenced himself round with a rude pantheism, and refused to believe in a Supreme Intelligence. The disorder inherent in creation, the perpetual contradiction between ideas and things, the unequal partition of wealth and strength, fixed in his mind the conviction that blind matter had alone produced all things, and alone directed and organized them.

Chance became his God, annihilation was his hope. He attached himself to this system with transport, almost with pride, as if he had himself created it. He felt happy in the fulness of incredulity, since it relieved him from the pressure of the doubts that had beset him.

He now bade adieu to science, and resolved to live for happiness. The death of a relation had just put him in possession of an immense fortune. Since the establishment of the consulate at the head of affairs, society in France had been reorganized in luxury and splendour. In the midst of the trumpets of victory, which were heard from every side, all was joy and festival in Paris. He mixed in society, opulent society—lovely, brilliant society—the society of learning, grace, and wit. He collected it around him—opened to gay youth, rank, and fashion, the doors of his hotel and his saloons. He mixed in the crowd, shared in their amusements, delirium and excesses; then in this whirl of busy, idle life, in this great frenzied movement of pleasure, he was astonished not to find happiness.

The airs of a dance, the dress of the women, and the perfumes which they shed around them, were all that appeared to him worthy of attention.

He had endeavoured to form intimate connections with men distinguished for their knowledge and wisdom; but he found them weak, ignorant, and full of error. He pitied them.

It is one of the great inconveniences of excess in human science that we no longer find any on our own level; those even who know as much as ourselves, do not know it as we do. From the heights to which we have risen, we see those below us miserable and little. For in the superiority of mind, as in that of power, isolation is born of greatness. To live in isolation is the chastisement of him who wishes to raise himself too high!

He more and more sought the aid of material and positive enjoyments. In that revival of society which, so long debarred from joy and festivity, and still stained with the bloody orgies of the revolution, dragged after it its rags of Roman virtue, and at the first bound surpassed the stately orgies of the regency, he signalled himself by his immense expenses, his profusion, his follies. Useless efforts! He had horses, carriages, an open table; he gave concerts, balls, huntings; yet nowhere would pleasure attend him! He had friends to flatter him in his triumphs, mistresses to toy with in his moments of leisure, and though he had paid a good price for both he knew neither friendship nor love.

All this parade, all these parodies of a joyous life could not soothe his heart, or draw from him a single smile. Vainly he endeavoured to blind his eyes, while enjoying the allurements of society. The siren half raised upon the water displayed her nymph like beauty and seductive voice before the man; and the foolish eye of the philosopher immediately plunged involuntarily below the wave, in search of the scaly body and forked tail of the monster.

Charney could no longer be happy either in truth or error. Virtue was a stranger to him, vice indifferent. He had proved the vanity of science, and the pleasures of ignorance were denied him. The doors of that Eden were for ever closed behind him. Reason seemed to him false, pleasure appeared to him a lie. The noise of festivals fatigued him; retreat and silence were painful. In company he was weary of others; alone he was weary of himself. A deep sadness seized upon him.

Philosophical analysis, notwithstanding all his efforts to banish it, continually predominated in his mind, and mingling in his views, tarnished, lessened, and extinguished the pleasures and luxury in the midst of which he lived. The praises of his friends, the caresses of his mistresses, were to him no more than the current coin with which they paid for the part they took of his fortune, and only proved the necessity they felt of living at his expense.

Decomposing all, reducing everything to its first elements by that same spirit of analysis, he was attacked by a singular disease. In the web of the fine cloth of his coat, he imagined he smelt the infectious odour of the animal which had furnished the wool; on the silk of his rich hangings, he saw the disgusting worm crawling that had spun it; on his elegant furniture, carpets, bindings, his ornaments of mother-of-pearl and ivory, he saw only wrecks and cast-off garments—death, death adorned and fertilized by the sweat of a dirty artisan. The illusion was destroyed, the imagination was paralysed.

Emotions were, however, necessary to Charney. That love incapable of resting on a single object he endeavoured to extend over a whole people. He became a philanthropist!

To be useful to the men whom he despised, he again devoted himself to politics; not to speculative policy, but to the politics of action. He was initiated into secret societies, became a member of a party, endeavouring to feel that kind of fanaticism which is still compatible with minds which have thrown off enthusiasm. He at length took part in a conspiracy, having for its object the overthrow of the power of Bonaparte.

Perhaps that patriotic, that universal love, that appeared to animate him, was at bottom only hatred towards a single man, whose glory and good fortune annoyed him.

The aristocrat Charney returned to the principles of equality; the proud noble who had been deprived of the title of count in right of descent, was not willing that any one should, with impunity, take that of emperor in right of his sword.

What was this conspiracy? It matters little. There was no want of them at that time. I only know it was in agitation from 1803 to 1804; but it had not even time to break forth—the police, that hidden providence which already watched over the destinies of the future empire, discovered it in time. It was not judged advisable that it should make any noise, not even that of a fusillade on the plains of Grenelle. The principal chiefs of the conspiracy were surprised, carried from their homes, condemned almost without trial, and distributed separately in the prisons, citadels, or fortresses of the ninety-six departments of Consular France.

## CHAPTER II.

I REMEMBER that, when, as a tourist, travelling on foot, my knapsack on my back, and my iron-pointed stick in my hand, I was crossing the Graian Alps, on my way to Italy, I stopped pensively, not far from the Col Rodoretto, to contemplate a large torrent swollen by the melting of the higher glaciers. The noise which it made rolling onwards, the foamy cascades by which its course was impeded, the various colours by which its waters were tinted, by turns yellow, white, or black, showing that it had worn its way through beds of marl, lime, and slate; the enormous blocks of marble or silex that it had laid bare, but not torn from their places, and which, forming many cataraets, added a new noise to all its other noises, new cascades to all its other cascades; whole trees which it carried down rising half out of the water, their foliage on one side agitated by the wind, which was high, and on the other dashed about by the bounding waves; fragments of banks still covered with their verdure, islets detached from the shores, which in like manner were floating on the surface of the torrent, and which were broken against the trees, as the trees were torn while passing the blocks of marble and silex;—all this clatter, all these murmurs, all this confusion, all these sights, inclosed between two high steep banks, kept me some moments interested and thoughtfully. This torrent is the Clusane.

I followed its course, and I arrived with it in one of the four valleys called Protestant, in remembrance of the ancient Vaudois, formerly refugees there. The torrent no longer retained its rapid disordered course, and its hundred voices roaring and howling; it had become calm, and had lost its trees and islets, on some low bank or in some little bay; its colours were melted into one, and the mud of its bed no longer obscured its surface. Still flowing swiftly but quietly, smoothly, almost coquettishly, it mimicked a little river as it caressed the walls of Fénestrella with its waves.

Fénestrella is a large town, celebrated for the mint-water which is made there, and still more for the forts that crown the two mountains between which it is situated. These forts, which communicate with each other by covered ways, had been partially dismantled during the wars of the republic: one of them, however, was repaired and revictualled, and had been converted into a state prison, as soon as Piedmont had become part of France.

Well! it was there, in that fort of Fénestrella, that Charles Veramont count de Charney, was confined, accused of having endeavoured to overthrow the regular and legal government of his country, to substitute for it the rule of disorder and terror.

Here he was then, separated from the men of pleasure and of science, regretting neither the one nor the other, forgetting, without much bitterness, that hope of political regeneration which for an instant appeared to reanimate his worn-out heart; bidding a forced but perfectly resigned adieu to his fortune, whose pomp could not dazzle him; to his friends, who tired him; to his mistresses, who deceived him; having for his dwelling, instead of a vast and splendid hotel, a gloomy naked chamber; for his only valet, his jailor, and shut up alone with his desolating thoughts.

What mattered to him the gloom and nakedness of his chamber? indispensable necessities were there, and he was tired of superfluity. His jailor even appeared supportable. His thoughts alone weighed upon him. But did no resource, by which to ease this heavy burden, appear open to him? None! at least he did not then see the possibility of any.

All correspondence with the exterior was forbidden. He did not possess, nor was he allowed to possess, either books, pens, or paper. This the disci-

pline of the prison required. This might not have been a deprivation formerly, when he thought only of ridding himself of the scientific malady by which he was beset. Now a book might have been a friend to consult, or an enemy to combat. Deprived of all, sequestered from the world, he felt it necessary to reconcile himself to himself, to live with his enemy—with his thoughts! Oh! how dreadful and overwhelming was this idea, which constantly reminded him of his desperate condition! how cold and bitter for him, on whom nature had at first poured her gifts, whom society had surrounded from his birth with its favours and its privileges; for him, now a captive and miserable—him who had so much need of protection and help, but who believed there was no God, and put no faith in human charity!

He still struggled to get rid of this thought, that chilled, that froze him; when wrapped up in his reveries he let it wrestle with itself. Again he wished to live in the external, the material world. But how was this world narrowed for him!

The lodging occupied by the Count de Charney was in the back part of the citadel, in a small building raised on the ruins of an ancient and strong edifice, which had belonged to the defensive works of the place, but was rendered useless by more recent fortifications.

Four walls, on which any trace of the prisoners, his predecessors in this place of desolation, had been obliterated by the whitewash; a table useless except at meal-time; a chair, whose striking loneliness seemed to warn him that never would a human being come to seat himself beside him; a trunk for his linen and clothes; a little half worm-eaten wooden cupboard painted white, to which a rich dressing-case, of mahogany inlaid with silver, placed upon it (all that was left him of his past splendour) offered a singular contrast; a narrow but tolerably neat bed; a pair of curtains of blue linen which hung at his window, like an object of derisive luxury, like a bitter irony; for, from the thickness of the bars, and the wall rising ten feet before them, he could not fear either curious eyes, or the annoyance of the too ardent rays of the sun: such was the furniture of his apartment.

Above him was a similar room, but empty and unoccupied; for he had no companions in this detached part of the fortress.

The rest of his universe was confined to a stone stair, short, massive, and spiral, leading down to a little paved court, sunk low in one of the ancient ditches of the fortress. This was the place of promenade, where, two hours a day, he might take as much exercise and enjoy as much liberty as the commandant's regulations allowed.

From thence, the prisoner might also extend his view over the summits of the mountains, and see the vapours rising from the plain; for the works of the fortress suddenly sinking at the extremity of the yard, allowed the air and sun to penetrate it. But once shut up in his room, an horizon of masonry alone met his view, in the midst of the picturesque and sublime nature that surrounded him. On his right arose the enchanting hills of Salure; on his left were seen the last undulations of the valleys of Aosta and the banks of the Chiara; before him were the lovely plains of Turin; behind him the Alps rose one above another, covered with forests, rocks, and precipices, from Mount Geneva to Mount Cenis; and he saw nothing—nothing but a foggy sky, suspended over his head in a frame of stones; nothing, but the pavement of his court, and the grating of his prison; nothing but that high wall which faced him, and whose wearisome uniformity was only interrupted towards one end, by a little square window, where a sad melancholy countenance occasionally appeared between the bars.

This was the circumscribed world where henceforth he was to seek his occupations and find his amusements! He exerted his mind to do so. He drew, he charcoaled the walls of his chamber with ciphers and dates which recalled the happy days of his youth. But how few they were! He quitted these remembrances with a heart still more depressed.

Then those fatal demons, his thoughts, returned with their desolate convictions, and he formed them into terrible sentences, which he also inscribed on the walls, near the holy recollections of his mother and sister.

Determined at length to overcome his sickly thoughts and weary idleness, he tried to accustom himself to frivolous and puerile occupations; he voluntarily anticipated that abasement which is the consequence of a long residence in prison; he plunged into it, he threw himself on it with transport! The *savant* made trimmings of linen and silk! The philosopher manufactured pipes of straw, and play-vessels of walnut shells! The man of genius constructed whistles and carved little boxes and open-work baskets of fruit stones! He wove chains and made musical instruments with the elastic wire of his suspenders, and admired himself in his works! Then, soon after, disgust seized him, and he trampled them under his feet.

To vary his occupations, he carved on his table a thousand fantastic designs. Never did a schoolboy so cut his desk, or cover it with arabesques, in relief or intaglio, with more patience or skill. The church of Caudebec, the pulpit and the pawns of St. Godeule in Brussels, are not decorated with a greater profusion of figures on wood. There were houses on houses, fishes on the trees, men taller than steeples, boats on the roofs, carriages in open water, dwarf pyramids and gigantic flies; all these, horizontally, vertically, or obliquely, one above the other, pell-mell, here and there, a true hieroglyphical chaos, in which he sometimes tried to find a symbolical sense, a meaning, a motive; for he who believed so much in the power of chance, might hope to find a complete poem in the carving on his table, or a design of Raffaele in the party-coloured veins of the box-wood of his snuff-box.

He was thus ingenious in multiplying difficulties to conquer, problems to solve, enigmas to divine; yet *ennui*, formidable *ennui*, still surprised him in the midst of these grave occupations.

The man whose figure had been visible at the end of the wall might perhaps have furnished him with more real interest; but he seemed to avoid his observation, retreating from the grating as soon as the count appeared!

desirous of examining him with any attention. Charney at first took offence at all this. He had such an opinion of the species, that this retreating movement alone was sufficient to give him the idea that the unknown was a spy, commissioned to watch over him, even during the leisure of his prison hours, or an ancient enemy enjoying his misery and his abasement.

When he asked his jailor about him, he undeceived him.

"He is an Italian," said he, "a good fellow, a good Christian, for I often find him at prayers."

Charney shrugged his shoulders.

"And who shut him up here?" he asked.

"He attempted to assassinate the emperor!"

"Is he a patriot, then?"

"Patriot! nonsense! nonsense—not but the poor man had a son and a daughter; and now he has only a daughter; his son died in Germany,—a bullet dashed out his brains. *Povero figliuolo!*"

"Then it was a transport of selfish revenge!" said Charney.

"Bah! you are not a father, signor count?" added the jailor. "If my little Antonio, who is still sucking, must be weaned for the good of the empire, which is at this moment about as old as he is—Holy Virgin! but silence. I do not wish to lodge at Fénestrella, except with the keys at my girdle, or under my pillow."

"And now, what are the occupations of this bold conspirator?"

"He catches flies!" said the jailor, with a half-laughing glance.

Charney no longer detested, but he despised him.

"He is a fool, then!" cried he.

"*Circho pazzo!* Signor count, you who are a later arrival here, are already a master in the art of carving in wood. *Pazienza!*"

Notwithstanding the irony which these last words expressed, Charney resumed his manual labours, and the explanation of his hieroglyphics, remedies ever powerless against the evil with which he was tormented.

In these puerilities, in this weariness of spirit, a whole winter passed. Happily for him a new subject of interest was soon coming to his aid.

(To be continued.)

## ANGEL EVE.

THERE was sadness with the angels,  
There was gladness with us here,  
When our little Eve came to us,  
In the spring-time of the year.

Then before the heavenly FATHER  
Bow'd the angels to the ground.  
"Oh! our FATHER," ask'd they, mournful,  
"Where can angel EVE be found?"

"We have sought her, vainly sought her.  
All the fruits and flowers among;  
But we found her harp was hanging  
In her chosen bower, unsung."

Then out-spoke the loving FATHER  
"Seek her not in lands above,  
She has gone to regions earthly,  
On a mission of my love."

But we knew not that our darling  
Was a wand'ring angel-child;

Though the thought was with us often,  
When she gaz'd on us, and smiled,

One sweet twilight in the autumn  
When all around us was bright gold,  
And in the west the holy angels  
Their purple wings began to fold:

Our little Eve's smile beam'd upon us,  
As it never beam'd before,  
And she straightway left the earthly,  
For the distant Eden shore.

There was gladness with the angels,  
There was sadness with us here,  
When our darling EVE went from us,  
In the winter of the year.

Yet our thoughts, thine ones were clinging  
To the earth, now rest above;  
Thine was wrought the blessed mission  
Of our Holy FATHER's love.

FRANKLIN AND THE BARBER.—On Dr. Franklin's arrival at Paris, as Plenipotentiary from the United States, during the revolution, the king expressed a wish to see him immediately. As there was no going to the court of France in those days, without permission of the wigmaker, a wigmaker of course was sent for. In an instant a richly-dressed monsieur, his arms folded in a prodigious muff of furs, and a long sword by his side, made his appearance. It was the king's wigmaker, with his servant in a livery, a long sword by his side too, and a load of sweet-scented bandboxes, full of "de wig," as he said, "de superb wig for de great Doctee Franklin." One of the wigs was tried on—a world too small! Bandbox after bandbox was tried; but all with the same ill success. The wigmaker fell into the most violent rage, to the extreme mortification of Doctor Franklin, that a gentleman so bedecked with silks and perfumes, should, notwithstanding, be such a child. Presently, however, as in all the transports of a grand discovery, the wigmaker cried out that he knew where the fault lay—"not in his wig as too small; oh, no! his wig no too small, but de doctee's head, too big; great deal too big." Franklin, smiling, replied that the fault could hardly lie there; for that his head was made by God Almighty himself, who was not subject to err. Upon this the wigmaker took in a little; but still contended that there must be something the matter with Doctor Franklin's head. It was at any rate, he said, out of de fashion. He begged Dr. Franklin would only please for remember, dat his head had not de honour to be made in Parree. Not for if it bin made in Parree, it no bin more dan half such a head. None of de French noblesse had a head any ting like his. Not de great Duke D'Orleans, nor de grand monarch himsef, had half such a head as Doctee Franklin. And he did not see, he said, what business anybody had wid a head more big dan de head of de grand monarch. Pleased to see the poor wigmaker recover his good-humour, Dr. Franklin could not find it in his heart to put a check to his childish rant, but related one of his fine anecdotes, which struck the wigmaker with such an idea of his wit, that, as he retired, which he did, bowing most profoundly, he shrugged his shoulders, and with a look most significantly arch, said, "Ah, Doctee Franklin! Doctee Franklin! I no wonder your head too big for my wig. I 'fraid your head be too big for all de French nation."

## KEW GARDENS.

ARE you weary friends, of pacing the hot streets, amid the din and stir of gathered thousands? Away, then, to the river's brink,—that hard-working river, old Father Thames, who, from the earliest period of his emerging to life and light, has never witnessed such overwhelming numbers as daily crowd his banks. It is pleasant to be upon the river, to feel the soft, fresh breeze, to watch the rippling of the stream, to hear the blackbird's song of joy, and the cuckoo's one word spoken. Merrily goes our boat, for the tide is favourable; one famous spot is passed, then another, till swans with arching necks bid welcome to our steamer, and we spring on land. The bank is somewhat rough, and yet some distance must be traversed before we reach the iron gates of those Botanic grounds which chiefly owe their origin to the Prince of Wales, the son of George II. Nearly one hundred and seventy acres were planted and adorned under his superintendence, and the improvements which he did not live to finish were completed by his widow. Early in the morning, and often when the dews fell fast at close of day, that noble lady might be seen among her fruits and flowers; and many of the finest forest trees, contributed by Archibald Duke of Argyle, from his once richly-stored garden at Whitton House, near Hounslow, were planted according to her directions.

Kew Gardens are rich in biographic recollections. the names of Philip Milner, of James Smith, of Joseph Banks, and William Chambers, are inseparably associated with it. Celebrated voyagers enriched its matchless collection with vegetable productions from all climes, "from sultry India to the Pole;" till, in the latter end of the eighteenth century, William Aiton published his elaborate and important work, containing admirable plates and notices of plants, amounting to at least five thousand six hundred in number. His unpretending tomb may be seen in the churchyard on the green, near the graves of his distinguished friends, Zoffany, Meyer, and Gainsborough. You remember the old brick church beside the river, at Chelsea; Miller found a resting-place beneath its shadow, when trees grew round, and Chelsea was a pleasant village.

Cobbett, of political notoriety, was at one period of his life a gardener's labourer at Kew Gardens. This circumstance is alluded to in the "Annual Obituary for 1821," in connection with a biography of George the Third:—"In horticulture his majesty took great delight. As he was extremely fond of the delicacies of the season, his fruit-trees were cultivated to great perfection. No expense was spared in rearing esculents of all kinds, and he frequently visited Kew Gardens for the express purpose of superintending their culture. It was in one of these excursions that he saw and noticed the celebrated William Cobbett. The young man, with a few halfpence in his pocket, and Swift's 'Tale of a Tub' in his hand, had been so captivated by the wonders of the royal gardens, that he repaired thither in search of employment. His majesty, on perceiving a clownish boy, with his stockings tied about his legs by scarlet garters, inquired concerning him, and humanely desired that he might be continued in his service."

The Botanic garden proper, into which we now enter, formerly contained about eleven acres, but has been greatly enlarged by additions from the Pleasure-ground, with its breaks of lawn and wood. Yonder handsome stone building, of classical design, was filled, till lately, with palms of various kinds, and such exotic plants as required ample room and space. But the space assigned them did not suffice for their full development, and they have mostly been removed to the Palm Stove, a noble building which stands at the farthest end of the wide walk, with its beautiful beds of flowers arranged on either side.

We shall do well to rest for a few minutes, and delight ourselves with the varied foliage of the gardens. Birds are singing blithely in unison with the gentle rustling of the leaves, and all around is verdant and joyful. Surely the heaviest heart must forego for a short time its sadness, and he who has little hope as regards the future may learn contentment, nay, even filial confidence, while listening to the warbling of those glad creatures who have neither "barns nor storehouses," and while looking on the glorious flowers that are so beauteously attired.

As the weather is likely to be fine, the ladies will find it pleasant to leave their umbrellas and shawls, that were required for the river, in the cloak-room. A little before reaching it, the main walk takes a southern direction, and we find ourselves near the Orangery, which is especially appropriated for receiving the tender kind of pines which need shelter during autumn and winter.

The rapidly growing gum-tree of Australia, *Eucalyptus*, is represented in this house with others of the same brotherhood. It is, undoubtedly, the most gigantic tree in nature, rising oftentimes at least two hundred feet, and entirely branchless, and then throwing out a magnificent canopy of branches at an elevation equal to that of the Monument of London, to which the trunks may be compared, both for straightness and circumference. A recent traveller in Australia speaks with no small enthusiasm concerning these sylvan giants. Leaning against the trunk of a magnificent gum-tree, and contemplating with astonishment the colossal forms that extended far as the eye could reach, he heard voices calling him, as from a distance; and stranger was the rush of feeling, sad though momentary, for it seemed as if his companions were far away, wandering, it might be, among the intricacies of the forest. And truly his apprehensions were not unfounded: a labourer, employed in forest work, who was scarcely two hundred yards from his companions, became bewildered when seeking to rejoin them. He shouted, and heard distant shouts; but getting more and more in the forest, went wandering on till night closed in, and he sunk to the ground overpowered with fatigue and anxiety. The same traveller relates that he measured a fallen

tree, two hundred and thirteen feet long; he ascended it by the help of one of its huge branches, and walked with four of his companions along the trunk. Equally picturesque or beautiful are the prostrate forms of these patriarchal

PINES.

trees; some are bleached with age, throwing wide their sepulchral arms; others, left, perchance for ages, are overgrown with luxuriant ferns and mosses.

Observe the camphor-tree of Japan, *Laurus camphora*, in passing.

Before proceeding to inspect the lesser stove-houses, let us make all haste up the wide gravel walk leading to the new palm-stove. Beautiful is the effect produced in this noble walk by the arrangement of shrubs and flowers on either side, and the alternating, with large beds of flowers, two lines of deodars, stately and yet graceful trees, eventually designed to form an avenue terminating at the house of palms.

We have watched the progress of that building ever since the period when it was merely an external frame, yet, giving the earnest of future greatness, it progressively advanced to its present magnificent proportions.

This building, termed by Sir William Hooker, "the glory of the gardens," is thus described by Mr. Brayley:—"The New Palm-house was designed by Mr. D. Burton, and commenced in 1845, under the directions of the Commissioners of Her Majesty's Woods and Forests. This vast structure, which is chiefly composed of wrought-iron beams and glass, consists of a rectangular central part, 137 feet 6 inches in length, and 100 feet wide; with projecting wings, each of which is 112 feet 6 inches long, and 50 feet in width; the entire length is 362 feet 6 inches in the clear. The height of the central portion is 63 feet, exclusive of the lantern, which rises 6 feet: the height of each wing is 27 feet to the bottom of the lantern above.

"The general form of the Palm-house is curvilinear. The main ribs are constructed of deck-beam iron, obtained in lengths of about 12 feet, and welded together to the length required, about 42 feet, and bent to the necessary curve. These ribs, which are 12 feet 6 inches apart, and foot into cast-iron sockets let into enormous blocks of Cornish granite, upon a foundation of concrete, are braced together and strutted by wrought-iron tie-rods, passing through tubes of cast-iron, that act as purlins, and form a continuous tension-rod around the edifice. The upper ribs foot into strong cast-iron hollow columns, which also receive the upper part of the ribs of the lower roof, and become the bearers for a gallery surrounding the central part, the ascent to it being by a spiral staircase of iron.

"The entire glazing is composed of sheet-glass (21 ounces to the foot), slightly tinged with green by oxide of copper; that tint having been chosen in order to counteract the injurious effects on vegetation, arising from the scorching influence of the solar rays when transmitted through white sheet-glass, which had before been used in most stove-houses. The long-continued series of experiments on the properties of glass, of different hues and manufactures, which led to this arrangement, were made by Mr. Robert Hunt (keeper of the Mining Records in the Museum of Practical Geology), to whom, on the recommendation of Sir William Hooker and Dr. Lindley, the subject was referred by the Commissioners of Woods and Forests.

"Due ventilation is provided for by rolling-sashes in the roofs, and vertical sashes hung on centres at the level of the gallery, and in the lanterns; fresh air can likewise be admitted through the panels of the stone pedestal of the superstructure. The flooring between the surrounding stone footpaths is formed of perforated castings, each about four feet square, supported on wrought-iron bearers and cast-iron uprights. The house is heated by hot-water pipes, the apparatus being calculated to maintain a temperature of 80° when the external air is at 20° of Fahrenheit. For this purpose twelve boilers, from the patent of Messrs. Burbridge and Healy, have been fixed in two vaults under the house; and 28,000 superficial feet of heating surface in pipes, tanks, and troughs, laid beneath the whole of the flooring, a distinct set of pipes being supplied by each boiler. The vaults communicate, by a tunnel 550 feet in length, with a lofty ornamental tower at a short distance from the house, which conceals the chimney-shaft into which the flues are carried, and also contains a large reservoir near the top for the supply of water to the stove. Within the tunnel is also a railroad, for the purpose of conveying coals to the furnaces, and carrying away the ashes."

We see around us objects of the deepest interest, which it is needless to mention. One plant, however, must be especially noted, and that is the *Xepnthes distillatorica*, or pitcher-plant, in the orchidaceous house. This

wonderful production is brought from sultry regions, and abounds in stony and arid parts of Java. Travellers, in passing through the country, are often attracted by seeing a multitude of birds flying to one spot, and on drawing near they observe a considerable-sized plant, having leaves terminated by pitcher-shaped bags, furnished with lids and hinges. The latter is an elastic fibre, acted on by heat and moisture. Numerous little goblets, filled with sweet fresh water, are thus held forth, and afford a refreshing draught to such small animals as climb the branches, and to a variety of winged creatures. They hear the pattering of rain-drops on the dry leaves, while sheltered in their hiding-places, and, when the rain abates, forth they come, and drink at every open cup. The pitcher-plant is sometimes nearly covered with these thirsty creatures—some taking a full draught, others lifting

PITCHER-PLANT.

up their little bills between each sip, as if grateful for the blessing thus awarded them. But no sooner has the cloud passed, and the warm sun shone forth, than the heated fibre begins to expand, and closes the goblet so firmly as to prevent evaporation. This is a beautiful and provident contrivance. The quadruped, bird, or insect, has had sufficient time to quench its thirst, for the heavens do not immediately become cloudless; some brief space must, therefore, necessarily elapse before the warmth of the sun is felt. But the plant also requires nourishment; rain-drops soon trickle from the parched place in which it grows, and nightly dews, though heavy, are insufficient to refresh the sloping side of its arid habitat. The pitchers, therefore, are essential to its preservation, and a sufficient quantity of fluid is preserved by the gradual contraction of the lid. As long, too, as the lid stands open, the slender bill, the proboscis, or the tongue, can be readily thrust in; but as it gradually contracts, lest any poor creature should arrive late, or remain unsatisfied in the crowd, such pitchers as are covered with leaves remain much longer open, and it is probable that some never close. Neither one, nor two, nor even six or eight large pitchers, are assigned to each plant; but every leaf-stalk has its own, and consequently every leaf receives a needful supply of moisture through tubes that communicate with the absorbing vessels. We scarcely know a single instance in which a wonderful adaptation of one part to another of any vegetable to the animals that surround it, is more clearly shown forth, than in this interesting plant.

Farewell, beautiful Kew! we can only spare time to take a rapid glance at thy cactuses and mesembryanthemums, thy Victoria water-lily, thy orchidous house, with its seeming butterfly and king-plant, rare, as its leaves are beautiful; thy heaths and calcareolarias; thy muscums, too, for, although as yet in its infancy, it contains subjects fraught with instruction and delight.

**A STRANGE COSMETIC.**—The Thibetan women adopt a custom, or rather submit to a regulation, certainly unique in the world. Before going out of their houses, they rub their faces with a sort of black, sticky varnish, a good deal like conserve of grapes. As the object is to render themselves hideous, they daub their faces with this disgusting cosmetic till they scarcely resemble human creatures. The following was, we are told, the origin of this monstrous practice:—About two hundred years ago, the Nomekhan or Lama king of Anterior Thibet was a man of austere character. At that period, the Thibetan women were not more in the habit of trying to make themselves look ugly than the women of other countries; on the contrary, they were extravagantly addicted to dress and luxury. By degrees the contagion spread even to the holy family of the Lamas; and the Buddhist convents relaxed their discipline in a manner that threatened a complete dissolution. In order to arrest the progress of this alarming libertinism, the Nomekhan published an edict, forbidding women to appear in public unless disfigured in the fashion above mentioned; the severest punishments and the heaviest displeasure of Buddha were threatened to the refractory. The fair Thibetans vie with each other in making themselves frightful, and she who is most offensively besmeared passes for the most pious. In the country the law is most rigorously observed; but at Lhass, women are to be met with who venture to appear with their faces as nature made them; but those who permit themselves this license are considered as women of bad reputation, and they never fail to hide themselves when they catch sight of an agent of police.—*Hue's Travels in Tartary.*

## THE CANARY BIRD.

THE Canary birds now kept and reared throughout the whole of Europe, were originally natives of the Canary Islands. There they are still found in pleasant valleys, and on the delightful banks of sparkling rills and small streams. But for some two hundred years they have been bred in Europe.

About the beginning of the sixteenth century, a ship was wrecked on the coast of Italy, which, in addition to merchandise, had a multitude of canaries on board. These birds, thus obtaining their liberty, flew to the island of Elba, the nearest land. There they found a propitious climate, and multiplied very rapidly. Had not man interposed, by hunting them for cage birds, until they were entirely extirpated, they would probably have naturalized themselves there.

In Italy were found the first tame canaries, and there they are still raised in vast numbers. Within the last hundred years they were so uncommon and expensive, that only princes and people of great wealth could keep them. But at the present day these birds are raised in all our cities, and most of the towns, and sold at moderate prices.

In its native island the plumage of the canary bird is said to be more beautiful than that of our tame ones; but its song is less melodious and varied, consisting of fewer notes, and uttered at longer intervals. The original colour of this bird in its wild state was grey, merging into green beneath; but by domestication and climate it has been so changed that canaries may now be seen of almost every hue.

Most commonly they are of some shade of yellow; but some are grey, others white; some are reddish brown, or chestnut-coloured, others are beautifully shaded with green. These are the prevailing colours, but they are blended in various combinations, and thus present every degree of shade. Those the most prized exhibit most marked and regularly these various shades.

The one most generally admired, at present, is yellow, or white upon its body, and of a dun, yellow colour on the wings, head, and tail. Next in degree of beauty is that which is of a golden yellow, with black, blue, or blackish-grey head, and similar wings and tail. There are also grey ones, with yellow heads, or with a ring about the neck; and white ones with a yellow breast, and white head and tail. Those which are more irregularly marked are less esteemed.

The canary bird is five inches in length, of which the tail comprises two inches and a quarter. Sometimes the female is not easily distinguished from the male; but the latter has generally deeper and brighter colours, the head is rather thicker, the body is more slender throughout, and the temples and space around the eyes are always of a brighter yellow than the rest of the body.

In selecting a bird, those are best which stand upright on the perch, appear bold and lively, and are not frightened at every noise they hear, or every thing they see. If its eyes are bright and cheerful, it is a sign of health; but if it keeps its head under the wing, it is drooping and sickly.

Its song should also be particularly noticed, for there is much difference in this respect. But as it often depends on the peculiar taste of the purchaser, no directions can be given for its application. In respect to the notes of these birds, there is much difference. Some of them have very fine notes; but if the song is not fine they can be educated, by being placed with another, which is a good singer.

They catch the tunes of other kindred songsters with considerable facility; hence, among the best singers there is a material difference in the song, which depends mainly on the bird with which they have been educated. In some countries the nightingale is employed as a master musician to a whole flock of Canaries; and it is this which gives some foreign birds a different tone of voice from those bred in this country.

In teaching the canary bird to sing it is usual to take him from his comrades, and place him in a cage alone. This is covered with a cloth, when a short, simple air is whistled to him, or played on a flute, or a small organ. In this manner, by repeating the tune five or six times each day, especially mornings and evenings, he will learn to sing it. But it will frequently require five or six months before he will retain the whole tune.

Canary birds sometimes hatch their young every month in the year; but more commonly they breed only in the spring, summer, and fall months. After the young birds are hatched, the old ones are fed with soft food, such as cabbage, lettuce, chick-weed; also with eggs boiled hard, and minced very fine with some dried roll, or bread containing no salt, which has been soaked in water, and the water pressed out. Rape-seed, or the seed of the turnip, is much used for their food.

Up to the twelfth day the young birds remain almost naked, and require to be covered by the female; but after the thirteenth, they will feed themselves. When they are a month old they may be removed from the breeding cage.

It is a curious fact that, when two females are with one male in the same cage, and one female dies, the other, if she has not already sat, will hatch the eggs laid by her co-mate, and rear the young as her own.

GRACIOUS hearts reflect most upon themselves; they do not seek so much what to reprove in others, as what to amend in themselves; they love to look inwards, and being sensible of their own failings, are tender in reflecting on the weaknesses of others; whereas those that are most inquisitive into the lives of others, are usually most careless in reforming their own.—*Cradock.*

## CAROLINE AND CATHARINA.

(Continued from page 597.)

## CHAPTER XXVI.

"The shout  
Of battle now begun, and rushing sound  
Of onset ended soon each milder thought."—MILTON.  
"It is, methinks, a morning full of fate."—JONSON.  
"The eager armies meet to try their cause."—MAY.

THE morning of the twenty-third dawned bright and clear; and the first rays of the morning sun, as he rose in glory over the hills, played upon fluttering pennons and glittering bayonets. The American columns, who had bivouacked in the rear, came slowly winding over the hills to occupy the line of battle—then calmly to await the onset. In the intervals of the broken ground, horsemen, gaily dressed in lace and brodered colours, were galloping from flank to flank of the Mexican array. Heavy columns of lancers, with the heads of their pennoned lances lifted to the sky, moved slowly from point to point, and halted for the signal of attack. Large masses of infantry, moving with the precision of a field-day, and gleaming like a forest of steel in the sunlight, wound slowly from their bivouacs towards the right and front. Here, sheltered from the fire, they lay like clouds along the mountain, ready to discharge their force upon the American left. The cannon frowned ominously from every rising ground, and the gunners stood, with matches lit, beside the deadly engines. The preparation was complete—naught was wanting but the signal for launching forth the deadly charge.

Our friends upon the mountain were roused before the dawn by "the note of preparation" below them; and as the first light broke over the *sierra*, the firing again commenced between the skirmishers, where the darkness had suspended it. As they climbed out of the sheltered nook in which they had reposed, the two parallel ridges occupied by the opposing forces were two unbroken lines of fire; and a cloud of white smoke already hung upon the morning air, concealing every combatant. Over this cloud they gazed upon the fields below, and saw the movements of each party—the one preparing to overwhelm, and the other to resist. As Vernon gazed upon the dense masses of Mexicans, piled along the ridges and concealed within the ravines, his heart trembled for the little band which lay, diminutive and scattered, along the unfortified line of defence; and, although feeble from long illness, and sore from fatigue and want of rest, he determined at once to join his friends.

"I am sorry to leave you in this situation," said he; "but my friends will need all the help they can receive. I must join them at once."

The old man would have remonstrated, but Catharina interposed.

"It is right, father," said she. "His friends are few, and his enemies are many. We can remain here in safety till the fight is over; and if we cannot, he could not protect us if he remained."

Her father threw his arms around her, and made no reply.

"You need not fear for me, father," she continued. "At the worst we can go back over the mountain the way we came."

"You need not even do that," said Vernon, who had been examining the field. "You can keep along the mountain here to the right, until you clear the flank of the army, and then go into Saltillo. Major Warren is in command there, I think; and if I had paper, I would give you a note to him. You will be safe, at all events, there."

"I have friends there—many of them," said Bonaro, "who would give us shelter, if we could but reach them."

"Here is a piece of paper," said Catharina, drawing a carefully-folded letter from her bosom, the writing upon which, as she opened it and tore off the margin, Vernon recognized as Hugh's. Their eyes met, and she blushed deeply; but Allen hastily took the scrap to relieve her embarrassment, and she quickly concealed the remainder. He then traced a few words with a pencil, and handed the note to Bonaro.

"Where will we find you after these troubles are settled?" he asked, as he bade them farewell.

"It is my intention," said Bonaro, "to return as soon as possible to Rinconada, four leagues from Monterey, on the San Juan."

About to turn away, he caught Catharina's eyes fixed upon him with an expression which he could not mistake. He took her hand again, and pressing it warmly, replied to the look:

"I will see that he is exchanged as soon as possible," he said; "and in two months you may look for us at Rinconada."

"God bless you!" said the old man, solemnly; and Catharina sank upon a stone, and covered her face with her hands.

He hurried with all speed down the ridge upon which his friends were still fighting; and the old man and his daughter turned away to the right. Catharina walked pensively by the side of her father, or kindly assisted him to cross the ravines which occasionally obstructed their way. She was thinking of Hugh. Little more than one month had elapsed since they first met; yet that brief time had been sufficient for the growth to maturity of an affection strong and deep—an affection frank, warm, and pure, though not, perhaps, so impulsive as it might have been a few years before. The few glimpses the necessities of our story have permitted us to give of them were not all, nor even a large part of their intercourse. If they were so, she might be liable to the censure of being too frank, as perhaps she may be accused. But she was a true daughter of her race—with just enough of the blood of the colder North to temper and subdue, without destroying, the impulsiveness of her nature. Hugh's bold, free, and open spirit had impressed her deeply—too deeply for her present peace. For, though Vernon's

pledge to rescue his friend as soon as possible had somewhat calmed her fears, she still felt forebodings which made her heart far from quiet. Had Hugh been in the ranks below her, nothing short of violence could have induced her to turn away. But he was not there; and she walked by her father's side in silence, never turning her face to the conflict, and occupied by far different thoughts. The old man was anxious to reach the city on her account; had he been alone, perhaps he would not have left the mountain. To place her in safety before the license consequent upon victory and defeat alike, was his first object. He sometimes turned his head to gaze for a moment upon the contending hosts below; but after an hour's walk, a ridge shut the field from view, and they hurried on in silence.

Vernon threw himself at once among the scanty band, who were endeavouring to resist the encroachments of ten times their number. He was unarmed; but seizing the rifle of one of the wounded, and taking the cartridge-box offered by the dying man, he at once joined the now retreating line. Ampudia's light brigade was pressing on them in force—they were but a handful of weary men; but, gallantly fighting for every inch of ground, they strewed the opposite slope with the fallen. Dearly did the enemy purchase every advantage; for not a Mexican could show himself above the plantain, but some American sharp-shooter levelled him with the dust. Each had been climbing the mountain; and as they rose near the summit, the ravine which divided them rapidly grew narrower, so that, when the sun rose, not one hundred yards separated the combatants. A perfect tempest of bullets rattled among the rocks and plantains, and riddled the leaves and trunk of the stunted palms. The Americans fought under cover—they were so few that the ground afforded them shelter—but the dense masses of Mexicans presented a mark not to be missed; and yelling with agony, or shouting with excitement, the hapless infantry went down by scores. The iron hail that stormed around them was, to the American riflemen, comparatively harmless—the casualties among them bore no ratio to the slaughter in the ranks of their enemies.

But this could not last. The maddening peril of their situation, and the shelterless ground they occupied, while they thinned their numbers, goaded the rest to desperation. To stand before the storm was impossible—to retreat, or to advance boldly upon the little band of rifles, was the only alternative. To fall back was disgrace to their leader—already arraigned and punished for his conduct at Monterey—and he chose to make one desperate effort to dislodge the Americans, and turn the flank of the army. With one wild shout they rushed into the ravine; many fell, pierced through and through, mingling their yells with the din of battle; the line became disordered; the Americans rushed to the brink of the ridge, and poured volley after volley into the dense and confused mass; shouts of derision and defiance mingled with the roar of musketry; the Mexicans began to waver, ten to one as they were, and a few threw away their arms, and fled for life down the mountain; to increase the confusion, a shell from O'Brien's battery fell directly among the crowd, and bursting in their midst, sent many a brave man to his final account!

The fight seemed now lost, and the Americans crowded to the bank, and redoubled their deadly fire within fifty yards, telling upon the boiling mass dreadfully. But it was not to be given up so. Ampudia, and two or three of his officers, rushed to the front. A man seized the colours from the ground, and rushed up the steep. He fell, pierced by twenty bullets; but another, and another snatched them from the ground, as each in his turn fell before the storm. Goaded to madness, like a herd of wild buffaloes, the mass swayed to-and-fro. At last they turned upon their enemies, and, with one wild shout, rushed up the broken ridge. At the point of the bayonet, hand to hand, and foot to foot, the fight wavers upon the brink; hundreds fall over the rocks dead, wounded, and bruised. But numbers and fury at last prevail. The level ground is at last gained—the riflemen slowly retire down the steep, turning at every step to avenge their defeat—the infantry form upon the ground they have left—they slowly advance, and the flank is turned!

In the meantime the fight opened along the whole line; and shells and round shot were thrown into the American camp, or ploughed up the ground over all the field. Copper balls, weighing eighteen and twenty-four pounds, came bounding in enormous leaps from ridge to ridge, or howled through the air far over our heads. The ground was covered with large black boulders, hard as flint, and when one of these deadly missiles struck the earth, it scattered these in every direction, like the fragments of a bursting shell, killing and maiming all who were near. As the two armies neared each other—like two dark clouds full charged with lightning—grape was used; and first dropping along the line, like the large drops of rain before a summer shower, and then pouring in like the storm itself, the messengers of death hailed thick and fast. One unbroken roar of artillery—one sheet of flame—one dense cloud of smoke—marked the positions of the gradually-closing armies.

The small American force stood firm—nay, revelled in the danger, and cheered long and loudly, casting their caps into the air, as if upon some peaceful holiday rejoicing. Not a moment were their voices silent; and one continued shout ran like a contagion from flank to flank, or was taken up by the whole line in one loud, simultaneous cheer. No soldiers were ever in better spirits—none ever had the prospect of a harder fight.

Large masses of infantry and cavalry were now seen moving up from Santa Anna's third line, and severally taking their positions. A heavy body of two thousand horse, sustained by an equal number of infantry, formed into close column of attack upon the San Luis road. Orderly officers galloped from front to rear, assigning each corps to its position—the head of the column moved up a little rise—the long, dense line halted, and awaited the signal of attack. They were destined to assail the Pass of Angastura, held

by Captain Washington's light battery of six pieces, and the first Illinois foot—both under the command of Colonel Hardin.

Another column, double the number of the first, was slowly concentrated on the Mexican right, covered by a battery of eighteen pounders at the foot of the mountain, and destined to follow up the movement of Ampudia on the American left. Both these columns were formed while the fight was going on upon the mountain; and each now awaited the result of that movement. At last the riflemen gave way; overpowered by numbers, and literally borne down the slope, they hastened towards the plain. The signal was given as this was perceived, and then came the second great effort of the day!

#### CHAPTER XXVII. \*

"——— The battle swerved  
With many an inroad gored; deformed rout  
Entered, and fatal disorder."—MILTON.

"It was a goodly sight,  
To see the embattled pomp, as with the stop  
Of stateliness the barbed steeds came on."—SOUTHEY.

THE ground in front of the Pass of Angastura, over which the San Luis road passes, is perfectly level for the space of six or seven hundred yards. It then gradually rises until it reaches the summit of a gentle eminence, over which the road passes, and slopes away towards *La Encantada*; or, the "Haunted" *Rancho*. Washington's guns thus commanded the road for nearly a mile; and a force advancing upon the pass would be subjected to a murderous fire, in traversing the whole of that space, before they could come to close quarters. Jutting out from the plateau, and terminating suddenly at the road, came tongues of broken ground, like the fingers of a man's hand; and between these were deep rocky *barancas*, washed sheer down to the level below, and extending, many of them, to the precipitous hills. A narrow space of level land separated them from the deep *arroyos*, or ravines, and chasins washed in the ground; and these were impassable even to the infantry. At the pass, a ridge runs out farther than the rest, while the *arroyo* closes in—forming a passage not more than twelve feet wide. Here was posted the battery, supported by eight companies of infantry; and this was the position to be forced.

The column was at last formed; and amidst deafening cheers from Hardin's men, its head slowly appeared above the little eminence spoken of above. First came a dense body of lancers, moving forty abreast, in close array, with pennants fluttering in the wind, and sabres gleaming in the sunlight. Winding over the eminence, and slowly descending to the plain, their formidable numbers were visible to their breathless enemies; the tramp of eager steeds, the mellow music of their bugles, and the waving of numberless banners, announced the pride and confidence of discipline. As the long column of horsemen cleared the hill, the flags of the infantry were visible, floating, rich in gold and silk embroidery, above the forest of gleaming bayonets. Then came the tall hats and many-coloured cockades of the different corps, and firmly breasting the hill, in admirable order, the heavy infantry of the column marched close upon the heels of the horsemen. Before the infantry had cleared the hill, the cavalry were within point blank range of Washington's guns; but that officer was unwilling to open upon them, until they were fairly within the jaws of death.

Not a word was spoken among the little band who held the pass; the silence was so profound that the neighing of the horses and the jingling of the sabres could be distinctly heard. Even the voices of their officers, preserving unbroken order, came, mingling with the stillness, to the pass; and the measured tramping of the horses as their prancing ceased, became distinctly audible. The impatience for the onset, manifested by loud cheers, had given place to a stern, ominous silence; and every musketeer grasped his weapon more firmly for the struggle.

The head of the column had now advanced within five hundred yards of the redoubt, and still not a gun had been fired. Lieutenant-Colonel Weatherford stepped out from behind the parapet, and raised his hand; and simultaneously six pieces, trained upon the head of the column, opened their deadly fire. Shells and round shot sped together howling through the air; striking the head of the dense mass, they tore through the pass, or burst in the crowd, ripping up the formations and opening long lanes from front to rear. Sabres and lances, and shakos and banners, mingled in frightful confusion; horses plunged and neighed and rolled upon the crowd, crushing and wounding their riders and obstructing the passage of the rest. A yell of agony from men and horses, was answered by a shout of triumph and derision from the cannoniers and infantry. The fire was redoubled; the confused mass was more confused; loud commands and louder curses were of no avail; a storm of grape succeeded to the shells and reaped them down like ripened grain; they made an effort to move forward, only to meet death the sooner and in greater numbers; the dead, the wounded, and the struggling cumbered the plain; the infantry halted in helpless masses; the column wavered, a few stragglers put spurs to their horses and galloped to the right; the example was contagious, and in five minutes the whole mass, broken, decimated, and flying, had disappeared among the ravines. Another long loud cheer from the American lines proclaimed their rout.

But the column on the right was now advancing, too. As the front platoons cleared the ravines, within whose cover they had mustered, they were surprised to see a little band detach itself from the American line, and advance several hundred yards along the level plateau—apparently challenging the whole Mexican host to fight them, twenty to one. This was General Lane, with the second Indiana foot, and O'Brien's light battery of three pieces. Brought thus suddenly into action, a straggling fire opened on both

sides—the Mexicans pushing forward, as company after company and battalion after battalion emerged from the ravines. In five minutes the little band found themselves engaged with ten times their number—raked from left to right by a heavy battery on their left, and enfiladed by another on their right—supported feebly by O'Brien's small though active guns, and torn to pieces by the murderous fire of the whole Mexican force. To make their situation worse, they had been, by some unexplained mistake, advanced entirely beyond supporting distance, and were thus compelled, singly and alone, to combat the grand charge of the day. Like four-fifths of the force, they were volunteers but lately raised, and had never before been under fire.

But with the steadiness of veteran troops, they prepared to make the most of their desperate position. Loading and firing as rapidly as possible, they poured a deadly fire into the close ranks of their enemies. The batteries played upon them continually, enveloping them in clouds of dust, and often striking down the fated files. O'Brien's men worked with the fury of desperation; and many and many a shriek went up to heaven, from those his coolly-directed shot struck down. His gunners fell, one after another, and the officers supplied their places; his horses were killed and their harness cut away, but still the devoted guns were plied with desperate fury. All the horses and all but two of the men belonging to one gun were killed; it became evident that the gun must be abandoned. But, charging it once more, the officer pointed it with his own hand; the long lane opened in the cloud of infantry before him, told how certain was the aim!

The fight had now lasted nearly half an hour—an age, almost, in such a place—and the battle was fast approaching a deadly grapple hand to hand. The mere weight of numbers must have overpowered the little band, and the guns must have been lost. An *à-de-camp* galloped up and ordered them to fall back. It was too late! The enemy was upon them, and their backs once turned, there was no choice but flight. They had been in a false position too long, safely to retreat from it. O'Brien charged his guns once more, and once more he threw a shower of grape among the rapidly advancing battalions. The fatal word was given—the firing ceased, a retrograde movement was attempted in slow time; but the fire was too hot. The slow time became quick time, and the quick time degenerated into a run. The regiment fled precipitately from the field! A panic may seize the bravest men—and when it does, the mischief is the greater in proportion to the rarity of the occurrence.

O'Brien left one of his pieces on the field—all the men and horses belonging to it were killed. It was one of the pieces taken from General Santa Anna by San Houston at the battle of San Jacinto. Thus recovered by that general in the country from which he carried it more than ten years before, had he been victorious in the fight, it might have formed the text of a vainglorious homily. But the recollections connected with it were not the most pleasant—in his official despatch to his Government he did not mention it; and after the battle, it was found by the Americans dismounted, spiked and thrown into a ditch at the foot of the mountain of *Agua Nueva*. A cannon may have strange adventures—perhaps the strangest!

The attacking column, elated with success, and sure of victory, pressed firmly and rapidly onward. Reinforced by numbers from the repulsed column on the left, it now amounted to more than ten thousand men. The second Kentucky foot, which, with two pieces, had been all the morning posted in the valley to the right of the *arroyos*, was now ordered to support the second Illinois in its conflict with the body which just routed the second Indiana. Colonel Hardin was ordered up with four companies of his regiment, to take the Mexicans in flank; while all the artillery available was concentrated on the heavy mass.

It was a critical moment.

The flight of the Indians had left the second Illinois entirely unsupported; and the broken line could be filled up only by bringing troops from a point nearly a mile away. If this regiment followed the example of the other, the fight was lost beyond all redemption. One waver, or false movement—one blast of faint-heartedness, would ruin the fortunes of the day, and give over the whole American army to murder and outrage. It was a fearful responsibility; but it was nobly sustained! Without wavering or swerving from its course, the Mexican column came steadily on. As they approached musket range, a dropping fire opened from the flanks; anon the platoons deployed into companies, and the companies into battalions; but without slackening their speed. And now the guns of Bissell's men were heard. A rolling fire ran from right to left—and then every man loaded, aimed, and fired as fast as possible. Not a man moved from his ranks, except to lie down and die—not a movement of hesitation or doubt was seen along the line. The firing in other parts of the field had almost ceased, and both armies seemed tacitly to wait the issue of this charge. One by one, file by file, the Americans went down; but cool command to "close to the right," was as coolly obeyed. Officer after officer was despatched to hasten the advance of reinforcements; and far down the slope could be seen Hardin's and McKee's men running at full speed to join the fight. Hurry! hurry! for it is time, indeed! Quick, double-quick time; and still they cannot be in time! The fire is becoming too dense and murderous; but still no sign of wavering along the line. An officer rides forward, and speaks to Colonel Bissell.

"Can you take ground to the rear, colonel, without another panic?"

"As certainly as upon regimental drill, sir," proudly answered the colonel.

"Then do so."

The word to "cease firing" was passed along the line, and the roar was suddenly silenced. "About face!" Calmly and steadily the facing was done. "Forward! Quick time! Steady, men—steady! March!"

Coolly "as upon drill" the regiment marched off to the right and rear, with a galling fire upon their backs. "Halt!" Every man halted and dressed the line. "About face!" Again their faces were towards the enemy. "Commence firing!" Once more the rolling fire ran from right to left, and the cheer of the enemy was checked in its utterance.

"The battle is won!" exclaimed the excited Aide—a large man, with a very red face.

And now came Hardin an McKee. Forming on Bissell's right, they opened a deadly fire upon the flank of the labouring column; amidst deafening cheers, broken only by the roar of cannon and the rattle of the musketry, they swept them down. At the same time the skirmishers from the mountain, who had slowly retreated to the plain, charged through the Mexican force, cutting the long column in two. The infantry advanced to meet them—half the Mexicans, including all the cavalry of the column, are cut off and gallop away to the American rear; the rest recoil and waver. One vigorous charge, sustained by artillery and cavalry, breaks the formations—forces the leading battalions back upon their comrades. One more push with the bayonet completes the confusion—the broken mass, like the waves of a troubled sea, role away to the rear, and their retreat is accelerated by the artillery, which ploughs through them in every direction. What had been the head of the column floated away towards the plain, like a fragment from a cloud, and the hot and breathless combatants lie down to rest. It was the first crisis of the day, safely passed; and every man felt his courage renewed and strengthened.

#### CHAPTER XXVIII.

"Much work for tears in many an English mother,  
Whose sons lie scatter'd on the bleeding ground."—SHAKESPEARE.

"My lord, here are letters for you."—LORD.

"Here are a few of the unpleasant words  
That ever blotted paper."—LORD.

AMONG those who broke through, and divided the Mexican column, was Allen Vernon, having taken part in the fierce fight of several hours on the mountain. During the hand-to-hand conflict that followed their retreat, he had no time to look about him. But when the broken and rifled mass had at last retired beyond musket range, and were left to the tender mercies of the most effective artillery in the world, he threw himself upon a stone to breathe. His name was called, and his hand was grasped by Lieutenant Clayton.

"A warm welcome after your wanderings, isn't it?" said he smiling.

"Warm enough in all conscience," replied Vernon, wiping the perspiration from his brow. "When did you return from the States?"

"Only a few days ago," said the lieutenant; "and I have letters for you."

"Are my friends well? Did you see my father?"

"Yes, I saw him a moment—all well. But now answer me a question or two: where in the world have you been so long? and how happens it that you return just in the nick of time?"

"I can't tell you now—it would take till night; and we are likely to have plenty to do between now and then. From whom are the letters?"

"One is from your father, and one from—can you guess?"

"I might hope, but *contra spem*—"

"The other is from Miss Cara Talbot—I will not keep you in suspense," interrupted Clayton.

"Where is it?" asked Allen, eagerly rising to his feet.

A flush passed over Clayton's face, but faded out immediately. It was a flush of jealousy which even the most generous natures cannot avoid. It was gone, however, and he replied with a laugh—

"Nay, sit down; you cannot get it till night—"

"And then we may both be dead," interrupted Vernon.

"You are right," replied the other. "Wait here—I think I can venture to be absent a few minutes."

He caught a horse, of which there were many running loose over the plateau, and springing into the saddle galloped away to his regiment, and thence to the camp. In a very few minutes he was again beside Allen, presenting him a letter. Like Vernon, he had totally forgotten the letter from his father, and thought only of that from the hand of her whom they both loved. Allen snatched it eagerly, and tore it open. Before he commenced reading, however, he looked up, and met Clayton's eyes resting upon him, with an expression which he did not understand. But as before, it vanished, and Allen spoke—

"Pardon my ungraciousness," he said; "I should have thanked you before for manifesting so much eagerness—"

"O read, read! by all means," said Clayton hastily. "You may be interrupted at any moment, and never read any more."

Thus urged, he opened the letter again, and Clayton turned away. The fight was raging fiercely on the left and in the rear, and there was a heavy cannonading on the right at Angastura; but in the centre where they were, everything was quiet. Had all the artillery on the field, however, been playing over him, after he commenced the letter, it would not have roused him. It ran as follows—we can read it as he does while Santa Anna is reforming his broken battalions:

"L—, January 15, 1847.

"DEAR MR. VERNON:

"You have now been absent more than eight months, and yet during the whole of that time—an age to me—you have never had the grace to write me a single line! If, like the forlorn knight who sang—

"O! fly to her bowyer, and tell her the chain  
Of the tyrant is over me now,"—

you are immured 'in a dungeon to waste away youth,' I can excuse the otherwise inexcusable neglect. And, as I am determined at all events to pardon you, I am forced to suppose you a forlorn captive among your cruel enemies. See what a woman's confidence and imagination can do! I am not, I hope, one of the class of my sex who make themselves miserable about 'the milk' which they expect to *spill* next week; and therefore hold it to be the worst philosophy—or no-philosophy—in the whole world, to hasten the advent of coming ills. If they will come, they'll be with us soon enough; and if they will not come, our fretting is all feeling wasted. If one be of the crying mood, the wicked present furnishes quite enough ills to consume all our tears without reaching forward; and if he be stoical and obdurate, the miseries, even when they come, will not affect him.

"But I am 'sobering down.' When one begins to philosophise he is very near crying—notwithstanding the effort to the contrary; indeed, the very effort shows the inclination. And in truth, although I commenced with the intention of writing a cheerful letter, I am very much nearer tears than smiles. I have some bad news to tell you, and I feel that I am doing it very awkwardly. But you know I never wrote to you before, and it is unfortunate that I should begin with such tidings. Perhaps it would have been better if I had gone straight to it in the outset, without any affectation of a cheerfulness which I do not feel. So without further delay I will tell it to you at once.

"You are accused of *forgery*; and, worst of all, you are accused by—my father! That his daughter does not join him in the suspicion, witness this letter—no, not for one moment! But he does believe it, I have no doubt, fully. Upon what grounds I do not exactly understand—although the whole story has been detailed to me more than once. I will, however, endeavour to recall enough of it to enable you to know with what you are charged—perhaps then your own better information may enable you to ascertain your position. It seems that my father refused to sign a paper with you, to be given to Mr. Manning; for what purpose I do not know—yes, to borrow some money. Well, he says he left the paper at your studio, with a note explaining the reasons why he refused, and heard no more of it. Time passed on until a few weeks ago, when he discovered that the paper had been given to Manning *by you*, with his name subscribed in the very place where he refused to put it. Manning says he gave you the money, and received this paper; and their conclusion is irresistible, they say, that you signed the name.

"Several of your friends, with whom I have talked, say that the signature of your name is undoubtedly genuine, and that my father's name is as unquestionably a forgery, though skilfully executed. Can it be that some one has got possession of the paper after you signed it, and, after affixing my father's name, presented it to Manning? And yet this supposition is excluded by Manning's positive statement, that he received it *from you*, and paid you the money: and when money is to be paid, from M.'s character, I should think he would be careful enough. He is a singular, hard man, it is said, and seems much incensed at what he calls 'the trick' played off on him. Thornley (father's lawyer since Thorpe's absence) says, 'Manning views the affair, not so much as a crime by which the laws of the land have been violated, as a stratagem in which he has been circumvented;' and I say that Thornley, like most lawyers, I suspect, thinks more of the violation of the laws of the land, than he does of the violation of the laws of honour. My father is very indignant, 'not,' he says, 'on account of the paltry thousand (which is natural, since, as I am told, he will not have it to pay), but on account of the 'felonious use of an honourable name.'

"These things gail me, Vernon, exceedingly, and make me sullen sometimes, even to my dear father. The 'hue and cry' against you, and the infamous manner in which they have treated your father, make me even undutiful; and I fear that, if I could be this moment convinced of your guilt, my wrong feelings would make me justify you. Not, Vernon, that I even have such a thought—no! I am as positively certain of your innocence as I am of my own. I am certain that you have been made the victim of an infamous plot: and I am equally certain that if you were even guilty of this act, you would be better, a thousand times better, than many who are now railing against you. Old Manning has seized the house in which you left your father, as he says, to secure the debt. Father offered Mr. Vernon an asylum, but he refused it—as he should have done; and is now boarding comfortably in the upper part of the city. I called to see him yesterday; and promised him to write this letter. He is too feeble to write much, though in general good health. Mr. Clayton, who almost alone believes you innocent, and is therefore doubly my friend, has undertaken to deliver this as soon as possible. When you return, which of course you will do immediately, you should persuade him to come with you. He is said to be a lawyer of fine talents; I know him to be a man of the very best feelings; and, more than all, he believes in your innocence. In this last quality he is almost alone, as I said before; everybody believes you guilty but me. They say the evidence is too strong; and they say, moreover, that you will never return. I know better—but what can my feeble voice effect?

"There is one other circumstance which gives me some hope that you may be able to establish your innocence—confirms me, indeed, in the belief that you are the victim of a plot. It is this: an accident, which I will explain when I see you, put me in possession of a note, addressed, I think, to you, written and signed by my father—the same note, I presume, intended to convey to you his refusal. It is as follows:

"DEAR MR. V.

"On examining the state of my affairs, I find it impossible to accommodate you. With the security of this valuable property, however, I doubt not you can easily have it done. I am called away, so as not to be able to

redeem the appointment. Hoping you may find no difficulty in so doing, I remain

"Your most humble servant and friend,

"J. TALBOT."

"I preserved this paper, because I thought it strange that it should be in the hands of him through whom I got it. I have said nothing about it in all the fermentation, because the scandal-mongers would seize upon the fact of its being in my possession, to say that you must have had it. For they already say that I am far too much interested in a man who has——, you can fill it up, I am too impatient to write it. I state these things, at the risk of wounding your feelings, in the hope that a full knowledge of your position may hasten your return.

"I have now related the whole story, I believe, fully; but I cannot close without urging you to return as soon as possible. I have not said more than I could avoid about my own feelings, for I know I can safely leave them to your imagination. My confidence in you is not impaired—I am as firmly as ever what I was when we parted—but you *must* come home. I cannot wait longer than it will take you to reach here. I know I need not urge you, and yet I cannot help it. If I close this letter without any more tender expressions, you must not attribute it to change, but believe that I am, as truly as ever,

"Yours,

"CARA."

Vernon read the letter through, and then covered his face with his hands. The din of battle, now fast approaching them again, came to his ears unheeded. But his mind was far too elastic to be stunned, even by such a blow as this, for any very long time. He raised his eyes to Clayton's and took his hand.

"You know the contents of this?" he asked.

"In part, I suppose I do," Clayton answered.

"And you believe me innocent?" Allen pursued.

"I have not a doubt of it," said the other.

"Thank you—thank you!" he exclaimed, pressing his hand warmly. "She says," he continued, looking at the letter, "that you alone believe it. Will you return with me?"

"It is your intention to go immediately, then?"

"To-morrow, if the fight closes."

"I had already tendered my resignation," said Clayton, "when the prospect of a fight induced me to withdraw it. But if we survive the battle, I will go with you gladly."

"Thank you, once more!" Vernon exclaimed; but he had no time to say more. A column of lancers came galloping down the plateau, and the loud commands of the officers called every man to his post. Scarcely was the line formed, before the cavalry, struggling over a narrow *baranca*, put spurs to their fiery horses, and dashed at the straggling force. They came on in beautiful order, the many-coloured pennants of their lances fluttering in the wind, and their prancing horses springing lightly and evenly over the broken ground. At a word from their commander, every lance was levelled and the pennants were flecked with foam from the clamping bits.

"Steady! steady, my men!" shouted the colonel, "and fire low! Wait for the word! Wait for the word!"

The officer allowed them to come within a hundred yards, before he gave the word to fire. Then stepping out, he cautioned them again to "aim low," and gave the signal. No volley was fired—no booming sound of many guns at once—for nothing is less effective in checking permanently a charge of cavalry; but that same "fire by file" (in technical language), the rolling fire from right to left, which checks, confuses, and routs a column sooner than anything else, ran all along the line like the firing of a train. The front companies drew violently up, the rear came thundering on, and in one minute the whole mass was one cloud of confusion. Many a horse and rider bit the dust together, and many a lancer was killed by the press, whom not a ball had touched. A random volley of *escopets* attempted to answer the murderous fire of the Americans; but nearly all the balls passed high over their heads, wounding none. To extricate himself from the crowd was now each man's aim, and in five minutes the plain was covered with fugitives, making for the mountain. A vigorous charge with the bayonet drove the remainder from the field, and a few well directed shots from a battery of twelve pounders, made the rout a race for life. They rode furiously towards a gorge in the mountain, formed by two ridges jutting out into the plain, and surrounded on three sides by inaccessible rocks and precipices. Here they met a large body of another cavalry corps, who had just been repulsed by the third Indiana and second Mississippi regiments, under the command of Colonel Davis (who formed his singular half square or V, to receive their charge), and thus were massed in the space of four acres, at least five thousand men.

A slight advance of the corps with which our friends Vernon and Clayton were fighting, effectually cut off the retreat of this force to the main body. Lieutenants Sherman, Kilburn, and O'Brien—the first and third on the flanks, and the second in front—were pouring into the dense mass an unflinching fire, which did fearful execution. Every gun was coolly trained, and told with the certainty of rifle-shooting, tearing open the columns, and reaping down whole companies. The mountain enclosed them on three sides, and a half circle of fire enclosed them on the other. It was impossible for them to hold out; ten minutes more must witness their surrender, and the defeat of the Mexicans. But at this juncture Santa Anna was true to his fame. A white flag was seen fluttering in the wind, and an officer came forward to General Taylor, with the inquiry—"What he wanted?" The general, as had no doubt been foreseen, immediately ordered

the artillery to cease firing; the frightened mass were surprised by a respite, and galloping towards the right of the American line, they forthwith commenced a retreat along the mountain, and directly under the American guns.

General Wool was despatched to the hostile lines, with an answer to the inquiry, and the Americans remained inactive. He advanced within the Mexican lines, and endeavoured to procure a cessation of the firing. But the object of the flag was already gained, and the general returned to his post. The guns opened again; but the bird had flown! The whole mass, who, a few minutes before, were completely in our power, had profited by the stratagem, and gained the main body of the Mexican army. The crafty politician had outwitted the honest old soldier!

The day was now far advanced. The Americans had regained the ground lost in the morning, and the Mexicans were doggedly removing their more advanced guns, and slowly retiring from the field. A straggling fire was still kept up between the fixed batteries, but everything denoted a cessation for the night. The exhausted infantry were lying round the guns, and the cannoniers were resting from their fatigues.

## CHAPTER XXIX.

"It gives me wonder

To see you here before me."—SHAKESPEARE.

"The conflict grew; the din of war—the yell  
Of savage rage—the shriek of agony—  
The groan of death, commingled in one sound  
Of undistinguished horrors."—SOUTHER.

VERNON and Clayton at last found an opportunity for conversation, while enjoying the temporary calm. The former had briefly related the incidents of his absence, closing with the capture by Minon's men of Manning, when Colonel Thorpe was seen advancing towards them, evidently for the purpose of speaking to Allen.

"You had better let him believe that Hugh is dead," hastily said Clayton; "I will give you the reason afterwards."

"But—" commenced Allen.

"Tell him so," interrupted the other, "if it becomes necessary, and trust me for the reason—it is of great importance."

Allen had no time to reply. Thorpe advanced, warmly extending his hand, and expressing a cordial "Welcome back!" Allen took it in the same spirit; and no one who had seen them, would have suspected from their bearing, that one was plotting the other's destruction.

"You have encountered many dangers," said Thorpe, in a tone of interest, "and unluckily you have returned just in time for more."

"Luckily, rather," answered Allen; "I would not have been a day later for a colonelcy."

"You value neither your security nor your preferment," said the colonel, with a smile. "But what has become of your companion?"

Vernon caught a quick glance from Clayton, and replied—

"He is where our friendship cannot avail him."

"How did it happen?" asked the other, in apparent surprise.

"He was shot by a party of lancers on the other side of the mountain, while endeavouring to cross to the camp."

"Were you with him?" asked Thorpe.

"Yes," Allen answered; "and with difficulty escaped the same fate."

The colonel heaved a deep sigh, but Clayton saw it was more a sigh of relief than of sorrow.

"Well, well," he said, "it has been the fate of many a brave man to-day, and will probably be that of many more before sunset."

Before Allen could reply, a staff-officer, whom they recognized as a Quartermaster on the staff of General Wool, rode briskly up the slope, followed at a distance by two squadrons of dragoons, and turned towards O'Brien's battery. The latter was supported by five companies of the first Illinois foot, under Colonel Hardin; and both infantry and cannoniers were resting on the stony ground. The colonel sprang to his feet as the officer approached, and eagerly received his commands.

"Colonel Hardin," said he, "you are now ordered to charge. Hasten, or the dragoons will deprive you of the honour."

The order was received with a shout, and every man sprang to his foot, and hastened into line. The colonel had repeatedly, during the day, asked permission to charge a battery posted on the American left, but it was always refused—the general deeming it, correctly, no doubt, a rash desire. But the permission had come at last—rendered significant, too, by the qualifying word "now," used by the officer; and the colonel very naturally construed the order as a direction to do what he had before wished to do. He turned his eyes to the point previously occupied by the battery; but it was gone. Following the line of the mountain with his eye, he descried it moving to the rear, and already far within the Mexican lines.\* But this made no difference to the chivalrous colonel. He immediately ordered his battalion (numbering some three hundred men), to advance by the right of companies, and filing to the right, he passed between O'Brien's guns, and commenced an advance in double quick time, in the direction of the retreating battery. He had first to cross an open, bare plateau, of about a quarter of a mile in extent, totally void of vegetation, and affording no cover of any description. This was bounded by a deep ravine, running from the road, and heading somewhat above the line of his advance.

\* When I speak of "the lines" of either army, I mean the ground covered by their guns, and held without contest. Whether this be technical or not, I am not sufficiently learned in military matters to know: and hence this note.

(To be continued.)

## THE HOME COMPANION IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS;

BEING

A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.

PRICE ONE PENNY. ALWAYS ON SALE.

WEEKLY ISSUE OF THE FAMILY FRIEND.

On SATURDAY, the 3rd of JULY, was published No. 1. of the NEW SERIES of THE FAMILY FRIEND; with which Number will be presented a Beautiful STEEL ENGRAVING, by C. ROLLS, after a Painting by W. COLLINS, R.A., entitled

"PARTING WITH A LITTLE FAMILY FRIEND."

This number will also have a new Title-page, by FRANKLIN. There will be no alteration in the Size, Shape or Price of "THE FRIEND," its present neat and economical form being much approved. For the convenience of those who have not taken in or completed the OLD SERIES, it is suggested that Orders should be given to Booksellers to supply

- 1st. THE WHOLE SERIES, BOUND, PRICE 15s.; OR  
2nd. A VOLUME MONTHLY, PRICE 2s. 6d.; OR  
3rd. THREE NUMBERS MONTHLY, PRICE 2d. EACH.

By this arrangement, Subscribers may become possessed of the OLD SERIES by a method adapted to their own convenience. Back Numbers and Volumes, for completing Sets, should be ordered immediately.

London: HOULSTON and STONEMAN, 65, Paternoster-row; and all Booksellers.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### SOME PLAIN HINTS ON HEALTH.\*

HEALTH is a word which, in its full import, is of a far more comprehensive character than is commonly imagined—including the well-being of the intellect and the affections no less than that of the physical powers. So necessary, indeed, is a healthy state of the "inner man," that wherever this is greatly defective, the most perfect state of bodily vigour is of but little worth, in regard to its power of promoting true happiness. If, therefore, we would accurately define the meaning of the word in question, we must explain it as implying "a sound mind in a sound body." It were easy to show that bodily health can never be so well, and so hopefully cared for, as when the intellectual faculties are unimpaired, and the affections are well ordered.

That such is the fact will readily be seen, if it be remembered that some of the best preservatives of physical health necessarily presuppose a "sound mind" on the part of those who use them; for without this there is but little probability that due attention will be given to observances, which—although highly conducive to the preservation of bodily vigour—do, nevertheless, involve an amount of self-command that cannot well be looked for where the intellect is in a disordered and unhealthy state.

The necessity of bodily health, in order to the full enjoyment of all other blessings, is too evident to require being dwelt upon. So important an ingredient is it in the cup of human happiness, that, wherever it is wanting, there is a serious drawback upon what is required, in order to the full and abiding consciousness that "life is good." It is, therefore, quite natural that there should be a general and an earnest concern to possess this valuable immunity; and accordingly, all who are capable of appreciating it, are anxious to avoid losing it, or, if they have already lost it, to get it restored. It were well if equal anxiety were felt to keep it from being impaired. Here, however, there is a prevailing neglect of due precaution. Appetites are indulged in, and practices allowed, which have the inevitable effect of sapping the firmest and most vigorous health; but, because the process of deterioration is carried on slowly, or, it may be, almost imperceptibly, no apprehension of danger is felt, and, consequently, no care is taken to prevent the coming evil.

It is freely admitted that this neglect is, in most cases, attributable to a want of due knowledge as to what is, or is not, likely to be hurtful. In multitudes of instances this perilous carelessness may be traced to the baneful influence which the merely sensual passions have been allowed to exercise over the rational faculties. So powerful is this influence, that even where there is some perception of the danger attendant upon the unchecked gratification of the animal appetites, there is no attempt made to bring them under proper control. In many of these cases, there is an exhibition of folly, such as one would think could hardly be looked for from any who claim to be reasonable beings. Habitual efforts are made by means of drugs to accomplish the evidently impracticable work of uniting two opposites: nothing less than the preservation of bodily health in connection with the full indulgence

of the sensual propensities. That all such efforts must, of necessity, be fruitless, is a proposition too evident to require any laboured proof.

Addressing the reader as being a sensible, sober-minded person, the following particulars are given, with a view to show the advantages connected with early hours, especially as regards rising in the morning. These particulars, if duly weighed, will, it is hoped, serve as so many persuasives, or inducements, to adopt, or to persevere in, this very beneficial practice:

I. To devotional or religious exercises.

II. To intellectual pursuits.

III. To the effective discharge of duties.

IV. To the pursuit of pure and delightful pleasure.

First, as to religious exercises. It were to be wished that no rational, accountable, necessitous being, such as is man, would be unwise enough to abstain from holding converse with that great and glorious Being, who is his Maker, Preserver, and Redeemer, through the medium of earnest prayer and fervent praise. It is, however, most true, that multitudes of such persons, although they have become, nominally, members of the Christian Church, and thus are solemnly bound to observe Christian-like practices, do, nevertheless, totally neglect the highly important exercises of private devotion. There are, however (and it is a cheering consideration that the fact is so), very many who do feel the importance and necessity of private religious exercises; and who, moreover, are wishful to engage in them, both regularly and leisurely. They have, however, many obstacles to contend with. Let such consider whether these may not be avoided, or even removed, by their adopting the practice of rising an hour or two earlier than hitherto they have risen. If they are in earnest, they will not fail duly to consider this point; and in so doing, will most probably come to the conclusion that, by adopting the plan hinted at, they will escape all the hindrances which at the present time prevent their full enjoyment of the high privilege of private devotion. No Christian man would wish to enter upon the duties of his station—which duties will probably call him to mingle in the busy scenes of the bustling and thought-dissipating world—without having first engaged in the delightful exercises of praise and prayer: the first, on account of blessings enjoyed, and the second, with a view to obtain spiritual help—such as may sustain him during the prosecution of his necessary (although, it may be spiritually-hazardous) business or occupation.

It cannot be for a moment doubted, that there is a highly important use in early rising. Every one who knows anything, practically, of either study or literary composition, is fully sensible that the mental powers are much more vigorous, collected, and manageable in the early morning, than they either are, or can be, in after times of the day, especially if the mind has been at all closely or laboriously engaged during the previous and by-gone hours. This being the fact, it follows that better progress may be made, both in regard to the acquisition of knowledge and also in the work of literary composition, during the hours of the early morning than during any other given time in the course of the day. This must now suffice under the second head. As to the third,—a similar line of argument will hold good, for every handicraftsman, if he be a sober and orderly-living man, knows that work may be got through, both more readily and in a more workman-like manner, at the beginning of the day than at any other time. The knowledge of this fact induces multitudes of working people to adopt, and to persevere in the habit here recommended; and it is worthy of special observation, that early-rising workmen are generally more healthy in body, as well as more orderly in their habits, than are those who habitually rise at a late hour. These remarks will, more or less, apply to very many of those who are engaged in the higher kinds of business, whether it be trade or manufacture. As to the fourth particular, it may be observed, that the influence of early rising in promoting the enjoyment of pure and healthful pleasure is so considerable, that it can hardly be fully imagined, much less can it be duly pointed out. Yet a few particulars may properly be given; perhaps, indeed, they ought not to be omitted. No one, except by personal experience, can adequately understand either the nature, the variety, or the extent of this pleasure. To walk abroad in the early hours of the morning; to inhale the fresh and refreshing morning air; to smell the fragrance of plants and flowers; to survey the beautiful verdure of the fields and meadows; to listen to the sweet song of the lark, and other feathered minstrels; to see the shepherd tending his flock, or the farm-labourer at his work, or the rustic wagoner with his well-favoured team; or the ruddy milkmaid "crowned with her dripping pail;" or to mark the lively actions of the finny tribes in brook or river; or to contemplate the clear blue vault of heaven—to mark the glorious sun illumining all objects, whether far off or near, and to feel the genial warmth of his morning beams—with numberless other scenes and objects of natural beauty or magnificence, cannot but excite in every susceptible heart the most delightful emotions.

Cleanliness, from its direct and unceasing bearing upon, not only health but also upon comfort, deserves a foremost place. Without the strict, regular, and persevering observance of this habit, as regards the person and the apparel, together with the preparation of food and the management of the dwelling-place, there can be no true physical enjoyment of life; while the preservation of the bodily health is rendered a very doubtful, if not altogether a hopeless matter. Yet what multitudes of men and women are there who are lamentably remiss in their attention to this highly necessary habit. The wretched state of their dwellings, together with the disgustingly-squalid condition of themselves, and, if they be family people, of their children also, proclaims them to be either grossly ignorant, or culpably negligent, of that duty which, not without good reason, has been declared to be "next to godliness."

It is freely admitted that the necessary means of being thoroughly clean and tidy are not within the reach of multitudes; yet even where these means

\* The above essay is extracted from a valuable little work, entitled "Thoughts on Various Subjects," by the Author of "Memoirs of a Working Man." We shall enlist the sympathies of our readers by informing them that the writer is a worthy mechanic, who has been for many years almost incapacitated from labour by severe bodily sufferings, and now depends for the support of himself and a numerous family, upon the sale of the work we recommend for its merit's sake to the reader.

are the most deficient, if there be but a disposition to be cleanly, there will be such efforts made in order to be so as will effectually remove all that is greatly offensive, either in the person, or in the dwelling place. Happily for this class, there are now in several populous districts, even of the metropolis, public institutions established for the especial purpose of applying the necessary means of being cleanly, in regard both to the person and the apparel; and it is a most gratifying fact that many of the people for whose benefit those truly benevolent institutions were formed, are gladly and regularly availing themselves of the benefits which they both offer and bestow.

A third means of promoting the health of the body is moderation, or temperance, in respect both of diet and drink. Much has been of late years said about the necessity of temperance in drinking, and much good is said to have followed these discussions, but hitherto the equal, if not surpassing, necessity for moderation in eating, both as to quantity and quality, has not been very earnestly, much less very extensively, insisted upon. Yet it is very readily to be proved that immoderate eating is the fruitful source of many painful disorders, and, moreover, of several highly dangerous diseases. It were to be wished that this incontrovertible fact were more generally published and recognized, for then there would be ground for believing that much of the disease now so often and so widely prevalent would be prevented, or, if existing, removed. A collateral benefit, and that not a trifling one, would be a diminished use of the deleterious, if not actually poisonous, compounds, which are sold under the imposing name of "patent medicines." In passing, it may not be superfluous to note, that there is much reason to believe that the habitual, or even frequent, use of these base mixtures, is productive of not a little bodily disorder, if not, indeed, of fatal, or at least incurable, disease. Few things are likely to be more perilous to the health, than the habitual use of medicine—even when administered by an honourable and duly qualified member of the medical profession; but when (what is called) medicine is taken with no better guidance than can be found in the "directions for use" given by the unprincipled quack, the consequences cannot be otherwise than very baneful.

## ROTUNDITY OF THE EARTH.

For many ages mankind supposed the earth to be a vast plain, bounded on all sides by the sea and sky. They supposed the sun, moon, and stars to be at no great distance from the earth, and that these moved daily from east to west.

Though this was the belief of the great mass of mankind, there were a few attentive observers of the motions of the heavenly bodies who thought the earth to be round, like a ball; but they dared not tell their views, except in secret, lest they should be persecuted, and even endanger their lives.

It is only about three hundred years since the true theory of the figure and motion of the earth began to be generally received. A few years previous to that period a person would have been in danger of imprisonment for life, or even of being put to death, had he taught the opinion now held concerning the shape of the earth.

We learn from history that the learned Spengelius, of Upsal, in Sweden, was burned at the stake because he taught that the earth was round. Only a little more than two centuries ago, the celebrated Galileo was confined in prison because he proclaimed that the earth turned on its axis, and moved around the sun.

Nicholas Copernicus, who was born at Thorn, in Prussia, in 1473, was the author of the theory of the Solar system, which is now received by all enlightened nations. But he was threatened banishment and even death if he would not deny his belief, so prejudiced by ignorance were the minds of that period. Yet truth prevailed, and in honour of its author the theory is called the Copernican system.

How the ancients first became convinced that the earth was round we have no means of knowing; but we will here give a few facts and observations which prove it to be a globe:

1. Persons have sailed around the world, and come back to the place from which they started, as a fly would do by crawling around an apple. But, since there are so many continents and islands to obstruct a direct passage, it may not appear plain to some how sailing around the world will prove anything about its shape.

That this may be better understood, we will suppose a vessel to start from Rio Janeiro, in South America, and sail directly east. In a few weeks it would come to the western coast of Africa. Now navigators carry with them a compass and other instruments by which they can always tell the course they are sailing, and how far they move in any direction.

On arriving at the coast of Africa, the captain changes the course of his vessel and sails south until he has passed the Cape of Good Hope; then he goes east again till he gets beyond Africa, when he turns toward the north and sails as far as he had gone south, which will bring him in a direct line east of his starting place.

He will now continue his course eastward, till coming to Australia; and after sailing around that, in a like manner, to a point directly east of Rio Janeiro, will again proceed in an easterly direction, and at length arrive at the western coast of South America. Then, by sailing south, around Cape Horn, and going north again, he will arrive at the place from which he started.

It is by thus making allowances for the land which is sailed around, that the navigator knows he has continued in one general direction. Once it was considered an extraordinary act to have sailed around the world, but

now many persons return every year from such a voyage. The time thus required is from one to two years.

2. When a ship goes out to sea, we first lose sight of the hull, or body of the ship; then of the sails and lower rigging, and lastly of the mast. When a ship approaches the land, the top of the mast is seen first, then the lower parts of the vessel gradually appear. If the earth were an extended plain, the largest parts of the ship, when leaving the shore, would be seen last, and on approaching land these would be seen first.

If a person stands on the deck of a vessel when leaving the shore, the land and less elevated objects are first lost sight of, and the steeples and highest parts of all objects are seen last. Now these appearances are the same in every part of the world, which man has visited, hence it follows that the earth is regularly curved on all sides.

3. When the moon is eclipsed, it is darkened by passing through the earth's shadow. This shadow, as seen on the surface of the moon, is always of a circular form, such as a round ball would make.

4. If we stood on the equator, the north star would be in the horizon, where the earth and sky seem to meet. On going twenty degrees to the north, this star would appear to have arisen twenty degrees above the horizon. If we proceeded forty-five degrees north, this star would appear forty-five degrees above the horizon, and so on. The reverse would be the case on going south again. Then the stars in the north would sink and new ones rise in the south.

These changes prove that the earth is round from north to south, as they could not occur were it otherwise. The first mentioned observation proves that the earth is round from east to west; the second shows its general convexity; and all combined afford convincing proofs that the earth is round like a ball.

## KEEP IN STEP!

"Those who would walk together must keep in step."

Aye, the world keeps moving forward,  
Like an army marching by;  
Fiear you not its heavy footfall  
That resoundeth to the sky?  
Some bold spirits bear the banner—  
Souls of sweetness chant the song—  
Lips of energy and fervour  
Make the timid hearted strong!  
Like brave soldiers we march forward;  
If you linger or turn back,  
You must look to get a jostling  
While you stand upon the track.  
Keep in step!

My good neighbour, Master Standstill,  
Gazes on it as it goes;  
Not quite sure that he is dreaming,  
In his afternoon's repose!  
"Nothing good," he says, "can issue  
From this endless 'moving on'—  
Ancient laws and institutions  
Are decaying, or are gone;  
We are rushing on to ruin  
With our mad, new-fangled ways."  
While he speaks, a thousand voices,  
As the heart of one man says,  
"Keep in step!"

Gentle neighbour, will you join us,  
Or return to "good old ways?"  
Take again the tranquil pleasures  
Of old Adam's ancient days;  
Or become a hardy Briton—  
Beard the lion in his lair—

And lie down in dainty slumber,  
Wrapp'd in skin of shaggy bear—  
Rear the hut amidst the forest,  
Skim the wave in light canoe!  
Ah! I see! you do not like it;  
Then, if these "old ways" won't do,  
Keep in step!

Be assured, good Master Standstill,  
All-wise Providence design'd  
Aspiration and progression  
For the yearning human mind;  
Generations left their blessings  
In the relics of their skill;  
Generations yet are longing  
For a greater glory still;  
And the shades of our forefathers  
Are not jealous of our deed—  
We but follow where they beckon,  
We but go where they do lead!  
Keep in step!

One detachment of our army  
May encamp upon the hill,  
While another, in the valley,  
May enjoy "its own sweet will;"  
This may answer to one watchword,  
That may echo to another;  
But, in unity and concord,  
They discern that each is brother!  
Breast to breast they're marching onward  
In a good and peaceful way;  
You'll be justified if you hinder,  
So don't struggle nor delay.  
Keep in step!

DOUBLE DISAPPOINTMENT.—Johnson tells us, in his life of the great Frederick of Prussia, that his majesty's father was particularly attached to his tall regiment, and that if he met with a woman of more than common height, he consigned her to Berlin, and married her to one of his giants. As the king was travelling one day *incognito* through Hanenburgh, arrayed in a blue coat, little hat, and woisted stockings, he cast his eye upon a young woman who was nearly seven feet high. Such a sight as this never escaped him, and he alighted from his horse, and caused her to be brought before him; when, finding she was a shoemaker's daughter, unmarried, unengaged, and only nineteen years of age, he immediately wrote a letter to the colonel of the royal regiment of grenadier-guards at Berlin, commanding him to cause the bearer to be instantly married to the tallest man in his corps, and to be present at the ceremony. This letter he delivered to the girl, without informing her of the contents; but making her a handsome present, enjoined her to carry it as directed, deliver it into the colonel's own hands, and await for an answer. This done, he proceeded on his journey. The girl never having been at Berlin, and not suspecting the rank of the personage who gave her the letter, bargained with a little old woman in the neighbourhood to carry it. The deputy was true to her trust, and delivered the letter as directed; but the colonel, on reading it, was surprised. However, his majesty's orders were peremptory, and must be obeyed; the parties met, and were married; and the affair remained a mystery until the king's return to the capital, when the first persons he wished to see were his handsome new-married couple. He was astonished at the sight of the bride, and in great warmth demanded how she came to practise such abominable deceit! The woman told him the truth, and lifting up her eyes to the ceiling, acknowledged the kindness of Providence in bringing about such a wonderful work of charity by such unexpected means.

## ONWARD!

**A ROMAN RAILWAY.**—It is said that the surveys for the construction of a railway between Civita Vecchia and Rome are completed; that a company has been formed; and that it has already lodged the caution-money.

**WORKHOUSE SCHOOLS.**—The Poor-Law Commissioners, with a view to the introduction of suitable books into workhouse-schools for the use of scholars and teachers, have made arrangements with several publishers to supply for the use of such schools books and maps at prices varying from 32 to 55 per cent.—the average being 43 per cent.—under the price at which the same books and maps are sold to the public. The subjects embraced are, reading lessons, grammar, arithmetic, geography, English history, mensuration, vocal music, &c.

**THE ELECTRICAL LIGHT.**—We have not heard much of late about the electric light in the metropolis: why it has gone to the country we do not know, unless it be merely as a novelty; we observe, however, that it is at present being exhibited at Liverpool, where there is perhaps a somewhat better or opener field than in the narrow river of the metropolis for the extension of its uses in connection with shipping. "The light," says a Liverpool paper, "was exhibited from the tower at the north end of the Prince's Dock shortly after the mail steam-ship *Africa* entered the river. It was exceedingly brilliant, and could be distinguished at a great distance. The experiment was considered decidedly successful. The inventor has obtained the permission of the Dock Committee to test the advantages of his light by showing it at the landing-stage, or other suitable position along the line of the docks. With steadiness of lustre, the power of the electric light would be invaluable as a guide to sailors."

**SEA-WATER BATHING IN THE CRYSTAL PALACE.**—A design is now lying before the Directors of the Crystal Palace Company for laying down incorrodible pipes from the sea at Brighton, for the purpose of conveying pure sea-water along the slopes of that railway to a large reservoir at Sydenham, where capacious plunging and swimming baths will be established, in connection with the Crystal Palace, affording to the ladies, gentlemen, tradesmen, and invalids of all classes, residing in London, and its environs, the means of obtaining, at a cheap rate, the salubrious recreation of sea-bathing without entailing on them the expense, or the loss of time of retiring to the seacoast. By a simple extension of the plan, the water once at the Sydenham reservoir, could be distributed throughout the principal residences, palaces, hospitals, hotels, and public baths, for our great metropolis, and employed not only for the sanitary purposes of bathing, but also for supplying the ornamental waters of the Crystal Palace, which, by the acquisition of sea-water, will surpass the hitherto unequalled *fets d'eau* of Versailles, or the noble cascades of Saint Cloud. It has been ascertained from careful calculation by the projector, Thomas Wright, C.E., that the metropolis could be supplied at the rate of 3d. per 100 gallons, or one good bath for a Penny.

**GRAND EXHIBITION OF INDUSTRY IN DUBLIN.**—The example of Cork is to be followed in Dublin. As we announced in page 604, Mr. Dargan, has offered to place at the disposal of a Committee of the Royal Dublin Society the sum of 20,000l. to be applied in giving prominence and completeness to an exhibition of manufactures in 1853. His conditions are—"1st. That a suitable building shall be erected on the lawn of the Royal Dublin Society. 2nd. That the opening of the Exhibition shall not be later than June 1853. 3rd. That the special Executive Committee shall be nominated by three gentlemen on the part of Mr. Dargan, to be named by him, and three gentlemen, to be selected by the Council of the Royal Dublin Society from that body. 4th. That Mr. Dargan shall have the nomination of the chairman, deputy-chairman, and of the secretary of the Special Executive Committee. 5th. That at the termination of the Exhibition the building shall be taken by Mr. Dargan, and shall become his property at a valuation by competent persons. 6th. That if, after payment of all expenses, the proceeds of the Exhibition do not amount to 20,000l., with interest thereon at 5 per cent., Mr. Dargan shall receive the proceeds less all expenses incurred. If the proceeds, after payment of all expenses, amount to 20,000l. with interest thereon at 5 per cent., Mr. Dargan is to receive 20,000l. and interest at 5 per cent. If the proceeds, after the payment of all expenses, exceed the sum of 20,000l., with interest thereon at 5 per cent., the Executive Committee is to have the disposal of the surplus. The amount of the valuation of the building to be considered as cash paid to Mr. Dargan."—The Royal Dublin Society have of course accepted this handsome offer. A committee has been named—or is in process of being named,—and the works will be forthwith commenced on the grounds of the Dublin Society, which abut on Merrion-square. It is hoped to give to the Dublin Exhibition something of the interest of a general collection of industrial products—of a "Crystal Palace" on a smaller scale—as distinct from that of Cork, which is entirely local and insular. Much attention will be paid to the classes which include the "materials" of manufacturing art, with a view to practical results in the development of national industries.—As goods of other countries are to be shown, as well as Irish, we recommend our friends in Birmingham, Manchester, Sheffield, Leeds, Bradford, &c., at once to consider their course of proceeding; and we would venture to suggest that by a little combination in each of these towns joint collections might be got together which would prove of great interest to the Irish visitors and of benefit to the senders' respective trades. By such a combination one person would be sufficient to take care of each collection: so that the expenses thus divided would be trifling.—Mr. Dargan will preside over the execution of his own project in the double capacity of contractor and magistrate:—for we understand that he is to be Lord Mayor of Dublin next year.

## POETICAL QUOTATIONS.

## BOASTING.

The honour is overpaid,  
When he that did the act is commentator.—*Shirley*.

For then we wound our modesty, and make  
Foul the clearness of our deservings, when  
Of ourselves we publish them.—*Shakespeare's All's Well*.

Who knows himself a braggart,  
Let him fear this; for it will come to pass  
That every braggart shall be found an ass.—*Ibid*.

What art thou? Have not I  
An arm as big as thine? a heart as big?  
Thy words, I grant, are bigger; for I wear not  
My dagger in my mouth.—*Shakespeare's Cymbeline*.

He made me mad,  
To see him shine so brisk, and speak so sweet.  
And talk so like a waiting gentleman.  
Of guns, and drums, and wounds (God save the mark!)  
And telling me, the sovereign'st thing on earth  
Was parricacy, for an inward bruise;  
And that it was great pity, so it was,  
This villanous saltpetre should be digg'd  
Out of the bowels of the harmless earth,  
Which many a good tall fellow had destroy'd  
So cowardly: and but for these wild guns,  
He would himself have been a soldier.—*Shakespeare's Henry IV.*

So spake the apostate angel, though in pain,  
Vaunting aloud, but rack'd with deep despair.

*Milton's Paradise Lost.*

We rise in glory, as we sink in pride;  
Where boasting ends, there dignity begins.—*Young's Night Thoughts.*

For men (it is reported) dash and vapour  
Leas on the field of battle than on paper.  
Thus in the hix'try of each dire campaign  
More carnage loads the newspaper than plain.

*Dr. Wolcot's Peter Plunder.*

## BOOKS.

And though books, mudam, cannot make this mind,  
Which we must bring apt to be set aright;  
Yet do they rectify it in that kind,  
And touch it so, as that it turns that way  
Where judgment lies. And though we cannot find  
The certain place of truth, yet do they stay,  
And entertain us near about the same.—*Daniel*.

A book! O rare one!  
Be not, as is our fangled word, a garment  
Nobler than that it covers.—*Shakespeare's Cymbeline*.

Books should to one of these four ends conduce,  
For wisdom, piety, delight, or use.—*Denham*.

Learning is more profound  
When in few solid authors 't may be found.  
A few good books, digested well, do feed  
The mind; much cloy, or doth ill humours breed.—*Robert Heath*.

Give me  
Leave to enjoy myself. That place that does  
Contain my books, the best companions, is  
To me a glorious court, where hourly I  
Converse with the old sages and philosophers;  
And sometimes for variety, I confer  
With kings and emperors, and weigh their counsels;  
Calling their victories, if unjustly got,  
Unto a strict account; and in my fancy,  
Deface their ill-plac'd statues. Can I then  
Part with such constant pleasures, to embrace  
Uncertain vanities? No: be it your care  
To augment a heap of wealth: it shall be mine  
To increase in knowledge.—*Fletcher*.

Books are part of man's prerogative,  
In formal ink they thought and voices hold,  
That we to them our solitude may give,  
And make time present travel that of old.  
Our life, fame pieceth longer at the end,  
And bookt it farther backward doth extend.—*Sir Thomas Overbury*.

'Tis in books the chief  
Of all perfections to be plain and brief.—*Butler*.

## CHARADE.

My first the bold Ronald exclaimed,  
As he urged on his clan to the  
flight;  
But he fell on my second and then,  
His clansmen were soon put to  
flight.  
His death, as you plainly may see,  
Proved my whole to the end which  
he sought,  
For terror then seized on each arm,  
That before had most valiantly  
fought.

## PARLOUR PASTIME.

## Optical Illusion.—Subtraction.

AGAINST the wainscot of the room fix three small pieces of paper, about the size of a sixpence; let them be about half a foot asunder, and the height of the eye; stand about a yard distant, and keeping both eyes steadfastly fixed on the centre piece, all three pieces are visible. Now shut the right eye (keeping the left still on the centre), and the piece which is opposite to the left eye disappears; or close the left eye, and the right piece cannot be seen: so that if either eye be shut, the paper opposite its fellow becomes invisible; plainly proving, that some objects opposite the left eye are viewed by the right, and *vice versa*, with the left eye closed, and the right piece consequently invisible; remove the right eye from the centre, and carry it to the piece on the left; the right piece now becomes visible, but the centre disappears; and so on alternately, the three pieces not being visible at the same time, as when both eyes are open, showing one of the uses of having two eyes. Another method of trying this experiment is, by holding both the thumbs together at a little distance from, and at the height of the eyes: shut the left eye, and keep the right steadfastly fixed on the left thumb-nail; move the right thumb gently away in a horizontal direction, and at the distance of two or three inches, the top of the thumb disappears; but by carrying it a little further, it becomes visible again. The cause of this phenomena is thus:—The optic nerve entering the eye, is spread out into a fine membrane, called the retina, on which the rays of light falling produce vision: now that part, at which it enters the eye, is incapable of receiving impressions; consequently, when the object is directly opposite, the rays proceeding from it fall on the optic nerve, and making no impression, none is conveyed to the sensorium, and therefore no vision is produced; but as the eye or the object is shifted, the rays fall on the retina, and that being the part on which it is necessary they should fall to produce distinct vision, the impression is received, and the object becomes visible. Nature has wisely planned the entrance of the optic nerve, not in the centre of the eye, but at the side inclining towards the nose, so that rays striking the nerve on one eye are received on the retina of the other. For this reason, when the right eye is open, the piece on the right side is opposite the optic nerve, and invisible; but when the eye is shifted from the centre to the left side, it brings the nerve opposite the centre, and renders that invisible, while the right piece falling opposite the retina, consequently becomes visible.

## OUR CORNER CUPBOARD!

A WELSH tourist, among many other judicious observations, remarked, that the mad-house of Lanark was in a very crazy state.

KEEP a low sail at the commencement of life; you may rise with honour, but you cannot recede without shame.

EVERY earthly evil but death and dishonour may become a blessing by comparison.

OUR old grandmother used to say to our grandfather,—"It's useless quarrelling, my dear, for you know we must make it up again."

BOYS fly kites for recreation, and men for other motives; the first require the wind to raise the kite, the second the kite to raise the wind.

MISERIES OF AUTHORS.—"Now, then, Thomas, what are you burning off my table, there?" "Only the paper what's written all over, sir; I ain't touched the clean."

"So you would not take me to be twenty!" said a young lady to her partner, while dancing the polka a few evenings ago. "What would you take me for then?" "For better, or worse," replied he.

DANDIES, to make a greater show,  
Stuff their coats with pleats and puffing,  
But this is very apropos,  
For what's a goose without the stuffing!

THERE was a rule in an old debating society which might be advantageously recommended to the House of Commons. "Any gentleman wishing to speak the whole evening, shall have a room to himself."

"SAM," said a lady to a milk-boy, "I guess from the looks of your milk, that your mother put dirty water in it." "No, she didn't nuther," replied the boy: "for I see her draw it clean out of the well 'fore she put it in."

SOME one was asked what works he had in the press? "Why, the History of the Bank, with notes; the Art of Cookery, with plates; and the Science of Single-Stick, with wood-cuts."

A GENTLEMAN observed to his friend, "that Lord N—y's attempts at wit, resembled an electrifying-machine." "Indeed, how so?" "Because they are so shocking."

THE following advice was left by a miser to his nephew: "Buy your coal in summer; your furniture at auctions, about a fortnight after quarter-day; and your books at the fall of the leaf."

A MALREACTOR of the name of Hogg, under sentence of death, petitioned Lord Chancellor Bacon for a reprieve, claiming a relationship. His lordship said, he could not possibly be *bacon* till he had first been *hung*.

AN OSTLER'S ACCOUNT WITH A GENTLEMAN.—"I hundred and twenty five nites since I began to wate on the Pony, and twenty four nites away, so hero remains I hundred and I. Twice I washed the Carredg, and wogce I oiled and cleaned him."

A MIRROR has been well defined  
An emblem of a thoughtful mind;  
For look upon it when you will,  
You find it is reflecting still.

MR. CONGREVE going up the water in a boat, one of the watermen told him as they passed by Peterborough House, at Millbank, that the house had sunk a storey. "No, friend," said he; "I rather believe it is a story raised."

"JOHN, who was the wisest man?" "Don't know, sir." "Yes, you do know, too; tell me." "Wall, I guess it was Uncle Zek, for father says he was so cunning that he got everybody to trust him, and wasn't fool enough to pay nobody."

A *WERB* signifies to be, to do, or to suffer (which is all the grammar, and enough too, as ever I was taught); and if there's a *werb* alive, I'm i'. For I'm always a bein', sometimes a doin', and continually a sufferin'.—*Martin Chuzzlewit*.

AN Irish gentleman, visiting some friends in the North, was received with so much hospitality, and drank so very hard, that he departed in a shorter time than was expected; and when asked the reason, very gravely said, "that he liked them so very much, and ate and drank so incessantly, that he was sure, if he lived there a month longer, he should die in a fortnight."

I LOVE a friend that's frank and just,  
To whom a tale I can entrust;  
But when a man's to slander given,  
From such a friend protect me heaven!

Two little girls of the city of Norwich, one the daughter of a wealthy brewer, the other the daughter of a gentleman of a small fortune, disputing for precedence.—"You are to consider, miss," said the brewer's daughter, "that my papa keeps a coach." "Very true, miss," said the other, "and you are to consider that he likewise keeps a dray."

A PARTY had once climbed a considerable way up the usual track on the side of Skiddaw, when a gentleman (a stranger to the rest of the company,) who had given frequent broad hints of his being a man of superior knowledge, said to the guide, "Pray, what is the highest part of this mountain?" "The Top, s.,," replied the guide.

## OUR MEMORANDUM BOOK!

FRIENDSHIP.—Dr. Johnson most beautifully remarks, that "When a friend is carried to his grave, we at once find excuses for every weakness, and palliations of every fault; we recollect a thousand endearments, which before glided off our minds without impression, a thousand favours unrepaid, a thousand duties unperformed, and wish, vainly wish, for his return; not so much that we may receive, as that we may bestow happiness, and recompense that kindness which before we never understood."

KINDNESS IN LITTLE THINGS.—The sunshine of life is made up of very little beams, that are bright all the time. In the nursery, on the playground, and in the school-room, there is room all the time for little acts of kindness, that cost nothing, but are worth more than gold or silver. To give up something, where giving up will prevent unhappiness—to yield, when persisting will chafe and fret others—to go a little around, rather than come against another—to take an ill word or a cross look, rather than resent or return it: these are the ways in which clouds and storms are kept off, and a pleasant smiling sunshine secured even in the humble home, among very poor people, as in families in higher stations. Much that we term the miseries of life would be avoided by adopting this rule of conduct.

THE GNAT.—The wings you will find ornamented with a fringe of feathers or scales, as are also the ribs of the wings. The wings, when viewed as transparent objects, present a most interesting spectacle; but when viewed under the opaque speculum, and placing a black ground behind them, they present to the eye of the observer the most splendid colours, equalling some of the most brilliant specimens of minerals. The horns are also fine objects; so also are the head, eyes, and legs; in short, there is no part of this insect but is highly interesting in the examination. Every part of it is profusely ornamented with scales or feathers, varying in their characters from each other, according to the part from whence they are taken. Each of these deserves minute inspection under the microscope, in order to discover the beauties with which this insect is adorned.

HUMAN life is like a river—  
Its brightness lasts not on for ever—  
That dances from its native braes,  
As pure as maidhood's early days;  
But soon, with dark and sullen motion,  
It rolls into its funeral ocean;  
And those whose currents are the slightest,  
And shortest run, are aye the brightest:  
So is our life—its latest wave  
Rolls dark and solemn to the grave.

SEA TERMS.—Windward, from whence the wind blows; leeward, to which it blows; starboard, the right of the stern; larboard, the left; starboard helm, when you go to the left; but when to the right, instead of larboard helm, helm a-port; luff you may, go nearer to the wind; this (thus), you are near enough, luff no near, you are too near the wind; the tiller, the handle of the rudder, the capstan, the weigher of the anchor; the buntlines, the ropes which move the body of the sail, the bunt being the body; the buntlines, those which spread out the sails, and make them swell. Ratlines, the rope ladders by which the sailors climb the shrouds; the companion, the cabin-head; reefs, the divisions by which the sails are contracted; stunsails, additional sails, spread for the purpose of catching all the wind possible; the fore-mast, main-mast, mizen-mast; fore, the head, aft, the stern; being pooped (the very sound of which tells one that it must be something very terrible), having the stern beaten in by the sea, to belay a rope, to fasten it. The sheets, a term for various ropes; the balyards, ropes which extend the topsails; the painter, the rope which fastens the boat to the vessel; the eight points of the compass, south, south and by east, south-south-east, south-east and by east, south-east, east south and by east, east south-east, east and by south-east. The knowledge of these points is termed "knowing how to box the compass."

CAUTIONS FOR THE BITTER PREVENTION OF ACCIDENTS.—The following regulations should be engraved on the memories of all:—1. As most sudden deaths come by water, particular caution is therefore necessary in its vicinity.—2. Stand not near a tree, or any leaden spout, iron gate, or palisado, in time of lightning.—3. Lay loaded guns in safe places, and never imitate firing a gun in jest.—4. Never sleep near charcoal; if drowsy at any work where charcoal fires are used, take the fresh air.—5. Carefully rope trees before they are cut down, that when they fall they may do no injury.—6. When benumbed with cold, beware of sleeping out of doors; rub yourself, if you have it in your power, with snow; and do not hastily approach the fire.—7. Beware of dampness.—8. Air vaults, by letting them remain open some time before you enter, or scattering powdered lime in them. Where a lighted candle will not burn, animal life cannot exist; it will be an excellent caution, therefore, before entering damp and confined places, to try this simple experiment.—9. Never leave saddle or draught-horses, while in use, by themselves. Nor go immediately behind a led horse, as he is apt to kick.—10. Ride not on foot-ways.—11. Be wary of children, whether they are up or in bed; and particularly when they are near the fire, an element with which they are very apt to amuse themselves.—12. Leave nothing poisonous open or accessible; and never omit to write the word "Poison" in large letters upon it, wherever it may be placed.

**CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY.** Persons of all ages, and in every station, may assure with this Society, and the assured can reside in any part of Europe, the Holy Land, Egypt, Madeira, the Cape, Australia, New Zealand, and in most parts of North and South America, WITHOUT EXTRA CHARGE.

**FIFTH DIVISION OF PROFITS.**

The FIFTH BONUS was declared in January last, and the amount varied with the different ages, from 24 to 85 per cent. on the premiums paid; during the last Five years; or from 25 to 113 10s. per cent. on the sum assured.

The small share of profit divisible in future among the Shareholders being now provided for, without intruding on the amount made by the regular business, the ASSURED will hereafter derive all the benefits obtainable from a Mutual Office, with, at the same time, complete freedom from liability, secured by means of an ample Proprietary Capital—thus combining, in the same office, ALL THE ADVANTAGES OF BOTH SYSTEMS.

The Fund invested for the security and benefit of the Assured exceeds £850,000; and the Income is now upwards of £136,000 per annum.

Every description of Assurance may be effected, and for any sum from £50 to £10,000.

A copy of the last Report, setting forth full particulars, with a Prospectus, can now be obtained of any of the Society's Agents, or by addressing a letter to

GEO. H. PINCKARD, Resident Secretary.

99, Great Russell-street, Bloomsbury, London,

**METROPOLITAN and GENERAL FREEHOLD LAND SOCIETY.**—(Enrolled under 6 and 7 William IV., cap. 32.)

**PRESIDENTS.**

James Wyld, Esq., M.P. | John Williams, Esq., M.P.

**TRUSTEES.**

Samuel Read, Esq. | H. B. Sheridan, Esq.

**CHAIRMAN OF THE COMMITTEE:**—James Reel, Esq. Shares, £10. Subscription, 1s. per week. Entrance Fee, 1s. per Share. No back payments. No Fines on withdrawal. Law Charges for Conveyance, fixed at 30s.

This Society has been formed to meet the requirements of the Industrious Classes, and to afford a more secure Investment, and a larger rate of Interest, than Savings Banks. Upwards of 900 Shares taken in only five months. Agents wanted.

Applications for Shares received daily at the Society's Office, 24, Eastcheap, City. Enclose Stamp, and obtain Prospectus.

D. R. WHITE, Secretary.

**MUTUAL LOAN FUND ASSOCIATION,**

4, Newcourt-buildings, Strand, opposite Exeter Hall. Advances from £5 to £500 granted without delay. This is the only incorporated Company with a large paid-up capital which is adapted to meet the wants of all classes by promptly advancing money on one or more sureties, repayable by instalments. The public have availed themselves, to a large extent, of the advantages derived from its peculiar feature of paying the sum applied for without deduction. Forms of proposal, with particulars, may be had (gratis) on application, or forwarded on receipt of two postage stamps. Office hours from 11 to 3, and 6 to 8, daily.

HENRY ARROW, Secretary.

**TO EMIGRANTS AND VOYAGERS.**

**MOORE AND BUCKLEY'S PATENT**

**CONCENTRATED MILK** will be found a great desideratum, as it supplies Fresh Milk at all times. It is preserved in hermetically sealed tins, which will keep sweet in the hottest climate many days after being opened; each tin producing seven times the quantity of pure milk.

"The milk is most admirable; none should go to sea without it."—*Captain Ommanney, H. M. S. Assistance.* 25th October, 1851.

Connoisseurs of Cocoa and Chocolate are invited to try MOORE AND BUCKLEY'S COCOA AND MILK, AND CHOCOLATE AND MILK, which are combinations of the finest Trinidad Cocoa and the choicest English and French Chocolates with the Patent Concentrated Milk, in hermetically sealed tins. These delicious preparations are wholly free from the admixtures so common in the packet cocoas, and, considering their quality, are equally inexpensive; for example, a breakfast cup of PURE COCOA, combined with MILK and SUGAR, can be had at the cost of a Penny, by merely adding boiling water.

The PRIZE MEDAL at the GREAT EXHIBITION was awarded to these preparations.

MOORE AND BUCKLEY'S INFANT'S FOOD is a combination of the Concentrated Milk with pure Farina, and will be found a light and nourishing diet for Invalids as well as Infants, requiring only boiling water for its instant preparation.

The whole of the above are prepared under the immediate inspection of Mr. Moore, the Patentee, who was for many years the ordinary medical attendant of the Royal Family, in London.

The finest FINEST CHOCOLATES imported, and in every variety.

MOORE AND BUCKLEY, Ranton Abbey Farm and Works, Southwicks, Wholesale Depot, 4, Upper East Smithfield, London. Sold by all the Provision Merchants, and most of the respectable Grocers and Chemists in the Kingdom.

**TO THE MIDDLE AND INDUSTRIAL**

CLASSES of every profession and business; and all others who wish to provide for their Wives or Families in case of their premature decease, or for transmission in advancing years.

**THE OAK MUTUAL LIFE ASSURANCE AND LOAN COMPANY**, an Institution founded on equitable and sound principles, and especially framed to accommodate persons of moderate incomes, who have not the means of accumulating money, has recently been ESTABLISHED under the auspices of the Right Hon. the Earl of Hardwicke. (Postmaster-General).—Prospectuses and further information may be obtained by applying personally, or addressing a letter to William Swiney, Esq., Actuary and Secretary to the Company, 49, Moorgate-street, London.

"Handel's 'Judas Macabees.'"

O love-ly Peace, with Plen-ty crown'd

MOURNING BONNETS. WEDDING BONNETS.

All at the lowest possible prices, for cash only.

BETH EL WARE.

Manufacturer, 217, Tottenham Court road, London.

**SMART YOUNG MEN.—For your HATS**

go to PARKER'S noted Wholesale and Retail Hat Warehouses, opposite Shoreditch Church, where you can select from Fifty different Shapes of the best Style and Workmanship in London. A first-class Hat, in every prime shape, 9s. 6d. You are respectfully invited to select your shape from the window.—Note, PARKER'S, 127 and 128, opposite Shoreditch Church, and City-road, one door from Old-street.

"Costly they hold as thy purse can buy,  
But not express'd in fancy—rich, not gaudy;  
For the apparel oft proclaims the man."—*Hamlet.*

**EVERY WELL-DRESSED MAN KNOWS**

how difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste being equally regarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connexion has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates.—F. FOX, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

**ANDERSON'S PORTABLE SPRING**

PRESSURE SPECTACLES that never shift their position, but when removed from the face immediately collapse. Double eye-glasses to open and close with one hand only, to fix on the nose or place before the eyes at the option of the wearer. Inventions of the utmost importance. Sold by Messrs. HARRIS AND SON, 52, Great Russell-street, London; and all appointed Agents throughout the kingdom.

**FREE EMIGRATION.**

**THE HAND-BOOK TO THE AUSTRALIAN GOLD MINES**, price 1d., contains everything requisite for Emigrants to know. How to go, and where to go; authentic and interesting letters from the diggers; with full particulars concerning Government and other schemes of Free Emigration.

London: R. Donaldson, 24, Holywell-street, Strand.

**A GREAT LUXURY.**

**PAYNE'S ROYAL OSBORNE SAUCE,**

prepared by Her Majesty's Chemist, in the Isle of Wight, specially patronised by the Royal Yacht Squadron, exhibited and used at the Great Exhibition of 1851, is considered the premier sauce for fish, game, hot and cold meats, soups, gravies, &c.

"We have tasted, and relished, many piquant sauces, but the Royal Osborne beats them all."—*Sun, April 24, 1851.* Sold wholesale by Rumsey, 3, Queen-street-place, London; retail, by Fortnum & Mason, and sauce-vendors generally.

**TEETH.**

129, Strand, and 55, Connaught-terrace, Hyde-park.

Teeth, 5s. each; a complete Set, £5.

**MR. JONES, Inventor and Manufacturer** of IMPROVED ARTIFICIAL TEETH. They are permanent, never change colour, break, or decay, and are better adapted for Articulation and Mastication than any hitherto in use. Attendance from 10 till 6.

**BEAUTIFUL HAIR, WHISKERS, EYEBROWS, &c.**

**MAY** be with certainty obtained by using a very small portion of ROSALIE COUPELLE'S PARISIAN POMADE every morning, instead of any oil or other preparation. A fortnight's use will, in most instances, show its surprising properties in producing and curling Whiskers, Hair, &c., at any age, from whatever cause deficient; as also checking grayness, &c. Persons who have been deceived by imitations of this Pomade, puff'd off by so-called "Testimonials," as spurious as the article they represent, will do well to make ONE TRIAL of the only genuine preparation. Price 2s. per pot. Sent free by post, with instructions, &c., on receipt of 24 postage stamps, by Madame COUPELLE, Ely place, Holborn, London, where she may be consulted daily, from 2 till 5. Testimonials.—Dr. Erasmus Wilson: "It is undoubtedly the best preparation known."—Mr. Yates, hair dresser, Malton: "The young man has now a good pair of whiskers; I want you to send me two pots for other customers."

**SUPERFLUOUS HAIRS. FRY'S PASTA**

removes superfluous hairs in a few minutes (warranted not to injure the most delicate skin). This preparation for ten years has enjoyed an extensive and successful patronage. All persons can use the Pasta with ease and safety. Mrs. Fry will forward a packet, free by post, to any part of the kingdom, on receipt of a post office order or stamps, price 4s. 6d. Full directions for use and testimonials proving its efficacy, are enclosed with each packet.

Prepared by Mrs. LOUISA FRY, 17, Great Cantrbury-place, Lambeth-road, London. Wholesale Agents, BARNES & SON, London; RAINES and Co., Edinburgh; and 40, Hanover-street, Liverpool; BLANSHARD and Co., Bridge-street, York.

**MOAT'S PILLS.**

**THE best Vegetable Tonic and Aperient**

Medicine, by W. C. MOAT, Surgeon and Apothecary, formerly the Partner with the late Mr. Morison, the Hygelist. For persons whose occupation and mode of living induce frequent disarrangement of the digestive organs, a reliable Medicine is a necessary of life. Mr. Moat's Pills fulfil this requirement. Sold at Mr. Moat's Establishment, 344, Strand, London; and by all Vendors of Medicine; with directions affixed, in English, Welsh, Spanish, French, German, or Dutch.

**HOLLOWAY'S OINTMENT and PILLS,**

the most extraordinary remedy known for curing Skin Diseases.—Mr. A. G. Rehme, residing at Paramaribo, in South America, states, in a letter addressed to Professor Holloway, that he was troubled for about four years with an eruption on the skin that defied the skill of the most eminent medical men of the place to cure or alleviate; in despair he had recourse to Holloway's Ointment and Pills, and with such good results, that after using them for a short time, he was completely cured, and he has ever since been in the enjoyment of perfect health. These medicines are also infallible for scalds and burns. Sold by all vendors of patent medicines, and at Professor Holloway's Establishment, 244, Strand, London.

**PAINS IN THE BACK, GRAVEL, LUMBAGO, Rheumatism, Gout, Indigestion, Nervousness, Debility, &c.**

**DR. DE ROOS' COMPOUND RENAL PILLS**, as their name—Renal, or the kidneys—indicates, are now established as the most safe and efficacious remedy ever discovered for the above dangerous complaints, which, if neglected, frequently end in piles, fistula, stone in the bladder, and a lingering death. For gout, sciatica, rheumatism, the dolorous, erysipelas, dropsy, serofula, loss of hair and teeth, depression of spirits, blushing, incapacity for society, study, or business, confusion, giddiness, drowsiness, sleep without refreshment, fear, nervousness, and even insanity itself, when, as is often the case, arising from, or combined with, urinary diseases, they are unequalled. By their salutary action on acidity of the stomach, they correct bile and indigestion, purify and promote the renal secretions, thereby preventing the formation of stone, and establishing for life the healthy functions of all these organs. ONE TRIAL will convince the most prejudiced of their surprising properties.

May be obtained at 1s. 1d., 2s. 6d., 4s. 6d., and 11s. per box, through all Medicine Vendors in the Kingdom; or, should difficulty occur, they will be sent free, on receipt of the price in postage stamps, by DR. DE ROOS, 35, Ely-place, Holborn-hill, London, where he may be consulted from 11 to 1, and 5 till 8 (Sunday excepted), unless by previous arrangement.

N.B. A considerable saving is effected by purchasing the larger boxes.

### Editor's Note-Book.

#### DOMESTIC HINTS.—No. 14.

**Cleanliness.**—The want of cleanliness is a fault which admits of no excuse. Where water can be had for nothing, it is surely in the power of every person to be clean. The continual discharge from our bodies, by perspiration, renders frequent changes of apparel necessary. Change of apparel greatly promotes the secretion from the skin, so necessary to health. When that matter, which ought to be carried off by perspiration, is either retained in the body, or re-absorbed by dirty clothes, it is apt to occasion fevers and other diseases. Most diseases of the skin proceed from want of cleanliness. These indeed may be caught by infection; but they will seldom continue long where cleanliness prevails. To the same cause must we impute the various kinds of taints which infest the human body, houses, &c. These may generally be banished by cleanliness alone. Perhaps the intention of nature, in permitting such venoms to annoy mankind, is to induce them to the practice of this virtue. One common cause of putrid and malignant fevers is the want of cleanliness. These fevers commonly begin among the inhabitants of close dirty houses, who breathe bad air, take little exercise, use unwholesome food, and wear dirty clothes. There the infection is generally hatched, which spreads far and wide to the destruction of many. Hence cleanliness may be considered as an object of public attention. It is not sufficient that I be clean myself, while the want of it in my neighbour affects my health as well as his own. If dirty people cannot be removed as a common nuisance, they ought at least to be avoided as infectious. All who regard their health, should keep at a distance even from their habitations. In places where great numbers of people are collected, cleanliness becomes of the utmost importance. It is well known, that infectious diseases are communicated by tainted air. Everything, therefore, which tends to pollute the air, or spread the infection, ought, with the utmost care, to be avoided. For this reason, in great towns, no filth of any kind should be permitted to lie upon the streets. We are sorry to say, that the importance of general cleanliness does by no means seem to be sufficiently understood. It were well if the lower classes of the inhabitants of Britain would imitate their neighbours the Dutch, in the cleanliness of their streets, houses, &c. Water indeed is easily obtained in Holland; but the situation of most towns in Britain is more favourable to cleanliness. Nothing can be more agreeable to the senses, more to the honour of the inhabitants, or conducive to their health, than a clean town; nor does anything impress a stranger sooner with a disrespectful idea of any people than its opposite. It is remarkable that, in most eastern countries, cleanliness makes a great part of their religion. The Mahometans, as well as the Jewish religion, enjoins various bathings, washings, and purifications. No doubt these were designed to represent inward purity; but they are at the same time calculated for the preservation of health. However whimsical these washings may appear to some, few things would appear more to prevent diseases than a proper attention to many of them. Were every person, for example, after handling a dead body, visiting the sick, &c., to wash before he went into company, or sat down to meat, he would run less hazard either of catching the infection himself, or communicating it to others. Frequent washing not only removes the filth which adheres to the skin, but likewise promotes the perspiration, braces the body, and enlivens the spirits. Even washing the feet tends greatly to preserve health. The sweat and dirt with which these parts are frequently covered, cannot fail to obstruct their perspiration. This place of cleanliness would often prevent colds and fevers. Were people careful to bathe their feet and hands in warm water at night, after being exposed to cold or wet through the day, they would seldom experience any of the fatal effects which often proceed from these causes. In places where great numbers of sick people are kept, cleanliness ought most religiously to be observed. The very small in such places is often sufficient to make one sick. It is easy to imagine what effect that is likely to have upon the disease. A person in perfect health has a greater chance to become sick, than a sick person has to get well, in an hospital or infirmary where cleanliness is neglected. The brutes themselves set us an example of cleanliness. Most of them seem uneasy, and thrive ill, if they be not kept clean. A horse that is kept thoroughly clean, will thrive better on a smaller quantity of food, than with a greater, where cleanliness is

neglected. Even our own feelings are a sufficient proof of the necessity of cleanliness. How refreshed, how cheerful and agreeable does one feel on being shaved, washed, and dressed; especially when these offices have been long neglected. Most people esteem cleanliness; and even those who do not practise it themselves, often admire it in others. Superior cleanliness sooner attracts our regard than even finery itself, and often gains esteem where the other fails.

**THE HILL OF LIFE.**—Many and various are the views entertained of life. Dryden has described it, as a cheat:—

“None would live past years again,  
Yet all hope pleasure in what yet remain.”  
That our existence is a strange mosaic we know from experience. “The web of our life,” says Shakspeare, “is of a mingled yarn—good and ill together: our virtues would be proud if our faults whipped them not; and our crimes would despair, if they were not cherished by our virtues.” Some have placed their faith in elixirs, capable, it was assumed, of preserving beyond the term allotted to man by his beneficent Creator the vital powers. But the real art of prolonging life, we believe, exists in the attainment and practice of virtue. For many years these prevailed at China an extraordinary superstition and belief that the secret root of Tso had discovered an elixir which bestowed immortality. No less than three Emperors died after swallowing a drink presented to them by the eunuchs of the palace, as the draught that was to confer never-ending life. “The best method of prolonging life, and of making life happy,” said a wise mandarin to one of these infatuated princes, “is to control your appetites, subdue your passions, and practice virtue! Most of your predecessors, O emperor! would have lived to a good old age had they followed the advice which I give you!” The wise reproof of the Chinese sage affords an excellent moral lesson to all who would mount with honour the hill of life. No one should despair of overcoming some evil propensities which impede his progress. The least exercise of reflection will prepare the mind for noble aspirations, and if he is not perfect at once, he should remember, the homely old Scotch proverb,

“BETTER SMALL HELP THAN NONE.”

**FLORAL SPECIMENS.**—G. ROBERTSON.—The mode of preserving leaves is simple. Take two leaves of every kind you wish to keep; lay them inside of a sheet of blotting paper, place them under a considerable pressure, and let them remain during the night. Open them the next morning, remove them to a dry part of the paper, and press them again for the same space of time. They may then be placed in the book intended for the purpose, and fastened down with a little gum, with the alternate sides turned out, and the name written, with such other observations as the artist may think proper.

**ORIGIN OF EXCHEQUER BILLS.**—J. S. L.—In the year 1696 and 1697, the silver currency of the kingdom being, by clipping, washing, grinding, filling, &c., reduced to about half its nominal value, Acts of Parliament were passed, for its being called in and recoined, and whilst the recoinage was going on, exchequer bills were first issued, to supply the demands of trade.

**OYSTERS.**—M.—Oysters are not reckoned proper for the table till they are about a year and a half old; so that the brood of one spring are not to be taken for sale till at least the September twelve months afterwards. When younger than these happen to be caught in the dredge, they are always thrown into the sea again. The fishermen know the age of oysters by the broader distances or interspaces among the rounds or rings of the convex shell.

**PASTE FOR SHARPENING RAZORS.**—J. HARDING.—Oxide of tin levigated, vulgarly termed prepared putty, one ounce, saturated solution of oxalic acid, a sufficient quantity to form a paste. This composition is to be rubbed over the top of the strap, and when dry a little water may be added. The oxalic acid having a great attachment for iron, a little friction with this powder gives a fine edge to the razor.

**WASH-BEANS.**—M. M.—The following directions will be of service to our correspondents, and, indeed, to our readers generally:—Never sit for any length of time in abso-

lute gloom, or exposed to a blaze of light, and then remove to an opposite extreme. 3. Avoid reading a very small print. 4. Never read by twilight, nor by fire-light, nor, if the eyes are disordered, by candle-light. 5. Do not permit the eye to dwell on glaring objects, particularly on first awaking in a morning. 6. Long-sighted persons should accustom themselves to read with rather less light, and somewhat nearer to his eyes, than is naturally agreeable, while the short-sighted should habituate themselves to read with the book as far off as possible. 7. Nothing preserves the sight longer than a moderate degree of light; too little strains the eyes, and too great a quantity dazzles and inflames them. 8. Do not wear other spectacles than your own, to which your eyes have accommodated themselves.

**COMMUNICATIONS RECEIVED.**—T. THOMPSON (the selling of unwholesome provisions, as meat or fish, is punishable under most local acts besides being an offence against common law). ROBERT (the lines are inadmissible. In reference to your qualifications for a rapid short-hand reporter, we believe all you say; but much and various knowledge is necessary, to fill with success such a situation in the metropolis). S. RYLANDS (he is liable to a penalty of two hundred pounds). S. K. (it was Wordsworth who verified the text of Bede, in a well-known sonnet, certainly very beautiful, but in our estimation scarcely so beautiful as the original in plain prose). ANNE (hardly suitable, but evincing so much promise that we would recommend you to try again). J. T. R. (we will be happy to receive your tale, but cannot promise its insertion until we read it). P. S. (yes). A. BACHELOR (eat and drink less, and walk and work more, and no fear of you yet). GEORGE (the spot is supposed to be near Dilston in Northumberland, an ancient seat of the Earls of Derwentwater). J. B. (New York may, but is not likely to prove more favourable in the least for your exertions than London is. The one is proportionally as much overrun as the other. Gato the diggings). A. T. (always remember that poetry or verse, without it is really good, is quite intolerable. The Scots and the Byrons have exhibited such wonderful variety, strength, and sublimity, that they have completely filled the public mind, and left no room for the flight of humbler aspirants). SUSAN (read the now-to-be-worked appendix of the FAMILY FARRER, and you will be supplied with what you want). HARRY RICH (the poetry of Chaucer, is, perhaps, in all essential respects, about the freshest and greenest in our language). T. S. (join a literary and scientific institution, there are a number of them in town). A. P. (No. Michael Angelo is at the head of the Florentine school). S. R. T. (your fears are altogether groundless; he cannot touch you. Set his threats at defiance, and for the future ponder the following lines).

“Who would believe such strange bugbears,  
Mankind creates itself, of fears  
That spring like fern, that insect weed,  
Equivalently, without seed,  
And have no possible foundation,  
But merely in the imagination.”

**PERSONA** (although we write *persona* differently, yet it is but *person*, that is the individual person set apart for the service of such a church; and it is in Latin *persona* and *personatus* is a personage). G. L. (not having been educated in the seminary in which Baron Munchausen exercised his full authority, we are unable to give credence to our correspondent's facts. These being so utterly beyond the rules of nature is a sufficient apology for any seeming rudeness which this answer may imply). A. MUSICIAN (Mozart was the composer of the “Marriage of Figaro.”) A. G. (you cannot help it now; it must go on). **FOOT OF BIRDS.**

(THE EDUCATOR.  
Here comes a pretty Cockatoo,  
Crying, “How d’o’ you do?”)

O! thou FOOT OF BIRDS! Canst thou favour us with no better specimen of thy natural warbling than this! For mercy sake give up the feathered tribes, and take to some calling in which you will not even have to exercise a quill. JACOBS (same exceedingly). We would advise you to get ideas before you attempt to write, and when you do write, to transport yourself as far as possible from the fogs of December, and endeavour to breathe a little of the fresh and sunny air of the morning spring. We have made a very slight attempt at being *fine* ourselves in thus answering you. GABRIEL (by all means).

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 40.—Vol. I.

SATURDAY, OCTOBER 2, 1852.

[PRICE ONE PENNY.]

*"A feeling of curiosity had led her towards the little grated window which looked out on the yard."*

PICCIOLA;

OR,

THE PRISON FLOWER.

(Continued from page 611.)

## CHAPTER III.

One day, at the accustomed hour, Charney was breathing the air of the fortress; his head bent, his arms crossed behind him, walking step by step,—slow, gently, as if to increase the narrow space he was allowed to traverse.

Spring announced itself—he inhaled a softer air; and to live free, master of earth and space, seemed then very desirable to him. He was counting, one by one, the paving-stones of his little court,—doubtless to verify the exactness of former calculations, for this was not the first time of numbering them,—when he perceived there before him, under his eyes, a slight mound of earth, rising between two stones, and divided at the top.

He stopped; his heart beat, he scarcely knew why. But all is hope or fear to a captive. In the most indifferent objects, the slightest events, he seeks a mysterious cause, which speaks to him of deliverance!

Perhaps this slight disarrangement of the surface was produced by great labour beneath the ground; subterranean ways existed underneath that

place, which were on the point of opening, and would discover to him a passage to the fields and mountains! Perhaps his former friends and accomplices were endeavouring, by sapping and mining, to reach him, and restore him to life and liberty!

He listened attentively, and thought he heard below him a hollow lengthened sound; he raised his head, and the agitated air brought him the rapid notes of the tocsin. The roll of drums was heard along the ramparts, like a signal of war. He started, and laid his trembling hand on his damp forehead. Was he then going to be free? Had France changed her master?

This dream was but as a lightning flash; reflection soon destroyed the foolish illusion. He had no longer accomplices, he had never had friends! He continued to listen, and the same sounds struck his ear, but cool reason had returned. It was no more than the distant sound of a church clock, that he heard every day at the same hour, and the drum that beat the accustomed recall. He smiled bitterly at his own folly, as he reflected that an insignificant animal—perhaps, a mole wandering from its path, or a field-mouse that had moved the earth under his feet—had made him for an instant believe in the friendship of worldlings, and the destruction of a great empire!

He wished, however, to set his mind completely at rest; and he stooped down to the little mound, and with his finger lightly struck away first one point, then the other, of its divided summit (see engraving, page 600). And he saw with astonishment that this foolish vivid emotion, which had overpowered him for an instant, had not even been caused by a living being

stirring and vibrating with its teeth and claws, but by a weak vegetable scarcely dominating plants and languishing. He rose deeply imprinted, and was going to crush it with his foot, when a fresh breeze, wafted over bushes of woodbine and spring, reached him, as if to implore mercy for the poor plant, which also would perhaps some day yield perfumes for him.

Another idea came, which also arrested his movement of vengeance. How had this tender, delicate plant—so fragile that a touch might break it—been able to raise, divide, and throw up the earth,—dried and hardened in the sun, crushed by his own feet, and almost cemented to the two pieces of gray stone between which it had been compressed? He again bent down to examine it more attentively.

He saw at its upper extremity a kind of double fleshy valve, which, folding over its first leaves, preserved them from every too rude attack; enabling them, at the same time, to pierce that earthy crust in search of air and light.

"Ah," said he, "here is the whole secret! It derives from its nature that principle of force, like the little chickens which, before being hatched, are provided with beaks hard enough to break the thick shell in which they are inclosed. Poor prisoner! thou, in thy captivity, at least possess instruments capable of aiding thee to free thyself!"

He looked at it some minutes longer, and thought no more of crushing it. The next day, at his usual promenade, as he was walking up and down hastily and heedlessly, he was on the point of stepping on it, and suddenly drew back his foot; surprised himself at the interest his new acquaintance inspired, he observed its progress.

The plant had grown, and the rays of the sun had partly removed the sickly paleness it bore at its birth. He reflected on the power which this weak slender stalk possessed of absorbing the luminous essence, of being nourished and strengthened by it, of borrowing from the prism the colours with which it was clothed, colours assigned beforehand to each part of the plant.

"Yes, its leaves doubtless," thought he, "will be tinted with a different shade to the stalk; and its flowers then! what colours will they have? How, nourished by the same juices, will they be able to borrow from the light their azure or their scarlet? They will be clothed in it, however; for, notwithstanding the confusion and disorder of things here below, matter follows a regular though blind course. Very blind," repeated he; "I wish no other proof of it than these two fleshy lobes which have inclosed the plant to issue from the earth, but which now, useless for its preservation, are still nourished by its substance, and hang down fatiguing it by their weight! Of what use are they?"

As he was speaking, evening coming on,—the evening of spring, which is sometimes frosty,—the two lobes rose slowly before his eyes, and, appearing to wish to justify themselves from the reproach, drew near one another, and inclosed in their bosom the tender fragile foliage to protect it from cold and the attacks of insects, as the sun was leaving it, and which, there sheltered and warmed, slept under the two wings, which the plant had just folded softly around it.

The inquirer comprehended this mute but decisive reply the better, as the outer edges of the vegetable valve had been rubbed and eaten the preceding night by the little-animal, whose sly traces were still discernible.

This strange colloquy of thought on one side, and action on the other, between the man and the plant, could not rest there. Charny had been too long accustomed to metaphysical disquisitions to yield so easily to a good reason.

"It is well," replied he; "here, as elsewhere, a happy concurrence of fortuitous circumstances has favoured this weak creature. To be born armed with a lever to raise the soil, and a buckler to protect its head, was a double condition of its existence; if it had not been fulfilled, this plant would have died in the germ, like myriads of other individuals of its species, whom nature has doubtless created imperfect and unfinished, unable to preserve and reproduce themselves, and which have had only an hour of life on the earth. Can we calculate how many false and powerless combinations she has tried ere she has been able to bring forth a single organised being adapted for duration! A blind man may strike the mark, but how many arrows will he lose before he strikes it! For thousands of ages a double movement of attraction and repulsion has acted upon matter; is it then surprising that accident also, many many times have made a fortunate hit! This envelope may protect the first leaves, I grant; but will it increase, will it enlarge, and preserve and guard the other leaves also from cold and the attacks of their enemies? No! Nothing then has been calculated beforehand, nothing is the fruit of intelligent thought, but rather a happy accident!"

Monsieur count, nature is still reserving another reply for you, capable of retorting your arguments. Be patient, and observe her in this weak and solitary production, coming forth from her hands, and thrown into the court of your prison, in the midst of your enemy; perhaps less by a stroke of accident than by a benevolent provision of Providence. You were right, monsieur count; those protecting wings, which until now so maternally covered the young plant, will not increase with it; they will even fall soon, dried and withered, powerless as they then will be to shelter it! But Nature watches, and so long as the winds of the north shall bring down from the Alps the damp fogs and snow-storms, its new leaves, still in the bud, will there find a sure asylum, a lodging prepared for them, closed to the impressions of the air, covered over with gum and resin, which will expand as they require it, and will only open under the propitious time and sky; and they will only come forth one by one, each and each, each lending to each a fraternal support, and covered with warm and soft cotton down, to defend them from the late fogs and capricious atmosphere. Never did mother watch with more love over the preservation of her children! This is what you would have known

long ago, monsieur count, if, descending from the abstract regions of human science, you had deigned formerly to cast your eyes on the simple genuine works of God! The more you have turned your steps towards the north, the more these common wonders had been displayed before you. There, where danger increases, the care of Providence is redoubled.

The philosopher had attentively followed the progress and transformations of his plant. Again he had opposed it by reasoning, and again it had replied to him.

"Of what use are these spiny hairs that cover thy stalk?" said he. And the next day it showed them to him loaded with a light hoar-frost, which, thanks to them, kept at a distance from the tender bark, had been unable to injure it.

"Of what use in fine weather will thy warm covering of wadding and down be?"

The warm weather came, and it got rid of its winter mantle before his eyes, to adorn itself with the green dress of spring; and its new branches appeared without those thick wrappings, which henceforth were needless.

"But let the storms rage, and they will tear thee; and the hail will break thy leaves, till too tender to resist it."

The wind blew, and the young plant, still too weak to offer opposition, bent to the earth, finding safety in submission. The hail came, and, by a new manœuvre, the leaves laying themselves close to the stalk to defend it, close to one another for mutual protection, presented only their reverse sides to the blows of the enemy, thus opposing their firm nerves to the weight of the atmospheric pressure; their union constituted their strength; and, this time as before, the plant came forth from the struggle, not without some slight mutilations, but still alive and strong, and ready to spread itself before the sun, which would heal its wounds.

"Is chance intelligent, then?" exclaimed Charny. "Must we spiritualise matter, or materialise spirit?" And he seemed to interrogate his mute companion; he liked to look at it, to follow it in its metamorphoses; and one day, after he had long contemplated it, he fell into a reverie while standing by it, and his reverie had an unaccustomed sweetness, and he felt happy in prolonging it by walking quickly up and down his court. At length raising his head, he perceived at the grated window in the high wall the fly-catcher, who seemed to be observing him. He blushed at first, as if the other could have divined his thoughts; and then he stilled at him, for he no longer despised him. Had he any right to do so? Had not his mind also just been absorbed in the contemplation of one of the infinitesimal creations of nature?

"Who knows," said he, "if this Italian may not have discovered in a fly as many things worthy of observation as I in my plant?"

On returning to his chamber the first thing that struck his eye was that fatal sentence inscribed by himself on the wall two months ago:

*Chance is blind, and it alone is the father of Creation.*

He took a piece of charcoal and wrote under—  
CHARNY.

#### CHAPTER IV.

CHARNY no longer drew on his walls, no longer carved anything on his table, except budding plants protected by their cotyledons, or leaves with their notched edges and their projecting nerves. He passed the greatest part of his hours of exercise before his plant, to examine it, and study its development; and when returned to his chamber, he often contemplated it through his bars.

This was now the favourite occupation, the plaything, the fancy of the prisoner. Will he tire of this as easily as he did of the others?

One morning from his window, as he beheld the jailor, while rapidly crossing the court, pass so near the plant that it seemed as if he must have broken it with his foot, he shuddered.

When Ludovico came to bring him his allowance for breakfast, he thought of begging him to spare the only ornament of his walk; but he scarcely knew how to frame so simple a demand.

Perhaps the regulations for the neatness of the prison required that they should remove this parasitical vegetation from the court. If so, it would be a favour he was going to implore; and the count possessed very little to pay the price at which he estimated it. This Ludovico had already completely impoverished him by exacting, to the utmost, payment for every article which the rules of the prison reserved to him the right of furnishing to the prisoners. Besides, hitherto he had rarely addressed a word to this man, whose rough manners and sordid character disgusted him. He should doubtless find him little disposed to show him any favour. Then it wounded his pride, thus to place himself, by his tastes, nearly on a par with the fly-catcher, for whom he had so clearly testified his contempt. Lastly, he might experience a refusal; for an inferior, whose position gives him a transient right of granting or refusing, almost always uses his power with rudeness, for he is not aware that indulgence is an act of power. A refusal would have deeply wounded the noble prisoner in his hopes and pride.

It was only after a number of introductory expressions, and by using the philosophic knowledge he had of human weakness, that he was able to bring his discourse, which he had logically arranged beforehand, to the point, without hurting his self-love, or rather his vanity.

He began by speaking to his jailor in Italian. This was to awaken remembrances of infancy and nationality; he spoke to him of his son, his young Antonio; he knew how to make the tender chord vibrate, and command his interest. Then taking from his rich dressing-case a little silver-gilt cup, he begged him to give it from him to his child. Ludovico smiled, and refused.

Charney thought a little but of countenance, did not consider himself defeated. He insisted, and by a skilful transition—

"I know," said he, "that playthings, a rattle, or flowers, would suit him better, perhaps; but you can sell this cup, good man, and keep the price to buy something for him."

He then hastened on to—*But apropos of flowers*, which at length introduced the subject.

Thus love of country, paternal love, remembrances of childhood, personal interest—those grand motives of humanity—had all been brought into action to attain his end. What could he have done more if his own fate had been concerned? Judge if he did not already love his plant!

"Signor count," said Ludovico, when he had ceased speaking, "keep your gilded cup; its absence will make the other jewels of your pretty box weep. You have forgotten that my dear baby is only three months old, and can still drink without a goblet. As to your gilliflower—"

"Is it a gilliflower?" cried Charney.

"What matter! I know nothing about it, signor count. To my eyes all plants are more or less gilliflowers. But now, about this one, you are rather late in recommending it to my mercy. Long ago I should have put my foot upon it if I had not perceived the tender interest you bear to the beauty."

"Oh! this interest," said Charney, a little confused, "is very simple."

"Well, well, I know what it arises from," replied Ludovico, trying to wink with a knowing air. "Men must have occupations; they must attach themselves to something, and poor prisoners have no choice. Here, signor count, we have our pensioners, who doubtless were formerly great personages, with fine brains (for it is not the rabble that they bring here): well, now they amuse and occupy themselves at little expense, I promise you. One catches flies; that is not bad—another," added he, with a new wink, which he tried to render even more significant than the former—"another carves, to great advantage of penknives and knives, figures on a deal table, without thinking that I am responsible for the furniture of this place."

The count would have spoken: he did not leave him time.

"Some bring up canaries and goldfinches; others, white mice. For me, I respect their tastes, and to such a point, thank God, that having an enormous fine cat once, with long white air, an Angora—he jumped and gambled about in the prettiest manner in the world, and when he settled to sleep you might have said it was a muff sleeping, and my wife doated upon it, and I also—Well, I gave it away; for this little game might tempt it, and all the cats in the world are not worth the mouse of the captive."

"It is very kind of you, monsieur Ludovico," answered Charney, feeling a little annoyed at being suspected of such frivolities; "but this plant is to me more than an amusement."

"What matter! if it recalls to you only the verdure of the tree under which your mother cradled you in your infancy, *per Bacch!* it may shade the half of the court. Besides, the orders do not mention it, and I have my eyes shut to all such things. Let it become a tree, and serve you to scale the wall; that will be another thing. But we have time to think of that, have not we?" added he, laughing loudly; "not that I do not wish you, with all my heart, open air and liberty for your limbs; but that must arrive in its own time, according to rule, with permission of the chiefs. Oh, if you thought of getting out of the citadel!"

"What would you do?"

"What would I do? Thunder! I would stop your passage though you might kill me! Or I would have the sentinel fire on you without any more pity than on a rabbit; that is the order. But to touch one of the leaves of your gilliflower—oh! no, no! to put a foot upon it—never! I have always looked upon that man as the greatest rascal, and unworthy of being a jailor, who wickedly crushed the spider of the poor prisoner! It was a wicked action! It was a crime!"

Charney felt at once touched and surprised to find so much feeling in his keeper; but for the very reason that he was beginning to esteem him a little more, his vanity determined him to account for the interest he felt in his plant by reasons of some consequence.

"My dear monsieur Ludovico," said he, "I thank you for your kindness. Yes, I confess this plant is the source of very numerous philosophical observations that I am making. I like to study it in its physiological phenomena—"

And as he saw by a gesture of the head that the jailer listened without understanding, he added:

"Besides, the species to which it belongs possesses medicinal virtues very efficacious in certain serious indispositions to which I am subject."

He lied; but it would have cost him too much to have shown himself sunk to the fantastic trifles of prisoners before this man, who had just partly raised himself in his eyes—the only being who might approach him, and who, to him, was the summary of human kind.

"Well! if your plant, signor count, has rendered you so many services," replied Ludovico, preparing to leave the room, "you ought to show it more gratitude. Water it sometimes; for if I had not taken care, when bringing you your provision of water, to wet it from time to time, *la povera Picciola* would have died of thirst. *Addio*, signor count."

"One instant! my good Ludovico," cried Charney, more and more surprised to find so much instinctive delicacy enclosed in so rough a case, and almost blaming himself for not having discovered it till then. "What! do you interest yourself thus with my pleasures, and are silent before me! Ah! I pray accept this little present as a remembrance of my gratitude. If, later, I can entirely acquit myself towards you, depend on me."

And he again offered him the gilded cup. This time Ludovico took it, and examined it with a sort of curiosity.

"Acquit yourself of what, signor count! Plants can require water, and we may pay for their drink without being ruined at any time. If it a little diverts you from your cares—if it produces good fruits for you—that is all I wish for."

And he immediately went and put the cup back himself into the place in the box.

The count made a step towards Ludovico, and held out his hand to him.

"Oh! no, no," said he, drawing back with air of constraint and respect, "we only give our hand to our equal or our friend."

"Well, Ludovico, be my friend!"

"No, no," repeated the jailor, "that cannot be, *eccellenza*. We must foresee everything, that we may always do our duty to-morrow, as well as to-day, conscientiously. If you were my friend, and sought to break bounds, should I then have the courage to cry to the sentinel, 'Fire!' No, I am your keeper, your jailor, and *divotissimo servo*."

## CHAPTER V.

AFTER the departure of Ludovico, Charney reflected how, with all his personal advantages, he had sunk below this uneducated man in the relations existing between them; what miserable subterfuges he had used to influence the heart of this simple benevolent being! He had not blushed to descend to a lie.

How much obliged was he to him for the secret cares bestowed on his plant! What! this jailor, whom he had supposed capable of a refusal, when merely required to abstain from an unkind act, had anticipated his wishes!—had watched him, not to laugh at his weakness, but to favour his pleasures, and his disinterestedness had forced the noble count to acknowledge himself obliged.

The hour for exercise having arrived, he did not forget to divide with his plant the portion of water which had been given him. Not content with watering it, he endeavoured to clear it of the dust which soiled it, and the insects which attacked it.

Still occupied with this care, he saw a large black cloud obscure the sky, and hang suspended like a gray floating dome over the high turrets of the fortress. Soon large drops of rain fell, and Charney, turning back, was thinking of sheltering himself within, when hailstones, mixed with the rain, bounded suddenly on the pavement of the yard. *La povera*, blown about by the storm, its branches tossed here and there, appeared ready to be torn from the ground, and as its wet leaves were crushed against one another, it trembled under the gusts of wind, and seemed to utter plaintive murmurs and cries of distress.

Charney stopped. He recalled the reproaches of Ludovico, and looked eagerly around for something that might shelter his plant. He could see nothing. The hailstones, in the mean time, fell more thickly and numerous, and threatened to destroy the frail being. He trembled for it, although he had lately seen it so well resist the winds and rain; but he already loved his plant too well to risk its incurring any danger, by bringing reasoning against it. So, taking a resolution worthy a lover or father, he drew near it, and placed himself before his charge, like a wall interposed between it and the wind; he bent down over his ward, thus serving it as a buckler against the shock of the hail; and there, motionless, breathless, beaten by the storm from which he guarded it, sheltering it with his hands, his body, his head, his love, he waited till the storm had passed over.

It passed; but might not a similar danger menace it again, when he, its protector, should be shut up by bolts? Besides, the wife of Ludovico, followed by a large dog, sometimes visited the court. And might not this dog, while playing about, by one bite, or a stroke of his paw, destroy the joy of the philosopher? Rendered more provident by experience, Charney devoted the rest of the day to meditate on a plan, and the morrow he prepared to execute it.

His small allowance of wood was scarcely sufficient in this changeable climate, where sometimes even in the middle of summer the nights and mornings are cold. What matter? It is only a privation, for a few days! Will he not be warm in bed?—he will go to rest earlier, and rise later. He collected his wood together, and stored it up; and when Ludovico questioned him on the subject,—

"It is to build a palace for my mistress," said he.

The jailor winked as if he understood, but he comprehended nothing about it.

During this time Charney chopped, shaped, and pointed the sticks, put aside the most pliable branches, and carefully preserved the flexible oster that had tied up his daily saggot. Then, in his linen trunk, he discovered a large cloth, coarse and loose, which covered the bottom. He took it away, and drew out the strongest, thickest threads. And his materials thus prepared, he boldly set to work, as soon as the rules of the prison and the scrupulousness of the jailor allowed him.

Around his plant, between the paving-stones of his court, he forced in large branches of unequal size; he fixed them still more firmly at the base, by means of a cement composed of earth collected here and there with difficulty between the stones, and of plaster and saltpetre, which he took secretly from the damp sides of the old ditches of the fortress. And when the principal framework was thus fixed, he interwove it in some parts with small branches, forming a kind of hurdle, which would be sufficient to defend *la povera* from the shock of any external body, or from the dog, which had satisfied him completely during his labours was, that Ludovico, in their confinement, at first appeared uncertain if he should permit their continuance. He shook his head, and uttered a low grumbling sound of bad

augury; but afterwards he determined on his course, and sometimes while smoking his pipe quietly at the end of the court, his shoulder leaning against the entrance-door, with one leg crossed over the other, he smilingly contemplated the yet inexperienced workman, and sometimes even interrupted his pastime of smoking to give some good advice, which he did not always know how to turn to account.

In the meantime the work advanced. At length to complete it, Charney improvised his thin prisoner's bed, in favour of his plant. Here was a new sacrifice he made for it. He took some of the straw of his bed to make light mats, and hung them, according to circumstances, around his frame, whether the sudden gusts from the Alps threatened to attack it on one side, or the sun at mid-day darted its rays too directly down on the feeble plant, when reflected by the stones and walls.

One evening the wind was very violent. Charney, who was already locked up, saw from his window the court strewn over with pieces of straw and little branches; the straw-mats and wickerwork of the hurdle had not been made sufficiently strong for resistance. He determined to remedy the evil the next day; but the next day, when he descended at the accustomed hour, all was already repaired. A hand more skilful than his had firmly rewoven the branches and mats, and he knew well whom to thank for it in his heart.

Thus, thanks to him, thanks to them, the plant was defended against its dangers with ramparts and roofs, and Charney attached himself to it more and more, from the care which he took of it; and with delight saw it increase and develop, and constantly unfold to him new wonders to admire.

Time strengthened it. The plant was becoming woody; a ligneous bark surrounding its formerly fragile stalk, gave him daily security for its duration; and its happy possessor, with impatient curiosity, desired to see it blossom.

He was at last, then, wishing for something—that man with worn-out heart and frozen brain—that man so vain of his intellect, and who had just fallen from the height of his proud science to sink his vast thoughts in the contemplation of a blade of grass!

Yet he was not in too great a hurry to accuse him of puerile weakness and folly. The celebrated Quaker, John Bertram, after having passed long hours in the examination of the structure of a violet, would never again apply the powers of his mind to anything but the study of the vegetable wonders of creation, and soon took a place among the masters of science. If a philosopher of Malabar became mad while seeking to explain the phenomena of the sensitive plant, the Count de Charney will perhaps find true wisdom in his plant. Has he not already discovered a charm which has power to dissipate his ennui and widen his prison?

"Oh! the flower, the flower!" said he; "that flower whose beauty will strike my eyes only, whose perfumes will be for me alone, what form will it take? what shades will colour its petals? Doubtless they will offer new problems to solve, and throw a last defiance to my reason! Well, let it come! Let my frail adversary show herself armed at every point. I do not yet renounce the contest. Perhaps, then only I shall be able to seize in its whole that secret which its incomplete formation has scarcely permitted me to have a glimpse of until now. But wilt thou, flower? Wilt thou show thyself one day before me in all the splendour of thy beauty and attire, PICCIOLA!"

PICCIOLA! It was the name he had given it, when, from the wish of hearing a human voice sound in his ear in the midst of his labours, he conversed aloud with his companion in captivity, while surrounding it with his cares. *Povera Picciola!* Such had been the exclamation of Ludovico, pitying the poor little one which had been in danger of dying for want of water. Charney remembered it.

"Picciola! Picciola! wilt thou flower soon?" repeated he, carefully turning aside the leaves at the extremity and joints of the branches of his plants, that he might see if the flower was appearing; and that name, Picciola, seemed sweet to pronounce, for it recalled to him at once the two beings who peopled his universe—his plant and his jailor.

One morning, as, at his usual hour of exercise, he was examining Picciola leaf by leaf, his eyes suddenly remained fixed on one spot of his plant, and his heart beat violently. He raised his hand, and his countenance glowed with pleasure. It was long since he had experienced so lively an emotion. He has just seen at the point of the principal stalk an unusual green silky exorescence, of a spherical form, imbricated with small scales, placed one over the other, like the scales of the rounded dome of an elegant kiosk. He cannot doubt it:—it is the bud—the flower is not far off.

## CHAPTER VI.

THE *fly-catcher* often appeared at his grating, and seemed to take a pleasure in following the count with his eye, so completely engrossed as he appeared with his plant. He saw him mix and prepare his mortar, weave his mats, fasten up his straw-work, and at length raise his palisades, and, a prisoner also, and for a longer time than he, he easily united himself in thought with the grand occupations of the philosopher.

At that same grated window, another countenance bright and smiling also once showed itself. It was a woman, a young girl, with a step at once quick and timid. In the turn of her head, in the sparkle of her eyes, modesty alone seemed to temper beauty. Her glance, full of soul and expression, seemed half extinguished in passing through her long dark lashes. At the first glance, when looking at her with her face turned towards the shade, in a thoughtful attitude behind those chamber bars, on which she was leaning, and

resting her pure white hands, she might have been taken for a pure emblem of captivity.

But when she raised her countenance, and a ray of light played upon it, the harmony and serenity of her features, and her clear bright colour, told sufficiently that it was in activity and open air, and not under bolts and bars that she had lived.

Must we then admire her as one of those angels of charity who visit prisons? No; filial love has hitherto alone filled her heart; it is from this love she draws her strength, and almost her beauty. Daughter of the Italian Gerhaldi, the *fly-catcher*, she quitted Turin, its fets, its lovely promenades, and the banks of the Doria Riparai, to dwell in the little town of Fânestrelle, not at first to see her father, for she had not then gained permission but to live in the same air with him, to think of him as near her. Now, through her entreaties and solicitations she had obtained permission to visit him at stated times, and this is why she was gay, bright, and beautiful!

A feeling of curiosity had led her towards the little grated window which looked out on the yard; an emotion of interest retained her there in spite of herself, for she feared being perceived by the prisoner. She may be satisfied, Charney will not see her; at that moment, Picciola and her rising bud alone occupy his attention.

The week passed: when the young girl returned to her father, she was again cautiously approaching the grating, to give a look at the other captive; Gerhaldi stopped her.

"For three days he has not been near his plant; the poor man must be very ill," said he.

"Ill!" said she, with an astonished air.

"I have seen physicians cross the court, and according to what Ludovico has told me, they are only agreed on one point, which is, that he may die."

"Die!" repeated she, and her eye dilated, and fear more than pity, was perhaps painted on her countenance. "Oh! how I pity him! The unfortunate!" Then, fixing a look of anxiety and agony on her father, "They can die here then!" cried she, "or, rather, can they live here? It is doubtless a residence in this prison, and the pestilential vapours which exhale from these old ditches, that have caused his illness! My father!"

Her eyes became moist; Gerhaldi endeavoured to console her, and held out his hand to her; she bathed it with her tears.

At this moment Ludovico entered. He brought the *fly-catcher* a new capture which he just made for him. It was a *cétosina*, a beautiful golden beetle, which he presented to him with an air of triumph. Gerhaldi smiled, thanked him, and, without his perceiving it, set the insect at liberty, for it was the twentieth individual of the same species that Ludovico had brought him during the last few days. He then profited by the opportune entrance of the jailor, to ask news of Charney.

"Oh! depend upon it," said Ludovico, "I do not forget him any more than the others; and, as long as he remains a pensioner of God, he shall remain mine, signor. So I am just come from watering his plant."

"Of what use, if he must not see it blossom?" sadly interrupted the young girl.

"Why, lady," said Ludovico. Then he added with a knowing air, and his usual wink, slightly waving his hand, the forefinger raised, "Our lords, the physicians, think this way, that the poor man is laid on his back for eternity; but for me, the lord jailor, I don't think so! Well! I have my secret."

He turned round on his heel and went out, after having tried to assume his harsh voice and severe look, to signify to the young girl, with his watch in his hand, that no more than twenty-two minutes remained for her to pass with her father. At the end of the twenty-two minutes he returned, and executed the orders.

The illness of Charney was but too real, whatever might have been the cause of it. One evening, after having paid Picciola his visit and usual attentions, a great numbness had attacked him, on his return to his chamber. His head became heavy, and his limbs agitated with nervous tremblings; he went to bed disdaining to call any one to his aid, and confiding his cure to sleep.

Sleep would not come, but, instead of it, pain; and the next day when he tried to rise, a power stronger than his will confined him to his bed. He closed his eyes and was resigned.

In the face of danger, the calm of the philosopher and the pride of the conspirator returned. He would have thought himself dishonoured by breathing a sigh, uttering a complaint, or imploring succour of those who had forcibly sequestered him from the world. He only gave some instructions to Ludovico on the subject of his plant, in case of being confined long to his bed,—that *carcere duro*, which was going still more to aggravate his other captivity. The physicians arrived, and he refused to answer their questions. It appeared to him, that his life being no longer in his own care, he was no longer charged with its preservation, any more than with the management of his confiscated estates, and it was for those who appropriated the whole, to watch over the whole.

The physicians at first paid no attention to this rebellion, and they insisted. Repulsed at length by the obstinate silence of the sick man, they desisted, in future, only to inquire of his malady.

(To be continued.)

Be Gracé!—Who have done the most for mankind? Who have secured the rarest honours? Who have raised themselves from poverty to riches? Those who were steady to their purpose.

## SCHOOL BOOKS.

We cannot overrate the importance of First Books for Children. Yet, if we glance through our juvenile literature we find an enormous amount of absolute trash distributed among the rising generation. Old outs, old types, old fables, and alarming stories of Tommy and Harry, with ill-drawn pictures of the former giving the latter good advice, and the latter being torn to pieces by a lion for not listening thereto,—these present the too common features of the most popular books for children. In some of the modern works, an attempt has been made to supersede the old books by a remarkable cheapness; but this has been gained at the sacrifice of everything like method in the arrangement and construction of the lessons, and thus the interest of the child has been sacrificed for the sake of gaining a sudden popularity. In a picture book for teaching the alphabet, which has lately come under our notice, the following absurdities and errors occur, amid many others of similar character:—

- "I is an infant, and dressed out in silk."  
 "L is a ladder, for climbing a wall."  
 "R stands for rabbits, for Fanny or John!"  
 "S stands for snail, with its house on its back."  
 "V is a violet, which here you may see."  
 "Y is a youth, who has many kind friends," &c.

In another work, which in many respects is nicely got up, an attempt is made to impart a knowledge of the letters of the alphabet, by employing similitudes, of which we quote a few examples:—

- "B is a snake that is twisting about."  
 "L is a bird's leg, with his toe standing out."  
 "M is like a swing between the two trees."  
 "X is a long flag, blown about by the breeze."  
 "K is just like two crossed pieces of wood."  
 "Z is a toy you shall have if you're good."  
 "V is like the hook with which they catch fish."  
 "Y is the nice knife for which you would wish," &c.

That such works are unfitted for the young, on account of these stupid errors, which, once impressed upon the mind, cannot be easily effaced, is sufficiently evident.

An important contribution to National Education has been made through the production of a series of *Illustrated Twopenny School Books*,\* which are destined to supersede all others of the class. The First Book of Spelling and Reading opens with an—

## ADDRESS TO PARENTS AND TEACHERS.

"The subject of popular Education very properly excites considerable attention at this time. And as the result of this excitement, various books have been offered to the public as contributions to the desired end. Some works have appeared with considerable parade, and have, for the sake of sudden popularity, hacked the elements of education in a manner little calculated to promote the diffusion of the latter, or to exalt the character of the press as the organ of the national mind. Convinced that one of the most material aids to popular improvement may emanate from the production of a really excellent series of Elementary Books, at the lowest possible price, we have addressed ourselves to this object, and the *ILLUSTRATED TWOPENNY SCHOOL BOOKS*" are the result. These Books are designed equally for use in Nurseries and in Schools. An inspection of them will show that they have been written with considerable care, and that many new features and improvements have been introduced. The series is intended to consist of—

- |                                 |                        |
|---------------------------------|------------------------|
| 1. FIRST SPELLING AND READING.  | 7. ENGLISH HISTORY.    |
| 2. SECOND SPELLING AND READING. | 8. NATURAL HISTORY.    |
| 3. GRAMMAR.                     | 9. ASTRONOMY.          |
| 4. WRITING AND COMPOSITION.     | 10. DRAWING.           |
| 5. ARITHMETIC.                  | 11. PHYSICAL TRAINING. |
| 6. GEOGRAPHY.                   | 12. MORAL CULTURE.     |

(Forming the First Vol., Price 1s. 6d.) (Forming the Second Vol., Price 1s. 6d.)

The whole of the Series comprising the First Volume will appear almost simultaneously.

Upon the arrangement of this our First Spelling and Reading Book, considerable care has been bestowed. It will be found to contain One Hundred and Twenty-seven carefully graduated Lessons in Spelling, and Twenty-five Reading Lessons, illustrated by Twenty-five instructive Engravings.

It will be seen that we have discarded the usual attraction of these first books—a Pictorial Alphabet, in which letters and figures are intermixed, to the production of obscurity in the former. The remarks of an experienced Teacher, in the first volume of *The Family Friend*, first called our attention to this subject. The writer we have alluded to says:—"There should be set before the children a single letter, in bold, hard, outline. There should be no heavy, black lines contrasting hair drawn ones; no flourishes; nothing but such a plain form as a young child could not mistake—nothing but a bare skeleton outline." The same lady advises that teachers should form letters of bits of laths and tape laid upon a table, or the floor, and that the children should be taught to imitate them. Of the evil of pictorial letters we have been sufficiently convinced, by examining an old and standard work, and also a modern one, which has been received with a large

\* London: Houlston and Stoughton, Paternoster-row.

amount of favour, when its demerits, which are very numerous, are taken into account. From the former we copy the Q for Quail, and from

the other the letter U. It is true that by the side of each a small and plain letter is given. But all who know the habits of children will at once understand how much their attention must be diverted by these pictures from the precise form to be imprinted upon their minds."

Upon teaching children the alphabet it offers some capital

## SUGGESTIONS TO TEACHERS.

"A common mode of teaching a child the letters of the alphabet has been to point them all out in succession, until they were remembered by the child in their consecutive order. This is a slow and unsatisfactory method. The impression of each letter on the mind is erased by that which is shown next. A better way is to call the child's attention to only one or two letters at a lesson, give their sounds very distinctly, speak about their appearance, and let him look at them until he can distinguish them, and call their sounds or names. The following plan will be found to be quite original, and its results will afford the greatest satisfaction. Cut out the large letters from this book, and, putting them a little distance off, send the child to fetch A, or N, or W, as you may determine. After a little while you may proceed to amuse and instruct the child by putting the letters down upon objects, of the names of which the letters form the initials. Thus: put T on the Table, and say—

"The T is on something that's spelt with a T:  
 Look about, look about, and bring it to me."

The child will be amused to seek and find the letter, and will learn to distinguish not only the letter T, but to understand that the piece of furniture from which he took the letter is called a Table, and that its name begins with a T.

This simple couplet will serve to rhyme with the letters B, C, D, E, G, P, and V; and the letters may be placed variously upon the Bed, a Board, a Basket; a Chair, a Cup, a Cradle; a Door, a Dresser, a Drugget, a Desk, Dimity; an Ear, an Egg or Egg-cup; a Glove, a Glass, Gause, Gooseberry; a Pitcher, a Poker, a Plum, a Pie or Pie-dish, a Pudding, a Penny, Paper, &c.; a Vine-leaf, a Vegetable, Velvet, a Vase, &c., &c. When anything nice turns up, as a prize, it will prove a reward."

The book then supplies other couplets for all the remaining letters of the alphabet.

At the head and foot of every page are rhymes and maxims sufficiently simple to impress the mind of the learner:

- "Who strives to spell will do so well."  
 "Good boys make no loud noise."  
 "Thank God that he gave life to me."  
 "I love my papa and my mamma."  
 "I will be good, 'tis right I should."  
 "Be kind to all, both great and small."  
 "Why should I hurt a poor fly?" &c.

Each twopenny book contains thirty-two pages of letter-press, containing carefully graduated lessons in Spelling and Reading, illustrated by about seventy or eighty appropriate pictures!

The Second Book of Spelling and Reading is a perfect gem in its way. The Reading Lessons are beautifully simple and impressive, including "The Good Child and the Swing," "A Kiss for a Blow," "The Dangerous Companion," "The Watch-key," "The Bird's-nest," "Charles Clear," "The Clouds in the Sky," "Mary's First Sun," "Grandfather Whitehead and the Children," "I Can't," "Keep your Temper," "How my Envy Punished me," "Apprentice Boys," "The Echo," "Began, but not Finished," "Politeness in Children," "Little Children Love one another," &c. It also contains a dial for teaching children to understand the time by the clock with moveable gilt hands; and about one hundred lessons in spelling, with simple poems, pictures of animals, &c., &c. All this for Twopenny! Surely education should now be universal. The Reading Lessons are so simple and pretty, that we must quote one or two of them—

## A KISS FOR A BLOW.

"One day a minister went into an infant-school. He had been there before."

"Please to tell us," said a little boy, "what is meant by *overcoming with good*?" The minister began to explain it, when a little incident occurred which gave him a striking illustration.

"A boy, about seven years of age, was sitting beside his little sister, who was only six years old. As the minister was talking, George, for that was the boy's name, got angry with his sister about something, doubled up his fist, and struck her on the head.

"The little girl was just going to strike him back again, when the teacher seeing it, said, 'My dear Mary, you had better kiss your brother. See how angry and unhappy he looks!'

Mary looked at her brother. He looked sullen and wretched. She threw both her arms about his neck and kissed him.

The poor boy was wholly unprepared for such a kind return for his blows. His feelings were touched, and he burst out crying.

His gentle sister took the corner of her apron and wiped away his tears, and sought to comfort him by saying, with endearing sweetness and generous affection, 'Don't cry, George; you did not hurt me much.' But he only wept the more.

"But why did George weep? Poor little fellow! Would he have wept if his sister had struck him as he had struck her? Not he. But by kissing him as she did, she made him feel more acutely than if she had beaten him black and blue.

"Here was a kiss for a blow, love for anger, and all the school saw at once what was meant by 'overcoming evil with good.'"

#### "THE ECHO."

"One day little George happened to cry out in the fields, 'Ho! ho!' and he instantly heard the same words repeated from the neighbouring thicket near him.

"Surprised at the sound, he exclaimed, 'Who are you?' upon which the same voice also returned, 'Who are you?'

"George cried out, 'You must be a very foolish fellow.' 'Foolish fellow!' repeated the voice from the thicket. George then began to grow angry, and he uttered words of defiance toward the spot from whence the sound proceeded.

"The echo faithfully repeated all his words. He then ran home, and complained to his father and mother that a wicked boy was concealed in the wood for the purpose of mocking him.

"Ah, now, you are complaining of your own self," replied his father, who then read to him from a book about the Echo, and afterwards said: 'Know that you have heard nothing but your own words; for even as you have seen your face reflected in the clear water, so you have just heard your own voice in the woods.

"If you had uttered an exclamation of kindness, you would have received the same in reply."

"It is thus in every-day life. The conduct of others towards us is generally an echo of our own."

#### "POETICAL READING LESSON.—THE BIRD'S NEST."

"To-whit! to-whit! to-whoee!  
Will you listen to me!  
Who stole four eggs I laid,  
And the nice nest I made!

"Bob-a-link! Bob-a-link!  
Now what do you think!  
Who stole my nest away  
From the plum-tree to-day?"

"Not I," said the cow; "moon-ool!  
Such a thing I never would do.  
I gave you a wisp of hay,  
But I did not take your nest away."

"Not I," said the dog; "bow-wow!  
I would not be so mean, I vow!  
I gave the hairs the nest to make,  
But the nest I did not take."

"Not I," said the sheep; "O no!  
I would not treat a poor bird so.  
I gave the wool the nest to line;  
But the nest was none of mine."

"Caw! caw!" cried the crow;  
"I should very much like to know  
What thief stole away  
A bird's nest to-day."

"Cluck! cluck!" said the hen;  
"Do not ask me again."

Why, I have not a chick  
That would do such a trick.

"We all gave her a feather,  
And she wove them together.  
I would scorn to intrude  
On her and her brood.

"Cluck! cluck!" said the hen;  
"Do not ask me again."

"Chir-a-whirr! chir-a-whirr!  
We will make a great stir.  
Let us find out his name,  
And all cry, For shame!"

"I would not rob a bird,"  
Said little Mary Green.  
"I think I never heard  
Of anything so mean."

"It is very cruel, too,"  
Said little Alice Neal.  
"I wonder if he knew  
How bad the bird would feel?"

A little boy hung down his head,  
And went and hid behind the bed;  
For he stole that pretty nest  
From the poor little Yellow-breast;  
And he felt so full of shame,  
He did not like to tell his name!

The other contents are equally as good as the selections we have made. We have no doubt whatever that these very cheap and excellent books will be widely adopted in families and schools; and we have no hesitation in recommending them.—From the "Family Tutor," No. 38, Vol. 4.

**Taylor story.**—An old fellow who never yielded the palm to any one in reeling a knotty yarn, was put to his trumpet at hearing a traveller state that he once saw a brick house placed upon runners and drawn up a hill to a more favourable location some half a mile distant. "What do you think of that Uncle Ethiel?" said the bystanders. "O fudge!" said the man, "I once saw a two-story stone house, down east, drawn by oxen three miles." A dead silence ensued; the old man evidently had the worst end of it, and he saw it. Gathering his energies, he bit off a huge piece of pigtail by way of gaining time for thought; "they drew the stone house," said the old man (rejecting a quantity of tobacco-juice towards the fire-place), "but that wasn't the worst of the job; after they'd done that, they went back and drew the cellar." The stranger gave in.

## CAROLINE AND CATHARINA.

(Continued from page 617.)

ON the other side of this ravine was another plateau, of about the same extent, only sloping away towards the Mexican position, and covered by a species of plantain, which afforded sufficient cover for five thousand men. The handful of soldiers had nearly crossed the plateau, in the headlong, disorderly fashion of a volunteer charge, and were within one hundred yards of the edge of the ravine, when their advance was suddenly checked. A roar of musketry boomed out from among the plantain, louder and better sustained than anything yet heard that day; at the same moment a cloud of Mexican infantry rose, like the warriors of Clan Alpine, from their cover, and began rapidly to deploy both to the right and left. The little band had unexpectedly rushed upon the whole Mexican army—a body of four thousand fresh troops, who had been lying concealed, for the purpose of giving the finishing stroke to the expected victory!

The devoted battalion went down before the hurricane of balls, "like corn before the reaper,"—a spectator might have thought them slain to a man. But it was not so. At the command of their colonel they had thrown themselves upon the ground, to avoid the fire until they could ascertain from whence it came. Not long were they kept in ignorance. The deploying mass emerged to the right and left from among the plantain, and began to wheel in, as if to envelope them completely. The colonel sprang to his feet and waved his sword—the battalion rose from the ground and re-commenced their charge at a run. Passing each flank of the enemy, they pushed on towards the centre. A deep and wide ravine lay across their path; but dashing madly down its precipitous side they commenced a scramble for the opposite plateau. It was impossible to gain it! Three several times they attempted to gain a footing: but they were as often driven back by the hurricane of balls. At last Hardin ordered them to form along the brow of the hill. Obedient, even in such a moment, they opened their fire.

"Aim low, boys!" shouted Hardin. "Let no man pull a trigger without a sight upon his man! It is the only chance!"

Scarcely more than two hundred had reached the line; but every man was now a soldier; officers seized the muskets of the slain and plied them in the ranks; and few shots were fired without effect. The dense mass before them offered a mark not to be missed, and all along the line the tall hats of the infantry went by hundreds to the earth. Cheer after cheer had rung over the plain during the whole day; but here there was no cheering. Stern silence and compressed lips marked the desperation of the fight. And now came Bissell, with the glorious second Illinois foot; and for a moment there was a hope of victory; but the masses still closed in—the movement was only checked. The Mexican right and left had outflanked the little band, and were still wheeling in; their fire took the Americans in front, flank, and rear. There was another gleam of hope: the chivalrous McKee came rushing up with his Kentuckians, and the American force was trebled. But the movement, suspended for a moment, again commenced, and a long line of red cockades approached the brow of the ravine on the Kentuckian right. Upon the other flank the fight had become almost hand to hand; and although hundreds were swept down, the maddened host moved steadily forward. It seemed that the devoted band were to be literally driven from the ground, at the point of the bayonet.

The fight was hopeless from the first moment of its inception, and time had only made it worse. The men were fatigued and worn out; their cartridges began to fail, and many of the guns, which they had not had time to clean, began to miss fire and choke with powder. Still the fight was nobly sustained, and a deafening roar filled the ravine, and echoed among the mountains, for many a mile. The Mexican force, like a huge giant, had spread abroad its arms, as if to embrace and crush them. They were completely surrounded, except upon one side, where the breadth of the ravine, about sixty yards, still left a narrow path open for retreat. Hardin sprang upon a large rock and looked over the field. He saw there was but one way open, and even in that, now began to be visible the fluttering pennants of a body of lancers! The door was about to be closed, and the band shut in for ever! They were lost, and all there was left for them was to sell their lives as dearly as possible. At this moment an aide-de-camp galloped through the storm of bullets, and reached the Kentuckians untouched. He was the bearer of an order from General Taylor to fall back. It was high time—may, it was doubtful whether it were not too late! It seemed as if the bearer of the order had only forced his way into the jaws of death! For the lancers were now seen slowly advancing up the ravine—a glittering mass of many colours! The order was passed to Bissell and by him to Hardin, who was still standing conspicuously upon the rock, and encouraging his men in efforts, which he saw could only delay their fate and his. He received the order and cast his eyes again down the ravine. To retreat was as dangerous as to remain where they were—it seemed that there was no escape. For him, alas! there was none!

"We must fall back, my men!" he said in a tone of regret. "Retire down the ravine, and force your way to the redoubt."

They needed no second order. Every man had long known it was a hopeless conflict—though few, very few, had left their comrades without an order. The nature of the ground precluded all attempts to retire in order. It was a confused rush upon the cavalry. The usual order of battle was reversed—the foot were charging the horse,—and the charge was desperate and bloody. Hardin stood upon the rock until the last of his men had received the order and left the spot. Casting his eyes once more towards the enemy, he sprang to the ground and followed his men.

In the meantime Taylor had ordered up the third Indiana foot and

Bragg's light battery, to stem the torrent. It was quite a mile of rough ground over which they had to travel, and horses and men were scarcely able to move. The moment was too critical for delay; and aide after aide was despatched to hasten their advance. The cannoniers plied whip and spur, the horses strained every muscle; the guns rumbled along faster than ever before; the infantry put their shoulders to the wheels and pushed them painfully up the hill. The effort was a convulsive and desperate one—upon one minute's speed depended the fate of the day! At last they cleared the last ravine, and got a run of the ground they were endeavouring to reach. Their friends had left it, and it was now flooded by Mexican infantry! The tide was setting rapidly down the plateau towards the pass of Angastura. Should they gain that all was lost!

Again the whip was plied, a shout of anger and of sorrow went up to Heaven; horses and men sprang forward to within one hundred yards of the Mexican force. In a moment the guns are unlimbered, the infantry formed, and a storm of iron hail poured into the dense columns. The advance begins to slacken, they turn upon the guns and attempt to charge. It is too much! they are driven back, and long lanes are opened in their ranks; broken, rent, and torn; they begin to waver; they fall into disorder. The guns are seized by the wheels and pushed upon them, nearer and more near, quicker and more deadly hurtle the shot. A few turn to retreat,—the example becomes contagious, and the whole mass rolls back like a wave, that has spent its force upon the rock!

The retreating infantry have met the lancers hand to hand. Fighting in inextricable confusion, they flow out of the mouth of the ravine upon the wheat-fields beside the road. Captain Washington springs upon a gun and waves a handkerchief—the Americans fall upon their faces, and the shot rushes over them, tearing the lancers to pieces and driving them to shelter. The road is left clear to the exhausted men, and the battle is over.

In this retreat the American loss was greater than during the whole day before. Hardin, McKee, and Clay fell fighting in the mêlée. The victory would have been dearly purchased by the life of either one.

#### CHAPTER XXX.

"The fight was o'er, the flashing through the gloom,  
Which robes the cannon as it wings a tomb,  
Had ceased; and sulphury vapours, upward driven,  
Had left the Earth, and but polluted Heaven."—BYRON.

"And thousand had sunk to the ground overpowered,  
The weary to sleep, and the wounded to die."—CAMPELLE.

"One woe doth tread upon another's heel,  
So fast they follow."—SHAKESPEARE.

A field of battle, when the strife is passed, is a melancholy sight. The high excitement, the chivalrous courage, and the heroic endurance, all the nobler traits, which almost redeem war from the charge of barbarism, have passed away with the noise and din of battle;—man has leisure to look around upon the work of his passions, and to reflect upon the horrors of strife. Many, whom he knew but a few hours ago, instinct with life and warm with feeling, now lie around him cold and stiff and dead—part and parcel of the ground upon which he treads, and void of feeling as the rocks among which they lie. Many at whose side he fought, and whose voices, cheering on to the charge, he can even now hear and remember, lie with rigid faces turned to heaven, and with fingers convulsively grasping the earth. Prancing horses and stately riders lie together; and the feet of some are even yet within the stirrup where they fell. Here a whole rank has been swept down by a missile more deadly than another; and the precision with which they lie, with their feet upon a line, attest their steadiness in the hour of peril. Here is a ring of mangled bodies, and within it the earth is torn and blasted, where a shell has burst in their midst. Here, a confused heap of dead and dying, where, under concentrated fire, man after man, file after file, stepped up to fill the places of the slain. There has been a charge of cavalry, and where that pile of horses, men, and weapons lies, was the head of a gay and gallant column when the fire opened on them. The ground is trampled with the feet of many horses, and the stones are dabbled with blood; while banners torn, and broken lances, lie scattered on the ground, or still grasped with the last hold of death by their bearers. But worse, far worse than all, in yonder sheltered nook, was the field hospital to which the wounded were conveyed; and piles of mangled limbs attest the surgeon's trade, the callousness of war.

And amid all this carnage, one may reflect, how was it that I, too, was not swept down? What Hand was that which turned aside the balls and kept me safe, where so many better men have fallen? What fathomless counsels are those which still reserved me from Death—and what has the Future yet in store, for which I have thus been saved? With feelings chastened, mind subdued—with mingled gratitude and sorrow—one may turn his steps away, and seek a solitude he cannot find among the dead; and, thinking of the perils multiplied through which that Hand has led him safe, reflect what duties rest upon a life so signally preserved! Well would it be for human nature, if, from the consequences of its own infirmities, might thus be drawn the lessons of wisdom, thoroughly taught and faithfully improved!

The night had passed away; although not without alarm, yet without renewal of the fight. The Americans were too much weakened by their losses and fatigues—indeed, were too few in numbers at the first—to think of leaving their entrenchments; and Santa Anna occupied the night in preparations to evacuate a position which had witnessed the discomfiture of the Mexican army ever raised in Mexico. General Taylor, like the Roman general Aulus, at the battle of Châlons, was unwilling to press a partly-beaten foe—preferring to allow his adversary to withdraw his shattered forces, rather than to risk the advantage he had gained, by pressing him too closely. He,

indeed, received small reinforcements during the night, but even with these his force was not nearly as large as on the previous morning. His little army had been more than decimated. Reinforced with two regiments of dragoons, he could have driven the retreating army like a flock of sheep into the wilderness beyond the Pass of Pangueros; but these regiments he could not get; and it was without regret that, on the dawning of the morning, he beheld the long columns of the enemy already filing in among the ravines at Agua Nueva. Santa Anna had chosen to retire in the night, when he might have waited patiently till the morning, and gone off in the open daylight unmolested. This, to the victors, was the first assurance of their victory; for not a man who lay down that night expected sleep, but a renewal of the fighting at the dawn of day. More than an hour was consumed in reconnoitring, lest the retrograde movement should be only a ruse; and when it was at last ascertained beyond a doubt that they were gone, then, and not before, the shout of victory was heard!

Eager crowds rushed out upon the plateau, to seek for missing comrades, or view the havoc of the fight. Vernon and Clayton were among them, seeking, among the slain and wounded, those to whom they might administer relief, and conversing, as they wandered over the field, of Vernon's position and plans. Stopping occasionally to examine more closely some disfigured form, or consign some wounded man to the patrols, they at last found themselves on the extreme left of the line, and within the gorge where so much slaughter had taken place among the compact cavalry. Here they paused and looked around them.

"The artillery has done fearful execution here," said Allen.

"As elsewhere," replied Clayton. "I presume two-thirds of those killed and wounded met their fate from the artillery. Nothing but the rapidity of their evolutions and the certainty of their training would ever have won the victory."

"Perhaps not; and yet infantry and cavalry fought as if they were not to be conquered, even if single and alone."

"They might not have been conquered—probably the spirit they manifested would have prevented that—but they must have been borne down by weight of numbers. Fatigue alone would have lost us the battle in another day's fighting."

"The immense extent of ground we had to cover with our small force, endangered it as it was. Men are not ubiquitous; and yet I suppose that our infantry came as near being so yesterday as ever men did."

"True," said Clayton; "there was probably more downright running in this battle, both from and towards the enemy, than ever was known in battle before. It was a race from beginning to end, and depended more upon speed than upon power."

"Yes; and I believe we lost far more in running from, than towards, the enemy. Indeed, in one retreat alone, our loss was more considerable than in all the rest of the fight."

"True," said Clayton, "that was a most unfortunate mistake."

"What is this?" exclaimed Vernon, suddenly, pointing to a group of soldiers carrying a body, and followed by a woman.

"Some poor fellow whose wife has already found him," said the other. "Let us meet them."

"That form seems familiar to me," said Allen, as they approached. "Certainly it cannot be!"

"Cannot be what?" asked his companion.

But Allen had left him; and running rather than walking, he stopped the mournful procession, and looked into the blanket which they were using as a litter. Turning from it, he stepped kindly up to the young girl, who mechanically stopped as he approached, and gently took her hand.

"Catharina," said he, gently, "what terrible misfortune is this?"

She pointed to the form of her father, and made no other reply.

"How did it happen?" he asked.

"I cannot tell you now, Señor Vernon," she replied, in a voice low and exquisitely sorrowful, but still calm and firm. "Will you not assist me to get him conveyed to Saltillo?"

"Assuredly," said he. "Do you wish to go immediately?"

"As soon as possible," said she; "I have relations there."

"Here is a wagon now," said Clayton; "I will stop it."

The body was at once deposited in the wagon, and, by the direction of Clayton, the driver turned his horses towards the city.

"Let me procure you some other conveyance," said Allen.

"No," she replied; "I will walk behind the wagon."

"I will go with you," said Allen, "and see you safely among your friends."

"Thank you," she replied, calmly; "I was about to ask you to do so."

"You will be back to-day, Vernon?" asked Clayton.

"Yes," said Allen.

At a sign from the lieutenant, the wagon moved off, followed by Catharina and Vernon in silence. Catharina was the first to speak.

"You asked me how this happened," she commenced, mournfully. "I can tell you now, I think. Soon after leaving you, we descended the mountain a little, with the purpose of gradually approaching the plain, and thus clearing the troops. Keeping along the slope for about half a mile, we came suddenly upon a deep ravine, the sides of which were too precipitous to attempt. Here we remained two or three hours, waiting for the troops to leave this part of the field, and designing to pass round the ravine, and again ascend the mountain. We had waited a long time—so long, that we began to despair of reaching the city before night, when a heavy cannonading opened at some distance, and all the men hurried away, leaving the path open. We lost no time in reaching the plateau, and had crossed the ravine, when we saw a confused mass of men and horses rushing towards us, under

a fire which was tearing them to pieces. We endeavoured to get out of the way, and ran towards the ravine again. I remember nothing for the next few moments but a confused trampling, and the hurrying and shouting and screaming of many men. I was knocked down, and stunned by the fall. When I recovered, the field was deserted, and he lay beside me trampled and dead."

She stopped, and buried her face in her hands.

"What I did I know not," she resumed; "I tried—in vain—to bring him back to life; and, I think, wept a great deal; for I cannot weep any more. At last, when night was about closing in on me, I rose to go for assistance. But I was bewildered, and wandered far out of my path. When at last I found some American soldiers, it was too late to come upon the field. They said it was in possession of my countrymen, and the fight would be renewed in the morning. They took me to a *ranchito* in the valley, where I was forced to await the morning. At dawn I sought them again, and they kindly came with me. We found him but a few minutes before we met you; and all I can do now is to see him buried, and go home."

Her voice failed her; but it was true, as she had said, she could weep no more. In that long, lonely night, her grief had consumed itself in passionate outbursts. Her spirit was bent to the earth; but her eye was without moisture, and her step was firm. She walked in calm, silent, deep sorrow, by Allen's side.

"Have you near relations in the city?" Vernon asked, after a long pause.

"An uncle and his family," she replied.

"But your home is in Monterey?"

"Four leagues from Monterey," she replied, "at Rinconada."

"Can I do anything to assist you in getting there?" he asked.

"I shall have no trouble, I think," she said. "My uncle will see that I have none. Forgive me," she continued, after a pause, "if I seem not to appreciate your kindness—the cause is before me."

"I would be glad to serve you," said Allen, "even if you never knew it; and I am not selfish enough to wish any thanks."

"You are very kind," she said, mournfully; and I will trouble you with one commission. Should Senor Manning escape from captivity, I beg you will tell him to come to Rinconada—I shall be there; and come with him; I will be glad to see you too."

Vernon assured her that he would not forget it; and soon afterwards they entered the streets of the city. She pointed to the street in which Senor Bonaro lived, and soon afterwards the wagon stopped in front of a large stone house, with iron balconies and broad windows. The body was carefully lifted from the wagon, and carried into the house. A middle-aged man, dressed in black, came out, and received Catharina in his arms. Declining a pressing invitation to enter, Allen took Catharina's extended hand, pressed it, and turned away to return to the camp.

#### CHAPTER XXXI.

"What's Hecuba to him, or he to Hecuba,  
That he should weep for her?"—SHAKESPEARE.

"The weary sun hath made a golden set."—IBID.

"Now began  
Night with her sullen wings to shade  
The desert."—MILTON.

"Misery acquaints a man with strange bed-fellows."—SHAKESPEARE.

It is time to return to the fortunes of our unlucky friend Manning. His wound was from an *escopet* ball, which struck him in the shoulder, at the moment when his whole weight hung upon that arm. His hold was broken, and he fell, as we have seen, wounded and bruised, to the bottom of the ravine. A hasty examination, by two or three who sprang to the ground, was sufficient to satisfy men accustomed to casualties, that his wound was not dangerous; and hurriedly throwing him upon his own horse, which they had caught, they galloped away with him, a prisoner in their midst. Regaining the road, or rather the plain where it skirts the spurs of the mountain, they turned again to the north, and hastened towards the Pass of Palomas. An occasional gun, whose booming sound came rolling over and down the mountain, quickened their pace; and in much less than an hour after his capture, Hugh found them compelled to walk their horses up the rugged steep leading into the pass. Here the first party was joined by two or three others, whom our friends had seen approaching across the plain; and by the time they had well entered the defile, they numbered not less than one hundred men.

Little notice had been taken of Hugh thus far, and in their hurry they had not even bound him. The joining of the other detachments, therefore, was far from welcome to him; for before their arrival he began to entertain hopes of escape. Bruised and bleeding as he was, his was not a spirit to yield to despair; and five minutes after his capture had hardly passed before he began to revolve schemes to elude his captors. No opportunity, however, occurred before entering the defile; and then, the joining of the straggling detachments made his plans hopeless. Still further to dash his bold spirit, when they had cleared the rugged path, and attained a small level place some distance up the mountain, the leader of the band suddenly called a halt, and riding back to where his prisoner was, ordered his feet to be bound under the horse's belly. Having given this order in broken Spanish, he continued, in good English—

"I am sorry to put such an indignity upon an American officer, as I perceive you are, sir; but you are too important a prisoner to be trusted unbound in this broken pass."

"I would have appreciated your politeness better," said Hugh, coldly,

"if it had been spoken in another language, or if you had ordered my wounds bound up before you shackled my limbs."

"Your remark is both just and unjust," said the other, calmly. "You evidently suppose me an American, but you must recollect that English is spoken in other countries besides America, even if it be spoken *there*, which I doubt. As to your wounds, they should have been dressed if we had had the means. But a short time now will bring us to the camp, and you will be attended to. Bind him securely, Martin."

So saying, he turned calmly away; and, though smarting under the indignity offered him, Hugh could not help admiring the air of martial grace which distinguished every movement of his lithe and well-knit form. He hesitated a moment, and then turned his open and pleasing face again to his prisoner.

"I ought not to leave you in doubt, sir," he said; "for, if your supposition were correct, I would deserve all your contempt and indignation. I therefore tell you I am an Englishman; and though I fight against your arms, no man can more deeply scorn the dastardly spirits who have deserted their colours and joined our army. Had I the power, I would hang every man of them."

"You speak like a soldier and a man of honour," said Hugh, warmly, proffering his hand: "and I ask your pardon for entertaining, even for a moment, so injurious a supposition."

"It is granted as freely as asked," said the other, taking the extended hand. "I hope we may outlive this war, and meet under more favourable circumstances. Martin," he added, turning to the man who had bound Hugh, "remove those cords; our prisoner will not leave us."

"Hold!" cried Hugh. "That I will not permit. I see what you intend. You think your confidence reposed in me is as good as my parole. So it would be, if I permitted it to pass unnoticed. But I now give you warning, that I shall escape if I can."

"Take them off, Martin," quietly ordered the other. "If you can escape, do so; but I will see that you stay with us."

"Very well," said Hugh, "it is understood, then. Keep me if you can—I will escape if I can. At all events, I thank you for removing the cords."

"No thanks are due," said the other; "I never intended to let them remain upon you; I wished to make you your own guard."

"How does it happen," Hugh asked bluntly, after a pause, "that an honourable and brave man, like you, is engaged with—"

"Pardon me for interrupting you," interposed the Englishman; "you know a soldier cannot listen to any disparagement either of his superiors or of the cause for which he fights."

"But if his cause be a bad one?" suggested Manning.

"He must either shut his eyes to the fact," answered the other, "or quit the service."

"Then, why cannot you—"

"Take advantage of my own alternative?" laughed the other. "What! while the war is actually going on? O no! You speak without thought. But I have not time to talk further; I must hurry on. Come, *compañeros*, you are sufficiently rested; mount, and away! Martin, Iago, Antonio, Andres, see that our prisoner does not escape, at your peril."

The troop mounted; the four he had designated closed around Hugh, and the cavalcade moved slowly on.

"*Como se llaman su comandante?*" asked Hugh.

"*El Coronel Melton, señor*," replied one of the men.

Before he had time to pursue his inquiries farther, a loud command to "close up" resounded from the front, and the whole body galloped forward, and formed on the slope at the mouth of the defile. Soon afterwards a body of lancers was seen painfully climbing the hill, and slowly emerging upon the table-land above. About two hundred men thus came out of the defile, and with precision and rapidity fell into a line immediately in front of the other detachment. They were admirably trained and equipped, well-mounted, and elegantly dressed in the costume of the light cavalry of the Mexicans. The colours of the pennants upon their lances were the same as those of the first troop, indicating that they were a part of the same battalion. As soon as they were formed, the Colonel, for he was no less, rode forward, and received their salute; then turning to the officer in command, he took a letter from his hand, and broke the seal. There were few as fine-looking, and no braver men in the Mexican service, than Colonel Melton; and as Hugh watched his calm, easy, and graceful bearing, he again regretted that such a man should be enlisted in such a cause.

His lip curled as he read the missive, and his dark brown *moustaches* seemed full of the expression of contempt.

"Fight already gained!—victory won!—flank completely turned!—surrender in the morning!" he muttered, in a tone which could only have been dictated by scorn. "The vain-glorious fool! I'll bet twenty to one he has been entrapped into some mistake, and thinks he has gained an advantage. Here, Sanchez," he continued aloud to his inferior officer, "do you know the contents of this paper? Were any verbal orders sent?"

"I know nothing of it, sir," replied Sanchez; "I was simply ordered to join you with two hundred and fifty men, and accompany you where that letter directs you to go."

"Was nothing said about any prisoners?"

"Nothing, señor."

"Then I will take him with me at all hazards," he muttered. "Reverse the flanks, and form the battalion," he added, aloud; "we must reach the *Tanca de San Felipe* to-night."

Sanchez set about obeying the order, and the Colonel rode towards his prisoner.

"I am ordered to the neighbourhood of Monterey," he said, "and I shall

"The conversation was interrupted by the necessity of dismounting to lead their horses up the difficult pass."

be forced to take you with me. This letter informs me that the flank of your army is completely turned, and that nothing delays their surrender but the approach of night."

"And are you ordered to superintend the operations about Monterey?"

"Yes; what think you of the news?"

"I think, that in every army there are two flanks and a centre," said Hugh, "and that turning one of the former, sometimes strengthens the latter."

"You do not believe Taylor will surrender, then?"

"Not without a fight, certainly," said Hugh, decidedly.

"That is my opinion, also," said the other, coolly. "But we must away; let me examine your wound."

Hugh submitted quietly to have his shoulder hastily bandaged, and soon afterwards the augmented battalion were winding again down the defile, on their way to Monterey. A few minutes brought them to the plain; and putting their horses into a quick trot, they followed the line of the *Sierra* towards the east and north. The scenery, for several leagues, did not materially differ from that over which Hugh had ridden in the morning; the mountain frowned down upon the plain, and the plain stretched boldly up to the mountain, in the same way; but it soon became perceptible that the ground sloped towards the east, and the warmer currents of air occasionally encountered indicated a lower level, and a more sultry climate ahead. Gradually, as night closed in, Hugh began to observe that the trees were larger, and the chaparral thicker; and occasionally he could see a tuft of grass or a patch of green sward dotting the plain, which a few leagues behind them presented a sterile surface, upon which the only green thing was the cactus. Several sharp descents, too, marked the gradual approach to the *tierra caliente*, which in this region stretches farther from the sea than on any other part of the coast. Among the mountains south and west of Monterey are beautiful valleys, bearing all the characteristics of that burning belt, except its insalubrity—as if the mountains had pushed their crests up through the plain and rifted off many a gem-like vale, enclosing each in a setting of rugged granite. The detachment had not yet reached one of these pleasant valleys, but they were near enough to catch now and then a breath of air, which bore upon its wings the perfume of the garden; and as they hurried on, descending slope after slope, and hill after hill, although night had closed, they began to feel that the temperature was perceptibly higher and softer. Their horses were jaded, and their riders fatigued; but in Mexico the length of the journey is not regulated by the strength of the traveller, or of his horse, but by the number of leagues between watering-places.

They were upon one of those *jornadas*, or "journeys," so common in Mexico, where no water is to be found often for a score of leagues or more; and ever which the jaded traveller must go in a single day, or be content to pass the night without water for himself or his horse. To obviate this difficulty, where the amount of travelling will justify the labour, or where the *jornada* is very long, large *taneas*, or tanks, have in many places been made,

thus cutting the journey in two, and affording a welcome relief in that sultry climate. These are formed by digging large holes, in the shape of natural ponds, in the earth, and so "puddling" or lining the surface as to retain the water when deposited by the rains. Most of these benevolent and wise works have been permitted to decay by the miserable mockery calling itself the *Republica Mexicana*. The writer has passed several of them, in places where they are of almost vital importance, and only one of them would hold water an hour, after an ordinary rain; all the rest had been allowed to decay and become worse than useless; and even that one too often deluded the traveller by a promise unfulfilled.

The "Tanca de San Felipe," at which Colonel Melton designed to pass the night, is one of the few which still retains a part of its former usefulness. It is some eight Mexican leagues from the Pass of Palomas, and agreesably breaks a *jornada* of some twenty leagues, on the road between Monterey and Metahuala.

As night closed in, the colonel fell back and rode beside his prisoner, kindly offering him a gourd, which hung, filled with water, at his saddle-bow. It was a refreshment not unwelcome; for Hugh had tasted no water since noon, was wounded and bruised, and had been in the saddle all day. Those who have known what it is to be thirsty—not merely to feel as if a draught of water would be pleasant, but to be actually parched with thirst—can appreciate the blessing of such a kindness.

"That revives you," said the colonel, smiling, as Hugh drew himself up and looked around him.

"Yes," Hugh replied, "I feel almost strong enough now to fight your battalion."

"Or, at all events, strong enough to run away from them," rejoined the colonel. "But I must warn you, that it would be much better not to attempt it."

"Why so?" asked Manning.

"Because I see you like good water," said the colonel; "and there is not a drop within ten leagues of us, except at the place where we will soon halt."

"You enforce your advice by a very strong argument, at all events," said the lieutenant, laughing; "but I suppose you gave me the water out of pure kindness, and without any concealed purpose."

"The motives were one and the same: my kindness was a concealed purpose, and my concealed purpose a kindness. I have Eastern blood in my veins, and to that do I attribute a strong penchant for symbolical teachings."

"I thank you for the lesson, as well as its medium," said Hugh.

"There was another motive I had in speaking to you—thus," said the colonel, after a pause. "You have already once rode my horse off within twenty-four hours, and you are now upon his back. This was, however, when you did not know the owner; and since you are an honourable man, and now know whose property he is, I am certain you will not again deprive me of him."

Hugh looked at him in astonishment too great to reply.

"I see you do not understand me," continued the colonel. "I will explain. Having been ordered to scour the country south of Pinones for supplies, and then to make a detour to the right, and join General Minon by the Pass of Palomas, I drew off all of my regiment then with Santa Anna, and commenced my march. While waiting last night, beyond Pinones, for a guide, my attention was attracted by a light some distance from the road; and dismounting my men, and leaving the horses picketed in what I supposed a safe place, I ascended the plateau. An explosion followed, which I could not explain; and on reaching the place, I found the ruins of a rancho scattered around upon the rocks, and burning rafters strewn up and down the ravines for many a rood. But not a man was to be seen; and after a fruitless attempt to reach the spot where the house had stood, I beat a retreat. What was my surprise, on returning to the horses, to find four persons mounted on as many of my chargers, and all the rest suddenly stampeded before my very face! It was well done, upon my word! and I respect you for the boldness of the act. I am glad, too, that our valley did you no injury; for it left you free to execute as masterly a retreat as Xenophon's."

"We recovered our horses soon after dawn, the most of them, and it happened that our path was the same as yours. We had been delayed by the stampede, and had to ride hard to recover lost time; so that at last we overhauled you, and thus you are a prisoner."

"Well," said Hugh, laughing, "I am truly glad he belongs to you; for if I had played the same trick upon one of these hombres, I fear I would have fared badly, had I fallen into his hands afterwards."

"You would, indeed," said Melton; "but you are safe now—at least, so long as you make no effort to escape. In that case, I fear I could not restrain the hombres from shooting you."

"I would not fear their bullets much at fifty yards' distance," said Manning, "if I could only get a fair start."

"And yet that gash in the shoulder ought to teach you respect for their skill, at least."

"I was not twenty yards from the muzzle when that gun was fired," rejoined Hugh; "and another inch to the left would have missed me."

"True; and another inch to the right would have disabled you. But I forgot to ask you, who were the persons with you who escaped? I thought one of them was a woman."

"You are right; a friend of mine, named Vernon, and a Mexican caballero, named Bonaro, and his daughter Catharina, were my companions. My friend and — J —"

"Catharina Bonaro?" interrupted Melton, "of Rinconada, near Monterey?"

"The same; do you know her?"

"What, in the name of all that is good, was she doing there?"

Hugh briefly related the circumstances under which he had met her, and the catastrophe which had driven them from the rancho.

"And do you know whither she, or rather her father, intended to go?"

"To Monterey, I think," answered Manning, "though several days must elapse before they can reach there."

"I wish I had known this before," said Melton, thoughtfully; "I would have pursued them to the top of the mountain, but I would have taken them."

"For what purpose?" asked Hugh, sharply.

"To have saved them the annoyance and danger they must incur by going into a camp on the eve of a battle," said Melton, and in his tone there was an interest which Hugh did not like.

"When did you know them?" he asked.

"In Matamoros and Monterey, and at his hacienda of Rinconada. I have known them intimately for several years."

"Then I do not wonder at the interest you manifest," said Hugh frankly.

"Is it because you feel something of the kind yourself?" asked Melton, coldly.

"I must understand the nature of your interest," said Hugh, "before I can answer that."

"Cautious enough!" said the colonel, in a tone whose contemptuous sneer made Hugh's blood boil. The emotion, however, passed in a moment; for Melton almost immediately resumed his frank and easy manner, and holding out his hand to Hugh, continued:

"Forgive me the error, senor; I have no right to insult you at any time, least of all now; and I hope I am too much a gentleman to seek a foolish quarrel even with an enemy."

"I am sure of it," said Hugh, warmly, taking his extended hand. "I do not know what interest you may have in the Senora Bonaro, nor was I aware till now that you had ever met her. I hope you will do me the justice to believe me, when I say, I never heard your name pass her lips."

"Not a very flattering apology," said the colonel smiling painfully; "though, if there were anything to excuse, a good one. But we are approaching the *Tanque*: we will speak more of this at another time."

The force with which he struck his spurs into his horse's flanks and galloped to the front, showed that, though smothered by a high sense of honour, the fire was still burning. Hugh gazed after him with feelings not very dissimilar. The jealousy which every man has felt at some period of his life was rising in his heart. But a little reflection soon convinced him that he had no reason to be uneasy; that the manner of the colonel was far from that of a successful rival. And he was right. Melton had met Catharina first at Matamoros, as he had stated. He had been struck with her beauty and vivacity, had become enamoured, had wooed, and been rejected.

PRICE ONE PENNY. ALWAYS ON SALE.

WEEKLY ISSUE OF THE FAMILY FRIEND.

On SATURDAY, the 3rd of JULY, was published No. 1 of the NEW SERIES of THE FAMILY FRIEND; with which Number is presented a beautiful STEEL ENGRAVING, of a House, after a Painting by W. Collins, R.A., entitled

"PARTING WITH A LITTLE FAMILY FRIEND."

This Number has also a new Title-page, by FRANKLIN. There will be no alteration in the Size, Shape, or Price of "THE FRIEND," its present neat and economical form being much approved. For the convenience of those who have not taken in or completed the OLD SERIES, it is suggested that Orders should be given to Booksellers to supply

1st. THE WHOLE SERIES, bound, PRICE 15s.; OR  
2nd. A VOLUME MONTHLY, PRICE 2s. 6d.; OR  
3rd. THREE NUMBERS MONTHLY, PRICE 2s. 6d. EACH.

By this arrangement, Subscribers may become possessed of the OLD SERIES by a method adapted to their own convenience. Back Numbers and Volumes, for completing Sets, should be ordered immediately.

London: Houlston and BROSSEMAN, 46, Paternoster-row; and all Booksellers.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### GENIUS AND TALENT.

SOME common ideas are so nearly alike in their bolder outlines and grosser qualities, and at the same time so intangible and evanescent in their nicer shades of meaning, and, withal, each of them in itself so complex and multi-form in character; and more baffling than all, so closely allied to each other; that it is a severe task of discrimination to fix clearly in the mind distinct and separate notions of them. It is sometimes more difficult still to express, when so fixed, those distinct notions in intelligible language. However, there is no safety, and but little profit either, in discussion or dissertation, unless you define before you begin: nay, not unfrequently, where definition begins difference and discussion end. Then "there is the rub;" how to define precisely; how to express that definition in such language as to exclude everything foreign, and yet to comprehend with perspicacity everything cognate: in short, how to include everything proper, and yet include nothing too much.

Purely intellectual ideas are never easily defined. It is no light matter to avoid a confusion of such ideas with others closely resembling them, and to fix the particular notion singly before the mind. Then, too, our conception of them takes much of its hue and shape from our individual organization. Beside, the stubbornness of language will not bend at choice to embrace exactly the nicer shades of meaning we would express, without the hazard of expressing too much. All who have attempted discussion of subtle distinctions of this sort have painfully felt this embarrassment. Hence, definitions of such abstract ideas as Wit, Humour, Poetry, and the like, although exhibiting great intellectual acumen and power of thought, coupled with copiousness and felicity of phraseology, have generally been deemed unsatisfactory.

Genius, as we understand it, is the result of a peculiar and felicitous combination of mental faculties, moral qualities and physical organization. The combination is peculiar, inasmuch as it differs from every other known combination, in possessing some positive and subtle attributes that none other has; and it is felicitous, as it excels every other combination by its productions in a marvellous way. It is not Taste, nor Wit, nor Humour. It is not Common Sense or Facility. Finally, it is not Talent. It may co-exist with each and all, or it may exist essentially independent of either. Now we apprehend there is but little practical danger of confounding either of these, except talent with genius. The difference between them is comparatively easy of illustration, but they are hardly susceptible of separate definition.

Genius may be said to be the ability to conceive, comprehend, and reproduce truth, beauty, and harmony: talent is the ability to explore, gather up, and re-construct truth, beauty, and harmony. Genius is creative ability: talent is executive ability. Genius, in its nature, growth, and power, is "subjective": talent, in its nature, growth, and power, is "objective." Genius is speculative and visionary: talent is practical and matter-of-fact. Genius revels in the ideal and possible; talent delves in the real and the actual. Genius conceives and invents: talent finds and remembers. Genius seeks by its own inward power to develop what it finds within itself; talent seeks foreign aid, and aims at a foreign object. To adopt a word, Genius is *intransitive*: talent is *transitive*. In their works, genius is easy and natural: talent is fastidious and accurate. Genius, in its results, has a quality of unexpectedness, and produces wonder, as wit produces surprise: talent shows

## GENIUS AND TALENT.

you its clue, long before it attains the end. One might almost say genius is the *instinct*, talent the *reason* of the understanding. Genius "substitutes intellectual vision for proof," and has the "clear conception out-running the deductions of logic;" talent moves by regular processes of thought: the operations of genius are *a priori*, from cause to effect; the operations of talent are *a posteriori*, from effect to cause. Talent is sagacious appreciation; genius is intuition. Talent ascends; genius transcends. Talent is empirical and experimental; genius is transcendental and prophetic. "Nothing can be proved to exist," says Talent: "I know that I exist," says Genius. Thus Talent arrives at a conclusion; Genius has a revelation.

The moral characteristics, if one may be pardoned the expression, in considering this intricate subject, are broadly different in genius and talent. Genius has more enthusiasm and self-devotion; talent has more zeal and energy. Genius is melancholy; talent is sober. Genius is affected by sensibility; talent by the passions. Genius overstrained is more apt to burst into madness; talent overtaken to lapse into idiocy. Genius is patient in conception, impatient in development; talent is impatient in conception, patient in development—each moving more freely where it feels its strength. Genius is moved by impulse, and is desultory; talent, chained to the will as a motive power, is methodical and direct. Genius *excels* unconsciously; talent is always aware when it produces an *effect*, and toils to reproduce it. Genius has its "end shaped" by a divinity; talent "rough-hews" its own. Genius finds its motive in its own gratification, and is but half-conscious of effect and external accomplishment; talent dies without appreciation, seeks the plaudits of the world, and knows marvellously well when it has made "a hit." Genius "wakes up in the morning and finds itself famous;" talent lies feverishly awake all night, and wonders why that morning and its fame don't hurry along.

The growth of capacity and power in genius is like the growth of a fruit, or a tree; spontaneous, constantly adding to itself, yet indivisible and a unit, still having the same identity. The same growth in talent depends chiefly upon cultivation; it is like the growth of a crystal (as science reveals it), adding to itself, yet each addition separate, severable, and obvious. The former grows by expansion from within; the latter by accretion from without. Genius seeks to discover the hidden providences of God, and the "mystery of man's nature, and, by 'wreaking its thoughts upon expression,' to ally itself and mankind with the great GODHEAD Himself: talent labours to apply truth practically to the immediate wants of man. Genius penetrates far into depths unfathomable, led on amid the mazes and windings of error, bearing a torch in its hand, and seeing what is good and what is worthless, gathers only that it seeks: talent gropes its way through the dark labyrinth, guided by a *clue*, gathering all it finds, and drags its indiscriminate booty into the daylight of other men's minds. Genius is conscious of itself, and needs no circumstance to call it forth: talent often awaits the call of pride, ambition, or duty, and first discovers its power when passion has forced it into exercise. Charles Lamb speaks of "crying halves to ideas" struck out, like sparks from the anvil, in the heat of conversation. Some one, perhaps Dean Swift, describes himself as catching by stealth, in its transit, "an idea Heaven intended for some other man." But the most honest expression I have ever met with on this head, is a line or two of Sydney Smith. There is so much comfort to us slow mortals contained in it, that I shall be pardoned for repeating the whole passage. "The mind," says he, quite as oracularly, if not quite as dogmatically, as myself: "the mind advances in its train of thought as a restive colt proceeds on the road in which you wish to guide him; he is always running to one side or the other, and deviating from the proper path, to which it is your affair to bring him back. I have," says the Rev. Sydney, "asked several men what passed in their minds when they are thinking; and I never could find any man who could think for two minutes together. Everybody has seemed to admit that it was a perpetual deviation from a particular path, and a perpetual return to it; which, imperfect as the operation is, is the only method in which we can operate with our minds to carry on any process of thought." Now, I suspect this may very well describe the mode of thinking by men of more talent than genius, but that the "crying halves," and intercepting "ideas intended for other men," better illustrates the process by which men of genius arrive at their ideas; and I am the more inclined to this opinion, because of the quality of suddenness, without loss of harmony or beauty, often visible in the thoughts and ideas of genius; while those of talent are obviously slow and anticipated.

"By genius," says Fuseli, "I mean that power which enlarges the circle of human knowledge; which discovers new materials of nature, or combines the known with novelty; while talent arranges, cultivates, and polishes the discoveries of genius." That is to say, genius creates, while talent merely constructs. Thus, in art and letters the creations of genius are copious, vast, true, and in harmony with nature; the productions of mere talent are literal, hard, imitative and prosaic, or grotesque and fantastical. With the first, everything revolves on the pivot of truth; with the other, this common centre is wanting. Genius is a law unto itself; talent must obey the law as it is written; and as it deviates, so it errs.

Perhaps no man was ever so peculiarly qualified to expound these distinctions as S. T. Coleridge. Certainly, in a few words he has thrown a flood of light upon the matter. "Genius," says he, "finds in its own wants and instincts an interest in truths for their TRUTH'S SAKE." Again: "To possess end in the means, as it is essential to morality in the moral world, and the contra-distinction from mere prudence, so it is in the intellectual world the moral constituent of genius, and that by which true genius is contra-distinct from mere talent." Given as the true moralist "does right" not from the paltry and contemptible motive that "honesty is the best policy," but simply because it is right, so the man of genius develops the great power within him from a law of its being, and because he finds that power

there. In another place he says: "Genius is originality in intellectual construction; talent is the comparative facility of acquiring, arranging, and applying the stock furnished by others, and already existing in books, and other conservatories of intellect." And in still another place: "This is a good gauge of genius, whether it progresses and evolves, or only spins upon itself." These are golden axioms, scattered here and there in the bed where the mighty current of his intellect flowed. I do but gather them up; I am not worthy to fuse or fashion them.

In the republic of the mind, genius is the source of power; talent is the executive or ministerial faculty. Genius invents and develops; talent collates and executes. Genius must not be confounded with Talent, or even Cleverness: these are but phases of talent, or its ready satellites, as imagination and sensibility are phases of genius. Genius is a "very particle," deriving its light and colour from within itself, and, like a burning coal, shines in the dark talent; borrows its lustre from without, and is seen only where there is light. Genius, too, leans to the poetical, and has a quality of feminineness, of which mere talent, hard and prosaic as it is, is deficient: indeed, genius is more common among women, while talent is more common among men.

In matters of judgment, I know not whether genius or talent is the more reliable; either, taken separately, can scarcely be trusted. The ideas of men of genius do so come in flashes—the blaze suddenly lighting up some part of a subject, like torchlight in a cavern, glaring with excess of light, thickening darkness as it repels it—that the understanding may be deceived. Hence may come partial views, eccentricity and sudden inconsistency, though with all real sincerity. Now, with men of talent the light is more steady, but there may be a deficiency of light.

Genius is versatile, strikes out a new spark at every blow, is inexhaustible, and, like Nature, never repeats itself. Talent elaborates, perfects, and polishes its ideas; but they are finite, have "iteration in them," and bear a family resemblance. Genius is the child of impulse; talent is born of the will. Genius is irregular, unsteady, and "studious of new things;" talent obeys an iron master, and its action wears and frets a channel, in which it flows the more easily and powerfully as it is sustained and assisted by the momentum of habit. Genius has no habits.

Genius without talent finds itself much at a loss how to get on in the world. Its peculiarities are oftentimes a bar to its progress. Talent without genius generally gets on bravely, and succeeds oftentimes from the absence rather than the presence of qualities; as a man with a conscience will starve sometimes, where a man without a conscience will thrive and fatten: nay, its very peculiarities, or rather want of peculiarities, remove many a stumbling-block from its path: for as we know, genius is full of tremulousness and sensibility, while talent is full of nerve and energy. Genius sees so much and feels so much, that without talent it is timid in action, and hesitates. It "considers too curiously." To borrow from "Hamlet" the great dramatist's type of genius, we may say it doubts by

— "Thinking too greatly on the event;  
A thought which quartered, hath but one part wisdom,  
And ever three parts coward."

and finally puzzles itself into inaction. But, on the other hand, with talent, whatsoever its hands find to do, that does it, with all its might: nay, to give the whole picture, not unfrequently it "rushes in where angels fear to tread."

Besides, genius often derives more strength from the heart than the head. It is prone to be warm, tender, profuse, spontaneous, gushing, full of sympathy, and careless of itself and the morrow. It soothes and loves the weakness of humbler minds, and, by all these outlets, is constantly diverted from its purpose, and its time wasted: the tide in its affairs is not "taken at the flood," and opportunity is lost. Talent borrows little of the heart: it is cold, prone to formality and elaborateness: is calculating, burns steadily, nurses its reputation, husband its resources, spreads every inch of canvas, makes everything "tell:" nay, more, is cutting, sarcastic, and hates cordially the weakness of feeble men, and spurns them. Genius is fitful and erratic; talent is the essence of equanimity and imperturbableness. Moreover, genius groans at the curse of labour, and shudders at practical details; while talent likes to work, and cheerfully masters all practical details. Then genius is proud in the simple consciousness of possession; but talent glories in the manifestation of superiority. And, too, genius is full of doubleness and a riddle; is mystic, and walks in a cloud; but talent is single in purpose, plain, practical, no greater or other than it appears. Genius is exclusive, and dreads lest its household gods should be jostled and profaned by strangers and barbarians; but talent has no household gods. In short, to sum up the whole matter, genius should have talent combined with it, and talent should have genius to enable either to act with independence and compensating energy and success in the affairs of life. To quote from Coleridge: "Genius must have talent as its complement and implement, just as imagination must have fancy; in short, the higher intellectual powers act through a corresponding energy of the lower."

**THE FEMALE CAPACITY.**—Women, in their course of action, describe a smaller circle than men; but the perfection of a circle consists not in its dimensions, but in its correctness. There may be here and there a cunning female who looks down with disdain on the paltry affairs of "this dim spot called earth;" who despises order and regularity as indications of a grovelling spirit; but a sound mind judges directly contrary. The larger the capacity, the wider is the space of duties it takes in. Proportion and propriety are among the best secrets of domestic wisdom; and there is no more test of integrity and judgment than a well proportioned expenditure.—More.

## ONWARD!

**MUSIC BY TELEGRAPH.**—A gentleman, of Louisville, Kentucky, according to the *New York Journal of Commerce*, has "nearly completed" an invention for writing music as it is played upon the pianoforte, the notes upon the sheet being produced as fast, and to the exact time, as the keys are touched by the performer. Strakosch has offered him 10,000 dollars for the patent right when the model is finished.

**SCIENTIFIC MISSION TO SOUTH AMERICA.**—The French government has resolved to send a new scientific mission into the interior of South America; and instructions as to the investigations and observations in natural history, botany, astronomy, geology, meteorology, &c., which it may be desirable to make, have been demanded from the Academy of Sciences. The mission is specially to occupy itself with the provinces of Brazil, Paraguay, and Bahia.

**PROGRESS IN THE EAST.**—A railway from Belgrade to Constantinople has for some time been projected, and an English company is in negotiation with the Porte for its construction. The engineers who have examined the ground point out a passage in the Balkan, which would require works of little labour or difficulty. The company undertake to finish the line in five years, and as the railway from Vienna to Belgrade is far advanced, Constantinople would then only be a comparatively short journey from Vienna. The name of the city of Belgrade, in relation to the capitals of Austria and of Turkey, and in connection with peaceful international progress, suggests strange historical associations.

**A HAIR-CUTTING SALOON.**—At St. Louis (U.S.) a saloon, 160 feet long and 72 feet wide, has been fitted up for hair-cutting! Around the sides are placed baths within low enclosures. The floor is of white marble, with marble fountains and flower-stands: the ceiling and wood-work are white and gold. The doors of the baths are of looking-glass; the baths plated silver, set in marble: they have hot and cold water, and a large jet for any part of the body. The shaving-chairs are carved mahogany, and there are crimson-velvet ottomans. Above the saloon is the billiard-room, with twelve tables; underneath a bowling-saloon. It cost 40,000 dollars building, and the same for furnishing. The charge for shaving and shampooing the head is 5d.; hair-cutting, 5d.; and for bath, 12½d. Eighteen years since this town was nothing but a concourse of log-huts and wigwags; now it contains 100,000 inhabitants, who have their hair cut in a palatial saloon. Well done, St. Louis.

**ENCLOSURE OF LAND FROM THE SEA IN THE NETHERLANDS.**—The first act of the lands conceded to the Netherlands Land Enclosure Company by the government of Holland, was lately turned by Captain Pelly, at Hanswerk, Zeeland, Holland, in the presence of a large concourse of the population. In the Scheldt, between Bergen-op-Zoom and Antwerp, there exist large tracts of land covered at high-water by the sea, and at low-water presenting a varying surface, of several feet in depth, of the richest alluvial soil, ever on the increase. To redeem and dispose of this land is the object of the company named, which is composed of practical men on both sides of the Channel, with Sir John Rennie as engineer-in-chief. The necessary powers have been granted for ninety-nine years from last August, under which the company may recover and enclose land to the extent of 35,000 acres. The reclamation will cost £20 per acre, they say, and the land reclaimed will be worth from £60 to £70 per acre.

**SECURITY OF PUBLIC BUILDINGS AGAINST FIRE.**—An American paper, in drawing attention to the necessity of securing the interior as well as the exterior of public buildings against fire, states that a manufactory of material useful for such a purpose has been established at New York, by Mr. T. J. Gillies, of Broadway. The material is iron, enamelled and finished in imitation of marble, or of some of the richest and finest woods. The manufacture is new to America, but not to Europe. As remarked by the paper in question, "The most expensive and permanent materials are generally employed in constructing the outer walls of public buildings, while the most frail and combustible are used in completing the interior. The outside is made fire-proof, but the inside is not. Whereas experience has shown, that at least equal, if not greater caution is required within than without, as conflagrations originate more frequently within than from the outside of public buildings. Our city hall (New York) has been several times on fire, and all its municipal and judicial records threatened with irremediable destruction; but the fire, in every instance, has originated within the building. Such also has been the case with the Treasury building at Washington. The Patent-office building, at Washington, shared a much worse fate, having been wholly consumed. The Congressional Library Rooms also took fire from the inside. The outer walls escaped uninjured, but the library was destroyed. There was security for the outside, but none for the inside. The points of greatest danger, so wit, the interior parts of the building, were lost sight of and left exposed. The building itself, which in case of loss could easily have been replaced, was saved, but the rich and valuable treasury, the accumulations of a whole century, which the building was intended to preserve, and which in many cases cannot be duplicated or replaced, were irretrievably lost. The principal object of strong outside walls is to give strength and permanence to the building; but it is perfectly idle to rely upon them alone for protection against fires. To effect this there is only one remedy—make the insides as well as the outsides fire-proof." It would be well if the same excellent precautions were taken in London, where such a vast accumulation of industrial wealth is constantly exposed to the devastating element, and a strange indifference prevails for its protection.

## POETICAL QUOTATIONS.

## BOOKS.

'Twere well with most, if books, that could engage  
Their childhood, pleased them at a riper age;  
The man approving what had charm'd the boy,  
Would die at last in comfort, peace, and joy;  
And not with curses on his art, who stole  
The gem of truth from his unguarded soul.—*Cowper*.

Come let me make a sunny realm around thee,  
Of thought and beauty!—Here are books and flowers,  
With spells to loose the fetters which have bound thee,  
The ravel'd coil of this world's feverish hours.—*Mrs. Hemans*.

The past but lives in words: a thousand ages  
Were blank, if books had not evoked their ghosts,  
And kept the pale, unbodied shades to warn us  
From fleshless lips.—*Butler*.

'Tis pleasant, sure, to see one's name in print;  
A book's a book although there's nothing in't.—*Byron*.

## BOUNTY.

What you desire of him, he partly begs  
To be desired to give. It much would please him  
That of his fortunes you would make a staff  
To lean upon.—*Shakspeare's Antony and Cleopatra*.

For his bounty,  
There was no winter in't; an autumn 'twas  
That grew the more by reaping.—*Ibid*.  
O blessed bounty, giving all content!  
The only faultruss of all noble arts,  
That lend'at success to every good intent,  
A grace that rests in the most godlike hearts,  
By heaven to none but happy souls infused,  
Pity it is, that e'er thou wast abused.—*Drayton*.

He that's liberal  
To all alike, may do a good by chance,  
But never out of judgment.—*Beaumont and Fletcher's Spanish Curate*

Such moderation with thy bounty join,  
That thou may'st nothing give that is not thine;  
That liberality is but cast away,  
Which makes us borrow what we cannot pay.—*Denham*.

Large was his bounty and his soul sincere,  
Heaven did a recompense as largely send;  
He gave to misery all he had—a tear;—  
He gain'd from heaven—'twas all he wish'd—a friend!—*Gray*.

## BRIBERY.

What! shall one of us,  
That struck the foremost man of all this world  
But for supporting robbers,—shall we now  
Contaminate our fingers with base bribes,  
And sell the mighty space of our large honours  
For so much trash, as may be grasped thus?  
I'd rather be a dog, and bay the moon,  
Than such a Roman.—*Shakspeare's Julius Caesar*.

None does offend, none, I say none; I'll able 'em  
Take that of me, my friend, who have the power  
To seal the accuser's lips.—*Shakspeare's Lear*.

Let me tell you, Cassius, you yourself  
Are much condemn'd to have an itching palm;  
To sell and mart your offices for gold  
To undeservers.—*Shakspeare's Julius Caesar*.

The world is not thy friend, nor the world's law;  
The world affords no law to make thee rich;  
Then be not poor, but break it and take this.

*Shakspeare's Romeo and Juliet*.

Silver, though white,  
Yet it draws black lines; it shall not rule my palm  
There to mark forth his base corruption.

*Middleton and Rowley's Fair Quarrel*.

Petitions not sweeten'd  
With gold, are but unsavoury and oft refused;  
Or if received, are pocketed, not read.  
A sutor's swelling tears by the glowing beams  
Of cholerick authority are dried up  
Before they fall, or if seen, never pitied.—*Massey*.

CHARADE.

My first how many flock to see!  
My second cometh from the sea.  
My whole the lightning is that flies  
In lurid darts across the frowning  
skies.

PARLOUR PASTIME.

To Write on Glass by means of the Sun's Rays.

DISSOLVE chalk in aquafortis to the consistence of milk, and add to it a strong solution of silver. Keep this liquor in a glass decanter well stopped, then cut out from a paper the letters you would have appear; paste it on the decanter, and lay it in the sun's rays in such a manner that the rays may pass through the spaces cut out in the paper, and fall on the surface of the liquor; then that part of the glass through which the rays pass will be turned black, while that under the paper will remain white. Particular care must be taken that the bottle be not moved during the operation.

THE LANGUAGE OF FLOWERS.

FLORAL LOVE LETTER.

**MOST WHITE JASMINE MYRTLE.**—Your Mallow, Calla Æthiopica, and Mint have long occupied my Heart's Ease, and filled my heart with Arbor Vitæ, and hitherto, Honey-Flower, towards you. Your conversation has ever been replete with Ragged Robin and Red Mulberry, attended with a Mezereon, and I should experience Everlasting Pea and Sweet Sultan if blessed with your Red Pink. I trust you will pardon my Live Oak when I say that you possess Full Blown Rose, at the same time it would be Apocynum in me to observe that Japan Rose, since to Mountain Ash, Small White Violet are united in you, a White Jasmine, and Mallow, with every Cowslip. Could I but win thy Crocus, thy Polyanthus and Acacia, it shall be my Amaryllis through Lucerne to prove to you my Cross of Jerusalem and Blue Pyramidal Bell Flower. Suffer me not then, Sweet Wild Daisy, to feel Spring Caroline and Convolvulus Major, but reward my Red Tulip. Forget-me-not—with Ambrosia. Your Bonus Henrious, Orange Tree and Marsh Mallow convince me that you cannot practice Winter Cherry, and as Wild Grape and Stinging Nettle cannot inhabit the same bosom, I feel Sweet Sultan in thinking you will not by cold Ever-flowing Candy Tuft doom me to dark Geranium and Cypress. Dearest, then suffer no Ox-eye to impede our happy Whole Straw. Common Cactus in Bitter Sweet Nightshade with the Yellow Iris, while Hawthorn sustains me. Adieu, Mouse Ear, Scorpion Grass. In Gillyflower and Acacia Rose, believe me, through White Poplar Globe Amaranth,

Yours,

IAGO FF

TRANSFIGURED PLAYING CARDS.

SIX OF CLUBS.—BLACK-AMOURS.

CONUNDRUMS.

1. What island invites the sailor to continue his voyage?
2. When does a ship of war seem most idle?
3. What part of a barrel do the Falls of Niagara represent?
4. Who is the most adventurous officer in the Chinese empire?
5. Why is a criminal just hung like a man expecting to hear bad news?
6. What old colony is still a recent discovery?
7. What three vowels will provide you a sandwich in the Pacific?
8. In what key has Jenny Lind lately been singing?
9. When would a ship's crew be most likely to get drunk?
10. What game played at Calcutta is a vegetable production?
11. Why is a Mohammedan, commercially speaking, a covetous man?
12. What islands ought to be good singers?
13. What is the proper wood for a ship's rudder?
14. When are your stockings like a retreating army?
15. What word in English is both sour and sweet?
16. What country is most likely to suffer from famine?
17. Why is a weak man a remarkable man?
18. What island in the Atlantic refuses to let you land?
19. Which of the British poets would provide a lion with the most comfortable quarters?
20. What two fishes get most frequently trodden upon?

ENIGMAS.

I.  
My cunning first you'll chase to-day,  
Put on my next, and then away.

II.  
My first is found in verdant dell,  
My next oft worn by village belle.

III.  
My first are oddities, I say,  
And if they lack my next, they may!

ENIGMAS.—I. *Sun-dew.* 2. *Tudor.*

## OUR CORNER CUPBOARD!

In the reign of Charles I. a mayor of Norwich actually sent a fellow to prison for saying that the Prince of Wales was born without a shirt.

In the word "facilities" the five vowels of the alphabet stand in their grammatical order. The word "facilities" presents the same accidental singularity, and "faciously" brings in the *ix*.

A FATHER chiding his son for not leaving his bed at an earlier hour, told him, as an inducement, that a certain man being up betimes found a purse of gold. "It might be so," replied the son, "but he that lost it was up before him."

## ON TIME.

Time darks the sky; time brings the day;  
Time glads the heart; time puffs all joys away;  
Time builds a city, and o'erthrows a nation;  
Time writes a story of their desolation.  
Time tells a time when I shall be no more;  
Time makes poor men rich, and rich men poor.

As the king of Prussia was passing in review several regiments near Potsdam, he observed a soldier who had a large scar over his face. Finding he was a Frenchman, Frederick addressed him in his native language, saying, "In what alehouse did you get wounded?" The soldier smartly replied, "In that where your majesty paid the reckoning."

DURING the high price of coals, a gentleman meeting his coal-merchant, inquired whether it was a proper time to lay in a stock? The knight of the black diamonds shook his head, observing, "Coals are coals now, sir." To which his customer replied, "I am very glad to hear it, for the last you sent me were all slated."

## FAST YOUNG MEN.

Gaming, talking, swearing, drinking,  
Hunting, shooting—never thinking,  
Chattering nonsense all day long;  
Humming half an opera song;  
Choosing baubles, rings, and jewels;  
Writing verses, fighting duels;  
Mincing words in conversation;  
Ridiculing all the nation;  
Admiring their own monkey faces,  
As if possess'd of all the graces.

AMONG the addresses presented to James I., on his accession to the throne, was one from the town of Shrewsbury, in which the loyal inhabitants expressed a wish that his majesty might reign as long as the sun, moon and stars endured. "Faith, mon," said the king, "if I do reign so long, my son must govern by candlelight!"

By a statement from a tailor in Boston, it appears that there are 25,243 stitches in a coat; viz., basting, 782 stitches; in the edges of the coat, 5,590 ditto; felling the edges, faces, &c., 7,413 ditto; out of sight, in the pockets, &c., 1,982 ditto; in the collar alone, 3,056 ditto; seams, 5,359 ditto; holes, 1,450 ditto. The coat, he says, was made in two days, journeyman's hours.

DEAN SWIFT's barber one day told him that he had taken a public-house. "And what's your sign?" said the dean. "Oh, the pole and bason; and if your worship would just write me a few lines to put upon it, by way of motto, I have no doubt but it would bring me plenty of customers." The dean took out his pencil, and wrote the following couplet, which long graced the barber's sign:

"Rove not from pole to pole, but step in here,  
Where naught excels the shaving, but the beer."

## SOME SAMPLES OF THE "HEX."

Ever ranging, constant changing;  
Sometimes pleasing, sometimes teasing,  
Sometimes coaxing, sometimes hoaxing;  
No expressing how much dressing;  
Little knowing, little sewing;  
Little walking, greatly talking;  
Mischief making, promise breaking;  
Duty shirking, hating working;  
Novel reading, dainty feeding;  
Idle dreaming, sudden screaming;  
Lap-dog doating, Byron quoting;  
Piano playing, genius displaying;  
Body bracing, tightly lacing;  
Over-sleeping, often weeping;  
Dandy loving, white kid gloving;  
Thin shoes wearing, health despairing;  
Daily fretting, sickness getting;  
Ever sighing, almost dying;—  
What blessed wives to cheer men's lives!

A DISPUTE about precedences once arose between a bishop and a judge, and, after some altercation, the latter thought he should quite confound his opponent by quoting the following passage—"For on these two hang all the law and the prophets?" "Do you not see," said the lawyer, in triumph, "that even in this passage of Scripture we are mentioned first?" "I grant you," says the bishop, "you hang first."

## OUR MEMORANDUM BOOK!

THE HANDS.—One of the most common signs of want of breeding, is a sort of uncomfortable consciousness of the hands, an obvious ignorance of what to do with them, and a painful awkwardness in their management. The hands of a gentleman seem perfectly at home without being employed; they are habituated to the *volu* for *stans*; or if they *spontaneously* move, it is attractively. Some of Queen Elizabeth's courtiers were playing with their sword-hilt an accomplishment; and the most efficient of the Spanish coquettes is her *fil*. Strength in the fingers is a sure token of mental aptitude. When Mutius burnt his hand set before the eyes of his captor, he gave the most indubitable proof of his *imagine* of *highness*; and it was natural that, amid the ferocious *bravery* of *judicial* *power*, a bloody hand in the centre of an escutcheon should become the *token* of a *monnet* of England.

ADVICE TO BOYS.—Boys, read something useful every day; something to reflect upon while at your work or on the road to school. Be inquisitive—find out things. Don't let the blood pass from your heart to your fingers' ends thousands of times, and you know nothing of its motions. Store your minds early with wisdom. Read a little every day. Remember Roger Sherman. He was one of the noblest examples of how much self-cultivation may do for a man. His school privileges were of the most ordinary kind. Early in life he was apprenticed to a shoemaker, and instead of joining in the vulgar conversation so common to many of his companions, he would sit at his work with an open book before him, and devote every moment that his eyes could be spared from the occupation in which he was engaged to reading. Be saving of your little allowance, and buy books,—lives of good and great men,—men such as Washington, and a host of others, whose virtues have rendered their names immortal. Cultivate a taste for reading. The field of instruction to which it will lead you is boundless.

## CHEERFULNESS.

BY ELIZABETH BARRETT BROWNING.

I THINK we are too ready with complaint  
In this fair world of God's. Had we no hope,  
Indeed, beyond the zenith and the slope  
Of yon gray blank of sky, we might be faint  
To muse upon eternity's constraint  
Round our aspirant souls. But since the scope  
Must widen early, 'tis it well to droop  
For a few days consumed in loss and taint?  
O pusillanimous Heart, be comforted—  
And like a cheerful traveller, take the road—  
Singing beside the hedge. What if the bread  
Be bitter in thine inn, and thou unshod  
To meet the flints? At least it may be said,  
"Because the way is short, I thank thee, God!"

THE TABLE IN THE MIDDLE AGES.—The English, in the eleventh and twelfth centuries, had only two stated meals a day, dinner and supper: the former at nine in the forenoon, the latter at five in the afternoon. These hours, besides being convenient for business, were supposed to be friendly to health and long life, according to the following verse, which was then often repeated, and should be kept in mind by all who are anxious to get on:

"To rise at seven, and dine at nine,  
To sup at five, to bed at nine,  
Makes a man live to ninety-nine."

We are not, however, on that account to imagine that they were either enemies or strangers to the pleasures of the table. On the contrary, they had not only a variety of dishes, but these, too, consisted of the most delicate kinds of food, and were dressed in the richest and most costly manner. Thomas à Becket is said to have given five pounds, equivalent to seventy-five pounds at present, for one dish of eels. The monks of St. Swithin's, at Winchester, made a formal complaint to Henry II. against their abbot, for taking away three of the thirteen dishes they used to have every day at dinner. The monks of Canterbury were still more luxurious, for they had at least seventeen dishes every day, besides a dessert; and these dishes were dressed with spices and sauces, which excited the appetite, as well as pleased the taste.

THE SNAIL FORMING ITS SHELL.—If you will examine the snail of any common *Helix*, you will perceive that where the body rises into the shell there is a fold or membrane, of a semicircular shape. This part is denominated the *collar*, from the manner in which it surrounds the body, and it is the organ which secretes the shell. The animal is born with the rudiments of its future covering, and by its gradual increase of growth is enabled to push the collar for a space, and, from time to time, beyond the original margin. In these operations, a thin layer of membranous and calcareous matter is excreted and deposited, which is gradually thickened by successive layers being laid on within the first, by the repeated protrusions and retractions of the collar. This portion being formed, the animal commences another, and finishes it in the same manner; and the extent of each portion is marked in some shells by an elevated rib, in others by a slight depression. There is not, as the language of some authors would seem to imply, a regular and alternate deposition of a layer of membrane and a layer of lime; but in all shells, the animal and earthy matters are obviously secreted and deposited at the same moment, and in commixture.

**CERICAL MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.** Persons of all ages, and in every station, may secure with this Society, and the assured can reside in any part of Europe, the Holy Land, Egypt, Madeira, the Cape, Australia, New Zealand, and in every part of North and South America, without extra charge.

**FIFTH DIVISION OF PROFITS.**  
The FIFTH BONUS was declared in January last, and the amount varied with the different ages, from 34 to 55 per cent, on the premiums paid, during the last five years; or from 25 to 212 1/2 per cent, on the sum assured.  
The small share of profit divisible in future among the Shareholders being now provided for, without intruding on the amount made by the regular business, the ASSURED will hereafter derive all the benefits obtainable from a Mutual Office, with, at the same time, complete freedom from liability, secured by means of an ample Proprietary Capital—thus combining, in the same office, ALL THE ADVANTAGES OF BOTH SYSTEMS.

The Fund invested for the security and benefit of the Assured exceeds £850,000, and the Income is now upwards of £150,000 per annum.  
Every description of Assurance may be effected, and for any sum from £50 to £10,000.  
A copy of the last Report, setting forth full particulars, with a Prospectus, can now be obtained of any of the Society's agents, or by addressing a line to  
GEO. H. PINCKARD, Resident Secretary,  
99, Great Russell street, Bloomsbury, London.

**METROPOLITAN AND GENERAL FREEHOLD LAND SOCIETY.**—(Enrolled under 6 and 7 William IV., cap. 32.)

**PRINCIPALS.**  
James Wyld, Esq., M.P. | John Williams, Esq., M.P.  
**TRUSTEES.**  
Samuel Read, Esq. | H. B. Sheridan, Esq.  
**CHAIRMAN OF THE COMMITTEE.**—James Beal, Esq.  
Shares, £30. Subscription, 1s. per week. Entrance Fee, 1s. per Share. No back payments. No Fines on withdrawal. Law Charges for Conveyance, fixed at 30s.  
This Society has been formed to meet the requirements of the Industrious Classes, and to afford a more secure investment, and a larger rate of interest, than Savings' Banks. Upwards of 800 Shares taken in only five months. Agents wanted.  
Applications for Shares received daily at the Society's Offices, 24, Eastcheap, City. Enclose Stamp, and obtain Prospectus.  
D. R. WAILES, Secretary.

**MUTUAL LOAN FUND ASSOCIATION,**  
4, Beaufort-buildings, Strand, opposite Exeter Hall.  
Advances from £5 to £500 granted without delay. This is the only incorporated Company with a large paid-up capital which is adapted to meet the wants of all classes by promptly advancing money on one or more securities, repayable by instalments. The public have availed themselves, to a large extent, of the advantages derived from its peculiar feature of paying the sum applied for without deduction. Forms of proposal, with particulars, may be had (gratis) on application, or forwarded on receipt of two postage stamps. Office hours from 11 to 3, and 6 to 8, daily.  
HENRY ARROW, Secretary.

**METROPOLITAN LOAN COMPANY.**  
Established 1839. OFFICES.—1, Craven-street, Strand, London, open from 11 to 3 o'clock daily, except Wednesdays and Saturdays, then from 11 to 1 o'clock.  
LOANS are advanced by the Company in amounts varying from £10 10s. to £100; above that amount, by special agreement; for periods of 25 or 50 Weeks, repayable Weekly. Forms of Application may be had, at any hour of the day, price 2d.; if required per post, three postage-stamps must be enclosed.

**EMIGRATION FOR THE MILLION!—TO ANY PART OF THE WORLD FOR "ONE SHILLING."**

**THE MUTUAL PHILANTHROPIC EMIGRATION ASSOCIATION.**  
BANKERS.—The Commercial Bank of London.  
CHIEF OFFICES.—40, Gracechurch street, City.

**THIS ASSOCIATION** has been formed for promoting the Emigration of the Poorer Classes of either sex; and in order to carry out that object, it is proposed to obtain Subscribers at 1s. each, and to ballot once a month (or oftener, if required) for Tickets (value not exceeding £50 each), entitling the Prize-holders to a free intermediate Passage in first-class Vessels; maintenance on the voyage, and a complete outfit to any part of the world, within one month after each ballot. The first ballot will take place at the Mechanics' Institution, Southampton-buildings, Chancery-lane, on Saturday, July 31st inst., at 5 o'clock in the evening, in the presence of the Subscribers. The Tickets will be transferable; but on no account will money be given instead. No communications whatever will be attended to unless they contain postage-stamps for a reply. Those who wish to participate in the first ballot must make immediate application to  
APPELTON, GILES, Esq., Hon. Secretary,  
Of to any of the numerous Agents in town or country.  
N.B.—Refugees Agents wanted.

**ANDERSON'S PORTABLE SPRING**  
A PREPARATION OF MEDICINE that never fails their patients, but what is removed from the face immediately collapses. Double eye-lashes to open and close with one hand only, to fix on the nose or place before the eyes at the option of the wearer. Inventions of the utmost importance. Sold by Messrs. HARRIS AND SON, 52, Great Russell-street, London; and all appointed Agents throughout the Kingdom.

**TO THE MIDDLE AND INDUSTRIAL**

CLASSES of every profession and business, and all others who wish to provide for their Wives or Families in case of their premature decease, or for themselves in advancing years.

**THE OAK MUTUAL LIFE ASSURANCE AND LOAN COMPANY,** an Institution founded on equitable and sound principles, and especially framed to accommodate persons of moderate incomes, who have not the means of accumulating money, has recently been ESTABLISHED under the auspices of the Right Hon. the Earl of Hardwicke. (Postmaster-General).—Prospectuses and further information may be obtained by applying personally, or addressing a letter to William Swiney, Esq., Actuary and Secretary to the Company, 49, Moorgate-street, London.

O love-ly Peace, with Plen-ty crown'd  
**NOVELLO'S MUSICAL PRESENTS.**  
Octavo Editions of HANDEL'S Israel in Egypt, 6s. 6d.; Messiah, 6s. 6d.; Samson, 7s. 6d.; Judas Maccabaeus, 6s. 6d.; Jephtha, 6s. 6d.; Joshua, 5s. 6d.; Solomon, in progress. HAYDN'S Creation, 5s. MENDELSSOHN'S St. Paul, 6s. 6d.; Lobengrin, and As the Hart Pante, 5s. 6d. Three Masses by Mozart, Haydn, and Beethoven, 5s. 6d.—LONDON SACRED MUSIC WAREHOUSE, 69, DEAN-STREET, SOHO, and 21, POULTRY.

Catalogues, postage-free, six penny stamps.

Mr. Caldwell guarantees to teach any Lady or Gentleman unacquainted with the Routine of the Ball-room to enter with grace and freedom, and to take part in this Fashionable Amusement, in Six Private Lessons, for £1 1s.

**LADIES' BONNETS,** Dunstable, Rice, Chip, English, and Foreign Fancy Bonnets, in every shape, every size, and every quality. A large and Superior Assortment of

**LEIGHBORN BONNETS and CHILDREN'S HATS.** Millinery Bonnets in all colours, of the Newest Designs in shape and material. Also a variety of the Choicest Bonnets direct from the first houses in Paris.  
**MOURNING BONNETS. WEDDING BONNETS.**  
All at the lowest possible prices, for cash only.  
BETH EL WARE  
Manufacturer, 217, Tottenham Court-road, London.

**SMART YOUNG MEN.**—For your HATS go to PARKER'S noted Wholesale and Retail Hat Warehouse, opposite Shoreditch Church, where you can select from Fifty different Shapes of the best Style and Workmanship in London. A first-class Hat, in every prime shape, 9s. 6d. You are respectfully invited to select your shape from the window.—Note, PARKER'S, 12, and 12a, opposite Shoreditch Church, and City-road, on door from Old-street.

"Costly thy habit as thy purse can buy,  
But not expressed in fancy—dub, not gaudy;  
For the apparel oft proclaims the man."—Hamlet.

**EVERY WELL-DRESSED MAN KNOWS**  
how difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste, being equally regarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first days of wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connexion has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates.—F. FOX, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

**GLENFIELD PATENT STARCH,** used in the Royal Laundry, and Wetherpoon's Steam-made Confections.—Sold by all respectable Grocers and Druggists.—Glasgow: R. Wetherpoon & Co., 40, Dunlop-street. London: Wetherpoon & Co., 40, King William-street, City.

**DEANE'S TABLE CUTLERY** has for more than 150 years received extensive and increasing public patronage. The Stock, comprising Ivory, Bone, Horn, and Stag handles, stands unrivalled in extent and variety. The prices are the lowest, and the quality of the Steel the very best. Deane's Monument Razor and London-bridge Strop are preferred by the best judges to any other. Their Pen and Pocket Knives, 6d. each, and upwards, and Ladies' Solers of every description, are all of the finest quality.  
DEANE, DRAY, and Co. (opposite to the Monument), London-bridge.

**LANCELOTT'S PATENT PORTABLE**

**COOKING STOVE.** for Australia Gold-Diggers, Farmers, and others. This Improved Portable Cooker, for Boiling, Baking, Steaming, &c.; and Gold-Diggers' Wash-basins, and Iron Pots, and Baskets, &c., which will enable the Australian Adventurer, with little trouble, to earn a profit of about £1000 per cent. immediately on reaching his new home.

A variety always on hand at Davy's Iron Works, 11, Bebban, London.  
Coffee-drinkers using the Colonies should begin with them one of Davy's Patent Coffee-pot.

**A GENUINE LUXURY.**  
**PAYNE'S ROYAL OSBORNE HAUCE,**  
prepared by H. Osborne, a Chemist in the Isle of Wight, specially prepared by the Royal Patent Office, exhibited and used at the Great Exhibition of 1851. It is considered the premier brand for hair, and is sold in all parts of the world.  
"We have tried, and yielded, many famous brands, but the Royal Osborne beats them all."—The Times, 12th Feb. 1852.  
Sold wholesale by Rumsey, 5, Queen-street, London; retail, by Fortnum & Mason, and many vendors generally.

**TEETH.**  
129, Strand, and 55, Connaught-terrace, Hyde-park.  
Teeth, 5s. each; a complete set, 25s.

**MR. JONES, Inventor and Manufacturer**  
of IMPROVED ARTIFICIAL TEETH. They are permanent, never change colour, break, or decay, and are better adapted for Articulation and Mastication than any hitherto in use. Attendance 7 am to 10.

**BEAUTIFUL HAIR, WHISKERS, EYEBROWS, &c.,**  
MAY be with certainty obtained by using a very small portion of ROSALIE COURELLE'S PARISIAN POMADE every morning, instead of any oil or other preparation. A fortnight's use will, in most instances, show its surprising properties in producing and curling Whiskers, Hair, &c., at any age, from whatever cause deficient; as also checking grayness, &c. Persons who have been deceived by imitations of this Pomade, puffed off by so-called "Testimonials," as apocryphal as the articles they represent, will do well to make ONE TRIAL of the only genuine preparation. Price 2s. per pot. Sent free by post, with instructions, &c., on receipt of 24 postage stamps, by Madame COURELLE, Ely-place, Holborn, London, where she may be consulted daily, from 2 till 5. Testimonials.—Dr. Erasmus Wilson: "It is undoubtedly the best preparation known."—Mr. Yates, hair-dresser, Malton: "The young man has now a good pair of whiskers; I want you to send me two pots for other customers."

**MOAT'S PILLS.**

**THE best Vegetable Tonic and Aperient**  
Medicine, by W. C. MOAT, Surgeon and Apocryphary, formerly the Partner with the late Mr. Morison, the Hygienist. For persons whose occupation and mode of living induce frequent disarrangement of the digestive organs, a reliable Medicine is a necessary of life. Mr. Moat's Pills fulfil this requirement. Sold at Mr. Moat's Establishment, 344, Strand, London; and by all Vendors of Medicine; with directions affixed, in English, Welsh, Spanish, French, German, or Dutch.

**HOLLOWAY'S PILLS, FOR THE CURE**  
OF DEBILITY, BILE, and LIVER and STOMACH COMPLAINTS.—This inappreciable Medicine is as well known throughout every part of the civilized world, and the Cures that are daily performed by its use are so wonderful, that it now stands pre-eminent above all other remedies, more particularly for the Cure of Bile and Liver Complaints, Disorders of the Stomach, Dropsy, and Debilitated Constitutions. In these Diseases the beneficial effects of this admirable remedy are so permanent, that the whole system is renovated, the organs of digestion strengthened, and a free respiration promoted; therefore sufferers should have recourse to it, to insure a safe and certain cure.—Sold by all vendors of medicines, and at Professor Holloway's Establishment, 344, Strand, London.

**PAINS IN THE BACK, GRAVEL, LUMBAGO,** Rheumatism, Gout, Indigestion, Nervousness, Debility, &c.

**DR. DE ROOS' COMPOUND RENAL PILLS,** as their name—Renal, or the kidneys—indicates, are now established as the most safe and efficacious remedy ever discovered for the above dangerous complaints, which, if neglected, frequently end in piles, fistula, stone in the bladder, and a lingering death! For gout, sciatica, rheumatism, the delirious, erysipelas, dropsy, scrofula, loss of hair and teeth, depression of spirits, blushing, incapacity for society, study, or business, constipation, giddiness, drowsiness, sleep without refreshment, fear, nervousness, and even insanity itself, when, as is often the case, arising from, or combined with, urinary diseases, they are unequalled. By their salutary action on acidity of the stomach, they correct bile and indigestion, purify and promote the renal secretions, thereby preventing the formation of stone, and establishing for life the healthy functions of all these organs. ONE TRIAL will convince the most prejudiced of their surprising properties.  
May be obtained at 1s. 1/2, 2s. 6d., 4s. 6d., and 11s. per box, through all Medicine Vendors in the Kingdom. It should steadily occur, they will be sent free of postage at the price in postage stamps, by DR. DE ROOS, 25, Ely-place, Holborn-hill, London, where he may be consulted from 12 to 1, and 3 till 5 (Sundays excepted) without previous arrangement.  
N.B. A considerable saving is effected by purchasing the larger boxes.

## Editor's Note-Book.

**DOMESTIC HINTS.—No. 15.**  
*Frugality.*—The great philosopher Dr. Franklin, inspired the mouth-piece of his own eloquence, "Poor Richard," with "many a gem of purest ray serene, encained in the

homely garb of proverbial truisms. On the subject of *Frugality* we cannot do better than take the worthy Mentor for our text, and from it address our remarks. A man may, if he knows not how to save as he gets, "keep his nose all his life to the grindstone, and die not worth a groat at last. A fat kitchen makes a lean will," and

"Many estates are spent in getting. Since women for tea forsook spinning and knitting, And men for punch forsook hewing and splitting."

"If you would be wealthy, think of saving as well as of getting. The Indies have not made Spain rich, because her out-goes are greater than her in-comes." Away, then, with your expensive follies, and you will not then have so much cause to complain of hard times, heavy taxes, and chargeable families.

"What maintains one vice would bring up two children." You may think, perhaps that a little tea, or superfluous gown and then, diet a little more costly, clothes a little finer, and a little entertainment now and then, can be no great matter; but remember, "Many a little makes a mickle." Beware of little expenses; "A small leak will sink a great ship," as Poor Richard says; and again, "Whodunnies love, shall beggars prove," and moreover, "Fools make feasts and wise men eat them." Here you are all got together to this sale of fineries and nick-nacks. You call them goods; but if you do not take care, they will prove evils to some of you. You expect they will be sold cheap, and, perhaps, they may for less than they cost; but if you have no occasion for them they must be dear to you. Remember what Poor Richard says, "Buy what thou hast no use of, and ere long thou shalt sell thy necessities." And again, "At a great pennyworth, pause awhile." He means, perhaps, that the cheapness is apparent only, and not real; or the bargain, by straitening thee in thy business, may do thee more harm than good. For in another place he says, "Many have been ruined by buying good pennyworths." Again, "It is foolish to lay out money in the purchase of repentance;" and yet this folly is practised every day at auctions, for want of minding the Almanack. Many, for the sake of finery on the back, have gone with a hungry stomach, and half starved their families. "Silks and satins, scarlets and velvets, put out the kitchen fire," as Poor Richard says. These are not the necessities of life; they can scarcely be called the conveniences; and yet, only because they look pretty, how many want to have them! By these and other extravagances, the gentle are reduced to poverty, and forced to borrow of those whom they formerly despised, but who, through industry and frugality have maintained their standing; in which case it appears plainly, that, "A ploughman on his legs is higher than a gentleman on his knees," as Poor Richard says. Perhaps they had a small estate left them, which they knew not the getting of; they think "It is day, and will never be night; that a little to be spent out of so much is not worth minding; but "Always taking out of the meal-tub, and never putting in, soon comes to the bottom," as Poor Richard says; and then "When the well is dry, they know the worth of water." But this they might have known before, if they had taken his advice: "If you would know the value of money, go and try to borrow some; for he that goes a borrowing, goes a sorrowing," as Poor Richard says; and indeed so does he that lends to such people, when he goes to get it in again. Poor Dick further advises and says—

"Fond pride of dress is sure a very curse; Ere fancy you consult, consult your purse."

And again, "Pride is as loud a beggar as want, and a great deal more noisy." When you have bought one fine thing, you must buy ten more, that your appearance may be all of a piece; but Poor Dick says, "It is easier to suppress the first desire, than to satisfy all that follow it;" and it is as truly folly for the poor to ape the rich, as for the frog to swell in order to rival the ox.

"Vex not large men with your smallness, But little boats should not go to sea."

It is, however, a folly gone mad, for "Pride that rises on vanity, sits on conceit, and breaks at breakfast

with plenty, dined with poverty, and supped with infamy." And, after all, at what use is this pride of appearance, for which so much is risked, so much is suffered? It cannot promote health, nor ease pain; it makes no increase of merit in the person—it creates envy, it hastens misfortune.

**IMITATION CORAL.**—X. Y. Z. An ingenious person can make up, with artificial coral, a great variety of useful and ornamental articles, such as work-baskets, liqueur bottle-stands, card-racks, candle ornaments, &c., all of which have a novelty in appearance, and are at the same time very pretty. To prepare this coral, procure small branches of shrubs, peel the bark off, and dry them; they are to be dipped in melted red sealing-wax; to every quarter of a pound of which should be added, prior to the melting, one ounce of bees'-wax, which will render the mixture, when cold, less brittle than sealing-wax by itself. Twigs of the black-thorn are the best kind of wood to employ for this purpose. Small articles should be fashioned before they are dipped, but larger ones require the twigs to be dipped first. After they are finished, they should be held before a gentle fire, turning them round till they are perfectly covered and smooth.

**SEPARATION.**—P. W. S. You are not the first who has had to complain of the parting of friends as one of the calamities to which human flesh is heir; and you must be content to sit down, with the usual advice on such occasions, which is as old as the human species, and summed up in the single word—PATIENCE. From the earliest times (not to speak of lovers), even conjugal separations have taken place; and, at the present day, the lust of gold is inducing many of these, by crowding into vessels of wood, human vessels yet more frail than the timber in which they have voluntarily immured themselves, to cross the briny deep. These separations are, in general, more or less of a melancholy character; but if they are cheered by the hope of gain, then they are not felt to be half so stern, but retain a prospective halo of wealth, which seems to brighten in the mind's eye, however distant the realization may be. In contemplating farewells of this kind, our sorrow is in some measure mitigated; but how can we contemplate, with any mitigation of sorrow, or even with a dry eye, the calamitous event of

A SAILOR'S FAREWELL TO HIS "POLL!"

**COMMUNICATIONS RECEIVED.**—G. A. (get rid of your pride as fast as you can. It is a dangerous thing to carry with you into the world, when a fortune is to be made). D. L. A. (ambergria was formerly employed in medicine as a stimulant and anti-spasmodic; but its effects were imaginary. Its use is now limited to the purposes of the perfumer). M. G. (go to bed early, and you will be able to rise early. Much that has been written by eminent men has been done before breakfast. The amount of time lost in bed is seen best when put in an aggregate form; for example, the difference between rising at six and at eight in the course of forty years, supposing a person to go to bed at the same time he otherwise would do, amounts to 29,000 hours, or three years, 121 days, and 16 hours, which will afford eight hours a day for exactly ten years; being in fact the same as if ten years were added to the period of our lives, in which we might command eight hours every day for the cultivation of our minds and despatch of business). X. Y. Z. (thyme will grow anywhere, but it prefers a dry poor soil; if the ground is rich, the plant will become too luxuriant, and lose its aromatic qualities). P. R. (the natural colour of wax is the purest white, in which state, and quite odourless, the new cells of the honey-comb remain, until filled with the luscious deposit they are formed to contain. The yellow colour which the wax assumes, is therefore due to the honey; a portion of it always remains in the wax until bleached. Indeed, one of the strong characteristics of bees'-wax, with reference to any other wax, is the odour of honey which it retains in its unbleached condition). E. H. (Mr. Pius are leeked black, not thinned, for the purposes of mourn-

ing). M. A. (yew). F. R. A. ("An air of yew" was an article in the domestic economy of by-gone times. They were a kind of ear-bowls, probably made from being looser than the terrible iron-bound ones, in which no jumping could be well performed). X. M. (sweet bags for perfuming linen in drawers, and sweet pots are composed in proportions according to fancy, of dried flowers mixed with fragrant gums, woods, fruits, seeds, roots, and bark; with a few drops of different essential oils). T. M. (yes; fairs and fowls were formerly held in church-yards, in honour of the saint to whom the church was dedicated; but in consequence of their being very much abused, they were suppressed about the 13th year of the reign of Edward III). P. N. (saps, in the ancient Saxon language, signified to cut; sapper, a cutter, being our ancient name for a tailor, till we took the name *tailleur* from the French, having the same signification). G. S. (it might and it might not; but we know of one instance of a corked bottle with a letter in it having been cast into the sea at the mouth of the British Channel, and afterwards found on the shores of Barbadoes). P. D. (yes; and there are other concurring causes which tend to produce the effects alluded to; for example, the mud of large rivers extends continents at their debouches and forms deltas of low land, which, in time, unite with the main land, and form the plains. The Mississippi adds 300 feet per annum to the mainland from this cause, and the Nile has advanced the land sixteen feet a year since the time of Herodotus, and raises the surface four inches in a century). N. A. (just so; although the invention of printing has been followed by the rapid and general dispersion of the cheap daily newspaper, and the religious tract and magazine, yet these have not been permitted to supersede the instrumentality of oral teaching, or the powerful sympathy and excitement created by congregated numbers). A. B. C. (we are not admirers of the habit of punning. We have even heard of a person ridiculous enough to propose commencing a lecture on the Father of all our Poets with the following upon his name—"Ladies and Gentlemen,—Craw Six!" P. D. (read Sir Francis Palgrave's "History of England during the Anglo-Saxon period"). T. B. C. (in our next). C. M. T. (thanks for your kindness and good wishes. The promised narrative will be acceptable). G. X. X. (yes; Punch is not only universal, but of very remote and indisputable antiquity. He is to be found in so many countries, and at such distant periods of time, that it is impossible to say when or where he had his origin. He is as popular in Egypt, Syria, and Turkey, as ever he was in London or Naples. Some living traces of him have been found in Nubia, and in other countries far above the cataracts of the Nile, and even amongst the ancient Egyptians, types or symbols of him have been discovered amongst their hieroglyphics). A. G. S. (we cannot say that it absolutely makes a man fat, but we generally associate obesity with easiness of temper, and easiness of temper with a disposition to laugh. Dryden says, "It is a good thing to laugh at any rate; and if a straw can tickle a man, it is an instrument of happiness;" and Sterne goes so far as to assert that laughter adds to our existence). D. J. (carpet knights were, in reality, an order of knights instituted in the reign of Queen Mary. Mr. Anstis is of opinion that they were a species of Knights of the Bath, without any additional title, and that "carpet knights" was not their proper name, but given them by the popular voice, from the honour being conferred on members of the clerical and other peaceable professions; both the order and the knights were the objects of contempt and ridicule by the writers of the period of its institution).

"You are women, Or, at the best, loose carpet knights," is to be found in Massinger's "Maid of Honour.") I. M. A. (we have heard that whilst Louis Philippe was in America he offered his hand to a lady of Pittsburg, whose father compelled her to reject him, on account of the future King of the French then figuring in the capacity of a schoolmaster; but we cannot vouch for its truth). MARY (if we are to believe our great dramatist, we must remember that "pity is ever nobler than revenge," and upon this principle, in your case, we would advise you to act). G. S. (the epitaph is clever, but objectionable from its immoral tendency).

# THE HOME COMPANION.

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 41.—Vol. I.

SATURDAY, OCTOBER 9, 1852.

[Price One Penny.]

"The jailor only answered the prayers of Charney, who conjured him to take up the paving stones, by these words, 'I can do nothing with it! nothing, signor count.'"

## PICCIOLA;

OR,

## THE PRISON FLOWER.

(Continued from page 628.)

The pathognomonic symptoms gave to each opposite answers, for each of the learned doctors belonged to a different system. In the dilatation of the pupil, and the purple colour of the lips, one saw certain symptoms of putrid fever; the other, those of inflammation of the viscera; and the last (for there were three), declared for apoplexy, or paralysis, from the colour of the neck and temples, the coldness of the extremities, the rigidity of the face, and asserted that the violence of the invalid must only be attributed to the congestion of cerebral congestion.

The captain, commandant of the arsenal, came twice to visit the prisoner in his chamber. The first time he inquired if there was anything he wished for. He even offered to change his apartment, if he thought the place he inhabited was at all the cause of his illness. The count only replied by a negative sign and a refusal.

The second time the commandant appeared followed by a priest. Charney being condemned by the physicians, it was the duty of his office to prepare the prisoner to receive the assistance of religion.

If there is in the priesthood an august and sacred function, it is that of the priest of the prisons,—of that priest, the single spectator whose presence sanctifies the scaffold. And yet the scepticism of our age has not hesitated to ridicule it bitterly. It is argued that such priests, being hardened by habit, cannot be moved—cannot weep with the guilty, and in their exhortations and consolations constantly returning to the same thoughts, with them the trade freezes all inspiration.

Well! and what matter if the phrases be the same? Is it the same man who hears them twice? A trade, do you say? But do they delight in the trade they have chosen? They, pure and virtuous, live in the midst of hardened hearts, that perhaps will answer their words of peace, hope, and brotherly love, by words of insult and contempt! They might, like you, enjoy the pleasures and luxuries of the world, yet they bring themselves in contact with rage, and breathe the damp, infectious air of dungeons; like you born with sensibilities, and the horror of blood and death which belongs to human nature, they have voluntarily condemned themselves to see a hundred times in their lives the bloody knife of the guillotine rise and fall. Are these, then, such very great pleasures? And is injury to be apprehended from such men?

Instead of that man of sorrow, devoted beforehand, and for ever to such painful offices—instead of that man, who, from virtue, has made himself the companion of the executioner, let us have a new priest for every new criminal.

You doubtless he will be overcome and distressed—will wean more but

he will console him. His words, if he finds them, will be interrupted with sobs. Will he then be master of himself and his ideas? Will not the deeply-felt emotion render him incapable of performing his duty? and will the sight of his weakness lead the sufferer courageously to give his life for society, in expiation of his crime, to redeem it by his own blood?

If the constancy and firmness of the new consoler are such that, from the first, he experienced neither this emotion nor this weakness, believe it, he is a hundred times more insensible by nature than the other by habit.

Then, would you abolish this office of priests of the prison? Ah! take not away this friend from those who are going to die! While mounting the scaffold, let the guilty repentant one have a cross before his eyes, to steady the axe; or at least let his last look perceive, near the representative of man's justice, him who proclaims God's clemency!

Thanks to Heaven, the priest, truly worthy of that title, who was called to the bed of Charney, had not such painful duties to fulfil. An indulgent and charitable man, he not only comprehended, from the silence and motionlessness of the sick man, but better still from the melancholy inscriptions he read on the wall, how little he must hope from that proud wind.

He contented himself with passing the night in prayer at his pillow; nor did he disdain to interrupt his pious office, by sharing with Ludovico the cares which the latter lavished on the sufferer, whilst waiting with resignation a favourable moment when he might enlighten the deep darkness of incredulity with a ray of hope.

During this night, the decisive night, the blood rushing with violence to the patient's head, brought on an affection of the brain, a delirium, which, lasting more than an hour, obliged the confessor and jailor to upbraid their efforts to prevent the patient from leaving his bed. And whilst he was struggling in their arms, in the midst of a multitude of incoherent words, speeches without meaning, and fantastic apostrophes, the words *Picciola*, *piccola Picciola!* several times escaped Charney.

"Let us go! let us go! the moment is come!" murmured Ludovico. "Yes, it is come!" repeated he with impatience; "but how here the chaplain here to struggle alone with this madman? And yet in an hour, perhaps, it will be too late, Cordioli! Ah! holy Virgin! I think he is getting calmer—he closes his eyes, he stretches out his arms as if to sleep! If at any return he is not dead—hurra! hurra! hurra!"

In fact, the violence of the invalid was lessened; Ludovico changed the priest to watch over him, and immediately disappeared from the chamber.

In that chamber, scarcely lighted by the feeble flame of a burning lamp, no other noise was heard than the irregular respiration of the dying man, the monotonous prayer of the priest, and the wind of the Alps, which sighed between the bars of the window. Twice only the sound of a human voice was heard to mix with it. It was the *galotte* of the sentinel, when Ludovico passed and repassed near the prison, going to his own apartment, and returning to the chamber of the invalid.

Half an hour had scarcely elapsed, when his pious companion, in watching saw him reappear, holding in his hand a vessel full of a sparkling liquor.

"Holy Virgin! I was ready to kill my dog!" said he, in an ecstatic tone. He began to howl: it is a bad sign. But how goes it on here? Has there been any more raving? At any rate, here is what will keep him quiet. I am going to taste it. It is as bitter as five hundred thousand deaths! Your pardon, father—taste it yourself!"

The priest gently rejected the cup. "Indeed it is not for us; a pint of muscadell, with thick slices of lemon, would serve better to sustain us during the cold night. Is it not true, signor chaplain? But here, this is for him—for him alone. He must drink it—he must drink it all—it is the prescription!"

And, while speaking thus, he poured a part of the liquid into a cup, moved it about, blew it to cool it; and when he thought the potion at the proper heat, he made Charney take it almost by force, whilst the priest sustained his head. Then wrapping him well up in the sheets and coverings,

"We will see the effect," said he; "it cannot be long. Indeed I shall not stir from here till the affair is over; all my birds are in their cages, they will not fly away, and my wife will do very well without me for a night. Are not you of my opinion, signor chaplain? I beg pardon—father," repeated he, perceiving an almost imperceptible gesture of reproof from his discreet companion.

And Ludovico went and placed himself near the bed, standing motionless, with his eyes fixed on the countenance of the dying man, holding his breath, and keeping silence, as in expectation of an approaching event.

Seeing that no change yet took place, he repeated his dose, recommenced his silent care, and at length became uneasy at perceiving no alteration in the state of the invalid. He feared lest his impatience might have hastened his death. He walked with long strides up and down the chamber, stamping, cracking his fingers, and menacing with gestures the jug that contained the rest of the liquor.

In the midst of all this action, he stopped an instant to contemplate the pale, motionless countenance of Charney.

"I have killed him!" cried he, uttering a terrible oath. The chaplain raised his head. Ludovico paid no attention to him, and began again to walk, stamp, swear, and crack his fingers. At length, fatigued with these gestures of emotion, he went and knelt down by the priest, muttering *Ave Maria*, and went to sleep in the midst of a prayer.

As early dawn he was still sleeping, and the chaplain still praying, when a burning hand was laid on the head of Ludovico, who awoke with a start.

"Drink!" said the voice. "At the sound of that voice, which he thought he should never hear again, Ludovico, opening his eyes wide, and with a stupefied air looked at Charney, whose features appeared under a bath of perspiration. His limbs were

stretched out, and a cloud of vapour came from his damp forehead. Rather a salutary crisis had just taken place, and Charney, aiding the vigorous constitution of the prisoner, triumphed over the disease, or the dose of liquor administered by Ludovico was gifted with great sudorific properties: this profuse perspiration seemed at once to have restored the invalid to life and reason. He himself directed what appeared likely to relieve him. Then turning to the priest, who was humbly standing at his pillow—

"I am not dead yet, sir," said he to him, "you see. If I recover,—and I hope I shall recover,—I pray you say from me to my two doctors, that it is not they whom I have to thank for it, and that they must hold me free from their visits and their science, foolish and deceitful like all others. I comprehended their discourse sufficiently to be convinced that a fortunate chance has alone come to my aid."

"Chance," murmured the chaplain, his eyes fixed on that inscription on the wall:

*Chance is blind, and it alone is the father of Creation.*

Then solemnly articulating the last word which Charney himself had added—"Perhaps!"—he turned, and left the room.

## CHAPTER VII.

QUITE intoxicated with success, Ludovico appeared plunged in a state of ecstatic stupor on hearing the count speak thus; not that he paid the least attention to the sense of the words; he did not care for them! But his dying patient had uttered them, collected his ideas, looked, lived, perspired! This was what overcame him with emotion, and filled him with satisfaction and pride. After some moments of admiring silence,

"Hurra!" cried he at last; "Hurra! what a wonder! He is saved!—Thanks to whom?"

And he shook his air the empty earthen pot, and kissed it, and addressed it with the sweetest words in his vocabulary.

"Thanks to whom?" repeated the prisoner; "thanks to your good cares, perhaps, my good Ludovico. But if I am really cured, those gentlemen, the physicians, will not the less attribute the honour of it to their prescription, and the chaplain to his prayers."

"Neither they nor I shall have the glory of it!" replied Ludovico, gesticulating again. "As to the chaplain, one does not know, he could only do well. But the others!—the others!"

"Who is then this saviour—this unknown protector?" said Charney, with a sort of indifference, for he expected Ludovico would attribute his cure to some saint.

"It is not a protector," said he; "it is a protectress."

"How? What do you mean to say? A Madonna, is it not?"

"No, it is not a Madonna, signor count. She who has saved you from death, and from the claws of the devil, certainly, for you would die without confession, is, first and before all, the signora Picciola!—Picciolina!—Picciolina!—my god-daughter,—yes, my god-daughter, since it was I who first gave her her name—her name of Picciola. Did you not tell me so? She is then my god-daughter—I am her god-father—and I am proud of it, *per Bacco!*"

"Picciola!" cried the count, rising suddenly, and leaning his elbow on his pillow, his reanimated features assuming an expression of the liveliest interest. "Explain yourself, my good Ludovico! explain yourself!"

"Are you astonished at it?" replied he, with his usual wink. "Is this, then, the first time she has rendered you this service? When you are attacked by that illness to which you are subject, is it not always with this plant that you are cured? You told me so at least, and I recollected it, thank God! It appears that Picciola knows more of it in one of her leaves, than all the square-caps of Montpellier and Paris put together. Yes, upon my word! my little god-daughter, in this affair, would have defied a complete regiment of physicians, were it of four battalions, and each battalion of four hundred men. As a proof, how your three ignoramus ran away, beating a retreat, and throwing the bed-clothes over your nose! Instead of which, Picciola!—ah! the brave little plant! May God preserve the seed of it!—As for me, I shall not forget the recipe, and if ever my little Antonio falls ill, I will make him drink it in broth, and eat it in salad, though it be bitter than chicory. She had only to show herself, and the victory was decided. Since you are cured,—yes, really cured, for now you open your eyes wide,—you laugh! Ah! long live the most illustrious signora Picciola!"

Charney took pleasure in the noisy and loquacious joy of his worthy keeper; his return to life, the idea of owing it to that very plant that had already charmed his long hours of captivity, inspired a lively sentiment of happiness; and a smile, in fact, showed itself on his yet furrowed lips, when suddenly a painful, distressing idea crossed his mind.

"But tell me—this plant," said he to Ludovico, "how has it contributed to my cure? How have you employed it?"

And a kind of terror agitated him while asking the question.

"Nothing more simple," replied the jailor, tranquilly; "a pint of water, on a good fire, three boils—a perfect potion: that is all."

"Great God!" cried Charney, falling back on his pillow, and putting his hand to his head, "you have destroyed it! Ah! I have no resources to make you, Ludovico. And yet my poor Picciola! What shall I do? What will become of me without her?"

"Come, come, signor count!" said Ludovico, drawing nearer, and his voice assuming an almost paternal tone, to console the captive, who was overwhelmed with grief, like a child who has just lost his favourite plaything. "Calm yourself, and do not worry yourself, as you are doing. Listen to

me," added he, occupying himself all the time in readjusting the clothes, and ransacking the pocket of the bed, caused by the sudden movements of the patient. "I ought to have hesitated sacrificing a gillflower to save a man's life! Certainly not. Well, nevertheless, I could scarcely have decided on killing at the first blow, and putting it whole into the pot. Besides, it was useless. I have only borrowed a little oil. With my wife's scissors I cut a handful of the useless leaves, and a few little branches without buds, for it has three buds now!—oh! it is not that fine! The operation is well done, and it has not died of it. On the contrary, it is much better now, and you also! You see you must be good!—Be good, perspire well, finish your cure, and you shall see it again!"

Charney turned upon him a look of gratitude, and held out his hand. This time Ludovico held out his, and pressed that of the count with emotion, for his eye was moist. But suddenly, reproaching himself doubtless for this infraction of the invariable rule of conduct that he had laid down beforehand, the muscles of his face lengthened, his voice became rougher; at length, still keeping the prisoner's hand between his, but as if he tried to make him ascribe the change to his former movement,

"You see now, how you are still uncovering yourself!" said he; and he gently, and like a doctor, replaced the arm of the sick man in bed; then, after new recommendations, made in an official tone, he left the room, humming gravely,

"Je suis géolier,  
C'est mon métier;  
Mieux vaut ça qu'être prisonnier."

### CHAPTER VIII.

THAT day, and the day following, extreme debility, the natural consequence of the great crisis and profuse perspiration, rendered Charney almost incapable of moving or thinking; but on the third day, a sensible improvement was visible; and if, from his weakness, he was still obliged to keep his bed, at least he looked forward, at no very remote period, to the moment when he should be able to rise, to walk, resume his usual exercise, and again see his companion and preserver.

For all his thoughts were directed towards it. He could not understand by what singular circumstances this weak plant, thrown under his feet in the court of his prison, had cured him of his disgust and weariness of life, which the attractions of society and fortune had been unable to remove; now it had snatched him from death—him, whom human science had condemned. In his inability to apply the strength of his reason to clear this mysterious point, he attached himself more and more to his Picciola with a sort of superstition. His gratitude to this inert, insensible being, could not be based on anything of reflection and intention; he, however, experienced a wish to give it his affection, in exchange for the favours he had received from it. Where reason cannot, imagination will work. His was excited, and his love for Picciola became a blind worship. He was persuaded that a supernatural chain linked them with one another; that there existed thus, in matter, secret attractions, incomprehensible sympathies, connecting the man to the plant. He who still refused to acknowledge a God, was in danger of yielding his faith to the puerilities of judicial astrology. Picciola was then his star, his Madonna, his talisman!

How is it we see men, illustrious from their learning or genius, deny a Providence, and be at the same time influenced by superstition? Is it not that, blinded by human pride, they would attribute to themselves all their glory or their strength; but that the instinctive religious sentiment which they stifle in their hearts, being turned aside from its right path, breaks forth in spite of them, but still stamped with the fantastic image of their own thoughts? That homage which they arrest in its flight towards heaven falls again to the earth. They aspire to judge, not to believe; and their genius, narrow in its grandeur, contracting the horizon before them, only permits them to seize some of the combinations of the Great Whole. They neglect the whole for the detail, because this isolated detail they believe themselves able to measure, and submit to the analysis of their reason, not perceiving the points of union which connect it with the rest of the created world: for is not creation, heaven, earth, man, the stars, the whole universe, a single being, immense, complete, varied to infinity, which lives and breathes under the powerful hand of God?

Thus it was that Charney, his imagination perhaps still excited by fever, saw only Picciola in all nature; and, to find analogies for it, he awakened his powerful memory, and asked of it the history of miraculous plants, from the moxy of Homer, the palm-tree of Latona, the ash of Odin, to the plant of gold which shines before the Breton peasant, or the thorn-flower which preserves the shepherds of La Brie from evil thoughts. He recalled the Ruminal tree of the Romans, the Testates of the Celts, adored under the form of an oak; the vervain of the Gauls, the lotus of the Greeks, the beans of the Pythagoreans, the mandrake of the Hebrew priests. He brought to mind the blue campane of the Persians, which grows for them only in Paradise; the white tree, holding the celestial throne of Mahomet; the magnificent amaranth, the vibrant amrita, from which the Indians see suspended fruits of immortality and wisdom. He attached also a symbolical sense to that Japanese flower of blazon, as a pedestal to their divinities, heliotropes, or water-lilies, and making love rise from the bosom of a flower. He supposed that the flowers of the Happiness, who forbids attempts on the existence of others, plants, and even protect them from mutilation. What formerly might have excited ridicule and contempt, and sunk weak human nature in his opinion, now raised it in his eyes. For he knew what grave teachings

may come from a stalk, or a branch; and in the customs of industry he saw only the sentiments of gratitude which gave them birth.

He heard Charney's confidence and enthusiasm, from the warmth of his western throat, recollecting the holy consecration of flowers to his people. He could even enter into the lively tenderness that Xerxes, according to the account of Elian and Herodotus, felt for a plant; embracing it, pressing it in his arms, sleeping with delight under its shade, decorating it with garlands and necklaces of gold, and overwhelmed with gifts which he believed to dull it.

Already convalescent, Charney was one morning sitting absorbed in these thoughts in his room, the threshold of which he had not yet crossed since his illness, when, his door suddenly opening, Ludovico, with a pale countenance, rushed towards him:

"It is in flower! Picciola! Picciolotta, my dear little daughter!"

"In flower!" cried Charney; "I will see it!"

In vain the good jailor remonstrated on the imprudence there might be in going out so soon; that he should have patience for a day or two; that the morning was not yet sufficiently advanced; that the air was not yet so pure; that a relapse was often fatal;—all was useless. The only thing he could do was, that the prisoner would wait an hour longer, that the sun might be at its power.

"It is in flower!" said Charney to himself.

That hour, how long it seemed! and yet he occupied himself as well as he could. For the first time since his captivity he thought of his toilette. Of his toilette, his dress in honour of Picciola! of Picciola in flower! His clothes were dusty, his beard was long. He arranged it all. A mirror, until that moment forgotten in his precious box, was brought forth, and he carefully shaved himself,—shaved himself to see it in flower! It was his first coming forth after his illness—the visit of the invalid to his physician, of the lover to his mistress! And when all was done, his eyes rested on the glass, and he was astonished to find, notwithstanding his recent illness, his countenance less faded, his features less sunk, his forehead less wrinkled, than formerly. He remembered that he was still young; that if there are bitter corroding thoughts, which even wither the external form, there are others gifted with the power of reviving it.

At the precise moment Ludovico presented himself. He supported the count while descending the steep steps of the massive winding stairs; and when he entered the little court, either from the effect of the pure air and light of heaven, or the privilege of those new and lively faculties with which convalescents are endowed, it seemed to him that the perfume of his flower was redolent in all around; and it was to it he attributed the delightful refreshing impressions of returning health that he experienced.

This time Picciola showed herself in all the radiance of her beauty. She displayed to his eyes her brilliant coloured corolla; white, purple, and rose mingled on her large petals, edged with little silver streaks, amongst which the rays of the sun were reflected, and spread around a radiance like a luminous halo. Charney contemplated it with transport; he feared lest he should dull it with his breath, or wither it by laying his hand on it. He no longer thought of analyzing or studying; he admired it, he enjoyed it by sight and smell. But soon another idea banished these pleasures, and his eye no longer rested on the flower. He saw traces of mutilation on his Picciola; shortened branches, leaves half cut by the scissors. The wounds were not yet closed. He then remembered he owed his life to it; and, in the memory of the benefits he had received, he forgot its splendour and its perfume!

### CHAPTER IX.

By order of the physician, the convalescent had the right the following days of enjoying a walk in his court at whatever hours he liked, and even prolonging it when he wished. He was now enabled to resume with ardour the studies he had commenced.

With the intention of recording in writing the observations that he had made on his plant from the first day to the present moment, he endeavoured to persuade Ludovico to procure him ink, pens, and paper. He expected at first to see him knit his brows, assume his air of importance, that he might be longer importuned, and yield at length, either from the interest he took in the invalid and his god-daughter, or by the hope of gain;—for now it was a question of purchase.

But there was none of this; Ludovico received his proposition at first gaily.

"What then! signor count, nothing is more easy," said he, gently puffing his pipe with his thumb, and turning aside to take several puffs to prevent its being extinguished; for he always left off smoking before Charney, who disliked the smell of tobacco. "I am far from opposing it. But all these little things are among those that lie under the key of the governor, and not under mine. If you wish to write anything, address him as soon as possible a fine petition on the subject, and that will do."

Charney smiled, and was not discouraged.

"But to write this petition, my dear Ludovico, I must first have what I ask for—pens, ink, and paper!"

"That is quite right, signor count, quite right; I have pulled the ear of the jail to make him go the faster," replied the jailor. "This is what is usually done in case of a petition," added he, with a knowing air, and on one side, and his arms crossed behind his back. "I will go to the governor, and tell him you wish to address some demand to him, without explaining what; that does not regard me—that regards him, and regards you. If he cannot come and talk to you himself, he sends a man. This man will bring you a pen, and paper stamped and marked with a blue sheet."

You write on it while he is present; he seals it before you; you return him the pen, he carries away the letter, and all is done."

"But, Ludovico, it is not from the governor I want to get all this, but from you."

"From me! You do not know my orders," said the jailor, suddenly returning his cold, harsh air.

He drew a long breath at his pipe, blew it out slowly, as if to keep the count at a distance, made half a turn to the right, and went away. And the next day, when Charney returned to the charge, he contented himself with winking his eye and shaking his head.

Too proud to humble himself before the governor, but too desirous of accomplishing his project to abandon it so quickly, with a toothpick, and using a razor for a penknife, the prisoner had soon made a pen; soot mixed with water, and a gilded bottle from his dressing-case, served him for ink and inkstand; and fine white cambric handkerchiefs, remains of his past splendour, did instead of paper. Thus Charney, separated from Picciola, could still occupy himself with her, by writing the result of his observations.

What delightful, surprising ones he made! What pleasure he would have felt in communicating them to an ear capable of understanding them! His neighbour the *fly-catcher* seemed to him worthy of receiving his confidence; that countenance which he had at first thought so sullen and forbidding, he had since seen lighted up with kindness, and even sparkle with that sort of brightness that a quick intellect gives. When, from his little window, the old man cast upon him and Picciola's half curious, half-thoughtful eye, Charney felt attracted by that look. A gesture of the hand, a smile even, had been exchanged between them; but the rules of the prison prevented their addressing any words to each other, even to inquire after their health, and the great explorer of the wonders of nature was obliged to confine his precious discoveries to himself alone.

In the number of these we must mention the singular property which he discovered in his flower, of turning towards the sun, and facing it during the whole of its course, the better to absorb its rays; and when he hid himself behind the clouds, and rain threatened, it immediately sheltered itself under its folded petals, as a vessel furls its sails before a storm.

"Is heat, then, so necessary to it?" thought Charney; "and why—why also does it seem to fear the slightest shower, which would only cool it? Oh! I have confidence in it now—it will explain this to me!"

Picciola had already been to him a benevolent apothecary; it could at need serve him for a compass and barometer, it was now going to serve for a clock.

From observing its perfume, he thought he remarked that it varied towards certain periods of the day. At first he imagined this phenomenon an illusion of his senses; but repeated experiments showed him its reality, and he became at last able to determine with accuracy the hour of the day from the odour of his plant.

The flowers were multiplied, and towards evening, above all, Picciola spread its sweetest odours. Then, how did the happy captive love to approach it! By means of some planks, supplied by the munificence of Ludovico, he had constructed a little bench, supported by four strong sticks, pointed at the ends, and driven into the interstices of the pavement. A rough back lent him its support when he wished to think and forget himself, by living in the atmosphere of his plant. There he felt more at his ease than he had ever felt on rich sofas of silk, and sometimes passed whole hours there in meditation while enjoying the perfume; recalling the days of his youth, which had passed away without pleasures, without affections, lost in the midst of vain chimeras, in a premature disenchantment.

It often happened that, in the course of these examinations of the past, he fell into deep reveries, participating at once of sleeping and waking; and whilst his bodily powers appeared suspended, his over-excited imagination peopled the court of his prison with lovely exquisite visions.

He was again at those fêtes where so lately ennui had pursued him; where he lavished on all pleasures and happiness, in which he alone could not partake.

He saw, in a winter's evening, the front of his splendid hotel, in the Rue de Verneuil, spontaneously illuminated. The noise of a thousand carriages sounded in his ears; by the light of torches they entered his circular court, and each of them deposited by turns on the steps of his portico, covered with carpets and adorned with hangings, the "Exquisite," wrapped in thick furs from under which glanced rich silks; the "Inconceivables," with pointed hat, high cravat, and nether garments adorned with bunches of ribands at the knees; celebrated artists, with bare necks and short hair, a costume semi-Greek, semi-French; generals, plumed and girdled with the tri-colour; men of science, and men of letters, with or without green collars; crowds of footmen were everywhere seen, heedless, under their new liveries, of the decrees of the Conventional republic, now gone out of fashion.

In his saloons he found, pell-mell, mixed together, all the nationalities of the epoch. The toga and the chlamys brushed against the frock coat and military cloak; pumps with rosettes, and boots laced or spurred, glided over the same floor with the sandal and the buskin. Men of law and men of the pen, men of the sword and men of money, ministers and contractors, artists and governors, whirled side by side in this olla podrida of the Directory. There an actor stood by a member of the old clergy; a descendant noble by a descendant pauper; aristocracy and democracy there joined hands; riches and science walked arm-in-arm. It was society in regeneration, falling in its different parties, each of which felt too weak to make a

circle of its own, around a common centre. Separation was deferred to a future period. This children of different nations met, when age or the desire of pleasure assemble together; as they grow up they gradually separate from their playfellows, unknowingly led away by the powerful attraction of the system of social order.

Charney smiled while contemplating this medley of manners, states, and customs. What had formerly been to him the odious source of bitter, contemptuous thoughts of the whole human race, now only raised in his bosom a slight feeling of ridicule at those years of follies and vain attempts.

Suddenly brilliant orchestras burst forth, in lively, varied, and animated measures. Charney recognized the airs which he had formerly heard, but the impressions he received were much more vivid to his senses. The sparkling light of the lustres, their many-coloured reflections in the mirrors and glasses, the warm and scented air of a ball and festival room, the noisy gaiety of the guests, the troops of waltzers who touched him while passing, the light and frivolous conversation which was increasing and buzzing around him, the resounding laughter—all gave him a sensation of inexpressible joy which he had never known before.

Then the women, with their elegant, graceful forms, with white shoulders and swanlike necks, dresses in rich tissues, and gauzes striped with gold and sparkling with jewels, appeared before him. He recognized them. They were the usual guests and ornaments of his splendid soirées, when, rich and free, they cited him as one of the fortunate of the earth. There, the proud Tallien, dressed à-la-Grecque, and wearing jewels and rich rings, even on the toes of her beautiful naked feet, scarcely imprisoned in light golden sandals, —the charming Recamier, whom Athens would have deified, and the gentle, touching, Josephine, formerly countess of Beauharnais, who, from her grace, often passed for the most beautiful of the three, shone unrivalled. Near them were others, who, even in their presence dazzled by their beauty, coquetry, and dress! How young and pretty Charney thought them now! How much more attraction and sweetness did they now appear to possess than formerly! How happy would he have felt to have been allowed to make his choice among so many brilliant women.

He endeavoured to do so, and often wandering undecided from one to the other, he suddenly fixed on one whom he distinguished in the midst of the crowd; but his attention was not attracted by uncovered shoulders, diamonds, or ornaments.

He was struck by the simplicity of her air and costume, as she timidly cast down her head, as if fearing to be seen; yet she also was beautiful! It was a young girl, clothed in white, having no ornament save the grace of innocence, and the blush that tinged her cheeks. Charney had never seen her before, and in proportion as he fixed his regards on her, the others seemed to fade and disappear. She was soon the only one; he could examine her at his leisure; and his emotion increased while beholding her: but how was it redoubled, when he remarked in her black hair a flower! That flower, it was one from his plant! the flower of his prison! He extended his arms towards the young girl, and wished to advance; but suddenly all grew indistinct to his view, all was agitated around him; a last time the orchestra of the ball was heard with redoubled force—then the young girl and the flower seemed to lose themselves in one another, the spreading leaves, the open scented petals were multiplied around the lovely face, and soon hid it entirely. The walls of the saloon, despoiled of their hangings, were already dark, and presented nothing to his view but a kind of indistinct vapour. The lustre, gradually extinguishing, was detached from the ceiling, and suddenly described an arch of light, which gilded the lower extremity of the cloud as it faded away from the sight. Heavy pavement replaced the shining echoing floor. It was cold reason returning in the midst of delirium; it was remembrance destroying illusion, truth dissipating the dream.

The prisoner opened his eyes. He was on his bench, his feet on the pavement of the yard, his flower before him, and the sun setting in the horizon.

When first he found himself attacked by this species of vertigo, he was struck with astonishment on thinking that it was always when seated on his rustic bench, near his plant, that these sweet dreams visited him. Nothing, however, was more natural than the effects he had experienced. He himself explained them, on recollecting that the sweet gaseous emanations from flowers may sometimes cause a slight and pleasing asphyxia. Then, with wonder, he contemplated all the relations existing between him and his plant, the almost magic influence it exercised over him; and those brilliant fets in which he had just taken a part, it was Picciola who gave them.

But that modest simple young girl, whose unexpected appearance threw him into an agitation so strange, yet so delightful, who was she? Had he seen her before? and, like those other fair ones, was she but a remembrance of times gone by? His memory, however, could recall nothing like her. If she were, on the contrary, a revelation of the future!—but had he a future, and ought he to believe in revelations? No! the young girl in the white robe, with the modest blush—that being, at once so simple and so attractive, who dimmed and eclipsed her brilliant rivals, it was Picciola! Picciola personified and poetised in a dream! Well, it is she whom he ought to love, it is she whom he will love! He can easily recall her graceful figure, and the ingenious features with which she was invested: it is her worth with this sweet image that he will rouse his reveries, that he will fill the void of his heart and mind. She, at least, can understand him, answer him, come and sit near him, walk by him, follow him, smile on him, love him! She will live in his life, in his breath, in his love! he will speak to her in his thoughts, and will close his eyes to see her. They shall be but one, and he will be two!

The flower has marked the same properties in the *Antirrhinum repens* (springing from a stone).—FLORA RATAEYRICA.

## CAROLINE AND CATHARINA.

(Continued from page 334.)

It was not, however, in his ardent nature to despair, and it was almost wholly because of the hope which he still cherished, that he had taken service in the Mexican army. Three years had rolled away without bringing him any nearer the goal of his hopes. Lapse of time and the constant brooding over one purpose, had deepened and intensified his passion. He had ceased to think of returning to his own country without her, and he only cared for the country of his adoption because it was hers. There were depths in his apparently careless and easy nature which scarcely sounded himself; and had it not been from his innate nobility of soul, no means, however violent, would have appeared to him unwarrantable, if they but brought him nearer his object. Obstacles to him there were none, even as it was; and his buoyant, hopeful spirit corrected the tendency to gloom. When he spurred his horse away from Hugh, notwithstanding the restraint he had put upon his feelings, his thoughts were far from amiable. But a few moments reflection satisfied him of the folly of such feelings; and as the head of the detachment reached the little grove within which lay the *Tanca*, he cheerfully, as usual, busied himself with his dispositions for the night.

If ever place deserved the name of oasis, it was this. Surrounded and shaded by large trees, its margin skirted by the luxuriant growth of all moist spots in that clime, and standing midway across a long, hot journey, its still crystal waters were surrounded by a pleasant atmosphere, which the traveller long remembered, when winding his way amid burning sands and stifling sun-rays. It lay like a well beneath the surface of the ground, and the shadows of the trees added depth to its sides. Not a breath ruffled its limpid surface; and far down in its waters were reflected the trees and the stars, as full of repose and beauty as in their own firmament. A young moon was near the horizon, and by its slanting rays, faint and dim, could be seen the level plain waving away, unbroken by hill or tree, until lost in the deep shadows of the mountain. The solitude was made more impressive by the perfect calmness of the winds; not a sigh was heard upon the wide plain. The moon, too, hung upon the horizon in a lonely, weird way, and the enchantment which always attends her setting, was redoubled by the giant forms, among which she seemed to be going to repose.

As the little column rode up to the tank, each lancer left his ranks, and unstringing his gourd from his saddle bow, replenished it before he led his horse to the water. Every steed was then carefully attended to, and piquetted upon the grass, which grew luxuriantly for several rods around. A light supper, brought by the detachment from Minon's corps, was next despatched almost in silence, and each weary trooper wrapped his blanket round him, and threw himself upon the ground beside his horse's *lariat*.

Leaving his lieutenant to post guards in several directions on the plain, the colonel wrapped his blanket round his form, and approached his prisoner, who was still in charge of his guard.

"If you will give me your parole, senior," he commenced, "not to attempt to escape before morning, I will dismiss these weary men to sleep."

"You have it," said Hugh without hesitation. "I am too much fatigued to ride further if I had a horse, and I will not deprive you of yours again."

"Leave this gentleman with me, my men," said the colonel, "and make yourselves as comfortable as possible. Now," he added to Hugh, when his men gladly availed themselves of his permission, "if you will walk with me, our tent for the night shall be the same."

Hugh took his *serape*, without which no man travels in Mexico, and followed him to the foot of a large elm, which towered above all its companions.

"There is no dew at this season," said Melton, "and if there were, this tree would protect us. By lying close together, we will be able to resist whatever cold the night may bring; our blankets are large enough to cover two at least."

Hugh looked at him doubtfully, but Melton continued—

"You must not suppose I distrust you, and take this plan of watching you; I mean no more than I say."

"It was not that," said Hugh, "but I was surprised that you should be willing to lie beside one whom you look upon as a rival."

"How know you I view you thus?" asked the other sharply.

"If I am mistaken you can undeceive me," Hugh quietly rejoined.

"So I could, if you were," said the other; "but we will not speak of that now. To-morrow we will be upon more fitting ground."

"Whither are we bound, then?" asked Manning.

"To Rinconada, first," answered Melton, "and afterwards to Monterey, if possible."

"If we go to Monterey," said Hugh smiling, "our positions may be reversed."

"That is as Providence shall direct," said the other, carelessly. "And now let us try to catch a little rest, for we must be in the saddle early. But first let me examine your shoulder."

A light was brought and the wound found to be doing well. Indeed, it had not been severe at first, the ball only cutting the fleshy part of the shoulder, and drawing but little blood.

"By the bye," said Melton, when he had with his own hand re-arranged the bandages, "I have several times thought of asking your name, but it has hitherto slipped my memory."

"It is Manning," said Hugh.

"Manning?" repeated Melton; "Catharina Manning—would not that sound well?"

"What think you of Catharina, Melton?" said Hugh, smiling but solemnly. "Neither one would please us both, I fear," said the other. "But this is not a fit subject for jest—let us lie down."

The men were already slumbering with their heads near the pleasant shade of their *lariats*, and no sound broke the silence, except the horses cropping the grass, or the breathing of some heavy sleeper. The moon had gone down behind the mountain; and though in that quarter the craggy outline of the *sierra* was more distinctly visible, relieved against the sky, no ray of her light could reach the plain. Dusky shadows hung upon the level surface, and seemed to fit from place to place; and to the eye of one ignorant of these plains, the darkness, as it closed around them, would have seemed a countless host surrounding them. The quiet waves which always rise before midnight on the plains, began to rustle, faint and low, among the leaves—and distant, wailing voices seemed to come from towards the hills and mingled with the ghostly wind. The stars looked down solemnly over all, and the quiet waters again reflected back their gem-like rays.

The new-found rivals lay beside each other, waked by neither, but neither spoke, for each supposed the other sleeping, and breathed low and cautiously for fear of waking him. Fatigue, however, gained the victory at length, and slumber closed the eyes of each. Dreaming, perhaps, of the same hope, their repose was only broken by the long, mellow bugle-note which called them back from fairy land.

Before the dawn of morning they were again upon the plain, and ere the evening closed they were climbing up a mountain dells which led to "Rinconada."

## CHAPTER XXXII.

"Yet he was jealous, though he did not show it."—BYRON.

"For seldom yet did living creature see  
That courtesy and manhood ever disagree."—SPENSER.

"No dainty flow'rs or herbs that grows on ground,  
No arborett with painted blossoms dress'd,  
And smiling sweets, but there it might be found."—JAY.

"Many a scene that looks desert and rock-bound from the distance, will unfold itself, when visited into rare valleys."—CARLYLE.

THE plain terminated suddenly under the points of the mountain spurs. From these, by a gentle ascent, extended a rough plateau of a mile in width, and beyond, abruptly rose the craggy peaks of the *sierra*. Two of these had been crushed together at the base, as if for want of room, and the notch thus formed was used as a passage over the lofty range. From the base of each of these hills extended a separate ridge, forming part of the great plateau; and between them was a deep ravine, sloping, and widening as it approached the plain, until, at the main level, it presented an opening of two or three hundred yards in width. In the wet season this was the channel through which an immense body of water found its way to the many little rivers and *arroyos* of the plain; but it was dry, now, and its bed was covered by light, yellow sand, and fine gravel, presenting a smooth and practicable road to the summit of the pass. A turn in the ravine, some four hundred yards from its mouth, shut out the view from the plain, and the perpendicular and often overhanging sides of the way prevented any prospect in all directions, except forward—where only the broken sides and pine-covered summits of the *sierra* were visible. The hoofs of the horses made no sound in the soft sand, and the troop rode along without noise, except the jingling of sabres and spurs. Melton rode beside his prisoner in the advance, and seemed absorbed in thought. Hugh was full of his own reflections—of no pleasant sort, we may suppose, and felt little inclined to conversation. Nor were his fancies far from the truth; for at that very moment the battle, in the thickest of which he wished to be, was about drawing to a close. It was near sunset; and from the shaded bed of the *barranca* he could see the yellow sunbeams gilding the rocks above, streaming through the foliage of the pines, and enamelling the craggy summits of the *sierra*.

"If," said Melton, breaking silence at last, as they approached the more precipitous ascent, "if these mountains on our left were out of the way, we could see the fair city of Monterey, for it is scarcely four leagues from us."

"You seem to be well acquainted with the country," said Hugh. "Are we near to Rinconada?"

"It lies just beyond this ridge, scarcely two miles from us."

"And is this the only approach to it?"

"By no means; on the north the little valley in which it stands slopes gradually down towards the sources of the San Juan, and a very good road leads out upon the plain. You will soon see it, however; from the point above us yonder there is a view equal to any, except perhaps, one, in Mexico."

"Where is the exception?" asked Hugh.

"The first view of the valley of Mexico, from the Vera Cruz road."

The conversation was interrupted by the necessity of dismounting to lead their horses up the difficult pass, obstructed as it was by large stones, and cut up by the floods of the rainy season. Half an hour's cautious labour, however, surmounted the difficulty, and brought them to a small level space, from which they commanded a view which fully justified the high praise of the colonel.

A valley about two leagues in circumference set, like an emerald, in the granite mountains, lay sleeping before them; while over its repose, like sentinel watchers, stood some of the loftiest peaks of the *Sierra Madre*. From the point where they stood no outlet was visible—locked among the hills, it seemed like one of those enchanted valleys of Oriental romance, where only the presiding gnom and favoured mortals are allowed to enter.

The mountain sloped gracefully down, covered with green, luxuriant sward, or terminated suddenly in moss-hung and pine-shaded precipices; and, bounding down, between the waving ridges, glistened many a sparkling aqueduct. On the level of the valley the waters were collected in winding aqueducts, whose sides were fringed with verdure, the long blades of which were laved by the currents, as they hung gracefully over the banks. Trained all around the lake, intersecting it in every direction, all these aqueducts were at last conducted to a large canal, that flowed through the entire length of the valley and wound away to the north. About midway between the mountains a little lake was formed, and in the centre stood an island, on which were growing all the varieties of tropical trees and plants. In every direction groves and double rows were growing, of orange, fig, and plantain trees; and, dividing the grounds into small allotments, numerous hedges ran along the aqueducts or passed from one to another. Among these groves and hedges stood more than twenty ranches, each surrounded by its own little garden, and each shaded by its own grove.

On the border of the lake, and apparently almost beneath their feet, were the grounds around the residence of the proprietor. Fronting, on the margin of the lake, and covering a large space, was a house built of stone in the peculiar style of architecture common in that country. Surrounded, except in front, by a high stone wall, enclosing the court-yards, and pierced by as many wide gates, it seemed to cover quite an acre of ground. Like almost all the houses of that country, it was only one story high; but its immense extent, and the convenient arrangement of its parts, gave it an appearance of grandeur seldom attached to anything so low. Its massive materials, too, the accuracy of the mason-work, and the perfect proportion of the parts, indicated taste and skill far above that usually seen in New Leon. Wide corridors, surrounding it on every side but one, rested on square columns hewn from the native granite; and round the flat roof was built a parapet, on which were growing many flowers and creeping vines.

Around the house were laid out grounds of great extent; and every tree and shrub and flower which that genial climate produces were cast with prodigal profusion and singular elegance upon the teeming soil. Among them, towering and majestic, were also found trees of a hardier growth; and oaks and elms, and even poplars, stood at every corner, and overhung each tangled bed. Twining around the trunks of these, and covering gracefully their northern ruggedness, hung vines and parasites; or sweeping in long festoons almost to the ground, masses of gray moss bent every limb. In all directions, among these groves and flower-beds were wandering sandal walks, and along their edges small canals were led, above whose sparkling waters hung matted flowers and creeping plants. Surrounding all, and forming a rich border to this garden-piece, ran double rows of China-trees, and at their feet were planted hedges, whose many colours blended with the deep, luxuriant green above them. Upon the margin of the lake were tied several small boats, and one, covered with a green canopy, lay moored beneath the trees upon the island-shore. Over all hung the very spirit of repose; as if no blast of war had ever blown upon the scene. The shadows of the mountain stretched across the valley; but the level sunbeams were pouring in rich profusion of yellow radiance upon the opposite slopes and precipices; and reflected light hung like a golden mist above the fairy scene.

Melton and his prisoner gazed long and silently upon this mountain paradise. The sun approached the western hills and left the valley wrapped in deeper shadows; ascending the slopes and precipices of the opposite ridge, and bathing in a mellow light the crags and pines upon its summit; but still the silence was unbroken. Each felt, perhaps, that within the little vale before him, was soon to be decided the fate of a cherished hope; and each gazed with an interested eye upon every feature of the quiet landscape.

Without addressing Hugh, the colonel at last turned to his men and made a signal to remount. Beckoning Manning to his side, he rode in front as before, and led the cavalcade slowly down the easy slope, directly towards the mansion. But, when they gained the level of the valley, he turned sharply to the right, and rode along the margin of the canal beneath the cover of a row of elms. Half an hour's ride brought them to the southern end of the valley, and, without speaking, the commander halted and made a sign to his lieutenant. The latter led them on, and turning round the corner of a grove, halted and prepared to bivouac.

"My own destination for the night," said the colonel, speaking for the first time, since they reached the summit of the pass, "is the *Hacienda*; and wounded as you are, probably you had better be there also. If you will now give me your parol, I will put no restraint upon you."

"To what extent do you wish it?" asked Hugh.

"Not to leave the grounds about the house for seven days."

"With one proviso I will give it," answered Manning, "in case of rescue or retreat I shall be released."

"Very well," said Melton, "let us go at once."

Giving Sanchez directions for the night, and taking ten men with him, he turned his horse's head into a narrow avenue, and by a much shorter route than that by which they had come, led the way towards the mansion of "Rinconada." They passed by the doors of several ranches, around which reigned a tasteful elegance, but seldom found among the rancheros. Women and men, with numerous children, gazed on the rare sight, as it passed, of armed men within the peaceful valley. The cattle grazed in quiet on the sward, and numerous flocks of geese were penned within their picket pens. Sweet voices, carolling the ballads so popular in Mexico, were mingling with the rural sounds of loving herds and tinkling bells. Every few rods they met or passed some merry boy, mounted on one of the patient *burros* of the country; and once they passed a youthful mother, with flowing raven hair and jet-black eyes, playfully holding a child upon the ass's back. The child clapped its hands in glee, and the mother's eyes sparkled with joy, while the

patient animal walked docilely and steadily along, as if of itself throwing off its scarce-felt burden. The jingling of the horsemen's sabres attracted their attention, and the woman looked suddenly and timidly around, the child was silent and alarmed, and *burro* stopped instinctively aside.

"You have not been accustomed to the sight of armed men, Maria, in the valley," said Melton kindly.

"Oh! I am not afraid, now that I see you, *Señor Melton*," said the woman quickly; "though these are the first armed men I ever saw at Rinconada."

"I hope you may never see another," said the colonel; "these are times when such an apparition seldom brings good fortune."

"We are not afraid of any ill-treatment at your hands," said she with a smile, "unless you should get into a passion on hearing that *Señora Catharina* is not here."

"I know that already," said he, turning with a smile to Hugh, to see what effect this cordial recognition would have on him.

"The outworks may be taken," said the latter almost angrily, replying to the look, "and yet the citadel be never won."

"True," said the colonel, flushing scarlet, "and the citadel may be taken by force or fraud, without attending to the outworks; but such possession is apt to be of short duration."

"The parallel will not hold," said Hugh coldly; and Melton turned with a haughty look to the woman again.

"Is the *Señora Capella* here?" he asked.

"O! yes," the woman answered; "you know she never leaves the valley."

"And Miguel, where is he?"

"Yonder—he is coming."

A tall, slight man, with a rather lighter complexion than most of his countrymen, approached, and at once recognised the colonel; cordially shaking hands with him, and, after the manner of his race, making many professions of friendship, all of which Melton coolly received without reply.

"Is that your only child?" he asked pointing to the boy, who still sat silent and rebuked upon the *burro's* back.

"Si, *Señor*," said Miguel, "the only one;—I want to make a soldier of him, if the war should last."

"Will Maria consent to that?" asked Melton.

"No, indeed!" exclaimed the mother; but she stopped and hung her head as the cold, hard eye of her husband rested on her."

"Well, well," said the colonel impatiently,—for like every man of honour, he was disgusted by the sight of tyranny, "run across the enclosure, Miguel, and announce our coming, while we go round by the lake."

The obsequious Mexican sprang across a canal, and soon disappeared among the trees. Melton lingered a moment to speak a few words in a low tone to Maria; and as he rode off she gazed smilingly after him till he disappeared.

"This Miguel," said the colonel in his natural good-humoured manner, "is the steward of the estate, and like most stewards is a great knave. Maria is Catharina's foster-sister."

"That accounts for your interest in her," said Hugh, smiling.

"And would have produced the same in you, had you known it sooner," said the other.

There seemed to be in each of these men's breasts, frank and generous as they both were, an unconquerable desire to recur to one unpleasant subject at every turn; and probably nothing but their temporary relation prevented their breaking out into open hostility. It was, however, not in the nature of either of them to entertain, much less suppress, a feeling of envy or malice. Hugh was made more sullen by the misfortune of his captivity; and Melton was, perhaps, less good-natured than he would have been, had he not felt constrained to treat his prisoner with respect.

"I think," said the latter, after a pause, "that we had better avoid that subject, at least while we have no visible cause of quarrel, and speak of other things."

"With all my heart," said Hugh. "I certainly have no cause of quarrel with you now, and hope I never may have."

As he spoke, they emerged from the gathering shadows of a row of China trees, and rode up to a wide gate in the wall, which was swung open as they approached, by the officious Miguel. Melton rode without ceremony into the court-yard, and dismounting, cast the rein to one of the lanceros, and signed to Hugh to follow him. He turned to the right and entered a wide door. Here he was met by a stately woman, some forty years of age, whose hair was slightly grizzled, but whose large black eyes still sparkled with all the fire of youth. Melton took her hand, and saluted her upon both cheeks; he then introduced his prisoner as a friend of Catharina, and they both followed her erect and lofty steps into a large and richly-furnished drawing-room. There is no country in the civilized world, containing fewer of the superfluous elegancies of life than Northern Mexico; and probably, north of San Luis, not one hundred houses can be found containing such a square yard of carpeting, or a single curtained window. But *Donato's* long residence in the United States had given him a taste for these things, while his great wealth enabled him to command them even here. His house was accordingly richly carpeted in almost every room, and the halls were covered with the *carpeting* of the country. Every window was glazed and curtained, while chairs and ottomans and sofas all denoted tastes acquired in a foreign country. The room into which Melton and Hugh were shown, was carpeted with the same white and red material, which gave so inimitable an air of neatness and comfort to the cottage in the mountains; and between the windows, looking out upon the lake, hung several crucifixes and rosaries. Many paintings of Scripture subjects hung upon the walls; and an unfinished portrait of

Catharina, unmistakable in its lineaments, though roughly sketched, sat on a table in the corner. The ceiling was painted, though not skilfully, in imitation of a leafy canopy, and from the centre hung a silver chandelier. Against the side on which they entered, stood a plain guitar and a richly-mounted bandolero; and as Melton took up the former and touched it with no unskilful hand, its soft, romantic notes blended with the harmony of the closing evening and the peaceful scene.

Their hostess (the Senora Casella, for whom Melton had inquired of Marina), after a few questions about her niece, left them to order some refreshment; and the colonel took advantage of her absence to acquaint Hugh with her history. She was the only sister of Bonaro, and had been widowed many years. Her husband, a partisan chief, had fallen in one of the feuds of the centralists and federalists; and since that time she had never left the valley. Devoting herself to her brother, she had relieved him of most of the care of his household, and assisted him in the education of his daughter. She was, however, but little liked by those who knew her, probably on account of the haughtiness of her spirit, and the uncompromising hatred she bore to every one who had been connected with the party opposed to her husband's. She was, at heart, however, kind and generous, Melton said; and interested herself in the fortunes of her niece quite as warmly as she would have done in those of a daughter.

"I hope she has none of the match-maker in her composition," said Hugh, quietly.

"If you were sure of her interest in your own favour," retorted Melton, "I suspect you would not find that an objection."

"Perhaps not," said Hugh. "But let me hear more about her; we agreed not to touch this subject again."

"I was not the first to allude to it, senor," said Melton.

"I plead guilty," said Hugh, good-humouredly, "and will try to avoid offence again."

"Oh! no offence to me, if you wish to open the discussion," said Melton, haughtily.

"But I do not wish it," said Hugh, gravely; "and besides, I hope you will either release me or remember I am your prisoner."

"True—I was wrong—forgive me," said the colonel, frankly extending his hand. Hugh took it, and the blaze was smothered again.

"If there were anything more to tell," said Melton, "I would continue the story; but there is not. She remains here during Bonaro's absence, and manages the estate far better, I am told, than Bonaro himself; at any rate, I am sure that under her administration the revenues are doubled at least."

"Then her management is for the interest of the landlord and not of the tenant," said Hugh.

"For the immediate interest of the former," replied the colonel, "and for the ultimate interests of both. Absenteeism is the curse of this country, as of many others. Had each great proprietor some just and vigilant representative on his estates, who would establish and enforce a rigid but merciful system, idleness and decay, which are now ruining some of the finest estates in the world, would disappear from the land."

"But," said Hugh, "you do not attribute every evil to the one cause of absenteeism?"

"No—not at all; for in many cases the owners themselves have filled their estates in the same way. But what I mean is this—if liberal, enlightened, and just proprietors would live on their own estates—or if they were represented by men of the same character—this country would not have been so unfortunate."

"I have seen but little of the domestic peculiarities of these people," said Hugh; but what I have seen, has led me to the conclusion, that the priests have had no unimportant influence in the production of this state of things."

"You are partly right and partly wrong. The priests have accelerated the movement; but we must acquit them of the charge of having first commenced it. It is generally supposed that corruption proceeds from the higher places to the lower, but in this country it has worked upward. Many causes combined to make the Mexican populace what they are, long before the higher classes had descended from the proud distinction of the Spanish *hidalgos*. Ignorance, superstition, and licentiousness became the three leading characteristics of the people; the priests followed, as in later generations they have always followed, instead of leading, the prevailing tone of society. Vows of celibacy and poverty were never made to be kept, at any rate; and a tone of public sentiment, (if such a thing exists in Mexico,) which does not reprobate the last of these three characteristics, and smiles upon rapacity and extortion, must either ruin the priesthood by bringing it down to the general level, or get rid of it by revolution or expulsion. In this case, it brought it down to the general level; and, as human nature, leaving one extreme, seldom stops short of the opposite, the sacerdotal class in this country are, as a class, more degraded than even the tenants of the absentees, for they add to their other vices that worst of all, the vice of hypocrisy."

"You seem to have examined this subject," said Hugh. "Have you ever thought of a remedy for these social evils?"

"Yes; war, pestilence, and famine, all combined, might partially remedy it, provided the war were vigorous and unrelenting, the pestilence universal and searching, and the famine pinching, unrelieved and of long duration."

"They would produce revolution and anarchy, even in Mexico."

"And a revolution which shall overturn the government completely, tear it up by the roots and fling it to the winds—which shall mingle all the elements of society in confusion, and drench the country in blood—is the only remedy now left."

"What think you of annexation to our union, and a gradual leavening of the loaf with Anglo-Saxon blood?"

Before Melton had time to answer, the senora reappeared, and in a few

moments the hungry men were seated to a substantial repast, which they were shown their rooms, and Hugh, overcome by fatigue and weariness, at once betook himself to rest. Melton remained a few minutes in the drawing-room, and held a conversation with the senora, which, if we were to repeat it, would show that, to the *Huasteca* illustration, he had not acquired "the outworks" on this side of the citadel either—she too was captivated in his interest. We will not repeat their conversation, however; and leaving Melton to consult with her undisturbed, we must pass over the night and its events, and hasten on.

## CHAPTER XXIII.

"Absence with all its pains  
Is by this charming moment wiped away."  
"Away to heaven, respective plenty,  
And fire-eyed fury be my conduct now."  
"His soul, like bark with rudder lost,  
On passion's changeful tide was tost."

THE first care of the colonel on the morrow was to send detachments to several points, both east and west of Monterey, to ascertain the positions of the generals, with whom he was ordered to co-operate. He remained in the valley only about one hundred men, and having so disposed those as to guard against surprise, he returned to Rinconada and prepared to execute further orders. He allowed Hugh to range freely within prescribed limits; and the latter availed himself of his liberty, to explore and examine the various beauties of this enchanted vale. Frequent walks among the avenues and groves, or occasional excursions to the island in the lake, alternated with long hours of meditation under the deep green foliage of tropical trees, or among flower-beds and trellised vines. These amusements were common to both Melton and his prisoner, but they were not partaken together. Each occupied with his own thoughts and feelings, was guided by his own caprices; and if ever they met or happened to go in the same direction, their companionship was of but brief duration. They avoided each other—not, perhaps, from any feeling of actual hostility, but from a consciousness, possessed by each, that their opposite interests necessarily precluded common sympathies; or from an anticipation often reluctantly entertained by such men, that their intercourse must ultimately come to strife. We sometimes feel irresistibly impelled to quarrel with those whose friendship would be very grateful to us; and not seldom in this way worlds persons meet, between whom this feeling is mutual. So it was with Melton and Hugh—though between them there was a perceptible, if not a just ground for the anticipation.

Every attention which hospitality could suggest, was given to Hugh in an equal degree with Melton; and though he sometimes thought the senora was more stately than was necessary, and the servants rather obsequious than hearty in their attendance, on the whole, he had no reason to complain. Left entirely to his own inclinations, so long as he kept within the limits prescribed, he was well pleased to be alone. Solitude in an army is but of the question; the constant bustle, the endless routine, the never-changing faces and the monotonous uniforms, parades, guard-mountings, and drills combine to stagnate and weary at the same time. The daily feeling of every man in such circumstances, until he has become reconciled by habit, is a strong desire "to flee away and be at rest." Hugh had felt this sentiment in common with every man, who has quitted civil life for military existence; and the repose of the valley, at any time refreshing, was now almost magical. One who has spent his life in the hot precincts of a noisy city, is prepared to enjoy the stillness and peace of the country; but enjoyment is too tame a word to express the feelings of the soldier escaped from the camp.

In many of his walks, Hugh encountered Miguel, the steward, who seemed very anxious to ingratiate himself by every attention servility or sycophancy could suggest. For two or three days, indeed, it was with difficulty that he could shake him off, so determined did he seem to wait upon the prisoner's footsteps. Hugh at first thought that Melton had directed this man to watch him; but on indignantly taxing him with it, he was at once undeceived.

"A little reflection," said Melton, calmly, "will convince you that if I suspected your faith I would confine you at once, and not take all this superfluous trouble. The fact is, the fellow is a steward—and in this country that term includes every epithet which you would apply to a coward and a sycophant. It is already noised among the servants that you have some interest with the Senora Catharina; and this fellow is only attempting to provide against contingencies. Besides, he hates me; for no good reason, for he is jealous of my intercourse with his wife, whose affection he feels he is not worthy to possess, and therefore fears to lose; and he attacks himself to you because, with the instinct of all mean, suspicious natures, he divines that our interests do not accord."

After this explanation, Hugh took the first opportunity offered quietly to rid himself of his persecuting servility; and, although the fellow received Hugh's plain rebuke with the submission characteristic of his class, we shall see that the venom of his nature received and retained the poison. Hugh was troubled with his attentions no more: and sensitive and suspicious as he was made by his situation, he even thought an unfavourable change took place in the bearing of the menials of the house. It is possible that this may not have been all fancy; for it was perfectly in keeping with the character of such a man, to revenge himself in that way.

However this may have been, Hugh was now allowed to pursue his own amusements, unimpeded, for several days. As yet no tidings had been received in the valley of the result of the battle, or of any of the subsequent events; and the evening of the sixth day was closing into night, ere any

messenger arrived from Saltillo. Half an hour before dark on that day, however, while slowly rowing back towards the house, after an unusually long visit to the tangled beetles of the island, Hugh saw a man ride rapidly into the court-yard and spring from his horse. He landed, and followed him into the house whither he proceeded without addressing any one without. Here he heard the tidings which the reader has already anticipated—the death of Bonaro, and the approach of Catharina. The senora turned her eyes sternly upon Hugh as the tidings were told, and her white lips moved as if about to speak. But she remained silent; and Melton, taking Hugh's arm, led him forth upon the lake shore.

They walked some distance from the house without speaking; but each felt that the moment for explanation had come, and each was endeavouring to arrange his thoughts. Melton was, as usual, the first to speak—his was not a temper to brook delay.

"The struggle," said he, stopping short, "which each of us has anticipated on the return of the Senora Catharina, would now be unseemly and dishonourable; we have, neither of us, a right to thrust our private feelings into the sanctuary of her sorrow. Let us, therefore, now agree that so long as we may remain here, we will, neither of us, attempt anything of the sort."

"The man who is disposed to act dishonourably," said Hugh, "would not be bound by any pledge. Were either of us inclined selfishly to intrude upon the sorrows of the afflicted, the other could not honourably keep any faith with him. But, so far as I am concerned, my course must be determined by circumstances. I shall not consent to bind myself by a pledge not to do anything which my duty requires me to avoid; neither will I promise to avoid anything which circumstances, when I know them, may permit."

"What course, then, do you propose to take?" asked Melton, coldly.

"That, I repeat," replied Hugh, "must be determined by the future. If I can be of service to the Senora Catharina in any way, I shall assuredly not be reluctant or tardy in its performance. I can say no more now. If my course, when you see it, should not please you, I am your prisoner, and you can do as you think best; while, however, I am at liberty, I shall act under no restraint."

"You do not suppose me capable of using my power for such a purpose, I hope?" exclaimed the colonel.

"I do not suppose you capable of anything dishonourable, Colonel Melton," said Hugh; "but you may consider my parole withdrawn the moment you see cause to be dissatisfied with my course."

"And this is the only pledge you will give?" said the colonel.

"I can give none other," said Hugh.

"Then I suppose we need say no more on the subject?"

"I see no good end to be attained by further conversation, even if we had time, as we have not; for I think the subject of our discourse is approaching us."

Melton turned hastily round and beheld a carriage, escorted by about twenty armed men, slowly approaching them. Within, even at that distance, he could see the mourning hues worn by the inmates, and recognize one of them as Catharina. The two men turned and entered the house to avoid even the appearance of intrusion; and soon afterwards the bustle and voices in the hall announced that the bereaved was again at home—a home left a few short months ago in company with him who was now no more, and seen again under auspices of sorrow and change but seldom known!

Darkness had closed in ere our friends were summoned to the evening meal; and here, as throughout the mansion, every face and voice and movement were full of mourning. Neither of the ladies appeared; and having silently partaken of the repast, each left the table alone. Melton mounted his horse, and rode off to the encampment of his men; and Hugh turned his footsteps to the shaded walks of the little garden where he had spent many quiet hours during his captivity. The moon was shining brightly through the leaves, and casting dusky shadows on the walks, while a gentle, wandering wind came rustling among the flowers laden with the perfumes of a thousand blossoms. Hugh paced quietly and thoughtfully up and down the walks for several hours, reflecting on the thousand things connected with his probable fate, when it suddenly occurred to him that he had not inquired whether any news had been brought as to the fate of the battle. He started at once to seek some one of the numerous persons who had come with Catharina, when, in passing from one walk to another, his steps were suddenly arrested by a well-known voice.

"Manning!" said Catharina; and her voice, though deeper and more melancholy, was still as low—was still as soft and sweet, as when he first heard it pronounce his name—"Manning! Will you not stay a moment?"

He turned, and she stood before him in the moonlight, beautiful as when he first saw her in the mountain of Pinones—beautiful, though sorrowful, and more beautiful because sorrowful. He clasped the hand extended to him, and drew her within his arm. A kiss of love and youth and passionate devotion, recompensed them for every uncertainty and fear.

"A moment!" he exclaimed. "And will you drive me away at the end of a moment?"

"I shall not drive you away, Manning," she replied; "but I know you will soon go."

"Why should I go, *cara mia*?"

"Because it's late and my aunt will be seeking me," she replied. "And besides, this is not a fit place and time."

"All times and places are proper, dearest, to those whose hearts are pure."

"That is the logic of love, Manning," she said, with a faint smile; "and that is always sophistry. But sit here beside me," she continued, leading

him to a seat, "and tell me briefly how you came here, and why Colonel Melton is here? Tell me all that has happened since we parted."

"That is soon done," said Hugh, seating himself beside her, and encircling her with his arm. "I was taken as you saw, was brought here by the colonel, and am now on my parole."

"You have heard of the death—?" she hesitated.

"Yes, yes, *cara mia*," he interrupted, "do not think of it; let me now be father and brother and all to you."

She covered her face with her hands. Hugh withdrew one gently and pressed it in his.

"You are all to me now, indeed, Manning," she murmured. "Forgive me, if I grieve that it is so."

"Forgive you!" he exclaimed, "I could not love you if you did not grieve. Do not think, dearest, that I would abate one tear of filial sorrow; it will make me love you more, because it will make you need my affection more."

"I do need it, indeed," she murmured; "but let us not speak of it now—to-morrow—some other time—"

"I would not steal one moment from sorrow," said Hugh; "but, dearest, even sorrow consecrates love, for without love there could be no sorrow; let them mingle then, and the one will assuage the other."

She lifted her eyes to his, and gazed into his face with a long, earnest look of mingled affection and melancholy. She cast her head upon his shoulder and sobbed deeply and silently. Hugh drew her closer to him, and whispered words of consolation to her stricken spirit—consolation not wholly ineffectual. For after a few minutes given to grief, she raised her head and dried her tears.

"Forgive me," said she, "if I seem selfish—if I seem not to repay your affection. Believe me, Manning, I am not so ungrateful."

"It is I who am selfish and ungrateful," said he, "to press my love upon you at such a moment."

"Hugh!" she whispered, holding up her finger. "We are not alone—there is some one behind that magnolia!"

Hugh stepped quickly to the bush, but the intruder, if there was one, was gone. He listened attentively and thought he heard stealthy footsteps, and many of them, beyond the hedge; but they were still in a moment, and he attributed the noise to the wind rustling among the shrubbery.

"There is no one near, *cara*," he said, returning to her side, "you heard only the wind."

"Perhaps so," she replied, "but I thought I heard a footstep on the gravel."

"There is no one there," he again assured her; and resuming their former posture, they recommenced a conversation which we will not repeat—love and sorrow, gloomy retrospection and bright anticipation, joy and grief, mingled, as they always are, in this world of change. Catharina forgot her wish to return to the house, and Hugh ceased to remember his captivity. The past was not forgotten, it is true; but the sunshine of the present shone back upon its gloom; and eyes dazzled by the future were unwilling to recur to the darkness that was gone.

Some two miles from them, at the upper or southern end of the valley, in a rancho of more than ordinary neatness, sat Colonel Melton, consulting with and officer of his corps. He had just received the news of Santa Anna's discomfiture and defeat six days before; and at the same time he had received orders, which must soon take him from the vicinity of Rinconada.

"We must fall back further from the city," said the colonel. "To-morrow, I hope, Sanchez will return; the rest are all in, I believe, and so large a body of men cannot remain long undiscovered."

"It is possible," said the officer, "that our position may be already discovered. A man came in this evening with the intelligence that a company of Texans has been scouring the plain all day—probably with a view of finding the entrance to the valley from the west."

"Let them come," said Melton; "nothing would please me better."

"I would rather they would keep to the plain," said the officer. "Our men dread a Texan as they do a Comanche; and a panic could be produced sooner by crying 'Tejanos!' than by any other means."

"Nevertheless," said Melton, "let them come. See what that knock is." The officer rose and opened the door, at which some one had knocked several times.

"A man wants to see the colonel," said the lancer on guard.

"Let him come in, then," said Melton; and stepping stealthily as a cat, with, however, some appearance of haste, entered Miguel, the steward.

"Well, Miguel," said the colonel, "what do you want?"

The steward glanced at the officer as if he wished to be alone.

"Withdraw, Blanco," said Melton; "Miguel has some momentous secret to communicate."

"You are right, senor," said the man, when Blanco had closed the door: "I have a secret to tell."

"Out with it, then," said Melton, curtly; "you know I am not patient."

"As quickly as possible, senor," cringed the steward. "I have just come in a gallop from Rinconada."

"Ha!" exclaimed Melton, "What could make you ride so fast?"

"The desire to serve you, senor," the man answered cowering.

"Ha!" exclaimed the colonel, with a kind of stern whisper; he was strongly excited, for he knew that something deeply interesting to him must have brought this man here. "Go on," he said, in the same tone; "let me have proof of your desire."

(To be continued.)

LORD BROUGHAM.

THE illustrious subject of this Memoir is the eldest son of a gentleman of small fortune, but ancient family, in Cumberland. His mother was the daughter of a Scotch clergyman; in the mansion of whose widow, on the Castle Hill of Edinburgh, the father of Lord Brougham lodged when prosecuting his studies at the University there.

In early life Mr. Brougham was called to the bar of the Supreme Court of Edinburgh, where he practised for some time, and with considerable success, if we may judge from his frequent employment in Scotch appeals. His selection too, on the part of persons charged with political offences to conduct their defence, would imply him to be well read in the institutions of his country. It was while at the Scotch Bar that, in conjunction with the late Mr. Francis Horner and Mr. Jeffrey, he planned and established the *Edinburgh Review*, of which he was for many years a most able and constant supporter. About this time also he became a member of the celebrated Debating Society at Edinburgh. Although professionally a lawyer, Mr. Brougham's ambition soon became directed to the senate; and, observes a clever contemporary, "it is an instructive example of the working of our admirable system of representation, that, up to the 16th of October, 1818, Henry Brougham, the greatest orator and statesman that perhaps ever enlightened Parliament, was indebted for his seat to the patronage of a borough-holding peer." He first took his seat for Camelford, a borough in the interest of the Duke of Bedford. In 1812 he contested Liverpool with Mr. Canning, and failed; and, in the same year, he was nominated for the Inverkeithing district of Boroughs, and failed there also. He was, however, subsequently returned for Winchester, in Sussex. During the discussions in Parliament respecting the Princess of Wales, Mr. Brougham was honoured with the confidence of her Royal Highness, and espoused her cause with much effect. His earliest efforts as a British senator were likewise distinguished by the same regard to the rights of individuals, and the liberties of the country. Nor was he then less firm in opposition to what he deemed the encroachments of the crown, and the extravagances and abuses of the government than he has since proved. His bold denial of the sovereign's right to the droits of the Admiralty, in 1812, will not soon be forgotten.

In the early part of 1816, he brought forward a motion for preserving and extending the liberty of the press, for which the ministers, particularly Lord Castlereagh (who knew well how to use the "delicious essence"), passed on him the highest encomiums; and miscalculating the firmness of the praised, some persons thought the minister's eulogy a lure for the member's vote; but the result proved that Mr. Brougham was above all temptation. In the same year he made a tour on the continent: in France he was the object of much attention; and he afterwards visited the residence of the Princess of Wales, in Italy, as was supposed on a mission of some importance.

In 1818, Mr. Brougham was invited to become a candidate for the county of Westmoreland, where his family have been settled for the last eighty or ninety years: he could not, however, withstand the powerful influence of the Leathes family, and thus lost his election. He made another effort, at the dissolution of Parliament, consequent upon the death of George III., but was again unsuccessful; and a third time in 1826.

We are now approaching one of the most eventful eras of Mr. Brougham's parliamentary life: we mean his intrepid defence of the consort of George IV. Mr. Brougham was the first to despatch M. Sicard, the old and faith-

ful servant of the Queen, with the intelligence of the death of George III. The Queen immediately replied that she was determined to return to England; and on February 22, 1820, Mr. Brougham received from Lord Castlereagh an assurance that no indignity should be offered to her Majesty while abroad. Mr. Brougham was now appointed her Majesty's Attorney-General, on which occasion he was admitted within the bar, and assumed the silk gown, which was subsequently taken from him, but restored.

The Queen having arrived at St. Omer, on her way to England, Lord Hutchinson, on the part of the King, was despatched to prevent, by a liberal offer, her leaving the continent. Mr. Brougham consented to accompany his lordship, willing to co-operate in the purpose, yet bound by office and by friendship to secure for the Queen the best possible terms. The Queen, however, was resolved, and while the deputies were exchanging notes, her Majesty sailed for England, and proceeded to London amidst all the demonstrations of popular triumph. Mr. Brougham, with Mr. Denham, on behalf of the Queen, next met the Duke of Wellington and Lord Castlereagh, on behalf of the King, to propose measures for an amicable arrangement, but the insertion of her Majesty's name in the Liturgy being refused, the negotiation failed. The struggle was now fast approaching. The motion green bag was laid on the table of the House of Commons, and Mr. Brougham commenced by deprecating a hasty discussion. The next day the minister developed the projected prosecutions of the government: Mr. Brougham replied, and concluded by demanding for the Queen a speedy and open trial. We need only advert to his subsequent reply to the note of Lord Liverpool, to the speech of Mr. Canning, and to the conciliatory proposition of Mr. Wilberforce. Then followed his speech at the bar of the House of Lords against the intended mode of investigation—his speech against the Bill of Pains and Penalties—his reply to the crown counsel, and afterwards to the Lord Chancellor—and finally his defence of the Queen against the several charges. His defence, it will be remembered, lasted nearly two days, and Mr. Brougham, amidst profound silence, concluded one of the most eloquent speeches ever heard within the walls of Parliament—with this pathetic appeal:—

"My lords, I call upon you to pause. You stand on the brink of a precipice. You may go on in your precipitate career—you may pronounce against your Queen, but it will be the last judgment you will ever pronounce. Her persecutors will fail in their objects, and the rule with which they seek to cover the Queen, will return to overwhelm themselves. Rescue the country; save the people, of whom you are the ornaments; but saved from whom, you can no more live than the blossom that is severed from the root and tree on which it grows. Save the country, that you may continue to adorn it—save the crown, which is threatened with irreparable injury—save the aristocracy, which is surrounded with danger—save the altar, which is no longer safe when its kindred throne is shaken. You see that when the church and the throne would allow of no church solemnity in behalf of the Queen, the heartfelt prayers of the people rose to heaven for her protection. I pray heaven for her; and I here pour forth my fervent supplications at the throne of mercy, that mercies may descend on the people of this country richer than their rulers have deserved; and that your hearts may be tuned to justice."

The result need scarcely be alluded to. Men of all parties, however discordant might be their opinions upon the point at issue, acknowledged and admired the intrepidity and splendid talents of Mr. Brougham on this occasion.

The year 1827 is a memorable one in Mr. Brougham's parliamentary life. Early in the session, upon the debate of the battle of Navarino, we find him expressing his readiness to support the ministry as long as the members who composed it showed a determination to retrench the expenditure of the country, to improve its domestic arrangements, and to adopt a truly British system of foreign policy. It was on this occasion that Mr. Brougham used the expression which has since become so familiar—"The schoolmaster is abroad." On February 7, he brought forward a motion on the State of the Law, in an elaborate speech of six hours' delivery. The debate was adjourned to February 29, when the motion, in an amended shape, was put and agreed to, requesting the King to cause "due inquiry to be made into the origin, progress, and termination of actions in the superior courts of common law in this country;" and "into the state of the law regarding the transfer of real property." Even the heads of this speech would occupy a considerable space. A passage much quoted at the time of its publication is a good specimen of Mr. Brougham's forcible style of illustration: "He was guilty of no error—he was chargeable with no exaggeration—he was betrayed by his fancy into no metaphor, who once said, that all we can see about us, King, Lords, and Commons, the whole machinery of the State, all the apparatus of the system and its varied workings, end simply in bringing twelve good men into a box." In the same month, Mr. Brougham spoke at great length in support of Lord John Russell's motion for the Repeal of the Test and Corporation Acts. On March 6, he also spoke in support of Mr. Peel's motion for Catholic Emancipation, which he described as going "the full length that any reasonable man ever did or ever can demand; it does equal justice to his Majesty's Roman Catholic subjects; it puts an end to all religious distinctions; it exterminates all civil disabilities on account of religious belief. It is simple and efficacious; clogged with no exceptions, unless such as even the most zealous of the Catholics themselves must admit to be of necessity parcel of the measure."

Upon the dissolution of Parliament, consequent upon the death of George IV., Mr. Brougham was invited to the representation of the extensive and wealthy county of York.

Soon after the assembling of the new Parliament, in connection with the

topic of the recent revolutions on the continent, and parliamentary reform in this country, he concluded an interesting debate by saying—"He was for reform—for preserving, not for pulling down—for restoration, not for revolution. He was a shallow politician, a miserable reasoner, and he thought no very trustworthy man, who argued, that because the people of Paris had justifiably and gloriously resisted lawless oppression, the people of London and Dublin ought to do the same for reform. Devoted as he was to the cause of parliamentary reform, he did not consider that the refusal of that benefit, or, he would say, that right, to the people of this country (if it were a legal refusal by King, Lords, and Commons, which he hoped to God would not take place), would be in the slightest degree a parallel case to anything which had happened in France."

Upon the resignation of the Wellington ministry—with the title of **BARON BROUGHAM AND VAUX**, he took the oaths as Lord Chancellor, November 23, and his seat in the Chancery Court on November 25, 1830.

Besides contributing to the *Edinburgh Review*, as we have noticed, Lord Brougham is the author of several papers in the Transactions of the Royal Society, of which his Lordship is a distinguished member. The chief entire work which bears his name is entitled, "An Inquiry into the Colonial Policy of the European States," 2 vols. 8vo. 1828; and a masterly pamphlet "On the State of the Nation," which has run through many editions. Several of his speeches have likewise been published.

It is, however, in connection with Public Education, that the pen of Lord Brougham has been more extensively employed. His zealous co-operation with Dr. Birkbeck, and other patriotic men of talent, in the establishment of Mechanics' Institutions in the year 1824, must be gratefully remembered by thousands who have enjoyed their benefits; and, for the advantage of the London Mechanics' Institution, were republished from the *Edinburgh Review*, his excellent "Practical Observations upon the Education of the People," addressed to the Working Classes and their Employers.

In 1825, Lord Brougham was elected Lord Rector of the University of Glasgow; his opponent, Sir Walter Scott, lost the election by the casting vote of Sir James Mackintosh.

Among the originators of the London University, Lord Brougham occupies a foremost rank, and partly by the aid of his indefatigable talents that establishment was opened, in 1828, within seventeen months from the day on which the first stone was laid.

Early in the year 1827 was established "the Society for the Diffusion of Useful Knowledge," of which Lord Brougham became chairman. In the original prospectus, issued under his sanction, we find, "The object of the Society is strictly limited to what its title imports, namely, the imparting of useful information to all classes of the community, particularly to such as are unable to avail themselves of experienced teachers, or may prefer learning by themselves." The Society commenced their labours by a set of Treatises, the first, or "Preliminary Treatise" "On the objects, pleasures, and advantages of Science," being from the pen of Lord Brougham; and in popularity and popular interest, this treatise is unrivalled in our times. His Lordship produced an edition of Paley's works, illustrated by numerous notes, and published by the above Society.

In the preceding outline of the public life of Lord Brougham, we have quoted but few points of his personal character. This has been so well drawn by the *Metropolitan Magazine*, edited during his chancellorship by the poet Campbell, that we are induced to adopt the following traits descriptive of his appearance at one of his levees:

"The Chancellor took his place at a corner of the room, backed by his chaplain, and was soon encircled by the visitants; his dress remarkably plain, being a simple suit of velvet in the court cut. The names were announced from the bottom of the stairs, and each person as he entered walked up to the Chancellor and offered his respects. The numbers were so great that it was impossible to devote any marked attention to each, as soon, therefore, as the visitor had made his bow, he retired into the throng, or took his departure through the adjoining room. I was not present at the first of the levees which were held, and at which the attendance was very distinguished; but a friend who was, spoke very highly of the manner in which the Chancellor performed his noviciate. The Archbishop of Canterbury came early, and was very kindly received: he was followed by the Archbishop of York, and several other bishops, whose attendance gave proof that tiff as they might from Lord Brougham, they surely did not consider him in enmity to the Church. . . . The most remarkable visitor of that evening was the Duke of Wellington;—the crowd was astonished, and I dare say the Chancellor himself was surprised, when his name was sent up—I doubt if they had ever met in the same room before. Their political lives, with the exception of the Catholic question, were one unvarying course of opposition, not enmity. I suspect that for a time the Duke despised the talk of the lawyer; and, on the other hand, Brougham had often declared, that the respect which he entertained for military glory was not very lofty. Some of his bitterest tirades were levelled at the Duke personally. No one will deny but that the high-minded Duke lay aside resentment of every sort, and offered this mark of respect as well to the man as the office. The Chancellor was flattered by the attention, and shook the Duke by the hand very cordially. . . . Not the least remarkable personage in the room was the Lord Advocate of Scotland. Brougham and he are very old friends, and have been much engaged in the same species of literature. Brougham was his predecessor in the editorship of the *Edinburgh Review*—a fact which is not generally known, but which is certain. Brougham was not the first editor, having filled that office for a short time after Sidney Smith withdrew from the situation. Jeffrey appeared extremely pale in his court dress, and did not seem very much at home: he was acquainted with but few of his fellow visitors, and had too much good sense to occupy much of the Chan-

cellor's attention: they did not seem to hold any conversation beyond the usual common-place inquiries. . . . A variety of lords, squires, generals, *ossa innominata* followed, for whom the Chancellor cared perhaps about as much as I did. At length Sir James Spalding was announced, and the Chancellor left his place to meet him. His welcome was very hearty. Brougham was doubtless gratified by this token of respect from a man who was indubitably his leader in the courts, and for whose forensic abilities it is known that he entertains, and has often expressed, the highest admiration. . . . The Speaker of the House of Commons was then announced. Brougham and he met as warm friends, though certainly men having little in kindred. . . . The last person of note who arrived before I departed was Sir Thomas Denman. The Chancellor was engaged with some one at the moment, and nothing passed betwixt them but an exchange of bows. It was nearly ten years since I had seen Brougham and Denman together; the Queen's trial was then the all-engrossing topic of public consideration. Who could then have foretold that these men would in so short a space have won the confidence of a sovereign, whom they attacked with a degree of virulence which, even in those days of party violence, was generally condemned?"

Of the eloquence and general character of Lord Brougham, we have the following excellent portrait by a skilful hand:

"Mr. Brougham differs from Sir James Mackintosh in this, that he deals less in abstract principles, and more in individual details. He makes less use of general topics, and more of immediate facts. Sir James is better acquainted with the balance of an argument in old matters. Mr. Brougham with the balance of power in Europe. If the first is better versed in the progress of history, no man excels the last in a knowledge of the course of exchange. He is apprized of the value of our exports and imports, and scarce a ship clears out its cargo at Liverpool or Hull, but he has notice of the bill of lading. Our colonial policy, prison discipline, the state of the hulks, agricultural distress, commerce and manufactures, the bullion question, the Catholic question, the Bourbons or the Inquisition, 'domestic treason, foreign levy,' nothing can come amiss to him—he is at home in the crooked mazes of rotten boroughs, is not baffled by Scotch law, and can follow the meaning of one of Mr. Canning's speeches. With so many resources, with such variety and solidity of information, Mr. Brougham is rather a powerful and alarming, than an effectual debater.

"Mr. Brougham speaks in a loud and unmitigated tone of voice, sometimes almost approaching to a scream. He is fluent, rapid, vehement, full of his subject, with evidently a great deal to say, and very regardless of the manner of saying it. Mr. Brougham writes almost, if not quite, as well as he speaks. In the midst of an election contest he comes out to address the populace, and goes back to his study to finish an article for the *Edinburgh Review*, sometimes indeed wedging three or four articles (in the shape of *refracimientos* of his own pamphlets or speeches in parliament) into a single number. Such indeed is the activity of his mind that it appears to require neither repose, nor any other stimulus than a delight in its own exercise. He can turn his hand to anything, but he cannot be idle. There are few intellectual accomplishments which he does not possess, and possess in a very high degree. He speaks French (and, we believe, several other modern languages) fluently; is a capital mathematician, and obtained an introduction to the celebrated Carnot in this latter character, when the conversation turned on squaring the circle, and not on the propriety of confining France within the natural boundary of the Rhine. Mr. Brougham is, in fact, a striking instance of the versatility and strength of the human mind, and also, in one sense of the length of human life, if we make a good use of our time. There is room enough to crowd almost every art and science into it. If we pass 'no day without a line,' visit no place without the company of a book, we may with ease fill libraries, or empty them of their contents. Those who complain of the shortness of life, let it slide by them without wishing to seize and make the most of its golden minutes. The more we do, the more we can do; the more busy we are, the more leisure we have. Mr. Brougham, among other means of strengthening and enlarging his views, has visited, we believe, most of the courts, and turned his attention to most of the constitutions of the continent. He is no doubt, a very accomplished, active-minded, and admirable person."

Lord Brougham married, in 1816, Mary Anne, relict of John Spalding, Esq. His lordship was born in 1779, and is, consequently, in his seventy-third year.

The writer of the above has left little to add to the portrait of this extraordinary man. Notwithstanding his age he is as laborious as ever, and although not now occupying so prominent a position in the public eye, yet he is felt to be one of those ubiquitous personages who may be said to be never out of mind.

**THE SOAP PLANT.**—From a paper read before the Boston Society of Natural History, it appears that the soap plant grows all over California. The leaves make their appearance about the middle of November, or about six weeks after the rainy season has fully set in; the plants never grow more than a foot high, and the leaves and stock drop entirely off in May, though the bulbs remain in the ground all summer without decaying. It is used to wash with in all parts of the country, and, by those who know its virtues, it is preferred to the best of soap. The method of using it is merely to strip off the husk, dip the clothes into the water, and rub the bulb on them. It makes a thick lather, and smells not unlike brown soap. The botanical name of the plant is *Phacelia pimarica*. Besides this plant, the bark of a tree is also used in South America, for the purpose of washing. Several other plants have been used in different countries as a substitute for soap.

IN ACCIDENT, DISEASE, EMERGENCY, HEALTH,  
AND SICKNESS;

BEING

A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.

PRICE ONE PENNY. ALWAYS ON SALE.

A MIDSUMMER PRESENT FOR A GOOD BOY OR GIRL.

Now ready, price 1s. 6d., beautifully bound, with a fine Steel Plate, and 70 Engravings on Wood.

**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
This beautiful little Volume is made the more attractive to the Young, by having the Christian Name of the Receiver elegantly impressed in Silver upon the cover. Thus—

A STORY-BOOK FOR MASTER EDWARD!

A STORY-BOOK FOR MISS ELIZABETH!

The following Names may be had to order:

BOYS—Charles, Edward, Frederick, George, Henry, James, Joseph, John, Richard, Robert, Thomas, and William.  
GIRLS—Anne, Caroline, Charlotte, Emily, Emma, Jane, Laura, Louisa, Lucy, Mary-Alice, and Maria.

For Names not included in the above, order the General Edition,

AUNT MARY'S STORIES FOR YOUNG PEOPLE.

London: Houlston and Stoheman; and all booksellers.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

### WOMAN'S LOVE.

The very first  
Of human life must spring from woman's breast,  
Your first small words he taught you from her lips,  
Your first tears quenched by her, and your last sighs  
Too often breathed out in a woman's hearing.  
When men have shrunk from the ignoble care  
Of watching the last hours of him who led them.

It would be easy to enumerate the authors who have described woman as otherwise "than in love." It would be too easy to enumerate the books in which woman is prominently brought forward in any of the great relative characters of life; as the daughter, the wife, the mother, the sister, the matron, or the friend; and yet wherever she is so introduced by a master-hand, the absorbing interest of the book centres in her. Fifty other females may have or want lovers, and we care nothing for them or their troubles. It is her actions, her faith, her love, and her sufferings, which sink into our hearts, aye, and abide there, long after we have closed the book. Elizabeth, in the pride and pomp of royalty, even Elizabeth yielding to womanly affections, fades from our minds before the influence of her humble rival, the imprudent, but the delicate, the devoted Any, who loved her husband's honour far better than her own aggrandizement. No one cares about Rose Bradwardine, when Flora MacIvor stands before us, in sublime self-devotedness to the cause of her royal friends; and who ever restrained his tears when the high-souled Rebecca presented the casket of jewels to Rowena, sent her farewell to Wilfred, and went forth a wanderer with her father?

Jeanie Deans, the heroine of sisterly affection, is more to us than Effie Deans, the victim of the unhappy passion; and Immaculate, in her island of flowers,—a fairy thing of love and happiness,—excites nothing of that agony of interest which the same Immaculate excites in the dungeon of the Inquisition, with her dead child lying on her bosom. Who has not (while reading dramatic works) felt more for the lovely and loving Desdemona, than the lovely and loving Juliet—for Imogene, the neglected wife, than Ophelia, the neglected mistress? And (we leave off putting cases) who does not sympathize more strongly in those true tales, which history has preserved for us of woman's love, manifested in the relative duties and relative characters of life, than in any or all the creations of the sublimest genius, the purest fancy? She, who "had no ornament but her children"—she who, even in the presence of Cyrus, "saw him only who said he would give a thousand lives for her ransom"—she who died to give her husband courage, and pronounced that death "not painful"—these and a thousand other instances which shine, and will shine, on the page of history "as the stars for ever and ever," come home to the human heart with a far deeper and diviner influence than all the love of mere lovers. The reasons are plain. Pure and fervent as their love may be, it is still selfish; possessing no higher motive than personal will and pleasure. It has not yet become sacred as a duty, and settled as a habit; nor has it yet passed through long years of need, sickness, sorrow, and adversity, and come out impressed with the broad seal of constancy. Lovers' love may exhibit the freshness and glory of a dream; but it is from the nature of things unproved, and therefore from books, as in real life, we have far deeper satisfaction in contemplating that love which has passed its trial hour undimmed and undiminished.

There is another reason:—If we cannot all invent, we can all observe; and he must be singularly unfortunate, in his society who does not know living instances of women whose love bears an analogy, at least, to that of which we have been speaking. His sphere is indeed confined, to say no worse of it, if he knows no woman who could, were it her duty, die with a husband for a child—no wife who has found the devoted, specious lover change into the

unworthy, brutal husband, and yet has endured her lot with unrepining patience, and meet the world with smiles of seeming cheerfulness, and

and, higher and harder task, denied herself the privilege of marriage, and never told her grief; no intellectual and accomplished mother, who has re-rendered early influence, and re-estimated comfort, the pleasure of being the indulgence of refined taste, and become a mother as well as mother to her children, and entered into all the harassing details of minute daily economy, not with mere dogged submission, but with active, cheerful interest. Does he not know some daughter who has rejected herself from youthful companions and youthful pleasures, that she may employ her youth and youth her days and nights, in soothing a parent's grief, or in becoming a burden, and existence a pain, but who can, nevertheless, heart quietly to his long home, because his last steps have been supported by a beloved and affectionate child? Does he not know some woman, whose child influence has controlled the follies, and whose tenderness, through all the risk of personal blame, has shielded the faults of a brother? Or has he never seen an instance of female friendship? His lip may curl at the idea, but there is such a thing as female friendship; not often, I grant, between ladies, but between the young and the old, the matron who has gently trodden the ways of life, and the young blooming girl, who has just entered upon them. It is a beautiful, aye, and it is a frequent sight to behold the calm gravity of age tempering the enthusiasm of youth, and the bright influence of youth shedding, as it were, a sunset radiance over the sombre sky of age. But to come rather closer to the feelings of our people, to touch upon his personal experience—if he ever lay upon a bed of sickness, what eyes became dim with weeping—what cheeks pale with watching, over him?—What hand administered the medicine and smoothed the pillow? Whose form glided round the bed with the quiet care of a martyr, and ministering spirit? Whose tear soothed his dejection? Whose smile dashed his temper? Whose patience bore his many infirmities? Unless he live in a desert island, he will reply—Woman's! Woman's!

But to know, to the full extent of such knowledge, how noble, how sacred a thing is woman's love, it must be contemplated when strengthened by the bonds of duty, when called forth by the ties of nature. Some may think it needless to lay such strong and repeated stress upon this condition; but my own part, I do not believe that in the hearts of true women—(and such alone are worthy of mention)—love, the passion of love, has before marriage by any means the power generally supposed. I verily think that in a most exemplary wife has been, as the mistress,

"Uncertain, coy, and hard to please."

No true woman will either do or suffer for the fondest and most faithful lover; a thousandth part of what she will do and suffer for a husband who is only moderately kind. No—love must, with a woman, become a duty, a duty, a part of existence, a condition of life, before we can know how completely it unites and exemplifies the natures of the lion and the dove, the eagle, which no danger can dismay, with the constancy no suffering can diminish.

It has been much the fashion, of late, to write and talk about woman's mind, and to make comparative estimates of the power of female and masculine intellect. Some, with pleasant malice, have made the scale preponderate on the gentleman's side; others, with pleasant gallantry, have made it preponderate on that of the lady. Women of genius never argue for the recognized equality of female intellect; and men of genius never argue for its recognized inferiority; but, as in political subjects, those dispute hottest who have the least at stake. "Master and mistress-minds" move in their separate spheres, like the rulers of distinct and distant kingdoms, seldom wishing, and scarcely ever tempted, to disturb each other's sovereignty. It is among those who reside in the nooks and corners of Parnassus, that disputes and litigation arise. We can only fancy such small occupiers of intellectual territory as Hayley and Miss Seward, extremely agitated about the mutual recognition of rights, and claims, and divisions. We can only fancy Shakspeare and Madame de Staël, regarding them with contempt and indifference. But by all means let the dispute go forwards, and if women are stimulated to give proof, by their exertions, that there is such a thing as female genius, and men are stimulated to give proof by their surpassing productions, and there is no genius in the world but what is masculine, the public will be gainers any way. We shall have more clever people to read, more clever books to read. Without hazarding an opinion on the subject, for the very sufficient reason of not understanding its merits, I return to the theme with which I began, and with which I would close—"Woman's Love."

Let man take his claimed supremacy, and take it as his hereditary, his inalienable right. Let him have for his dower, sovereignty in philosophy, in learning, in arts, and in arms; let him wear, unmoved, the ermine, the lawn, and the helmet, and wield, untrivalled, the sword, the pen, and the pencil. Let him be supreme in the cabinet, the camp, and the study; and to women will still remain a "goodly heritage," of which neither force nor rivalry can deprive her. The heart is her domain; and there she is a queen. To acquire over the unruly wills and tempers of men, an influence, which no man, however great, however gifted, can acquire: to manifest a faith which never fails, a patience that never wears out, a devotedness which can sacrifice, and a courage which can suffer; to perform the same unending round of duties without weariness, and endure the same unvarying round of vexations without murmuring; to require neglect with kindness, and fidelity with fidelity; to be true when all are false, and firm when all is wavering; to watch over the few dear objects of regard with an eye that never sleeps, and a care that cannot change; to think, to add, to suffer; to sacrifice, to live, to die for them, their happiness, and safety—these are woman's true triumphs; this, this is WOMAN'S LOVE!

## ONWARD!

**CHEAP COAL FOR LONDON.**—A Company is said to be in course of formation for working the coal-mines of Darlston estate, near Coventry, only 90 miles from London.

**TRAMWAY EMPLOYMENT.**—The Commissioners of Works are empowered by an Act of Parliament, which has just been printed, to construct an embankment and public road, to extend from Vauxhall-bridge to the Chelsea-gardens.

**GASOMETER.**—One of the largest gasometers in the kingdom is now being erected at Messrs. Westwood and Wright's Ironworks, Brierley-hill. The diameter is 187 feet, depth 40 feet: the weight of iron necessary for its completion will be 400 tons, and it will contain about 800,000 cubic feet of gas. —*Wolverhampton Chronicle.*

**IMPROVEMENT IN GAS AND COKE MANUFACTURE.**—A patent has been taken out by Messrs. Newton, of Chancery-lane, for a method of producing a coal gas, free to a certain extent of bituminous oils, and a coke suitable for smelting, locomotive, and other furnaces. The apparatus is a modification of a patent secured by Messrs. Pauwels and Dubochet in April 1850.

**GAS FROM WOOD.**—In experiments made some time ago, it was said that a considerable quantity of illuminating gas could be obtained from two ounces of wood. The process on a large scale is now, it seems, in operation at Basle, and about to be introduced at Zurich, Stockholm, and Drontheim. It is said to be far less expensive than the manufacture from coal, and to furnish a gas free from sulphuretted hydrogen, besides several useful by-products, such as charcoal, wood-tar, and vinegar.

**NEW SMOKE-CONSUMING APPARATUS.**—An apparatus, according to a Glasgow paper, has been originated by Mr. Aitken, of Murdoch and Aitken, Hill-street East, of that city, the advantages of which every one is at liberty to avail himself of without payment of fees for patent or "lordship." The flames from three furnaces meet in a central space or oven. The furnaces being fired in succession, at intervals of ten or twelve minutes, two of them are generally in a white flame, and on meeting the smoke from the third furnace (which is supposed to be newly kindled) in this oven between the boilers, it is immediately consumed before it can enter the flue of the larger boiler. The advantages of this apparatus, in addition to the great feature of the consumption of smoke, are described to be a considerable saving of fuel, a saving of the tear and wear of the principal boiler, and the facility with which it can be applied to boilers at present in operation, at a moderate expense, and in a very short time.

**ELECTRO-TELEGRAPHIC PROGRESS.**—Another new route has been proposed for a sub-marine Atlantic telegraph between Europe and America, namely, from Norway by Iceland (120 miles), Greenland (80 miles farther), and Davis Straits (where 100 miles wide) to Labrador, and thence by land to New York; while from Norway, a short line would bridge across the Skager Rack, and put the main line en rapport with Calais, and hence with England, &c. It is said that "the comparative success of the telegraph across the Irish Channel has at length led some speculators to entertain seriously the project of laying down a telegraphic communication between Europe and America."—[This sentence was probably written before the recent misadventure which befell this Irish telegraph. Its quotation now may show the importance to the general progress of telegraphic sub-marine communication of circumspection and avoidance of haste; the probability of future progress being very much dependent on the way in which past efforts may be carried out. We do not speak in reference to the scheme just noticed, but to the extension of sub-marine communication in general.]

**NEW METHOD OF MANUFACTURING GAS.**—Patents have been issued in England and America for a new method of manufacturing gas, which promises to supersede that at present in use, excelling, as it does, the great desiderata of cheapness, brilliancy, simplicity, and cleanliness. Companies for the manufacture and sale of the requisite apparatus have been organized in London and in New York—that in the latter city being styled the United States Gas Company.—The *Commercial Advertiser* (U.S.) says:—"We have examined the apparatus in operation at the latter Company's rooms, and have found it equal to representations, which we heard with some degree of incredulity. It occupies a small space, and is so simple in all its parts that any person of ordinary understanding can readily be made to comprehend its workings, and learn its management in a few months. As in the case of many other inventions, the observer wonders that such a simple and useful contrivance was never thought of before. The apparatus we examined was supplied with some twenty burners, all of which were ignited at once, and gave a light of surpassing brilliancy. Professor Renwick has drawn up a report on the subject, showing from a careful analysis, that this gas is superior in every respect to that in common use. It can be introduced into dwelling-houses, in public buildings, or even on shipboard, with the utmost safety. This gas is made from pine oil; a gallon of which, costing twelve cents, we are informed, will be sufficient for the supply of twenty burners for one hour. Thirty lights, burning five hours per night, will cost but 1 dollar 12½ cents, while the city gas for the same number of burners, would cost 2 dollars 25 cents; making a difference in one year of 410 dollars in favour of the new invention. This seems almost incredible, but it is a statement of that kind which can be easily tested, and which it would be impossible to sustain by any other but experimental evidence. The Company are about to publish a circular setting forth the results of experiments made by Professor Renwick, and other scientific persons who have examined the invention, and in the meantime the public are invited to see for themselves. Unless we are greatly deceived, this invention will mark the way into general favour."

## POETICAL QUOTATIONS.

## BRIBERY.

No, I'll not trust the honour of a man:  
Gold is grown great, and makes perfidiousness  
A most common waiter in most princes' courts:  
He's in the check-roll: I'll not trust my blood:  
I know none breathing but will oag a dye  
For twenty thousand double pistolets.—*Marston.*

## CALAMITY.

Do not insult calamity;  
It is a barbarous grossness, to lay on  
The weight of scorn, where heavy misery  
Too much already weighs men's fortunes down.—*Daniel's Philotas.*  
Calamity is man's true touch-stone.

*Beaumont and Fletcher's Four Plays in One.*

How wisely fate ordain'd for human kind  
Calamity! which is the perfect glass  
Wherein we truly see and know ourselves.  
How justly it created life too short!  
For being incident to many griefs,  
Had it been destined to continue long,  
Fate, to please fools, had done the wise great wrong.

*Sir W. Davenant's Law against Lovers.*

Know, he that  
Foretells his own calamity, and makes  
Events before they come, twice over doth  
Endure the pains of Evil destiny.  
But we must trust to virtue, not to fate;  
That may protect, whom cruel stars will hate.

*Sir W. Davenant's Distresses.*

Thus, sometimes hath the brightest day a cloud;  
And, after summer, ever more succeeds  
Barren winter with his wrathful nipping cold;  
So cares and joys abound, as seasons fleet.—*Shakspeare's Henry VI.*

When men once reach their autumn, sickly joys  
Fall off apace, as yellow leaves from trees,  
At every little breath misfortune blows;  
'Till left quite naked of their happiness,  
In the chill blasts of winter they expire.  
This is the common lot.—*Young.*

Tell me no more  
Of my soul's lofty gifts! Are they not vain  
To quench its haunting thirst for happiness?  
Have I not loved, and striven, and failed to bind  
One true heart unto me, whereon my own  
Might find a resting-place, a home for all  
Its burden of affection? I depart  
Unknown, though Fame goes with me; I must leave  
The earth unknown.—*Mrs. Hemans.*

## CALM.

Gradual sinks the breeze  
Into a perfect calm: that not a breath  
I heard to quiver thro' the closing woods,  
Or rustling turn the many twinkling leaves  
Of aspen fall. The uncurling floods, diffused  
In glassy breadth, seem through delusive lapse,  
Forgetful of their course. 'Tis silence all,  
And pleasing expectation.—*Thomson's Seasons.*  
The wind breathed soft as lovers sigh,  
And oft renew'd seem'd oft to die,  
With breathless pause between.  
O who with speech of war and woes,  
Would wish to break the soft repose  
Of such enchanting scene!—*Scott's Lord of the Isles.*  
St. George's banner, broad and gay,  
Now faded, as the fading ray  
Less bright, and less, was hung;  
The evening gale had scarce the power  
To wave it on the donjon tower,  
So heavily it hung.—*Scott's Marmion.*

When all the fiercer passions cease,  
(The glory and disgrace of youth);  
When the deluded soul in peace,  
Can listen to the voice of truth;  
When we are taught in whom to trust,  
And how to spare, to spend, to give;  
(Our produce kind, our pity just)  
'Tis then we rightly learn to live.—*Crabbe.*

PARLOUR PASTIME.

*Instructive and amusing Game for a Party of Intelligent Young People, in which their Seniors can assist.*

Two of the party to leave the room; during whose absence the remaining individuals are to fix on 4, 8, or 8 of their number to represent so many well-known characters, as kings, warriors, statesmen, philanthropists, philosophers, artists, poets, &c. When the absent persons are called in, each of the characters chosen, must in turn, mention some fact or event in the life of the person whose name they bear, but not too plainly; for instance, in speaking of King John, they might say, "He stooped very low, in order to obtain what was his own." (History states that he surrendered his crown, and then received it again as a gift from the Pope)—and of Cowper, "he made his *Task* a pleasure." The characters chosen should all be of one sort at the same time, to prevent confusion, as four kings, or four poets. If the two cannot guess who is intended from three such remarks as above mentioned, respecting each individual represented, they must give it up; two others go out, and the remainder choose fresh characters. Forfeits may be adopted, if agreeable to the young people; but in general, the pleasure of guessing has sufficient excitement.

The same game may be adapted to younger children, by choosing fruits or flowers, and speaking of some peculiar properties. S. M. H.

FLORAL ENIGMA.

A LOVELY maid, her mother's pride,  
On Enna's plain, 'mid flow'rets stray'd;  
Dark Pluto seized her for his bride,  
And to deep shades below convey'd.

The goddess wept her rifled child,  
And sought her through earth's widest bound;  
Where mother roam'd—where daughter smiled—  
In each—in ev'ry place I'm found. (1)

Offspring of day, I love the light,  
Oft sink to sleep when evening falls; (2)  
And yet I'm known to charn by night,  
And shed sweet influence round your halls. (3)

Proudly I stand with head erect,  
When in the purest white array'd; (4)  
And though with gorgeous colours deck'd,  
Simple I am as village maid. (5)

I'm known by character and name,  
But vary oft in form and size; (6)  
My family adds to my fame,  
Though from earth's lowest scum I rise. (7)

I am a garment, made with skill,  
A shelter from the noon-day heat; (8)  
I stand beside the mountain rill, (9)  
Prostrate I fall at beauty's feet. (10)

Now I assume a warlike guise, (11)  
And then a starry dress I wear; (12)  
Now like a winged insect rise; (13)  
Then at your feasts a cup I bear. (14)

I'm oft employ'd in converse sweet,  
And in Love's errands bear a part; (15)  
Oft, too, when buzzing crowds I meet, (16)  
My lips are seal'd with cautious art. (17)

Miss C. M.—

ORTHOGRAPHICAL ENIGMA.

A WORD, of letters five, contains  
All that the verse below explains.

Behold me (1) there, my dinner too, (2)  
My consort, who is kind and true; (3)  
The trunk of yon fair tree; (4)  
That upon which you often tread; (5)  
A thing that rears its lofty head (6)  
Above the stormy sea.

The sea itself, (7) a resting-place, (8)  
The oxen that the furrow trace, (9)  
A preposition too, you'll find, (10)  
A join, (11) a verb in constant use, (12)  
A plant, which China doth produce, (13)  
The bud-destroying wind. (14)

My whole's a cloud, a breath; me will you find  
Weak when in freedom, mighty when confined;  
The wintry air my presence oft reveals,  
And when the evening mist the plain conceals,  
I'm present there; in Iceland's Isle I dwell;  
And yet I think you know me very well;  
O'er time and space I triumph, by my aid  
Are the events of every day display'd;  
To my command the stubborn metals bow;  
I'll add no more; I'm sure you know me now.

S. R.

TRANSFIGURED PLAYING CARDS.

THE NINE OF HEARTS.—ARTFUL GRACES.

ENIGMATICAL LIST OF FISHES.

1. The fish which is dormant and ends with a sigh.
2. The fish which can swim and also can fly.
3. The fish which commands us to move in a trice.
4. The fish which makes metal look brilliant and nice.
5. The fish which reduces all substance to powder.
6. The fish which curtails that which makes some men pro der.
7. The fish which a master at balls may command.
8. The fish which is ne'er used by man on dry land.
9. The fish which a miser gloats over with pleasure.
10. The fish which a matron oft guards as her treasure.
11. The fish which is pottery broken to use.
12. The fish which destroying, all power we lose.
13. The fish which may shrink, or e'en spoil clothes for wear.
14. The fish which shines bright o'er this world of care.

ANSWERS TO THE PASTIME OF LAST EVENING.

Page 637.

PICTORIAL CHARADE.—START-LINE.

EXPLANATION OF THE FLORAL LOVE-LETTER.

MOST AMIABLE LOVE.—Your Sweet Disposition, Feminine Modesty and Virtue, have long occupied my Thoughts, and filled my heart with Unchanging Friendship, and, hitherto, Love sweet and Secret, towards you. Your conversation has ever been replete with Wit and Wisdom, attended with a Desire to Please; and I should experience Lasting Pleasure and Felicity if blessed with your Lively and Pure Love. I trust you will pardon my Liberty, when I say that you possess Beauty; at the same time, it would be falsehood in me to observe that Beauty is your only attraction, since to Confidence, Candour, and Innocence, are united in you an Amiable and Sweet Disposition, with every Attractive Grace. Could I but win your Smiles, your Confidence, and Obedience, Love, it shall be my Pride through Life to prove to you my Devotion and Constancy. Suffer me not then, Sweet Innocence, to feel Disappointment and Extinguished Hope, but reward my Declaration of Love—True Love, with Love returned. Your Goodness, Generosity, and Humanity, convince me that you cannot practice Deceit; and as Charity and Cruelty cannot inhabit the same bosom, I feel Felicity in thinking you will not, by cold Indifference, doom me to Melancholy and Despair. Darest, then suffer no Obstacle to impede our happy Union. I burn, in Truth, with the Flame of Love, while Hope sustains me.—Adieu, Forget-me-not.

In Bonds of Affection and Friendship,  
Believe me through Time Unchangeable,  
Yours,  
I AGO FF—

CONUNDRUMS.—1. Ceylon (sail on). 2. When it is (a action (inaction)). 3. A thin head (cascade). 4. The mandarin (man during). 5. Because he is in an untidy state of suspense. 6. Newfoundland. 7. O X B (Oxybow) one of the standard legs. 8. In a merry key (America). 9. When they are passing round the Cape (Cape of Good Hope). 10. India rubber. 11. Because whatever his business transactions may be, he always gains his pocket (profit). 12. The Cannibal. 13. Him (helm). 14. When they are in a hurry. 15. Tort (as an adjective, now) as a substantive, object. 16. Ministry (money). 17. Because he is not able (not-able). 18. Unhappy (you shanty). 19. Dry. 20. The one and all (hol).

ENIGMAS.—1. Fox glove. 2. Mass-rope. 3. Bachelor's button.

### Editor's Note-Book.

#### DOMESTIC HINTS:—No. 16.

**Food and Drink of Children.**—Happy indeed is the child who, during the first period of its existence, is fed upon no other aliment than the milk of its mother, or that of a healthy nurse: if other food becomes necessary before the child has acquired teeth, it ought to be of a liquid form; for instance, biscuits, or stale bread, boiled in an equal mixture of milk and water, till the consistency of a thick soup; but by no means even this in the first week of its life. Flour or meal ought never to be used for soup, as it produces viscid humours, instead of a wholesome nutritious chyle. After the first six months, weak veal or chicken broth may be given, and also, progressively, vegetables that are not very flatulent; for instance, carrots, endive, spinach, parsnips, with broth and boiled fruit, such as apples, pears, plums, and cherries. When the infant is weaned, and has acquired its proper teeth, it is advisable to let it have small portions of meat, and other vegetables, as well as dishes prepared of flour, &c., so that it may gradually become accustomed to every kind of strong and wholesome food. We ought, however, to be cautious and not, upon any account, to allow a child pastry, confectionary, cheese, heavy dishes, made of boiled or baked flour, onions, horse-radish, mustard, smoked and salted meat, especially pork, and all compound dishes; for the most simple food is the most salutary. Potatoes should be allowed only in moderation, and not to be eaten with butter, but rather with other vegetables, either mashed up or in broth. The time of taking food is not a matter of indifference: very young infants make an exception; for, as their consumption of vital power is more rapid, they may be more frequently indulged with aliment. It is, however, advisable to accustom even them to a certain regularity, so as to allow them their victuals at stated periods of the day; for it has been observed, that those children which were fed indiscriminately through the whole day, were subject to debility and disease. The stomach should be allowed to recover its tone, and to collect the juices necessary for digestion, before it is supplied with a new portion of food. The following order of giving food to children has been found proper, and conducive to their health:—after rising in the morning, suppose about six o'clock, a moderate portion of lukewarm milk, with well-baked bread, which should by no means be new; at nine o'clock, bread with some fruit, or, if fruit be scarce, a small quantity of fresh butter; about twelve o'clock, the dinner, of a sufficient quantity; between four and five o'clock, some bread with fruit, or, in winter, the jam of plums, as a substitute for fruit. On this occasion, children should be allowed to eat till they are satisfied, without surfeiting themselves, that they may not crave for a heavy supper, which disturbs their rest, and is productive of bad humours: lastly, about seven o'clock, they may be permitted a light supper, consisting either of milk, soup, fruit, or boiled vegetables, and the like, but neither meat nor meaty dishes, nor any articles of food which produce flatulency; in short, they ought then to eat but little, and remain awake at least for one hour after it. It has often been contended that bread is hurtful to children; but this applies only to new bread, or such as is not sufficiently baked; for instance, our rolls, muffins, and crumpets, than which nothing can be more hurtful and oppressive. Good wheaten bread is extremely proper during the first years of infancy; but that made of rye, or a mixture of wheat and rye would be more conducive to health after the age of childhood. With respect to drink, physicians are decidedly against giving it to children in large quantities, and at irregular periods, whether it consist of the mother's milk, or any other equally mild liquor. It is improper and pernicious to keep infants continually at the breast; and it would be less hurtful, nay even judicious, to let them cry for a few nights, rather than to fill them incessantly with milk, which readily turns sour on the stomach, weakens the digestive organs, and ultimately generates scrofulous affections. In the latter part of the first year, pure water may occasionally be administered; and if this cannot be procured, a light and unfermented table-beer might be substituted. When parents who accustom their children to drink water, and know on them a future, the value and superiority of which will be sensibly felt through life. Many children, however, acquire a habit of drinking during their infancy; it would be more conducive to digestion, if they were accustomed to drink only after having made a meal. This useful rule is too often neglected,

though it be certain that inundations of the stomach, during the mastication and maceration of food, not only vitiate digestion, but they may be attended with other bad consequences; as cold drink, when brought in contact with the teeth previously heated, may easily occasion cracks or chinks in these useful bones, and pave the way for their carious dissolution.

**Story Books.**—M. S.—Thanks for the hint, which has recalled to our memory those halcyon days of early boyhood, when the nursery rung with our notes of wondering delight at the close of one of those happy stories with which an aged aunt used to beguile us of many a drowsy hour. She was a *maître d'esprit* at story-telling, and although her narratives were sometimes dashed with melancholy, they usually assumed quite another colouring, and were as bright and sunny as any fabled land where the sun never sets, and where every object shines with the brilliancy of burnished gold. Her stories, however, had no aim beyond the vulgar excitement of wonder, and were often as remarkable for their startling adventures as those of Baron Munchausen, or the "Arabian Nights' Entertainments." All these notables of the nursery have passed away, having been in a great measure supplanted by tales equally entertaining, with the additional advantage of having a moral aim, calculated to impress the mind with principles capable of being acted upon throughout the great struggle of life. Without beating about for a proof of this, we may instance the beautifully illustrated "Story Books by Aunt Mary," now publishing by Messrs. Houlston and Stoneman. These are bound in cloth and lettered in silver, and convey principles as praiseworthy as we hope they will be enduring. Such story-tellers are invaluable to youth, and cannot but prove attractive. There are, however, said to be, other story-tellers, who "live and move and have their being" in and about the great city of London, whose attractions to the idle and dissipated are of a very questionable kind, and who are to be seen in living volumes sometimes rather stiffly than beautifully bound

IN CLOTH AND LETTERED.

**To MAKE APPLE FRITTERS.**—G. S.—Take one pint of milk, three eggs, salt just to taste, and as much flour as will make a batter. Beat the yolks and whites separately, add the yolks to the milk, stir in the whites with as much flour as will make a batter; have ready some tender apples, peel them, cut them in slices round the apple; take the core carefully out of the centre of each slice, and to every spoonful of batter lay in a slice of the apple, which must be cut very thin—lay them in hot lard to a light brown on both sides.

**THE TIMES.**—T. F.—The *Times* circulates 40,000 copies daily, or about 12,000,000 in the year, which is equal to the circulation of all the rest of the London newspapers. **CAPE AND HATS.**—A. L.—The introduction of caps and hats is referred to 1449; the first seen in these parts of the world at the entry of Charles VII. into Rouen, and from that time they began to take place of the hoods, or "chaparons," that had been used till then. When the cap was of velvet, they called it mortier; when of wool, simply bonnet, as still called amongst the Scotch. None but kings, princes, and knights, were allowed the use of the mortier. The cap was the head-dress of the clergy and graduates, churchmen and members of universities; students in law, physic, &c., as well as graduates, wear square caps in most universities. Doctors are distinguished by peculiar caps, given them in assuming the doctorate. Pasquier says, that the giving the cap to students in the universities, was to denote that they had acquired full liberty, and were no longer subject to the rod of their superiors, in imitation of the ancient Romans, who gave a plectrum or cap to their slaves, in the ceremony of making them free. The cap was also used as a mark of infamy in Italy. The Jews were distinguished by a yellow cap at Lucce, and by an orange one in France. Formerly, those who had been bankrupts were obliged, ever after, to wear a green cap, to prevent people from being imposed on in any business with them.

**CONVERSATION RECAPTURED.**—T. F. (study to be well bred yourself, and then you will find that to be the best security against the ill-manners of other people). R. T. (the golden rule is, to do as you would like to be done unto; but as this is not very easy to practice at all times,

we should recommend you to set up, in it as nearly as you can). L. A. (about five years are required before leeches attain a state of maturity; while very young, they are quite unfit for medical purposes. They are caught in various ways, either by the hand, or by persons wading in the shallow waters during the spring of the year, when they adhere to his naked legs; but in summer, as they have retired to deeper water, a raft of twigs and bushes is constructed, by which a few are entangled). G. S. (there are some who believe such things, but it is a sure mark of intellectual weakness; as the howling of a dog foretelling death, and dogs seeing death entering the houses of people who are about to die; we think it just as absurd as any other absurdity which took its rise in ages of ignorance and superstition, and which is now extinct). S. D. (we do not wish to advise in your individual case, but we think that the very poorest of all family goods are indolent females. If a wife knows nothing of domestic duties beyond the parlour or boudoir, she is a dangerous partner in these times of pecuniary uncertainty). G. F. S. (we believe it is true, that not one solitary epistle in the handwriting of George II. is known to exist). M. L. (No; dress is not everything, but it is a great deal and goes a long way towards securing your attention and civility as society is constructed. If you have entered a coffee-house, or the public room of a tavern, you must have remarked that the ratio of civility and attention from the waiter is regulated by the dress of his various customers). T. B. F. (go anywhere to overcome your propensity for strong drinks. Bury yourself in the woods of America, but do not settle in its towns, for there you will have more facilities than here, if you have money). S. L. (it was George III.). D. S. (the feeling is not quite extinct yet. There are still some of the old school of respectable tradesmen and merchants who will not take physic, be bled, or transact any particular business on a Friday, because it is an unlucky day. There are others for the same reason, who will not be married on a Friday, and others again, who would consider every child born on that day as doomed by misfortune. It is a common saying, and a popular belief, that—

"Friday night's dream on the Saturday told,  
Is sure to come true be it never so old."  
P. L. (True politeness consists in being easy yourself and in making every one about you as easy as you can). L. N. ("The Tempest," and "A Midsummer Night's Dream," are the most poetical and wonderful of Shakespeare's creations). P. G. (what matter? We cannot all be leaders. The only thing that you have to do in your case is to take care to be followed; not to be the last stands always in some rank of praise). A. M. (what you heard was no *Death Watch*, but a small insect (*Scaphium galatini pulsator*) lonely and retired, and frequently found amongst the dust of decayed rotten wood. By its regular pulsation, like the ticking of a watch, it is apt to surprise those that are strangers to its nature and propensities, who fancy, as you have done, that its ticking portends a family change; but this is an imaginary fear. The insect has been put into a box, and heard and seen in the act of pulsation, which is occasioned by its small proboscis beating against the wood, as if searching for food). M. A. (the eight principal public schools are considered to be those of Westminster, Winchester, Eton, Harrow, the Charter-house, Merchant Tailors', St. Paul's, and Rugby). T. B. (it is difficult personally to prove the experiment, but Dr. Kitchiner says, that the same quantity of wine diluted, intoxicates sooner than the same quantity drunk in the same time, without dilution; the wine being applied to a larger surface of the stomach, acts with proportionably greater quickness; though wine diluted sooner intoxicates, its effects are sooner over). P. S. (we could mention similar omens, which, as the event proved were construed as prophetic of ill-luck. Byron, for example, fell on the morning of his bridal, and observed it was a bad omen. On the Scottish Highlanders raising the standard for Prince Charles Stuart in 1745, the ornamental part fell off, which was considered by them an omen of failure in their enterprise. When Cooke, the solicitor-general was beginning to open the pleadings at the trial of Charles I. the King gently tapped him on the shoulder with his cane, crying "Hold! hold!" At the same moment the silver head of the cage fell off, and rolled on the floor. These and many more might be adduced to establish a belief in the fulfilment of omens, but no rational system of philosophy can support it).

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 42.—Vol. I.

SATURDAY, OCTOBER 16, 1852.

[PRICE ONE PENNY.]

"Here it is, Madame, here it is! It is the petition of a poor prisoner!"

PICCIOLA:

OR,

THE PRISON FLOWER.

(Continued from page 644.)

Thus the captive of Fénestrelle succeeded in drawing from those beloved studies which had intoxicated his fancy a charm which was not less illusive, and entered more and more into that sphere of poetry from whence we return like the bee from the bosom of the flower, all perfumed, and with a harvest of honey. Thus together with actual life he enjoyed an imaginative existence, that completion of the other without which men would only possess half the benefits of the Creator.

His time was now divided between Picciola the plant and Picciola the fair girl. After reasoning and labour, he had pleasure and love.

Pursuing his experiments upon the blooming of flowers, Charney felt each day new raptures as he investigated the ordinary wonders of nature. But his eyes were unable to penetrate into those subtler mysteries, so unapproachable by sight. He was lamenting his own want of power, when Ludovico presented to him, from his neighbour, the Italian conspirator, a strong magnifying-glass, by the aid of which he had been able to number eight thousand ocular facets on the corner of a fly. Charney felt a thrill of joy. Thanks to

this instrument, the most minute parts of his plant would appear clear to his view five times their natural size. Then he advanced, or thought he was advancing, with rapid strides, on the road of discovery! He divided and analysed the external envelope of his flower; he thought he could discover that those brilliant colours of the petals, their form, their purple spots, those bands of velvet or satin which were attached to their base, or ornamented their circumference, were not there only to please the eye by the sight of their beauty, but also to divide or reflect the rays of the sun, to lessen or increase their force, according to the wants of the flower, accomplishing the great act of fructification. Those bright varnished surfaces, shining like porcelain, were doubtless glandulous masses of absorbent vessels, intended for the reception of air, light, and moisture, for the nourishment of the seeds; for without light, no colour; without air and heat, no life! Moisture, heat, light: of these, then, were vegetables composed, those wonders of the earth!—and to this also they must return when they die.

Unknown to him, it often happened that, during his hours of study and delight, Charney had two attentive spectators, who followed him in all his movements, and, from sympathy took part in all his emotions: Gerhardt and his daughter.

Brought up under the eye of a father deeply imbued with the principles of religion, and passing his life in retirement and contemplation, Gerhardt's daughter possessed a character in which the most elevated and healthful feelings of our nature appeared combined. Her beauty, virtues, and graces, of both mind and person, could not fail to attract admirers; gifted with a

deep and extensive sensibility, she seemed especially formed for the exercise of the more tender affections; but if some slight prepossessions led for a moment, disturbed the serenity of her soul while surrounded by the gaieties of Turin, the captivity of her father had absorbed all such transient impressions in one great sorrow.

Could she who was now alone devoted to the Saviour, who had suffered for her on the cross, and the father who was languishing in a prison, open her heart to one who should offer himself in all the sunshine of happiness? The fair Turinise had not weakly abandoned herself to sadness and melancholy; all her duties were pleasures, all her sacrifices brought joy to her heart; but was it near the happy of the earth that she could find joy? Where she could dry a tear or awaken a smile, there was her place, her pride, there her triumph! That sweet task is almost the only one she had hitherto fulfilled. But from the moment she beheld Charney, both interest and compassion were excited in her breast. He, like her father, was a captive; he was near her father; he had now nothing to love in the world but a poor plant, and he loved it so much! The manly countenance of the prisoner, his noble brow, his elegant figure, doubtless excited the pity of the young girl; but had she known him in the time of his fortune, at that time when the false appearance of external happiness surrounded him—no, she would not then have distinguished him from others. What charmed her in him was his isolation, his misfortune, his resignation. She instinctively devoted to him her friendship, even her esteem; for, in her ignorance of the world, she placed misfortunes in the number of virtues.

This lovely, excellent girl, as bold when a good action was to be performed, as she was timid when an eye was to be encountered, too forgetful perhaps of danger, constantly encouraged and incited her father in his kind intentions towards Charney.

At length, one day, Gerhardi, on showing himself at his window, did not, as usual, content himself with saluting the count with his hand; he made him a sign to approach as near as possible, and moderating the tone of his voice, as in great apprehension of being heard by others, entered upon the following dialogue:—

"I have, perhaps, good news to give you, sir!"

"And I, sir, have thanks to return to you for this microscope you were so kind as to lend me."

"I have not even the merit of the idea; it was my daughter who suggested it."

"You have a daughter, sir; and they allow you the privilege of seeing her?"

"Yes, I am a father, and I thank God for it every day; for my poor child is an angel! She took a great interest in you, my dear sir, when you were ill; and since, while seeing you bestow so much care on yon flower. Have not you sometimes seen her at this grating?"

"Indeed—I think—"

"But while speaking to you of my daughter, I forgot I was going to tell you the great news. The emperor is going to Milan, where he is to be crowned king of Italy."

"King of Italy! Well, then, sir, he will be more than ever your master and mine. As to the microscope," putted Charney, "as the great news he had heard had but little withdrawn his attention from his first idea, and who did not suspect any consequences to follow from it, "you have long been deprived of it for me, - forgive me; perhaps I may still need it for approaching experiments; yet I will restore it to you soon."

"I can do very well without it; I have others," replied the fly-catcher, kindly, guessing from the sound of the speaker's voice the regret he would feel at losing the instrument. "Keep it, sir, keep it in remembrance of a companion in captivity, who, believe me, feels a lively interest for you."

Charney would have expressed his gratitude to the generous man,—he interrupted him:

"But let me finish what I have to tell you;" and lowering his voice, "it is asserted that pardons will be granted, on account of this second coronation of the new emperor. Have you friends in Turin or Milan? Are there any means of making them interest themselves?"

The person addressed sadly shook his head.

"I have no friends," said he.

"No friends!" repeated the old man, with a look full of pity. "You have then doubted mankind! for friendship never fails those who believe in it. Well, I have friends; friends whom even adversity could not shake. They will be able, perhaps, to do for you what they are still unable to do for me."

"I will ask nothing of General Buonaparte!" replied the count, in a proud, stern tone, in which all his old animosity suddenly reappeared.

"Hush!—speak lower—I think I hear some one coming—but, no—"

There was a moment's silence, then the Italian continued in a tone where reproach was softened as if coming from the mouth of a father:

"Dear companion, you are still irritated. I should have hoped that the studies to which you have devoted yourself for so many months would have extinguished those feelings of hatred which God reproves, and which pervert the life of man. Have not the perfumes of your flower entirely healed the wounds received from the world? That Buonaparte, whom you seem to hate—I have more to complain of him than you, perhaps, for my son died from having served him."

"Ah! that son, you would have avenged him!" quickly interrupted Charney.

"I see that those false reports have reached you even," said the old man, nobly raising his head towards heaven, as if to call God to witness. "I avenge myself by a crime! no! But, in the first moments of my grief I could not restrain myself; it is true; and whilst the people of Turin saluted

the conqueror with acclamations of joy, I opposed my cries of despair to the vivas of the crowd. I was arrested; I had a knife about me; the base parasites, to gain favour with their master, had no difficulty in making him believe that I wished his life. They treated me as an assassin, when I was only an unhappy father, who had just learned the death of his son. Well, I can believe that he may have been deceived; I can even believe that this Buonaparte is not a cruel man, for he has not put either you or me to death. If he restores me to liberty, he will but have repaired an error with respect to me. I will bless him, however; not that I cannot support captivity. Full of faith in Providence, I am resigned to all. But my imprisonment weighs upon my daughter; it is for my daughter that I would be free, to put an end to her exile from the world, that she may again enjoy the pleasures of her age. Have you not also some being in whom you are interested; a wife who weeps for you, and for whom you will be happy to sacrifice your scorn of oppression? Come, authorise my friends to speak in your name."

Charney smiled. "No wife weeps for me," said he; "no one sighs after my return, for I have no more gold to give them. What should I then do in that world, where I was less happy even than I am here? But could I again find friends, fortune, and happiness, I would still say, No! a thousand times No! if it were necessary to humble myself before the power I have tried to destroy."

"What! all hope is then denied you by yourself?"

"Never will I salute with the title of emperor him who was my equal."

"Take care lest you foolishly sacrifice your future to a sentiment which has more perhaps of vanity than of patriotism in it. But hush!" said the old Gerhardi again, "for this time I do not deceive myself; some one is coming. Adieu!" and he left the grated window.

"Thanks, thanks, for the microscope!" cried Charney, before he had quite disappeared from his sight.

At that moment Ludovico made the low door of the court grate upon its hinges. He brought the prisoner his daily provision. He saw him thoughtful and contemplative; and not wishing to disturb him, he contented himself with gently rattling the plates he held while passing near him, to warn him that his dinner was ready. Then taking it all up into his room, he soon retired, after having silently saluted *monsieur dîd madame*, as he sometimes said, that is to say, the man and the plant.

"The microscope is mine!" thought Charney. "But how have I merited the benevolence of this kind stranger!" and seeing Ludovico at the time, crossing the court, "he also has gained my esteem. Under the coarse exterior of a jailor there beats a noble heart; I am sure of it. There are, then, kind and benevolent men in the world; but where do they hide themselves?"

And he seemed to hear an internal voice answer, "It is because misfortune has taught you to comprehend a benefit, that men appear to you less deserving of contempt. What is it then that these two men have done? One has watered your plant unknown to you, the other has given you the means of understanding and analysing it better."

"Oh!" said Charney to himself, "the heart does not deceive itself; there was on their part true generosity!"

"Yes," replied the voice; "but it is because that generosity is exercised towards you that you do them justice. If Picciola had not existed, you would perhaps still have seen in the one of these two men only an old fool, given up to degrading occupations; and in the other a rude being, debased by sordid avarice! In your former society, did you love anything, monsieur le comte? No, your heart was isolated like your mind. Here it is, because you love Picciola, that these two men have loved you; your love to the flower has attracted them towards you."

And Charney looked by turns at his plant, and at his precious microscope—Napoleon, emperor of the French, king of Italy! That terrible formula, the half of which was sufficient formerly to make him a furious conspirator, scarcely presented itself to his mind at that moment.

What matter to him the triumphs of the newly-elected of the nations, and the liberties of Europe! An insect that buzzed menacingly around his flower, caused him more agony and care than all the usurpations of the new empire!

## CHAPTER X.

He resumed his labours; armed with that glass, henceforth his own property, he repeated his observations, he extended the field of his discoveries, and his enthusiasm increased from day to day. It must be acknowledged indeed, that, inexperienced in analysis, ignorant of the first rudiments, and without instruments sufficiently powerful, sometimes unconsciously led him to indulge the spirit of system and paradox, while pursuing his examinations. Thus he invented a thousand theories for the circulation of the sap, on the means by which it rose, spread, and changed, without suspecting its double circulation; on the different colours of the plant, as well as on the source of the difference in smell of the stalk, leaves, and flowers; on the gum and resin distilled by vegetables; on the wax and honey which the bees procure from them. He found at first a reply to all; but the system of the morning came to destroy that of the evening; and he was pleased at his own impotence, since it forced him to exert all the faculties of his mind and of his imagination, and did not allow him to see a termination to these interesting occupations.

A day of triumph was coming for him, a glorious day, when he should inscribe the most important of his observations.

He had formerly heard the loves of the plants, that ingenious and sublime discovery of Linnæus, spoken of, and had heard of the numerous nuptials

that are performed in a corolla, under shelter of the petals; but at the time he had bestowed but a contemptuous attention to the subject. Aided by his microscope, he now gave himself up entirely to this new series of studies; he spied, he was patient; he at length penetrated the mysteries of this nuptial couch! Under his eyes, a movement of life and love manifested itself in every part of the flower; by a double attraction the pistils and stamens approached one another, and seemed for an instant to feel the animation of living, thinking beings! Amazed, confounded, Charney doubted if he were awake, his head could not contain the ardent admiration with which he was penetrated. By analogy, his thoughts, mounting from plants to animals, embraced the whole scale of creation, in its harmony, in its immensity. He doubted if the secret of the universe were not in his possession! his eyes became dim, the instrument fell from his hand; the bewildered philosopher fell upon his rustic seat, folded his arms, and then, after long meditation, addressing his plant,

"Picciola," said he, "formerly I had the whole world to travel over; I had numerous friends; I was surrounded by learned men of all kinds; well! none of these learned men ever taught me so much as thou; not one of my friends, or rather of the men who usurped that title, rendered me the good offices that I have received from thee alone; and in this circumscribed place, where thou miserably vegetatest between two stones, have I, walking up and down, and around thee, without my eye losing thee, thought more, felt more, observed more, perhaps, than in my long journeys through Europe. What was my blindness! when thou didst offer thyself to me, so weak, so pale, so languid, I expected nothing from thy appearance; and it was a companion that was arriving for me, a book that was opening before me, a world that was about to be revealed to my eyes! That companion softened my griefs, and banished them, she attached me again to that existence which she preserved for me: she taught me to know men, and reconciled me to them! That book made me despise others; it convinced me of my ignorance, and cast down my pride; it made me comprehend that science, like virtue, is acquired only by humility; that we must descend to rise; that the first step of that immense ladder, the top of which we hope to gain, is buried in the earth; and it is by that we must begin! It is the book of light, perhaps! Written in living characters, in a language still mysterious to me, it offers me those sublime enigmas, of which each word is consolation, for my solution. I can no longer doubt that that earth is the work of design; it is the intelligent creation, it is the abstract, the criterion of the eternal, the celestial world; the revelation of that immense law of love, which rules the universe, which makes atoms and suns gravitate; which connects in one link the plant to the stars, the insect which grovels on the earth to man who raises his front to heaven to seek there—his Author—certainly!"

Charney, much agitated, walked quickly up and down his court; thoughts succeeded thoughts in his head; a struggle was carried on in his heart; then he returned to Picciola, contemplated it with emotion, cast a rapid look to heaven, and murmured these words:

"My God! my God! Too much of false science has obscured my reason, too many sophisms hardened my brain, for you to penetrate it so soon. I cannot understand you yet; but I call you; I cannot see you, but I seek you!"

Returning to his chamber, he read on the wall:

*God is only a word.*

He added:

*May not this word be the solution of the great enigma of the universe?*

There was still the expression of doubt; but was not the admission of a doubt into that proud mind, striking thus with an anathema his first negation, and retracing the wanderings of his mistaken path, equivalent to a confession that he already felt himself half conquered? Now the shaken philosopher no longer leans on himself alone; he has now no longer faith only in his own strength, in his own reason; while yielding to these unknown emotions, it was of Picciola he demanded a faith, a God, a support; and again he questioned her with fervour, that she might dissipate the remaining obscurity that surrounded him.

## CHAPTER XI.

Thus his days slowed on; and after hours entirely devoted to study and examination, he would turn when fatigued by his labours, from Picciola the plant, to seek relaxation with Picciola the young girl. As soon as the perfume of his flowers surrounded him by their abundant exhalations, when his head became heavy, and his eyes avoided the light,

"This evening there shall be a fête with Picciola," he would say to himself.

In fact, sinking into a reverie, he was not long in falling into that sort of half sleep, peopled by dreams, which a gleam of instinctive reason is still able to direct. Oh! would it not be one of the most delicious enjoyments reserved for men, to be able to give a direction to his dreams, and to live that other life where events pass on with such rapidity, where ages only last an hour of existence, when a magic reflection seems to colour all the actors of the drama that is played, where emotions alone are real? There the substance of all things is effaced to leave only their pure essence. Do you wish for them? harmonious concerts are heard, and you will not be annoyed by the sound of tuning, the contracted figures of the musicians, the fantastic and ungrateful forms of the instruments; it is the life of souls, it is pleasure without regret, it is the rainbow without the storm!

Charney abandoned himself to these illusions. Faithful to the sweet image of Picciola, it was she whom he called, it was she who first appeared to him, always under the same features, with the same grace, young, modest, and charming; appearing sometimes in the midst of his ancient companions of

science and pleasure, sometimes with the only beings he had loved, and who were no more—his mother and his sister; and she renewed for him scenes full of sweet pleasure, inexpressibly delicious in remembrance, of youth, and of domestic ties, and she mixed with them, to render them sweeter still. Sometimes she suddenly introduced him into a house of modest appearance, but where ease and good taste presided. The persons amongst whom he found himself were unknown to him, but they received him with smiles, and he already felt himself at the paternal hearth. After having reanimated his extinct family, his joys of the past, did she then evoke another family for Charney, and prepare the joys of the future? He could not explain it himself; but on awakening, he felt confidence in his destiny, and took regular note, on his journal of fine linen, of the events of his dreams; these were the only happy events of his life, except his captivity.

It happened however once that Picciola, in one of those fêtes, where he was used to recognise her by her tranquil and happy air, inspired him with a sudden dread. Later, he only recalled it to believe in revelations, in the prescience of the soul. It happened thus:

The perfumes of the plant marked the sixth hour in the evening. Never had they been stronger, more powerful, for thirty full-blown flowers united to maintain the magnetic atmosphere, in the midst of which Charney was growing drowsy. Wandering from the crowd, he breathed the air of a verdant esplanade, where his beloved phantom alone followed his steps. Picciola advanced with smiling look and gesture; and he, in a contemplative attitude, was admiring the easy figure of the fair girl, the light waving folds of her white robe, which betrayed the harmony of her motions, and the curls of black hair in which appeared the accustomed flower. Suddenly he saw her stop, she tottered, extended her arms to him; the seal of death was imprinted on her brow. He tried to rush towards her; an unconquerable obstacle retained him rooted to the spot. He uttered a cry, and awoke; but awake, another cry answered to his; yes, a cry! a woman's voice! Yet he found himself quite well, in his court, on his bench, near his plant! He turned his eyes, and like an apparition, another young girl appeared to him through the little grated window. At first that melancholy graceful countenance, half shaded as it was, seemed to his eyes to float in indistinctness. But he saw it gradually become clear, a penetrating look was cast on him; he rose, approached, and suddenly the sweet vision faded; or rather, the young girl fled away.

However rapid had been her flight, he had nevertheless seen her features, her air, her figure, and the whiteness of her robe: he remained motionless; he thought he was not quite awake, and that the insurmountable obstacle, which in his dream had separated him from Picciola, was the grating of a prison.

Ludovico ran to him in great alarm, and found Charney still agitated.

"Signor count," said he, "is your illness going to attack you again? By my soul! this time they will bring the physicians because it is the rule; but it is madame Picciola and I who will undertake the cure."

"I am not ill," said Charney, with difficulty recovering himself, "what made you think I was?"

"The daughter of the fly-catcher, then! She saw you, heard you cry out, and hastened to tell me of it."

Charney became thoughtful. It was only then he remembered that a young girl sometimes inhabited that part of the fortress.

"The resemblance I imagined I discovered between this stranger and Picciola is certainly only an illusion of my senses, still under the influence of my dream," said he to himself.

Then he recalled the interest which, according to the old man, the young Piémontese had shown for him. She had pitied him during his illness, it was to her he owed possession of the precious microscope, and he felt his heart swelled with pleasing gratitude! Under its first impulse, having still before his eyes the double image of the young girl of his dreams and of her of his awakening, a thought struck him; "She does not wear a flower in her hair!"

Not without hesitation, not without a secret reproach, as if at that moment he was guilty of profanation, he broke, he silently gathered, with a trembling hand, a little flower branch from his plant.

"Formerly," said he to himself, "how much gold did I foolishly lavish to cover with pearls and diamonds brows prostituted to perjury! To how many deceitful women and false friends did I throw my fortune in shreds, without caring more for it than for the real feelings of my heart, which I also cast beneath their feet and my own! Ah! if a gift be estimated only by the value attached to it by the donor, never have I proffered a more precious offering, than that which I borrow from thee to-day, Picciola!" And putting the little branch into the jailor's hand, "My good Ludovico, present this from me, to the daughter of my old companion. Say that I thank her for the interest she has deigned to show for me, and that the count de Charney, poor and a prisoner, possesses nothing more worthy of her acceptance."

Ludovico received the flower with an air of amazement.

He had now so completely identified himself with the love the prisoner felt for his plant, that he could scarcely conceive how so slight a service could render the daughter of the fly-catcher worthy of a present of such vast munificence.

"It is all the same! By the head of St. Pascal!" said he, going out, "they have as yet only seen my god-daughter at a distance; they will now be able to judge by the sample, how pretty she is, and how sweetly she smells!"

Charney was soon obliged to part with many more of his flowers; for the time of the fructification of his Picciola was drawing near. Some of the flowers had already lost their brilliant petals, and their stamens had become useless. They fell, as formerly the cotyledons did, when the first leaves,

arriving at an age of strength, could do without their aid. Now, the ovary containing the germ of the seeds began to swell beneath the enlarging calyx. The maternal flowers laid aside their splendour, like women, careless of gay attire, when the sacred cares of a mother arrive.

He prepared for new observations, doubtless the greatest, the most sublime, he had yet made; for they would refer to the duration of created races, to the reproduction of beings, whose fecundation was only the determining act. Already, in analysing a bud, separated from the stalk by the bite of an insect, he had a glimpse of that primitive germ, that weak embryo, which is not born of the loves of the flower, but which requires that to vivify and be developed. Admirable foresight, comprehensive combination of nature, and which science has not yet been able to explain! He now turned his attention to the birth of the complete being, of that seed within whose narrow limits is contained the whole plant; a phenomenon for which others have been only the preparation. The moment arrived for the observer to study the progress of the vegetable egg in all its stages; in the bud, in the brilliantly ornamented flower, and under that calyx divested of its petals. He must again dismember Picciola, but will she not easily repair her losses? On all sides, on the joints of the stems, under the foot-stalks of the leaves, budding branches were swelling, announcing a future blossoming; then Charney will be able to manage it. To-morrow he will begin his work.

On the morrow he took his seat on the bench, with the gravity of a man who is going to attempt a difficult experiment, but the success of which may be expected. At the first glance he gave his plant, he was surprised at the drooping appearance of every part. The flowers, hanging down on their stalks, seemed no longer to have strength to turn towards the sun; the leaves, half turned back, had lost the brightness of their shining green. Charney at first thought a violent storm was coming on, and instantly hung his mats and cloths to shield Picciola from the too violent attacks of the wind and hail. But the sky was free from clouds, the air calm, and the invisible lark, lost in space, was singing her gay song. His brow grew dark; after an instant's thought, "It wants water," he said. He ran to his chamber for it, knelt down before the plant, putting aside the lower branches, the better to water the roots, and there he remained, as suddenly struck motionless. His eyes were fixed on the ground, on the same spot; the arm that held the watering-pot remained suspended, and his countenance looking as if thunderstruck. He had discovered the source of the evil!

Picciola was dying!

Whilst it was multiplying flowers and perfumes before his eyes, for his studies and his pleasures, its stalk had also increased, confined at the bottom between two stones; strangled under a double pressure, it was at first surrounded by a large swelling, but this rubbing soon split it at the edges of the stones, and the nourishing juices of the plant were wasting by several fissures at once.

Picciola required more soil: exhausted of strength and sap, she would die if prompt assistance could not be brought her. She was going to die! Charney saw it. One means alone remained to save her. It was to raise the stone that pressed upon her; but how could he do it? Deprived of tools, his efforts would be vain. He rushed towards the little entrance door, knocked at it with redoubled blows, at the same time calling Ludovico. He came at last; the recital, the sight of the disaster confounded him; but, notwithstanding the feeling of interest that his god-daughter inspired, the jailer only answered the prayers of Charney, who conjured him to take up the paving stones, by these words:-

"I can do nothing with it! nothing, signor count." (See engraving, p. 61).

This time the prisoner offered not one jewel from his precious box, but the box itself, with all that he possessed. Ludovico drew himself up, folded his arms firmly on his breast, and resuming his jailer manner, his tone half Provençal, half Piedmontese:

"What signor count! you would offer me a treasure! I am an old soldier, and I know my orders. Address yourself to the commandant."

"No!" cried Charney; "rather break the stones myself, tear them from the earth, though I should leave my nails there!"

"We shall see—we shall see! At any rate, do as you like!"

And Ludovico, who at his entrance had carefully half extinguished his pipe, and held it at a distance while addressing the prisoner, replaced it abruptly in his mouth, rekindled it with a strong breath, and suddenly prepared to go away. Charney detained him.

"My good Ludovico, you whom I have always found so kind, can you not do anything for me?"

"Confusion!" said he, seeking to defend himself by oaths from the emotion that was mastering him; "give me peace, you and your cursed gilliflower! Pardon me, for the poor little one, she is not the cause of your diabolical obstinacy. What! you will then have the heart to let her die thus, without help!"

"But what can I do?"

"Address yourself to the commandant, I tell you."

"Never!"

"Let us see," said Ludovico; "if it costs you so much, will you let me speak to him?"

"I forbid you to do so!" cried Charney.

"How! You forbid me!" replied the jailer. "What! am I to receive orders from you? If I will speak to him of it, I will! No! I will not speak to him about it. In fact, you are right; what matters it to me? Let it die! Let it live! Need I trouble myself about it? What matters it to me? You do not wish it? Good morning!"

"But your commandant, will he understand me, do you think?" said Charney, suddenly relenting.

"Why not? do you take him for a fool? Explain it to him cleverly, with pretty phrases, not too long; you are a learned man, this is the moment to show it; why should he not comprehend what makes you love your plant? I understand it very well. Then I shall be there, so make yourself easy. I will tell him how good it is for a decoction, for all sorts of diseases; he has not very good health, he has rheumatism just at this moment; that is just the thing, he will understand it better."

Charney still hesitated: Ludovico winked, pointed to Picciola in its sickly condition. The other nodded, and Ludovico went out.

Some instants after, a man, in a half-military, half-civil costume, brought the prisoner a writing-desk complete, with a sheet of paper, bearing the commandant's stamp. As Ludovico had told him, the man remained while Charney wrote his request; he took it sealed from his hands, saluted him, and carried away the desk.

Perhaps you smile with contempt at seeing the pride of the noble count so easily brought down, and that strong will yielding at the aspect of a fading flower. Have you then forgotten that Picciola was everything to the prisoner? Do you not know how solitude and captivity can act upon the proudest, firmest spirit? Had he recourse to that act of weakness with which you reproach him, when he himself, cast down by suffering, sinking for want of air and liberty, was pressed between the stones of his prison, like his plant between the pavement? No! but between him and her are established mutual services, sacred engagements; she has saved his life, and he must now save hers in his turn!

The old Gerhardt saw Charney walking backwards and forwards in his count, agitated with all the signs of expectation and impatience. How long that reply appeared to him coming! three hours had passed away since his message was sent to the governor, and during that time the plant became more and more exhausted for loss of sap. Charney would certainly have seen his own blood flow with more composure. The old man tried to console, gave him hope; and, more experienced than he in the knowledge of vegetables and their diseases, showed him the means of stopping the wounds of Picciola, and preserving it at least from one of the dangers by which it was menaced.

According to his counsel, Charney with a mixture of chopped straw and wet earth, composed a clay which he applied to the wound. His handkerchief torn up furnished bandages and fastenings to fix it in its place. In these occupations another hour passed away, but the answer did not arrive.

When the dinner-hour came, Ludovico entered the count. His gloomy, abstracted countenance announced nothing good. He scarcely deigned to answer the questions of the prisoner, except in short, abrupt phrases.

"Wait awhile! You are in a great hurry. Leave him time to write!"

He seemed to be preparing himself beforehand for the part he foresaw he should have to play in the affair.

Charney would not dine.

He endeavoured to be patient while waiting the decree of life or death for Picciola, and to gain courage; he tried to prove to himself that the governor could not, without being a cruel man, refuse him so simple a demand. His impatience, however, increased, and he was as much astonished as if the commandant could not have had more pressing business to transact than his. At the least noise, his eyes turned suddenly towards the little door, by which he continually thought he saw the messenger returning.

The evening came—nothing! Night—nothing! He could not close his eyes.

## CHAPTER XII.

THE next day, that reply, so impatiently expected, was at last given to him. The commandant told him, in a dry, laconic style, that no change could be made in the walls, fosses, or fortifications of the citadel, without the express authority of the governor of Turin; with respect to his demand he would refer it to his Excellency; for, added he, *the pavement of the court of a prison is also a wall.*

Charney felt confounded on reading this message. To make the existence of a flower a question of state! A displacing of the fortifications! To wait the decision of the governor of Turin! To wait an age, where a day may destroy! Would not this governor in his turn refer to the minister? the minister to the senate? the senate to the emperor? Oh! how strongly then awoke his contempt for men! Ludovico himself now only seemed the agent of his executioner. To his exclamations of despair Ludovico answered in the language of consolation; to his entreaties, he opposed his military orders.

He drew near the sick one, whose brilliancy was fading, whose colours were vanishing. He contemplated it with grief. It was his happiness, it was his poetry, which was departing! Its perfumes now no longer announced the true time, like a watch out of order whose springs are stopped; each flower had sunk upon the other, and entirely ceased to turn towards the sun, as a sick girl closes her eyes, that she may not see the lover she fears that she too much regrets.

In the midst of these overwhelming reflections, the voice of his old companion in captivity was again heard.

"Dear sir," said the good old man, with his paternal accent, sinking his voice and stooping to the lowest bars of the grating, to approach more nearly him whom he addressed, "if it dies, and it will die, I fear, what will you do here alone, quite alone? What occupation will be able to interest you, after that which has had so many charms for you? Ennui will kill you in your turn; uninterrupted solitude becomes such a weight! you will not be able

to bear up under it; it is as it would be to me, should they now separate me from my daughter! from that guardian angel whose smile can console me for all! As to your plant; the wind of the Alps doubtless brought the germ to you, or a bird, perhaps, while passing dropped the seed into your court; but now should a similar circumstance send you another Picciola, it would be but to renew the regret for the first, for from the first you would expect to see it die like that one. Listen to me, dear sir, yield at length. Liberty will perhaps be easier than you think; several traits of generosity and clemency are already told of the new emperor. At this moment he is at Turin, and Josephine accompanies him."

He pronounced the name of Josephine, as if the certainty of success was attached to it.

"At Turin," interrupted Charney, quickly raising his head, until now sunk on his breast.

"At Turin for two days," repeated the old man, quite joyful, on seeing that his good counsels did not this time, as formerly, excite only a doubtful attention in the count.

"And what is the exact distance from Fénestrella to Turin?"

"By going through Giaveno, Avigliano, and the great road, it is sixteen miles, or nearly seven leagues."

"In how much time can it be travelled?"

"In four or five hours at least, for at this moment the route must be obstructed by the troops, carriages, and vehicles of all the surrounding districts, that are going to take part in the fêtes. The road which goes by the valleys is certainly longer, but will, I think, require less time."

"Tell me, sir, by your communications from without, could you find any one who would go to Turin to-day—before the evening?"

"My daughter will undertake it."

"And you say that General Bonaparte, the first consul—"

"The emperor," gently replied Gerhardt.

"Yes, the emperor—the emperor is still at Turin; is it not so?" replied Charney, strongly governed by one great resolution; "Well, I will write to him—address a supplication to him—to the emperor!"

He dwelt on the word as if to confirm himself in his new path.

"Oh! blessed be God!" cried the old man, "for it is from him come this good thought to you, where human pride has sunk. Yes, write—address yourself to him for your demand of pardon; Foscomboni, Cotenna, and Delarue, my friends, will support you as warmly as they will me myself, with the minister Maesalechi, the cardinal Caprara, and even Melzi, who has just been named keeper of the seals of the new kingdom. My dear companion, we shall perhaps quit this prison together, the same day, you, to recommence an active useful life; I, to follow my daughter where she wishes to go."

"Pardon me, sir, pardon me, if I do not yet seem entirely satisfied with the protection you have offered me with so much benevolence and disinterestedness. My esteem and my gratitude you have gained; but it is to the emperor himself that my demand must be presented, this evening, or to-morrow morning at the latest. Can you engage for me a faithful and devoted messenger?"

"Yes, as for myself!" said the old man, after having reflected for a little.

"Still another question," added Charney, "do you not fear being compromised by the signal services you are going to render me?"

"The pleasure of obliging effaces all fear, dear sir. If I can contribute a little to so late your misfortunes, let what will come. I know how to submit to the decrees of Heaven."

Charney felt touched to the bottom of his heart by these simple words; he contemplated the old man with moistened eyes.

"How much I would give to press your hand!" said he to him, and he stretched out his arm towards the little window. Gerhardt passed his through the grating, but it was in vain, he could not reach the hand that was extended towards him. Then, inspired by those sentiments of tender enthusiasm so warm in the soul of a recluse, he suddenly took off his cravat, held it by one end, threw the other to Charney, who seizing it with transport, and a double impulse, a double emotion, gave several affectionate vibrations to that insensible linen.

On repassing Picciola, "I shall save thee," murmured Charney.

He returned to his room, took the whitest and finest of his handkerchiefs, carefully mended his toothpick, renewed his ink, and immediately began to write; and when his petition was finished, which was not done without causing painful struggles to his rebellious pride, a little cord descended from the grated window, down the wall of the court; the petitioner attached his supplication to it, and the cord was drawn up again.

One hour after, the person charged with delivering the petition to the emperor took, with a guide, her route across the valleys of Susa, Busolino, and St. George, following the right bank of the Doria-Riparia; both were on horseback, but speed was impossible; unexpected obstacles stopped them in their course. The recent rains had undermined the earth, the river banks had fallen in in several places; torrents seemed to unite the Doria and the lakes of Avigliano. Already the forges of Giaveno reddened more and more in the distance behind them, announcing that the light would soon fail. Too happy then to follow the common road, they gained, but not without difficulty, the magnificent avenue of Rivoli; and it was only when the evening was far advanced that they arrived at Turin. There they learned the emperor had just departed for Alessandria.

(*To be continued.*)

## THE BRITISH MUSEUM.

It is difficult to imagine that extensive grounds, with terrace walks and fountains, and old ancestral trees, once occupied the space now covered with squares and narrow streets. Yet so it was. In days long past the British Museum was known only as Montague House, the residence of a ducal family. Great hospitality was exercised there, and those who looked from the northern boundary, might see troops of country children gathering cowslips among the grass, or breaking down branches of fragrant hawthorns, with which to bedeck their homes on May-day. The cuckoo's voice was often heard beside an ample stream that went murmuring towards the forest; nightingales repaired thither; and those who liked to walk through green lanes, when dew glistened on the grass, and the moon looked in her singleness and beauty over a sleeping world, might hear their melodious concert both far and near.

At length the Duke of Montague ceased to care for the noble building that bore his name; and the British government having purchased a museum, collected with great cost and care by Sir Hans Sloane, an eminent naturalist and physician, in the time of George I., entered into an agreement with the Duke for £10,000, and laid out £15,000 in repairs and alterations; £30,000 were then voted in the public funds, for the payment of salaries and defraying necessary expense.

My young days were spent amid woods and streams; and when first I passed through the iron gates, and stood in the great quadrangle, my heart beat tumultuously; I felt as if about to enter into some overpowering and mysterious presence.

And so in truth it was. Works of ingenuity and taste, wrought by men who perhaps lived when the Pyramids of Egypt were erecting, produce a powerful effect upon the mind. Nor these alone; for every room has its own embodyings of solemn thought; its magic wands, with which to open treasures of past ages, or else to call up images of intellectual individuals who have ranged the wide world in quest of knowledge.

Thus thinking, there is something inexpressibly affecting, when, turning aside from the great saloon, we enter the Ethnographical Room, our attention is directed to a variety of dissimilar articles, illustrative of nations far remote, partially civilized it may be, or of rude and ancient races; among these are specimens of art from Africa and India, from the wilder portions of North America, from the South Sea Islands, and Australia; China is recognized among them, and yet but slightly, when considering her ancient claim to knowledge and civilization. But who, in looking at figures on their china, corpulent and pig-tailed, and seemingly repeating to one another their favourite proverb, that "rest is pleasant, sleep is better, and death is best of all," could believe that they were acquainted with the directive power of a magnetic needle, resulting from its relation to the earth's magnetism, and that, in consequence, Chinese vessels navigated the Indian Ocean, with needles pointing to the south, at least seven hundred years before the introduction of the compass in European seas? Nay, more—that a thousand years previous to the coming of our Lord, the Chinese employed magnetic cars, in which the figure of a man, whose movable outstretched arms were directed to the south, guided them across the vast plains of Tartary.

We are now in the Egyptian room; and persons who like to contemplate the productions of various nations, with reference to their civilization, may find subjects of engrossing interest connected with the history of an ancient people once great in arts and arms.

Time was when Egypt was pre eminent among the kingdoms of the earth, when her astronomers gave names to stars; and those who sought for knowledge repaired thither from distant regions in quest of instruction. But her glory has departed, and we see around us the relics of what has been.

Look narrowly, young lady, at the cases marked LXXVII., LXXXIX., and XC., CI. Whispered words, from out their contents, may speak well to you; yes, words of solemn and yet pleasing import, telling you that though the maiden need not forego her ornaments, there are purer and holier adornings than those of gold and precious stones, which neither rust nor time may tarnish, nor stranger hands convey to distant climes. Observe those earrings, armlets, and bracelets, anklets, and finger-rings, chains, necklaces, and plates for wearing on the breast; they belonged to ladies of distinction, wrought from gold and precious stones, while bronze, and glass, and ivory, pertained to nymphs and dames of low degree.

Imagine Pharaoh's daughter going down to the banks of the old river, according to her wont, attended by her ladies, and each one having rings, and necklaces, and bracelets. For not then, as now, were such ornaments put aside by those who had a right to wear them; their fingers were decked with rings of considerable value, sometimes two or three; but the left hand was peculiarly privileged, and especially the third finger, which was covered with them. Imagine, also, the dress of the Egyptian lady,—a long robe or gown, descending from the neck to the feet, and over this a petticoat of richly-coloured patterns, secured by a golden girdle. Her sandals are finely painted and embroidered; those of her attendants are variously shaped; they are made of woven palm-leaves, of papyrus stalk, or leather, and are either flat or peaked at the toe. Imagine, too, her coming back from that same river, joyous with the thought of having rescued at least one doomed little one from the waters of the Nile. It may be her brother, or some dearer friend, is coming forth from out the palace of Pharaoh, to bid her welcome. Take notice of his dress and decorations. He also wears a richly ornamental necklace, formed of gold or beads of various qualities, substances, and shapes, disposed with great taste. He carries in his hand a cane or walking-stick, having his name engraven on the handle. His vestments are a long tunic or robe of fine linen, without sleeves, reaching from the neck nearly to the feet,

and terminated by a fringe; beneath this is a small kilt, or apron, fastened at the waist. A gentleman, somewhat advanced in life, wearing a flowing vest of the finest linen, and richly ornamented, is driving himself in his chariot, while servants run beside him carrying his sandals. He is going, most probably, to make a state visit; for a young man, swift of foot, keeps before the horses, ready to knock at the door of his master's friend; and to hold the reins when he has dismounted. His attire and attendants betoken him to be a man of rank; we may presume that he is a relation of the royal family, for he smiles on the young people, and courteously salutes them as he passes.

It is thus that we can most readily comprehend somewhat the manners of those ancient people, whose eventful history was taught to us in childhood, with reference to their utter desolation.

Examine well the cases which contain objects associated with the homes and domestic habits of the Egyptian. Cases XIV.—XIX., division 2, contain the model of a granary and yard. A female is represented making bread in an open court-yard; on one side are three small store-rooms, with a staircase leading to a chamber on the flat roof, in which the master of the house is seated. The model was brought from Gournah, in Upper Egypt.

The heads of children used to be shaven, while yet of tender age, and, among the peasantry, even such as worked in the fields left their heads exposed to the sun, a practice to which Herodotus ascribes the hardness of Egyptian skulls, when compared with those of other nations. Men of rank, on the contrary, commonly wore small wigs, made with a single piece of leather cut into a kind of network. On state occasions they were adorned with flowing wigs, plaited and curled. Specimens may be seen in Cases XIV.—XIX., division 2. At first sight it may seem strange that such a covering should have been adopted in sultry Egypt; but the reason for this is obvious; men of every rank were despoiled in childhood of their hair, the reticulated ground-work to which the hair was fastened allowed, therefore, the natural heat to escape, and afforded sufficient protection for the head, surpassing in coolness and in comfort the modern turban.

Women wore their natural tresses, carefully braided and plaited. They used ornamental combs and studs and pins of considerable value; they had mirrors also wherein to gaze, or rather circular plates of lustrous metallic composition, though little beauty is associated in our mind with Egyptian features. Bones, and vases of alabaster, of ivory, wood, and shells, varied the toilets of noble dames; they contained unguents and perfumes, used for the hair or at the bath. Remains of ointments are still to be observed, and a vase in the museum of Alnwick Castle still preserves its fragrance. Among scent-bottles, several of Chinese manufacture have been found in tombs pertaining to the era of the Pharaohs. Egyptian ladies further stained their eyebrows and eyelashes jet black, with a metallic substance; the vases, ornamented boxes, or bottles, that held this metallic substance, still remain; they may be seen, with numerous articles belonging to the toilet, in Cases XX. and XXI.

Notices of Egyptian customs are derived from paintings on their tombs; such paintings indicate that women dined with their fathers and husbands; that water was brought to wash the hands in covers and basins of costly material and elegant shape; that when the guests were seated, their heads were anointed and adorned with chaplets of flowers, a wreath being thrown at the same time around their necks, and a lotus flower given into the hand of each. That further, single flowers and choice garlands were arranged on stands, from which to replace the others when need required; that rooms of state were perfumed with myrrh and frankincense, and costly aromatics, and that the master of the feast returned thanks to the presiding deity, whom erroneously, and yet faithfully, he desired to honour.

Thus much we learn from paintings of remote antiquity, and travellers rejoiced in the knowledge which they acquired. It was reserved for the present day to bring from out a private tomb at Thebes genuine Egyptian bread, which had lain there for at least twenty centuries. This wondrous relic is preserved in Cases XXXIII.—XXXV., and he who seeks for it will see, not bread merely, in the form of round cakes, but a small duck trussed and laid upon them, the whole upheld on a small rectangular stand of papyrus. Near the stand, and taken from other tombs, are biscuits, cakes, and figs, grapes and dates, with ears of wheat and barley, in which, however old and shrivelled, the vegetative spark has remained unquenched.

We must not forget the Egyptian vases in Cases XL. and XLI. Many of these are elegantly formed; they bear a strong resemblance to the works of Grecian artists, both with regard to embellishment and shape; they are, however, purely Egyptian, and were adopted in the valleys of the Nile as early as the time of the third Thothmes, a monarch who lived about 1490 before the Christian era, and is presumed by Sir G. Wilkinson to be the Pharaoh of the Jewish Exodus. Their colours and hieroglyphics prove them to have been of gold and silver, or of the last inlaid with gold; others of less costly materials are often tastefully engraved, and studded with precious stones. And how curious is the fact, that glass, of which the origin is

assigned, by all writers from the time of Pliny, to Phœnician mariners, may be seen among Egyptian relics of great antiquity. Sir Gardiner Wilkinson discovered minute representations of glass-blowing painted on tombs, pertaining to the era of Orsirtasin the First, at least sixteen hundred years before the time of Pliny. Captain Hervey found a glass bead inscribed with the name of one of Egypt's kings who lived in the sixteenth century B.C., the specific gravity of which is precisely that of English crown-glass.

Thirty complete mummies, besides coffins, occupy the middle of the room. An indescribable feeling passes over the mind, while contemplating the remains of persons once great on earth, and beloved by their friends, who walked, perhaps, in the streets of Thebes, when this country was inhabited by a wild and barbaric race. We may glean much concerning the history of each from their inscriptions. Maut-Emmen, a priestess of Ammon, occupies a place near the door; beneath, and in Case LXXVI., is a mummy of the Græco-Egyptian period—that of a female named Cleopatra, of the house of Soler. A Greek youth occupies Case LXXIV.—1, his portrait, painted in rough style on cedar, preserves, most probably, a faithful transcript of his features. Case LXXVII.—1. exhibits no small degree of taste in its adorning: it pertains to Kalbti, a priestess of Ammon. A gilded mask covers the countenance of this lady; a gilded plate her breast, to which are attached wooden models of her arms and hands; her fingers are adorned with rings and bracelets; and beside the coffin are trays containing the tresses that once adorned her head. An inner coffin, Case LXX.—2. is believed to contain a Pharaoh of the eighth century previous to the time of Abraham. It is well that a warlike people watch with untiring vigilance over the spot which contains the mummies of that ancient patriarch and his wife; they would otherwise be exhibited in the Egyptian-room of the British Museum. An auditor in the palace of one of the Pharaohs occupies Case LXV., division 1. His name was Pefsaakhons-Anch-hum-Nepcr. How little did that distinguished officer contemplate, when treading the royal halls, that Egypt would become the base of nations!—that, borne by strangers from the sepulchre of his family, he would be gazed at beneath a glass-case by the descendants of those wild races whose semi-girt isle was known only in one of its remotest parts to Phœnician merchants trading there for tin!

Pass we now into the Bronze Room III., with its miscellaneous collection, among which bronze articles are suggestive of much that is connected with far-off times.

The Greeks and Romans delighted in bronze statues. Athens, Delphos, and Rhodes, contained three thousand each; and concerning Rome, history relates that their numbers were even greater than those of men. Ancient sculptors wrought in bronze as well as marble. Lysippus, under the patronage of Alexander, executed six hundred works in this metal. Tenodorus, in the time of Nero, perfected his memorable statue one hundred feet in height. We owe the knowledge of these facts to men who preserved the records of past ages. We look upon works of art, and admire their magnificent proportions or exquisite finishing, but we know nought concerning the anxiety and thought, the days of labour and nights of watchfulness, that were endured by those who then laboured for posterity. An extraordinary Italian artist, Benvenuto Cellini, has preserved a faithful record of the process through which his Perseus and Medusa attained perfection. His patron, the Grand Duke of Tuscany, desired to possess a bronze, cast of one piece, hollow, and of five ells high, while at the same time he expressed a doubt that it would be possible to comply with his wish. Cellini, therefore, who could not brook the slightest reflection on his ability, set himself diligently to work, till at length, after many impediments had been overcome, the mould was sunk into a pit beneath the surface, the furnace was made hot, and the metal thrown in. Rain fell in torrents on that day, the wind howled fearfully, and at the very moment when all was ready for casting, Cellini's shop nearly caught fire, and he became so extremely ill, that after giving his workmen the necessary directions, he left them in great sorrow, and went to bed. A violent fever came on, which rapidly grew worse and worse, and threatened a fatal termination: Cellini even gave himself up for lost, when an ill-looking man entered the room, and began to exclaim in a dismal voice, "Alas! poor Benvenuto, your work is lost!" "No sooner did I hear those words," said Cellini, "than I shouted aloud with a bitter and melancholy cry, and leaping out of my bed, began to dress in the greatest haste, driving my maid-servants and the boy who offered to assist me, in all directions. Regardless of the fever that was raging in my veins, I rather flew than ran to the furnace, where the men, in whom I had confided, were standing idle, and the metal had congealed. 'Fetch a load of young oak, for firewood,' I exclaimed, with furious gestures, and as the fire blazed up, I threw in a mass of pewter, about sixty pounds weight, to render the metal more clear and fusible. The workmen, surprised at my sudden re-appearance, bestirred themselves wonderfully, till at length a loud noise was heard, with sudden flashes, as if a thunderbolt had burst. We looked at each other with some alarm, till it became evident that the cover of the furnace had burst and blown off, and that the bronze began to run. I then caused half my pewter dishes and porringers, in number about two hundred, to be thrown into the furnace, and presently had the inexpressible delight of seeing that my mould was filling. Oh! the exceeding joy and thankfulness of that moment! I knelt down, and in the presence of my workmen offered up this prayer:—'O Lord, I address myself to Thee, who of Thy divine power didst rise from the dead, and ascend in glory to heaven, I gratefully acknowledge Thy mercy that my mould has filled. I fall prostrate in Thy presence, and with my whole heart I give Thee thanks.'"

The cast which thus narrowly escaped destruction was perfect in all its parts.

Remember this anecdote when looking upon works of ancient art: it will enable you more fully to appreciate them.

EGYPTIAN GRANARY.

Statues and busts, which testify the ability of the ancients in this branch of the fine arts, occupy various cases. Such of the former as adorned the cities of Greece and Rome, were mostly melted during the middle ages; others escaped the ravages of northern barbarians, and exhibit specimens of exquisite beauty; many were concealed beneath the volcanic ashes and lava that overwhelmed Herculaneum and Pompeii.

**Etruscan or Vase Room IV.**—By this name I introduce you to the tombs of an ancient people of uncertain origin, inhabiting a great portion of modern Lombardy, and the western coasts of the peninsula proper, far south as the Tiber, with its yellow sands.

It may seem strange that tombs belonging to remote antiquity should be conspicuous in national museums. But the reason may be readily explained. They are valuable sources of historic information, inasmuch as it was customary to place within them rare and costly articles, and even food, as marks of respect and affection; to embellish, also, the interior with drawings and inscriptions having reference to domestic habits or warlike achievements. The tombs of Egypt and Etruria were especially distinguished in this respect. We have seen many that pertained to the former, and of the latter several thousand tombs have been already opened. Paintings, sculptures, and inscriptions, adorned the walls, and each contained weapons, tripods, canelabrs, bracelets, rings, and mirrors, coins, earrings, and scarabæi, with gems of exquisite workmanship. Early as the days of Julius Cæsar, Etruscan tombs were rifled of their treasures; in modern times large sums have been realized by dealers in the works of art abstracted from them. Some of the most exquisite productions, such as necklaces and chaplets, worn by Etruscan ladies of high rank, have adorned Italian dames; the Princess of Canino appeared at a magnificent ball with jewels taken by her husband from a tomb under his estate.

Dancing figures and flute-players, even Bacchantes, are often selected as appropriate for funeral decoration. This seems strange, yet so it was. Antiquarians, who threw open to the light of day tombs which contained the dust of nobles who mingled in the warm converse of life two thousand five hundred years since, beheld with astonishment joyous figures and gaudy colours, fresh as if the work of yesterday.

But silence, as that of the grave, seems to brood within them; an impenetrable mystery rests upon inscriptions that none may read. Learned men have solved the hieroglyphics of Egypt, but no one has yet deciphered the written language of Etruria.

Minerals, sponges, corals, and star-fishes, comprised in the Zoological Department, however beautiful and curious, must be passed over with a rapid glance, as also many of the insect tribes, attractive though they be, for time will not suffice. Reptiles are rather repulsive than agreeable to contemplate, though often wonderfully formed, and well fitted for their various locations. Pass not, however, the Frilled Agama in Case VII., found only in the warmer regions of the old world and Australia; his small body is adorned with wing-like appendages capable of being opened or folded at pleasure; not designed indeed, for flying, but to support the creature like a parachute, when leaping from branch to branch in quest of insects. A full invests his neck, resembling the ruff of courtly dames and nobles, and this he raises when excited by fear or pleasure. Nor is it improbable that the harmless little being may spread forth his tippet, which extends five inches in the form of an open umbrella, in order to alarm his enemies, more especially as he has no other means of self-preservation.

It is pleasant to linger in the eastern Zoological Gallery, to look at the large table cases which contain the shells of molluscan animals; and then at stuffed specimens of birds that adorn the walls. In the former, what exquisite variety of mingling hues, what elaborate tintings and architectural designs! not springing at once to life and light like flowers, but embellished and painted by the occupant.

Take, for example, the common cowrie. Many a costly specimen is preserved in cabinets; but would you know what thoughts of love rest often on the cowrie shell, look at one of them on the chimney-piece of some widowed mother, dusted daily, and with her best china cups on either side. She will tell you that it was brought by her sailor boy, when he last came home from the hot countries.

Changes of form and colour which the Cyprea exhibits at different stages of growth are so dissimilar, that many conchologists have imagined that they pertained to different species. You ask why? Because the young mollusc forms his shell by successive layers of highly vitrified enamel, till a superb arch of many strata, varying in colour and design, becomes apparent.

Lovell Reeve, whose invaluable works on conchology furnish information that is nowhere else to be met with, mentions that the first stage of advancement produces a simple shell resembling a long drawn out Bulla, which we shall presently see; the outer lip is thin, and the colour diffused in bands and waves. This done, the shell becomes more solid, lip and columella thicker, teeth become developed, and a strong coating of livid colouring matter is laid on. Another process succeeds, the teeth are strengthened, the sides thickened with a rich coating of enamel, and the beautiful dome is

rendered complete by colouring matter disposed in lines, or waves or dots of various hues and patterns. Still more wonderful is the well-substantiated fact, that when a cowrie grows too large for his shell, he spreads over it some powerful solvent, which causes it to become thin and dull. At length no trace remains; the inhabitant has no other covering than a membranaceous mantle; but in the course of a few days a thin layer of glutinous matter is secreted, which shortly obtains the fragile consistency of shell lac, and thus the cowrie builds up his house.

Cases XXXI., XLVIII. contain some richly varied specimens of bivalve shells. Many of the occupants have a band of hair-like filaments proceeding from their bodies, by means of which they adhere to rocks and pieces of wood. Such is the case with the *Pinna Marina*, a common inhabitant of the Mediterranean, who safely moors herself beneath the waters. The byass has been manufactured into articles of the finest quality. Every shell, however small, has its own history—its beautiful adaptation to existing circumstances. The solen is provided with a foot, by means of which she is enabled to move from place to place. The snail progresses by an undulatory motion, dependent on an exquisite variety of muscles. The cockle is provided with a digging instrument, and buries herself in the sand or mud, breathing through long tubes, that reach into clear water. *Pholadæ* are provided with small accessory pieces for boring rocks and wood, and this is the method they adopt.—They stand firmly on the one foot which nature assigns them, and make the shells revolve upon the surface till a perforation is commenced; this is progressively enlarged by the rasp-like action of the rough exterior, and although the shell is continually worn away, it is as constantly renewed.

In no one department of natural history is the contrast between minuteness and comparative vastness more strikingly displayed. Shells perfect in all their parts, beautifully tinted and adorned, yet small as grains of sand on the sea shore, may be compared with giant clam shells inhabiting the Indian ocean,—the largest of known bivalves. When young, the creature fixes itself to rocks by means of its tendinous foot, but when the shell is fully grown, this precaution is no longer needful; the byass is broken asunder, and the groove filled up. Here are fine specimens of this giant clam under one or two of the table cases.

It is surely difficult to leave this portion of the great Museum, where objects of the deepest interest await us at every step: but go we must.

Who can look, unmoved by feelings of admiration and delight, on the beautiful assemblage of birds that occupy the side cases? Here is the great vulture of the Andes, whose expanded wings measure eleven feet across, soaring among his native mountains, twenty-two thousand feet above the level of the sea, and often carrying off in his fell swoop such animals as are unable to resist him; and there are hoopoes, gentle and affectionate creatures which live on the nectarean juice of flowers, and are associated with whatever is most beautiful and perfect in the vegetable kingdom. Exquisite little humming-birds contained in the XLIV. case, natives of America and the West Indies, excite universal admiration. Every one stops to look at them, and with good reason. Some present inimitable plumage, resembling rubies, others gold, others again are emerald tinted, others of the deepest purple. The humming from which they derive their name, is produced by the rapid movements of their wings. They chiefly remain near the tropics; but though occasionally no larger than humble bees, Lyell relates that one of these tiny creatures was seen hovering over the blossoms of a *fuchsia* during a snow storm.

We must come again, and yet again, to visit the Mammalia Saloon, the Geological section, and that of Vegetable and Animal Remains. Egyptian sculptures, although fraught with interest to lovers of antiquarian lore, yet their sameness of expression and want of freedom render them less generally pleasing. We must pause, however, before the Rosetta stone, because our countryman, Dr. Young, derived from it suggestions relative to hieroglyphics, which Champollion and others followed up, till they were enabled to decipher those mysterious-looking characters and symbols, which threw a clear and steady light on the history of ancient Egypt.

Hear you not a voice speaking from yonder figure, looking as if rock-bound, and destined to endure for ages? "My name is Memnon," says he, "signifying a conqueror, of ancient Egypt; my birth-place Thebes, that glorious city. Through each one of her two hundred gates went forth ten thousand fighting men. You behold in me the representation of that great Egyptian monarch who made the nations of the Mediterranean tremble some fourteen centuries before the Christian era. And yet there is naught of harshness in my countenance. Men praise me as a master-piece of some Egyptian sculptor: they admire the beauty of the execution, the sweetness and the mildness of my features; but it matters not to me. I speak for him whose representative I am. Even the ruins of my ancestral palace eclipse the glory of all kingly dwellings. Four avenues, extending further than the eye could reach, bounded on either side by Sphinxes exquisitely wrought, were terminated by porticoes of gigantic proportions. My hall of state was adorned with one hundred and twenty pillars six fathoms round, of majestic height, interspersed with obelisks which Time has not been able to demolish. Painting developed her utmost power, and still the colours which her disciples used preserve their beauty and their lustre. What see I now around me? Tablets from the rifled tombs of those who graced my court; noble ladies, and men of high degree; even the tombs themselves. Nay, the swathed forms of priests and priestesses who ministered in my temples have I seen carried past me with jokes and unseemly laughter!

"I look down upon you, people of many languages and nations—barbarians I may call you, for such were your forefathers, when my country was pre-eminent in arts and arms—look in your turn on me; ponder well my history, and remember that the same Almighty hand which laid low the

FRILLED AGAMA.

pride of Egypt, will equally visit those who are proud and stout of heart."

Thy words are true, O kingly statue! It is well to think of them amid the stunning tide by which we are surrounded, where the beautiful works of art are proudly shown, and inventions, which have no parallels in history, are brought to bear on the happiness of myriads.

We have yet to see the elaborate sculptures in bas-relief, brought from beneath old mounds near the junction of the Tigris and the Zab, which local tradition points out as covering the ruins of Nineveh, whose streets resounded with the voice of the prophet Jonah, calling upon men to repent.

The great winged human-headed bull, brought by the enterprising traveller Layard to this country, is a symbolic figure, equally with that of the winged lion. That traveller records that he used to contemplate for hours these mysterious figures, and muse over their intent and history. What more noble forms could have ushered heathen men into the temple of their false gods? What more sublime images could have been borrowed from nature

HUMAN-FACED BULL.

by men who sought, unaided by the light of revealed religion, to embody their conceptions of the wisdom, power, and ubiquity of the Supreme Being. They could find no better type of intellect and knowledge, than the head of the man; of strength, than the body of the bull or lion; of the power of existing everywhere, than the wings of a bird. These winged and human-headed creatures were not the offspring of mere fancy; they were and instructed races that flourished three thousand years since. Kings, priests, and warriors passed through the portals which they guarded, long before the wisdom of the East had penetrated into Greece, and furnished its mythology with symbols. They were concealed beneath huge mounds, most probably before Romulus and Remus laid the foundations of Imperial Rome. The darkness of twenty-five ages has brooded over them, and now they stand forth once more in their ancient majesty.

The Lycian Room now attracts us. Asia Minor has also yielded contributions to our national museum in this eventful period of the world's history, when it seems that hidden things must be brought to light. In the neighbourhood of poor Turkish villages, amid the representatives of different races and superstitions, all mingled together under the followers of Mahomet, antiquarians discover the sites of ancient theatres, carved marble blocks overgrown with trees and shrubs, or rock tombs bearing Greek and Roman inscriptions.

Here are bas-reliefs from the tomb of Xanthus. No. 1.—This tomb stood on a considerable eminence, near the ruins of the theatre,—a prominent object, for the forgotten city itself covered the summit of a precipitous hill, rising abruptly from a plain washed by the rapid torrent of the Xanthus. If that old tomb could speak, it would tell concerning the desperate resistance that was offered to the troops of Brutus in the war that followed Cæsar's death—of ruined homes, and the carrying away of many a wretched family.

Such is war, and the injuries which it inflicts. The memorials that occupy our thoughts are nearly every one inscribed, like the prophet's scroll, with mourning, lamentation, and woe.

Adjoining the bas-reliefs is a perfect monument, where the admirer of horses may see an armed figure, in a chariot drawn by four horses. This is Païsa's tomb, a Persian chief of Lydia. Among the Xanthian marbles, the most attractive are statues of draped females. They are beautifully executed; their attitudes are those of nymphs or goddesses borne rapidly through the air, the wind agitating their garments; and their journeying across the sea suggested by marine emblems.

Another day must be devoted to the Elgin Saloon, containing sculptures from the Parthenon. Seat yourselves, however, before the friezes; there are numerous benches whereon to rest, and while looking at those works of the sculptor Phidias, you will not think that Flaxman expressed himself too strongly when he said, "The horses seem as if alive; they roll their fiery eyes, they gallop, prance, and curvet; the veins of their legs and faces appear distended; their bony forms are well defined; and the elasticity of their tendons may be readily observed." Elegant too, are they, moving with deer-like lightness; and though the relief is not above an inch from the back-ground, and they are considerably smaller than nature, it is scarcely possible to realize that they are not alive.

We shall, perhaps, scarcely find much more to inspect in this gathering together of ancient sculptures. To artists they are subjects of engrossing interest, and we may chance to see young men employed in copying them.

An animal performs the greatest quantity of work in the least time, when it moves with one-third of the utmost speed with which it is capable of moving, and is loaded with four-ninths of the greatest load which it is capable of sustaining in motion.

## CAROLINE AND CATHARINA.

(Continued from page 648.)

"I have heard," commenced Miguel, trembling and hesitating, "that you feel an interest—" he stopped and cast a timid glance at Melton.

"You have discovered, by spying and eavesdropping, that I feel an interest in your young mistress," hissed the latter. "Well, go on."

The steward began to regret the step he had taken; but it was too late to retract it.

"Well," he recommenced, gulping down the insult, "this evening, but a few minutes ago, I was walking in the garden—"

"What were you doing in the garden?" asked Melton, sternly; and seeing the man tremble, he added—"Never mind, go on—I shall judge for myself when I hear the story."

"I was walking in the garden," again commenced Miguel, "enjoying the moonlight, when the Senora Catharina came forth, and walked very near me down one of the paths; and soon afterwards, the Senor Americano, Manning—"

"Ha!" hissed Melton.

"The Senor Manning came into the same walk," continued Miguel, more glibly, "and went down it in the same direction; but the senora turned when she heard his footsteps, and came back, as if to meet him."

"Well," said the colonel, calmly, "what took place then?"

"They then met," said the steward, now sure of his ground, "and turned aside to a little bowser, which you remember—"

"Yes, yes—go on."

"I was afraid to move," continued the acrobat, "for fear they would hear me, and think I had been watching them; and then it occurred to me, that you would like to hear how they met, and I was forced to remain."

"I understand all that—go on with your story—what did you hear?"

"I saw the Senor Manning place his arm about her, and heard him press her to stay, when she said she wished to go in; he told her how he loved her, and hoped she would not allow her sorrow for her father to make her forget him; and when she urged him to let her go, he only held her the faster: she cried a long time, and when she looked up, I took advantage of the noise made by the wind, and came away to you."

"And, doubtless, you expect a great reward," said Melton, speaking through his teeth, and giving significance to his words by a blazing eye.

"Fear not—you shall have it. Come with me."

The steward followed him trembling, for there was that in his eye and manner which made his blood run cold. Melton opened the door and stepped out.

"Blanco!" he called, "bring me ten men mounted, instantly!"

The men were before him: most as soon as the words were spoken.

"Dismount here, three of you," he ordered; and three were on the ground at once. "Untie the *lariat*." It was done, and Miguel turned pale with fright. "Now seize this traitor, and hang him to yonder limb. Out, traitor!" he exclaimed, as the affrighted wretch fell upon his knees, and absolutely screamed with terror. The men hesitated, moved by the extreme horror of the abject wretch.

"Seize him, I say!" thundered Melton. "Christ! shall I not be obeyed?" His sword flashed in the moonlight, as he reiterated the order. His men knew him too well to hesitate longer—they hastily adjusted the rope around the steward's neck.

"O! *Madre de Dios*," screamed the wretched man. "O! God! oh, mercy! mercy! mercy! Do not—oh! do not kill me! I will serve you—I will kiss your feet—I will live for you—I will die for you! Oh, mercy! oh, spare me! spare me!" and the affrighted man burst into tears, and sobbed and screamed until his voice died away in a deathly gurgle, as they dragged him rudely away.

"Be quick!" sternly ordered the colonel. But they saw he was in earnest, and they needed no further order. They threw the *lariat* over the limb, and two of them at once jerked the strangling man into the air. A gurgling sound came from his throat—a convulsive twitch or two agitated his frame, and then all was relaxed and still. The man was dead, and his lifeless body swung fearfully in the moonlight, and his shadow was cast at the colonel's feet. Love often lifts men towards the angels, and not seldom lowers them towards the fiends.

"Tie the *lariat* to that root now," said Melton, "and let this warn you all from ever playing traitor. Mount, now, and follow me."

As he spoke he sprang into the saddle; his men followed his example, and the little band thundered at a gallop towards the house. The colonel rode erect and rigid in his saddle. His teeth were set, and his eye blazing with suppressed passion. He had returned his sword to the scabbard, but he kept his hand upon the hilt, and at almost every hundred paces he sank his spurs deep into his horse's flanks. By the time they reached the turning point, in front of the house, the gallop had become a furious run, and it was with difficulty that his men kept pace with the fiery speed of his blooded charger.

He dashed madly into the open court yard-gate, and sprang from his horse. Seizing a pine-torch from the hand of a *peon*, he plunged through the gate and into the garden walks. A few steps brought him to the place where Hugh and Catharina were standing, astonished, and ignorant what this sudden apparition meant. Melton strode furiously up to them, with flaming torch and face burning with rage.

"What means this furious haste, Senor Melton?" asked Catharina, draw-

• "Manning!" said Catharina, "will you not stay a moment?"

ing herself haughtily up before him. He gave no answer, but a glance of scorn; and grasping Hugh by the arm shook him furiously.

"Traitor! Villain!" he exclaimed; "is it thus you betray me?"

"Unhand me, sir!" said Hugh, sternly: "arm me like yourself, and we shall see whether your courage equals your audacity."

"Audacity!—Traitor!" shouted the colonel, almost beside himself with rage. "Audacity!" But as he spoke, a violent blow from Hugh's powerful arm struck him in the face and felled him to the ground. At the same moment one of Melton's men, who had followed his frantic steps into the garden, struck Manning with a lance, inflicting a deep and dangerous wound in the side. He fell bleeding to the earth; and, regardless of the shrieks of Catharina, several pressed forward and endeavoured to despatch him.

"Hold! every man of you! Hold! on your lives!" shouted a loud, resounding voice; and a tall, powerful man, in plain American clothes, stepped in between Hugh and the Mexicans. One swing of a broad and heavy cavalry sabre dashed up the heads of the lances, and shivered one of them in splinters. The new-comer cleaved a lance to the earth, and with his left hand fired a pistol among the rest. A crashing sound of many feet was heard among the shrubbery; and twenty Texan Rangers sprang from their cover on the surprised Mexicans. The flashing of sabres in the moonlight, the crackling fire of rifles, and the death groans of the slain were intermingled with the ringing of steel upon steel, and the grasp of the deadly struggle. The trampling of many feet, and the home-thrust of the shortened sabre lasted several silent minutes; and suddenly a shout was heard from the courtyard. The remainder of the Rangers were storming in at the gate—the place was attacked, and already taken. Colonel Melton rose raging to his feet, and endeavoured with his voice and arm to turn the tide of battle; but a heavy blow from the Ranger-captain's sabre stretched him senseless and bleeding on the ground. His men—the few who were left alive—at once surrendered. The attack upon the court-yard had been equally successful. The band were about making their onslaught, when the colonel's furious advance delayed and disconcerted them; but luckily he did not perceive them, and they soon discovered that his arrival was not caused by their attack. Dashing into the open gate, on hearing the signal of the pistol, they fell at once upon the lancers of the escort there assembled, and five minutes of furious fighting secured the victory.

• The place was taken. The report made to Colonel Melton, but a few minutes before was true—the Rangers had been seeking the entrance to the valley, and unluckily for Melton, had found it. In ten minutes after the attack the place was theirs—every avenue of escape was guarded; and the Ranger captain had leisure to count his losses. Almost the first object which attracted his attention was Catharina, holding Manning's drooping head, and bathing his forehead with her tears.

"Where is Anderson?" he asked. "Look to this man first, Anderson," he said to a surgeon; at least one of which, with some degree of skill, a company of Rangers always contains,

#### CHAPTER XXXIV.

"But say, I prithee, is he coming home?"—THANKS, ARE.

"Let us away: we have had enough of this."—FURTHER.

"This is more madness."—SHAKESPEARE.

"Breathes there a man with soul so dead,  
Who never to himself hath said,

This is my own, my native land?

Whose heart hath ne'er within him burn'd,

As home his footsteps he hath turn'd,

From wandering on a foreign strand?"—SCOTT.

THE surgeon—a man of some experience, as every ranger is, whether professional or not—examined Manning's wound by torchlight; and Catharina gazed anxiously at him while he probed the gash, as if her own fate depended on his judgment.

"The wound is mortal," said the surgeon. Catharina's eyes turned up to heaven, and her hands fell by her side.

"She has fainted," said the captain. "Carry her within."

The menials who stood gazing by lifted her gently from the ground, and bore her away. The same office was performed for Manning; and the surgeon, having dressed his wounds, found time to look to others. Melton's injuries were found severe, though not dangerous; and he was at once placed in quarters where he would be comfortable, but safe. He had been taken in the toils with all his men who were with him; and he knew that before morning the remainder of his battalion would be surprised, and either taken or cut to pieces. As the excitement of the hour before subsided, he became gloomy and silent—indeed, he had said but little after his capture. Perhaps the violence and blood of his course began to sink into his spirit; as his mind cooled, he, perhaps, reflected upon the high-handed deed with which he had made the night memorable to himself, as well as to others; and the certainty that he had only freed the world of a treacherous domestic spy, which justified the execution in his eyes when he committed it, now seemed to melt away and be no more a justification. However this may have been, when removed to a strong room in the house, he walked moodily in, and without speaking a word threw himself upon a couch, and allowed his wounds to be attended to. To the inquiry of the surgeon, whether he wanted anything, he returned no answer; a moment afterwards the key turned upon him, and he was alone with his own thoughts.

• Hugh was carried to the chamber pointed out as his; and by his bedside stood the ranger-surgeon. The door opened quietly; and pale as death, but calm and firm, Catharina entered. An hour had elapsed since she had been borne within, and now the house was still as it had been three hours before. The moon shone brightly through the graceful tracery and trefoiling of the Gothic window, and fell warm and yellow on the spotted floor. The light was shaded in the sick man's chamber, and through the pointed arches could be seen the shining stars; and through the lattice came the sighing of the night-wind mournfully. Scarcely breaking with her footsteps the enchanted

stillness of the scene, she walked slowly to his bedside and touched his drooping hand. No sign of recognition came from him she loved; the surgeon took her hand from his, and gently led her to the door.

"Is there no hope?" she asked earnestly, gazing in his face.

"None," he replied calmly, and she turned away. Walking noiselessly to the end of the hall, she paused before a narrow door, over which was sculptured in the stone the figure of a cross. Pushing it gently back, she stepped in and closed it behind her. It was a domestic chapel, and on the altar were burning long wax candles, while blazing from amid rich gilding and gorgeous ornaments, a silver cross with golden rays flashed back the pure white light. Behind the altar rose one of those noble Gothic windows, in which the tracery and the penetrations both preserve their equalled importance, and whose pointed arches look like leaves of light. Upon the lake without, so still, so calm, so pure, was dashed the silver moonlight; and from its depth shone up another firmament in which were sailing moon and stars and fleecy clouds. The little island, like an emerald set in silver, sat on the quiet waters, doubled; and the shadows of its trees seemed pointing to that other firmament beneath.

Catharina, however, saw not these things; or, if she did, heeded them not, but glided noiselessly towards the altar. The solemn silence of the midnight hour, the loneliness which hovers, like a spirit, round an altar in the night, and the shadowy light that came reflected from the candles, burning unattended in the house of God, were all in keeping with the melancholy of her feelings. She turned aside and came not to the altar, but knelt within a shadowy niche, where the sable mourning hues of the drapery mingled with the shades. She came not to the altar—the gorgeous trappings of that worship jarred against her heart; the humble Christian came within the chapel to address herself to God, and not to images; for she felt that God alone could lift her from her darkness. With upturned face, whose paleness shone like marble from among her mourning weeds—with hands clasped on her heaving breast, and every attitude and motion speaking eloquence of earnest supplication—she turned her thoughts to heaven. Her lips moved in prayer, and though no sound came from them, the words were breathed more earnestly than human voice can speak. She prayed fervently and long; the colour went and came, and mantled all her face and neck; her fingers clasped each other, and rose and fell upon her snowy breast with deepened respiration.

At last the muscles of her rigid face relaxed—her fingers slowly unclasped themselves, and her body bent towards the ground. She rose quietly and calmly, and glided back to Manning's room. Her step was not more light, but her soul was braced against affliction; she could now bear to see him die, and though her heart might break, she felt that she was no longer weak. The surgeon was still standing by the bedside; and when she took again his patient's hand, he turned away and walked across the room. She pressed her lips to Hugh's cool forehead, with a melancholy kiss, but no sign of recognition yet was visible. She covered her face with her hand, as if overcome; but a moment afterwards she raised her eyes and fixed them on the sad features of her dying love. The surgeon came back and tried to draw her away; but a look from these dry but mournful eyes made him desist; he saw his interference could only give her pain, and could not benefit his patient. Servants entered with the bandages and water he had ordered. He shook his head as if no good could come of them; but still he used them. Catharina watching every movement and striving to assist him.

"Nothing," said he softly, "but the hand of God can save his life, but we will not neglect all in our power."

"There is hope, then?" said Catharina quickly.

The surgeon pointed upwards, and Catharina bowed her head in grief and resignation.

More than a fortnight elapsed, after the final retreat of Santa Anna, before our friends Vernon and Clayton were able to set out on their return home. The resignation of the latter was not accepted until it was certain that the fight was not to be renewed, and the former was unwilling to go without him. The communication, too, was closed between Monterey and Camargo, so that travelling, except in large bodies, was unsafe. Taylor had advanced again to Agua Nueva, and returned to Buena Vista, where the army was now encamped for the summer. Two or three days after this last movement, Clayton announced that his resignation was at last accepted, and on the following morning they set out for Monterey, en route for home.

"If," said Vernon, as they emerged from Saltillo, upon the plain which stretches away from the city to the east, "if Manning were with us I would feel contented: I dislike to return home leaving him in such circumstances—even though my own be worse."

"And besides," said Clayton, "I wish he were with us, because I suspect he might do something to benefit you."

"I fear there is but small probability of that," Vernon replied, "except as the support of a warm, decided friend is always valuable."

"Grateful to the feelings, if nothing more," said Clayton. "True; but have you ever endeavoured to penetrate the darkness that hangs over this charge against you? In all our conversations I believe you have never intimated a suspicion of any design or plot against you."

"No," answered Vernon, "because I can imagine no reason why any one should wish to ruin me. A mistake will be the result of some unfortunate mistake."

"If Talbot never signed the note," said Clayton musingly, "there certainly was a mistake in your supposing he did; and I know him too well to suppose he would deny his signature."

"I have told you, I believe," said Allen, "that the note was lying signed on my table when I returned, with a note in Talbot's writing; that I then

walked with Hugh to his father's and got the money. That is all I remember. You say Talbot swore before the grand jury that he lent it unsigned with a note explaining the reason?"

"Yes," said Clayton, "and I have no doubt swore truly; for I examined the note, as I told you; and, though a remarkably good imitation, the signature is certainly not genuine. Now, I do not know that I have ever told you what my suspicion is; but Hugh's presence in the house when you returned makes it at least very important that we should have him sworn as a witness. He is, of course, above suspicion of having made this false signature; but he may be able to direct our inquiries to the right person."

Vernon shook his head. "I fear not," said he; "for if he had seen anything to excite suspicion, he would have told me."

"Of course," said Clayton, "he could not have seen the signature placed there; but he may have met some one coming out, or some one may have been there when he entered—at any rate we must delay the trial until he can be found."

"That will scarcely be before the end of the war," said Vernon, "if ever; and I cannot rest under such an imputation so long. He may be killed, though I hope not. *Zapros.*" he added suddenly, "when Colonel Thorpe asked me of him, you told me to lead him to believe that Hugh was dead. I never asked you why."

"Well," said Clayton, smiling, "it will be difficult for me to give an answer, unless I attribute it to a lawyer's instinct. I had reason to believe that he had instigated the attempt upon his and your life; and accident informed me that it was Hugh whom he especially pursued. I could not conceive for what reason; and I desired that he might think his plot successful, in order that he might show his hand."

"I hope it is not only your 'lawyer's instinct' that causes you to suspect him."

"Not altogether," said he; and he detailed for the first time the information he had received from the Mexican, who so mysteriously met his fate in the rancho of Buena Vista.

"After all," said Allen, after a pause, "this may be an entire mistake. The man's craft may have induced him to acquiesce in your evident suspicion of Thorpe; or the conference overheard by the corporal may have related to some matter entirely different."

"You are too willing to believe men honest," said Clayton, in a tone strongly indicative of the lawyer; "but on your supposition, how do you attempt to account for the man's sudden death?"

"I do not attempt to account for it," said Allen, "but at least I cannot connect Thorpe with it."

"Well, well," said Clayton impatiently, "we will not argue about so dark a mystery. If we can only find Manning unhurt, or even alive, I shall be content to let it remain unexplained."

They rode on in silence; and during their journey to Monterey, nothing more passed that concerned our story. They reached that city after riding several hours in the night; and learning that a train and escort were to start for Camargo in two days, they concluded to await that opportunity of safe conveyance. On the following morning, in visiting the various quarters of the city, they fell in with an officer of the Texan rangers, who pointed out Colonel Melton, then on his parole, and related the circumstances under which he had been taken.

"At Rinconada?" said Vernon; "the hacienda of Senor Bonaro?"

"The same," said the officer; "and it is said that this Bonaro's daughter attracted the colonel into danger. At all events, when we took him, he was in a towering passion with an American prisoner he had, because the lady seemed to favour him, or rather *did* favour him—for I lay within sight of them during an interesting exchange of kisses as ever I witnessed." The loud, free laugh of the ranger- lieutenant was checked by Vernon's quick remark, "That could have been no one but Manning?"

"Manning? Yes," said the ranger, "that was what she called him, when he was about to leave the garden without seeing her."

"And what became of him?" asked Allen.

"He was mortally wounded, Anderson said, by one of the mulatto devils, and we left him at the hacienda. I did not go back after we drove the lancers from the valley—perhaps the captain may know more about him."

The captain was found, but he could give no additional information, except that the lancers had come back, after the return of the rangers, and desolated the valley with fire and sword.

"Your friend, as he seems to be," said he, "was too badly wounded to be removed when I called my men off in the morning, and he was accordingly left in the care of the senora and a Mexican surgeon, with one of my men who was in the same situation. I suppose neither is living now."

The captain concluded his story with an offer to send twenty men with them to search the valley, assuring them at the same time that the search would be fruitless.

"Come in," said he, in the true Texan way, "and we will have something to eat, and set out immediately—I will go myself. You need not even go after your horses—they will need rest—and I can mount you both."

"How far is it?" asked Clayton.

"Short twelve miles," said the ranger, "we can ride it easily and be back before 'tattoo.' Jim," he added, to his lieutenant, "tell twenty of the boys to swallow their rations and saddle up."

The officer went away to obey the order, and our friends sat down to a hastily-prepared luncheon of the ranger captain. Soldier's fare is "rough" at the best, but it has the invaluable recommendation of being always "ready." In twenty minutes they were all in the saddle, trotting rapidly through the defiles of the mountains towards Rinconada.

## IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS;

BEING

A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.

PRICE ONE PENNY. ALWAYS ON SALE.

A MIDSUMMER PRESENT FOR A GOOD BOY OR GIRL.

Now ready, price 1s. 6d., beautifully bound, with a fine Steel Plate, and 70 Engravings on Wood,

**AUNT MARY'S STORIES for YOUNG PEOPLE.**  
This beautiful little Volume is made the more attractive to the Young, by having the Christian Name of the Receiver elegantly impressed in Silver upon the cover. Thus—

A STORY-BOOK FOR MASTER EDWARD!

A STORY-BOOK FOR MISS ELIZABETH!

The following Names may be had to order:

**BOYS**—Charles, Edward, Frederick, George, Henry, James, Joseph, John, Richard, Robert, Thomas, and William.

**GIRLS**—Anne, Caroline, Charlotte, Fanny, Emma, Eliza, Jane, Laura, Louisa, Lucy, Mary-Anne, and Maria.

For Names not included in the above, order the General Edition,

**AUNT MARY'S STORIES for YOUNG PEOPLE.**

London: Houlston and Stoneman; and all booksellers.

A WEEKLY MAGAZINE.

## DIETETIC USE OF WATER.

WATER is an inestimable benefit to health, and as it neither stimulates the appetite to excess, nor can produce any perceptible effect on the nerves, it is admirably adapted for diet, and we ought, perhaps by right, to make it our sole beverage, as it was with the first of mankind, and still is with all the animals. Pure water dissolves the food more, and more readily, than that which is saturated, and likewise absorbs better the acrimony from the juices—that is to say, it is more nutritious, and preserves the juices in their natural purity; it penetrates more easily through the smallest vessels, and removes obstructions in them; nay, when taken in large quantity, it is a very potent antidote to poison.

From these main properties of water may be deduced all the surprising cures which have been effected by it in so many diseases, and which we shall here pass over altogether. But as to the dietetic effect of water, we shall recommend it to our readers for their ordinary beverage on three conditions.

The first is, that they drink it as pure as possible. Impure water is of itself impregnated with foreign matters which may prove prejudicial to health. Hence it loses all the advantages which we have in the preceding remarks ascribed to water; and it would in this case be much better to drink beer, or any other such beverage, that is saturated with nutritive particles, rather than impure water. We must leave the stomachs of camels to answer for the preference given by them to muddy water; for we are assured by Shaw, that these animals stir it up with their feet, and render it turbid before they drink. The human economy requires, on the contrary, a pure beverage.

The signs of good water are, that it easily becomes hot and cold; that in summer it is cool, and in winter slightly lukewarm; that a drop dried on a clean cloth leaves not the faintest stain behind; and that it has neither taste nor smell. It is also a sign of good water, that when it is boiled it becomes hot, and afterwards grows cold, sooner than other water. But this sign is far more fallible than the evidence of the quality of water obtained by feeling. Singular as this may sound, it is very possible to distinguish the properties of water by means of this sense. A soft or a hard water is synonymous with a water the parts of which adhere slightly or closely together. The slighter their adhesion, the less they resist the feeling, and the less sensible they are to the hand, because they may be so much the more easily separated. A gentleman of our acquaintance has for many years used two different sorts of water, which are equally pure and limpid, the one for drinking, and the other for washing his hands and face. If his servant ever happens to bring the wrong water for washing, he instantly discovers the mistake by the feeling. Our cooks and washerwomen would be able to furnish many other instances of the faculty of discriminating the properties of water by the touch, which would show that this faculty depends more on the excitement occasioned in the sensible parts than on any other cause. Hard water, for instance, makes the skin rough; soft, on the contrary, renders it smooth. The former cannot sufficiently soften flesh or vegetables; the latter regularly produces this effect. The difference of the extraneous

matters which change the qualities of water, naturally makes a different impression on the feeling; and in this there is nothing that ought to astonish a person of reflection.

The water of standing pools and wells is in general extremely impure, and is accounted the worst of all. River water differs according to the variety of the soil over which it runs, and the changes of the weather; but though commonly drank, it is never pure. Of all impure river-waters, those which abound in earthy particles alone are the least injurious, because these particles are not dissolved by the water. In Auvergne, near the villages of St. Allier and Clermont, there is a stream of a petrifying quality, which constructs of itself large bridges of stone, and yet it is the only water drank by the inhabitants of those places, and that without the slightest inconvenience. If we consider that a stony concretion is deposited in all our kettles, we shall readily conceive that a water which carries stone along with it cannot be very pernicious to health, since it is constantly drank by men and animals. This stone in our kettles is really a calcareous earth, which may be dissolved by boiling in them vinegar, or water mixed with a small quantity of nitric acid; and as the water deposits it, and does not hold it in solution, it can of course do us very little injury. We cannot, therefore, imagine how the celebrated Dr. Mead could believe that water which leaves such a deposit in culinary vessels may occasion a particular disease, merely because Pliny has said so; though he was well acquainted with the great difference between animal calcoli and mere calcareous earth.

Next to well and river-water, both of which are always impure, rain-water follows in the scale of preference. It is very impure, and a real vehicle for all the pernicious matters that are continually floating in the atmosphere. Snow-water is much purer. Snow is formed of vapours which have been frozen before they could collect into drops. It is in the lower region of the air that these drops, in falling, absorb most of their impurities. The vapours floating in the upper atmosphere freeze before they reach the mire of the lower. This water is seldom to be had. That which we would most strongly recommend for drinking, is a spring-water, which descends from lofty hills, through flints and pure sand, and rolls gently along over a similar bed of rocks. Such water leaves behind all its coarse impurities in the sand; it is a purified rain and snow-water, a fluid crystal, a real cordial, and the best beverage for persons in good health.

The second condition which I attach to water-drinking is, that such persons only choose it for their constant beverage, to whom warming, strengthening, and nutritive liquids are hurtful; and that if they have not been in the habit of drinking it from their youth, they use some caution in accustoming themselves to it. Many suffer themselves to be led away by the panegyrists of water, without considering that even good changes in the system of life, when a person is not accustomed to them, and when they are abruptly or unseasonably adopted, may be productive of great mischief. Hence arise the silly complaints that water-drinking is dangerous, pernicious, nay, fatal, and the inapplicable cases quoted from experience. Those who have been in the habit of drinking water from their youth, cannot choose a more wholesome beverage, if the water be but pure. Many nations, and many thousand more species of animals, have lived well upon it. But for an old infirm person, a living skeleton, with a weak stomach that can scarcely bear solid food, to exchange nourishing beer or strengthening wine, with the water of his brook, would be the height of absurdity. Let such adhere to their accustomed drink. Water is an excellent beverage, but beer too is good; it is also water, more nutritious than the pure element, and therefore more suitable for the persons to whom we allude.

The third condition which we require from water-drinkers is, that they take cold and hot water for their habitual beverage. We mean not to prohibit their boiling or distilling it, if they suspect it to be impure. Boyle drank nothing but such distilled water, and most delicate people of good taste in Italy still do the same. It must not, however, be drank warm, but cold. The ancients, it is true, drank hot water. Various passages in Plautus and other ancient writers, clearly prove that so early as their times it was customary to drink the water of warm springs; and there are frequent instances of common water warmed. Thus, in Dio, we find Drusus, the son of Tiberius, commanding warm water to be given to the people, who asked for water to quench their thirst at a fire which had broken out. Seneca says (*De Ira*, ii. 15,) that a man ought not to fly into a passion with his servant if he should not bring his water for drinking so quickly as he could wish; or if it should not be hot enough, but only lukewarm; and Arrian says the same thing, but more circumstantially. The drinking of hot water must of course have been a common practice with the Greeks and Romans; but it should be observed, that even in their times it was held to be an effeminate indulgence of voluptuaries. Stratoniceus calls the Rhodians "pampered voluptuaries, who drink warm liquors." Claudius, when he attempted to improve the morals of the people, and to check luxury at Rome, prohibited the public sale of hot water. When, on the death of the sister of the Emperor Caligula, he had enjoined mourning in the city of Rome on account of this, to him, exceedingly painful loss, he put to death a man who had sold hot water, for this very reason, because he had thereby given occasion for voluptuousness, and profaned the mourning. So dangerous an indulgence was the drinking of hot water considered, that the trade of water-sellers was interdicted by the censors. Some writers publicly satirized this species of intemperance. Ammianus complains that in his time servants were not punished for great vices and misdemeanours, but that three hundred stripes were given them, if they brought the warm beverage either not promptly enough or not hot enough; and from that passage of Martial's in which he says, that, at entertainments, the host was accustomed to pay particular attention that during the feast there should be an abundant supply of hot water, it appears that this beverage was an essential requisite at the tables of the luxurious.

## ONWARD!

**"POST" RECEIVING BOXES.**—The practice of erecting cast-iron posts or pillars in the streets, and forming letter-receiving boxes in them, as is the case in some parts on the Continent, is about to be introduced into Jersey as an experiment, previous, no doubt, to its introduction into England. The post-office authorities in St. Martin's-le-grand have ordered four cast-iron pillars, with letter-receiving places in them, to be erected in St. Helier's, Jersey.

**DWELLINGS FOR THE WORKING CLASSES.**—A society has been recently formed to promote and carry out the improvement of the dwellings of the Working Classes in Windsor. It is constituted on the principle of a joint stock company, with a capital of £6,000 to be raised in £10 shares, and is empowered to increase the same. The amount of dividend payable to the shareholders is limited to five per cent., leaving any surplus return available for the extension of the Society's operations. Freehold ground, midway between the Long Walk and the cavalry barracks, containing nearly 1½ acres, has been purchased of the Woods and Forests, for £287 19s. 3d., including expenses, and laid out for the erection of two rows of houses, opposite one another, to accommodate, together, about forty families, each having a small garden.

**CHLOROFORM AS A MOTIVE POWER.**—The French Government have ordered steam-engines for the *Galilee*, man-of-war, and other two vessels, in which a saving of fuel and heat is to be attempted by help of chloroform, which is to abstract the heat from the steam, and then with constitute a motive power in aid of that of the steam, to be employed in separate cylinders, after which the heat of the chloroform is to be extracted by means of cold water, which, as well as the condensed steam, are to supply the boiler, while the condensed vapour of chloroform is returned for use as before. A saving of 50 per cent. in fuel is thus calculated on. The invention is a modification by M. La Fond, a French naval officer, of one by M. Du Tremblay, a French civil-engineer, in which ether was used, but found to be highly dangerous from its combustibility.

**IMPROVED DWELLINGS FOR MARRIED SOLDIERS.**—A meeting of officers was lately held at Willis's Rooms, Colonel Angerstein in the chair, at which the following resolutions were agreed to:—"That, in the opinion of this Meeting, improved sanitary dwellings for the married soldier may be constructed on a principle combining a fair remuneration to the landlord, with increased convenience to the tenant. 2. That his Serene Highness Prince Edward of Saxe Weimar, Lord Colville, the Hon. F. Villiers, M.P., Colonel the Hon. Arthur Upton, Colonel Angerstein, Colonel Wigram, Lieutenant-Colonel H. Daniell, Captain Coeks, Captain Carleton, Captain Higginson, the Rev. R. W. Browne, and Mr. Montagu Gore be appointed trustees for carrying out this object, and they are hereby empowered to act accordingly." Funds were subscribed to the extent of about £4,000. The trustees are in treaty for a site on which to commence operations.

**RESULTS OF ELECTRIC SHOCKS IN WHALE FISHING.**—In reference to the process of stunning whales in capture, the *Liverpool Albion* states that some successful experiments have been announced by Mr. E. A. Heineken, of Bremen, the inventor, as having been reported to him by Captain Georken, of the Bremen whale ship *Averick Heineken*. Captain Georken, in a letter dated New Zealand, Dec. 13, 1851, writes as follows:—"The first experiment we made with the new invention was upon a shark, applying the electricity from the machine with one magnet. The fish, after being struck, instantly turned over on its side, and, after we had poured in upon him a stream of electricity for a few moments, by turning the handle of the machine, the shark became stiff as a piece of wood. We have as yet had but one chance to try the experiment upon a whale, which was made by the four-magnet machine. The whale, upon being struck, made one dash onward, then turned on his side, and was rendered perfectly powerless. Although I have as yet not been fortunate enough to test the invention in more instances, I have the fullest confidence in the same, and doubt not to be able to report the most astonishing results on my return from the Arctic Seas, whither I am now bound.

**STEAM FROM ENGLAND TO CALCUTTA IN THIRTY DAYS.**—The projects which are started almost every day for the purpose of still further annihilating space, have become so bold and extraordinary that the public have almost ceased to wonder at even the most "advanced" proposals. During the last ten days, for example, the Eastern Steam Navigation Company—an association of some pretensions—has obtained the permission of its proprietors to construct a class of steam-vessels of greater capacity and power than any that have yet appeared. It is intended with these steamers to perform the voyage from a Channel port to Calcutta, *via the Cape*, and without touching any intermediate place, in about thirty days. The speed would be about sixteen knots an hour, and the vessels would carry fuel for the whole voyage. The accommodation afforded to passengers and for cargo are expected to be of the most ample description; and when fairly equipped for a voyage, one of these giant steamers would not fall far short of a three-decked man-of-war in bulk and comprehensiveness. The project is a bold one. We express no opinion as to its soundness,—but it seems very likely to be submitted to the test of actual trial. Two years hence, therefore, it is probable that a floating hotel will pass uponly from England to Calcutta in thirty days, carrying passengers at half the present overland charges. With such facilities of communication it will not be easy to retain the "Asian mystery" inviolate.

## POETICAL QUOTATIONS.

## CALM.

'Twas one of those ambrosial eves  
A day of storm so often leaves  
At its calm setting—when the west  
Opens her golden bowers to rest,  
And a moist radiance from the skies  
Shoots trembling down, as from the eyes  
Of some meek penitent, whose last  
Bright hours atone for dark ones past,  
And whose sweet tears, o'er wrong forgiven,  
Shine as they fall with light from heaven!—*Moore's Lalla Rookh.*

How calm,—how beautiful comes on  
The stilly hour, when storms are gone,  
When warring winds have died away,  
And clouds, beneath the glancing ray,  
Melt off and leave the land and sea,  
Sleeping in bright tranquillity:—  
When the blue waters rise and fall,  
In sleepy sunshine mantling all,  
And ev'n that swell the tempest waves,  
Is like the full and silent heavens  
Of lovers' hearts, when newly blest,  
Too newly to be quite at rest!—*Ibid.*

The sea is like a silvery lake,  
And o'er its calm the vessel glides  
Gently as if it fear'd to wake  
The slumbers of the silent tides.—*Moore.*

Serenely my heart took the hue of the hour,  
Its passions were sleeping, were mute as the dew,  
And the spirit becalm'd but remember'd their power,  
As the billow the force of the gale that was fled!—*Ibid.*

## CANDOUR.

Then, gentle Clarence, welcome unto Warwick;  
And welcome, Somerset;—I hold it cowardice  
To rest mistrustful where a noble heart  
Hath paid an open hand in sign of love.—*Shakspeare, Henry VI.*

Make my breast  
Transparent as pure crystal, that the world,  
Jealous of me, may see the foulest thought  
My heart does hold.—*Buckingham.*

The brave do never shun the light;  
Just are their thoughts, and open are their tempers;  
Truly without disguise they love or hate;  
Still are they found in the fair face of day,  
And heaven and men are judges of their actions.

*Rousse's L'Ami Penitent.*

You talk to me in parables:  
You may have known that I'm no wordy man;  
Fine speeches are the instruments of knaves,  
Or fools that use them, when they want good sense;  
But honesty  
Needs no disguise nor ornament: be plain.—*Otway.*

'Tis great—'tis manly to disdain disguise;  
It shows our spirit, or it proves our strength.  
*Young's Night Thoughts.*

## CARE.

Rude was his garment, and to rags all rent,  
No better had he, no for better cared;  
With blist'ring hands amongst the cinders bent,  
And fingers filthy, with long nayles unpared,  
Right fit to rend the food on which he fared:  
His name was Care; a blacksmith by his trade,  
That neither day nor night from working spared,  
But to small purpose yron wedges made:  
Those be unquiet thoughts that careful minds invade.

*Spenser's Faery Queen.*

In care they live, and must for many care;  
And such the best and greatest ever are.—*Lord Brooks's Alhamb.*

Care that is enter'd once into the breast,  
Will have the whole possession ere it rest.—*Jonson's Tale of a Tub.*

Thus sometimes hath the brightest day a cloud,  
And after summer ever more succeeds  
Barren winter with his wrathful nipping cold;  
So cares and joys abound as seasons fleet.—*Shakspeare's Henry VI.*

Care keeps his watch in every old man's eye,  
And where care lodgeth sleep will never lie.  
*Shakspeare's Romeo and Juliet.*

## PARLOUR PASTIME.

*Clapperton; or, the Goose's History*

This game was suggested by the ancient one of "Couch," but is much altered to avoid both the necessity of young and old making themselves giddy by twirling round, when their names are mentioned, and to effect a compromise in the redemption of the forfeits; the ordinary mode being often singularly tiresome. In the History of the Goose, a commencement of which is appended, to show the sort of story which should be invented for the occasion, no notice is to be taken when her name occurs, but whenever the word Drake or Doctor is mentioned, every one is to clap their hands once, unless the two are joined, when two merry claps must sound. Any one omitting to clap at the right place, or clapping when the Goose is named, pays a forfeit, and all the forfeits may be redeemed by quoting two lines of verse, varied by kissing the mantelpiece, if the little ones present prefer it to the former mode. This saves all trouble of crying the forfeits, or the performance of disagreeable sentences, which too often cease to render the game a jest:—"A Goose, feeling out of spirits one morning, consulted her favourite Doctor Drake (two claps), who advised her to go a long journey to foreign countries, which she resolved to do. So making, by the Doctor's advice (one clap), a good meal of cabbage-stalks and apple-parings, she set out from Dingle Farm, escorted by Doctor Drake (two claps). A shrill scream soon announced some disaster, and the Doctor (one clap) was obliged to extract two thorns from one of the Goose's wings, and to bathe her foot, stung by nettles, in a ditch, before they could proceed. After this they got on pretty well, though Goose was so fat she could not have forced her way through one of the stiles, had not the Doctor (one clap) given her a good push behind. Part of the journey lay through a meadow, in which two Miss Chickens, admiring the Goose and the Drake (one clap), joined them; but they talked so fast, the Doctor (one clap) soon gave them to understand their company was unacceptable. A Cock in the neighbourhood looked disposed to fight Doctor Drake (two claps) for this rudeness to his daughters, but the Doctor (one clap), not thinking it becoming to his professional dignity to engage in duels, only quacked a saucy reply, and went on with his patient. They soon met with a pig-driver." . . . H. M. R., JUN.

## ENIGMA.

As first made by Nature I'm hid from your sight; (1)  
But by labour of man I am brought to the light; (2)  
And though when first seen foul apparel I wear, (3)  
In a brilliant white dress I soon after appear. (4)  
Then I start into thousands of wonderful forms; - (5)  
I cut through the waters, despite of the storms; (6)  
While I travel o'er land even swifter than wind,  
And far leave the lingering race-horse behind. (7)  
I am always at hand when the battle grows warm; (8)  
I often announce the approach of a storm. (9)  
The sailor is guided by looking at me,  
On board ship, where without me he'd quite be at sea. (10)  
I fly quickly about when the fire is hot;  
And, like landlords in Ireland, am frequently shot. (11)  
It was I who beheaded King Charles the First,  
And sated with royal blood Oliver's thirst. (12)  
By me to your chamber admittance you gain; (13)  
And lightly your chariot rolls over the plain. (14)  
By me to the depths of the ocean you dive; (15)  
And quicker (16), or slower your courser you drive. (17)  
But enough;—yet did time and your patience not fail,  
Night sooner o'er earth should have thrown her dark veil,  
Than I should have finish'd the wonderful story  
Of all I can do for man's greatness and glory.—ISAAC ASHIE.

## RIDDLE.

I am a curious monster of the feminine gender, at least I am always termed she, even when I am christened Richard, Thomas, Harry, or any other masculine name. I have five heads, two are those of gallant knights, two are those of cats, and the fifth, though of various shapes and sizes, is more particularly my own. I have only one fore-foot, but I receive assistance from a number of crow's-feet. My eyes, of which I have several, are bull's-eyes; I have two cat's-tails, frequently many monkey's-tails, and am never without a quantity of knees, the most of which are attached to my sides. I possess whips, many yards in length, saddles, bridles, and many horses (some of the Flemish breed), which never enter a stable, but are kept at the yard, suspended by stirrups. Though I know nothing about Cinderella or the Fairy, yet I keep both mice and lizards, and though they never eat, yet they are stronger than a man, and perform important duties for me. I am exceedingly well paid, if I was not I would drink so hard as to become unmanageable and dangerous. I may wear stoms, ear-rings, collars, chains, and have generally two watches; but, though I am often gaily dressed in different colours, yet at the same time, I wear my shroud. I never sew, yet I am helpless without a needle, pins, and thimbles. Like a plant, I have a stem; like a fiddle, I am useless without a bow, and I am also sounded with a string. Though often many miles away from another of my kind, yet I am scarcely ever without a companion; and though I am noted for gammoning, yet, gentle reader, all that I have told you is true.—H. W. PINKERTON.

## TRANSFIGURED PLAYING CARDS.

THE TEN OF DIAMONDS.—A LEGAL TEN-URE.

## PUZZLE.

I am a foreigner, although I travel into all countries. I was very fair when I was born (1), although I am now very dark. I make myself generally useful;—I assist youth in the study of arithmetic (2), artists are indebted to me (3), and little children sport with me (4). I am particularly fond of ladies, whom I often embrace (5), and attend them in their walks (6), although I am never permitted to kiss them. I frequently unite parties of very different character (7). Although I am an enemy to water (8), I am both able and willing to save people from being drowned (9). But in return for all my services, I am too often trampled upon by the world (10); although occasionally elevated in society (11). I am roughly treated and abused, until my constitution, which is not strong, wears out; but I belong to a numerous family. I know that when I die, I have brothers who will supply my place.

## TRANSPOSITION.

How cold and dreary does my whole appear;  
A prospect chilling as December's snows!  
Curtail'd, I fill the hardy tar with fear,  
By yawning, keep him from his hour's repose;  
Transpos'd, the merchant adds me to his store;  
Once more, for every bird I furnish food;  
And last, employment for the rustic poor,  
Who rip me open for their master's good.

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 653.

**SOLUTION OF THE ENIGMA—THE FLORAL ENVELOPE, OR PERIANTH OF A FLOWER.**—(1.) Verses 1 and 2 allude to the well-known fable of Proserpine, the wife of Pluto, and daughter of Ceres. (2.) The petals of a flower expand in the sunshine, and often close at night. (3.) The floral envelope charms the eye, and sheds its perfume in the heated atmosphere of the drawing-room. (4.) As in the Lily. (5.) In the Tulip, where the perianth is termed simple, because consisting of a calyx alone. (6.) Each part of a flower has its distinctive character and name. (7.) The system adopted by late writers on Botany, of classifying plants according to their natural families, has added to their notoriety and interest. (8.) The perianth covers and shelters the flower. (9.) It is often found beside the streamlet; and (10.) when its day of usefulness is past, it falls to the ground; occasionally, too, forming a part in the composition of a bouquet, it is thrown at the feet of the fair. (11.) Helmet-shaped, lanceolate-spurred. (12.) Stellate. (13.) Papilionaceous. (14.) Cup-shaped, and often decorating the table at a feast. (15.) In the language of Flowers. (16.) Flies. (17.) As in the Snap-dragon.

**ORTHOGRAPHICAL ENIGMA.—STRAVE.**—(1.) Ment. (2.) Mat. (3.) Mast. (4.) Stem. (5.) Mat. (6.) Mast. (7.) Sea. (8.) Seat. (9.) Team. (10.) At. (11.) Steam. (12.) Am. (13.) Tea. (14.) East.

**SOLUTION.—ENIGMATICAL LIST OF FISHES.**—1. The Torpedo (torpid—oh!) 2. The Flying-fish. 3. The Oyster (Oh—str.). 4. The Whiting. 5. The Fluke-fish (Pholades). 6. The Razor-fish. 7. The Mackerel (Make-a-row!). 8. The Skate. 9. The Gold-fish. 10. The Herring (Her-ring). 11. The Shark-fish. 12. The Mullet. 13. The Cockle. 14. The Star-fish.

## OUR CORNER CUPBOARD!

Why is John Pigger's boy larger than his father? Because he is a little Pigger!

Why is a schoolmaster best off in summer? Because he keeps his day's cool (day school) from nine till five!

A lazy fellow lying down on the grass, said, "Oh! how I do wish that this was called work, and well paid."

Why should a man, when he's eating salt fish on a Good Friday, take no egg-sauce with it?—For fear his appetite should get egg-sauce-ted (exhausted).

QUESTION FOR EXERCISE.—If a hole is twice as wide as it's deep, and twice as deep as it need be, how many potatoes will it hold, provided they are half mercers?

An Irish gentleman entered a public-house one day, and called for "a pint of half-and-half; and, d'y'e hear," said he, very significantly, "let there be *most ale* in it!"

A witness under examination in an Irish court of justice, had just stated that he was suddenly roused from his slumbers by a blow on the head. "And how did you find yourself?" asked the examining counsel, "*Fast asleep*," replied the witness.

THE GRAMMAR OF MATRIMONY.—If you are a precise man, and wish to be certain of what you get, never marry a girl named Ann, for we have the authority of Lindley Murray, and many others, for the assertion that Ann "is an indefinite article."

DOCTOR PENNE happening to call a clergyman a fool, who was not totally underserving of the title, but who resented the indignity so highly, that he threatened to complain to his diocesan, the Bishop of Ely. "Do so," says the Doctor, "and he will confirm you."

A gentleman whose house was under repair, went one day to see how the job was getting on, and observing a quantity of nails lying about, said to a carpenter, "Why don't you take care of these nails, they'll certainly be lost." "No," replied Master Chopstick, "you'll find them all in the bill."

## LIFE INSURANCE.

In a storm one night,  
When all was fright,  
'Mong't passengers and crew  
An Irish clown,  
Like a block sat down,  
And seem'd as senseless too.  
Conduct like this,  
Was much amiss,  
And not to be endured,  
But when ask'd why,  
He made reply,  
"Good folks, my life's insured."

"CURF, you see dem two ladies ob color, cross de street dare?" "Yes, I see de dear angels, Pomepy." "Well don't dey look 'mazing like one another?" "Dat berry true; I gibbs you credit for your nice demonstration; dey do 'mazingly 'zemble one anoder, 'specially de one on this side."

"Look here, ma!" said a young lady, just commencing to take lessons in painting, holding up a sample of her skill to her mother. "See my painting; can you tell me what this is?" Ma, after looking at it some time, answered, "Well, I reckon it's a cow, or a rose-bud; but I don't know which."

Tom presented his bill to his neighbour Joe, for service rendered. The latter looked it over, and expressed much surprise at the amount. "Why, Tom, it strikes me you have made out a pretty round bill here, eh?" "I'm sensible it's a round one," quoth Tom, "and I have come for the purpose of getting it squared."

POETS.—The effects of disappointed love—*Alenside*. Part of a lady's dress—*Spenser*. What the ladies do, and a weight—*Chatterton*. A manufactory, and a weight—*Milton*. The prayers of a glutton—*Moore*. An indication of old age—*Gray*. What a mortgage will do—*Cumberland*. The contributions of a miser—*Little*. A troublesome companion—*Bunyan*. The soldiers home, and an alarm—*Campbell*.

"JOSEPH," said a pedagogue to a boy who came too late one day, "where have you been for the last hour?" "Nowhere," meekly replied Joe. "Nowhere!" fiercely echoed the teacher, who was wont to swagger about his little kingdom like a Gulliver in Lilliput,—"where is that?" "I don't know," replied Joe, as he scratched his head, and looked down upon the floor—"I guess it aint anywhere." "And what were you doing there?" demanded the pedagogue, again scowling still more fiercely. "I wasn't doing anything! I had *nothing to do*, and so I went *nowhere*!"

"MASSA, you know dem big glass shades, what am aribe last night?" "Well," said the master. "Well, dey was put in de store-room," continued the boy. "Well," continued the master inquiringly. "Well, I was peelin' de apples, when Mr. Johnson told me to bring one of dem out, and—" "Well," said his master impatiently. "Well, as I was gwine to do—" "You let it fall and broke it, you scoundrel," anticipated the master. "No, I didn't needer," said the negro, sulkily. "Well, what then?" said the master recovering. "Why I struck him again de corner of de shelf, and he brake himself all to pieces!"

## OUR MEMORANDUM BOOK!

BIBLES.—The following list of the principal English Bibles, with their respective dates, may serve to assist the collector of them in his researches; (it is to be observed, that printing was in use 57 years before any New Testament was printed:)—1526 and 1530, Tindal's Bible; the first printed. —1535, Coverdale (Miles) Bible. —1537, Matthew's Bible. —1540, The Bishop's Bible; printed by Grafton. —1562, The Geneva Bible. —1568, Great English Bible.—The same in 8vo., reprinted 1572.—1582, New Testament; printed by Jugge.—1584, Rhenish Testament.—1610, King James's Bible.

FAMILY ECONOMY.—There is nothing which goes so far towards placing young people beyond the reach of poverty, as economy in the management of their domestic affairs. It is as much impossible to get a ship across the Atlantic with half a dozen butts started, or as many bolt holes in her hull, as to conduct the concerns of a family without economy. It matters not whether a man furnishes little or much for his family, if there is a continual leakage in the kitchen, or in the parlour it runs away, he knows not how; and that demon waste, cries "More," like the horse-leech's daughter, until he that provides has no more to give. It is the husband's duty to bring into the house, and it is the duty of the wife to see that nothing goes wrongfully out of it.

## LIFE.

Sink not beneath imaginary sorrows,  
Call to your aid your courage and your wisdom;  
Think on the sudden change of human scenes,  
Think on the various accidents of war;  
Think on the mighty power of awful virtue;  
Think on the Providence that guards the good.—*Johnson*.

LADIES' CURLS.—About the year 1595, when the fashion became general in England of wearing a greater quantity of hair than was ever the produce of a single head, it was dangerous for any child to wander, as nothing was more common than for women to entice such as had fine locks into private places, and there cut them off. I have this information (says Stevens) from Stubbs's "*Anatomy of Abuses*," which I have often quoted on the article of Dress. To this fashion the writers of Shakspeare's age do not appear to have been reconciled. So, in "*A Mad World, my Masters*," 1608: "to wear periwigs made of *another's hair*, is not this against kind?" Again, in Drayton's "*Mooncalf*:"

"And with large sums they stick not to procure  
Hair from the dead, yea, and the most nuclear;  
To help their pride they nothing will disdain."

Again, in Shakspeare's 68th sonnet:

"Before the golden tresses of the dead,  
The sight of sepulchres, were shorn away,  
To live a second life on second head,  
'Ere beauty's dead fierce made another gay."

Warner, in his "*Albion's England*," 1602, book ix. chap. xlvii., is likewise very severe on this fashion. Stow informs us that "women's periwigs were first brought into England about the time of the massacre of Paris."—See note to "*Timon of Athens*," in which play Shakspeare says:

"And thatch your poor thin roofs  
With burdens of the dead;—some that were hanged,  
No matter," &c.

THE CHEESEMITE.—The *Accarus domesticus*, or common mite, is of all the species the best known. It is found in great abundance upon old cheese, on dried or smoked meat, on birds and insects in collections of natural history, on old bread, and dried up confectionary, which has been kept too long. It is for this reason that Degeer has named this species *domestic*. He also observed some of these mites in the flower-pots which he had in his chamber. This insect is almost invisible to the naked eye; its colour is a dirty white, bordering a little on the brown, with two brown spots produced by the internal parts, appearing through the skin, which is transparent. The body is bristling with hairs, thick, oval, a little narrowed in the middle; its anterior part is terminated in a cone, or a sort of muzzle, containing the organs of manducation. The mandibles have been distinguished; the palpi are very short and setaceous; the skin is smooth and tense; the eight feet are rather long, always curved towards the plane of position, terminated by an oval piece, transparent, and swelled like a small bladder with a long neck, having in front a sort of small cleft or separation. The insect can impart to it all kinds of inflections, swell and contract it. It dilates it when walking, and contracts it, so as to make it disappear, when the foot does not touch the plane of position, and is raised. The vesicle can be folded in two in its length, by reason of the cleft which we have just mentioned. Each moiety is furnished with a small hook, which enables the mite to fix itself on the object upon which it walks. The feet are of equal length, but the two anterior pair are much thicker than the two last. The numerous hairs with which the body is bristled are barbed on both sides, and what is singular is, that the insect can move them on one side and the other. "Each hair," says Degeer, "must necessarily be attached to, or have communication with a muscle, which gives it motion." What marvellous mechanism in so small an object! These sort of prickles are placed upon the body in regular order: two are observed on the upper part of its anterior extremity, which represent, as it were, two small antennae. There are some on the feet which are finer, and on which Degeer has observed no barbs. The females are larger than the males. The female lays some oval eggs, very white, and which appear to be reticulated or spotted with brown. Leuwenhoek, who has particularly observed this species, saw but six feet on the little ones just disclosed.

**COMMERCIAL CREDIT MUTUAL ASSURANCE SOCIETY,** Registered pursuant to 7 & 8 Vic. c. 11b. Office, 52, Threadneedle-street, London.  
This Society is issuing Policies to secure Commercial Houses against Losses arising from Bad Debts.

**SMART YOUNG MEN.**—For your HATS go to PARKER'S noted Wholesale and Retail Hat Warehouses, opposite Shoreditch Church, where you can select from Fifty different Shapes of the best Silk and Workmanship in London. A first class Hat, in every prime shape, 9s. 6d. You are respectfully invited to select your shape from the window.—Note, PARKER'S, 127 and 128, opposite Shoreditch Church, and City-road, one door from Old-street.

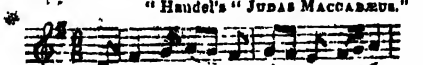

"Costly thy habit as thy purse can buy,  
But not expressed in fancy—rich, not gaudy;  
For the apparel oft proclaims the man."—*Hamlet.*

**EVERY WELL-DRESSED MAN KNOWS** how difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste being equally regarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connexion has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates.—F. FOX, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

**ANDERSON'S PORTABLE SPRING PRESSURE SPECTACLES** that never shift their position, but when removed from the face immediately collapse. Double eye-glasses to open and close with one hand only, to fix on the nose or place before the eyes at the option of the wearer. Inventions of the utmost importance. Sold by Messrs. HARRIS AND SON, 52, Great Russell-street, London; and all appointed Agents throughout the Kingdom.

**GLENFIELD PATENT STARCH,** used in the Royal Laundry, and Wetherpoon's Steam-made Confections.—Sold by all respectable Grocers and Druggists.—Glasgow: R. Wetherpoon & Co., 40, Dunlop-street. London: Wetherpoon & Co., 40, King William-street, City.

**TO ARTISTS.**—Just published,  
**THE PRACTICAL LITHOGRAPHER,** containing every Information for Working on Stone. Sent post free on receipt of Two Dosea Stamps. Depot for Lithographic Artists' Materials, 48, Bathone-place, London. Lithographic Chalks, acknowledged to be the best in London, 1s. per Dozen. The Trade supplied.

"Handel's" "JUDAS MACCABEUS."  
  
O love-ly Peace, with Plenty crown'd

**NOVELLO'S MUSICAL PRESENTS.**—Octavo Editions of HANDEL'S Israel in Egypt, 6s. 6d.; Messiah, 6s. 6d.; Samson, 7s. 6d.; Jndaa Macabeanus, 6s. 6d.; Jephtha, 6s. 6d.; Joshua, 6s. 6d.; Solomon, in progress. HAYDN'S Creation, 5s. MEXERLESSON'S St. Paul, 6s. 6d.; Lobengrin, and As the Hart Pines, 5s. 6d. Three Masses by Mozart, Haydn, and Beethoven, 8s. 6d.—LONDON SACRED MUSIC WAREHOUSE, 69, DEAN-STREET, SOHO, and 24, POULTRY.  
Catalogues, postage-free, six penny stamps.

**UNCLE TOM'S CABIN.**  
To be completed in Six Weekly Numbers, Price 1d. each. Each Number will be uniform in size and price with the HOME COMPANION, and may be bound up with this Journal.

"UNCLE TOM'S CABIN," though very recently published in America, has already passed through twenty editions in that country, and is one of the most thrillingly interesting novels ever written.  
London: GEORGE VICKERS, 334, Strand, and all book-sellers.

**WHEN YOU FURNISH, OBTAIN.** Post-free, on application, DEANE, DRAY and Co.'s General Furnishing Piced List, enumerating more than 500 articles selected from the various departments of their establishment, requisite in fitting up a Family Residence. The stock includes TABLE CUTLERY, ELECTRO-PLATE, LAMPS, PAPER MACHE TRAYS, FENDERS AND FIRE IRONS, IRON BEDSTEADS, BRITANIA METAL, Tin and Japan Ware, Turnery, Brushes, &c. &c. **A GREAT LUXURY.**  
**PAYNE'S ROYAL OSBORNE SAUCE,** prepared by Her Majesty's Chemist, in the Isle of Wight, specially patronised by the Royal Yacht Squadron, exhibited and used at the Great Exhibition of 1851, is considered the premier sauce for fish, game, hot and cold meats, soups, gravies, &c.  
"We have tasted, and relished, many piquant sauces, but the Royal Osborne beats them all."—*Sun, April 24, 1851.*  
Sold wholesale by Rumsey, 5, Queen-street-place, London; retail, by Fortnum & Mason, and sauce-vandres generally.

**BEAUTIFUL HAIR, WHISKERS, EYEBROWS, &c.**  
**MAY** be with certainty obtained by using a very small portion of ROSALIE COUPELLE'S PARISIAN POMADE every morning, instead of any oil or other preparation. A fortnight's use will, in most instances, show its surprising properties in producing and curling Whiskers, Hair, &c., at any age, from whatever cause deficient; as also checking grayness, &c. Persons who have been deceived by imitations of this Pomade, puffed off by so-called "Testimonials," as spurious as the article they represent, will do well to make ONE TRIAL of the only genuine preparation. Price 3s. per pot. Sent free by post, with instructions, &c., on receipt of 24 postage stamps, by Madame COUPELLE, Ely place, Holborn, London, where she may be consulted daily, from 2 till 5. Testimonials.—Dr. Erasmus Wilson: "It is undoubtedly the best preparation known."—Mr. Yates, hair-dresser, Malton: "The young man has now a good pair of whiskers; I want you to send me two pots for other customers."

**TEETH.**  
129, Strand, and 56, Connaught-terrace, Hyde-park. Teeth, 5s. each; a complete Set, £5.

**MR. JONES, Inventor and Manufacturer** of IMPROVED ARTIFICIAL TEETH. They are permanent, never change colour, break, or decay, and are better adapted for Articulation and Mastication than any hitherto in use. Attendance from 10 till 6.

**HOLLOWAY'S PILLS,** a never-failing Remedy for Complaints of the Stomach, Indigestion, and Sick Head-aches.—This extraordinary medicine will effect cures after every other remedy has been tried in vain. Persons suffering in any way from general debility, sick head-aches, bile, stomach or liver complaints, may rest assured that a course of these pills will effect a radical cure, however bad their cases may be, as it is confidently asserted that this medicine acts so directly upon the very main-springs of life, that no disease, however severe, can resist its influence. Every one, therefore, who is subject to any of the above mentioned disorders, should have recourse to Holloway's Pills.—Sold by all druggists, and at Professor Holloway's Establishment, 244, Strand, London.

**MOAT'S PILLS.**  
**THE best Vegetable Tonic and Aperient** Medicine, by W. C. MOAT, Surgeon and Apothecary, formerly the Partner with the late Mr. Morrison, the Hygienist. For persons whose occupation and mode of living induce frequent disarrangement of the digestive organs, a reliable Medicine is a necessary of life. Mr. Moat's Pills fulfil this requirement. Sold at Mr. Moat's Establishment, 344, Strand, London; and by all Vendors of Medicine; with directions affixed, in English, Welsh, Spanish, French, German, or Dutch.

**PAINS IN THE BACK, GRAVEL, LUMBAGO, Rheumatism, Gout, Indigestion, Nervousness, Debility, &c.**  
**DR. DE ROOS' COMPOUND RENAL PILLS,** as their name—Renal, or the kidneys—indicates, are now established as the most safe and efficacious remedy ever discovered for the above dangerous complaints, which, if neglected, frequently end in piles, fistula, stone in the bladder, and a lingering death! For gout, sciatica, rheumatism, the doloureux, erysipelas, dropsy, scrofula, loss of hair and teeth, depression of spirits, blushing, incapacity for society, study, or business, confusion, giddiness, drowsiness, sleep without refreshment, fear, nervousness, and even insanity itself, when, as is often the case, arising from, or combined with, urinary diseases, they are unequalled. By their salutary action on acuity of the stomach, they correct bile and indigestion, purify and promote the renal secretions, thereby preventing the formation of stone, and establishing for life the healthy functions of all these organs. ONE TRIAL will convince the most prejudiced of their surprising properties.

May be obtained at 1s. 1d., 2s. 9d., 4s. 6d., and 11s. per box, through all Medicine Vendors in the Kingdom; or should difficulty occur, they will be sent free, on receipt of the price in postage stamps, by DR. DE ROOS, 38, Ely-place, Holborn-hill, London, where he may be consulted, from 1 to 1, and 5 till 8 (Sundays excepted), unless by previous arrangement.  
N.B. A considerable saving is effected by purchasing the larger boxes.

### Editor's Note-Book.

**DOMESTIC HINTS:—No. 17.**  
**Rest of Children.**—Infants cannot sleep too long; and it is a favourable symptom when they enjoy a calm and long-continued rest, of which they should by no means be

deprived, as this is the greatest support granted to them by Nature. A child lives, comparatively, much faster than an adult: its blood flows more rapidly; every stimulus operates more powerfully; and not only its emunctory parts, but its vital resources also, are more speedily consumed. Sleep promotes a more calm and uniform circulation of the blood; it facilitates the assimilation of the nutriment received, and contributes towards a more copious and regular deposition of alimentary matter, while the horizontal posture is the most favourable to the growth and bodily development of the child. Sleep ought to be in proportion to the age of the infant. After the age of six months, the period of sleep, as well as all other animal functions, may in some degree be regulated; yet, even then, a child should be suffered to sleep the whole night, and several hours both in the morning and afternoon. Mothers and nurses should endeavour to accustom infants, from the time of their birth, to sleep in the night preferably to the day; and for this purpose they ought to remove all external impressions which may disturb their rest, such as noise, light, &c., but especially not to obey every call for taking them up, and giving food at improper times. After the second year of their age, they will not instinctively require to sleep in the forenoon, though after dinner it may be continued to the third and fourth year of life, if the child shows a particular inclination to repose; because, till that age, the full half of its time may safely be allotted to sleep. From that period, however, it ought to be shortened for the space of one hour with every succeeding year; so that a child of seven years old may sleep about eight, and not exceeding nine hours: this proportion may be continued to the age of adolescence, and even manhood. To awaken children from their sleep with a noise, or in an impetuous manner, is extremely injudicious and hurtful; nor is it proper to carry them from a dark room immediately into a glaring light, or against a dazzling wall; for the sudden impression of light debilitates the organs of vision, and lays the foundation of weak eyes, from early infancy. A bed-room, or nursery, ought to be spacious and lofty, dry, airy, and not inhabited through the day. No servants, if possible, should be suffered to sleep in the same room, and no linen or washed clothes should ever be hung there to dry, as they contaminate the air in which so considerable a portion of infantile life must be spent. The consequences attending a vitiated atmosphere in such rooms, are various, and often fatal. Feather beds should be banished from nurseries, as they are an unnatural and debilitating contrivance. The windows should never be opened at night, but left open the whole day, in fine clear weather. Lastly, the bedstead must not be placed too low on the floor; nor is it proper to let children sleep on a couch which is made without any elevation from the ground; because the most mephitic and pernicious stratum of air in an apartment, is that within one or two feet from the floor, while the most wholesome, or atmospheric air, is in the middle of the room, and the inflammable gas ascends to the top.

**ORDER.**—P. S.—In your affairs, your time, your expense, your amusements, your society, the principle of order must be equally carried, if you expect to reap any of its happy fruits. For if, into any one of those great departments of life you suffer disorder to enter, it will spread through all the rest. In vain, for instance, you purpose to be orderly in the conduct of your affairs, if you be irregular in the distribution of your time. In vain you attempt to regulate your expenses, if into your amusements, or your society, disorder has crept. You have admitted a principle of confusion which will defeat all your plans, and perplex and entangle what you sought to arrange. Uniformity is above all things necessary to order. If you desire that anything should proceed according to method and rule "let all things be done in order."

**MUSCULAR EXERCISE.**—L. S. A.—Much care should be taken in setting down the feet. Let the outer edge of the heel first touch the ground, and the sole of the foot bear and project the weight of the body. The length of step is to be determined by the length of limb. Efforts at taking long steps; out of proportion to the power of

motion, are always ungraceful. Reckoning from heel to heel, or toe to toe, the length of a military step at drill march, is thirty inches, which is considerably more than the length of ordinary steps in walking. The length of step at a moderate pace, of a man, five feet, nine inches high, is usually twenty-four inches; and this will be found a convenient length to acquire the habit of using. The motion of the arms too and fro, in cadence with the movements of the legs, greatly helps the locomotion, and is advantageous in exercising the muscles of the shoulders, and expanding the chest. The motions of the arms, however, should be on a moderate scale, the hands not swinging through a greater space than eight or nine inches before and behind the leg. The practice of working forward the shoulders and swinging the arms at a great rate is most odious. It may be added, that the art of comporting the hands, keeping them down, or from meddling with the person, is one very necessary in polite behaviour, and should be acquired by all young persons, before bad habits are confirmed.

**THE DREAMER.**—A. R. S.—The march of emigration is certainly one of the most extraordinary features which marks the character of modern times, and it all arises from a natural yearning after wants much imaginary as real. Any analysis of the motives which induce mankind generally to emigrate, might be summed up in the single word, *Cupid*. This is the ta'monic charm which excites the acquisitive organ to a degree which breaks up the bonds of the domestic hearth, and scatters families over the world. True, a craving for novelty and change of scene sometimes mingles with it; but, still, in the largest proportion, will be found the four letters which express the shining mass that is to purchase every comfort, and gratify every desire. In the eye of the philosopher this spirit of cupidity presents a lamentable picture of the human species, and excites his pity that, what his class has been accustomed, in the ages of all civilized time, to stigmatize as *base*, should yet be one of the greatest objects of

CIVIL ATTRACTION AND SAVAGE TEMPTATION.

**HINTS TO WRITERS.**—B. C.—It should be the aim of those who write for the press to have, in their articles, some great truth or precept, to the inculcation of which their powers should be directed. It seems almost a necessary consequence that, where so much is written as at the present day, there should be some chaff among the wheat; but the greater part of this is very evidently the result of carelessness. Writers are not always mindful of the influence a few words may exert, especially if printed in a widely circulated journal; and hence, that is sometimes penned which should never go forth to the world. It would seem almost a moral duty to be exceedingly cautious in this matter, and therefore the essay writer should carefully weigh his thoughts before giving them to the public.

**COMMUNICATIONS RECEIVED.**—T. M. (It is said that the plant guano, obtained in South America, will cure the bite of a mad dog and prevent hydrophobia). A. R. G. (the halcyon alluded to by the poets is the bird called the kingfisher. It was believed by the ancients that while the female brooded over the eggs, the sea and weather remained calm and unruffled; hence arose the expression of halcyon days). M. S. (we would not wish to be severe; but the verses sent remind us of an epigram, which runs thus in Dundee churchyard:

"Here lies the body of John Watson,  
Read not this with your hats on,  
For why? He was the Provost of Dundee,  
Hallelujah! hallelujah!")

P. R. (many of the best poetical pieces of Lord Byron, having the least amatory tendency, have been distorted by his calumniators, as if having some relation to the lamented circumstances which darkened the latter days of his life). R. M. (the site of the erection which used to be at Charing-cross, is now occupied by the equestrian statue of Charles I., in which the figure and symmetry of the horse are beautifully displayed). J. W. (the New Forest is in Hampshire, and has been so designated for nearly seven hundred years. It is situated on the south side of the county, and anciently contained many populous towns and villages, and thirty-six parish churches,

all of which are said to have been destroyed by William the Conqueror, and his son William Rufus, to gratify their inordinate love of hunting). A. Yarrin ("What o'clock?" is an allusion for "What is it on the clock?"). P. A. (all animals, so far as we know, possess the sense of hearing, although it was formerly doubted with respect to fishes. The organ, however, in these was discovered by the late Mr. John Hunter). O. S. (the rays of light travel 120,000 miles in a second, and are seven minutes in completing their passage from the great luminary to our earth, a distance of about seventy millions of miles). T. R. (fogs are more frequent in October and November, than at any other period of the year, because besides the evaporation from seas, rivers, and lakes, there is a constant exhalation from the ground in the form of vapour). A. P. (depend upon it, your disqualifications are more imaginary than real. Nature has given to every man the capacity of being agreeable, though not of shining in company; and there are a hundred men sufficiently qualified for both, who, by a very few faults, that they might correct in half an hour, are not so much as tolerable). T. S. T. (the China clay of Cornwall ranks foremost amongst the British clays, and fetches the highest price in the market. When it is purified it is understood to be almost exactly identical with the *kaolin* of the Chinese). DAVIN (good sound bricks are the best materials for ovens, and a neat calculation of the number required may be made by applying this well-known rule:—100 bricks will build a square yard of nine inch work). R. G. (pepper, sugar, and water, will effectually destroy flies and wasps). D. A. (cannel, or channel coal, is produced best in Lancashire; it contains a much larger proportion of charcoal, and less inflammable tar). P. D. (a tablespoonful of moist sugar has been given as the quantity necessary to splutter a salmon of five or six pounds weight; to which may be added, if desired, either a teaspoonful of salt or saltpetre). T. P. (resolve now. Do not leave till to-morrow what may as well be done to day). G. W. (we believe it is generally felt, that, in order to deserve a true friend, we must first learn to be true). M. A. (No; in our opinion, no company whatever can justify drinking to drunkenness. When Esculapius applauded Philip, King of Macedon, as a jovial man who would drink freely, Demosthenes replied, "That it was a good quality in a sponge, but not in a king"). P. D. (if you desire to cook a potato properly, wash it well, but let there be no scraping. At the thickest end cut off a piece the size of a sixpence. This is the safety valve, through which the steam escapes, and all rents in the skin are thereby prevented, just as a valve prevents a rupture in the steam boiler). M. L. (your reasoning is sophistical rather than wise. You should always remember that a promise is just a debt which you ought to take care to pay, for honour and honesty are the security). G. S. (the following will answer your question:

"Not on the field of blood and strife,  
Where life is waged for a life,—  
With bodies striven,—  
Not in the fight where ghastly death  
Is wrapt in each inhaling breath,  
Is courage shown,—  
Not on the sword where friend meets friend,  
And their life's blood together blend,  
The strife of pride,—  
But they who thum the sinful fight,  
And nobly say—'We will do right,  
Not wrong, whatever befall.'"  
Who boldly meet the scolds of men, and scorn  
Whate'er is mean, are brave—God's noble born.")

N. N. (No: at the present day, eminent position in any profession is the result of hard, unwearied labour. Men can no longer fly at one dash into eminent position. They have got to hammer it out by steady and rugged blows. The world is no longer clay, but rather iron in the hands of its workers). P. M. (unqualifiedly to affirm that all men are equal, is to make an assertion which few will be found to support, and which, if carried into effect practically, would produce frightful results. For we must have superiority, else we could not have government; the will of our Creator has expressly conferred superiority in this respect upon some among men. But with this exception we may claim as an inviolable proposition that all are equal.)

PICCIOLA:

OR,

THE PRISON FLOWER.

(Continued from page 661.)

## CHAPTER XIII.

THE next morning the city of Alessandria was in its gala dress by break of day. An immense population was already circulating in its streets, which were adorned with boughs and hung with flags. The crowd was going from the town-hall, where Napoleon and Josephine then were, towards the triumphal arch, raised at the extremity of the suburb through which they would pass to visit the illustrious plains of Marengo.

On the road from Alessandria to Marengo were similar multitudes, shouts, and trumpet-bleats. Never had a pilgrimage to Our Lady of Loretto, never had the ceremonies of the Jubilee in Rome, attracted such crowds as those who were bending their steps towards that field of recent battle.

There was to be performed the most important act of the ceremonies of the day. The emperor Napoleon was to preside there at a mock fight, in commemoration of the victory gained in that very place, five years before, by the First Consul Buonaparte.

Tables and stages were placed along the road. There they ate and acted

plays in the open air. They even preached there, for more than one pulpit suddenly appeared between the theatre and the tavern; monks mixed with the crowd, or keeping themselves apart on the sides of the road, not content with giving their benedictions to the passers-by, exhorted them to sobriety and tranquillity, and sold them little ivory virgins, and blessed rosaries.

In the long single street of the village of Marengo, all the houses were turned into taverns, and presented an image of confusion and motion. At every window, to attract or tempt customers, hung smoked hams, sausages, strings of partridges and quails, festoons of gingerbread, and bouillons. They went in and out, they pushed on, Italians and French, citizens and soldiers; the piles of macaroni, the pyramids of macarons, buns, and radishes, disappeared under the hands of the buyers. In the dark, narrow stairs, they pushed and elbowed in a double line, ascending and descending; some still loaded with their provisions, to save themselves from the rapacity of their neighbours, raised their arms above their heads; and, in the darkness, a hand longer and more dexterous than theirs, would seize the scanty load, whether of buttered bread, figs, oranges, a little ham of lard, or a larded quail,—whether a raised pie, or an excellent stew in its pan,—all was taken; and there were cries, jests, and prolonged laughter, which reached from the first to the last of the line of march; and the thief of the ascending line, contented with his prize, turned about trying to retreat, while the robbed of the descending train, constrained to return to the shop, endeavoured to remount; and the whole band, confused by this opposing ebb and flow, was turning this way and that, in the midst of busts of gaily, outla, and blows

distributed at random; and were at last poured out partly into the street, partly into the rooms, where the drinkers were already roaring out their songs, forgetful of the good advice of the monks.

Amongst tables loaded with meats; and benches with guests, from one room to the other, were seen in every part the women and the *giannine* of the house. The one with their coloured aprons, powdered hair, and little coquettish poultard; still the principal ornament of their dress; the others in a short petticoat, long-plaited tresses, their necks and ears loaded with gold ornaments, and their feet bare.

To these lively, animated scenes of the roads and the village, of the chamber and the street; to these murmurs, songs, and cries; to this laughter, and clatter of tongues, glasses, and plates, other scenes and sounds soon succeeded.

In an hour the cannon would thunder against the village, almost inoffensive, it is true,—for it would only break some of the windows; the street would only resound with the cry of the soldiers, worked up to warlike fury at the word of command; and all the houses disappear under the smoke of the musketry—happily only charged with powder. Then, let them take care of pillage, if the provisions are not instantly sheltered!—let the *giannine* with the naked feet beware, for mock war sometimes aces the real in its excesses.

It imitates it above all in the splendour of its shows; and nothing was more imposing and more majestic than that which was then preparing in the fields of Marengo.

A magnificent throne, hung with tri-coloured flags, was already raised on one of the few hills which diversify the plain; troops of every description, of every variety of uniform, were already rapidly filing off to take their places. The trumpet called the cavalry, the roll of the drums was heard over the ground that was shaken by the artillery and wagons. The aides-de-camp, in splendid costume, paraded and repassed, and crossed in a thousand directions; the flags spread to the wind, which at the same time waved the sea of plumes. Crests and feathers, variegated with the tri-colours, and the sun—that great guest at the festivals of Napoleon, that luminary radiant with the pomps of the empire—appeared; and the gold of embroidery, the bronze of cannon, carcases, cuirasses, and the sixty thousand bayonets that bristled on the field, shone like fire.

The crowd of gazers, soon forced to bear back before the troops, now pouring forth with an accelerated pace over the field of their operations, described an immense retreating circle, like the smaller waves of the ocean when an enormous one breaks upon them.

Some cavalry, charging at full gallop against the lingering groups, rapidly cleared the ground.

The village was deserted, the joyous tents were struck, the stages knocked down, the songs and cries were no longer heard. On all sides were seen, running over the vast circuit of the plain, men, interrupted in their games or their repasts; and women, frightened at the flashing sabres and neighing horses, dragging their children after them.

If an eye had then glanced over the ranks of the army, still undivided, and ranged under the same colours, those whom the orders of the general-in-chief, the marshal Lannes, had beforehand designed as the future conqueror or conquerors, might have been easily recognized by the expression of exultation or silent discontent impressed upon the countenances of the soldiers.

He himself was seen followed by a numerous staff, reconnoitring the ground on which he had formerly so valiantly figured, and distributing to each his part.

The military movements of the terrible day of the 14th of June, 1800, were there to be repeated, care being taken to omit the faults then committed; for this was to be a military compliment, a madrigal of cannons, that they were preparing for the new emperor and king.

The troops, now formed in order of battle, deployed or resumed their places, according to the command of the chief, till thundering symphonies were heard on the road from Alessandria; a vague murmur increasing and spreading among that immense multitude, which—protected by the banks of the Tanaro, the Bormida, the Orba, or the ravines of Tortona—formed the undulating, living boundary of that vast arena. Suddenly the drums beat to arms, cries and vivas rose on all sides, sabres flashed to the light amidst clouds of dust, muskets were presented, and rung as by a unanimous movement; and a splendid carriage, drawn by eight caparisoned horses, blazoned with the arms of France and Italy, brought Josephine and Napoleon to the foot of their throne.

After having received the homage of all the deputations of Italy—sent from Lucra, Genoa, Florence, Rome, and even from Prussia,—Napoleon, impatient of inactivity, sprung on his horse, and soon the whole plain was illuminated with fire, and covered with smoke.

Such were the games of the young conqueror! War to amuse his leisure—war to accomplish his high destinies: it was necessary for that ardent soul, born as it was for dominion, and whom the conquest of the whole world would have alone left in idleness.

An officer appointed by the emperor explained to Josephine, who remained alone upon her throne, almost frightened at the scene, the secret of those resolutions, the object of those grand movements. He had shown her the Austrian Melas driving the French from the village of Marengo, overthrowing them at Pietra Buona and at Castel-Ceriola, and Buonaparte suddenly stopping him in his triumph with nine hundred men of his consular guard. Then he called all her attention to one of the decisive moments of the battle. The republicans were falling back, but Desaix appeared on the road from Tortona. The terrible Hungarian column, commanded by Zach, moved heavily forward, and marched to meet him.

Whilst the officer was still speaking, Josephine perceived a slight tumult near her. Having inquired the cause, she learned that a young girl—after

having imprudently broken through the line of operations, at the risk of being crushed a thousand times by a charge of cavalry or the shock of an artillery-carriage—had been the sole cause of this disturbance, by endeavouring, notwithstanding the resistance of the guards and the remonstrances of the ladies of the suite, to penetrate to her majesty.

On hearing that the emperor had quitted Turin in the morning for Alessandria, Teresa, Girhardi's daughter,—for it was she who, accompanied by a guide, took charge of Charney's petition,—was at first overwhelmed, more perhaps from fatigue than discouragement. But she soon recovered at the recollection, that in that moment a poor captive placed all his hope in her, without, however, knowing her; and ignorant whose hand had been stretched out to take charge of the dangerous petition. Without taking note of time, or of fatigue, at the risk of arriving too late, she persevered, and told her guide that the end of her journey was no longer Turin, but Alessandria.

"It is twice as long as the way we have just come."

"Well, we must set out directly."

"I shall not set out," said the guide, composedly, "till day-break, and then it will be to return to Fénestrella. I wish you a good journey, signora."

All that she could urge to make him change his resolution was useless. He remained encased in his Piedmontese obstinacy, unharnessed his horses, led them to the stable, and lay down beside them.

Once embarked in the cause of another, Teresa never looked behind. Decided on continuing her route alone, she begged the hostess of the inn where she alighted, in the street Dora Grassa, to procure her the means of immediate and rapid conveyance to Alessandria. The hostess sent her people over the city; but in vain they traversed it in every direction,—from the gate of Susa to that of the Po, from the Porta Nuova to that of the palace,—public carriages, carts, beasts for drawing, saddle, and burden, were gone or engaged long beforehand on account of the solemnities of Alessandria.

Teresa was in despair at this fatal accident. Absorbed in thought, her head cast down, she remained standing at the door of the inn, defying, thanks to the night, the eyes that might recognize her in her native city, when the noise of wheels, enlivened by the sound of bells, was heard. Two strong mules—drawing one of those long strange vehicles, whose deep body, shut and locked like a trunk, is used for transporting articles of sale, and which has only a little leather bench in front for its sole seat, scarcely sheltered by a hood of tarpaulin—soon stopped at the door where she stood.

The husband and wife, possessors of the vehicle and merchandise, got down from the seat, uttered deep sighs of satisfaction, stamped their feet, stretched their arms, as if to unstiffen or rouse themselves; and saluting the hostess with the air of acquaintances, took refuge immediately in the two corners of the chimney, holding their hands and faces to the fire of vine-branches which was sparkling there; then, after having desired that their mules should be put into the stable, congratulating each other on having arrived, they set themselves down to supper, proposing to go to bed as soon as possible.

The hostess on her side prepared to do her best; the yawning waiters, half asleep, were occupied in the business of the inn; and Teresa, still pensive and sadly depressed in the midst of all these preparations, thought of the time that was passing away, of the hope that was perishing, of the flower that was dying!

"A night! a night!" said she, "the unfortunate will count the minutes while I sleep! To-morrow, perhaps, it will be equally impossible to find a means of proceeding!"

And she looked attentively, by turns, at the two merchants who were at table, as if her only resource were in them. But she was ignorant what route they were taking; if they would, if they could, change it for her; and the poor girl, little accustomed to find herself alone—thus depending on herself in the midst of strangers—dared not address them; and impelled on one hand by her kind intentions, restrained on the other by her timidity,—one foot advanced, her mouth half open,—she remained on the same spot, silent and undecided, when, suddenly presenting herself to her, the maid gave her a candle and a key, pointing with her finger to the room she was to occupy.

Recalled to a sense of her situation, and forced to decide, Teresa immediately gently put aside the arm of the *giannine*, and advanced, though not without great emotion, towards the couple at table.

"Pardon my question," said she, with a trembling voice; "what road are you going to take on quitting Turin?"

"The road to Alessandria, my pretty girl."

"To Alessandria! It is my good angel who has brought you here!"

"Your good angel has made us take very bad roads, signorina," said the woman; "we are thoroughly wet!"

"But, let us see, how can we be useful to you?" said the merchant.

"A pressing affair calls me to Alessandria, will you take me there?"

"It is impossible!" said the woman.

"Oh! I will pay you well!—two pieces of St. John Baptist, ten French livres."

"It is difficult," replied the man. "In the first place, the seat is very narrow, and it is with great difficulty it will hold three. It is true you will not take much room; but there is another difficulty, my child. We are going to the market of Revignano, near Asti, and not to Alessandria; it is half-way, and that is all."

"Well, then," said the young girl, "take me to the gate of Asti; but we set out this evening—directly."

"Impossible! impossible!" repeated both at once. "We sell neither our sleep nor our fatigue."

"I will double the sum!" interrupted Teresa, in a low voice.

## PICCIOLA; OR, THE PRISON FLOWER.

The man looked at his wife, consulting her with his eye.  
 "No! no!" said she; "do you wish to make yourself ill? Then Lasca and Zoppa want rest; would you kill them?"  
 "Four pieces!" whispered her husband, "four pieces!"  
 "Lasca and Zoppa are worth more than that."  
 "For half the distance—a double gain!"  
 "Well, what matter!—a single sequin of Venice is worth more than a double parpaiole of Genoa!"

However, the idea of four pieces, the desire of such easy gain, was not long in influencing the woman as well as her husband; so, after a little more resistance on one side, and many supplications and prayers on the other, the mules were again put into the carriage; Teresa, wrapped up in her cloak, on account of the night, settled herself very tolerably on the seat, between the pair, and they set off just as eleven o'clock resounded from all the churches of Turin.

In her impatience to arrive at the end of her journey, and to be able to transmit good news to Fenestrella, Teresa would have wished to have been carried away in a swift chariot, by horses rapid as the wind, and the cart of the merchant moved heavily over the ground; the two mules walked step by step, slowly raising one foot after the other, and the regular tinkling of their bells seemed to give a still more marked character of indifference. The traveller at first restrained her impatience, hoping the walk would ere long arouse the poor beasts, or that the whip of their conductor would soon be able to hasten their pace. But seeing him remain inactive, and content himself with only a slight noise of his tongue to excite his team, she at length informed him how important it was to her to arrive quickly at Asti, that she might reach the gate of Alessandria by morning.

"My good girl," said her new guide, "it does not please me any more than you to pass the night reckoning the stars, but the merchant must watch over his merchandise. Mine is earthenware and china, which I am going to sell at Revigano, and, if the mules hurry, they will very likely make posherds of all my goods."

"What, sir! are you an earthenware merchant?" cried Teresa, with a countenance of alarm.

"Earthenware and china," replied the merchant.

"Ah! my God!" said the traveller, groaning. "But at least you can surely go a little faster."

"Do you wish to ruin me, then?"

"Ah! I am so anxious to arrive!"

"But, my good girl, that is not a reason for breaking everything."

As a kind of concession, the merchant, however, multiplied his noises; but the mules were too well accustomed to their pace to change it easily.

Teresa bitterly reproached herself then for not having sooner inquired the time they should take to reach Asti; she reproached herself, above all, with not having gone about Turin herself, to discover, with the knowledge she had of the city, a quicker means of conveyance; but she had now nothing to do but to resign herself, and she did so.

The carriage continued at its usual rate. Losca and Zoppa went neither more quickly nor more slowly; only walking on the sides of the road, they no longer made the pavement clatter with the noise of the wheels. The merchant and his wife, who, until then, had talked much on the chances of their trade at the fair of Revigano, grew silent; and in that obscurity, in the midst of that stillness, notwithstanding the cold, which was beginning to numb her feet, Teresa was growing drowsy under the monotonous tinkling of the little bells. Her head fell first on the right, then on the left, seeking by turns a pillow on the shoulder of the woman, then on that of the man, and again fell heavily on her bosom.

"Lean firmly on me," said her conductor, "and good-night, my good girl!"

She followed his advice, arranged herself as well as she could, and went fast asleep.

She slept so well during several hours, that the light of dawn alone made her open her eyes. Astonished at finding herself thus in the open air, and on the road, memory returned, and, looking around, she saw with surprise and sorrow, that the carriage was not moving, and seemed to have been long stationary. The merchant, his wife, the mules even, were fast asleep, and the double set of bells no longer made the slightest sound.

Teresa perceived, not far behind her, the points of several steeples; and the morning mists, forming whimsical figures on the contracted horizon, showed her, fantastically grouped, the spire of Luperga, the castle of Milles-Fleurs, that of the Queen's Vine, the church of the Capuchins, and all the fine decorations of the magnificent hill of Turin.

"Mercy! Heaven!" cried she, "where are we? we have scarcely quitted the suburbs!"

The merchant awoke at her exclamations, and after having rubbed his eyes, hastened to comfort her.

"We are approaching Asti," said he; "and the steeples that you see there, behind you, are those of Revigano. Losca and Zoppa are not much to be scolded; they are only just gone to sleep, and they must have wanted greatly. Provided they may not have profited by my sleep to trot a little too fast," Teresa smiled. "Come, let us get on!"

And he directly cracked his whip, the noise of which awoke at the same time his wife and the mules.

At the gate of Asti, the honest merchant took leave of Teresa; set her down; made the sign of the cross with the twenty francs he had received from her, and wishing her a good journey, turned his mules about to regain the road to Revigano.

The half of the journey was now accomplished. But Teresa had lost all hope of arriving in time for the early levee of the emperor. "However,"

said she, "an emperor must rise late." Oh! how she wished to plunge the sun again beneath the horizon, which was already its approach by the increased light.

It seemed to her that all around must feel the agitation which tormented her, that she should see the whole population of Asti on foot, preparing for the journey to Alessandria; and then, in that multitude of carriages, and conveyances of all kinds, she should be able to attain a place, were it in the public boat.

What then was her astonishment on entering the city to find the streets silent and deserted! The light of the sun scarcely penetrated it, and only enlightened the roofs of the highest houses, and the domes of the churches.

She just then remembered one of her maternal relations, who had many years inhabited Asti. He might be of great assistance to her; and seeking on the ground-floor of a rather poor-looking house a reddish light shining through the latticed window, she ventured to knock and inquire for the dwelling of this relation.

A casement was half-opened, and a harsh scolding voice told her, that for three months the individual in question had been at his country-house at Montercello, and the casement was again shut.

Alone in the middle of the street, Teresa began to feel alarmed at her desolate situation. To gain courage, she paid her morning devotions before the Madonna enshrined in a wall at some paces from where she stood, and before whom a little lamp was burning. Then, before her prayer was scarcely ended, she heard footsteps in the street, and a man appeared.

"Pray, sir," said she, "show me where the carriages that go to Alessandria put up."

"You are too late, my good girl," answered the stranger: "carriages and drivers, all have been engaged for three days;" and he passed on.

A second came up to her. At the same demand from Teresa, he stopped, looked at her with a dark scowling air:

"You like the French, then? cursed race!" and he went away more rapidly than the first.

The poor inquirer remained some time intimidated, and did not recover herself till she saw a young artisan coming out of his house singing. For the third time she repeated her question.

"Ah! ah! signora," said he with a good-humoured air, "you wish to see a battle! But there will be no place for pretty girls down there. Believe me, remain with us; it is a holiday, and brave dancers shall fight for the honour of having you for a partner. You are worth a little trouble. A little war in your honour; eh! will that tempt you?"

And advancing with a bow, he endeavoured to put his arm round her waist; but at the glance she darted on him, he resumed his song, and pursued his way.

A fourth—a fifth crossed the street, Teresa no longer thought of inquiring of them; and her eyes were directed towards the doors, now opening on all sides, to the carriages standing at the bottom of the courts. At length, not without trouble, and by special favour, she was received into a coach, to be taken no farther than Ammona, where they were to take in a passenger, whose place she temporarily filled. From Ammona to Felizzano, from Felizzano to Alessandria, there were more obstacles, more difficulties. She triumphed over all.

On arriving at this latter city, Teresa knew that the emperor was no longer there; so, without stopping a moment, she followed with the crowd, and on foot, the road to Marengo.

There, pressed on all sides by the multitude who surrounded her, carefully looking out for openings in the crowd, keeping the side of the road, she constantly endeavoured to gain ground on those who preceded her, paying no attention either to the trumpets, the jugglers, or the discourses of the monks. In the midst of the curious spectators, talking, singing, shouting, dancing, with joy or drunkenness, she struggled on, through heat and dust, the sole stranger to the joys of the day. With an anxious countenance, fixed and preoccupied eye, wiping from her brow the moisture that covered it, she made her way—the gravity of her features strongly contrasting with all those gay faces.

Her whole energy was concentrated in the difficulties of the road, and in the anxiety to proceed. Scarcely during this time did the object she wished to attain, the motives that made her act, present themselves to her mind. But on the crowd showing a disposition to halt, from the front ranks stopping, being obliged to slacken her pace, then remembrance returned. She thought of her father, who would soon be distressing himself at her prolonged absence; for the guide who abandoned her at Turin, could not go to him and inform him of the cause of the delay. She thought of Charney, perhaps cursing the bad choice of the messenger, and accusing her of carelessness and forgetfulness; then from a sudden motion her hand sought her bosom, for fear the petition might have dropped. Then her father, her father again presented himself to her eyes. The old man, distressed at having yielded to her entreaties, may think his daughter lost to him!

At the remembrance of this adored father, a tear moistened the eyelids of Teresa, and she was only aroused from her meditations by the loud exclamations of joy uttered near her. An immense space had been cleared behind her, and around this space the crowd appeared to be whirling. Teresa turned. Immediately two hands seized her on both sides at once, and, notwithstanding her resistance, her fatigue, and the little disposition she felt at that moment above all for such a diversion, she found herself forced to take an active part in a great farandola which was danced on the road, easily increased at every moment by the pretty girls and young men.

This was the most painful incident of her journey. But courage did not yet abandon her, for she hoped she had just arrived at her goal.

After having freed herself from this singular association, making a last effort to open a way through the multitude which was before her, she at length arrived in sight of the plain, and her eye, surprised and pleased, for some time wandering over that fine army drawn out on the fields of Marengo, suddenly fixed with agitation on the mount which formed the base of the imperial throne.

At that sight all her strength, all her constancy, all her ardour returned. But how to gain it through those thousands of men and horses! Could she attempt it?

However, what had been before an obstacle to her progress, was coming to her assistance.

The first ranks of the crowd that was pouring in torrents from Alessandria, to gain a favourable situation, divided to the right and left, gaining the borders of the Tornaro and Bormida. At one moment, when suddenly urged on by the hinder ranks, they encroached so rapidly on the plain, that they seemed invading the field of battle.

A hundred cavalry advanced against this disordered multitude, and making their naked sabres flash, and their horses prance, forced it without difficulty to retire within its limits. All lost their ground as rapidly as they had gained it; all except one.

In one of the hollows of the ground rose a little spring, surrounded by some trees and a strong hedge of hawthorn.

Impelled onwards by the waves of the curious crowd, Teresa, pale and trembling, still directing herself instinctively towards the elevated throne before her, had been hurried and dragged on towards the group of trees. Terrified at this violent impulse, fearing to be crushed against the trees, she threw her arms round the trunk of a poplar as a support; shut her eyes, like the child who thinks the danger past when it has ceased to see it, and remained thus motionless for some time, her ears filled with the roaring of the multitude and the murmurs of the leaves.

The retreat of the people at the approach of the soldiers was so rapid, that when Teresa raised her head and looked around her, she found herself alone, —quite alone; separated from the army by the group of trees and the hedge of hawthorn, and from the multitude by a thick whirlwind of dust, raised by the retreating steps of the fugitives.

Not hesitating to penetrate the hedge, she immediately entered the little grove, and her agitation subsiding, the traveller took a view of the place.

Shaded by twenty poplars and aspens, the spring was half concealed by banks fringed with creeping ivy, moss, and ivy-wort, and bubbling with a slight sound, while escaping in a stream whose course through the plain might still be traced by the eye, from the quantities of forget-me-not and white ranunculus which edged its waters. The fresh air arising from it did more for Teresa in revivifying her from her agitation and fright. It seemed as if she had just discovered an oasis of coolness and repose, and that the enclosing hedge protected her at once against the dust, the heat, and the noise. In an instant the plain became nearly silent; she heard neither the cries of the officers, the hurrahs of the crowd, nor the neighing of the horses.

But a singular bustle took place above her head. It was a continual rustling and crackling in the trees. She looked up, and saw the branches of the aspens and poplars covered with innumerable sparrows, who, driven from the surrounding parts, by the march and tumult of the people, came, like that young girl, to seek a shelter in this little verdant solitude. It might have been said that fear had paralysed their wings and voices; not a cry, not a twitter broke from the midst of their band. They even saw their new asylum invaded without thinking of flight, so much had the noise and spectacles by which they were surrounded struck them mute and insensible. Now the regiments of cavalry advanced to the sound of trumpets, and stationed themselves on the place where just before the people had been moving, and the birds did not abandon their retreat. They only snapped their beaks and hopped from branch to branch, turning from one side to the other, seeming anxious for the end of it all; and it was this sound, increased by the quivering of the foliage, that had just excited the attention of Teresa.

The soldiers, who now closed against her all communication with the road, soon exclusively occupied the attention of the young innocent girl, thus surrounded on all sides by the troops.

"It is only harmless war," said she to herself; "and if I am imprudent, God knows the motive of my efforts, and He will protect."

Then directing her attention to the opposite side, and advancing to the extremity of the clump of trees, she saw at about three hundred paces in front of her the imperial throne, where Josephine and Napoleon had just seated themselves.

From thence to the place where she was, the interval was partly filled by soldiers under arms, going through their manoeuvres, but in some parts also the unoccupied ground left a passage practicable.

Teresa gathered courage: the moment was come. She drew back from the hedge that she might jump over it, but immediately she thought, with an emotion of shame and confusion, on the disorder of her dress. Her hair was falling about or entangled, stuck to her cheeks, or hanging on her shoulders; her hands and face covered with dust. To present herself thus before the sovereigns of France and Italy, was to ensure her repulse, and to prevent the success of her mission.

She therefore returned to the trees, went to the spring, took off her large straw hat, shook down her black hair, passed her fingers through it, replaited it, smoothed the bands in front, and adjusted her collar; then kneeling down by the spring, she looked at herself in it, dipped her hands in, and purified them, as well as her face; then before she rose offered a fervent prayer for her father and Charney,—thus ending that pure toilet, performed in the midst of an army.

Whilst watching again for a favourable moment to cross, suddenly on twenty sides at once, the loud explosions of the artillery were heard. The earth seemed shaken; the poor girl was struck motionless and stupefied, and the birds on the trees above, all taking flight at once, uttering loud cries, whirling about and striking against each other, sought the woods of Valpeda and the shades of Voghera.

The battle had just begun.

Teresa, stunned by the noise of the cannon, alarmed by all this confusion, remained in a state of bewilderment, her eyes constantly fixed on the throne, which by turns appeared and disappeared behind a curtain of lances and bayonets.

In about half an hour, during which time every other thought than that of instinctive terror seemed to abandon her, she recovered her energy of soul. She examined more calmly the difficulties she had to conquer to reach the pavilioned mount, and did not consider them insurmountable.

Two columns of infantry drawn out in line, whose bases rested on the sides of the little grove, had just engaged in a hot fire of musketry one against the other. She hoped to be able through this cloud of smoke to make her way without being even perceived. She was hesitating, however, when suddenly a troop of Hussars burning with thirst made an invasion into her asylum.

Then Teresa hesitated no longer: her courage strengthened by her modesty, she rushed forward between the two columns of infantry, and when the smoke was dissipated, the soldiers uttered exclamations of surprise, on perceiving suddenly in the midst of them a white petticoat, a woman's bonnet, a pretty charming girl, who, notwithstanding their cries, pursued her course.

A squadron of cuirassiers came up to support one of the lines. The captain nearly overthrew Teresa, but seizing her in time by her arm, raised her from the ground, and swearing, *sacré*, without inquiring how a young girl should come on the field of battle, he gave her in charge of two soldiers to take her to the quarters of the women.

She was obliged to mount behind one of the cuirassiers, and thus she was taken towards the place where the ladies of the suite of the Empress Josephine, accompanied by some aides-de-camp and gentlemen, deputies from the towns of Italy, were standing on the hill.

Arrived there at length, within reach of her object, Teresa could no longer fail in her enterprise. She had surmounted too many difficulties to allow herself to be conquered by the last; so when on her demand to speak to the emperor, they told her that he was on the plain at the head of the troops, "Well! I wish then to see the Empress!" said she with firmness. But this one was scarcely more easy than the other. To get rid of her importunity they tried to intimidate her; they could not do it. They told her that she must wait the end of the evolutions; she refused to do so, and tried to make her way to the throne; they held her back; she struggled, raised her voice with vehemence, until at length the attention of Josephine herself was attracted towards her.

#### CHAPTER XIV.

The orders of Josephine were not transmitted till, in the midst of the half-opened crowd, the young girl appeared in supplication, held back, and still resisting.

At a gracious sign from the Empress, which all comprehended, they disappeared from before the captive, who, darting forward, freed, yet disordered by the struggle she had just maintained, arrived panting on the steps of the throne; bent down, and drawing hurriedly from her bosom a handkerchief, which she eagerly waved, exclaimed:

"Madame! Madame! a poor prisoner!"

Josephine did not at first comprehend what the handkerchief thus presented to her meant.

"Is it a petition that you would give me?" said she.

"Here it is, Madame,—here it is! It is the petition of a poor prisoner!"

—(See engraving, page 637.)

And the tears ran down the cheeks of the pleader, while a celestial smile of hope animated her countenance. The empress answered her by another smile, held out her hand to her, made her rise, and bending towards her with an air of kindness—

"Come, come, my child, recover yourself. Does this poor prisoner interest you so much, then?"

The young girl blushed, and cast down her eyes.

"I have never spoken to him," replied she; "but he is so unhappy! Read, read, Madame!"

Josephine opened the handkerchief, sad at thinking how many miseries and privations this linen bore witness of, imprinted with difficulty with a factitious ink; then stopping at the first word,—

"But it is to the Emperor that he addresses himself!"

"What matter! Are you not his wife? Read, read, Madame; read for pity's sake! It is of such consequence!"

It was during the height of the combat; the Hungarian column, though attacked with grape by the artillery of Marmon, had persevered in its formidable movement. Zach and Dessaix were at length opposed to each other, and on their encounter would depend the safety or ruin of the army. The cannon thundered in every direction; the field of battle was in confusion; the cries of the soldiers, mixing with the trumpets of war, seemed to agitate the air like a tempest; when the Empress read as follows:

"Sire,—Two paving-stones less in the court of my prison will not shake the foundations of your empire, and such is the only favour I am going to ask of your Majesty. It is not for myself I implore the effects of your protection; but in this walled desert where I expiate my offences towards you,

a single being has brought some alleviation to my sorrows.—a single being has thrown some charm over my life. It is a plant, Sire; it is a flower, unexpectedly come up between the paving-stones of the court where I am sometimes allowed to breathe the air and see the sky. Ah! be not in haste to accuse me of folly and madness! This flower was to me the source of soothing and consoling studies. While fixed on it, my eyes have opened to truth; to it I owe reason, repose, perhaps life. I love it as you love glory!"

"Well, at this moment my poor plant is dying for want of space and earth; it is dying, and I cannot relieve it, and the commandant of Fénestrella sends my complaint to the governor of Turin; and when they will have decided my plant will be dead. And this is why, Sire, I address myself to you,—to you who with a word can do all, even save my flower! Let them take up the stones that press on me as well as on it; save it from destruction,—save me from despair! Command it; it is the life of my flower that I implore of you; that I entreat with earnestness, with supplication, my knee on the earth, and I swear to you, that deep in my heart this benefit shall be placed to your account.

"Why should it die? It has, I confess, deadened the blow your powerful hand would have dealt to me; but it has broken my pride also, and it is this that now throws me a suppliant at your feet. From the height of your two-fold throne, deign to cast your eyes upon us! Can you comprehend what links may connect a man to a plant, in that solitude which leaves to a prisoner only a vegetative existence? No, you cannot know it, Sire; and may your star keep you from ever knowing what captivity can do to the proudest, firmest mind. I do not complain of mine; I support it with resignation; prolong it; let it last as long as my life; but mercy for my plant!"

"Remember, Sire, that this favour I implore of your Majesty must be immediate, must even be to-day! You may let the sword of the law long hang suspended over the head of the criminal, and remove it at length, and pardon him; but Nature follows other laws than that of the justice of man; two more days, and perhaps the Emperor Napoleon may be able to do nothing for the captive of Fénestrella."

CHARNEY.

A tremendous explosion of artillery suddenly took place; a thick smoke, divided in every direction by a hundred thousand flashes from the musketry, covered the field of battle with a vast canopy at once bright and sombre; then the fires were extinguished, and it seemed as if a hand extended from on high suddenly removed this canopy which hid the combatants. There was then a magnificent spectacle for the sun to contemplate. That brilliant charge in which Dessaix had lost his life, had just been made. Zach and his Hungarians pressed in front by Boudet, taken on the left by the cavalry of Kellermann, were broken and in disorder, and the intrepid consul, immediately re-establishing his new line of battle, from Castle-Cerolo to St. Julien, resumed the offensive, overthrew the Imperialists at every point, and obliged Melas to sound the retreat.

This sudden change of position, these great movements of the army, this flux and reflux of men, obedient to the voice of a chief alone motionless in the midst of this apparent disorder, had something in it to seize on the coldest imagination; applause and vivas rose from the midst of the groups of spectators stationed around the throne; and these sounds, contrasting with the others that surrounded her, at length roused the empress from the deep reverie into which she had been plunged. For, of these last and brilliant manoeuvres, of those imposing scenes that passed before her, the future Queen of Italy had seen nothing; attentive, and absorbed, her eyes were fixed on the singular petition, which she still held in her hand, but which, however, she had ceased to read.

She moved to encourage the young girl, who, standing before her, was on her side also lost in thought.

Joyful, and charmed with that look so full of sweet promises, Teresa, certain of success, kissed a thousand times, with gratitude and emotion, that hand, at once so frail and yet so powerful, where shone the nuptial ring of Napoleon. She returned to the quarter of the women, and the plain being now clear, she immediately sought a church or chapel, where she might shed her tears in silence, and perform her act of thanksgiving at the feet of the Virgin, that other protectress of those who suffer.

Judge if the Empress-Queen would not be impressed with a deep sentiment of pity on reading this supplication. Would not each word awaken all her pity? Josephine also was a flower-worshipper; it was her favourite science, her passion; and more than once did she forget the pomps and fatigues of power while watching a half-opened bud, or studying the structure of a blossom, in her beautiful conservatories at Malmaison.

There often had she felt more happy in contemplating the purple of her cactuses than the purple of her imperial mantle, and the perfumes of her magnolias had more deliciously intoxicated her senses than the poisonous flatteries of her courtiers. There she loved to reign, there she united under one sceptre a thousand vegetable tribes, brought from all quarters of the world. She knew them, classed them, enrolled them in orders and races; and when one of her subjects newly arrived, displayed itself for the first time, she knew well by examination how to interrogate it on its age and habits, and learn from it its name and family, and then it went amongst the crowd of its brethren to take its natural place; for each tribe had its flag, each family its standard.

According to the example of Napoleon, she respected the laws and customs of the conquered people. The plants of every country there found their primitive soil and native climate. It was a world in miniature. There, in a circumscribed spot, were to be seen savannahs and rocks, the earth of virgin forests, and the sand of the deserts; beds of marl and clay, lakes, cascades, and inundated marshes. There you passed from tropical heats to

the refreshing atmosphere of the most temperate zones; there all those different races grew and developed themselves side by side, separated only by a slight wall of verdure, or by frontiers of glass.

When Josephine looked on them, sweet dreams arose at the sight of certain flowers. The Hortensia had but recently borrowed the name of her daughter. Thoughts of glory also visited her; for after the triumphs of Buonaparte she had claimed her share of the booty; and the remembrances of Italy and Egypt seemed to increase and spread under her eyes! The Soldanella of the Alps, the Violet of Parma, the Adonis of Castiglione, the Pink of Lodi, the Willow and Plantain of the East, the Cross of Malta (*Lychnis Chalcedonica*), the Lily of the Nile, the Hybiscus of Syria, the Rose of Damietta;—these were her conquests! And of these at least some still remain to France.

In the midst of all her riches she still preserved her cherished flower, her flower by adoption, her beautiful Jasmine of Martinique; the seed of which, gathered, sown, and cultivated by her, recalled her country, her infancy, the ornaments of her youth, the paternal roof, and her first interchange of affections with her first husband.

Oh! how well she could understand the terrors of the unfortunate for his plant! How he must love it, for he has but one! And how did she feel for the fate of the poor prisoner! The widow of Beauharnois had not always dwelt in a consular or imperial palace. She had not forgotten her days of captivity. Then Josephine had known that same Charney: so calm, so proud, so careless in the midst of the pleasures of the world; so sarcastic on the sweetest human affections! What change had been wrought in him? What had brought down that haughty spirit? Thou didst refuse to bend even before God, and now thou art on thy knees asking mercy for thy plant! Oh! she shall be preserved to thee.

To Josephine, the last evolutions of the troops, all this vain semblance of battle, only caused impatience and vexation, for she feared to see the loss of one of those moments, so necessary perhaps to the existence of the captive's flower. So that when Napoleon, surrounded by his generals, came to rejoin her, expecting doubtless her congratulations, and still flushed with that warlike toil which pleased him so much, her first words were—

"Sire, an order for the commandant of Fénestrella! An express immediately!" While her eye was animated, her voice raised, as if a new victory were in question, and that it was her turn to display all the activity of command; and she showed the handkerchief, holding it extended with both her hands, that he might read it immediately.

Napoleon, after having looked at it from top to bottom, with an astonished and discontented air, turned his back and passed on. It might have been supposed he finished his review with it, and came simply to inspect it the last.

From habit he then went to examine the field of battle, which no blood had reddened, and where nothing was overthrown but the future harvest. The corn and rice were crushed and broken; in some parts the furrowed earth, torn by heavy wheels, showed the manoeuvres of the artillery; here and there were seen, strewn about, gloves of dragons, plumes, and epaulettes; then some lamed foot-soldiers, some disabled horses who were being led away. This was all.

In the mean time the affair had nearly become serious at one moment. The soldiers, occupying the village of Marengo, in character of Austrians, unwilling to play the part of the vanquished, prolonged their resistance beyond the time indicated by the programme. Hence resulted a great irritation between them and their adversaries. The two regiments bore different arms, and had had disputes in garrison. They insulted and provoked each other on both sides, and bayonets were crossed.

A terrible collision was on the point of taking place, and all the efforts of the generals were necessary to prevent the mock fight from becoming real. At length, but not without difficulty, they consented to be reconciled by exchanging canteens; but the canteens were empty: to fill them they forcibly entered the cellars in the village; excesses took place, but to the cry of "Vive l'empereur!" and it was all set down to the account of enthusiasm. After twenty parleys, and as many bumpers, the Austrians decided on beating a retreat, reeling away, and the French conquerors made their entrance into Marengo dancing the farandole, singing the Marseillaise, and mixing at times with their watch-words their ancient cry of "Vive la république!" They put all this down to the account of drunkenness.

The troops resumed their lines. Napoleon distributed crosses of honour amongst the old soldiers, who, five years before, had been on the same place. In their turn, the principal magistrates of the Cisalpine Republic were decorated by him. Then, with Josephine, he laid the first stone of a monument, destined to perpetuate the memory of the battle of Marengo. After which the emperor, the empress, the ambassadors, the magistrates, the people, and the army, all resumed the road to Alessandria.

And the fate of Picciola was not yet decided!

That evening Napoleon and Josephine were in one of the apartments prepared for them in the Hôtel-de-Ville of Alessandria, after the public dinner that had just taken place; the one dictating letters to his secretary while walking up and down at a quick pace, and rubbing his hands with an air of satisfaction; the other before a large mirror, admiring with natural coquetry the elegance of her costume, and the richness of the ornaments in which she was attired.

When the secretary was gone, Napoleon sat down, put both his elbows on a long table covered with crimson velvet fringed with gold, leant his head upon his hands, and seemed to reflect; but his reflections were far from being on any painful subject, for his countenance was characterised by pleasing meditation.

Josephine, in the mean time, became tired of the silence which followed. She had already managed badly once that day on the subject of the petition

from Fénestrella, and perceiving that her protection had been unskillfully, because too hastily, extended, she had determined to watch a more favourable opportunity.

She thought the right moment was now arrived. She went and sat down on the other side of the table opposite to him, leant on her elbows also, and like him affected an air of abstraction, and soon both looked at one another and smiled.

"Of what are you thinking?" said Josephine, with a caressing voice and look.

"I am thinking," said he, "how well a diadem becomes you; and that it would have been a pity if I had neglected to place one in your casket."

Josephine's smile gradually vanished, that of Napoleon became more marked: for he loved to combat the painful apprehensions of which she could not divest herself when thinking of the degree of elevation to which they had recently arrived. It was not for herself, noble woman, that she trembled!

"Do you not like better to see me emperor than general?" pursued he.

"Certainly, emperor: you have the right of granting favours, and I have one to ask you."

This time it was from the countenance of the husband that the smile was effaced to pass to that of the wife. He frowned and prepared to be firm, fearing lest the influence that Josephine exercised over his heart might lead him into any vexatious weakness.

"Again? Josephine, you promised me not to seek any more to interrupt the course of justice! Do you think that the right of granting favours is only bestowed on us to gratify the caprices of our hearts? No! we should only use it to soften the too rigorous application of the law, or to repair the errors of tribunals! To be always stretching out the hand to our enemies, is to try to increase their number and insolence!"

"Sire," replied Josephine, restraining a burst of laughter ready to escape, "you will however grant me this favour that I implore of your majesty?"

"I doubt it!"

"And I do not doubt it. First, and above all, I ask you to dismiss two oppressors! Yes, sire, let them leave their places! let them be driven from them, torn from them, if necessary!"

Speaking thus, she pressed her handkerchief to her mouth; for on seeing the astonished countenance of Napoleon, she was no longer mistress of herself.

"What! is it you who excite me to punish; you, Josephine! And to what does it refer then?"

"To two paving-stones, sire, that are in the way in a court."

And a burst of laughter, hitherto restrained with difficulty, at last escaped. He rose quickly, and putting his arms behind him, looking at her with an air of doubt and surprise, exclaimed,

"How! what does all this mean? Two paving-stones! Are you jesting?"

"No," said she, rising in her turn, and leaning her two crossed hands on his shoulder with her graceful Creole ease,

"On these two stones depend a precious existence. Listen to me attentively, sire, for it needs all your kindness to comprehend me."

She then told him the subject of the petition, and all that she had learnt from the young girl respecting the prisoner, whom however she did not name, and what had been the devotion of the poor child; then, in speaking of the prisoner, of his flower, of the love that he bore it, the words flowed from her lips, sweet, tender, caressing, full of charm, and of that eloquence which comes so naturally from the heart.

(To be continued.)

## THE HALLOWED NAME.

I once could speak those simple words  
With gay and cheerful tone,  
And hear them fall from other lips,  
As lightly as my own;  
But now my voice grows tremulous  
And low as if it came  
Through tearful mists, where'er I breathe  
That fond, familiar name.  
When others utter it, the sound  
Awakes a sudden start,  
That with concentric motion thrills  
The surface of my heart:  
All other visions break before a  
That circle's widening sway,  
Until the trembling memories melt  
In silent tears away.  
Why should those sounds have power to call  
Such sadness to my brow?  
And wherefore has that name become  
So consecrate as now,—

That I can only murmur it  
In mournful under breath?  
It hath been hallow'd—sanctified  
By the dread seal of death.  
Far off, above a grave that lies  
'Mid other graves unknown,  
Strange eyes will see it cut upon  
The monumental stone:  
They seek not, as the sad, brief line  
They frame with thoughtless air,  
Through what a gush of tears my eyes  
Would read it graven there!  
Deep down within my brooding heart  
Is hid that sacred word,  
Which midst the throngs of living men  
Shall never more be heard:  
I could not find on earth again  
Scope for his spirit's aim;  
Oh! since an angel bears it now  
It is a hallow'd name!

**CLASSICAL NAMES.**—Such is the rage for giving classical names to the manufactures of the present day, that a comic writer suggests to James the propriety of introducing his next novel thus:—"It was on a sunny evening in the merry month of June, that a solitary horseman might have been seen cantering leisurely along the gravelled ride of Rotten-row. His dress evidently bespoke him as one who anxiously watched the many ebbs and flows of the changing tide of fashion. His carefully-brushed Levior Plumâ sat jauntily on his head. The snowy whiteness of his Estreka, studded with malachites, was just discernible underneath the carefully-buttoned Pardessus, on which a Siphonia hung lightly and loosely. The tips of his Resilients pressed firmly in the stirrups; while the Antigropelos which protected his Anexyrydians flashed back the sun's beams from their polished sides."

## LITERARY FAME.

LITERARY fame, especially cotemporary fame, is a very unsubstantial thing, after all, and often rests upon very unsubstantial causes. Talents and genius do not always secure to their possessor the consideration which is their due. Even the fame enjoyed by men of undoubted genius is often attributable less to their intellectual superiority than to other and accidental causes. It would be interesting to go over the list of popular poets and analyse the elements of their fame. We should find, in the words of a recent English writer:

"There's many a fame that the wearer but owes  
To the personal writings of critics he knows,  
And many a name that is smother'd through pique,  
Through not being quite of a sect or a clique,  
To instance the first, look to what a false height  
Consumption and Southey threw up a Kirke White;  
See how churchmen prefer what 's clumsy or feeble,  
And puff into poets Montgomery and Keble;  
How Scotchmen, who hold it's damnation to read  
A couplet that's not written north of the Tweed,  
Have found, and will stick to their faith until doom,  
A Milton in Bollock, because he has gloom."

How much of the notoriety Byron has gained is owing to his being Lord, to his licentious life, and his domestic troubles! Undoubtedly these causes have diverted attention from the real merits of his poetry, as well as from its defects. Moore had great popularity in his day, but unquestionably much of it was caused by his obsequious flattery of the aristocracy. He early learned to discard the liberal sentiments of his youth, and to look up to a live lord as something more than a common mortal. His poetry lacks back-bone. It is all sweetness and splendour, dazzling with theatrical tinsel, rather than rousing the energies of men to great thoughts and mighty deeds—the true mission of the poet. For our part, in the words of the critic just quoted:

"We would rather,—if have one we must,—  
Have the plague that in Egypt came down with the dust,  
Than bear an eternal infliction of blisses,  
An awful existence of nothing but kisses."

On the whole, we think the following verdict on Moore is very near the truth:

"Yes, monarchs have flatter'd, and courts have attracted him,  
Stars and garters, and dukes, and princesses, have acted him.  
And what caught their far eyes?—prayer, what are your guesses?  
Why, mark me, he wrote most of stars and princesses!  
He never disgusts a taste aristocratic,  
With interest even for a pair in an attic;  
His heroes drink wine out of real golden chalices,  
Have each fifty peacocks and five hundred palaces,  
And as to the jewels he gives 'em, believe 'em!  
Why rubies and brilliants? we cannot conceive 'em!  
We're bewildered with splendours of number so puzzling,  
With hours in nothing, and a life in a trice,  
Till spite of Goldondas and vales of Cashmere,  
We long for something more sober and near,  
Such passions as Larry the but of your heart on  
In an Admiral's daughter, Jane Eyre,—Mary Barton;  
With sorrows that never drew tears, we would part  
For a grief that, though low, should come home to the heart."

It is but fair to admit, however, that Moore had a stinging satire, which he sometimes directed against objects well worthy of it:

"I blipputian his arrows may be, but too small  
Though they may be to slaughter, they're mighty to gull."

Wordsworth's reception was quite different from that of Moore. Some doubted if he could be called a poet. He has lived down that doubt, but it is not without interest that we turn to the judgment of his cotemporaries. The following anecdote was written at the time of the appearance of his earlier poems.

### RECIPE FOR A POEM.

"Weigh out three pounds of moonlight beams;  
Of twinkling stars and mountain streams,  
Rivers and lakes, and wat'ry stuff,  
Don't spare, but give quantum suff.  
Stir in an old man's hoary head,  
With grey eyes turn'd, by weeping, red,  
One ounce of spirit of donkey's bray,  
Rectified sans empyreuma.  
This mixture sold with Wordsworth's name,  
Has given rise to all his fame."

Though the popularity of some writers may be affected by accidental and temporary causes, there is another class whose claim to our admiration and our love is never disputed. They knock at our hearts, and they are opened unto them. They deal with the affections, with the joys and sorrows of humanity, and neither poverty nor pomp can obscure the sunshine of their genius, which bathes in a mellow and genial light everything upon which it falls. Goldsmith and Lamb are of this class, and we cannot better conclude these rambling thoughts than by quoting the following clever and truthful characterization of the gentle Elia:

"Charles Lamb, better known by his alias Elia,  
A shade sad and gentle as that of Ophelia,  
Whose spirits' soft sunshine so gladsomely played,  
O'er the gloom of his sorrows, you saw not the shade.  
In all that he wrote, grief and joy took a part;  
Men seeing but nature, mistook it for art.  
'Tis an April sweetness his writings endears,  
A rainbow-like charm, spring of gladness and tears,  
When the darkest of shadows are tender with light,  
And the gloom does but render the darkness more bright.  
A Yorick, to set the whole room in a roar—  
A Sterne, to draw tears where he draw laughs before—  
A Howard, in pity for guilt and for pain—  
The gentlest of natures more gentle again:  
As free as the creature that named him from blame,  
In short, a new Goldsmith in all but the name."

## CAROLINE AND CATHARINA.

(Continued from page 668.)

It was three hours past noon when they entered the valley, and the shadows of the western mountains were already falling on the scene. The pines upon the summits were tinged with crimson, and a rich yellow played round the slopes and gilded the mass upon the precipices. A filmy haze hung over the lake, and in the shadows could be seen long lines of thin, blue smoke, floating motionless against the cliffs. The same air of quiet repose still pervaded the valley, but deepened and more solemn, like the silence of some vast building, in which we tread more softly and are conscious of no reason. The little island rested on the bosom of the waters, "like a castle with its moat;" but it seemed far distant through the haze, and over its leafy solitude a dreamy magic seemed to reign. No living thing was visible within the valley; but far up the eastern ridge, dotting its green slopes with snow, were feeding flocks of goats, and so transparent was the atmosphere that the form of each could be distinguished from the rest, as each moved slowly up and down, or sprang from rock to rock.

The horsemen rode in silence up the little stream, and the Texan captain led the way towards the hacienda.

"The valley seems deserted," said Allen.

"Something worse than you have heard has happened," said the ranger, and, spurring his horse forward, he and Vernon galloped round the gardens to the front of the house. It was a mass of blackened and still smoking ruins! The dome of the chapel was still standing, and the Gothic window was entire; but traces of fire were visible even here; and the roofs of every other part had fallen in, and lay, a pile of smoking rubbish, in each room. Even the gates and massive doors were burned, and round the whole circumference of the house the trees were scorched and withered by the flames. Even the offices around the court-yard had been consumed; the blackened walls in many places had fallen in, and from the heaps of beams and stones were slowly rising thin wreaths and lines of smoke. The whole place was ruined and deserted. Not a human being could be found, and when the rangers rode within the court-yard, the footsteps of their horses on the pavement echoed from the ruined walls, and rang among the lonely rooms.

"Canales has been here," said the ranger. "I knew the place had been sacked, but I had no idea of this ruin."

"These ruins are still smoking," said a ranger; "perhaps they may be in the valley yet."

"That's not very likely," said the captain; "for evil takes too good care of his own for that. But still we will not leave without examining. Come, boys," he continued, spurring through the gateway, "let us find them if they're here!"

The rangers followed with the alacrity characteristic of these men when in pursuit of an enemy, and the little band rode rapidly towards the southern end of the valley. The same ruin was found wherever they went—every house had been burnt, and not a human being could be seen. Even the cattle had been driven away, and, in some places, trees were felled upon the walls to break them down.

"This looks like our work, boys," said the ranger, laughing. "These fellows have been actuated by revenge."

"You do not suppose Americans have done this?" said Allen.

"Oh! no!" said the captain; "but as you go down to the Rio Grande you will find many a place that looks like this, and every one made so by Americans."

"Here is a woman," exclaimed one of the men, pointing to the right, "and a grave, too!"

"It is the wife of the steward of the place," said the captain, as they all rode under the tree where she was sitting. Her head was bowed, and one arm rested on a new-made grave, on which the sod was dry and withered. Upon this tree her husband had died; here he was buried; and it was his grave over which she was mourning. He had been a coarse, tyrannical, and jealous husband; but he was dead, and the tears shed over his grave were no less tears of love. She did not look up as the horsemen approached, but continued singing in low, plaintive tones, a Spanish ballad, whose story, which I have rendered as follows, she imagined bore some resemblance to her own—

"The knight came pricking in armour bright,

To visit his lady love;  
The moon was sailing in silver light,  
The fleeting gray clouds above,  
The wind was sighing the boughs between,  
And the leaves were rustling low;  
The light shone upward among the green,  
From the silvery stream below.

"The knight came pricking, and at his back

Were riding his trusty band;  
They followed in silence his fiery track,  
Each trooper with lance in hand,  
From his horse, in his armour, sprang the knight,

To his page he threw the rein;  
And he hasten'd away to his lady bright,  
To seek in her smile again.

"The lady sat in her bower green,  
And, shining upon her face,  
The moonlight fell with a silvery gleam—  
Revealing the knight's disgrace!"

For another sat at the lady's feet,  
And his arm was round her form;  
And to him the lady gave kisses sweet,  
For embraces long and warm.

"Grew dark and stern, the brow of the knight,  
And the curl of his haughty lip.  
And on the hill of his sabre bright,  
Fell his hand with an angry grip.  
But he turned away from the guilty pair,  
And summon'd his well-tried band;  
To his rival here, and an oak tree there,  
He pointed them with his hand.

"He died an ignominious death—  
The tree is withering now;  
And where he hung, the south winds  
breath,  
Of its leaves, hath stripped the bough.  
By his grave the lady weeps each day—  
And she fades with the fading tree;  
And when all of its leaves have been  
washed away,  
The lady will cease to be."

She sang in tones of exquisite melancholy, and the humble poetry and music, by the magic of feeling alone, sank, like a strain from the clouds, into the hearts of the strangers. They sat silently listening till her song was done; and when the rough ranger captain broke the silence, the harsh tones of his voice were softened down, and in his manner was visible—rare feeling for a ranger!—deep compassion.

She looked up as he spoke to her, but her gaze was vacant and thoughtless. Her face was pale and haggard, her cheeks hollow, and her eyes sunken; but no expression of intelligence or recognition lit her features. Her mind was shattered, and its impressions broken and insane. The blow which had thus stunned her intellect, had left the impression of itself alone; and her sorrow sat like a spirit on her face. She turned indifferently away, and again began her chant.

"She is mad," said the captain; "but there must be some else near—she certainly cannot live here alone."

He spurred up to the door of a partially ruined *ranchito*—the same from which Melton had issued when the steward was hung by his order—and pushed back the half-open door with sword. An old and wrinkled face peered from among the broken ruins; a moment afterwards a short, swarthy woman came to the door and demanded what he wanted, in tones whose harshness well accorded with her appearance.

"Is there no one else living here but you?" asked the ranger.

"Si, senor, she replied, "Marina."

"Is there no one else in the valley?"

"No one else alive, senor—plenty dead."

"And do you take care of Marina?"

"She is my daughter," said the old woman, sharply.

"Whose grave is that?"

"Her husband's—murdered by the villain, Melton."

"Who desolated the valley in this way?"

"Melton's and Urra's lancers, driven back from Marina," said the woman; and she turned to re-enter the house, as if tired of being questioned.

"Stop, Muger," said the ranger, "I want to inquire about two Americans left sick in the valley; can you tell me what has become of them?"

"The lancers burnt the house down over them," said the woman; adding, in a muttering tone, "it was the only righteous act they did."

"And they both perished in the flames?"

"Si, senor, if they were not dead before," and the pinched features of the old hag relaxed into a malignant smile. The fiery ranger raised his sword to cleave her down, but Clayton arrested his arm, and Vernon rode forward.

"Was one of those who perished," he asked of the old woman, "a prisoner brought here by Colonel Melton?"

"Yes," she said, "an officer and a friend of Catharina."

"And where is she?" asked Allen.

"Gone to Saltillo with the senora," said the woman.

"That is her aunt," said the captain, and the woman abruptly entered the house, and refused sullenly to answer more.

The party rode silently back to the principal ruin, and searched it thoroughly for any remains of those who had perished so miserably; but after an hour thus spent, they were convinced that the bodies had been consumed, or so buried in the ruins that it would be impossible to find them. Allen and Clayton, seconded by all the rangers, narrowly examined every part of the huge pile—but entirely without success.

"After all," said the ranger, "this story of the woman may be false—she may have only told us so to pain us. The few Mexican women who do hate us, make up by the fervour and refinement of their hatred for their small numbers—and this woman was far more likely to be actuated by that feeling than by a desire to tell the truth."

"Yet," said Allen, "her story is probable; because we know that both these men were unable to escape without help."

"True," replied the ranger; "but, at all events, we have done all we can. It is time to return."

Reluctantly, Clayton and Vernon consented to abandon the search, though its continuance promised no good result. They rode rapidly out of the valley, and about two hours after dark re-entered Monterey. Parting from the Texans with many expressions of gratitude and good-will, they sought their quarters. On the second day after this they joined the escort for Camargo, and were on their journey homeward.

## CHAPTER XXXV.

"They praise, and they admire they know not what,  
And know not whom, but as one leads the other."—MILTON.

"When lovers meet in adverse hour,  
'Tis like a sun-glimpse through a shower,  
A watery ray, an instant seen,  
Then darkly closing clouds between."—SCOTT.

TIME and change are synonymous—not in terms alone, but in substance and effect; and the succession or progress of existence, each moment of which is marked and perceived by a change, is not only all that makes the lapse of time perceptible, but is actually the lapse of time itself. Time, as we use the word, is a mere abstraction—there is no such thing; it is only the gradation of occurrences, or of ideas, which we so name. If that gradation should cease, we would lose the idea of time altogether—we could have no more conception of it than a blind man has of colours. A man's life is not measured by time. His term of existence is only an appointed succession of events; or thoughts, one succeeding another in what we call order of

time; and when all the events or thoughts are exhausted, or have occurred, like the grains of sand in an hour glass, his life is at an end, and for him time has ceased.

Change, too, in this world is not only progressive, but lateral and incidental also—for so abhorrent is monotony to Nature, that she will not even have an unbroken succession of changes. We measure what we call time by the regular occurrence of one day after another; the sun rises every morning and sets every evening. But, though it would have been just as easy to have created the universe in such a manner, as that his position should not vary from day to day—and though, from aught we know, this arrangement would have been just as good as the present—yet we see that, even in this, there is allowed no monotony. Change, is, therefore, a condition of the existence of the universe—if mutation should cease, the universe could no longer exist. And so with man: should the mutations, which constitute what he calls time, at any stage of their progress, terminate, his existence would end, not as a consequence merely, but *ipso facto*—just as, when all the sand has left the glass, it ceases to run, not as a consequence of its exhaustion, but because the exhaustion and the ceasing are one fact.

If, then, time and change are not only necessarily connected, but are one and the same, it follows, that there can be no pause in the existence, not only of a man, but even of the inanimate and apparently unchanging creation. Even the granite rock, frowning from the mountain side, to which we would think a thousand years to be as one day, must obey the law of its existence—its particles must indurate or soften, by the action of the winds or rains, be modified by the vicissitudes of its own nature—it must cover itself with a mantle of moss, sink deeper in its bed of rocks, or loosen itself, and bound headlong to the plain. Decay, too, is only another phase of change, another variation of what we call time. The progress of existence from its beginning to its close, is but a circle of events, ending where it began.

The shortest absence is long enough to change everything we have left; and our return can find nothing as we left it. We may not see the difference, it may be perceptible to God alone; and yet we may be certain that for us the universal law has not been suspended. Sometimes we do see the change—old, familiar places, ruined for us by another's taste, old friends gone to their slumbers, and loving hearts estranged. And it is in these forms that the law of change appears most cruel. If the presence and affection of those who loved us, and the places that we loved be left us, we can hear all else.

Vernon had at last returned; and the moment to which he had looked forward as the happiest in his life, was bitter as death. He had gone away honoured and envied, with fair prospects in life and a name still more fair: he returned with a name blighted by calumny, prospects nipped in the bud, and none even to envy him. To him the law of change was hard indeed! But to him, also, there was a compensation—for in the places he had loved he could see no change, and those who had loved him, now loved him more. His summer friends had fallen off like leaves in the early frosts of autumn, and the blast of calumny had blown them away. Many who had envied now affected to pity him, and still more, who had been his friends while his friendship was worth something in the world, now tailed at his iniquity, and were the louder in their denunciations because they had been "taken in." Some whom he had shunned, and many who had never known him even by sight, now declared that they had always suspected him. It surprised even some of his enemies, to discover how equivocal a reputation he had always had, and in the general storm his friends were almost silenced. A few, only, dared to say they believed him innocent, and their own characters suffered not a little in consequence. Society, like a herd of wild buffaloes, was running in a fixed direction; and they would overrun and crush everything that lay in their way. At another time, perhaps, the same amount of evidence, upon which they now condemned him, and which rendered his former good character nugatory, or even a disadvantage, would have satisfied them that he was slandered, persecuted, the victim of an infamous plot—all the circumstances of improbability surrounding the charge would have been remembered, magnified, commented on, and adjudged conclusive of his innocence—his uniform good character would not have been forgotten, his exemplary support of his father (the very purpose for which this money was borrowed), his praiseworthy and unassuming labour, all would have been recalled, he would have been pronounced innocent, persecuted, and forthwith been "lionized." But now, it happened, that society was not in a very good humour. As the schoolmaster, who, with aching head and puzzled brain, has tolerated the confusion among his pupils as long as human patience can endure, at last rises in wrath, and flags the first he catches; so society, having been blind and complacent as long as its patience would last, now rose for a victim, and was determined soundly to punish the first it might catch, innocent or guilty. Vernon happened to be the unlucky individual—for (may I be forgiven the heresy!) there is "luck" even in popular opinion.

But we have said there was a number, small indeed, but all the better for that, who persisted obstinately in believing Allen innocent. In some measure, these shared his obloquy; for, from a mere smile of incredulity, when first told that certain persons did not believe him guilty, the prosecuting party soon came to be "astonished at" them. Now, this phrase is like a certain other word used among the slanderous—"imprudence"—which means anything, from the wearing of a thin shoe in wet weather, to downright immodesty; it is capable of any interpretation which may be chosen, according to the character of the hearer. It has also two advantages, which the other has, also—its intangibility and its capability of expressing what the speaker does not feel, in such a manner as to gain him the credit of sincerity. To be "astonished at" one for not believing in the guilt of another, may mean, "I am surprised that his good sense does not at once see his guilt;" or it may

mean, "I am surprised to find that he has so strong a sympathy with vice or crime;" and it may mean anything between these two extremes. What a happy thing it is, that society has flexible terms at command, which express the very worst, and yet incur no responsibility!

So people were "astonished at" Allen's friends, and if something could not be done to stem the tide, the time seemed approaching when both Allen and his friends would be included in the same category. Various means were suggested to divert public attention, to allay the excitement and mitigate public indignation. But none of them would answer. Could they have discovered a "horrible murder," or imported a foreigner with moustachios, they might have had some hope—could they have gotten an opera dancer, a little more shameless than the rest—could they even have introduced a company of "model artists" (under, of course, the respectable programme of "*tableaux vivans*"), the herds of the city wilderness would have been turned another way, and Vernon saved a world of abuse. But nothing of the kind could be produced. The season was, moreover, dull, and people actually had nothing else to talk about. And, besides, the forgery (if any had been committed) was committed by a needy man upon two wealthy ones, who each had thousands to throw away, and, of course, it could not be forgiven. Had the case been reversed, and the money swindled by the rich man from the needy, the "public opinion" would have been, that he was "a shrewd fellow;" and a shrug of the shoulders, and a meaning, half-approving smile, would have been the only commentary on the villainy. And in this honest complacency, the poor themselves would have joined with others; not a few would have envied the swindler his good fortune, and all would have bowed to him; he would have been made President of the Board of Trustees for Charitable Institutions, while men of talent and qualification would have been placed below him at the council table. But here the case was different; the poor had robbed the rich, and, of course, the offence was beyond forgiveness. People were "astonished at" you, if you doubted the guilt of the accused; and to attempt to bring another over to your way of thinking, was an offence almost as bad as heresy.

Notwithstanding all this stormy weather, there were a few who still held steadily to their friendship—whom nothing could convince of his guilt, and who bade fair to have people "astonished at" them till the end of time. Among these, and, as the reader might divine, among the warmest, was Cara Talbot, whom no evidence could convince and no storm shake; and to her we will now return.

On a bright sunny morning early in April, she was walking thoughtfully up and down the richly-furnished room, where her first interview with Allen had taken place at her father's house. The sun shone warmly upon the crimson curtains which covered the tall window, and cast a tender, rosy light within the room, tinging everything with colours more lovely, and making Cara's face and hands still more like veined marble. The rosy tints of sunlight shaded by crimson, were even more remarkable than usual, and some undiscovered affinity between it and the veins of the human frame, made her skin more transparent, and brought out, as it were, the blue lines upon her graceful neck and exquisite hands. She seemed changed, but for the better—the slight appearance of levity, which we noticed in her manner before, was now entirely gone; and without making her decidedly grave, or destroying the volatility of her features, had left her thoughtful though serene. There was a deep light in her eye, probably deepened by the prevailing tint of the room; and an eager though subdued expression about her lip, which denoted expectation. At every turn she stopped and gazed at the picture of "The Sunset," which hung where Allen had placed it, illumined by the red light of the morning, and mellowed into almost deceptive colours by the shadows. The other accompaniments of her retirement were the same that we have seen them—the prevailing colour beautifully contrasting with the pure white of her loose morning costume. A book of drawings lay open on the table near the window, and on one page might be seen a miniature in water colours preserving the features of her lover; on the opposite lay several sheets of fine note paper and a pen, with which she had been writing. She passed several times across the room, and her light and graceful form swept noiselessly over the rich carpeting beneath her feet; several times she stopped and gazed, with folded arms, upon the miniature, and now and then she raised the curtain and gazed out upon the busy street beneath. A step was heard upon the stairs, and her eye lit up with a still warmer light. She hastily closed the portfolio, and advanced a step or two towards the door. It opened, and her father entered. Her eye fell to the floor in disappointment, and she listlessly sank into a seat. He whom she had been expecting was not before her, and even the appearance of her father could not prevent her feeling the difference. He closed the door quietly, and crossing the room, seated himself beside her, and took her hand.

"My daughter," he commenced affectionately, though the affection could not wholly overcome the somewhat pompous dignity of his manner, "I have, for some time, been wishing to converse with you upon a serious subject."

"Upon what subject, father?"

"About young Mr. Vernon. He has now returned, and it is time we should understand each other."

"I thought we did so, father, some time since," she said.

"So we did," he replied. "But I told you then that I hoped you would, before his return, see the folly of your course, or, at all events, would see the propriety of holding no intercourse with him for the present."

"Father," she replied, firmly, "I told you then, and I am ready to repeat, that, could I be convinced of his guilt, no one would spurn him away sooner than I; but I cannot consent, so long as I believe him innocent, to treat him as if I thought him guilty. Independently of my private feelings—were

"How dare you enter my door, sir!" exclaimed Talbot.

they no more than the merest friendship—nothing on earth but conviction of the criminality would induce me to change my course."

"But, my daughter, it is of your course in obstinately persisting in the belief that he is innocent, after he has been proven guilty, that I complain. Unless you think me perjured, you can believe nothing else."

"Far be it from me to even dream such a thing, for a moment!" she exclaimed; "and fortunately there is no such alternative. I am sure that what you say is true—that you never signed the note—but I am equally sure that Allen Vernon did not sign it either."

"Then who did?" asked her father.

"That," said she, "I cannot tell—I only know Vernon did not."

"I hope," said Talbot, "he may be able to establish his innocence; but it is impossible."

"Would he ever have returned if he had been guilty?" she argued.

"He knew nothing of the charge against him," said her father; "and no doubt was hurried back, by the hope of being able to take up the note before the discovery of the forgery."

"You are mistaken," said Cara; "I myself wrote to him a full statement of his position, and I know he received the letter, because only yesterday I received his answer."

"You! you wrote to him!" exclaimed Talbot.

"I did, father—I wrote to him to hasten home, and at once to meet the charge, and, like an innocent man as he is, he has come."

The old man was surprised and grieved—too much grieved to reply, and Cara went on—

"I am sorry to grieve you thus, father," she said, and threw her arms about his neck; "but I cannot believe him guilty. You do not know him, indeed you do not, or you would be as sure of his innocence as I am. You are blinded by fallacious evidence. If he were guilty—if he could be guilty—father, I would despise him as you do. Forgive me, father, I cannot, cannot believe it!"

"Do you suppose," said he, drawing her arms away, and angrily pushing her from him, "dare you suppose that, even if he should succeed in avoiding the punishment due to him, I would ever allow you to see him again?"

"You may exert your authority, father," she said, faintly, while the tears rolled down her cheeks; "I shall not question that—at least while it lasts—but you can never convince me of his guilt."

"While it lasts!" he exclaimed. "What do you mean by that?"

She attempted to throw herself again upon his neck, but he pushed her angrily back. She gazed into his flashing eyes for a moment, with an expression of mingled sorrow and reproach. Gently disengaging her arm from his grasp, she rose and walked to the window, sobbing as if her heart were breaking. Her father sat as if confused by his own violence. He was about to go to her, when the door was opened; a servant announced "Mr. Vernon," and Allen walked quietly into the room. The old man's wrath exploded at once.

"How dare you enter my door, sir!" he exclaimed, and made a step forward, as if to thrust him out. But Cara came forward and interposed, frankly giving Allen her hand.

"He is here, father," she said, "by my invitation, and the weight of your anger must fall upon me. I have a communication to make to him, which is essential to his defence."

"I should certainly not have intruded my presence," said Allen, "where it is not welcome; and so soon, sir, as I am at liberty to do so, I will leave you. I would have been glad to have some conversation with you, also, in order to my defence, but I perceive you have prejudged me."

"I believe nothing except upon evidence," said Talbot, haughtily.

"I hope to give you evidence of my innocence," said Allen, "at some future time; for the present, I can only ask a suspension of your opinion until I shall have had a hearing."

"That's nothing but just! at all events," said he, more coolly, perhaps seeing that no good end was to be gained by violence; perhaps, also, impressed, as every ignorant man always is, by the confident tone assumed by Allen. "There has been bad blood between your father and me," he continued, "but no one would rejoice more sincerely than I to be convinced of your innocence."

"For the present," said Allen proudly, "I will not even give you my assurance of it; but if I fail to establish it before a jury of my country, I shall be content to be branded as a felon."

"Have you any evidence?" he inquired eagerly.

"I am sorry to say, but little," answered Allen; "but I have confidence in the ultimate triumph of the right. I feel my innocence, and I do not believe I shall be abandoned by Providence."

"Providence is not sworn a witness in our courts," said he, with a coarse attempt at a jest. A reproachful look from his daughter checked his ill-timed mirth.

"Sit down," said Cara, pointing to a seat, "and I will give you the information I promised you."

"I will take it standing if you will allow me," said Allen.

"Well," said Talbot, recovering his self-possession, "I am glad to see that you know what is proper. You may be able to establish your innocence, and, as I said before, no man would rejoice more than I would; but I must say, that until you do so—"

"You interdict my intercourse with your daughter," interrupted Allen. "You are right, sir—I cannot blame you—and you may depend upon my not violating propriety in that way, at all events."

"Then I will bid you a very good morning," said the colonel; and he went out, probably seeing that his presence only lengthened the visit, since Cara did not seem disposed to speak while he remained.

"I understand your feelings, Vernon," said she, as soon as her father was gone, "and will not detain you. I sent for you to give you this paper in the hope that it may be of value to you."

A MIDSUMMER PRESENT FOR A GOOD BOY OR GIRL.

Now ready, price 1s. 6d., beautifully bound, with a fine Steel Plate, and 76 Engravings on Wood.

**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
This beautiful little Volume is made the more attractive to the Young, by having the Christian Name of the Reciever elegantly impressed in Silver upon the cover. Thus—

A STORY-BOOK FOR MASTER EDWARD!  
A STORY-BOOK FOR MISS ELIZABETH!

The following Names may be had to order:  
BOYS—Charles, Edward, Frederick, George, Henry, James, Joseph, John, Richard, Robert, Thomas, and William.

GIRLS—Anne, Caroline, Charlotte, Fanny, Emma, Eliza, Jane, Laura, Louisa, Lucy, Mary-Anne, and Maria.

For Names not included in the above, order the General Edition,  
**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**

London: Houlston and Stoneman; and all Booksellers.

**THE HOME COMPANION:**  
A WEEKLY MAGAZINE.

LIGHT.

"Let there be light: and there was light."—GEN. I. 3.

It is not necessary to suppose that the Almighty uttered these express words; but, understanding them as an expression of His sovereign will, they may be considered as an instance of the truest sublimity. This extraordinary expression, says Boileau, which marks so well the obedience of the creature to the commands of the Creator, is truly sublime, and has in it something divine. If, in stead of those few words (says he), we were to substitute—"The Sovereign Lord of all things commanded that light should be formed, and at the same time, this wonderful work, which we call light, was produced," what littleness should we not perceive in these pompous expressions, when opposed to—"God said, Let there be light: and there was light."—*Reflex. Crit. v.*

The simplicity of the words, the brevity of the whole, and the rapidity with which this wonderful and glorious work, proceeding from the First Great Cause of all things, was accomplished, when taken collectively, are truly admirable. Besides, we cannot help adverting to the great benefit and blessing of the thing created, by means of which the beauties of creation are unveiled to our senses, and we enjoy, with the least possible exertion, the most innocent, varied, and extensive pleasures.

A difficulty has arisen, however, in the minds of some persons, to account for the production of light before the creation of the sun, which has been considered as its source, and they have indulged various conjectures on the subject. Some have supposed that it was caused by an imperfect sun, in which the elements of light and fire were not yet collected in sufficient quantities to illuminate the earth. Others have imagined, that though the sun existed, his rays could not penetrate through the dense atmosphere, to render the surface of the terraqueous globe visible. A third conjecture is, that this first-created light was only a lucid cloud, of the same nature as the shechinah, which guided the Israelites by night in their journeyings through the wilderness. But this difficulty has arisen from adopting, with implicit confidence, a mere hypothesis of modern philosophy, an hypothesis which the recent improvements of science seems to render every day more questionable. Instead of the great elementary body of light emanating from the sun, there is reason to believe that light itself is an inconceivably subtle fluid, pervading all space, and wholly independent of the sun, which may be considered as its principal excitor, or the great agent in nature which gives it motion and renders it the medium of vision. The late experiments in chemistry and galvanism have served to render such a fluid or elementary principle more familiar to us. Besides, we know that there are many substances capable of emitting light, independently of the sun. Among others may be mentioned, besides culinary fire, the different kinds of phosphori, the diamond, the glow-worm, the Bologna stone, the fire-fly, ignis-fatuus, putrescent fish, &c., and frequently the waters of the sea are seen to emit light, respecting which last the reader may find some very curious observations in the "Philosophical Transactions," vol. lix. p. 446, et seq.

Another genus of mollusca, called pyrasoma, seen and described by M. Perou (whose veracity may certainly be relied on), presents one of the most singular phenomena of this kind of light.—"On the 14th of December," he relates, "the horizon was loaded with heavy clouds, and the darkness was intense. We had discovered, at a little distance, a broad belt of phosphoric light spread upon the waves. We presently reached it, and found that the brilliancy was caused by an innumerable quantity of small animals, which, lifted by the waves, floated at different depths, appearing under a variety of shapes. The pieces that were more deeply immersed presented the idea of masses of burning matter, or of enormous red-hot balls, whilst those on the surface perfectly resembled large cylinders of iron heated to whiteness."

Bouguer, Hawksbee, and Bernouilli, instituted many curious experiments, by which they produced various kinds of artificial light, as did, also, the philosopher Franklin. The supposition that light is a subtle elementary fluid, or a substance independent of the sun, is at least as old as Aristotle, and supported by the opinion of many writers of eminence, among whom may be mentioned the Abbé Pluché, the ingenious author of "Spectacle de la Nature," Dr. J. Taylor, Dr. Franklin, and that profound mathematician, Euler. Nor should it be forgotten, that the sentiments of Milton on this

subject are conformable to the declaration of Moses. His invocation to light is one of the most poetical passages in his immortal work. He calls it—

"Bright effluence of bright essence increate!  
Or hear'st thou rather, pure ethereal stream,  
Whose fountain who shall tell? Before the sun,  
Before the heav'n's thou wert, and at the voice  
Of God, as with a mantle, did'st invest  
The rising world of waters dark and deep,  
Won from the void and formless infinite!"

"Universal space, as far as we know of it," says Dr. Franklin, "seems to be filled with a subtle fluid, whose motion or vibration is called light; but I am not satisfied with the doctrine that supposes particles of matter, called light, are continually driven off from the sun's surface, with a swiftness so prodigious as philosophers suppose. Must not the smallest particle conceivable have, with such a motion, a force exceeding a twenty-four pounder discharged from a cannon? Must not the sun diminish exceedingly by such a waste of matter? And the planets, instead of drawing near to him, as some have feared, recede to greater distances through the lessened attraction; yet these particles, with this amazing motion, will not remove the least and slightest dusk they meet with, and the sun, for aught we know, continues of his ancient dimensions, and his attendants move in their ancient orbits. May not all the phenomena of light be more conveniently solved by supposing universal space filled with a subtle and elastic fluid, which, when at rest, is not visible, but whose vibrations affect that fine sense in the eye, as those of air do the grosser organs of the ear? We do not, in the case of sound, imagine that any sonorous particles are thrown off from a bell for instance, and fly in straight lines to the ear; why must we believe that luminous particles leave the sun and proceed to the eye? Some diamonds, if rubbed, shine in the dark, without losing any part of their matter. I can make an electrical spark as big as the flame of a candle, much brighter, and therefore visible farther; yet this is without fuel; and I am persuaded that no part of the electric fluid flies off in such case to distant places, but that all goes directly, and is to be found in the place to which I destine it."

"It appears," says Dr. J. Taylor, in his "Scheme of Scripture Divinity," "from electrical experiments, that light is a distinct substance from all others, as much as air is from water, and that by being properly excited, it may be made to appear in midnight darkness; which shows that it did exist in that darkness previously to its being excited, and that it was rendered visible by being excited. Consequently it may, and I doubt not doth, exist, expanded through the whole visible system of things at all times, by night as well as by day, and that the sun is in our system the great exciter, by which the substance of light is impelled and becomes visible."

"By light," says the Abbé Pluché, "we do not mean that sensation which we experience in ourselves, on the presence of any illuminated body, but that inconceivably subtle matter which makes an impression on the organ of sight, and paints on the optic nerve those objects from the surface of which it was reflected to us."

Taken in this sense, light is a body quite different from the sun, and might have existed before it, seeing that it now exists in its absence as well as when present. It is diffused from one end of the creation to the other, traverses the whole universe, forms a communication between the most remote spheres, penetrates into the inmost recesses of the earth, and only waits to be put in motion to make itself visible. Light is to the eye what the air is to the ear; air cannot be called the body of sound, though it equally exists all around us, when there is no sonorous body to put it in motion; so the light equally extends, at all times, from the most distant fixed stars to us, though it then only strikes our eyes when impelled by the sun, or some other mass of fire. The body of light, therefore, either exists independently of the luminous body, or we must suppose that every luminous body, whether it be the sun, a candle, or a spark, produces this light from itself, and projects it to a great distance; but to assert the latter, is to assert a very great improbability; for if a spark, which is seen in every part of a large room, fifty cubic feet in dimensions, emits from its own substance a quantity of light sufficient to fill the whole room, then there must issue from that spark, which is but a point, a body, the contents of which are fifty cubic feet. How incredible the supposition! On the contrary, how simple and natural is it to suppose, that as the air existed before the bell that put it in motion, so, in like manner, the light existed in the room before the spark was struck which excited its vibrations and made it visible. Thus, the sun and stars made themselves visible, without suffering any diminution of substance; God having placed between those luminous globes and us the body of that light which we see, and which is impressed on the organs of vision by their actions and influence, but which does not proceed from them, nor owe its existence to them. The account of Moses, therefore, is agreeable to truth, as well as a useful lesson of caution, when he informs us that God, and not the sun, was the author of light; and that it was created by his Almighty fiat, before there was a sun to dart it on one part of the earth, and a moon to reflect it on the other. Dr. Young, in his "Lectures on Natural Philosophy and the Mechanical Arts," has maintained nearly the same theory, by reasoning and deductions equal, at least, in force and depth of science, to any that have preceded him. A very remarkable property of light is the uniformity of its velocity in the same medium; and no other instance of nature of a simple projective, moving with a velocity uniform in all cases, whatever be its cause. Light, therefore, if it consist not in the emission of very minute particles from luminous substances, which are actually projected, is probably an affection of elastic ether, pervading the universe in a state so rare, that although it constitutes a continuous medium, it suffers all bodies to move through it without sensible resistance, and is admitted into their pores with perfect freedom.

## ONWARD!

**CLEANING MACHINERY.**—An apparatus for beating, brushing, scouring, and drying carpets has been patented by Mr. Horn, of Belgrave-street, Piccadilly. The carpet is fixed on rollers, and made to pass between spring-whips and revolving brushes. In purifying feathers, wool, &c., dust is first removed: they are then subjected to steam, and dried by heat.

**THE NEW YORK CRYSTAL PALACE.**—It is said that 184,200 dollars have been subscribed towards the fund of 200,000 dollars required for the erection of the Crystal Palace in Reservoir-square. The directors calculate on "140 per cent. as the profits of the concern, and the building on hand, at the close of the first season, with power to keep open the Exhibition during the continuance of the lease."

**PROPOSED NATIONAL EXHIBITION OF METAL-WORK AT SHEFFIELD.**—Preparations, according to the local papers, are in progress towards the formation of an exhibition of metal-work next year at Sheffield. The authorities connected with the local school of Ornamental Art are taking an active interest in the project, and the superintendents of the central department of practical art are said to approve of the idea.

**NEW ACT FOR SCHOOL SITES.**—According to an Act now in operation, the provisions of former Acts with respect to sites for schools, are extended to schools and colleges for the religious and educational training of the sons of yeomen or tradesmen, or others, or for the theological training of candidates for holy orders, of the Established Church, which are erected and maintained in part by charitable aid.

**RAISING SUNKEN SHIPS, &c., BY AIR-TUBES.**—Experiments for raising sunken vessels, &c., by means of gutta-percha tubes, have been made on the Seine, near the Bridge de l'Archêvêche. Amongst others, a boat laden with between 5,000 and 6,000 kilogrammes (from five to six tons) was sunk, and then raised with its burden by the tubes filled with air. The experiments were witnessed by Prince N. Bonaparte, and others.

**A NEW KIND OF PAPER.**—It appears that a gentleman named Senefelder, nephew of the inventor of lithographic printing, has proposed to the French government an invention of his, termed *papier de sûreté*. With this paper, it is said, not only the slightest attempt at forgery of public or private documents would be rendered impossible, but also that of a second time using stamped paper by means of chemical preparations. In the departments of the Seine the treasury suffers a yearly loss of 500,000 f. by the art employed to render stamped paper again fit for use. Independently of other advantages, it is supposed that by the introduction of such prepared paper, the French state would gain from 10,000,000 f. to 12,000,000 f.

**ELECTRO-MAGNETIC MOTIVE POWER.**—A patent has been out by Dr. Kemp for an arrangement of machinery for the obtaining of a maximum power from numerous short strokes of electro-magnetic power, acting on one long piston-rod in the cylinder of a hydraulic press, thus neutralizing the difficulty which is presented of the rapid decrease of force with the increase of the magnetic distance. This result is obtained by an arrangement of cylinders and pistons, in pairs, connected by levers in such manner, that as one ascends the other descends, and forces water, in a continuous circle, through valves into a chamber in connection with a long cylinder and piston, or hydraulic press, in connection with the prime moving crank of the engine.

**IRISH SUBMARINE TELEGRAPH.**—The Submarine Telegraph—the "final fetter," or the "cable of concord," as it is variously called—is completed between Portpatrick and Donaghadee, and the wires are now in use. The strength of the cord was accidentally put to a severe and satisfactory test while the work of "paying out" was going on: for when the men raised a part of the sunk cable to connect it with that on board, they brought up a large anchor, covered with shells and sea-weed, and supposed to have been at the bottom of the sea at least a century. While on the subject of marine telegraphs, we may add, that the cables for the new lines to Belgium and Holland are in rapid progress of being made at the various workshops, and it is believed they will be ready for laying in a few weeks. These new lines are to connect Dover with Ostend, and Harwich with some point on the Dutch coast. The wonderful results of these submarine telegraphs will, no doubt, act upon the character of people generally, and tend to bring them into closer union and brotherhood.

**INDUSTRIAL AND PROVIDENT PARTNERSHIPS AND SOCIETIES.**—An Act was passed at the end of last Session (15 & 16 Vict., c. 31), "to legalise the formation of Industrial and Provident Societies." It is intended by this Act that societies of working men may be established for attaining the objects of the Friendly Societies' Acts by means of joint trade, except banking. The rules of such societies are to be framed in accordance with the Act. The funds are not to be invested with the National Debt Commissioners, and societies established before the passing of the Act shall come under its provisions so soon as they shall conform to the provisions thereof. As to the liability of members, it is provided that "nothing in this or the said recited Act (Friendly Societies' Act) shall be construed to restrict in anywise the liability of the members of such society established under or by virtue of this Act, or claiming the benefit thereof, to the lawful debts and engagements of such society; provided always, that no person shall be liable for the debts or engagements of any such society after the expiration of two years from his ceasing to be a member of the same." The Act is to be cited as the "Industrial and Provident Societies' Act, 1862."

## POETICAL QUOTATIONS.

## CARE.

Care is no cure, but rather corrosive,  
For things that are not to be remedied.—*Shakespeare's Henry VI.*

Care that in cloisters only seals her eyes,  
Which youth thinks folly, age and wisdom owns;  
Fools, by not knowing her, outlive the wise;  
She visits cities, but she dwells on thrones.—*Sir W. Davenant.*

But human bodies are sic fools,  
For a' their colleges and schools,  
That when nae real ills perplex them,  
They mak' enow themselves to vex them.—*Burns.*

He woke,—to watch the lamp, and tell  
From hour to hour the castle-bell,  
Or listen to the owl's cry,  
Or the sad breeze that whistles by,  
Or catch by fits the tuneless rhyme  
With which the warden cheats the time;  
And envying think, how, when the sun  
Bids the poor soldier's watch be done,  
Couch'd on his straw, and fancy-free,  
He sleeps like careless infancy.—*Scott's Rokeby.*

And on, with many a step of pain,  
Our weary race is sadly run;  
And still, as on we plod our way,  
We find, as life's gay dreams depart,  
To close our being's troubled day,  
Nought left us but a broken heart.—*Percival.*

Ah! who can say, however fair his view,  
Through what sad scenes his path may lie?  
Let careless youth its seeming joys pursue,  
Soon will they learn to scan with thoughtful eye  
The illusive past and dark futurity.—*Kirke White.*

I do not starve!—not yet; not yet;  
But wait to-morrow! Famine will be here.  
In the mean time, we've still grim Care—(whose tooth  
Is like the tiger's—sharp,) lest dreams should fall,  
And shadow us with sweet forgetfulness.—*Barry Cornwall.*

## CAUSE.

Circumstance must make it probable  
Whether the cause's justness may command  
Th' attendance of success: For an attempt  
That's warranted by justice, cannot want  
A prosperous end.—*Nab's Hannibal and Scipio.*

Justness of cause is nothing,  
When things are risen to the point they are;  
'T is either not examined or believed  
Among the warlike.—*Suckling's Brennoralt.*

This is a cause which our ambition fills;  
A cause, in which our strength we should not waste  
In vain, like giants, who did heave at hills;  
'T is too unwieldy for the force of haste.

*Sir W. Davenant's Gondibert.*

Small are the seeds fate does unheeded sow  
Of slight beginnings to important ends;  
Whilst wonder, which does best our reverence show  
To heaven, all reason's sight in gazing spends.—*Ibid.*

## CAUTION.

But now so wise and wary was the knight  
By trial of his former harms and cares,  
That he desisted, and shunned still his slight:  
The fish, that once was caught, new bait will hardly bite.  
*Spenser's Fairy Queen.*

Who 'scapes the snare  
Once, has a certain caution to beware.  
*Chapman's Revenge for Honour.*

They that fear the adder's sting, will not come  
Near his hissing.—*Chapman's Widow's Tears.*

Nones pities him that's in the snare,  
And warn'd before, would not beware.—*Herrick.*

The wound of peace is surety,  
Surety secure; but modest doubt is call'd  
The beacon of the wise, the tent that searches  
To the bottom of the worst.—*Shakespeare's Troilus and Cressida.*

## PARLOUR PASTIME.

*The Home Bazaar.*

THIS game requires some preparation, but is productive of much amusement. A stall is erected at one end of a large apartment, by means of a slight frame like a window; coarse print hangings, and pink calico drapery over the table. It should be made to resemble, as much as possible, the booth of a fair, and the articles to be sold should also partake of that character. The larger ones, which have required considerable trouble in their fabrication, may be raffled for, and this adds not a little to the general amusement. Bonbons, toys which are ingenious, and droll pictures, caricatures, &c., are excellent subjects for the sale, which should be conducted by two or three young ladies, in some pretty or droll costume; and instead of actual money, each guest should be presented on their entrance with an equal number of caraway-comfits in a little bag, the articles being priced to correspond, and every one thus placed on an equal footing as to their means of expenditure. Various amusements may be contrived by an ingenious arrangement of articles; and the author can vouch for the screams of delight, and the prolonged fun, which this mode of passing an evening has occasioned.

## ENIGMAS.

I.  
At first a golden crown I wear,  
That glitters in the sun;  
And when I reach maturer age,  
A white wig I put on.  
But from my head my wig is torn,  
And scatter'd in the air;  
And then my naked head is left  
Disconsolate and bare.  
Yet for my wig I would not grieve,  
But this afflicts me more,  
My children to my wig are stuck—  
The offspring that I bore.  
Still, pity for me there is none,  
For Christians, bad and good,  
Cut my poor body into shreds,  
And drink my very blood.  
Although a creature's teeth I wear,  
I'm harmless as a lamb;  
So, gentle reader, if you know,  
Pray tell me who I am.

T. MILNER.

II.  
Ever eating, never cloying,  
All devouring, all destroying,  
Never finding full repast,  
Till I eat the world at last.

## ARITHMETICAL QUESTIONS.

I.  
Pray can you on a number fix,  
Which multiplied by seven times six,  
And then divided by thrice eleven,  
Shall give the product twelve times seven?

II.  
A MOTHER said—"Now, Ann, my dear,  
Your age is twelve, mine thirty-two;  
What will our ages be, declare,  
When I'm just twice as old as you?"

## PRACTICAL PUZZLES.

I.  
Now, sir, your coat is off!  
And see—  
Your right-hand pocketed!  
So let it be:  
While o'er your arm  
An endless string—  
Some three yards round—  
Hangs like a sling.  
Take the string off—  
But, just for fun,  
It must be done—

Keeping your right-hand in its place,  
And not a smile must stir your face.  
Until you find this puzzle out,  
No coat shall wrap your back about.

II.

With three pieces of cardboard, of the shape and size of No. 1, and one each of Nos. 2 and 3, form a cross.

## TRANSFIGURED PLAYING CARDS.

THE SIX OF HEARTS.—ARTS MILITAIRES.

## CHARADE.

ONE of the plagues that blight this world of woe  
From pole to tropics, wheresoe'er you go,  
By coach or railway, diligence or car,  
Your steps to number, and your joys to mar,  
My *first* pursues you with its with'ring curse,  
Curtails your journey, and contracts your purse.  
Yet strange it is, this much abused thing  
Such comfort to the inward man can bring—  
Is so much valued at the journey's end—  
So much reported of from friend to friend—  
So praised—so thoroughly enjoy'd—when good,  
'Twould seem as precious as our daily food!

Go, seek my *second* underneath the floors  
Of populous cities, where its glitt'ring stores  
Lie dark and silent; seek it on the plains  
Of old Judea, when the latter rains  
Have fill'd its hollow breast; or on our farms  
And British homesteads, wreath'd with rural charms;  
Under the apple-bough, or in the shade  
Of elm or elder, where the busy maid,  
At morn and eve, to its rich cave may come,  
And blithely bear its sparkling treasure home.

My *whole*—the saddest, yet the kindest word  
That ever friend from friendship's tongue hath heard.  
Unravel quickly from so plain a clue,  
Else, gentle friend, 't is what I say to you!

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 669.

**SOLUTION OF ENIGMA.**—The general answer is, "Iron," which (1) is by nature concealed beneath the ground. (2) Is brought thence by man. (3) Is at first united with the dross in the ore. (4) When iron is smelted, it is of a brilliant white colour. (5) It is then manufactured into innumerable articles—viz. (6) Iron steam-ships; (7) Locomotive steam-engines. (8) The sword is in the hand of him who wields it, in the heat of battle. (9) Cannons, by their firing, announce the storming of a town. (10) The needle of the mariner's compass is steel, i.e. iron. (11) Cannon-balls, in military terms, "shot." (12) The axe. (13) A key. (14) Steel springs. (15) A diving-bell. (16) Steel spurs. (17) A steel curb.

**SOLUTION OF RIDDLE.**—A SHIP. All the words in italics are nautical terms for different parts of a ship and her equipment. To "pay a ship" is to fill the interstices between the planks with pitch, to prevent the admission of water. The needle is the compass-needle. A ship is sounded with a string, to ascertain if any water has entered.

**SOLUTION OF PUZZLE.**—INDIA-RUBBER.—(1) India-rubber, when procured from the tree which produces it, is a white liquid like milk, and, as it consolidates, it becomes a very dark colour. (2) India-rubber is used in the composition of slates. (3) For erasing pencil-marks, &c. (4) For balls, and various children's toys. (5) For watch-guards, bracelets, &c. (6) For ladies' pages. (7) India-rubber rings for papers, &c. (8) For waterproof clothing. (9) For swimming-belts. (10) India-rubber shoes. (11) The fastenings of parasols.

**TRANSPOSITION.**—Bleak, lak, tale, lake, lea.

## OUR CORNER CUPBOARD!

Who are the most disinterestedly good? Those who are good for nothing.

Why is a man who deals in stale jokes like a stock jobber? Because he depends on fun-dead property.

A gentleman observed one day to Mr. Erskine, that punning is the lowest sort of wit. "It is so," answered he; "and therefore the foundation of all wit."

Two Irishmen one day meeting, "I am very ill, Pat," said one, rubbing his head. "Then," replied the other, "I hope you may keep so—for fear of being worse."

At a parish examination, a clergyman asked a charity boy if he had ever been baptized? "No, sir," was the reply, "not as I know of; but I've been *watinated*."

A gentleman of Cork ordered his man to call him up at six o'clock; but he awoke him at four. Being asked the reason, he replied, "He came to tell him he had two hours longer to sleep."

A native of Cork hiring himself to a needy alderman, was asked if he could live hard. "By my faith," says Pat, "and I can live upon bread and water, provided your honour will feed me well every day of my life."

## ON FEAR.

BY SIR THOMAS MORE.

Evils come not, then our fears are vain;  
And if they do, fear but augments the pain.

"How many years have you been dumb?" said an Irish gentleman to an Irish beggar man. "Five years last St. John's Eve, please your honour," answered the mendicant, completely taken off his guard by the question.

DRUNKEN DAVE going home one night, said—"If I find my wife up, I'll lick her—What business has she to sit up and burn out fire and candle? And if she's gone to bed, I'll lick her—for what business has she to go to bed till I get home."

A lady going into a tea-shop in Leitli, and buying a pound of tea, the merchant said he would send it home. "Oh, no," said she; "it is not inconvenient, as it is light." "Why," said he, "it is as light as I could possibly make it."

"HAVE you seed a fox go by here?" "Wal, yes." "Have you seed a dog go by here?" "Wal, yes; they was a rummin' along like blazes." "How was they?" "Wal, about nip and tuck—dog a little ahead." Bob sloped, and gave the dog up for a hard one.

TEDDY O'FLANNIGAN, with his uncle, being at sea in a great storm, he waked his uncle, who was asleep, told him he was afraid he would be drowned, and know nothing at all, at all, of the matter, and then when he waked in other world, he would be angry with him, for not telling him.

LADY C——, an old coquette, and very fond of her reminiscences, and a censor of all present fashions and arts, looking into her glass, beheld sundry wrinkles, freckles, &c. "Now, here is my new glass," said her ladyship, "not worth a farthing. They cannot make mirrors so well as they used to do."

The Hon. Henry Erskine, observing a spot of grease upon a friend's coat, said, that he was at present in the same situation with his horse. "How is that?" the gentleman asked. "Because," replied Mr. E., "you are *greased*." "Oh, Harry," said his friend, "that wit is *far-fetched*." "By no means," exclaimed Mr. E., "it is *made upon the spot*."

A young Irishman (placed by his friends as a student at the veterinary college) being in company with some of his colleagues, was asked, "If a broken-winded horse were brought to him for cure, what he would advise?" After considering for a moment, "By the powers," said he, "I should advise the owner to sell as soon as possible."

MR. TWISS, a romancing traveller, was talking of a church he had seen in Spain a mile and a half long. "Bless me!" said Garrick, "how broad was it?" "About ten yards," said Twiss. "This is, you'll observe, gentlemen," said Garrick to the company, "not a round lie, but differs from his other stories, which are generally as broad as they are long."

## ALLITERATIVE POETRY.

WHEN a twister in twisting will twist him a twist,  
For the twisting his twist he three times doth entwine;  
But if one of the twists of the twist doth untwist,  
The twine that untwisteth, untwisteth the twist.  
Untwisting the twine that untwisteth between,  
He twines with his twister the two in a twine;  
The twist having twisted the twines of the twine,  
He twisteth the twine he had twisted in twain.  
The twine that in twisting before in the twine,  
As twines were untwisted, he now doth entwine;  
Twist the twain intertwisting a twine more between,  
He twisteth his twister, makes a twist of the twine.

A gentleman, on a tour through the west of England, happened to be at a very populous town on a Sunday, and being acquainted with the minister, he accompanied him to church, which, to his great surprise, was very thinly attended. As they were returning home, he asked his friend, "if there were many dissenters in the town." "No," said the other, "but there are numerous dissenters."

## OUR MEMORANDUM BOOK!

INTELLIGENCE IN A WASP.—Dr. Darwin, in his "Zoonomia," relates an anecdote of apparent ratiocination in a wasp, which had caught a fly nearly as large as itself. Kneeling down, the doctor saw the wasp discover the head and tail from the trunk of the fly, and attempt to soar with the latter; but finding, when about two feet from the ground, that the wings of the fly carried too much sail, and caused its prize and itself to be whirled about, by a little breeze that had arisen, it dropped upon the ground with its prey, and deliberately sawed off with its mandibles, first one wing and then the other: having thus removed these impediments to its progress, the wasp flew away with its booty, and experienced no further molestation from the wind.

SEA WATER.—Sea water, when taken up at a distance from the shore, appears limpid, tastes salt, nauseous, and bitter; it purifies by keeping: it contains, upon the coasts of Great Britain, from one twenty-eighth to one thirty-eighth of salt. The sea water lately examined by a very accurate hydrometer, two successive seasons at Hastings, is to distilled water as 1,023 to 1,000, and holds in solution a thirty-sixth part of saline matter. The purgative qualities of sea water depends, in a great measure, upon the muriated magnesia it contains, which is a neutral substance, formed naturally from the earth of magnesia, and the acid of sea salt, and which gives sea water its bitter taste; the other saline contents are chiefly common culinary salt, with a very small proportion of selenite salt.

SIR WILLIAM JONES'S PLAN OF STUDY.—Some idea of the acquirements of the resolute industry with which Jones pursued his studies may be formed from the following memorandum:—"Resolved to learn no more rudiments of any kind, but to perfect myself in—first, twelve languages, as the means of acquiring accurate knowledge of

- |              |                 |                |
|--------------|-----------------|----------------|
| 1. Man       | II. Arts.       | 2. Nature.     |
| 1. Rhetoric. | 2. Poetry.      | 3. Painting.   |
| 1. Law.      | 2. Mathematics. | 3. Dialectics. |
|              | III. Sciences.  |                |

"N.B. Every species of human knowledge may be reduced to one or other of these divisions. Even law belongs partly to the history of man partly as a science to dialectics. The twelve languages are Greek, Latin, Italian, French, Spanish, Portuguese, Hebrew, Arabic, Persian, Turkish, German, English.—1780."

## COMPARATIVE NUTRIMENT OF FOOD.

TABLE of the comparative nutriment contained in various articles of Food. The figures appended to each article denote the proportion of nutriment in every 1,000 parts:—

|                    |     |                   |     |                    |     |
|--------------------|-----|-------------------|-----|--------------------|-----|
| Mutton .....       | 290 | Beans (dry) ..... | 800 | Melons .....       | 30  |
| Chicken .....      | 270 | Rice .....        | 850 | Cucumbers .....    | 25  |
| Beef .....         | 260 | Bread .....       | 800 | Plums .....        | 250 |
| Veal .....         | 250 | Eye .....         | 702 | Grapes .....       | 270 |
| Pork .....         | 240 | Oats .....        | 745 | Ch. files .....    | 350 |
| Fish, about .....  | 200 | Almonds .....     | 650 | Peaches .....      | 60  |
| White of Egg ..... | 140 | Beets .....       | 118 | Gooseberries ..... | 100 |
| Milk .....         | 72  | Potatoes .....    | 120 | Apples .....       | 170 |
| Wheat .....        | 950 | Carrots .....     | 98  | Pears .....        | 160 |
| Peas (dry) .....   | 930 | Cabbage .....     | 75  | Strawberries ..... | 125 |
| Barley .....       | 290 | Turnips .....     | 42  |                    |     |

From Dr. Beccumet's Tables it appears that the following articles were digested in the times indicated:—

|                              | H. M. |                               | H. M. |
|------------------------------|-------|-------------------------------|-------|
| Rice, boiled soft .....      | 1 0   | Oysters, stewed .....         | 3 30  |
| Apples, sweet and ripe ..... | 1 30  | Eggs, raw .....               | 2 2   |
| Sago, boiled .....           | 1 1   | " soft boiled .....           | 3 0   |
| Bread, stale .....           | 2 0   | " hard boiled .....           | 3 30  |
| Milk, boiled .....           | 2 0   | Beef, roast or boiled .....   | 3 0   |
| Cabbage .....                | 2 0   | " salted .....                | 3 30  |
| Baked Custard .....          | 2 45  | Mutton, roast or boiled ..... | 3 0   |
| Parasols, boiled .....       | 2 30  | Pork, boiled .....            | 3 30  |
| Potatoes, roasted .....      | 2 30  | " salted and boiled .....     | 4 30  |
| " boiled .....               | 3 30  | " roast .....                 | 5 0   |
| Turnips, boiled .....        | 3 30  | Veal, roasted .....           | 5 30  |
| Carrots, boiled .....        | 3 15  | Turkey and Goose .....        | 2 30  |
| Butter and Cheese .....      | 3 30  | Domestic Fowls .....          | 4 0   |
| Venison .....                | 1 35  | Wild Fowls .....              | 4 30  |
| Oysters, raw .....           | 2 3   |                               |       |

## OMNISCIENCE DISPLAYED IN THE CONSTITUTION OF THE ATMOSPHERE.

—In the constitution of the atmosphere we have ample scope to admire the design and execution of a structure calculated, with such prodigious precision, to fulfil its purposes. Were the atmosphere to consist wholly of oxygen, and the different kinds of objects which compose, and are found upon, the globe, to remain what they are, the world would run through the stages of decay, renovation, and final destruction in a rapid cycle. Combustion, once excited, would proceed with ungovernable violence; the globe, during its short existence, would be in a continual conflagration, until its ashes would be its only remains: animals would live with hundred-fold intensity, and terminate their mortal career in a few hours. On the other hand, were the atmosphere wholly composed of azote, life could never have existed, whether animal or vegetable, and the objects of the Creator in forming this world would not be fulfilled. But the atmosphere is a wholesome mixture of these two formidable elements, each neutralizing the other's baneful influence. The life of animals quietly runs through its allotted space; and the current of nature flows within prescribed limits, manageably and moderately.

SUMMER EXCURSIONS.

**INSURANCE AGAINST LOSS OF LIFE,**  
with COMPENSATION for PERSONAL INJURY  
BY RAILWAY ACCIDENT during an Excursion, or single  
journey by Railway. The Tickets of the RAILWAY  
ASSURANCE COMPANY may be obtained at almost all the principal Railway Stations.

To insure £1,000 in a first-class carriage, at a premium  
of £200 in a second-class 3d.  
" £300 in a third-class 2d.

Excursion or double Journey Tickets at double the above rates.

Periodical Tickets, which give the holder the option of  
travelling in any class carriage on any Railway, are also  
issued, and may be had with Prospectuses containing particu-  
lars of the Rates of the Provincial Agents, and at the  
Company's Offices, 3, Old Broad-street, London.

WILLIAM J. VIAN, Sec.

STEPHENS'S PATENT PROPELLING

**PENCILS.**—A new kind of over-pointed Pencil in  
Wood, lined through with Lead, requiring no cutting, as  
he lead is propelled to the point by a novel, easy, and in-  
genious contrivance; is more economical than even the  
best Pencil, which is destroyed as used; whereas in these  
Pencils the lead only is consumed, the Pencil remaining as  
perfect as at first, ready to be refilled, and this is required  
only at long intervals.

Prepared and sold by the Proprietor, HENRY STEPHENS,  
4, Stamford-street, Blackfriars-road, London. Sold by  
Booksellers and Stationers.

NEW TENTS FOR EMIGRANTS.

**TENTS, Square or Round, MARQUEES**

with Square, Gable, or Circular Ends, and Socketed  
Poles, complete with Pegs, Mallets, &c.  
Military, or Hall Tent, 30 ft. round, socketed  
pole..... £2 10s.

Square Tent, 8 ft. square, and 5 ft. 6 in. walls,  
socketed pole..... £3 0s.

Square Tent, 10 ft. square, and 5 ft. 6 in. walls,  
socketed pole..... £3 10s.

Round Tent, 10 ft. square, and 5 ft. 6 in. walls,  
socketed pole..... £3 10s.

Iron Folding Bedsteads, 31 in. wide, with sack  
ing and mattresses..... £1 5s.

To be had of R. G. PAGE, Tent and Rick-Cloth Maker,  
40, West Smithfield.

TO EMIGRANTS AND VOYAGERS.

**MOORE AND BUCKLEY'S PATENT**  
**CONCENTRATED MILK** will be found a great  
 desideratum, as it supplies Fresh Milk at all times. It is  
preserved in hermetically sealed tins, which will keep sweet  
in the hottest climate many days after being opened; and  
in producing seven times the quantity of pure milk.

"The milk is most admirable; none should go to sea  
without it."—*Captain Ommeney, H. M. S. Assistance,*  
25th October, 1851.

Consumers of Cocoa and Chocolate are invited to try  
**MOORE AND BUCKLEY'S COCOA AND MILK,** and  
**CHOCOLATE AND MILK,** which are combinations of the  
finest Trinidad Cocoa and the choice English and French  
Chocolates with the Patent Concentrated Milk, in hermeti-  
cally sealed tins. These delicious preparations are wholly  
free from the admixtures so common in the packet cocoa,  
and, considering their quality, are equally inexpensive;  
for example, a breakfast cup of Pure Cocoa, combined  
with Milk and Sugar, can be had at the cost of a Penny,  
by merely adding boiling water.

The PRIZE MEDAL at the GREAT EXHIBITION was  
awarded to these preparations.

**MOORE AND BUCKLEY'S INFANT'S FOOD** is a combination  
of the Concentrated Milk with pure Fatina, and will be  
found a light and nourishing diet for Infants as well as  
Infants, requiring only boiling water for its instant prepa-  
ration.

The whole of the above are prepared under the immediate  
inspection of Mr. Moore, the Patentee, who was for  
many years the ordinary medical attendant of the Royal  
Family, in London.

The finest FINEST CHOCOLATES imported, and in every  
variety.  
**MOORE AND BUCKLEY,** Ranton Abbey Farm and  
Works, Staffordshire; Wholesale Depot, 4, Upper East  
Smithfield, London. Sold by all the Provision Merchants,  
and most of the respectable Grocers and Chemists in the  
Kingdom.

FIFTY THOUSAND CURES BY DU

**BARRY'S DELICIOUS REVALENTA AFRICA**  
**FOOD,** without medicine, inconvenience, or expense, (as  
it saves fifty times its cost in other remedies.) Cure No.  
71, of Dyspepsia:—"From the Right Hon. the Lord Stuart  
de Decles:—"I have derived considerable benefit from Du  
Barry's Revalenta Africain Food, and consider it due to  
yourself and the public to authorize the publication of  
these lines.—Stuart de Decles."—Cure No. 49,552:—"I  
suffered from indigestible agony from dyspepsia, nervous-  
ness, asthma, cough, constipation, flatulency, spasms, sick-  
ness at the stomach, and vomiting, have been removed by  
Du Barry's excellent Food."—Mrs. Jolly, Wortham Lodge,  
near Ditch, Norfolk:—"In my children, suitably packed for  
all climates, and with full instructions.—1 lb., 2s. 3d.;

### Editor's Note-Book.

**DOMESTIC HINTS.**—No. 18.  
**Cries of Children.**—If we inquire into the causes which produce the crying of infants, we shall find that it seldom originates from pain, or uncomfortable sensations;

for those who are apt to imagine that such causes must *always* operate on the body of an infant, are egregiously mistaken; inasmuch as they conceive that the physical condition, together with the method of expressing sensations, is the same in infants and adults. It requires, however, no demonstration that the state of the former is essentially different from that of the latter. In the first years of infancy, many expressions of the tender organs are to be considered only as efforts or manifestations of power. We observe, for instance, that a child, as soon as it is undressed or disencumbered from swaddling clothes, moves its arms and legs, and often makes a variety of strong exertions; yet no reasonable person would suppose that such attempts arise from a preternatural or oppressive state of the little agent. It is therefore equally absurd to draw an unfavourable inference from every inarticulate cry; because, in most instances, these vociferating sounds imply the effort which children necessarily make to display the strength of their lungs, and exercise the organs of respiration. Nature has wisely ordained, that by these very efforts the power and utility of functions so essential to life, should be developed, and rendered more perfect with every inspiration. Hence it follows, that those over-anxious parents or nurses, who continually endeavour to prevent infants from crying, do them a material injury; for, by such imprudent management, their children seldom or never acquire a perfect form of the breast, while the foundation is laid in the pectoral vessels for obstructions, and other diseases. Independently of any particular causes, the cries of children, with regard to their general effects, are highly beneficial and necessary. In the first period of life, such exertions are the almost only exercise of the infant: thus the circulation of the blood, and all the other fluids, is rendered more uniform; digestion, nutrition, and the growth of the body, are thereby promoted; and the different secretions, together with the very important office of the skin, or insensible perspiration, are duly performed. Hence it is extremely improper to consider every noise of an infant as a claim upon our assistance, and to intrude either food or drink, with a view to satisfy its supposed wants. By such injudicious conduct, children readily acquire the injurious habit of demanding things, or nutriment, at improper times, and without necessity; their digestion becomes impaired; and consequently, at this early age, the whole mass of the fluids is gradually corrupted. If, however, the mother or nurse has no recourse to the administration of aliment, they at least remove the child from its couch, carry it about, frequently in the middle of the night, and thus expose it to repeated colds, which are in their effects infinitely more dangerous than the most violent cries. We learn from daily experience, that children who have been the least indulged, thrive much better, unfold all their faculties quicker, and acquire more muscular strength and vigour of mind, than those who have been constantly favoured, and treated by their parents with the most solicitous attention: bodily weakness and mental imbecility are the usual attributes of the latter. The first and principal rule of education ought never to be forgotten; that man is intended to be a free and independent agent; that his moral and physical powers ought to be *spontaneously* developed; and that he should as soon as possible be made acquainted with the nature and use of all his faculties, in order to attain that degree of perfection which is consistent with the structure of his organs; and that he is not originally designed for what we endeavour to make of him by artificial aid. Hence the greatest art in educating children, consists in the continual vigilance over all their actions, without ever giving them an opportunity of discovering that they are guided and watched. There are, however, instances in which the loud complaints of infants deserve our attention. Thus, if their cries be unusually violent and long continued, we may conclude that they are troubled with colic pains; if, on such occasions, they move their arms and hands repeatedly towards the face, without finding any account for the cause; and if they exhibit phenomena accompanying their attacks, or if these appearances be repeated at certain periods of the day, we ought not to alight them, but endeavour to discover their proximate or remote cause.

**CAMERA OBSCURA.**—J. S.—The simplest form of the Camera obscura consists of a darkened room, with a round hole in the window-shutter, through which the light enters. Pictures of opposite objects will then be seen, inverted, on the wall, or on a white screen placed so as to receive the rays. We give here a very simple form of camera, which our readers may easily construct. A B C D is a small rectangular box, closed on all sides, except the space E F G D which is covered with a piece of ground glass. In the other end is a moveable tube, T, with a proper lens; and in the body of the box is a

mirror E I H D, set to an angle of 45 degrees. Upon this mirror the image of the object, P Q falls, and is reflected upon the ground-glass plate.

**POLLING.**—D. F.—A rejected candidate lately was heard to remark that there is no kind of excitement equal to that which he experienced on the polling day. He felt as if all his ends were coming together, and he was going to be regularly rolled up. He saw no means of escape from being *come down upon* by the whole weight of adversity, and sweat in quarts, as the *rain* fell in buckets full, in the Island of Prospero. Such is an extract from our correspondent's letter, which does not incline to much sympathy with the unfortunate candidate, whose polling propensities, we trust, have been confined to politics, and not extended so far as *physics*. We are all aware that at elections extraneous often meet, as we see that the ends of the earth are about to be brought together by a new adventure in steam navigation. Calcutta and England will, it is expected in the course of a couple of years, be within thirty days of each other, and if enterprise progresses at such a rate, who knows but what the *Poles* may be yet united by the force of steam; but we hope in a more friendly way than they are here by

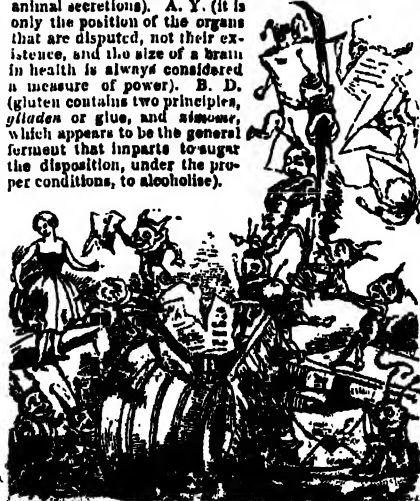

THE FORCE OF GRAVITATION.

**CONSUMPTION OF PAPER IN THE BANK OF ENGLAND.**—G. F.—In the Bank of England no fewer than sixty folio volumes or ledgers, are daily filled with writing in keeping the accounts: To produce these sixty volumes, the paper having been previously manufactured elsewhere, eight men, three steam presses, and two hand presses are continually going within the bank! In the copper-plate printing department, twenty-eight thousand bank-notes are thrown off daily; and so accurately is the number indicated by the machinery, that to purloin a single note without detection is an impossibility.

**M. THIERS.**—M. S.—No; M. Thiers is not the most eloquent of orators; he has not the dignity of M. Guizot, nor the imagination of M. de Lamartine, nor the passionate bursts of eloquence of M. Berryer, nor the periphrastic and caustic grace of M. de Montalembert, nor the enthusiasm, sometimes tinged with grandeur, of M. Ledru Rollin, but he has clearness, precision, method, logical reasoning, boldness, vigour, and unexpectedness,—all that seduces and fascinates; he does not make a speech, he holds a conversation, in which he is the only speaker. Never is there a moment's hesitation in what he says, never a forgetfulness, never the slightest disorder in his mind; each deduction comes at the proper moment, and each word expresses, to the most delicate shade of meaning, what he desires to convey. The more confused the subject the clearer he will make it. Figures of arithmetic are as familiar as facts to this marvellous intelligence.

**COMMUNICATIONS RECEIVED.**—J. W. (your position is certainly unenviable, and the only advice we can offer is, to persevere until you can get out of it). T. F. (wood pavement commenced in 1836). R. A. (there is a philosophical society in London, and also in many provincial towns). M. F. (curks are cut from large albes of the cork tree, a species of oak, which grows wild in the southern countries of Europe. The sap is stripped of its bark at about sixteen years old, but before stripping it off, the tree is not cut down, as in the case of the oak).

It is taken when the tree is growing, and the operation may be repeated every eight or nine years; the quantity of the bark consumed each time to improve as the age of the tree increases. T. B. (we cannot say anything about the box of the man who eat the first apple, but he who took the first show of tobacco must have had, in our opinion, a more than ordinary share of that commodity). D. A. (we will be happy to pursue the manuscript). S. A. (powdered nitre strewed on a fire that burns dull, will cause it to revive, and produces the effect which quicker than the bellows). V. V. (we find a piece of soft wash leather by far the best thing for wiping pens. There is always a degree of face in the smoothest cloth). H. M. (immense quantities of naphtha are made at Neath; it is getting into general use as a good and cheap light, and particularly in places where coal is dear). T. F. (the principal ingredient used in cleaning kid gloves is spirits of turpentine). G. F. R. (our belief is quite the reverse; we conceive that an improved course of husbandry would cause a great deal more employment to labourers, and the augmented produce would compensate for any deficiency of prices). G. L. (inadmissible). G. B. R. (in the London porter breweries, all the butts and other casks, if long kept, and not sweet when returned (as from the country), are steamed, after being washed with boiling water. After the steaming, in which the force of the steam is considerable, they are again washed with hot water). G. M. (roses will force well for years in succession; but every autumn they should be turned out of the pots, a good portion of the old soil shook away, and fresh supplied. Some few will probably require larger pots, of which we must judge by the condition of the plant and roots). L. E. (cut some brown paper into very small bits, so as to go with ease into the decanters; then cut a few pieces of soap very small, and put some water, milk warm, into the decanters upon the soap and paper; put in also a little pearlsh; by well working this about in the decanter, it will take off the rust of the wine, and give the glass a fine polish). T. D. (had principled men can never excite confidence when they are known; it is only so long as the motives upon which they act are concealed, that they can be successful). J. W. (Yes; and it certainly seems a great absurdity, although it shows how far the force of prejudice will carry a people. Another instance we have in the Hungarians, who have an irreconcilable aversion to the name of Queen, and consequently whenever a female succeeds to the throne of Hungary, she reigns with the title of King. Thus, in 1383, when Mary, the daughter of Charles Duras, came to the crown, she was styled King Mary). A. A. (St. Paul's within is 500 feet). G. T. (No; it is a curse rather than a blessing. No human invention has ever tended more to corrupt the morals and ruin the character, constitution, and circumstances of numbers of mankind than distillation. In all nations spirituous liquors have been considered as a proper subject of heavy taxation for the support of the state). G. L. (we have the authority of Scripture (see Exodus xxxi.) for its early introduction, and in profane history, the art of carving is first mentioned 772 years before Christ, and is referred to the Egyptians). J. A. (the diamond is the hardest of all known bodies). G. S. (the term honeymoon arose from the Teutonic custom of drinking diluted honey for thirty days, or a month's age, after a wedding). M. R. (the defect in your kitchen range probably arises from some fault in the flues, and we recommend you to apply to the person who set the range). C. H. (eight hours may be taken as the maximum of sleep that may be indulged in by a person in a good state of health). S. R. (five drops of sulphuric acid put into a full quart of bad water, will cause the noxious particles to fall to the bottom. The water should stand two hours; pour off about three parts for use and throw the rest away). G. A. (a glazier's diamond, or even a common fluid may be used to write on self or china). P. G. (there is no example in history of any purely agricultural or pastoral state attaining eminence or superiority over others). D. F. (perfumes for the use of the toilet are derived from the fragrant principle of flowers and other vegetable productions, united generally to enhance their fragrance with one or other animal secretions). A. Y. (it is only the position of the organs that are disputed, not their existence, and the size of a brain in health is always considered a measure of power). B. D. (gluten contains two principles, *gluten* and *glue*, and *amidon*, which appears to be the general ferment that imparts to sugar the disposition, under the proper conditions, to alcoholise).

## (Continued from page 672.)

Curran watched the hours, minutes, and seconds. It seemed to him that the smallest divisions of time were heaped on one another, to wait upon his going, and to break it. Two days had passed, the messenger brought no news, and the witness himself grew and mounted in his tears, not knowing what to fear of this moment and delay, suggested obstacles, and the possibility of the devotion of the woman charged with the message (without her abandoning his daughter), and endeavored still to keep alive the hope of his companion. But hope which was extinguished in his eyes.

It might be said that a veil of mourning had fallen suddenly over this place of misery, when, formerly, notwithstanding the absence of liberty, signs of joy and happiness appeared at intervals.

The plant advanced further and higher on her road to destruction. Charnay, in despair, attended on the last agonies of Florella. His noble cause for grief; he feared losing the object of his love, the treasure of his life, and having vainly humbled himself. What should he have bowed in vain? That he should have asked a favour, something himself to the earth, and that he should have been repulsed. As he struggled against him, Ludovico, formerly so frank, so communicative, now even avoided addressing a word to him. Silent and morose, he went up, he passed, not touching his pipe, almost without looking at him, and seemed to enjoy his misfortune. It was, that from the first, Ludovico, on hearing the speech of the commandant, foresaw the instant when he should have to choose between his inclination and duty. He knew that duty must be first, and he made himself more and more ready, to give himself up. His humanity would certainly be repulsed, and beforehand he had made up his mind.

It is these forces whose education has not suffered usually and the enormous impulse of this work when it is necessary to give a final impulse, rather than seek to take their numbers under great numbers. It is not to wonder that England and even above the waters of heart it

The intervention of Josephine had not thus been as powerful as she so first promised. No. After her sweet pleading in favour of the plant and the prisoners, when she put the hankkerchief containing the petition into the hands of Napoleon, he recalled the singular intention, so offensive to his pride, which the empress had shown that very morning, during the warlike ceremonies of Marengo, and the signature of Charney increased the vexatious impression he received from it.

Josephine would have raised her voice to exclaim against the title of Jacobin, so lightly applied to the noble count; but at that moment a chamberlain came to announce to the emperor, that the generals as well as the ambassadors and deputies of the Italian states waited in the reception hall. He hastened to join them, and, inspired much more by their presence than by the contents of the petition, he made the prisoner's name an occasion for a vigorous attack upon idealists and philosophers, returning again upon the Jacobins, whom he should know well, he said, how to keep in order and bring to submission! And he raised his voice to a tone of determination and menace, not that he was as warm as he pretended to be, but skillful in profiting by circumstances, he wished that his words might be heard and repeated, above all by the Prussian ambassador, who was present. It was this act of divorce from the Revolution which he there proclaimed.

"Well, sire," said she, "why all this noise? This has nothing to do with Jacobins or Revolutionists, but only with a poor flower that has never conspired against any one."

"Do they think to dupe me with such idle tales?" cried he. "This Chien-ai is a dangerous man, but not a fool. The flower is a pretence. The object is gaining the stones! It is an escape he is meditating, doubtless. You must watch over it, Menqu. And how has this man been able to write without the demand passing through the hands of the commandant? Is this the way in which the contrivance of the state prisons is carried out?"

"Be not impatient further in this affair, madame!" said the master. And Josephine, repulsed and discouraged, was silent, and cast down her eyes beneath his angry glance.

...saw, said by the experts, did not spare reproaches on the captain-  
...of the district of Vinnitsya, and he in his turn, hastened to  
...with severity the prisoners to whom he owed these harsh reprimands.  
...I truly suffered from his slanders, and, with her heart full of hope, had  
...the officers of the garrison to require an order to quit the terri-

**THE UNIVERSITY OF CHICAGO**

[illegible][illegible]

As they sat on the porch with their backs to the door, suddenly, he came in with a gun in his hand. He pointed the muzzle and threw work in his hands. He came in the yard in a sort of fury. When he saw the first of the children there, he ran from the porch and into the yard and threw them in the water. It seemed to him that he was chased into the water, and that he also had a gun.

During this time Charney remained motionless as  
he lay fixed on his place, now entirely unattended, until he  
died.

The day had been cool; the sky cloudy; the stars had appeared in the evening, and from the midst of the darkness, a woman appeared. It might be said Flodrig was gathering up his Flodrigs!—his Flodrigs!—his real wife, and his wife's pivot on which his life turned,—the sole thing which he thought he will be no more! And he, poor devil! whose heart had suspended, he must then be arrested in his flight, of true science! How shall he now find consolation? how all the void to his heart? Flodrig's life seems to be again a desert. No more projects, no more wishes, no more dreams; no more observations to record, nothing more to love, confined will his prison be now!—how miserable the life he will! It will be now only a tumb,—the tumb of Flodrig! What! the gold, that sibylline bough, which has driven him, the sole thing he was bent—it will be there no longer to defend him against incredulous, the disenchanted philosopher will be obliged to an ancient life, with all his bitter thoughts, less to face with

"No! rather die, than return to that cold night from whence I

At that moment, Pham saw something like a shadow appear in the lattice window. It was the old man.

"Ah," said he to himself, "I have robbed him of his only treasure. I have deprived him of his daughter. He is surely come to seek for damages to curse me doubly. Has he not a right to do so, and what is my answer by the side of his despair?"

When he looked towards that side, he perceived him grasping at earth with his weak hands, trembling with emotion. Charles turned and cast his eyes to seek pardon from the heart of his son, who, before he could have time to preserve ; he feared to see on that noble countenance the mark and evidence of reproach or disdain ; and when their eyes met, at the tender look, passionate look, that the poor father turned towards him, forgetful of his own sorrows that he might partake those of his unfortunate companion, he was penetrated to his inmost heart, and two tears, the only ones he had ever shed, started to his eyes.

These tears were sweet to him, but the lingering remains of his pain made him dry them quickly. He feared being suspected of unmanly weakness by those men who stood by.

Of all the witnesses of this scene, the two officers alone, both of whom were spectators, seemed to comprehend nothing of the drama in which they were playing a part. They examined by turns, the prisoner, the chief of the commandant, the jailer, astonished at the strong and violent impression imparted on all their countenances, and asked each other in a low voice some important secret must not exist under that mask, so well guarded.

At length the fatal work was finished. Excited by the captain, he had endeavoured to remove the supports of the rustic bench; but they were too firm.

"A hammer (take a hammer!)" cried the peasant.  
Lyudoviko took one; it fell out of his hands.  
"Death! make an end of it!" roared the other.

At the first blow the bomb exploded at the front it was thrown forward and exploded over the plane, it was regained standing in front of the wreck. The count was nine and ten, the instructor said that the plane was destroyed.

"But I don't why kill is! It is going to die! .. .. ."  
 once more descending to the character of a suppliant.  
 The captain looked at him, smiled ironically, and .. .. .

Full resource library, paginated, I will have it done. I will

...the hands to rock it down the road.

[illegible]

large, rough, hands of the jailor. Its corolla, almost hidden amongst some leaves, from the midst of which it appeared with its bright tints, was opening, and turned towards Charney. He fancied he smelt its perfume, and, his eyes wet with tears, he saw it dazzle, increase, disappear, and again show itself.

The man and the plant were exchanging a last look of adieu.

If, at that moment, when so many passions and interests were agitated around a weak vegetable, strangers had suddenly made their appearance in that prison-court, over which a deep and sombre hue was cast by heaven, the only witness of the scene, would they not, on beholding the aspect of those officers of justice, with their tri-coloured scarfs and that military chief, dictating his pitiless orders, think they were present at some secret and bloody execution, where Ludovico played the part of executioner, and Charney that of the criminal, to whom the sentence had just been read? Yes, is it not so? Well! these men, they will come! they come! they are here!

The one was an aide-de-camp of General Menou; the other, a page of the empress. The dust that covered them told sufficiently that they had made good haste to arrive.

It was in time.

At the noise that announced their entrance, Ludovico let go Picciola, raised his head, and he and Charney looked at each other: both were pale!

The aide-de-camp gave to the captain an order from the governor of Turin; the captain considered it, appeared seized with a feeling of hesitation, made two turns in the yard shaking his cane, compared the message he had just received with that which came the evening before; then at last, after having several times raised and lowered his eyebrows, to show his great astonishment, affecting a half-contemptuous air, he drew near Charney, and graciously laid in his hands the letter of the general.

The prisoner, trembling with emotion, read aloud the following lines:—

"His majesty the emperor and king has just transmitted me an order. M. le Commandant, to let you know that he at length consents to the demand of M. de Charney, relative to the plant that grows amongst the paving-stones of his prison. Those which injure it shall be taken up. I charge you to see to the execution of the present order, and to communicate on this subject with M. de Charney."

"Long live the emperor!" cried Ludovico.

"Long live the emperor!" murmured another voice, that seemed to come from the wall.

During the reading, the captain leant his hip on his cane, to give himself support, the two men in scarfs, still unable to find the key to all this, were amazed, and sought from each other by what means they should connect these events with the supposed conspiracy; the aide-de-camp and the page inquired why they were obliged to come so quickly. At length, the latter, addressing himself to Charney, said,—

"There is a postscript from the empress."

And Charney read at the end:

"I recommend M. de Charney to the kind attention of Captain Morand. I shall be particularly grateful to him for what he may do to soften the situation of the prisoner."

"Signed,

"JOSEPHINE."

"Long live the empress!" cried Ludovico.

Charney kissed the signature, and kept the message some moments before his eyes.

## CHAPTER XVII.

THE commandant of Fénestrella had resumed all his courtesy towards the protégé of her majesty the empress and queen. Not only Charney was not sent to occupy the cell of the bastion, but he was allowed to reconstruct his defences and shelters, of which the languishing, half-transplanted Picciola more than ever required the succour. The fury of Captain Morand towards the man and the plant were so entirely allayed, that every morning he desired Ludovico to inquire from him if the prisoner wished for anything, and how Picciola was.

Taking advantage of his good disposition, Charney obtained from his liberality, pens, ink, and paper, that he might again record from recollection his studies and observations on vegetable physiology; for as the letter of the governor of Turin did not annul the right of inquest and seizure, the two judicial officers had carried away his linen archives, and, after a deep examination, declaring they could not, with all their efforts, find the key to this correspondence, they had sent it all to Paris to the minister of police, to be commented upon, examined, and deciphered by the most skilful and most expert among them.

Charney also suffered from another privation, the more important because it could not be so easily supplied. The commandant, as a punishment to Gerhardi for the reproaches addressed to him by General Menou on his want of watchfulness, had banished him to another part of the fortress, where he could not communicate with any one. This separation, which placed the old man in complete solitude, fell on the heart of Charney with the weight of remorse, and precluded the captain's favours from having their full effect.

He passed great part of the day with his eyes fixed on the grating and the little closed window. He imagined he still saw the good old man at the moment, when, with difficulty passing his arm through the lower bars, he had vainly tried to let him touch a friendly hand; he saw his supplication to the emperor graze up the wall, and mount to that grating, to go from him to

Gerhardi, from Gerhardi to Teresa, from Teresa to the empress; and behind those bars shone and smiled again that look of pity and of pardon, which had come so recently to sustain him in the midst of his agony, and he heard the cry of joy coming from that crushed heart when the pardon for Picciola had arrived! That pardon, it is to him, it is to them, that he owes it; and for that mad attempt that could only profit Charney, they alone have been punished—punished cruelly! Poor father! Poor, poor girl!

She also often appeared to him at the same place where he had seen her appear for a moment, on his awaking from that painful dream which predicted the death of his plant. Then, in the confusion of his ideas, he seemed to discover in her all the features of the Picciola of his dreams; and it was thus he thought he saw her now.

One day, as the prisoner was dwelling on these sweet visions, something moved behind the dim, dusty, casement; the little window was opened; a woman appeared at the grating. She had a dirty, brown skin, an enormous goitre, and cunning, avaricious eyes. It was Ludovico's wife.

From this time Charney saw nothing more there.

Freed from its confinement, surrounded by good earth, with a wide space around it, Picciola recovered from its disasters, again flourished, and triumphed over all its misfortunes. It had lost its flowers, however, except the little one which had opened so lately at the foot of the stalk.

In the ample space, in the seed which was swelling and ripening in the calyx, Charney foresaw new and sublime discoveries, and even thought of the *Dies Seminalis*, of the feast of seed-time! For now there is no want of earth, it is more than sufficient for Picciola; perhaps she may become a mother, and see her daughters grow under her shade.

While waiting this great day, he had an anxious wish to know the real name of his companion, with whom he had passed such delightful moments.

"What! shall I never, then, be able to give Picciola, the poor foundling, that name which science and custom have bestowed on her beforehand, and which she bears in company with her sisters of the plains or mountains?"

The commandant had paid him a visit; Charney mentioned to him his wish to possess a work on botany. Without refusing his request, as he did not wish to incur any responsibility, he first applied for authority from the governor-general of Piémont; and Menou not only hastened to give it to him freely, but also sent him, from the library at Turin, an enormous collection of volumes to assist the prisoner in his researches:

"Hoping," he wrote, "that her majesty the empress and queen, well versed herself in this branch of knowledge, as in many others, would not be sorry to know the name of that flower, in which she was so greatly interested."

At the sight of this mass of science, which was brought to him by Ludovico, who bent under its weight, Charney smiled.

"Is such great artillery necessary," said he, "to force a flower to tell me its name?"

It was, however, with a sentiment of pleasure that he laid his hand once more upon books. He turned them over with that thrill of delight which he had formerly felt, when knowledge was to him a mysterious and desirable thing. How long it was since his eyes had wandered over printed characters! Already he was forming projects for sweet, holy studies.

"If ever I leave this place," said he, "I shall be a botanist! There I shall find none of those scholastic, pedantic, controversies which mislead rather than enlighten. Nature must show herself the same to all her disciples; always true though changing, always beautiful though madorned!"

And he made himself acquainted with these newly-arrived books, their names and titles also. There were the "Species Plantarum" of Linnæus, the "Institutiones Rei Herbariæ" of Tournefort, the "Theatrum Botanicum" of Bauhin; then, the "Phytographia," the "Dendrologia" the "Agrostographia" of Plunket, Aldrovando, and Scheuchzer; and others in French or Italian.

Though a little alarmed at this array, so entirely scientific, Charney was not discouraged; and, as a preparation for more serious researches, he first opened the thinnest volume, that he might seek at random in the tables for the most pleasing names a plant could bear.

He wished he could make his choice in that floral calendar, amongst *Alcea*, *Alisma*, *Andryala*, *Biometra*, *Celosia*, *Coronilla*, *Euphrasia*, *Helvella*, *Passiflora*, *Primula*, *Santolina*, or any other name, pleasing to the lip, harmonious to the ear!

The fear suddenly seized him that his plant might bear, with a ridiculous and unpleasing name, a masculine or neuter termination, which would be entirely at variance with all his ideas respecting his friend and companion.

What would become of the young girl of his dreams, if he must apply to her a designation such as *Rumex obtusifolius*, or *Satyrion Hyoscyamus*, or *Gossypium*, or *Cynoglossum*, or *Cucubalus*, or *Cenchrus*, *Buxus*! or even some French name more barbarous still, such as *Arrête-bœuf* (rest-harrow), *Attrape-mouche* (fly-catcher), *Herbe à paupere homme* (hedge-hyssop), *Bes-de-grue* (crane's bill), *Dent-de-chien* (dog's tooth), *Langue-de-cerf* (hart's tongue), or *Pleur-de-coucou* (cuckoo flower)! Would it not be sufficient to disenchant him for ever? No, he will not risk the trial!

Notwithstanding, he resumed each volume by turns, opened it, turned over the leaves again; was in raptures at the innumerable wonders of Nature; was angry at the systematising spirit of men, who of this study, which he had hitherto found so attractive, had made a science the rudest, the most technical, the most confused of all sciences.

During a whole week he endeavoured, by examining his plant, to find out its name; he could not succeed. In this chaos of so many strange words, thrown from one system to another, bewildered in the midst of this unwieldy and immense nomenclature,—a true net of Vulcan, which covers Botany with a veil as if to hide her charms, and weighs on her almost to suffocation,

—in vain he consulted all his authors, one after another; descending from class to order, from order to family, from family to genera, from genera to species, he continually lost the traces, and always ended by mathematising his faithless guides, who were often at variance with each other, either on the general character, or even on the use and denomination of each of the parts of a plant.

In the midst of these investigations, which he renewed a thousand times, the little flower, the only flower—examined petal by petal, explored even into its calyx—suddenly broke off in the hand of the examiner—the dissector, and fell; carrying away with it the projects of study on the fruit, the hopes of seed, the maternity of Picciola!

Charney was in consternation; and, after a long silence, apostrophising, with an agitated voice and an angry look, the books which he still held open upon his knees—

"She is named Picciola!" exclaimed he, "nothing but Picciola, the plant of the prisoner, his consoler, his friend! What does she want with another name? and why did I wish to know it? Fool, what is there, then no certain remedy in this thirst to know, and can it not be cured?"

Then, with an impulse of anger, he seized the books he had before him, one after the other, and dashed them on the ground. A little paper came from between the leaves of one of them, and fell in the courtyard. Charney immediately picked it up. It contained some words recently written, and in a female hand. He read the following:—

"Hope, and tell your neighbour to hope, for neither he nor you have I forgotten."

## CHAPTER XVIII.

CHARNEY read and read this billet twenty times over. Its sense could not be doubtful, for amongst women one alone had been for him all heart and all devotion; and that woman he had scarcely seen, thought he; he was ignorant of the sound of her voice, and if she had suddenly presented herself before him, he should certainly scarcely recognize her. But by what means, eluding the vigilance of his Arguses, had she been able to send him these lines? "Tell your neighbour to hope." Poor girl, who dared not name her father! Poor father! to whom he cannot even show the remembrance of his daughter!

When thinking of that excellent old man, on whom he had brought such bitter misfortune, and whose sorrow he was prevented from alleviating, Charney felt overwhelmed with regret; and in the midst of sleepless nights, the idea of Gerhardi sadly pursued him.

During one of these nights, an unaccustomed noise was heard above him, in the chamber of the upper story, hitherto empty; and his mind was filled with various conjectures, one more absurd than the other.

In the morning Ludovico entered his room with an air of business, and though he tried to compose his features to discretion, his sparkling animated eyes announced great news.

"What is the matter?" said Charney, "and what has been passing over my head to-night?"

"Oh! nothing, signor count, nothing; except that yesterday an addition of prisoners arrived here, and the vacant lodgings will be occupied.—Yes," pursued he, with a tone of affected commiseration, "you must share the enjoyment of your court with a companion in captivity; but be easy, we only receive good men here. When I say good men," resumed he, immediately; "I mean there are no thieves amongst them. But look, here is the newcomer, who is going to pay you his visit of installation."

At this unexpected announcement, Charney rose, much surprised, not knowing if he should rejoice or be sorry at the change, when suddenly he saw Gerhardi enter his chamber.

Both looked at each other as if they still doubted the reality of the meeting; and at the same instant, their hands, united and pressed together, testified how warm was the pleasure they experienced in seeing each other again.

"Come, come," said Ludovico, laughing, "I see that the acquaintance will be very soon made;" and he went out, leaving the two in an ecstasy, gazing on each other.

After a moment's silence,—

"What has reunited us, then?" said Charney.

"My daughter! I am sure of it, I cannot doubt it; and how could I be deceived? Does not all the happiness I experience in life come from her?"

Charney cast down his eyes with an air of embarrassment, and his hands strongly pressed those of the old man. At length, taking from his box a little paper, he presented it to him:

"Do you know this writing?"

"It is hers!" cried Gerhardi; "it is my daughter's! my Teresa's! No, she has not forgotten us; and her promise was not long in being realised, since we are reunited. But how did this billet reach you?"

Charney told him, and then unthinkingly made a gesture as if to resume possession of the note; but seeing Gerhardi holding it in his hands, that were trembling with emotion—reading it slowly word by word, letter by letter, kissing it a thousand times, he felt that it was no longer his, and in his inmost heart he experienced a vivid sentiment of regret, which he knew not how to explain to himself.

After the first few moments, when they had exhausted all their conjectures with respect to Teresa, her fate, and her present place of residence, Gerhardi, casting his eyes with a feeling of natural curiosity over the chamber of his host, stopped before each of the inscriptions on the wall. Two amongst them

had been modified already: he comprehended the influence of the plant and understood directly the important part it had played in respect to the prisoner. In his turn he took the charcoal. One of the sentences contained these words:

*Men are placed upon this world as, later, they will be placed beneath it; one near another, but without links to connect them. To the body, this world is a populous arena, where men jostle against each other on every side; to the heart—it is a desert!*

He added:

*If we have no friends!*

Then turning affectionately towards his companion, he opened his arms to him.

Still agitated with the thoughts that had just filled his mind, his heart palpitating, his eyes moist, Charney threw himself into them, and both sealed that holy bond of friendship by a long and warm embrace.

The next day they breakfasted together, tête-à-tête, in the chamber on the first floor, one sitting on the bed, the other on the chair, having between them the little sculptured table, then holding, besides the double prison ration, a beautiful trout from the lake, craw-fish from the Cenise, a bottle of excellent wine of Mondovì, and a tempting morsel of that delicious cheese from Millesimo, known throughout Italy by the name of *Rubiola*. This was a feast for the captives! But Gerhardi did not want money, nor the captive's complaisance, since the new orders had been received.

An unreserved and affectionate conversation was carried on between the two friends. Never had Charney so completely or so long enjoyed the pleasures of the table; never had a repast appeared so delicious to him. Certain it is, that if exercise and the waters of the Eurotas could season the black broth of Sparta, the presence and conversation of a friend add much more to the flavour of the finest meats.

Confidence soon followed in its turn. They loved each other so well already, though they were scarcely acquainted. Without any incitement, without hesitation, without preamble, only as if he were fulfilling the contract of friendship entered into the preceding day, Charney related the presumptuous labours and the vain follies of his youth. The old man then commenced in his turn, and in a similar manner confessed the early errors of his life.

Gerhardi was born in Turin, where his father possessed a vast manufactory of arms. Piémont has always been a passage for the merchandise and ideas of France to Italy, as well as for the merchandise and ideas of Italy to France. A portion of both always remains on the way. The wind of France had blown on his father—he was a philosopher, a reformer; the breath of Italy had rested on his mother—she was devout to excess. As to him, poor child, loving, respecting, listening to both with the same confidence, he must necessarily participate in both their natures, and so he did. A republican devotee, he dreamt of a reign of religion and liberty, a very excellent alliance certainly; but he had his own peculiar ideas of it, and he was only twenty. We are still young at that age.

He was not long in pledging himself to both parties.

At that time the Piémontese nobility enjoyed certain privileges, that were very humiliating to the other classes of society. Its members alone, for example, could appear in the boxes of the theatre, and could it be believed, dance at a public ball! for the dance was then considered an aristocratic exercise, and the citizens could only attend as spectators.

At the head of a band of young men of the city, Giacomo Gerhardi one day publicly attacked this singular privilege. He was bold enough to establish a plebeian in the midst of the patrician quadrilles. The noble dancers were indignant, the plebeians, dancers and spectators, uttered a terrible cry, claiming the dance for all! To this seditious noise other cries of liberty succeeded, and in the midst of the tumult which followed, after twenty challenges given and refused, not from cowardice, but from pride, the impudent Giacomo, carried away by the warmth of his age and of his feelings, struck the proudest and highest titled of his adversaries a blow on his face.

The insult was great; the powerful family of San Marsano swore to be avenged. The knights of St. Maurice, those even of the Annunciation—all the nobility of the country in short, who when in danger form but one body,—now seemed to have but one face, so much did each feel himself offended on his own account.

By order of his father, Giacomo took refuge with one of his relations, the curé of a little village in the principality of Masserano, in the environs of Bielle. But, notwithstanding his flight, he was condemned for contumacy to five years' exile from Turin. The foolish importance given to this affair, which was called "the dancing conspiracy," raised Giacomo in the eyes of his countrymen. The one side regarded him as the avenger of the people; the other, as one of those dangerous innovators who still dreamed of the independence of Piémont; and whilst at court this giver of blows was looked upon as one of the most active members of the democratic party, the poor little conspirator was quietly serving mass in the village, and never left the church, where he had just received the holy communion.

This stormy opening of a life which might have flowed on so calmly long influenced the fate of Giacomo Gerhardi. The old man paid dearly for the follies of his youth: for when he was arrested for the pretended attempt on the First Consul, his accusers did fail to bring against him the sentence formerly passed upon him as a disturber and mad republican.

From the time of his leaving Turin, and during his exile, Giacomo allowed that love of equality which his father had kindled in his mind to be entirely extinguished, while, on the other hand, the religious sentiments he derived from his mother were developed more and more.

(To be continued.)

## CAROLINE AND CATHARINA.

(Continued from page 682.)

"You think," said Clayton, "as I do, that Thorpe has taken advantage of Vernon's absence to change the purport of the note left by Talbot, and sign the forged name to the other?"

"Precisely," said Carlin. "And the only thing which is unaccountable is his carelessness in not destroying this paper."

"It is a fatality which always attends the commission of crime," said Clayton; "and through this mistake of his, like every evil-doer, he will be exposed and punished."

"If we can prove it," suggested Carlin. "It is one thing to feel assured of a fact, and another thing to establish it in a court of justice. Men have a notion that it should take more evidence to prove a fact there than in any other place; and here we have not even the usual out-of-doors amount. This, however, we must remedy by ingenuity and close watching. It is certain, of course, that the charge against our friend here is false. Now no untrue story ever was, or ever will be, consistent—God has so made the world, that no fact, which is really a fact, can be made the foundation of a lie—error cannot be built upon truth, without betraying its falsehood. Well, of course there will be real facts proven; facts, unlike many established in courts of justice, which are true, and, if we watch closely, we cannot avoid detecting the discrepancy between them and the case attempted to be made out—for, I repeat, a true fact and a false story cannot by human ingenuity be made consistent. This, so far as I see, and unless we make some further discovery, is our only chance for an acquittal. This many would suppose to mean a hopeless case; but you and I know, Clayton, that it is not so. More than half the great legal reputations of the country have been made by such vigilance alone; and from this you can form some estimate of the number of causes, which are commenced without hope, and triumphantly closed. This, indeed, is the great benefit of having a class of lawyers—men whose intellects are practised in ferreting out falsehood and discovering truth—whose minds are unavoidably so trained that, whatever evil they may now and then do in particular cases, in the long run, the cause of truth must be benefited by their training. Ignorant men—and only ignorant men—abuse the lawyers as a class; but in proportion to their ignorance are they benefited by them and preserved from imposition. For there is no institution, not even that of the gibbet, which is a greater terror to mal factors than the institution of the bar."

"A very flattering comparison, to say the least of it," said Clayton with a smile, "but I believe a true one, too. At all events, I hope your anticipation may prove correct in this case, if in no other."

"But gentlemen," said Vernon, looking up from the floor where he had been gazing throughout Carlin's lecture on lawyers, "it seems to me that you overlook a very important circumstance. When you suppose Thorpe to have done this act in my absence; for Hugh Manning was in the house when I left it, and had not gone when I returned—so that if, according to your supposition, the forgery was committed in that interval, as indeed it must have been, he must have been present; and yet he never said a word to me of the matter, during all the time since elapsed."

"Hugh is dead, I believe," said Carlin.

"Yes," answered Vernon, "he was killed near Monterey."

"It can do us no good, then," said the other, "to mention the fact of his having been there; it will only weaken in the minds of the jury the probability of Thorpe's having committed the act."

"Besides," said Clayton, "Hugh might have been out for a few moments, or he might have even seen Thorpe there, without suspecting anything wrong; and this may account for his never mentioning the circumstance; for I believe he never heard that any such charge as this was made."

"What was it you said," Carlin suddenly asked, "about Thorpe's procuring an attack to be made upon Hugh in Mexico?"

"I see you are coming to the same conclusion which I tried to impress upon Vernon," said Clayton; and he then briefly related the adventure, and the reason he had for believing Thorpe to have been the mover of the attack.

"It is as clear as sunlight," said Carlin. "You may rest assured that we have the end of the string, whether we ever get any more or not. Hugh has been rash enough to let Thorpe suspect the fact that he knew of his villany, and it has cost him his life."

"But," said Allen, "I do not see how he could have made the discovery, except at the moment of its commission; and if he saw it done, how could Thorpe be ignorant of it?"

"We may be very certain that a thing exists," said Carlin, "without being able to tell exactly how; and after all we must not lay too much stress upon our conjectures, probable as they are, for we are not able to prove them, and have arrived at them only through a course of reasoning, which it will be very difficult, with the restrictions of the law of evidence, to make any jury understand. The utmost we can expect is, to so array the evidence that they will doubt which of the two, Thorpe or Vernon, committed the act; and in that case we may possibly get an instruction from the Court, that they cannot convict, until the doubt is cleared up."

"But," said Clayton, "the object of our client is to show that there can be not even be a doubt of his innocence."

"True, true; but we may as well be candid, and tell him now, that no such good fortune is to be expected. If Manning were alive and here, we could speak somewhat differently; but I understand you to say that there is not even enough probability of his re-appearance upon which to found an affidavit for a continuance."

"Unfortunately, there can be no doubt of his death," said Vernon; and a

continuance is not what I want, unless I were certain of being able to establish my innocence at the end of the time."

"We have nearly two months, at any rate," said Carlin, "in which to prepare our defence. Something may turn up in the mean time, and if nothing should, we must fall back upon the hope I suggested a few minutes ago—trust to Providence and our own watchfulness. The only point of any strength we now have, is the testimony of Miss Talbot."

"I could wish not to call her if we can do without it," said Allen.

"Of course," said Clayton; "but we cannot do without it. We will, then, rigidly cross-examine the witnesses for the prosecution; and if we elicit nothing, I fear the case is a hopeless one. The lawyer's motto, however, is 'never despair,' and even at the last moment accident may enable us to come off with flying colours."

"Your conclusion, then," said Allen, "is simply to hope *contra spem*?"

"Exactly," replied the lawyer. "And now for another matter. Have you surrendered yourself yet?"

"Not yet," answered Allen, "for I did not know that I would be able to procure bail, and I wished to have a day's liberty to arrange my affairs."

"Well," said Carlin, "you will have that time, at all events; and when you are arrested, Mr. Clayton and I will see that you have sureties. We can do nothing more now," he continued, rising, "and to-morrow Clayton and I will take the matter over again."

He shook Allen's hand cordially again, bade him not despair, and took his leave, walking quietly down the street, and now and then smiling pleasantly at his own ingenuity in unravelling a difficult case—totally forgetting that in every conclusion to which he had come, he had been anticipated by his younger colleague. He was, after all, more of an advocate than counsellor, and it was in his subtle and forcible reasoning before a jury that his strength principally lay. No one could penetrate more ingeniously the disguises which iniquity wears, and no one could tear off the villain's mask with more effective oratory or more fervent conviction, while in his element before the panel. But in consultation, as the reader may have observed, he was apt to be diffuse and collateral—and here, as in all other places, his tendency to lecture was sometimes too strong for him. He was a good *talker* as well as an eloquent *speaker*—qualities seldom combined—and his conversation was often rich in thought and beautiful in imagery. But when his mind was not bent by the necessity of the moment to rigid argument, the very qualities, easy and fluent diction and a vivid imagination, which made him a fine conversationalist, suggested immaterial points; detracted from his value as a counsellor, by leading him to sink the lawyer in the pleasant companion. He had been retained at the suggestion of Clayton, for his powers as an advocate—and, to say the truth, not for any advantage he was expected to bring in the way of preparation. Clayton, though a much younger man, was immeasurably his superior in all that relates to the disposition for the fight; cool, deliberate, acute, and profound, he would long since have taken a far higher rank at the bar, but for two obstacles to his advancement—ill health, and a constitutional indolence, which led him to undervalue the results to be attained, in comparison with the effort necessary to secure them. He was also an able speaker, though in this his more showy colleague held an admitted pre-eminence. With either of them singly, the force would not have been complete; but with both of them every arm necessary to success was fully represented. For the great law which makes the division of labour in all things a necessity, obtains equally in the conflicts of mind. It is only when men mistake their vocation, and intermeddle with departments for which they are not fitted, that this great law of God's providence is defeated.

Clayton was, by nature, not more sanguine than his colleague, but his very cautiousness in this case made him hope better things than Carlin had dared to anticipate; and when he shook Vernon by the hand, and was left alone, it was with far better spirits, and with a far more sanguine expectation of success, than he had felt since the disappearance of Hugh Manning. He had, as every true lawyer has, some of Carlin's confidence in the efficacy of watching the course of events; but it was with far more sincerity that he bade Vernon never despair when he left him.

Allen had walked but a few steps from the office door, when he was suddenly stopped by Morris Thorpe, who cordially extended his hand. This Vernon did not deem it prudent to refuse; and he therefore met him, as nearly as he could, as if he had no reason to suspect him.

"You must have travelled slowly," said Thorpe. "I left Buena Vista more than a week after you, and yet arrived here on the same day."

"I had nothing to anticipate at home, so pleasant as to hasten me," said Allen.

"True," Thorpe replied. "That is an unfortunate affair, and I am almost as unfortunate in it as you are."

"How so?" asked Allen, with a start which did not escape Thorpe.

"I have been requested to accept a retainer for the prosecution," he said, "and by a man, too, whom it would embarrass me to refuse—Colonel Talbot. The State's Attorney has notified him that he will need assistance, and Talbot came accordingly to me."

"I cannot justly object to that," said Vernon. "You are a lawyer, and it is your duty to give your efforts to those who call for them."

"I am glad to find that you take that view," said Thorpe, with an air of relief; "for, otherwise I would have refused at all hazards. But, on reflection, I think it better for you that you should be assured of a fair trial, by having a friend on the other side. I assure you that you shall have nothing to complain of in my course; and that no one will more sincerely rejoice should you be able to establish your innocence. For my part, I have never doubted it."

"None who know me ever have doubted it, I believe," said Allen; "but whether I shall be able to make it appear, is another question."

"I sincerely hope you may," said Thorpe, with every appearance of candour.

Vernon expressed his thanks for the kind wish, and after several repetitions of the same substance, they parted—Vernon continuing down the street, and Thorpe resuming his walk with a sneering smile.

"Another question, indeed!" he muttered in his usual fashion, half-thinking, half-speaking. A few steps brought him to the court-house—one of those abominable, barn-looking piles of brick and mortar, which disgrace so many of our cities—and entering, he sought a door, over which was nailed a dingy tin sign, with the words, "SHERIFF'S OFFICE," in faded yellow paint.

## CHAPTER XXXVII.

"Within the oyster's shell uncouth,  
The purest pearl may hide—  
Trust me, you'll find a heart of truth,  
Within that rough outside."—OSGODD.

THE room entered by Thorpe was of moderate dimensions, and very scantily furnished. A large stove stood in the middle of the floor, and under it seemed to have been swept the accumulated dirt of the whole preceding winter. It was cold, now, the warm weather rendering fire unnecessary; but a little tin pan, very red inside, and very black outside, stood on top half full of very dirty water. A long, rickety table, and two smaller ones, with, perhaps, a dozen crazy chairs, half of them without backs, well rounded at the corners, and notched on the sides by penknives, comprised the furniture of the office. Cobwebs, bending towards the floors with loads of dust, ornamented the ceiling and corners, and the windows looked as if divorced, *à vinculo*, from everything moist.

At one of the smaller tables, whose drab fustian cover was well dabbled with ink, and split into ribbons by the aforesaid penknives, sat a short, heavy-made man, with fierce black whiskers, and a very dark complexion. With a pair of grappling-iron hands, he was arranging a large number of summonses, subpoenas, cost-bills, and executions, spelling over their titles, and laying each in its place. He turned as Thorpe entered, and springing up grasped his extended hand, with a gripe like a vice.

"Glad to see you back, sir—glad to see you back!" he exclaimed, in a harsh, grating voice, which always reminded Thorpe of manacles. "When did you return?"

"Only yesterday, Gillam," said the colonel, in his softest accents; "I hope you have been well."

"Never was better in my life, sir," answered the sheriff. "How does campaigning agree with you?"

"Admirably," the colonel replied; "so much so that I was sorry to be recalled."

"Wouldn't have come, sir," said the sheriff. "What induced you to give it up—fought battles enough?"

"Not that exactly," said Thorpe, "but my business was suffering from my absence. And that reminds me—have you not a warrant in your hands for the apprehension of one Allen Vernon?"

"Yes," said Gillam, "for forgery—has he returned, too?"

"I met him in the street but a few moments ago; and it occurred to me, that, perhaps, you were not aware of his return."

"I was not, sir; glad you told me; I'll have him forthwith," said the officer. "But what has induced him to come back?"

"I apprehend that he did not know the forgery had been detected, and perhaps thought of lifting the note," said the colonel.

"Had case," mused the sheriff, "very bad—I'm sorry for him, and for his old fool of a father too. But it can't be helped now. Better luck, or better sense, next time."

"It is a hard case," said Thorpe; "but your duty and mine have brought us in contact with very many hard cases. In this instance we must obey it, as usual. I am retained for the prosecution, and I advise you to arrest him as soon as possible."

"I'll do that, of course," said the officer duly; and having accomplished the object for which he came, Thorpe took his leave.

"Humph," said Gillam, as he closed the door. "What the devil could induce him to come home, expressly to prosecute this young Vernon? I wonder? A friend of his, too, they say. I wonder if there can be any truth in this story about old Talbot's daughter interesting herself for Vernon; and I wonder whether the colonel wouldn't like to convict a rival like him! Whew!" And the officer whistled a deep long note of peculiar meaning. He then shook his head several times doubtfully.

"Some foul play there, certainly," he said. "However, the sly rascal was right about my duty—I must hunt him up and arrest him."

He hastily bundled up his papers, and putting them into a large pocket-book, left the office.

In the meantime Allen held on his way down the street, for several squares, until coming opposite to a house with the name of "Uriah Manning" above the door, he crossed over and entered. The front room—the same in which he had first met Hugh—was no longer used as a shop. Neither the noise of hammer nor of saw broke the stillness of the place. A few boards were piled against one of the walls, and—mute witness of Uriah's thrift—a heap of scraps and shavings occupied one corner. A chest, probably containing Hugh's tools, sat at the lower end, near the open door of the counting-room; and within this could be discerned the thrifty money-lender, poring over a paper looking marvellously like a mortgage deed. The same old-fashioned strong box stood in its

ancient place, and the same solitary chair, now becoming rickety with age, bore the burden of its owner's body. The old man did not look up, and as Vernon approached him, he thought that, could memory be sunk, one might believe that not five minutes had passed since the unlucky day when he had deposited his note and received the money. He approached within a few feet before his presence was heeded; but when the old man looked up, he gave a start which at once dissipated every appearance of abstraction.

"What!" he exclaimed, "you back!" As he spoke he somewhat hastily turned the key of the safe, and deposited it in his pocket.

"My return seems to surprise as well as alarm you," said Allen quietly.

"Surprise me," said the money-lender, shifting his position from the chair to the safe, and gazing at him as if the emotion had deprived him of further speech.

"Yes, and alarm you," Allen repeated, smiling at his appearance.

"It will surprise more people than me," said he at last, as if recovered from a sort of dream.

"You did not expect me, then?" Vernon asked.

"Never expected to see you again in the world!" he said, pushing the chair towards him, but not inviting him to sit.

"You believe me guilty of the charge made against me?" said Allen taking the chair so ungraciously offered.

"Believed you guilty!" exclaimed Uriah. "Believed, indeed!" And he gave a kind of chuckle, as if he had detected some one in a simplicity, which with him was equal to a dishonesty.

"I am not here to argue that question, Mr. Manning," said Vernon, feeling his choler rising, and unwilling further to bandy words with one who hesitated so little to wound his feelings. "I am the bearer of some tidings from your son, which I thought it my duty to deliver to you in person."

"Hugh!" said the money-lender, with an appearance of interest; "Hugh? What of him? When is he coming home?"

"Not soon, I fear," said Allen, "indeed, never!"

"What!" shouted the old man, with a bound which brought him within a foot of Allen. "Is he dead?"

"I fear I must say yes," answered Vernon.

The old man placed his hands upon his bent knees, and stooping, gazed with a deprecating smile of unutterable mournfulness in Allen's face.

"Don't tell me any lie, now," he whispered coaxingly. "Don't wring a poor old man's heart because he has to prosecute you; come, now, don't say so. Think of it—do think of it again, and see how cruel it would be. I didn't press the accusation against you, indeed I didn't; it was old Talbot, indeed it was. Come, now, tell me Hugh is not dead!" In his earnestness he placed one hand on Allen's shoulder caressingly, and Allen could feel it trembling like an aspen leaf. He did not wink, either, and his eyes dilated and fixed their gaze upon Allen's face, with almost frenzied intensity.

"I ought to have been more cautious," said Allen, "but it is unfortunately too true."

The old man slowly withdrew his hand, and his eyes drooped to the floor. He sank back feebly upon the safe, and his hands hung helplessly by his sides.

"Dead!" he murmured; "and there goes the hope of twenty years! Twenty years! and such years!"

He rose painfully, as if the strength that had sustained him through all those weary years had been destroyed at one blow, and walked with tottering steps to and fro across the room. Allen rose to assist him; but he shook his head and continued his walk. Minute after minute went by, and still he never looked up. Indeed, he seemed entirely to have forgotten that he was not alone; and muttering to himself words broken and disjointed, he seemed utterly unconscious of everything around him. He was reviewing those years—"such years!"—counting his gains only as losses, eating the fruit which, like the apple of Sodom, had turned to ashes. The son for whom he had pinched and hoarded—for whom he had ground the needy and forgotten the poor—for whom he had lived meanly and worked hard—for whose benefit he had neglected every duty, and accumulated thousands upon thousands—that son was taken from him, and his wealth was no longer of value! To have been deprived of his hoard, stripped naked, and turned shelterless upon the world's charity, it seemed to him now, would have been a merciful sentence, could his son have been spared him. To be the possessor of thousands with no object for whom to save them, was bitter beyond conception. He was a miser without doubt; but in him, as unfortunately in many, the very best traits had only watered and nourished and strengthened the worst. He loved his son, and from this genial but perverted soil, had grown and flourished the very darkest of his passions. But the punishment had come; and in the agony of that moment, God may have concentrated a punishment equal to his sins.

Vernon had no consolation to offer—he felt that none he could give could heal the wounded spirit. The old man was stricken beyond human art; and though he had not spoken of the business for which in part he came, he turned from the room and left the mourner alone in his grief.

As he stepped out of the front door, a short man, with black whiskers, accosted him with the question whether his name was Vernon?

"That is my name, sir," said Allen, simply.

"Then, I am sorry to say I have a warrant for you," said Gillam, the sheriff, producing the paper and handing it to Allen.

"It is not unexpected," said the latter, returning it. "Will you be good enough to walk with me to Mr. Clayton's office?"

"Certainly," said the officer, "if you want me to do so; but if you will come with your sureties to my office at three o'clock, I will go back and not trouble you with my presence."

"Thank you!" Allen exclaimed, "a thousand times! I will either bring you sureties or come myself alone."

"That will do, sir," said the officer. "And now I have another word or two to say. Can't say that I can suggest anything about your case, that Clayton will not see when he hears the evidence. But I heard what was sworn before the Grand Jury, which he did not, and I hope I can put you upon the track of a defence."

"It is not possible for man to do me a greater favour," said Allen, "and nothing could command gratitude so warm."

"No favour at all," said Gillam, waving his hand. "I am an officer of justice, sir; it is part of my duty to see justice administered; and allow me to say, sir, that I believe it would not be done if you were unable to establish your innocence: I believe there has been foul play, sir!"

"There has, indeed," said Allen.

"Well," continued Gillam, "I'll not detain you longer than five minutes. As I said before, I know precisely what was sworn before the Grand Jury, and Clayton does not. Colonel Talbot swore that you asked him to go upon your paper, and showed him this identical note—that he did not know whether his business would allow it, and took the matter under advisement to ascertain—that on the following morning, finding he could not do it, and being called away from home, he went to your house, and not finding you at home, left this note with a few lines, explaining the reason why he could not sign it, and requesting Hugh Manning, who was there, to give it to you when you should return."

"Precisely," said Allen, "and when I did return Hugh was there yet, and he pointed out the note already signed, saying that it had been left there by Colonel Talbot."

"Yes," resumed the officer; "and Uriah Manning swore that you came into his office, when you got the money, with his son Hugh, who had been at your house doing some work."

"That is true, also," said Allen.

"Well," said Gillam, "if the note was *not* signed when it was left there, and *was* signed when you returned, and Hugh was there all the time, the conclusion is that *he* signed it. No jury on earth would believe anything else."

"That is impossible," said Allen: "I would not, could not, believe it, even if I had no reason, other than my knowledge of Hugh's character, to believe the contrary."

"I don't know Hugh," said Gillam; "I am only arguing the case upon the evidence. But if he did not do it himself, I have no doubt he could explain how it was done."

"That may be," said Allen, "if we could produce him; but he is past giving evidence in human courts now."

"How is that—is he dead?"

"He is," said Allen, "and this is the only thing that embarrasses me."

"That is unlucky!" said the sheriff. "But do you know whether he was on terms of intimacy with Colonel Thorpe before his death?"

"He was not," said Vernon; "why do you ask?"

"Because," answered Gillam, "Thorpe came to me but an hour ago, and directed me to arrest you immediately—telling me that his return was owing entirely to his business. Now I happen to know that his business was not suffering at all; and I am certain that his only object in returning was to prosecute you."

"Why should he wish to prosecute me?" asked Allen.

"If you know of no reason, I know of none," said Gillam smiling.

"Well, well," said Allen, "I am much obliged to you for your good opinion—though you are mistaken as to Hugh."

"Not at all obliged," said the officer, drawing out his watch. "I must go back to the office—you will be there at three?"

"Punctually," answered Allen; and turned away.

"If you cannot easily get bail," said the officer, recalling him, "you can command anything I can do for you—I may be able to find a friend for you, though my recognizance would not be taken."

"I am a thousand times obliged," said Allen; "but I think I will have no difficulty. Mr. Carlin told me he would procure sureties."

"Moses Carlin?" said Gillam. "Have you employed him?"

"He was retained for me by Mr. Clayton," said Allen.

"Then you are safe enough," said the officer; "for if those two cannot smoke this villain out, it is hidden deeper than villainy ever was before. But, still, Thorpe is singly a match for either—and if he had the right side, for both; and I know he will leave no stone unturned."

"I suppose not," Allen replied; "though why he should be so virulent against me, I am at a loss to conjecture."

"You don't know him," said Gillam. "He never forgives an injury, and never pardons any one for being in his way."

"I have never injured him," said Allen.

"No; but you are in his way, and he is determined to be rid of you. But I must go back to the office. Here is the key," he continued hastily, "of your house that old Manning attached. I suppose since you have returned he will not press the attachment; and, at all events, you shall have the possession if you wish it."

"There is nothing I desire more, except the means of establishing my innocence; but if your kindness is to bring you into any risk of censure or loss, I could not honourably receive it."

"No risk at all," said Gillam, under whose rough exterior there was a heart as soft as a child's; "and if there were, why, d—n it! you are an innocent man, and you shall have your property!"

Allen warmly thanked him; but, in the midst of his protestations, the officer turned abruptly on his heel, and hurried away down the street, as if in pursuit of a whole bevy of housebreakers. Vernon gazed after him a

moment, and then turned away, convinced that however true the novel portraits of the officers of the law may be in general, sometimes, at least, a human heart can be found even among them. As Gillam disappeared among the crowd, Allen hurried away once more to his own home.

## CHAPTER XXXVIII.

"As tedious as a twice-told tale,  
Vexing the dull ear of a drowsy man."—SHAKESPEARE.

AN artist has to contend with two fundamental difficulties, which are inter-reactive. The difference and vitiated taste of those upon whom he depends for encouragement, and the lassitude and despair which these produce. It seems to be a condition of genius that it shall be acutely alive to what others think and say; and thus, as prophecies are often the means of their own fulfilment, every slighting word or deprecating judgment contributes to produce its own justification. Sensitive men are only so because they lack self-confidence; and they are very apt to believe in the unfavourable judgments of others. And even if they do not thus believe—if, as is sometimes the case, they have a sublime consciousness that they were made for noble purposes, how often does their sensitiveness produce disgust and neglect of their art! It would be a curious and instructive book, in which should be faithfully set down the mental history of a neglected man of genius.

Another condition of genius—almost as universal as its sensitiveness—is *poverty*; and, to aggravate the misfortune, *pride* generally accompanies it. Even in the learned professions, the struggles for subsistence of one who wishes to rise, are bitter enough—often resulting in the resort to questionable expedients, and the formation of habits which retard, if they do not degrade. Pride—the petty ambition of having a son at the bar, or in another profession—accompanied by poverty too pinching to enable the candidate to await the slow returns of his employment—has ruined more fine minds, and degraded more high moral organizations, than any other cause, excepting only intemperance. But if it be so in those walks of life in which the returns are comparatively rapid, how much more destructive must it be in the pursuit of excellence in art! The leading necessity of genius is calmness—freedom from every disturbing care—in order that its inborn majesty may "erect itself in silence and composure." But how can this be, while it is engaged in a daily harrowing struggle for bread, while every noble conception must be toned down to suit the taste of those who buy, while the slowly maturing image is broken into fragments by the constant recurrence of petty, sordid cares, and the time, for which the imagination thirsts, to form or body forth its teeming fancies, is consumed in a mean inquiry what shall I eat, and wherewithal shall I be clothed? God has thought proper so to order the good things of this life, that the very qualities which fit a man for getting money, unfit him for appreciating art; so that he who has the means of gladdening the heart of the artist, by giving him an adequate return for his labour, and thus enabling him to pursue his art, has not the soul to appreciate what, in the artist or his works, is really admirable. If he will waste his time and bury his talents, in painting a senseless portrait of a face without expression, he shall have money—though even this he cannot command, until, by having acquired a name, he has placed himself above the want. If portraits be not required, and Dives have sense or taste enough to know that aught else can be desirable, the chances are a thousand to one that he will want the artist to paint his fancies and not his own—to illustrate history and poetry in his way, and to paint in all things as his taste requires. And if there be any situation under heaven, altogether beyond human endurance, it is to want, and yet be unable to compass the means of livelihood, except by prostituting talents, given for noble purposes, to the vulgar fancies and opinions of another! How many luckless sons of poverty and genius have been thus beleaguered by their enemies, none can now imagine; and how long the fight against the ills of life is yet to last, let us not have the temerity to conjecture.

We have seen, in the beginning of our story, that Allen Vernon was one of the unfortunate; and few had ever drunk deeper of this bitter cup than he. For, added to the grinding and ever-recurring necessity of effort for bread, was the never absent recollection of the fancies in which he had indulged in earlier life—fancies which it would have been far better for him never to have had—which now only made him miserable by their recollection. We cannot say that he was a genius of the first order; the causes which combined to check and cripple him, may, for aught we know, have ruined an artist greater than Michael Angelo; or by the energy which they brought out, may have developed the only valuable talent he had. And it is precisely because of this uncertainty, produced by causes such as we have indicated, that we lament the condition of genius.

We have seen how Allen bent the powers of his mind to the exigencies of his new position; we have seen him painting portraits, that last resort of the needy artist, surrounded by all the aggravations of his pitiable condition. We have seen him, also, once giving a loose rein to his imagination, painting, from his own conception, a picture which was to have a greater influence upon his fortunes than all the others of his works. But this was not the only occasion upon which he had allowed his pencil to stray away from the path prescribed by his necessities. He had painted many pictures from his memory, and many more from fancy. But these he had preserved from profane eyes; and when he went upon his eventful expedition to the seat of war, he had left them, as we have seen, where no eye would look upon them. Some of them were left unfinished; and to these his imagination had wandered while far away; many of them he had already completed in his meditations, and he longed again to be at work upon his easel. When, therefore, he received the key of his house from Gillam, he hastened away with a beating heart, once more to look, like the miser, upon his treasures.

He entered the house with feelings which few can understand, and having locked himself securely in, proceeded to open the closet where all his pictures were deposited. One by one he took them out, pausing upon each, filled with the recollections it called up. First came a gorgeous Sunrise among the mountains—where, just peeping through a grove of stately pines upon the summit of a cragged ridge, the sun, round, red, and shorn of his glaring beams by the filmy haze, was beginning to look over into a secluded valley; and, shining like jewels in the morning light, the dewdrops hung upon the leaves and glittered on the grass. On the mountain-side the flocks of sheep were grazing listlessly, and watching them, a sunny-faced boy, with his dog reclined beside him, sat on the sward, caressing with one hand his beautiful companion. Far down in the valley, embowered among the foliage and wearing a garment of green vines, lay a lovely cottage; and before the door stood a matron, upon whose minutely-painted countenance sat peace and love. A little stream meandered through the vale, and, growing less and less in the hazy distance, at last vanished among the green hills.

This picture had been painted from imagination—not a single feature had been copied. And yet he paused and meditated over it, as if it were a painting of his boyhood's home. Why he did so, at first he knew not; for, though a piece on which he had spent many, many hours, it had never before presented any point of interest above many others. At last, however, he remembered; for in it there was a strong resemblance to the valley which he and Clayton had visited in search of Hugh. He had painted (not copied) from nature, and accident had led him to a scene where all the features of his fancy were thrown together.

"Can it be," he thought, "that nature and our powers are commensurate—that all the combinations we are capable of making may be found somewhere in the world, precisely as we have painted them?"

His conjecture may not have been far wrong. At least, it is certain that so long as truth is not violated in a picture, precisely such a combination is possible, and may actually exist. The artist may never see the scene; and yet, in the most gorgeous of his fancies, he may, unconsciously, be only transferring to the canvass an actual landscape. And would not such an occurrence be evidence beyond a cavil of the painter's genius? But of this Allen never thought; his mind was too full of memories and cares to leave him even this moment for reflection. He set the picture down with a sigh, in which came back his griefs and fears. Even among the shadows of his mind, freedom from care was not allowed him.

He took all the pictures out, and ranged them round the walls. The light was by this time growing dim, and he went out to open a blind, and let the waning sunlight in. At the door he was met by a stout gentleman in black, with a silver-headed cane and white cravat. He approached with a stately, solemn tread, as if about to announce a sentence of death; and on his countenance sat an expression as of the grave. A beholder could not have hesitated to pronounce him an undertaker, a doctor, or some other purveyor to the tomb; and it was to the latter class that he belonged. Doctor Gordon, notwithstanding the very suspicious solemnity of his bearing, was really a benevolent man and an able physician. And though no man paid more especial attention to the pecuniary branch of his profession where fees were to be collected, no man was more willing to relinquish his claims where a rigid adherence to them was likely to produce distress. A little quackery is as inseparable from the practice of medicine, as a little pedantry is from the profession of a pedagogue. Every physician must use a little claptrap, or lose his practice among those who are most able to pay him for his services; and Doctor Gordon, being a successful practitioner, was, of course, not without this essential accomplishment of his calling. He had been summoned to the bedside of Allen's father a few weeks before his return, when attacked by what the doctor pronounced a fever brought on by an ill-regulated temper. By his assiduous and judicious treatment, the old man had rallied a little, and, when Allen returned, was again upon his feet. The day after Allen's return he had been prostrated again, though it was supposed only temporarily; and the doctor was again called in.

"You have recovered possession, I see," said Gordon, as Allen stepped forward to meet him.

"Yes," replied the latter; "and I hope to be established here, in the old way, once more, as soon as my father is well enough to be removed."

"That will be but a short time," said the doctor, solemnly.

"I hope so, indeed," said Allen; "for I am anxious—"

"You misapprehend me," interrupted the doctor. "Your father will never be removed except to the grave."

Allen started, as if a gun had been fired at his ear.

"What!" he exclaimed; "is he worse?"

"Not much worse than he was this morning," said Gordon; "but it is quite plain that he can never recover."

Allen was too much surprised and grieved to speak. He had not for a moment contemplated the possibility of his father's death.

"You had, perhaps, better go to him," said the doctor.

"I ought not to be away a moment," Allen replied; and hastily locking the door again, he hurried away.

"And they accuse this young man of forgery," said the doctor, musing; "but for once, I do not believe it."

(To be continued.)

An American writer says:—"We are born in a hurry; we are educated with speed, we make a fortune with a wave of a wand, and lose it in like manner, to re-make and re-lose it in the twinkling of an eye. Our body is a locomotive, travelling at ten leagues an hour; our spirit is a high pressure engine, our life resembles a shooting-star, and death surprises us like an electric stroke."

WILLIAM C. MACREADY, ESQ.

WILLIAM CHARLES MACREADY was born in London, in the parish of St. Pancras, March 3, 1793, and in his seventeenth year, while looking forward to speedy matriculation at Oxford, his father's affairs became deeply embarrassed. This fact brought him, in June, 1810, to make his first appearance on the boards in the character of *Romeo*, at the Birmingham Theatre. He was at once recognized as a provincial "star." Success attended his exertions, and till Christmas, 1814, he remained with his father's company as principal actor and stage director; performing with great applause at Birmingham, Sheffield, Chester, and Newcastle. The two following years saw him at Bath, Dublin, and Glasgow, with a widening and rising reputation, which ensured him a metropolitan engagement. On the 16th September, 1816, he made his first appearance at Covent Garden Theatre, as *Orestes*, in the "Distressed Mother." This performance fixed him at once in the foremost rank of his profession. It was the commencement of a series of successes. It was also the commencement of a series of struggles and difficulties.

Macready's first season at Covent Garden Theatre was John Kemble's last season. The veteran favourite was running through his whole range of characters, previous to his retirement. Miss O'Neil was in the zenith of her fame. Kean was thundering and electrifying at the other house. And Young was firm in his stately position. The town had other topics for its talk, more attractive than the new aspirant. If we may judge by its later characteristics, Macready's style of acting was nearly as new as his person to the boards. In those days, Shakspeare—and all tragic actors are tested by Shakspeare—was the monopoly of the two patent theatres. There was no open arena for competition. And to render the system still more exclusive, almost every prominent dramatic character was claimed as a sort of private property by some established performer.

"Within that circle none durst walk but he."

A club called "The Wolves" threatened any intruder on Kean's domain with the force and fury of organized opposition. Under this combination of influences, Mr. Macready was for a long period either restrained from, or not appreciated in, those Shakspearean representations in which he appeared. He became the hero of what (as distinguished from our own great classic, himself romantic,) may be termed the romantic drama. In this sphere, but in this principally, his power was acknowledged. He was pronounced great in *Gambin*, and won renown in *Rob Roy*. That is to say, he made character where he did not find it; filled up with vitality and expression the imperfect outline; and could "create a soul beneath the ribs of death." At length the *Virginius* of Sheridan Knowles afforded him chance for justice. In it, he took the heart of the public by storm. The play itself was the revival of a purer dramatic taste, and there could be no question that the power manifested by the actor was of the highest order.

For the sake of the theatrical art, it might be well that the difficulties of such a career, the petty jealousies, the base intrigues, the popular prejudices, and the literary censorship which often panders to them, besides having its own purposes, caprices, and corruptions, should be fully detailed: they would serve for the warning and guidance of future aspirants. Within the limits of this notice, we must jump gradations; say nothing of new characters, chiefly Shakspearean, from year to year; of a triumphant visit to America, in 1826, and an enthusiastic reception at Paris in 1828, where he

was pronounced second only to Talma, after Young, C. Kemble, and Kean had been coldly regarded; and view him in 1835-6, the one great actor of the British stage, by universal acclamation.

In October, 1837, Mr. Macready commenced his arduous and glorious career as manager of *Covent Garden Theatre*. His task was indeed arduous. He had everything to do, and Mr. Macready is the only manager in our time who brought the drama before public view with anything approaching to completeness. System, science, and poetry were the characteristics of his management.

In all that belongs to the *mise en scene*, Mr. Macready never forgot that his function was to *illustrate*. No splendid or striking effects induced him to depart from this duty. The gorgeousness of many revivals occasioned an imputation of overlaying Shakspeare with theatrical splendour. The critics disregarded the fact that some of these dramas, "King Lear," for instance, had never been so simply presented, so divested of "barbaric pearl and gold." Nor did "As You Like It," *haunt with spangles*. It was redolent of the green wood. Sylvan glades and the song of birds, and grotesque trunks of trees harmonized with the life of idle forestry, and realised the vision of the poet, dreaming of the remote rustic sojourn of princely courtesy. A hundred minute instances of arrangement introduced by Mr. Macready, and some happily become permanent on the stage, might be enumerated, from memory, which show his unwavering fidelity to the work of illustration, as well as his consummate skill in its details.

He also in many instances restored the text of our great dramatist. The two most extensive and remarkable of these restorations were those accomplished in the "Tempest," and "King Lear," and an unprecedented season of numerous and appreciating audiences was the public response to the appeal thus made at Covent Garden Theatre.

It has often been said that Mr. Macready's management failed, and proved the decline of a taste for the Shakspearean drama, but the fact had and again at Drury-lane afterwards), to struggle with an enormous outlay, rendered necessary by the forlorn condition in which he found the scenery and properties of both houses, and by the costliness of his own efforts; with an almost total neglect on the part of the aristocratic and fashionable world; and with proprietary arrangements, or disarrangements, which yielded no security for an expenditure that could only have repaid itself in a series of years, and the immediate profits of which were liable to be preyed upon by undefined and encroaching claims. Yet, notwithstanding these serious drawbacks, so far as the public was concerned, the *career* was complete.

Mr. Macready took leave of Covent Garden Theatre, at the end of his second season. A grand public entertainment, H. R. H. the Duke of Sussex in the chair, was soon afterwards given him at Fecussons' Hall. His reception was most enthusiastic. A subscription was commenced for presenting him with some appropriate memorial. The result was a felicitous design, chaste executed in silver, of the actor studying a drama for illustration; the Arts and Muses are grouped around to render him their aid; bas-reliefs of celebrated scenes surround the base, and the form of Shakspeare crowns the summit. The most illustrious names of which our country can boast were in the list of contributors; and, as if to render more noticeable the absence of aristocratic patronage during the season of struggle, as one royal duke had presided at the commencement of the subscription, another, the Duke of Cambridge, presided at the presentation.

After a twelve-month's engagement at the Haymarket, where the public became more familiar with the qualities of his acting, Mr. Macready undertook the management of Drury-lane Theatre, where he continued till June, 1843.

This second management was, in spirit, a prolongation of the first. The same Shakspearean splendour where splendour is required, the same reversion to the genuine text, and careful regard for the poetical idea of each drama, in its illustration; the same harmonised combination of costume and scenery; and of the individual talent of each member of the well-organised company; the same abundant success, in public enthusiasm, and the same abrupt termination from causes wholly extrinsic to the national drama, but inseparably connected with the condition, as to property, of the two large theatres.

At the close of his second season at Drury-lane, in June, 1843, Mr. Macready retired from the management. Up to this period, the two great theatres possessed a legal monopoly of the legitimate drama. This privilege implied a corresponding obligation, of which both had shown themselves utterly regardless. Other interests than those of the national drama had a paramount influence. Legally proscribed at the minor theatres, it was practically banished from the established theatres. In Mr. Macready's farewell speech, he animadverted with just severity on the sinister influence of the monopoly; which had been the real cause of blighting the prospects of the drama by the premature termination both of this and of his former management. The public heartily responded. A petition from Mr. Macready, in which the mischievousness of the system was more elaborately exposed, and its injurious bearing shown on the profession of an actor, and on the interests of society, was soon after presented to the Legislature. The result was, that before the close of the session, a new "Act for regulating Theatres" was passed, which may be regarded as a dramatic charter. It authorises the Lord-chamberlain, in the metropolis and wherever her Majesty may reside, and justices of the peace in other cities or towns, to grant licenses to the theatres; and throws open the whole range of the drama to theatres so licensed. Under this Act an immense improvement has taken place in the provision for public amusement. Several of the saloons and music-rooms in the suburbs have become regular theatres; and Mr. Phelps and Mrs. Warner commenced the honourable and successful enterprise of domesticating Shakspeare at Sadler's Wells.

In the autumn of 1843, Mr. Macready sailed for the United States.

During the ensuing twelve months, he performed at all the principal theatres in the Union, and also made a short visit into Canada. American enthusiasm for illustrious English visitors might be presumed to have undergone some chill about this time, when the "American Notes" had just been succeeded by "Martin Chuzzlewit." No symptom of the kind, however, anywhere attended the appearance of Mr. Macready.

Rapid was the transition and great must have been the contrast of the visit to Paris which promptly followed. A small but efficient corps, with Miss H. Faucit for the heroine, was formed by Mr. Mitchell for this enterprise, of English theatricals in Paris. The triumph of the experiment was attested by a succession of large, attentive, and applauding audiences. On the conclusion of the season, there was a special performance before the court in the private theatre of the Tuilleries. "Hamlet" was selected, by the royal command, and the present of a richly jewelled Oriental dagger evinced the gratification of the French monarch.

Mr. Macready's first appearance in London, after his retirement from Drury-lane Theatre, was in the interval between the visit to America and that to France. On this occasion the *Times* remarked:—"That whatever his opponents might say, it was an indisputable fact, that whenever Mr. Macready was absent, the poetic drama languished in the shade, and was called into immediate life when he returned to breathe a spirit over it."

Mr. Macready again visited the United States; where his enthusiastic reception excited the jealousy of Mr. Forrest, an American tragedian, who had been well received in this country; and a riot at New York was the consequence. In this unfortunate affair eight individuals lost their lives.

Subsequently to Mr. Macready's return from the United States, he made a professional tour through the provinces; and we need scarcely say was enthusiastically received everywhere. It was in this interval that Mr. Macready applied to the authorities of one of the universities for the use of their large hall, in order to give a reading, the proceeds of which were to be applied to the completion of the purchase-money of the house of our national bard. The application was rejected by the little great men with whom it rested to decide.

Mr. Macready having entered into an engagement with the management of the Haymarket for a limited number of final performances in each of his principal and favourite characters, it was there he repeated all those high-act personations upon which his fame has been built; and there he virtually closed as *King Lear*—he whom all men pity less as a king than as a father—his long and triumphant theatrical career of five-and-thirty years.

In reference to the acting of Mr. Macready, amongst many of the lovers of the histrionic art, there is but one opinion, and that is—excellence. It is not, therefore, our wish to institute any comparisons between him and other professors who have figured in the same line of characters as he has adopted. As tragedy is the noblest, so is it the most difficult walk in his profession, and Mr. Macready has, particularly in the tragic heroes of the plays of James Sheridan Knowles, evinced the possession of the highest powers of conception. In those Shakspearean representations, however, which require the development of strong natural passion and pathos, we never thought him happy. The artificiality of his school carries too much of the cool deliberation of elaborate study, both in action and delivery, to meet the requirements of those vivid, picturesque, and towering outbreaks of natural disposition which mark the tragic embodiments of Shakspeare. All who remember the elder Kean, and have seen Mr. Macready in the same characters, will agree with us in this—that the one seemed to act from natural impulse, and the other from artificial study; that the conceptions of the one were marked by the intuitive creative properties of original genius, and those of the other by no originality in the conception whatever, but by great elegance in the reading, and great force in the declamation. The inequalities of Kean's acting was his principal charm, and the evenness of Macready's is his. In the representation of real dignity Kean was inferior to Macready, whose perfection lies in the equanimity with which he can throughout sustain a character, when severely tried by the blows of adversity. Therefore, when he exhibits mental repose, when encompassed by a war of jarring elements, he is always great, and reminds us of one of those marble columns of classic antiquity, which, amidst the storms of all time still preserves its beauty, its grandeur, and its proportions.

**VENTRILLOQUISM.**—The real nature of ventriloquism is so little understood by the persons who write the "humorous sketches" of the day, that the most ludicrous blunders are made by them, and their readers are led into egregious errors in regard to the true philosophy of sounds produced by ventriloquists. We frequently read an account of scenes in which Signor Blitz, or some other professor of magic, has, while travelling *incog.*, thrown parties into great disorder by causing his voice to be heard in various directions, appearing to come from the lips of various persons of the company. This is simply ridiculous, when we consider that all the ventriloquist can do is to produce articulate sounds in his throat, and the appearance of distance is produced by making the sounds lower in the throat, and softer in their tone. The ventriloquist must be at some distance from his audience, and must have some aid from their imaginations, in order to produce the desired effect upon their minds. He directs their attention to a box, or window, or the floor of the stage, and, as the imaginary "Jack" recedes into the cellar, he forms the replies supposed to come from "Jack" lower and lower in his throat, as "Jack" vanishes in the distance. When you occupy the middle of a room, a ventriloquist standing at one side of the room cannot "throw his voice" over your head, and make it appear to come from the side opposite to himself, even by the help of your own imagination. He will never attempt such a feat as that, and those who write or read on the subject should keep this fact in view in order to maintain consistency and probability in the matter.

# THE HOME COMPANION; IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS;

BEING  
A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.  
PRICE ONE PENNY. ALWAYS ON SALE.

A MIDSUMMER PRESENT FOR A GOOD BOY OR GIRL.

Now ready, price 1s. 6d., beautifully bound, with a fine Steel Plate, and 70 Engravings on Wood.

AUNT MARY'S STORIES FOR YOUNG PEOPLE.  
This beautiful little Volume is made the more attractive to the Young, by having the Christian Name of the Receiver elegantly impressed in Silver upon the cover. Thus—

A STORY-BOOK FOR MASTER EDWARD!  
A STORY-BOOK FOR MISS ELIZABETH!

The following Names may be had to order:

BOYS—Charles, Edward, Frederick, George, Henry, James, Joseph, John, Richard, Robert, Thomas, and William.  
GIRLS—Anne, Caroline, Charlotte, Fanny, Emma, Eliza, Jane, Laura, Louisa, Lucy, Mary-Anne, and Maria.

For Names not included in the above, order the General Edition,  
AUNT MARY'S STORIES FOR YOUNG PEOPLE.  
London: Houlston and Stoneman; and all Booksellers.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### SUCCESS IN LIFE.

If you would be successful in life, live for some definite object. This is one of the most important elements of success. If you will read the biographies of our most successful men, you will find that the single object, in the attainment of which they became distinguished, was fixed in their minds at an early age, as the great object of life. They may have been wild and unpromising in their first years, but something happened in their history that changed the entire current of their life.

Not only should our object of life be definite, but it should become our ruling passion to gain it. It should awaken every emotion in your soul. It should fire you with a zeal that will not let you rest or sleep merely for comfort, for, with right notions, your comfort is not there, but at the end of your journey. Everything else should be forgotten. We do not here speak of the motives by which you should be governed, our object being simply to point out what is requisite to success.

Another element of success is decision of character. When your object of life is chosen, let it be the fixed purpose of your soul to gain it; otherwise you will be turned aside by every trivial circumstance. Let what will be your object in life, there will be obstacles and difficulties to be overcome at every step. No man ever has, or ever will, succeed in life without severe struggles. His life must be a battle. If we find nothing to fight it is because we are diones; if we do not gain the victory it is for want of bravery.

Suppose, after the plans of life are laid, and you have entered upon its business, you are easily induced to attend places of amusement, to spend your money for that which is of no profit, or to engage in every fancy speculation that is presented, is it not evident that you would squander what you might have in your possession, and form habits of idleness and dissipation, that would result in your ruin?

Is it not true that we need a "single eye" to succeed in its temporal affairs, as truly as in our spiritual life? When our object of life is chosen, we should see nothing but that, or, at least, we should never suffer ourselves to engage in anything contrary to its nature.

There is something noble in a decided character. Especially is this trait exhibited when the community is rocking under some great excitement. Amid such scenes he holds himself still and true to the great object of his life. He acts with deliberation; hence he moves, when he moves at all, with great strength. He never turns from his course, but trims his sails to the wind. In this way everything favours him, for by his own strength he has made everything his servant.

He can be trusted, for all know where to find him. His advice is asked and followed, simply because he is ever firm and even in his life. He exhibits the same nobleness in his struggles against difficulties. He cannot be discouraged or disheartened. If his property is burned up, his business is suspended but a few days. Wherever he is known he has credit.

Few men know their full strength until it is called out. All of us are strong enough, were our strength properly expended, to place us in the front rank of heroes. But most men lack courage and faith. Be not afraid. There is no obstacle but you may overcome, if you will not suffer it to overcome you. What has been done can be done again.

If you will consult the history of our best and most successful business men, who are now reaping the fruit of their labours, you will read of their early struggles and sleepless nights. You will also find that they neither wavered nor staggered in any situation. Their faith sustained them! If they

ran behind this year, they laboured the harder to succeed the next. They did not change their business. They plunged into the rushing current, having staked their all in a single labour of life. For that they lived.

Whatever be your calling in life, maintain a strict integrity. Never swerve from the right and the true. Let your simple word be as sacredly binding as your bond. Fulfil every engagement, however trifling. Do as you agree. Be punctual to a moment. Remember when you promise to meet your friend at a certain place at eight o'clock, you have no right to wait one moment past the time. Be on the ground when the bell strikes.

School yourself in these little things; if you would be punctual in paying a bank-note, or in meeting more important engagements in after life. Be fair and honourable in your trade. Let every man know where to find you. You need have no fears of being unknown, and your good actions unacknowledged and unappreciated, for a noble life cannot long remain concealed.

While you may be in the employment of others, if trusts are committed to you, keep them as you would your life. In this way you will form a character that is invaluable, and make yourself a name that will stand for integrity and honour so far as you are known. Never stoop to any low artifice or dishonourable means for obtaining the various wants of life. Walk with your head up, through the world. Fear no one, flatter no one, nor court any man's favour. All this may be experienced by strict integrity of heart and purpose. When you are proved, you will be loved and respected.

Self-denial will be required of those who are successful in life. We mean by self-denial, giving up what we have the right to enjoy for the sake of obtaining some higher good. Here is a young man just commencing life, penniless and without friends. His business affords him but a meagre support. He is proud and ambitious. He loves social intercourse, and would be glad to mingle with his young friends, but he finds it impossible to keep up with them in external appearance.

His coat is soiled, and his hat out of the fashion. He knows that men are usually rated according to their appearance, not by their true worth; hence, as he cannot associate with them as an equal, he abandons their society. Now comes the temptation. What shall be done? Shall he spend his whole income for dress, or live alone, waiting his turn, or seek association with those beneath his level? Here is the rock on which thousands have been shipwrecked.

If he spends all his earnings and spare time with his fellows in scenes of pleasure, he may be called noble-hearted and generous; but he will not only be without funds when he would enter into business himself, but he has formed habits of dissipation and prodigality that will not be easily broken.

If he lives alone, and dresses as he can afford, seeking the improvement of his mind and skillfulness in his business, he will doubtless be called niggardly and covetous, but he is all the while forming a character that is more valuable than gold, and habits of business that will be of more service than a rich inheritance. He will increase while others will decrease.

It may be difficult, at first, to make this sacrifice of feeling, but it can be done. Fix your eye on the end of your race, and you will be sustained. How many a young man has been saved by some little incident that has fixed his eye on the end of a year, or some brief period! For that he lives. To gain it he can sacrifice his ease and time.

Let temptation assail him; let him be introduced to some gay young men, and hear some remark made in reference to his appearance, it may require a struggle, but he can endure it all. He would be glad to dress, but he cannot consistently with the purpose of his life. His heart is fixed. He lives a life of virtue, not by laying hold of his passions, compelling their conformity to the right, but by living for a higher, nobler object.

Nor is he penurious or selfish. He may appear so to others, but it is in appearance only. His heart is generous and free. There can be no benevolence and generosity in a course of life that is sure to make one poor in after life.

Live, then, with your eye on a noble object, and self-denial is sweet. If gentlemen of the middle ages could sacrifice their ease, their time, and their life for their betrothed, can not you withstand temptation when the eyes of kindred are on you? Ask the student who has earned a world-wide fame, or the man of princely fortune, and learn of them their toil and struggles!

In conclusion, let me entreat you to seek the control of the elements by forethought, if you would be successful. It matters not what your profession may be; there are certain laws that govern it. Learn the laws by which every trade, and all intercourse with men are governed, and conform to them. Think! There is more strength in true thought than in the whirlwind or the lightning. The time has gone by when mere physical force will be sufficient to serve us. Our work is too great, and too heavy to be done by our hands. We must have the winds, and the streams, and the lightning to aid us.

Persevere against discouragement. When you have chosen your object of life, pursue it without fear or faltering. Be not discouraged amid difficulties. Let your will be under the control of reason and a sound judgment, and your success, in whatever you undertake, is beyond a doubt.

**GOOD ADVICE.**—Never cut a piece out of a newspaper until you have looked on the other side, where, perhaps, you may find something more valuable than that which you intend to appropriate. Never put salt in your soup before you have tasted it; I have known gentlemen very much enraged by doing so. Never burn your fingers, if you can help it; people burn their fingers every day, when they might have escaped it if they had been careful. Let no gentleman ever quarrel with a woman: if you are troubled with her retreat; if she tear your cloak, give her your coat; if she box your ear bow; if she tear your eyes out, feel your way to the door, and—fly.

## ONWARD!

**MATCH-MAKING.**—A new machine for splitting the timber used in making matches, has lately been introduced at Augusta, Georgia. It splits with ease twenty thousand a minute, or one million an hour, and turns them out ready to be dipped. *Magnus* will say it is much better that a split should precede a match than follow it.

**ELEMENTARY DRAWING-SCHOOLS.**—By a decision of the department of ornamental art, the teachers for the elementary drawing-schools shortly to be established will be selected from among the most talented and diligent pupils of the schools of design. The approved pupils will go through a course of preliminary training at the central school, and during that period will be allowed £1 a week, and the lowest salary, when they receive an appointment, will be £70 a year.

**NEW ZEALAND STEAM NAVIGATION COMPANY.**—A New Zealand Steam Navigation Company, for local communication with the islands, has been started under influential auspices. Dr. Selwyn, Bishop of New Zealand, has strongly advocated the measure, as did Sir W. Molesworth, in his speech in the House toward the close of last parliament, and others interested in the colony. Committees of management have been formed in London and in the colony. The steamers are to run from Auckland in the north to Otago in the south, visiting, in their course, New Plymouth, Nelson, Wellington, and Canterbury, and to be in connection with the Australian Pacific Mail Steam-Parcel Company from London.

**COASTING STEAMERS.**—The first coasting steamer of the Newcastle coal-trade has entered the Thames—no unimportant event in social and commercial progress. The ship, the *John Bowes*, ran from Newcastle in forty-eight hours, the speed being kept low on account of the engines being new. The average passage will probably be about forty hours, the consumption of coal about eight tons, and the cargo 600 tons. The crew consisted of eight, including the master, making, with the engineers and firemen, twelve in all. The vessels are to be open throughout, except gangways; and as they will be brought under the shoots as required, and no coal-trimmers be necessary, there will be great saving of time and expense in loading. The discharging of the cargo will be also now more rapid, with aid of machinery—this vessel having been cleared in one day, and having returned the same night to the north.

**MODEL DWELLING-HOUSES.**—A site of land at the back of the brewery in Broad-street, Golden-square, Westminster, bounded by New-street, Hopkings-street, and Husband-street, has been taken by the General Society for Improving the Dwellings of the Working-classes (Lord Viscount Ingestre, president), and the same has been cleared of the old and dilapidated buildings, long the haunt of the lowest and most vicious of the London poor. It is intended by the Society to erect at once on this site, under the superintendence of their architect, Mr. Lee, eight double houses, each to contain accommodation, consisting of a sitting-room, two bed-rooms, and other conveniences for eight families, or for sixty-four families in the whole. This arrangement it is hoped will, besides giving good accommodation to the families housed, produce improvement and change for the better in the character of the locality, which is one of the worst in that part of the metropolis. The expenditure is proposed to be about £7,000, independent of the ground, and a return of about 7 per cent. is looked for.

**RAILWAY EXTENSION.**—Most important, perhaps, of all the iron ways now in course of construction, is that at the Isthmus which separates the ocean over which Columbus sailed from that which Nunez discovered. All other railways are local and provincial—this is of universal interest. A letter from Herman Melville, printed in the *Panama Star*, describes the first trip made on a portion of this line—that is, as far as the crossing of the river opposite San Pablo. The works, according to report, proceed without interruption; and the author of "Omoo" expresses an opinion that they will be completed in about a year from this date. Before this time every one has heard of the opening of the Strasburg line; but what is more important to note than the facility with which a pontoon was thrown across the Rhine, is the fact, that the completion of this iron way has brought London and its pent-up population within forty-eight hours of the lakes and mountains of Switzerland, the historic glories of Heidelberg, and the romantic scenery of the Odenwald. The chain of Swiss railways is lengthening out daily. The section from Basle to Zurich will soon be finished. From this last city to the foot of the Splügen is already but one day's journey by the lakes; and one day more carries the tourist thence to Como and the vine-gardens of Lombardy. This year, the line from Milan to Venice—by Brescia, Verona, Vicenza, Padua, and Montebello (Shakspeare's Belmont)—is expected to be open throughout; when the distance between the two capitals of Northern Italy will be reduced to a single ride. Other facilities of communication are preparing in that land of old poetry and art. The treaty between Austria, Parma, Modena, and Tuscany, for the construction of a system of railways between those states—some particulars of which we laid before our readers last autumn—has just been made public; and in this more formal document it appears that the new lines are to connect Florence and Mantua, passing through Modena and Bologna, and clearing the Apennines either at Pistoia or at Prato. It is stipulated that an electric telegraph shall be laid down the whole length of these lines. In our own country we may notice the projection of several new lines, intended to open up to tourists—and open out to the inhabitants—a considerable part of the most romantic scenery of North Wales. One of these is to be from Rhaydon to Rethin, through the splendid vale of Clwyd, running into the Chester and Holyhead Railway at Rhyl. Another will connect Aberystwith with Shrewsbury, by way of Newton and Llanidloes.

## [ POETICAL QUOTATIONS.

## CAUTION.

It seems it is as proper to our age  
To cast beyond ourselves in our opinions,  
As it is common for the younger sort  
To lack discretion.—*Shakspeare's Hamlet*.

When clouds are seep, wise men put on their cloaks;  
When great leaves fall, then winter is at hand;  
When the sun sets, who doth not look for night?  
Untimely storms make men expect a dearth:  
All may be well; but if God sort it so,  
'Tis more than we deserve, or I expect.—*Shakspeare's Richard III.*

## Be advised;

Heat not a furnace for your foe so hot  
That it doth singe yourself; we may outrun,  
By violent swiftness, that which we run at,  
And lose by overrunning. Know you not,  
The fire, that mounts the liquor till it run o'er,  
In seeming to augment it, wastes it? Be advised.  
*Shakspeare's Henry VIII.*

## Trust none;

For oaths are straws, men's faiths are wafer-cakes,  
And holdfast is the only dog.—*Shakspeare's Henry V.*

Man's caution often into danger turns,  
And his guard falling, crushes him to death.

*Young's Night Thoughts.*

He knows the compass, sail, and oar,  
Or never launches from the shore;  
Before he builds, computes the cost,  
And in no proud pursuit is lost.—*Gay's Fables.*

All's to be fear'd where all is to be lost.—*Byron.*

Let no man know thy business save some friend,  
A man of mind.—*Bailey.*

## CEREMONY.

Ceremony was but devised at first,  
To set a gloss on faint deeds,—hollow welcomes,  
Recanting goodness, sorry e'er 'tis shown;  
But where there is true friendship, there needs none.

*Shakspeare's Timon of Athens.*

And what art thou, thou idol, ceremony?  
What kind of god art thou, that sufferest more  
Of mortal griefs than do thy worshippers?  
What are thy rents? What are thy comings in?  
O ceremony, show me but thy worth:  
What is thy toll, O adoration?  
Art thou aught else but place, degree, and form,  
Creating awe and fear in other men?  
Wherein thou art less happy, being fear'd,  
Than they in feasting?  
What drunk'st thou oft, instead of homage sweet,  
But poison'd flattery? O be sick, great greatness,  
And bid thy ceremony give thee cure.—*Shakspeare's Henry V.*

Then ceremony leads her bigots forth,  
Prepar'd to fight for shadows of no worth;  
While truths, on which eternal things depend,  
Find not, or hardly find, a single friend:  
As soldiers watch the signal of command,  
They learn to bow, to kneel, to sit, to stand;  
Happy to fill religion's vacant place  
With hollow form, and gesture and grimace.—*Cowper.*

It was withal a highly polished age,  
And scrupulous in ceremonious rite,  
When stranger stranger met upon the way,  
First each to other bow'd respectfully,  
And large professions made of humble service.—*Pollock.*

## CHALLENGE.

I never in my life  
Did hear a challenge urged more modestly,  
Unless a brother should a brother dare  
To gentle exercise and proof of arms.—*Shakspeare's Henry IV.*

Now, Thomas Mowbray, do I turn to thee,  
And mark my greeting well; for what I speak,  
My body shall make good upon this earth,  
Or my divine soul answer it in heaven;  
Thou art a traitor and a miscreant.—*Shakspeare's Richard II.*

CHARADE.

My first we all are of,  
Though different we be;  
My second none could lift,  
Save by machinery.

My whole will serve us, when, at last,  
The trials of our life are past.

PARLOUR PASTIME.

*The Nosegay of Flowers.*

ONE of the tallest boys present holds at arm's length a piece of wood or stiff card, about six inches square, on which is placed a small bouquet of real or artificial flowers, and the board is suspended by four strings, one from each corner, to the end of a stick, which the boy holds at the other end. Taking his place at the side of the room, he calls out,—

"The blind man's bride sits alone in her bower,  
As yet undeck'd by a single flower."

Upon this, another boy or girl comes forward, and being placed at eight feet distance from the challenger, and carefully blinded, takes a small wand in his right hand, and manfully steps forward, in hopes of walking straight to the bouquet, which, if he succeeds in hitting the board so as to shake it to the ground, becomes his to present to a young girl, previously selected and seated on the sofa, or an easy chair. Should he fail, the challenger takes off the covering from his eyes, saying—

"Go, worthless knight, and banish'd be,  
From this noble company."

Others try to do better, and the game is closed by tying as many bouquets as have been won into a wreath, which is then placed on the head of the same young girl, the rest of the party singing or saying—

"Gentle bride, we bind thy hair,  
With a wreath both sweet and fair;  
She who's sworn the blind to cheer,  
Unto every heart is dear;  
So upon thy youthful brow  
Place the crown of honour now.  
May thy lifetime, strew'd with flowers,  
Be happy as these evening hours."

TRANSFIGURED PLAYING CARDS.

THE FIVE OF HEARTS.—WINDLASSES.

ARITHMETICAL RECREATIONS.

I.  
Suppose I bought two hundred eggs,  
One half at five a-penny,  
The other half at four—because  
I could not get so many.  
Soon after, to oblige a friend,  
I sold him all the lot;  
Pray tell how I disposed of them,  
When I no profit got?

II.  
What number is that of which  $\frac{1}{2}$ ,  $\frac{1}{3}$ ,  $\frac{1}{4}$ ,  $\frac{1}{5}$ , and  $\frac{1}{6}$  added together make 145?

III.  
My age, if you will multiply by three,  
And two-sevenths of the produce trippled be;  
The square-root of two-ninths of that is four,  
Now tell my age, or never ask me more?

ANSWERS TO THE PASTIME OF LAST EVENING.

Page 685.

ENIGMAS.—1. The *Dandelion* belongs to the class and order *Syngenesia polygamia Equalis*. On the top of a hollow stalk it unfolds a crown of bright yellow florets; these wither and drop off, and are succeeded by the seed-down or pappus. The stalk of the down rises from the top of the seed, radiating from the receptacle, and forming a white globular head. The seeds are attached to the little parachutes of down, which are carried through the air, and deposited in various parts, there to germinate and produce another dandelion the succeeding year. The sap of the dandelion is an excellent remedy for various complaints. This flower is often gathered and made into tea, and drunk by people in declines and consumptions. Dandelion is taken from the French, *dent-de-lion*, which signifies, the tooth of the lion. The generic name, *Leontodon*, taken from the Greek, has the same meaning. This name is given to it because the teeth of the leaves resemble in form the teeth of the lion. 2. Time.

PRACTICAL PUZZLES.

1. The string must be put through the armhole, and over the head, then through the opposite armhole; then the hand must be put up underneath the waistcoat, and the string drawn down around the body until the former drops down about the waist, when the experimenter may jump out of it and claim his coat.

CHARADE.—FARE-WELL.

## OUR CORNER CUPBOARD!

NEVER look a gift shark in the mouth.

It is the early excise-man who catches the still-worm.

The man who squints rarely makes a good astronomer.

It is not every baby that curried lobster will agree with.

A mathematical line is straight enough, but the lines in geology are strata.

The man with two wooden legs should never ride anything but a clothes horse.

The best "house of correction" is the one in which a mother-in-law dwells.

If a "still tongue proves a wise head," then the wisest of mortals must be dumb persons.

Which are the two letters in the English language most disagreeable to ladies? D K—decay.

Of all flatterers the portrait painter may be said to carry off the brush; for no flatterer understands the art so well as he, of flattering a person to his very face.

The following is a rich specimen of Transatlantic poetry:

O, Jenny Lind has gone away,

The people loudly hollers,

And from our purses led astray

A mighty lot of dollars.

But we, in place of these, have had

A precious deal of notes;

But whether good, or whether bad,

There has been a great diversity of opinion, so that it is

impossible to come to a conclusion until the Presidential question is settled by the people's votes.

A bachelor, the other morning, remarked that wives who use the needle are like the enemy spoken of in the parable—they *see* TARS while the husbandmen sleep.

A wag, passing through a country town in the north, observed a fellow placed in the stocks,—"My friend," said he, "I advise you by all means to sell out." "I should have no objection, your honour," he replied drily, "but at present they seem much too low."

SHERIDAN being asked, whether he thought Mr. O'Brien was right in his assertion, that many thousands of the electors of Westminster would vote for the Duke of Northumberland's porter, were he put up, coolly replied, "No; my friend O'Brien is wrong; but they might for Mr. Whitbread's porter!"

## RAILROAD EPIGRAMS.

A sudden pitch

From a misplaced switch,

Laid me dead in this ditch.

Off the track the engine rushed—

Some were drowned, and I was crushed.

What is life? 'Tis but a vision,

Here I died by a collision.

Twenty more died by the same,

Verdict—"Nobody to blame!"

Sister, mother, aunt, and me,

Were run over—here we be.

We should have had time to mizzle,

Had they blown the engine's whistle.

THREE Venetians, whom Lord Byron brought with him into this country, were so dreadfully attacked by ophthalmia, as almost entirely to lose their eye-sight. "What can we do with these poor fellows?" said his lordship, when he heard of their misfortune. "Why," said Dr. L., "at the worst, we can set each of them up as a *Venetian Blind*!"

SIR Watkin, William Wynne, talking to a friend about the antiquity of his family, which he carried up to Noah, was told that he was a mere mis-hroom. "Ay," said he, "how so, pray?" "Why," replied the other, "when I was in Wales, a pedigree of a particular family was shown to me; it filled above five large skins of parchment, and about the middle of it was a note in the margin, '*About this time the world was created*!'"

A wealthy young lover once sought for his bride,

A dame of the blue-stocking school;

"Excuse me, good sir, but I've vowed," she replied,

"That I never would marry a fool!"

"Then think pot of wedlock," he answered, "my fair,

Your vow was Diana's suggestion,

Since none but a fool, it is easy to swear,

Would venture to ask you the question!"

Two eminent members of the Irish bar, Messrs. Doyle and Yelverton, quarrelled some years ago, so violently, that from words they came to blows. Doyle, the more powerful man (at the figs at least) knocked down his adversary twice, exclaiming with vehemence, "You scoundrel, I'll make you behave yourself like a gentleman." To which Yelverton, rising, answered with equal indignation, "No, sir, never; I defy you, I defy you; you can't do it!"

## OUR MEMORANDUM BOOK!

CHANGE.—The world, like the individual, flourishes in youth, rises to strength in manhood, falls into decay in age; and the ruins of an empire are like the decrepit frame of an individual, except that they have some tints of beauty which Nature bestows upon them. The sun of civilization rose in the East, advanced towards the West, and is now at its meridian; in a few centuries more it will probably be seen sinking below the horizon even in the New World, and there will be left darkness only where there is a bright light, deserts of sand where there were populous cities, and stagnant morasses where the green meadow or the bright corn-field once appeared.

SILK A PROTECTION AGAINST INFECTION.—A silk covering of the texture of a common handkerchief is said to possess the peculiar property of resisting the noxious influence, and of neutralizing the effects of malaria. It is well known that such is the nature of malaria poison, that it is easily decomposed by even feeble chemical agents. Now it is probable that the heated air proceeding from the lungs, may form an atmosphere within the veil of silk, of power sufficient to decompose the miasma in its passage to the mouth, although it may be equally true, that the texture of the silk covering may act mechanically as a non-conductor.

WHY A ROPE-DANCER CARRIES A POLE.—The feats of rope-dancers are experiments on the management of the centre of gravity. The evolutions of the performer are found to be facilitated by holding in his hand a heavy pole. His security in this case depends, not on the centre of gravity of his body, but on that of his body and the pole taken together. This point is near the centre of the pole; so that, in fact, he may be said to hold in his hands the point on the position of which the facility of his feats depends. Without the aid of the pole, the centre of gravity would be within the trunk of the body, and its position could not be adapted to circumstances with the same ease and rapidity.

TAKE CARE OF YOUR WATCH.—Wind your watch as nearly as possible at the same hour every day. Be careful that your key is in good condition, as there is much danger of injuring the machine, when the key is worn or cracked; there are more mainsprings and chains broken through a jerk in winding, than from any other cause. As all metals contract by cold and expand by heat, it must be manifest that to keep the watch as nearly as possible at one temperature, is a necessary piece of attention. Keep the watch as constantly as possible in one position—that is, if it hangs by day, let it hang by night against something soft. The hands of a chronometer or duplex-watch, should never be set backwards,—in other watches this is of no consequence. The glass should never be opened in watches that set and regulate at the back. On regulating a watch, should it be fast, move the regulator a trifle towards the slow, and if going slow, do the reverse. You cannot move the regulator too slightly or too gently at a time, and the only inconvenience that can arise is, that you may have to perform the duty more than once.

PHOSPHORUS.—This singular substance was accidentally discovered in 1667, by an alchemist of Hamburg, named Brandt, when he was engaged in searching for the philosopher's stone. Kunkel, another chemist, who had seen the new product, joined one of his friends, named Kraft, to purchase the secret of its preparation; but Kraft, deceiving his friend, made the purchase for himself, and refused to communicate it. Kunkel, who at this time knew nothing further of its preparation than that it was obtained by certain processes from urine, undertook the task and succeeded. It is on this account that this substance long went under the name of Kunkel's phosphorus. Mr. Bayle is also considered as one of the discoverers of phosphorus. He communicated the secret to the Royal Society of London, in 1680; and the process to Godfrey Hankwitz, an apothecary, who for many years supplied Europe with phosphorus. In the year 1737, a stranger having sold to the French Government a process for making phosphorus, the Academy of Sciences charged Dufay, Duhamel, and Hellot, to superintend it, and an account of the success of the experiment was published. In 1743, Margraf made a great improvement in the process; but still it continued to be obtained with difficulty, and in a very small quantity. In the year 1774, the Swedish chemists, Gahn and Scheele, made the important discovery, that phosphorus is contained in the bones of animals; and they improved the processes for procuring it.

TREATMENT OF DEAFNESS.—One of the latest efforts to restore to a deaf ear its original function, consists in applying a cup that fits closely to the side of the head, round the outer ear, and exhausting it with an air-pump. A common cupping apparatus answers every purpose, provided the glass will fit so well as to prevent the ingress of atmospheric air under the edge. In a variety of cases, the simple process of carrying on this exhaustion till a new sensation is felt, something like extreme tension in the lining membrane of the meatus externus, is represented to restore the organ to its normal state. Under such circumstances the theory of the remedy is, that deafness results from an impoverished flow of *cerumen*, in consequence of the inertia of the excretory ducts; and by taking off the atmospheric pressure, their proper fluid oozes out upon the tube and instantly modifies the condition of the mechanism, exterior to the drum. Having thus been roused from a state of torpor and suspended activity, they continue afterwards to act with energy. If they subsequently fall partially back to their abnormal condition, the pump must be reapplied, as occasion may suggest. As there is no witchcraft about it, and almost every practitioner has a breast-pump or similar contrivance, by which an experiment could be made, and there being no hazard attending it, it may be worth a trial, and it is very possible that one out of a dozen cases might be essentially benefited by this simple operation.

### Editor's Note-Book.

**DOMESTIC HINTS.**—No. 10.  
*Bathing.*—If to preserve health be to save medical expenses, without even reckoning upon time and comfort, there is no part of the household arrangement so important to the domestic economist as cheap convenience for personal ablution. For this purpose baths upon a large and expensive scale are by no means necessary; but though temporary or tin baths may be extremely useful upon pressing occasions, it will be found to be finally as cheap, and much more readily convenient, to have a permanent bath constructed, which may be done in any dwelling-house of moderate size, without interfering with other general purposes. As the object of these remarks is not to present essays, but merely useful economic hints, it is unnecessary to expatiate upon the architectural arrangement of the bath, or more properly speaking the bathing-place, which may be fitted up for the most retired establishment, differing in size or shape agreeable to the spare room that may be appropriated to it, and serving to exercise both the fancy and the judgment in its preparation. Nor is it particularly necessary to notice the salutary effects resulting from the bath, beyond the two points of its being so conducive both to health and cleanliness, in keeping up a free circulation of the blood, without any violent muscular exertion, thereby really affording a saving of strength, and producing its effects without any expense either to the body or to the purse. Whoever fits up a bath in a house already built must be guided by circumstances, but it will always be proper to place it as near the kitchen fire-place as possible, because from thence it may be heated, or at least have a temperature preserved by means of hot air through tubes, or by steam prepared by the culinary fire-place, without interfering with its ordinary uses. Where circumstances do not permit these arrangements, a small boiler may be erected at very small expense in the bath-room. Whenever a bath is wanted at a short warning, to boil the water necessary will always be the shortest mode; but where it is in general daily use, the heating the water by steam will be found the cheapest and most convenient method. As a guide for practice, we may observe it has been proved by experiment, that a bath with five feet water at the freezing point, may be raised to the temperature of blood heat, or 96 degrees, by 304 gallons of water turned into steam at an expense of 50lbs. of Newcastle coal; but if the door be kept closed, it will not lose above four degrees of temperature in twenty-four hours, by a daily supply of 3lbs. of coal. This is upon a scale of a bath of 5,000 gallons of water.

**THE THAMES.**—G. R.—This is only a scholarly name given to the Thames, probably from the termination of its Latin form *Tamisis*. In none of the ancient documents in which it is mentioned does the name *Isis* occur. The credit of having been the first to notice this, is usually given to Camden, but that excellent old antiquary appears not to have suspected the truth of the common notion. The Latin poem called "The Marriage of Thame and Isis" is even attributed to him by his biographer. It was Bishop Gibson, in his "Additions to Camden," who pointed out the error; and cited the various authorities in proof that it was an error, and the mistake of attributing it to Camden, no doubt arose from the manner in which the "Additions" are mixed up with the original text.

**THE HORSE GUARDS.**—S. T.—The Horse Guards were instituted in the reign of Edward VI., about the year 1550. The first troop of the Horse Grenadier Guards was raised in 1693, and was commanded by General Cholmondeley; and the second troop, commanded by Lord Forbes, was raised in 1702. There was a reduction of the Horse and Grenadier Guards, and the Life Guards as now established was raised in their room, May 26, 1788. The present edifice called the Horse Guards was erected by Ware, about 1780. In a part of the building is the office of the Commander-in-chief.

**NIKE OF DIAMONDS.**—M. C.—There are two reasons assigned for its being called the Curse of Scotland, namely that it was on the back of that card that the Duke of Cumberland wrote the cruel order to give no quarter to the Scots who fought on the side of Prince Charles Edward Stuart at the battle of Culloden; and that it was owing to a Scotch member of Parliament, part of whose family arms was the nose of diamonds, having voted for the introduction of the malt-tax into Scotland.

**SPECTACLES FOR THE BIRD OF A MAN DOG.**—K. R.—Take the yolks of three fresh eggs, and a little more than half

a noggin of olive oil, mix, and simmer the mixture over a slow fire until they are well incorporated. The patient before taking it must fast from food or drink six hours, and after taking it, for six hours more, and be kept quiet. If a man or woman, it is best that he or she lie in bed for the latter period, which must be repeated in like manner the following day, and in the same quantity. If the stomach reject it, more must be taken. The wound must be scratched open with a bit of wood, three times each day, and the above mixture applied as an ointment. If for a dog or any small animal, a double portion each time; if for a cow or horse, four times the quantity.

**THE HABEAS CORPUS ACT.**—T. WILKIN.—The Habeas Corpus Act is the famous statute, 31 Charles II. cap. 2. "The oppression of an obscure individual (says Judge Blackstone), gave rise to the famous Habeas Corpus Act." "The individual here alluded to, was one Francis Jenks, who (says De Lolme) having made a motion at Guildhall, in the year 1678, to petition the king for a new parliament, was examined before the Privy Council, and afterwards committed to the Gate-house, where he was kept about two months, through the delay made by the several judges to whom he applied, in granting him a Habeas Corpus." Mr. Fox, in his "Life of James II." has characterized this Act as "the most important barrier against tyranny, and best framed protection for the liberty of individuals that has ever existed in any ancient or modern commonwealth."

**TRANCE.**—E. G.—We are unable to define, with any degree of certainty, the cause of those trances which have occasionally taken place, and left behind them the most singular and unaccountable memorials of their effects. We are all aware, however, that it is a state in which the voluntary functions of the body are suspended, and the soul seems to be wrapt in visions. So far as we know, it is a state similar to that of *syncope*, wherein the patient continues without any sensible motion or respiration, accompanied with a suspension of the action of the brain, and a temporary loss of sensation or volition. It is from these characteristics of the disease, that the word has been adopted in grammar to signify the elision or retrenchment of a syllable from the middle of a word, as it might be the retrenchment of a man from the middle of his charger. These traits of the disease are certainly bad enough, but usually not so violent as when the neophyte huntsman is caught, as in this case, in a complete and visibly distressing state of

SUSPENDED ANIMATION.

**ADULTERATED CAYENNE PEPPER.**—T. M. Yes; everything you take in at the mouth almost, saving the pure element water, is adulterated. The *Lancet* gives the following results of an analysis of twenty-eight samples of cayenne pepper, regarding which you write, obtained at different shops:—"That out of the twenty-eight samples of cayenne pepper subjected to analysis, twenty-four were adulterated. That out of the above number, four only were genuine. That out of the twenty-four adulterated samples, twenty-two contained mineral colouring matter. That red-lead, often in large and poisonous quantities, was present in thirteen samples. That Venetian red, red ochre, black-lead, or some other analogous ferruginous earths, were contained in seven samples. That cinabar, vermilion, or sulphuret of mercury, was detected in one sample. That six samples consisted of ground rice, turmeric and cayenne, coloured with red-lead, or a red ferruginous earth. That six contained salt, frequently combined with rice and red ferruginous earth, or red lead. That one of the samples was adulterated with a quantity of the husk of white mustard-seed. That two contained rice only, coloured with red lead or a ferruginous earth."

**COMMUNICATIONS RECEIVED.**—P. M. (there is no accounting for taste, and you are entitled to yours as well as another; but we think you would be just as fashionable in a corduroy kilt, as in a pair of pantaloons with tasselled Hessians at the present day. If it will particularly gratify you to wear the dress, do so, by all means; but do not call boys rude if they stare at you, and put the tips of their thumbs on the points of their noses and extend their digits before your face). G. F. (It was James I. of Scotland who was so long a prisoner in Windsor Castle).

D. S. ("Consider the ant and be wise," then you may retrieve your circumstances, and yet resume your position in society). M. A. (Plato was a hetman of the Cossacks, and did visit London with the Russian Emperor Alexander, and was the object of great admiration). D. A. (the freaks of fashion are sometimes as wonderful in its own world, as are the "fantastic tricks" of Nature in hers. For example, it was customary in the days of Hogarth for ladies to adorn (1) their lovely countenances with black patches, so disposed as to smite them to the designation of beauty spots, and Frolsart narrates that, on one occasion, a number of young Englishmen put each a patch on one of his eyes, making a solemn vow to his "lady love" that he would not take it off till he had performed some notable exploit in France to her honour, and these gentlemen were greatly admired. Persons who would do such things now-a-days would be esteemed nothing less than mad; and if you should mount the Charles II. peruke, notwithstanding the picturesque of which you speak, we promise you a greater amount of ridicule than admiration). F. C. (coaches were introduced into England as early as the reign of Queen Elizabeth, and long prior to that time, carriages under the different denominations of chairs, cabs, carriages, and whiffles, were used by the gentry). C. N. (a Knight of the Post, was a hired witness, or one ready to swear to anything for money; so called from the whipping-post, to the punishment of which his crimes frequently brought him. Butler partially defines the character in the following couplet:

"But faith and love and honour lost,  
Shall be reduced to a Knight of the Post.")

M. G. (It was in 1823, that Captain Johnston received £10,000 for making the first steam voyage to India in the *Enterprise*, which sailed from Falmouth). K. C. (the monument of James II. is at the back of Whitehall). A. Y. (No). A. LOVER or FAIR PLAY (we must decline offering an opinion regarding the Association in question). G. R. (the wild boar was the undoubted progenitor of all the European varieties of the hog, and was formerly a native of the British Islands, and very common in the forests until the time of the Civil Wars in England). T. C. ( cider is the juice of apples made spirituous by fermentation; the apples are gathered in the autumn, because they are then ripe, then ground in a mill, and the juice being pressed out is put in casks to ferment). P. C. (we do not doubt it. The beautiful lake of Geneva is contracting, and the lakes in Lincolnshire and Cambridgeshire have become dry in our days. The marine palace of Canute is now twenty miles from the sea). T. S. (the house-wren is one of the most useful birds we have, from its capacity to devour poisonous insects). R. L. (it is folly talking so. A governess has not the power of choosing an occupation. She is by education and habits of thought a gentlewoman, and can follow no other line of exertion. It is much to be deplored that such are not treated with more tender consideration than they are in some families). M. G. (one fourth of yeast, and three of warm water, is the proportion for baking). C. C. (the peculiar influence of tea, especially of the green variety, over the nervous system, depends on the volatile oil which it contains). R. R. (Water Flannel is a microscopical plant, composed of jointed threads, secreting carbonate of lime on their surface, and forming seeds composed of starch within them). M. S. A. (consult a medical practitioner). G. C. (the historical traces of the use of cards are found earliest in Italy). M. D. (No; a hundred candles give no more light than a gas-pipe of an inch diameter). X. L. (canker in trees is caused by a superabundance of sap, which forces its way through the bark, and is checked by sudden cold). D. M. (the "Capati Sensi," were the lowest class of Roman citizens, who, having no property, were counted by their heads). P. L. (No; the thinner the stratum of cement, the firmer it will hold). C. A. ("Why is the air esteemed salubrious at sea?" Because the continual motion of the waters preserves the oxygen and nitrogen in due proportions). U. R. (give up the argument. In animals habit and instinct are the same now as they ever were. Where there is no mind, all is statorary). P. C. (it does not follow that because you may have a high appreciation of the poetry of another, that you have the qualification to be a great poet yourself. A certain amount of judgment, galeity and imagination may enable any one to appreciate; but there must be something more than these, to create).

## UNDINE: A MINIATURE ROMANCE.

### CHAPTER I.

ONCE on a beautiful evening, it may now be many hundred years ago, there was a worthy old fisherman who sat before his door mending his nets.

Now the corner of the world where he dwelt was exceedingly picturesque. The green turf, on which he had built his cottage, ran far out into a great lake; and this slip of verdure appeared to stretch into it as much through love of its clear waters, blue and bright, as the lake moved by a like impulse, strove to fold the meadow, with its waving grass and flowers, and the cooling shade of the trees, in its embrace of love. They seemed to be drawn toward each other, and the one to be visiting the other as a guest.

With respect to human beings, indeed, in this pleasant spot, after excepting the fisherman and his family, there were few, or rather none, to be met with. For in the background of the scene, toward the west and north-west, lay a forest of extraordinary wildness, which, owing to its sunless gloom and almost impenetrable recesses, as well as to fear of the strange creatures and visionary illusions to be encountered in it, most people avoided entering, unless in cases of extreme necessity. The pious old fisherman, however, many times passed through it without harm, when he carried the fine fish,

which he caught by his beautiful strip of land, to a great city lying only a short distance beyond the extensive forest.

Now the reason he was able to go through this wood with so much ease, may have been chiefly this, because he entertained scarcely any thoughts but such as were of a religious nature; and, besides, every time he crossed the evil-reported shades, he used to sing some holy song with a clear voice, and from a sincere heart.

Well, while he sat by his nets this evening, neither fearing nor devising evil, a sudden terror seized him, as he heard a rushing in the darkness of the wood, that resembled the trampling of a mounted steed, and the noise continued every instant drawing nearer and nearer to his little territory.

What he had fancied, when abroad in many a stormy night, respecting the mysteries of the forest, now flashed through his mind in a moment; especially the figure of a man of gigantic stature and snow-white appearance, who kept nodding his head in a portentous manner. Yes, when he raised his eyes toward the wood, the form came before him in perfect distinctness, as he saw the nodding man burst forth from the mazy web-work of leaves and branches. But he immediately felt emboldened, when he reflected that nothing to give him alarm had ever befallen him even in the forest; and, moreover, that on this open neck of land the evil spirit, it was likely, would be still less daring in the exercise of his power. At the same time, he prayed aloud with the most earnest sincerity of devotion, making use of a passage of the Bible. This inspired him with fresh courage; and soon perceiving the illusion, the strange mistake into which his imagination had betrayed

## PICCIOLA;

OR,

## THE PRISON FLOWER.

(Continued from page 693.)

He soon carried them to excess; and his relation, a good and worthy ecclesiastic, whose mind, perhaps, wanted expansion, but whose intentions were good, and convictions sincere, instead of seeking to control this enthusiasm in its commencement, excited it, hoping that Christian humility might prove a shield to the warmth of his character. He afterwards discovered the error in his calculation: Giacomo had no longer any desire, any wish, but to enter the church.

To ward off this blow, which would have deprived them of their only son, his father and mother recalled him home; and relying on the warm affection he felt for them, they managed so well, that they persuaded, or rather obliged him, by their supplications and tears, to marry.

Giacomo married accordingly; but his marriage turned out at first very differently from what they had expected: he lived with his wife as with a sister. She was young and beautiful, and felt the tenderest affection for him. He used his influence over her heart, he exerted his natural impetuous eloquence, not to make her comprehend the happiness of the domestic tie, but the charms of a religious life. He succeeded so completely, so well, that, a year after their union, the young wife retired into a convent, and he remained in the environs of Bielle.

A little distance from the village he inhabited, rises a chain of heights, the last branch of the Pennine Alps. At the base of Mount Mucrona, the highest peak of these mountains, a little valley, suddenly sinking, dark and sombre, covered with vapour, filled with rocks, bordered with precipices, some from a distance to answer the description Virgil and Dante gave us of the mouth of hell. But in proportion as you approach, the rocks appear clothed with beautiful verdure pleasing to the eye; the precipices present slopes of a gentle inclination, where flowering shrubs climb up the beautiful hill, covered with natural groves; and the vapours, changing their tint, with the rays of the sun, by turns white, rose, or violet at length entirely disappear. Then may be seen, at the bottom of this lovely valley, a lake of about five hundred paces wide, fed by the springs, and from whence issues the little river of Oroppa, which at some distance from thence empties into one of the smaller hills of the chain, at the summit of which is a church consecrated at great expense to the Virgin Mary, by the piety of the people. This church is the most celebrated in the country.

If we may believe the legend, St. Eusebius, on his return from Syria, in this solitary spot deposited a wooden image of the Virgin, carved by St. Luke the evangelist, which he wished to preserve from the profanation of the Arabs.

Well, in this little valley, on the point of those rocks, on the slopes of these precipices, on the borders of that lake and river, on that mountain, in that church, at the foot of that image, Giacomo Gerhardt passed five more years of his life, entirely forgetting the world, his friends, his family, his wife, his mother for the Virgin of Oroppa!

Ignorant that credulity is not belief, that superstition leads to idolatry, and that all excess estranges us from God, it was not the celestial Mary, the mother of Christ, that he adored; it was his own virgin! his virgin of the mountains. His days and his nights passed away in prayer, in weeping before her for imaginary faults, for his heart was like that of a child. In vain, his relation, the good curate, more and more alarmed at this excessive favour, sought to bring him back to reason; he could do nothing. In vain to distract him from this engrossing and dangerous propensity, he proposed his visiting other places where the virgin was honoured. What mattered to Giacomo Our Lady of Loretto, and St. Mary of Bologna, or of Anan! It was only the material object, the image, the piece of black warm cloth which he adored, and not the holy woman it so unworthily represented. This feeling of enthusiasm only lost in depth to gain in extent.

The Virgin of Oroppa had around her her suite of saints, both male and female.

Amongst them Giacomo had distributed all the celestial powers, all the attributes of the Divinity. Of one he asked to dissipate the hail-clouds, which sometimes descended on his mountain from the heights of Mount Mucrona; of another, to soften his mother's sorrow, or to sustain his wife under her trials; of this, to watch over his sleep; of that, to defend him against temptation; the same with the rest; and his devotion became an impure polytheism,—his mountain of Oroppa an Olympus, where God alone had no place!

Imposing upon himself the most severe penances and privations, he fasted, he macerated his body, sometimes remained three days without taking food, and would then sink into a state of exhaustion, which he honoured by the name of ecstasies. He had visions and revelations; he thought, like some Quietists, that, by subduing his material nature, he was able to render his soul visible; he held conversations with it; and his health was destroyed, his reason lost—he was mad!

One day he heard a voice coming from on high, ordering him to go and convert the heretical Vaudois, some remains of whom still existed, not far from him, in the Valais. He set out, crossed the country watered by the Tesino, attained the summit of the great Alps, on the side of Monte Rosa; but suddenly shut in by winter, in the midst of a tribe of herdsmen, he was obliged to pass several months sheltered under the wide roof of a chalet, for the accumulating snows had stopped up all the passes.

This chalet, called in the country *les strablas*, or the stables, was an oblong building, five hundred feet in length, open only on the southern side, and covered closely in every other part with strong planks of pine, cemented with gums, resins, mosses, and lichens. In the cold season, men, women, children, and flocks, all collected together there, under the direction of the most ancient of the tribe. In the centre of the habitation, a fire, constantly kept up, boiled an enormous cauldron, where, sometimes in turn, sometimes together, they prepared for the community dried vegetables, bacon, mutton, quarters of chamois, or outlets of marmot, which they ate with chestnut bread; and for wine they had a somniferous liquor, composed of several kinds of whortle-berries fermented.

Their numerous occupations—the care of the flocks and children, preparing cheeses, spinning hemp—making agricultural instruments, that later, during the fast-fleeting summer of those climates, they might force their rocks to give them fruits—forming cloths of sheepskin, baskets of bark, little elegant articles of larch or sycamore wood, destined for the towns, kept the whole population of the chalet employed. They were laborious but gay, and mingled laughter and songs with the sound of axes, wheels, and hammers. There, labour seemed a pleasure, study and prayer were considered duties and recreations. They sang their holy songs with harmonious and practised voices; the old taught the young reading and arithmetic; to the better prepared, music, and even a little Latin, for civilization in the High Alps, like its vegetation, is preserved under its snow, at least among these tribes, and it is not uncommon to see, on the return of spring, minstrels and schoolmasters descend from these stables to the villages of the plains, and spread instruction and pleasure at the foot of the mountains.

The hosts of Giacomo were Vaudois.

For a missionary this was a fine opportunity; but at the first word he pronounced of the subject of his religion, the chief of the family, an old cottager, a man less respectable even than his age than from his labours and virtues, by which every instant of his life had been marked, imposed silence upon him.

"Our fathers," said he, "have suffered exile, dispersion, death even, rather than consent to you heretics; do not hope then to do with us what you of perfection could not accomplish with them. Suffer, you are here, and do not live in our way; pray in your way, we will pray in ours; but none your efforts with ours in the common labours; for here, far from the noise and distraction of the world, where a would kill you. Be our companion, our brother, as long as the snows surround us. Then, when the roads are free, you may quit us, if it seem good to you, without blessing the month that warmed you, without even turning to salute those who have lodged and fed you. You will owe them nothing; you will have worked for them; and if the balance be on our side, God will discharge it."

Oblived to submit, Giacomo remained during five months with these good people; during five months he was a witness of their virtues; during five months, morning and evening, he heard the devotions they addressed to the one God. His mind, ceasing to be excited by the objects of his exclusive worship, became calm; and when that prison which the ice had closed behind his feet was opened by the sun at the period that was, and the magnificence of a nature from which he had been severed for so long a time, and which placed itself to him from the top of the Alps, the idea of an Eternal and All-powerful Ruler entered fully and vividly into his mind, and resumed its imperial place.

The removal of the early buds—the sight of the first plants which appeared covered with flowers from beneath the snow—the remainings of the swarms which surrounded them,—all excited transports of joy and love in his heart.

A whole volume would not be sufficient to describe the numerous and varied sensations that Giacomo then experienced. The good old man had felt attached to him, he knew little of books of science, but he had added all his own observations to those of his fathers, and was delighted to explain to him the Creator by the creation. At length, from that asylum, before which he had passed and himself with his idol of fanaticism and intolerance, the great event away almost entirely composed. The habit of employment, the duties of a family, led back Giacomo's ideas to the duties he ought to fulfil. He had retired to the parlour of his wife's convent. It would again require a complete history to relate the means he was obliged to use to reconquer that heart which he himself had formerly repulsed. This history will, perhaps, be worth telling another time.

In fact, after unheeded efforts to tear his wife from her cloistral life, to destroy himself the effect of his former lessons, his earlier instructions, Giacomo Gerhardt, restored to reason, to happiness, to rational belief, became the best of husbands, and some years after the happiest of fathers.

Twenty-five years of wisdom and virtue redeemed his errors. On his return to Turin, in the midst of his own family, he created, by his industry, occupations worthy of him. He possessed a tolerably good fortune, which business might have considerably increased if his benevolence had not swallowed up his gains. It was so delightful to him to do good! The love of his fellow-creatures filled his heart with joy, and the study of Nature added an inexhaustible charm to his life. Animated nature, above all, excited his curious investigations; and as God is great even in the least of his works, insects, offering themselves most readily to the hand of the religious philosopher, obtained the preference over the other productions of the Divine Artist. And thus it was that later, during his days of captivity, old Gerhardt gained from Ludovico the singular appellation of the fly-catcher.

The two captives had soon no secrets from each other. After having rapidly gone over the principal events of their existence, they resumed it in detail, to impart to each other the slightest emotions that had marked its course. They also talked of Teresa; but at that name Charney felt embarrassed, and the blood would mount to his forehead; the old man himself

became pensive, and a moment of silence, sad and solemn, always followed the recollection of the absent angel.

More willingly, they interrupted their recitals by some grand dissertation on a point of morality, or by observations on the caprices of human nature. The philosophy of Gerhardt, always gentle and consoling, made happiness consist in love of our neighbour; while Charney, often in opposition to him, could not comprehend how this warmth of indulgence and tenderness could be maintained for man, in spite of the injustice and persecutions which the victim of the Piedmontese had suffered from them.

"But," said he to Gerhardt, "did you not then curse these men, the day when, after having shamefully calumniated you, they deprived you of your liberty, and of the sight of your child?"

"The fault of some should not fall on all! These, even, who have injured me—who know!—might not they, deceived by appearances, blinded by political fanaticism, have acted sincerely? Believe me, my friend, we must think of the evils we have endured with the thought of pardon in our hearts. Which of us does not require it for himself? Which of us has not mistaken error for truth? The apostle John said, 'God is love!' Oh! how beautiful and true is this word! Yes, it is by loving that we rise to God, and that we derive from him strength to support misfortune. If I had entered prison with a feeling of hatred towards mankind, I should certainly have died of despair. But no! Heaven be praised, these painful sentiments were far from me. The remembrance of so many kind friends, faithful in my misfortunes—so many hearts that have suffered from my sufferings, made me still love my fellow-creatures; and the worst moment of my captivity was that when the sight of man was denied me!"

"What! did they use such severity towards you?" said Charney.

"At the first moment of my arrest," pursued his new friend, "I was taken to the citadel of Turin, put in solitary confinement, shut up in a subterranean gallery, where the jailors even could not communicate with me. They passed my food through a revolving box, and, during one long month, nothing came to interrupt this silent solitude. You must know what I experienced then, fully to comprehend how truly, notwithstanding all the reveries of our savage philosophers, a state of society is the natural state of the human race; and what privation he endures who is condemned to perfect solitude! Not to see a human being! to live without being supported by one look, without one voice sounding in your ear! To clasp no hand in yours! To lay your head, your breast, your heart, only on cold and insensible objects, it is frightful; and the strongest reason would sink under it. One month, one eternal month! passed thus away with me. Even at its commencement, when my turnkey came every two days to renew my provisions, the noise merely of his footsteps caused me inexpressible joy. I waited the moment with anxiety. I exclaimed 'Good day' to him through the iron door that separated us, but he did not reply. I endeavoured, during the rotation of the box, to catch a glimpse of his face, hands, or even his clothes. I could not succeed, and I was in despair. Had he borne upon his features the signs of cruelty and vice, I should have thought him beautiful. Would he have extended his hand to me, were it only to have repulsed me, I should have blessed him. But, nothing!—nothing! I only saw him the day of my removal to Fénestrelle. My only distraction, my only pleasure, my only company, then, were little spiders, which I observed for whole hours; but I had already observed them so often! I made friends of them, for I crumbled my bread to feed them. Rats, also, were not wanting in my dungeon; but these animals have always inspired me with dread, and an invincible disgust. I fed them also as well as I could, while defending myself from their approach and contact. However, the care that I took of my spiders—the terror, even, with which my poor villanous rats inspired me, was not sufficient to occupy me, and despair overwhelmed me when thinking of my daughter!"

Charney sighed; Gerhardt comprehended what was passing in his mind, and resumed the calmness of his demeanour, hastened to continue.

"Good fortune, ere long, came to me! Light came to my gallery by a dormer window, strongly barricaded by an iron cross (it was before that cross of my prison I performed my morning and evening devotions); a sloping shade which widened towards the outer end, was set up before this window, and only permitted my eyes to reach the upper extremity of a large piece of wall built to connect two bastions. Above me was situated the keep of the citadel. One day—Celestial Providence, how I thank thee for it!—the shadow of a man was suddenly thrown upon that part of the wall that was within my sight. The person I could not see, but I guessed his movements by those of the shadow. That shadow went and came. It was that of a soldier recently placed as a sentinel on the platform of the keep. I distinguished the out of his coat, his epaulettes, the form of his cartouche-box, the point of his bayonet, the waving of his plume. How can I tell you, my friend, the joy with which my soul was filled! I was no longer alone! a companion had just arrived! The next day, the following day, the shadow thrown by the soldier appeared on the wall, his shadow or that of another! But at least it was always a man, one of my fellow-creatures, who lived, who moved there, under my eyes! I observed and followed the passing and repassing of the shade; I placed myself in correspondence with it, I walked along my gallery in the same direction as the soldier along his platform. When they came to relieve guard, I said 'Adieu' to the departing 'Good day' to the coming sentinel; whose turn of duty it was. I knew the corporal; I soon knew all my military guards by their outline: shall I confess it? for some I felt nameless, accountable preferences. According to their attitude, their step, the slowest or the vivacity of their motions, I endeavoured to guess their age, their character, their feelings. One evening the shade, turned his musket rapidly in his hand, as moved his head in numerous ways he was doubtless young and naturally gay; he was singing, or muttering himself with dreams of love. Another passed with his head bent, sometimes stopping; and leaning both his arms

on his piece, he would remain long in a melancholy attitude. I was reminded of his absent mother, of his village, of all he had left behind him. His head was lifted to his face, perhaps to dry a tear. And these were the moments for whom I felt affection; I was interested in their fate, I forgot my own prayers for them; And thus new feelings of tenderness arose in my heart and consoled it. Believe me, my friend, we must love our fellow-creatures; we must love them with all our souls; for thus alone can we secure happiness."

"Excellent man!" said Charney, much touched, "who would not love you! Why did I not know you sooner? My life might have been changed. But ought I to complain? Have I not found here what the world refused me,—a devoted heart, a solid support, virtue, truth;—you and Picciola!"

For in the midst of all these affusions Picciola was not forgotten. The two companions had constructed together, near it, a larger, pleasant, more commodious bench than the first. They sat on it beside one another, opposite the plant, and they would imagine they were all three conversing. This bench they called the *bench of conference*. It was there the simple, modest man endeavoured to be eloquent, that he might be persuasive; to be persuasive, that he might be useful; and natural eloquence and persuasion did not fail him. That bench was the bench of the school, the chair of instruction. There were seated the professor and the pupil—the professor, he who knew the least, but who knew the best;—the professor was Gerhardt,—the pupil Charney,—the book, Picciola!

## CHAPTER XIX.

THEY were reposing on their accustomed seat. Autumn was approaching. Charney, losing all hope of seeing his Picciola flower again, was speaking to his friend of his regret for the fall of her last blossom; and he, to supply the loss as much as he could, laid before him a general view of the fructification of plants.

There, as elsewhere, the print of a Divine hand is shown in all the acts of nature. Gerhardt told how some plants, with large spreading leaves, that would stifle each other, by growing near together, have their seeds furnished with plumes, that the wind may more easily disperse them; how, when the plumes are wanting, these seeds ripen in pods, provided with an elastic spring, which suddenly starting at the moment of their maturity, throws them to a distance to separate them. Plumes and springs are feet or wings which God has given them, that each may choose its place in the sun.

What eye can follow, in their rapid flight through the agitated air, the membranous fruit of the elm—that of the maple, pine, and ash, whirling about in the atmosphere, in the midst of a cloud of other seeds, whose lightness is sufficient to raise them, and appear to be hastening of their own accord to meet the birds whose hunger they are to appease.

The old man also explained how water-plants—plants destined to ornament the streams or adorn the edges of ponds—have their seeds so formed that they may float on the water, and plant themselves on the sides of the banks, or pass from one shore to another; how, when their weight draws them to the bottom, it is that they require to grow in the bed of the river, or the slime of the marsh, as the flags and reeds, that come up like an army of lances from the bosom of the stagnant waters, and the brilliant water-lilies, which, while their roots are in the mud, rise to the surface, and spread their round shining leaves on the bosom of the stream, with their beautiful white or golden flowers. And he told him also of the loves of the Vallaneria, separated from her husband, which lengthens herself by extending the spiral cord that serves for her foot-stalk, to flower above the water; whilst her spouse, destitute of that faculty of extension, violently breaks the bands that retain him, to rise and blossom beside her, and die in fertilising her.

"What! do these things exist?" cried Charney, "and men in general do not deign to turn their eyes towards them!"

This was one of the old man's lessons.

"My friend," said his companion to him one day, as they were sitting together on the bench of conference, "have the insects which you have made your favourite study offered as many wonders to your observation as Picciola to me?"

"Quite as many," replied the professor. "Believe me, you will not thoroughly appreciate your Picciola till you have made acquaintance with those little animated beings that sometimes come to visit her, and fly and hum around her. Then you will see those numerous relations, those secret laws, that connect the insect with the plant, as the insect and the plant to the rest of the world: for all is born from the same Will,—all is governed by the same Intelligence! Newton has said, the universe was created by a single effort. Hence that harmony, that general union, which cannot be understood in its vast whole, but which nevertheless exists."

Gerhardt was going on to develop his ideas, when, stopping suddenly, he fixed his eyes on Picciola, and kept an attentive silence for some moments.

A butterfly of rich colours had alighted on one of the branches of the plant, its wings agitated with a peculiar quivering.

"What are you thinking of, my friend?"

"I am thinking," replied the professor, "that Picciola will assist me in replying to your former question. Look at that butterfly! At the moment I am speaking, it is obliging me to form an acquaintance with it. Yes, for it has placed its hope of future progeny on me, and is waiting."

Charney bent forward to see it; this was all. The butterfly, after having hovered a moment with a quivering voice as before, alighted on the leaf of the plant.

"Well, replied Gerhardt, "it is by chance that I have seen it; but it has come to coincide with some of my present thoughts. Tell me, my friend,

below. The insect has reserved a species of plant for each species of insect. Every plant has its insect, its large and small. Now, understand what there is in this. It is the law of nature. It was at first a caterpillar itself, and when it became an insect, it was the substance of a small plant. It afterwards went through its transformations, and, faithful to its first affection, it flew indifferently to any flower, to suck the juices of its host. Well, when the moment of maturity is come to it, to that butterfly that has not known its mother, and will not see its children (for its work is accomplished, and it will die), to that butterfly, that consequently experience cannot have instructed, it comes to confide its eggs to the plant, like that which nourished itself under another form, and in another season. It knows that the little caterpillars will come from the eggs, and for them it has forgotten the wandering habits of a butterfly. Who, then, has taught it this? Who, then, has given it the remembrance, the reasoning and faculty of recognizing that plant whose foliage now is no longer what it was in spring? Praised eyes are sometimes deceived, but the butterfly never!"

Charney was going to express his surprise.  
"Oh! this is not all!" interrupted Gerhardt. "Now examine the branch which it has chosen. It is one of the oldest and strongest; for the new shoots, weak and tender as they are, may be destroyed by the winter frosts, or broken by the wind. This it also knows. Again—who, then, has taught it?"

Charney was in amazement. "But," said he, "pardon me, my friend; I fear lest you should be deceived by some illusion."

"Silence, sceptic!" cried the old man, with one of his intelligent smiles; "you will perhaps believe what you see. Attend to me well. Picciola is going to play her part in her turn. This does not refer to the foresight of the insect only, but to that of nature,—to one of those laws of harmony which I spoke of just now, and which obliges the plant to accept the legacy of the butterfly. In the approaching spring we shall be able to verify this prodigy together," said he, repressing a sigh addressed to his daughter. "Then, when the first leaves of Picciola shall show themselves, the little larvae enclosed in the eggs will hasten to break their shells. You know, doubtless, that the buds of different shrubs do not open at the same time, and also the eggs of the different kinds of butterflies are not hatched on the same day; but here a law of unity regulates the bursting forth of the plant, by that of the insect. If the larvae came before the leaves, they would find nothing to feed upon; if the leaves became matured before the birth of the little caterpillars, they would be unable to feed on them with their feeble jaws. It cannot but be so. Nature never deceives! Each plant follows in its progress the course of the insect it is to nourish; the one opens its buds, when the other opens its eggs; and after having grown and strengthened together, together they will open their flowers and their wings."

"Picciola! Picciola!" murmured Charney, "thou hast not, then, told me all!"

Thus from day to day succeeded these delightful instructions; and when the evening came, the captives embraced while saying adieu, and returned to their chambers to wait there for sleep, or to think, often unknown to each other, of the same object—the daughter of the old man. What had become of her since the order of the captain forcibly exiled her from the prison of her father?

Teresa had at first followed the emperor to Milan; but she soon learned by experience that it is sometimes more difficult to cross an antechamber than an army. However, the friends of Gerhardt, stimulated by her entreaties, again redoubled their efforts, and promised before long to put an end to his captivity; and Teresa, more tranquil, had retraced the road to Turin, where a relation offered her an asylum.

The husband of this relation was librarian of the city; it was he whom Menou commissioned to make choice of the books to be sent to the fortress of Fénestrella. The nature of these books enabled Teresa easily to guess for whom they were destined. Hence, in one of the volumes, the insertion of that little note, whose mystic style could compromise neither her father nor her protégé. She was ignorant then that her father and Charney were more than ever separated from each other; and when the news reached her by the very messenger who had taken the books, terrified for the consequences of such complete solitude to her father, one single thought above all others occupied her mind—the reunion of the two captives!

Not only did she address letter upon letter to the governor of Piedmont, but she also interested the principal inhabitants of Turin in her cause, and even the wife of Menou. He had sufficient motives for not opposing a prolonged resistance to such numerous and pressing solicitations, and all that she asked was granted to Teresa.

Some time after, when, on being presented to the governor of Piedmont by Madame Menou, she offered her thanks, and poured out to him the expression of her gratitude, the old general, pleasantly surprised at seeing her—touched by that eloquence of filial tenderness which flowed from her lips, lost for an instant his usual roughness; and taking her affectionately by the hand, said—

"Come and see me sometimes, or rather come and see my wife. Perhaps before a month she may have some good news to give you."

Teresa immediately thought the favour to be granted was, her being allowed to return to Fénestrella, and pass part of her time in the prison with her father; she threw herself at the feet of the general, and thanked him: a thousand times with a countenance radiant with happiness.

Repeat, not of these beautiful runs of October which recall those of spring. Gerhardt and Charney were sitting on their bench. Both silent and pensive, and leaning on the arms of their rustic seat, they might have been supposed indifferent to all around them. It was the eyes of the count had not turned, with an expression of interest and anxiety, towards his companion, who was

entirely sunk in a deep reverie. The features of Gerhardt were nearly changed by the dark appearance of distress. Charney might easily have guessed from the cause that gave rise to it, and he was deceived.

"Yes, yes!" exclaimed he, suddenly breaking a long silence, "separation is horrible! horrible! when it is not merited! to live separated from what we love!"

Gerhardt raised his head, and, to his own raising himself from the meditation in which he had been sunk, said—

"Separation is the great trial of life, is it not so, my friend?"

"I, your friend!" replied Charney. "Does that name suit me? Is it not I who have separated you from her? Can you forget it? Alas! you do not deny it, you were thinking of your daughter, and she, thinking of her, you could not turn your eyes towards mine. What chance, then, have I? I can well believe the sight of me must be odious to you."

"You deceive yourself strangely on the cause of my sorrow," said Charney. "Never, perhaps, did the remembrance of my daughter pain me more than to my mind with more consolation than to-day, for she has written to me, and I have her letter!"

"Can it be possible! She has written to you? They have permitted her! And Charney drew near the happy father, with an emotion of joy immediately repressed. "But does that letter tell you any melancholy news then?"

"No—quite the contrary."

"Then, why this sadness?"

"Alas! what would you, my friend? man is thus made. Regret always mixes with our dearest hopes. Our happiness here below casts its shadow before it, and it is on that shadow our eyes first rest. You speak of separation! Here, take this letter; read it; and you will soon guess why, this morning, a feeling of sadness came over me near you."

Charney took the letter, and held it some time without opening it. His eyes fixed on Gerhardt, he seemed to be endeavouring to guess what it contained by the features of his dear companion; then he examined the direction, and was touched on recognizing the writing. At length, opening the paper, he tried to read it aloud; but his voice trembled, and the words died on his lips; he stopped, and finished the letter to himself.

He read as follows:—

"MY DEAR FATHER,—

"This note that you now hold in your hands, kiss it a thousand and a thousand times; a thousand times have I kissed it, and there is a complete harvest for you to gather from it."

"Oh! I have not failed to do so," murmured Gerhardt, "dear child!"

Charney continued—

"It is to you, as to me, a vivid satisfaction, is it not, to be permitted at length to correspond? We owe eternal gratitude to General Menou for it! It is he who has at length ended the silence, that, perhaps more even than distance, separated us. May he be blessed! Henceforth, at least, our thoughts will fly to meet each other: I shall tell you my hopes, and they will sustain you; you will tell me your sorrows, and, when weeping over them, I shall think myself weeping near you. But, dear father, if a greater favour still should be in reserve for us!—Oh! pray suspend for a few moments reading this letter, and before going farther, prepare your soul for the sudden joys there remain for me to tell you!—Father! suppose I may soon be allowed to return to you!—to see you from time to time, to hear you, to surround you with my cares; during two years this happiness detained me, and then captivity appeared light to you. Well, if my hope should be realized, soon I shall return to those walls whence I was exiled."

"She is returning. What! here, to be with you?" interrupted Charney, with a cry of joy.

"Read, read," said the old man, sadly.

Charney read again the last sentence, and continued—

"Soon I shall return to those walls whence I was exiled. You will be happy, very happy, I am sure of it. Rest, then a little, on this sweet thought. Your daughter, your Teresa, begs you to do so! do not hasten to reach the end of this letter too quickly. Violent emotions are sometimes very dangerous! Have I not said enough to you? Charged to accomplish your wishes, did an angel descend from heaven, you would not have dared to ask more from him; I, too exacting, perhaps, before he resumed his flight, would have interceded with him for your liberty—your complete deliverance. At your age it is so sad to live away from your native country! The hands of the Doris are so beautiful; and, in your garden on La Colline, the plants, planted by my dead mother and my poor brother, have so greatly flourished. There, their memory dwells more than anywhere else! Then you must regret your friends—your friends whose generous efforts have so much aided my weak endeavours.—Oh! my father; my father! the pen burns my fingers! my secret will escape. It has certainly escaped already. Oh! I implore you, arm yourself with strength and constancy, for this is the happiness that is coming. In a few days I shall rejoin you, no longer only to soften your captivity, but to end it. No more to remain with you for certain hours, and within the bars of a prison, but to bring you out with me—free and proud! Yes, proud! for you will have a right to be so; for your faithful Delphine and Cotenna have not obtained a pardon for you, but justice, reparation!"

"Adieu! my dearest father: oh! how I love you, and how happy I am!"

There was not a word in this letter, a single word of remembrance for Charney. This absent word he had sought for with agony during the whole time he was reading the letter; and yet, notwithstanding the disappointment he felt at not finding it, it was an exclamation of joy that first broke from him.

"You will be free, then," cried he. "You will be able to repose under the trees, and see the sunrise!"

"Yes," said the old man. "I am going to quit you! And this is the shadow that preceded my happiness to obscure it."

"And what matter," replied Charney, proving by the vehemence of his feelings, and his generous forgetfulness of himself, how capable he had become of comprehending true friendship. "You will be restored to her at last. She will have ceased to suffer by my fault. You will be happy. And I shall no longer feel at the bottom of my heart that weight which has oppressed me. During the few moments that remain for us to pass together, we shall, at least, be able to speak of her."

These latter words he uttered in the arms of his old friend.

The idea of the approaching separation seemed to redouble the mutual tenderness of the two captives. Always together, they were never tired of those long and instructive conversations on the "bench of conference."

There was a certain subject, however, one of very deep interest, which Gerhardt sometimes attempted to touch upon, and which Charney, on the contrary always avoided. The old man attached too much importance to it, to let himself be easily discouraged. For if he succeeded, he should leave him with less regret. One day an occasion for returning to it presented itself.

"Do you not admire," said his companion to him, "the fate that has united us two here; we, who, separated from one another by the countries in which we were born, imbued with opposite prejudices, by very different routes had arrived at the same point—denial of the Divinity?"

"Against that latter article, I defend myself," said Gerhardt, smiling: "to forget is not to deny."

"Granted: but which of the two was the more blind, the more to be pitied?"

"You!" said the old man, without hesitation; "yes, you, my friend. All excess may conduct man to his ruin, doubtless; but in superstition there is belief, there is passion, there is life. In incredulity all is dead. The one is the river turned from its true course; it inundates, it overwhelms, it displaces the vegetable fostering mould, but it is impregnated with its substance, and carries it with it; it may be able later to repair the disasters it has caused. The other is drought—sterility; it kills, it burns, without the hope of future benefit; of the soil it makes sand, of the opulent Palmyra a ruin in a desert! Incredulity, not content with separating us from our Creator, loosens the links of society, and even those of family; by depriving man of his dignity, it produces around him isolation and desertion, and leaves him alone—alone with his pride! I have said justly, a ruin in a desert!"

"Alone with his pride," repeated Charney, in a low voice, his elbow leaning on the arm of the bench, his head sunk on his hand. "The pride of human science! Why, then, is man so pleased to destroy the elements of his happiness, by wishing to penetrate, to analyse them? Even if he should owe that happiness to a lie, why seek to raise the mask, and hasten voluntarily to meet the ruin of his illusions? Is truth, then, so delightful? Will science be sufficient for his ambitious desires? Fool! it was thus with me. I am but a worm! I said, then, to myself, a worm destined to annihilation: but, planning myself on my dunghill, I was proud of knowing it. I was proud of my naked weakness. I had doubted happiness and virtue; but, before annihilation, my scepticism stopped. I believed. My degradation became glorious to me, since I had discovered it. And had I not good cause to congratulate myself! In exchange for my fine discovery, I had only given my kingly mantle and my treasure of immortality!"

The old man held out his hand to his companion.

"The worm, after having crawled upon the earth," said he, "after having fed on bitter leaves, after having dragged itself through the mud of the morass and the dust of the roads, will construct its chrysalis, a transient tomb! whence it will come forth, transformed and purified, to fly from flower to flower, to live on their perfumes; and then, displaying its brilliant wings, it will rise towards heaven! Is not the history of the worm ours in fact?"

Charney shook his head.

"Incredulous!" replied Gerhardt, reproving him by a smile characterised by sadness; "you see your malady was greater than mine. The cure is longer. Have you, then, forgotten the lessons of your Picciola?"

"No," said Charney, with a grave impressive voice; "I confess God! I now believe in that First Cause which Picciola has revealed to me; in that Eternal Power, the admirable Regulator of the Universe! But your comparison of the worm refers to the future destiny of man, and what proves that?"

"What proves it? his mind! That is all future, and bears him constantly onward. His life is consumed in ceaseless desire; even he turns in spite of himself towards that unknown pole that attracts him! for is his most glorious portion a fruit of the earth? Where are the people amongst whom ideas of immortality have not existed? And why should not that hope be realised? Can the mind of man go farther than the power of God? What proves it?—I will not bring the authorities of revelation and the holy scriptures; convincing as they would be without force for you, as the wind which impels the vessel on its way can do nothing against the immobility of the rock; for the rock has no sails to receive it, and its base is fixed in the earth. But, my friend, should we believe in the immortality of matter, and not in the eternity of that intelligence which serves to regulate our judgment on matter itself? What! genius, love, genius, can all these come to us by the attributes of certain fermentable, fusible molecules? Can that which does not think make us think? What! can brute matter create intelligence when intelligence directs and governs matter? Then, the stones also should love and think? Speak, speak, answer!"

"That matter may be endowed with thought," replied Charney, in the English tone he appeared inclined to assume. "There is no doubt in my opinion, for he denies innate ideas, while admitting instinctive knowledge. Then, interrupting himself, he exclaimed, laughing, 'Take care, my friend! Do you wish to draw me again into that labyrinth of metaphysics, metaphysics?'"

"I do not understand anything of metaphysics," said Gerhardt.

"And I not much," answered Charney. "It is not, however, from want of having devoted time to them. But let us leave a discussion which can only be useless or fatal. You are convinced, keep your convictions. They are dear to you, I know; suppose I were to shake them?"

"You cannot do so, and I accept the trial."

"What have you to gain by it?"

"To bring you back entirely to consoling faith. You cited Locke just now; I only know one fact respecting him: it is, that constantly, and, on the bed of death, he declared the only real happiness for man was in a pure conscience, and the hope of a future life."

"I can understand how pleasant it is to pour out, beforehand the draught of immortality, but my reason refuses to allow me to take a share. Do not let us talk of it more, believe me."

Both kept a constrained silence.

At that moment, something that was flying about above their heads suddenly settled before them on the leaves of the plant. It was a greenish beetle, a beautiful striped buprestis, with white wavy bands and a narrow body.

"Here, my friend," said Charney, "here is something to interest us. Reveal some more of the wonders of God to me!"

Gerhardt took the insect, carefully examined it, seemed to reflect; then suddenly his features were animated as with hope and triumph! One might have said an irresistible argument had just fallen from heaven; and, resuming at first his professor's tone, but raising it gradually in proportion, as the secret motive of the lesson became more apparent.

"I, the fly-catcher," said he, with apparent gaiety, "I ought, I know, to confine myself within the limits of my modest studies. I am not a savant!"

"The most enlightened mind, the best stored with science," replied Charney, "quickly perceives the bounds of its intelligence and strength, when it wishes to penetrate too far into things mysterious here below. Genius itself is worn out and destroyed, before it can make the true light burst forth!"

"We ignorant people," replied the old man, "go to the point by the easiest and shortest way; we simply open our eyes, and God is revealed to us in the sublimity of his works."

"On this point we are agreed," said Charney.

"Let us pursue our way then! A simple plant has been sufficient to make you comprehend that Intelligence which governs the world; a butterfly has given you a glimpse of the law of universal harmony: now this pretty buprestis, which has life and motion also, and whose organization is even superior to that of the butterfly, will conduct us perhaps farther. You have yet only read one page of the immense book of nature; I am going to turn over the leaf."

Charney drew near, and, with a very attentive air, in his turn examined the insect the old man held.

"You see this little being. Had it the power of creating, all human genius could add nothing to its organization, so well is it calculated for its wants, and the end that has been assigned it. It has wings to transport itself from one place to another, elytra above its wings to protect them and defend it from injury from hard bodies. It has besides a breast covered with a cuirass—eyes guarded with a network of mail that the thorn of the ragwort or the sting of an enemy may not destroy its sight. It has antennae, to examine the obstacles that present themselves; living by the chase, it has swift feet to reach its prey—hard, strong mandibles to devour it, to dig in the earth to make its abode, to deposit its booty or its eggs. If a dangerous adversary dare attack it, it keeps in reserve, an acrid and corrosive liquid which will soon send it away. An innate instinct has from the first taught it the means of providing its food, and constructing a habitation; to make use of its instruments and its arms. And do not think that other insects are less favoured than this. All have had their part in the magnificent distribution of the gifts of Nature. Imagination is appalled at the variety and multiplicity of the means employed by her to secure the existence and duration of these infinite small races. Now let us compare, and you will see that this frail creature will furnish sufficient to establish the immense line of demarcation which separates man from the brute!"

"Man has been thrown naked upon the earth; weak, incapable of flying like a bird, of running like a stag, of creeping like a serpent; without means of defence, in the midst of terrible enemies armed with claws and fangs; without the means of braving the inclemency of the seasons, in the midst of animals covered with wool, scales, or fur; without shelter, when every other has its den, its burrow, its nest, its abode; without arms, when all are armed around him and against him. Well! he has asked of the Heav his saviour, a dwelling, and the Heav has retired before his glance; he has spoiled the bear of his fur, and it was his first clothing; he has torn his horn from the bull, and formed it into his first gun. Then he scathed the earth to its inmost parts, to seek the instruments of his future power of a rifle, of a sword, he has made himself arms; and the metals, that at first formed his weakness, and his nakedness, prepared to seize him, for his power, he made the fulcrum of his feet, only to furnish him a support as an antagonist for his best friend."

"And what animals, is there one, a single one, who could live and flourish in the midst of such conditions? Let us divide, for a moment, the workman-

from his work; let us separate God from Nature. Well! Nature does all for this insect, and nothing for man. It is that man must be the offspring of intelligence, much more than that of matter; and God, in granting him this celestial gift, this ray of light, a portion of the divine fire, created him weak and miserable, that he might make use of it, and that he might be obliged to find in himself the elements of his greatness!"

"But, my friend," interrupted Charney, "what good then has this faculty, self called divine, done to our species? Superior to animals under so many relations, we are inferior to them under many others, and that insect itself, whose wonders you have just detailed to me, is it not worthy to excite our envy, and to raise in us a sentiment of humility rather than of pride?"

"No, for animals in their important actions have never varied. Such they are, such they have always been; what they know they have always known. If they are born perfect, it is that there can be no progression amongst them. They do not live by their own impulse, but by that given them by the Creator. Thus, from the commencement of the world, the beavers have built their huts on the same plan, the caterpillars and spiders have spun and woven their epouvons and their webs in the same form, the cells of the bees have always formed a regular hexagon; and lion ants have always traced, without a compass, circles and spiral lines. The character of their industry is uniformity and regularity, that of the industry of man is diversity, for it comes from free and creative thought. Now, observe. Of all the beings of creation, man alone has memory, presentiment, an idea of duty and hidden causes, reflection, love! He alone is determined by reason, and not by instinct, he alone can catch a glimpse of the universe in its whole—he alone anticipates another world, he alone knows life and death!"

"What doubt," said Charney, "but again, is what distinguishes him from animals so much to his advantage then? Why has God given us reason that misleads, science which deceives us? With our high intelligence we are often objects of pity to ourselves! Why is the only privileged being the only one liable to error? Why have we not the instinct of animals, and in its cur reason?"

"It is that they were not created for the same end. God does not expect virtue from them. Grant them reason, the liberty of choice in their dwellings and in their food, and you instantly destroy the equilibrium of the world. The Creator has decreed that the surface of the globe and even its most parts, should teem with animated beings that life should be everywhere. And accordingly, in the plains in the valleys in the forests from the summits of the mountains to their bases, on the trees as on the rocks—in the seas in the lakes, in the rivers in the streams, on their banks or in their beds in the swamps—in every climate, in every latitude from one pole to the other all is peopled all move in harmony with each other. In the depth of the desert as behind a blade of straw the insect and the ant are at the post that has been assigned to them. Each has its part each has his place marked out before him, each moves there in its appointed circle, each is there confined within its own limits, for it is necessary that all the squares of the immense chess board should be filled, they are so none can leave his place without dying. Man alone goes everywhere and lives everywhere—he crosses the oceans, and the deserts, he plants his tent on the wild, or constructs his palace on the shore of the lake, he lives in the midst of the surges of our life, under the tropical suns, he has the world for his son!"

But if this world is governed by God, said Charney, "why so many crimes in the bosom of human society, and so many disasters in nature? I admire with you the sublime distribution of created beings, my reason is overwhelmed before this vast whole; but when my eyes turn towards man—"

"My friend," interrupted the sage, "do not accuse God either of the errors of man, or the eruption of a volcano he has imposed on matter eternal laws, and his work is accomplished without his being anxious if a vessel sinks in the midst of a tempest or a town disappears under an earthquake. What matter to him a few existences more or less! I think he then of death? No! but to our soul he has left the care of regulating itself; and what proves it is the independence of our passions. I have shown you animals obeying in all things the instinct which directs them, having only blind impulses, possessing only qualities inherent in their species: man alone forms his virtues and his vices, he alone has free-will, for him alone this earth is a world of trials. The tree of happiness which we cultivate here below with so many efforts, will only flourish for us in heaven. Oh! do not think that God can change the heart of the wicked and will not that he can leave the just in sorrow, without reserving for him a recompense. What could he then have willed in creating us? If we were in this world to receive the reward of our virtues or our crimes, all prosperity would be honorable, and a thunderbolt would be a death of infamy!"

Charney was struck with surprise on hearing this simple man suddenly attain to eloquence from the depth of his convictions, he followed his eye, he admired his noble countenance, on which shone all the splendor of a religious soul; and involuntarily he felt moved and affected.

"But," said he, in a low voice, "why has not God given us a warranty of our immortality?"

(To be continued)

And the king, who had been seated at the foot of the throne, now rose and trembled in every limb at the sight of water-cresses. Dishes nearly expired at the sight of a fox, Omelette of Poland, raw from the sight of apples; Aristo shuddered at the sight of a buck, Curden at the breaking of an egg; Cassin at the cracking of a cock, Erasmus took a fever whenever he smelled fish; Henry of Navarre, and the Cardinal Gardon, from the odor of a rose.

## CAROLINE AND CATHARINA.

(Continued from page 67.)

## CHAPTER XXIII.

Learn—When to my father,  
King—Dead!—Wretched man.

At the close of a long, dark day, when the night seems about to descend, without one ray to mitigate its gloom, the clouds are sometimes lifted like a curtain, and beneath their sable folds eludes out the starry firmament, and the bow of the Covenant is set in the east, spanning the world in the arch of promise. At such times, the clouds are all pervaded by the light, we see far into their vapory depths, and can almost count the glistening drops that float suspended in mid-air. And the rain-drops hang trembling on the leaves, and the branches wave gently in the evening wind, not violent enough to shake them off, but only to present the thousand colors of the rainbow light, reflected from each tiny globe. And then the birds come out and sing to heaven their joyful songs, or flitter and play along the little rivulets, and by the rain. "The heart is lifted up in silent adoration," and the music of the heavens and the earth finds an echo of gladness in the soul.

Like such an evening as this, is sometimes closed a stormy life, and the pilgrim, whose way has been shadowed by adversity, often finds in the serenity of the hour of death, a compensation for the gloom of all the day. A life of splendour, gilded by the admiration of the world, too often closes in obscurity and neglect, and the bitterness of the passage to the grave is aggravated by the recollection of the triumphs that are past. And as the clouds of evening overshadow even the glory of the noonday, so the mild and pure serenity of the sunset may dispel, or gild the memory of all the storms that darkened the meridian. To live happily and die in misery, is a fate far worse than to live miserably and die in peace. For the moment of death is the moment to which all life has been tending, and for which all life was made. In natural landscapes, every smiling plain and blooming mead is bounded by the wood within whose darkened lines, imagination pictures deep ravines and gloomy shades, while beyond these haunted precincts, some again the open fields and flower-enamelled plains. And so it is in life—an alternation of lights and shades, the one but leading to the other; and happy is he who dies while the sun shines before another cloud hath curbed out the light!

It was with William Vernon a life of bitter disappointments was drawing to a close. But the clouds had broken away, and the sun was shining brightly and clear along the western sky.

His son sat at the head of his bed and held his hand, and the old man's eyes were bent upon him with an affection they had not often of late years shown. When he last saw him he was dozing and peevish; upon his features shone that imbecile and helpless expression, always accompanying such a state. Particularly was the visible about the mouth—that most truly expressive feature of expression—but it also distorted every other point of his wrinkled countenance. Now, it was gone not a vestige of his shining, and potent impatience could be traced. His mind went back across the waste of ill-spent years, and lingered on the moment when this son was born. He thought of her who bore him, and his memory dwelt with tenderness of late too seldom felt, upon the joys of their too early severed union. He looked forward, too, for he knew he had but a brief time to live—and thought of the reunion, perhaps not more than an hour, in the future. And as he thought of her, earth faded from his eyes, and calmly he resigned his joys.

There was but one thing I regretted, Allen," said he, feebly, drawing his son's hand nearer to him, "and that was that I could not leave you this wealth I once possessed. But I am convinced that it is all for the better, and I regret it no longer."

"It is indeed, father!" said Allen anxious to convince him, if any doubt disturbed his mind. "I shall do much better without it, and I only regretted its loss because it subjected you to privation."

"You are ambitious," continued the old man, pursuing his train of thought, "and if you were raised by wealth above the necessity of effort, you might not succeed so well."

"I would not I know," said the son; "it is better as it is now."

"I believe it is," sighed his father, "though I could never think so. I was peevish, I think, now since I can reflect—and, Allen my son, I have been fretful and unreasonable with you. You must forgive all that, Allen, for now you know it was not unkindness but disappointment."

"Do not think of it, father," sobbed the son, "for, indeed, I have nothing to forgive."

"It is very good in you to say so, Allen," said the old man feebly, "and I am glad you think so, it makes me more resigned. If I could only live to see you free from this criminal charge, I think I could die perfectly at peace. Are you sure you can establish your innocence, Allen—did you not say you were sure?"

"Yes, father," Allen answered, willing to exaggerate his hopes, which in fact were low enough, to smooth the pillow of the dying man, "I think I shall not have any difficulty. Do you need not think of that for a moment."

"Then I can die in peace," he whispered, and as he spoke, Allen felt his grasp relax, the life seemed to move, and the eyes became fixed. Allen gently placed his hand upon his breast, and felt for the pulsation of his heart—but it had ceased to beat.

Allen covered his face with his hands for a few moments, and in those moments came upon his heart the full sense of his utter loneliness. He rose,

and calling in the nurse, retired to his room, to pass in solitude the hours of melancholy thought. Affliction generally makes us selfish, or apparently so; for the adversity or anxiety, which absorbs our thoughts, necessarily excludes all other things. But with Allen it was not so; for during that long night, and the day and night following, he recollected the difficulties of his situation only as concomitants of this chief affliction—circumstances which made this grief endurable—and not, as usual, as griefs to which this was only an incident. On the second day, the mortal remains of a disappointed, but finally contented man, were committed to the tomb; and as Allen turned away, to seek again the solitude in which alone is found relief, the scene of his bereavement settled on his spirit like a weight; and all the scenes and faces round him, were as a shadowy pageant, fleeting, deceptive, and unreal.

But it was not his nature to despair—and it is only wilful and culpable repining which can find no amelioration of its grief. A week passed away, and he was once more at his easel, if not with as much zest as ever, at least with the zeal which no true artist ever loses. He had turned over and arranged a series of sketches he had made in Mexico; and one or two of them he had already begun to paint. He had thus laid out for himself a whole year's work; and yet within less than two months he must stand before a court of justice, upon a charge, which, were he convicted, would deprive him of his liberty for perhaps many years, and effectually destroy every hope in life. But he did not believe he would be convicted; he had an abiding faith in his innocence, and he felt that he would not be abandoned to his enemies. He had, also, a portion of that reliance, which every unprofessional man has, in his counsel; and he was confident that if human effort could triumph against falsehood and malice, he would certainly be able to establish his innocence. How it was to be done he could not precisely see; but that Clayton and Carlin would, with the help of Providence, find some way, he was sure. They had furnished him money for his bail, and feeling thus secure, he abandoned the management of his case almost entirely to them; showing nothing of the fidgetty, max-plot spirit, suitors so often exhibit, and confining himself almost exclusively to his own recovered home.

One bright spring morning, about a week after his father's death, he was as usual seated at his easel, when he was interrupted by the entrance of Mr. Clayton. That gentleman, as we have seen, was far more sanguine of success in the contest before him, than his more showy colleague; and to him, perhaps was attributable Vernon's confidence. He had been indefatigable in his preparations, and was anxious to inform himself precisely of what he might expect, even in matters which Carlin deemed trivial, and this morning his visit was made in a great measure for such a purpose.

"I am sorry to call your mind from things so pleasant," he said, as Allen laid down his palette and pencils, "especially when I have no pleasant substitute. But it occurred to me, that I could not do better than examine the precise position of this room. I do not know that it can do us any good; but it may be well to understand it. Where was it that you found this unlucky note?"

"Upon that table," said Allen, pointing to the place. "Everything is now arranged precisely as it was then."

"And what was it that Hugh Manning was putting up?"

"The rack in this closet," said Allen, opening the door.

"Strange," said his companion, inquiringly, "if he did see this crime committed that he never told you. But he may have had reasons which we do not understand; or, more probably, he may have thought he had reasons which he really had not."

"You still think, then," asked Allen, "that Hugh saw the note signed?"

"I scarcely know what to think," replied Clayton; "though we cannot doubt that he could give us some light if he were here."

"I cannot believe he would have been silent," said Allen. "The only time he ever said a word, to indicate that he even suspected Thorpe's ill will to me, was one day while we were on the excursion that ended in his death. And even that was apparently predicated upon facts entirely foreign to this accusation."

"What facts?" asked Clayton.

"I mean suppositions, when I say facts," said Allen; "a supposed state of things connected with Miss Talbot and her relations to Thorpe."

"I understand," said Clayton, turning quickly aside and examining a picture which stood near. "I asked the question because we can never know that any two facts, however wide apart, are really foreign to each other. My experience has taught me that it is unsafe to act upon any such supposition; for the discovery of any third fact may show a very close connection between the other two, which we had determined were entirely disconnected. And in this suspicion of Manning's I see that he had come to the same conclusion with Mr. Carlin and myself."

"I know what you mean," said Allen; "and you may be right—"

"But you do not believe it?" said Clayton.

"I did believe it," answered Allen, "but on reflection I cannot reconcile it with either my previous knowledge of Thorpe, or with the principles upon which men ordinarily act."

"Do you recollect what Carlin said the other day? 'In consistency with preconceived notions of men, the apparent absence of sufficient motive, or even the violation of usual modes of action, should never lead us to think men innocent or guilty.'"

Allen was disposed to dispute this lawyer's maxim, and combated it with all his power. But in doing so he experienced mind, his practical good sense was not without its force. It may be true that man never act without motive; but upon different men, inducements act with such unequal force—some men are so easily moved in comparison with others—that we can never

be thoroughly satisfied whether we have discovered their true motives or not. And human nature is so infinite in its varieties that a perfect knowledge of each individual is necessary to a positive conclusion. Even with this knowledge, in cases of mixed motives, we may often be at a loss to ascertain how far one inducement operated, what weight was given to another, or whether in fact either had any force at all.

"I see we all never agree," said Clayton, after talking some minutes; "and the abstract question is not of sufficient importance to justify the discussion. Do you know that Major Bryce has returned?"

"I had not heard of it," said Allen; "when did he arrive?"

"Yesterday, I believe. Would it not be well for you to call on him? Perhaps he may have some tidings of Hugh."

"Of that there can be no hope," said Allen.

"Still," said the lawyer, "it is a maxim of our craft that a death is not proven until the corpus be shown; and you know we could not find even a vestige of Hugh."

"There was but too good reason for that," replied Allen.

"Either one of two reasons was good enough," said Clayton: "the fire, or his captivity. I cannot but hope that we may yet hear of him."

"I will call on the major, at all events," said Allen, "though not with any hope of this good fortune. I may perhaps prove something by him, about the manner in which my engagement to go with him to Mexico was made."

"This money was borrowed, I believe, in consequence of that engagement?" said Clayton.

"Yes," said Allen; "will that fact be of any service to us?"

"I cannot tell, now," answered the other. "But, at any rate, it is better to call on him as soon as possible. Another thing," he continued more rapidly, "I am going to call to-day at Colonel Talbot's to ascertain precisely what can be proved by Cara. Have you anything to say to her?"

"Nothing," said Allen, after a moment's thought, "except that I am sorry for the necessity of calling her into such a place as a court of justice."

"I am much mistaken in her," said Clayton, "if she would consent to allow any consideration of mere timidity to keep her away."

After some further conversation, Clayton left him to go to Talbot's; and Allen went out to call on Major Bryce. We will accompany the former.

As he entered the room where Cara sat, there crossed his face a flush of which he was himself, perhaps, not conscious; and upon her countenance, also, might be traced a consciousness, that he who stood before her looked upon her with feelings far from indifferent. She observed it, too, in his manner, though he strove to conceal it; and regret mingled with her thoughts. She, however, advanced and frankly gave him her hand, replying to his first words with a voice whose tremor answered to the unsteadiness of her step. There was nothing of the coxcomb in Clayton's nature; and he, therefore, ascribed her manner to its proper cause—anxiety and agitation, consequent upon the danger of one she loved. She seemed sad, and even after she had recovered from her momentary agitation, one could have seen that she was full of some absorbing trouble. She was dressed as usual, plainly and simply, and Clayton thought, perhaps correctly, that about the simplicity of her attire there was wanting a portion of her accustomed care for neatness. An anxious mind cannot attend to minor things with the studied care of cheerfulness; and nowhere does grief sooner show itself than in the mourner's dress. Indeed, it too often shows itself in the dress, when it exists nowhere else; and as an importunate beggar driven from the house will seek a refuge in the fields or outhouses, so sorrow, finding no resting-place within the heart, takes hold upon externals, and shows itself in funeral and deceitful black. Or like the sun-rays on a cloud, whose centre they cannot illumine, seizing firmly on the skirts and fringes, gilding them and hiding from the world their natural darkness. It was not thus with Cara; for she was unconscious of the change which Clayton observed. The situation in which Vernon was placed—the disappointment of hopes so fondly cherished—her father's commands that she should see him no more—all conspired to weigh upon her spirits; and though none could be more elastic, it was not strange that a sadness insensibly came over her, and was visible even in her dress.

"I have been expecting to see you for several days," she said, after a pause. "Mr. Vernon left the impression on my mind, that the little I could tell you would be of service to him."

"I would have called sooner had I been able," said Clayton; "for what you speak of was almost the first ray of light we had, in a mystery of unusual darkness."

"And will it enable you to clear up the mystery?" she asked.

"Perhaps not entirely," he replied, and her eager eyes fell to the floor. But he hastened to add: "yet it directs our efforts to the proper point, and determines our minds upon a certain course of action—and that is a great point gained."

"It has enabled you to find other evidence, then?"

"It has supplied a missing link," he replied, "in a chain, of which we only lacked this. Another point of equal importance gained, and our triumph will be certain."

"Have you any hope of gaining that point?" she asked.

"We have very sanguine hopes," he replied, "of being able to establish Allen's innocence—though I must acknowledge that the evidence we do not as yet very clearly see."

"Does he fully understand his position?"

"Perfectly," answered Clayton.

"And how does he bear it—bravely?"

"Yes," said he, "far more firmly than could be expected."

"His son sat at the head of his bed and held his hand, and the old man's eyes were bent upon his with an affection they had not often lately shown."

"Have you seen him within a short time?"

"I left him but a few minutes ago," Clayton replied.

"And did he send me no message?"

"Nothing, except that he is sorry to be under the necessity of calling you as a witness."

"Tell him," said she, raising her eyes, "not to regret it for one moment. I am only sorry that I cannot give sufficient evidence to carry him safely through his troubles. If every one knew him as well as I do, this accusation would never have been made."

"You are willing, then," said Clayton—glad to draw her from such a strain, generous as he was—"you are willing then to allow us to call you as a witness?"

"Certainly," she replied; "I would be false to every feeling of my heart, if I allowed any consideration to make me refuse."

"Very well," said Clayton, a little nervous in spite of his efforts at self-control; "I called to ascertain precisely what we can depend upon your testifying—in order that we may fully comprehend our position."

A conversation ensued, the purport of which the reader will understand hereafter, and with which we need not therefore trouble him now. Let us return to Allen, at Major Bryce's.

As he entered the room where he had been received the year before, he perceived Miss Mary Bryce seated on an ottoman, "dressed for company," as the phrase is, and apparently deep in the fascinating pages of a French novel. She was very little, if at all, changed since Allen had last seen her. The same contradiction between face and form still forced itself upon the observation; but if there was any change in her appearance, it was in the fact that this contradiction was less obtrusive. Not, however, because her form had diminished in its essential characteristics of grossness, but because her face had gradually contracted a portion of the same expression. It is impossible for a delicate mind long to preserve its delicacy, when connected with a gradually developing animal nature; and the face, which is the exterior of the mind, must partake of the internal gangrene. So it was with her. Those who were constantly beside, who saw her every day—and all her acquaintances did that, for no day passed without her appearing in public—became accustomed to the change while it was taking place, and were not conscious that she was different from what she had been years before. Those, however, who had been absent, though for a few months only, could see a very sensible change. Vernon had not seen her for nearly a year; and he at once observed that the indulgence of indelicate tastes and ungenteel passions was fast stealing away even the small remains of beauty he had seen in her during his former acquaintance. Perhaps an example of those tastes might have been found in the pages of the book before her. At all events, she either was, or appeared to be, deeply engrossed; for Allen had entered and walked nearly across the room before she seemed to notice him; and when she did so, it was with a start and a little aversion, which to a more experienced man would have appeared rather too theatrical.

"Mr. Vernon!" she exclaimed, with a tragic air,—first, however, hiding the book under the sofa-cushion,—"*how glad I am to see you! I began to think you had forgotten us!*"

"Far from it," said Allen, pleased with the frankness of her reception—for of late he had felt as "a marked man"—"*I should have done myself the honour of calling sooner, had it not been for circumstances—*"

"Oh! don't mention them!" she implored, placing her fat, red hand upon his arm, and convulsively grasping it, as if even the mention of the "circumstances" was likely to end her useful life. "It is too infamous," she continued, "that men should make such odious charges!" And she again lifted up those hands, and her head drooped back and a little to one side, her eyes rolled up to the ceiling, and she grieved over the iniquities of the world.

"I alluded to the death of my father," said Allen, "which occurred only three days after my return."

"Oh!" she exclaimed, gasping alarmingly, and again dashing her hands up. But before she could say more, the door was opened, and a soft voice pronounced her name. She turned away, recovering immediately from what Allen began to fear was a fainting fit, and with an apology left the room. Allen seated himself, and waited several minutes; he then got up and examined the pictures upon the wall, looked out of the window, turned over the books on the table, and resorted to every other allowable expedient to kill time in such a situation. Half an hour went past, but Mary did not return, nor did any one else enter the room. Ten minutes longer elapsed, and the door was at last opened. A servant girl stopped within, and addressed him in these words—

"Mrs. Bryce bids me say, that the major will not be at home for several hours; but if you will return at four o'clock you may probably find him."

There was a half insolent smirk on the girl's face, which told more plainly than words, that she understood the purport of her message. Allen replied not a word; but passed out, and, in bitterness of spirit, left the house. At the door he met Thorpe, but they passed each other with a cold bow; for both began to feel that cordiality between them was entirely misplaced.

## CHAPTER XX.

"Virtue must be thrown off like a soiled garment.  
Too heavy for the sunshine of a court."—DANIEL.

Six weeks passed away, seeming, to Allen scarcely longer than as many days. After his bitter slight at Major Bryce's, he secluded himself almost entirely at home—visiting no one and receiving none except Clayton. Once, indeed, Manning called to ask the particulars of his son's death. Allen related them as circumstantially as he could, and the old man went away without a word of acknowledgment. But Allen forgave him readily for the worn, sorrow-stricken look of the old man precluded resentment. It was plain that he had forgotten the forgery while he was with Allen; and it

was still more evident that he cared not for any further injury that could be done him. With bent form and feeble step he went away, and Allen saw no more of him. But Clayton told him that the money-lender was no longer what he had been. The objects for which he had toiled had lost their value; and, as if conscious that the world would not know him long, he had begun a new, and for him, strange life. He had closed his counting-rooms, opening it only to receive the money due to him, and expending large sums as he received them in profuse and generous charities. The house of God, too, to the wiles of which his feet had so long been strangers, he now frequented regularly; and among all the throng who wore the garb of piety, none were more devoted than the money-lender. He seemed to be striving earnestly to redeem an ill-spent life; and although the worldly vanity which often leads the followers of Christ to triumph more over the conversion of a wealthy sinner, than over the reclamation of a hundred poor ones, might lead him to excessive exultation over his accession to their ranks, surely, if it might justify the feeling, it is the conversion of an usurer—the diversion of a stream of gold from the usurer's chest to the coffers of the church! As he entered the house of worship with a feeble step, scores, who had let the poor and pious pass them unheeded, and sent themselves uncared for on the great steps, were alert in opening their pews to invite him to a seat upon their velvet cushions; for they respected him doubly—as a convert, firstly; and secondly and most, as a rich convert.

But Vernon heard of these things only through Clayton; for he scarcely ever went abroad, and when he did, it was only for a few trifling moments. His painings were unceasing, and his own thoughts occupied him quite enough. For a several weeks he had held no consultation, even with his lawyers; everything they could hope for had been effected, and the trial of their defence was set off. Clayton had written letters to the Commandant of every Post in Mexico, making inquiries about Hught, and requesting them to take pains to ascertain his fate. But to several of these answers had come, announcing that no tidings were to be gathered. At last the regiment was ordered home, and Hught's companions brought accounts of his death at his residence, so circumstantial and detailed that no room was left for doubt or hope. Nothing now remained but to make the best defence they could, for the only chance of success lay in a rigid cross-examination of the prosecutor's testimony, and in the hope of casting doubt upon the transaction through the evidence to be given by Cara Talbot. If these failed, there was no hope except in the executive; and a pardon for an offence which he had not committed Allen would not receive if it were offered.

He was fully cognizant of his position; for Clayton had opened to him the extent of his danger. And yet he pursued his labours with unabated zeal—even hastening to finish a picture he was painting, as if he expected to be cut short by the sentence of the law. It cannot be denied, that now and then a pang of deep sorrow shot through his heart, with the reflection that he was about to be condemned unjustly—even the utmost despair of which men are susceptible, cannot wholly exclude the thought of what others will think; and it was in view of the anticipated blackening of his name, that he felt sick at heart. Cara, too, beautiful and loving, was always before his eyes; and the bitterness of his grief was their separation. He sometimes received from her messages of encouragement; but her father's prohibition prevented his ever seeing her, or even returning a message of more than ordinary acknowledgment. He was alone in the worst sense of loneliness—separated from what he most loved.

But few of his former friends had called upon him; and these, more as they would have gone to see some spectacle of *outré* interest, than as meeting a former friend. He was evidently an object of curiosity to them, and his sensitive nature shrank from such contact. He received them, therefore, coldly, and their visits were not repeated. Probably this would have been so had he met them cordially, for they came not to see Mr. Vernon, but the reputed forger. Of all the hundreds who had made his house a thoroughfare, in the days of his honest fame, not a score had stepped within its threshold since his return; and though they were right enough to stay away—for the evidence against him was convincing—he felt their desertion far more keenly than he should. Major Bryce had started several times to call on him; for the major was really a man of kind feelings; but he had never succeeded in reaching the door. In the first place, the major had a suspicion that Allen had not been well treated while at his house; and feeling the need of an apology, he was still at a loss how to make it. The major was a timid man, moreover, always afraid of the world's opinion, as was indicated by his pompous manner, and he was doubly so now, because his fortunes, although regretted by his official position in the army, like his health, had been failing for several years; he felt insecure, as a man does who feels the sand on a wet beach giving way beneath his feet. The major was in debt, and it was not wonderful that he shrank from anything which promised to compromise him even slightly. But above all, the major owed Allen for his services in Mexico in his department; and though he had the money, he would not now be convenient for him to pay it; for some reason which we must leave to the imagination of the knowing reader, he would rather wait until his accounts should be settled with the government; and being a conscientious man, he was afraid that, if he found himself once in Allen's presence, he would be inclined to pay him whether his creditor introduced the subject or not. For these, and other reasons which we cannot stay to catalogue, the major kept away; and sincerely hoping that Vernon would be acquitted of the charge against him, he was nevertheless too timid to give him the support of his presence and countenance, when he needed it most. Whether these or other motives operated upon others, we do not know, but certain it is, that after Allen's return from Mexico, he found himself (excepting Clayton's visits), as solitary as a hermit.

(To be continued.)

## FRIENDS AND ASSOCIATES.

A want of prudence in the use of money, at the beginning, may become confirmed into habits that will mar a man's fortunes for life; but a want of due caution in regard to our associates is fraught with consequences far more direful. The effects of the first error are felt mainly in the inconveniences and dissipation of natural life; but the effects of the latter reach far deeper and influence themselves upon man's spiritual and substantial part.

The laws of association are governed by mental and moral—or, to speak more correctly, spiritual—affinities, and are based upon the qualities of mind and heart. The good are attracted toward each other, and the same thing occurs with the evil, when reciprocal interchanges of thoughts and feelings take place. Now, in every society of either the good or the evil, there is a sphere of the quality of that society pervading the whole; and all who come into it, and voluntarily remain there, are more or less strongly affected by this sphere, and thus feel with the rest. Let a man, who has a respect for order and obedience to the laws, go into a mob, and voluntarily remain there for a time, and he will be surprised to find his liveliest sympathies on the side of mob law; and the reason of it is, he feels the sphere of the quality of that mob's associations—he is in it, and breathes it, and feels an impulse to act with it.

From this may clearly be seen the great importance of choosing with care our associates. If we mingle with those who make light of both human and divine laws, we shall be led into the same error, and sink, instead of rising, in the scale of moral excellence. But if we choose more wisely our companions, we shall not only be elevated ourselves, but help to elevate others.

Keeping this in view, the whole subject of his duties and his danger—every young man may see how much depends upon his choice of associates. If he mingles with those who are governed by right principles, his own good purposes will be strengthened, and he will strengthen others in return. But if he mingles with those who make light of virtue, and revel in selfish and sensual indulgence, he will find his own respect for virtue growing weaker, and he will gradually become more and more in love with the grosser enjoyments of sense that drag a man downward, instead of lifting him upward, and throw a mist of obscurity over all his moral perceptions.

It not infrequently happens, that young men—either from feeling the dangers attendant upon associations with others, or from a natural disinclination for society—shut themselves, and take for companions books and their own thoughts, becoming hermits in the very midst of society. This is an error that effectually prevents a healthy development of character. One of the first laws of our being is the law of association, and whoever disregards it, disregards not only his own, but the common good. Society is a man in a larger form, and we are all members, and must act in concert with the rest, and do our duty to the whole, or we shall find ourselves—like a hand that lies inactive appropriating the life-blood that flows into it, without doing anything for the whole body—gradually losing our power, and withering away into mental imbecility.

It is known that no two men are precisely alike in appearance, disposition, or ability; that no two men are able to do the same thing with equal skill; and it is also known that there is some one thing in which every particular man can excel his fellow, if he will but direct to that thing all the powers of both his mind and body. One man comes into the province of the head, and his chief delight and activities consist in a regard to things of government, either in the affairs of the nation, as a whole, or in some one of its thousand subdivisions into lesser associations. He sees ends, causes, and effects far more clearly than his neighbour, who may be, perhaps, in the province of the hand, and ever ready to execute what others plan. The one is a man of thought, the other of execution, and they act in harmony in the attainment of the general good; one is not more honourable than another, except so far as he does his appropriate work more faithfully. It would be an interesting task to trace here the correspondence between the attributes and functions of common society, and those of the individual man; but a mere declaration of the fact, with the simple and apparent illustration of it that we have given, will cause it to strike almost every one as true, and enable every one to trace out this correspondence for himself. But, if there are any who cannot comprehend what has been assumed in regard to society being a man in a larger form, let them consider this plain proposition. Society is an aggregate of individual men, and must, therefore, be the complex of those qualities, attributes, wants, and abilities, which appertain to individual men; consequently society is a greater man, and must be sustained in health by an observance of the laws which preserve the individual.

The conclusion arrived at in the last sentence is what we are particularly desirous of impressing upon the minds of such of our readers as feel inclined to separate themselves from society, and live in selfish seclusion. All the members of the body act in harmony: the eye does not for itself; the ear hears not for itself; the hand works not for itself; but all labour for the common good, while each part is sustained from the whole. If any part ceases to perform its functions, that part at once begins to suffer decay; its sinuses shrink, its veins and arteries decrease in volume, the blood circulates feebly through it; it becomes weak and helpless, and affects the whole body with disease more or less serious, as the part approaches or is more remote from the seat of life. Just such will be the effect produced in every case where a man deliberately withdraws himself from the use of society; and the more serious will be the result, the higher the function he is called to fill. The duty of each intercourse is not to impede, but to aid in the duty of performing faithfully the work of our office in life, be it what it may.

Let every young man, then, seek for associations in life, but let him be exceedingly careful to make his selection. Almost everything depends upon its being done with prudence.

**THE HOME COMPANION:**  
IN ACCIDENT, DISEASE, EMERGENCY, HEALTH,  
AND SICKNESS;  
A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.  
PRICE ONE PENNY. ALWAYS ON SALE.

A MIDSUMMER PRESENT FOR A GOOD BOY OR GIRL.  
Now ready, price 1s. 6d., beautifully bound, with a fine Steel Plate, and 70 Engravings on Wood.

**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
This beautiful little Volume is made the more attractive to the Young, by having the Christian Name of the Receiver elegantly impressed in Silver upon the cover. Thus—

A STORY-BOOK FOR MASTER EDWARD!  
A STORY-BOOK FOR MISS ELIZABETH!  
The following Names may be had to order:  
BOYS—Charles, Edward, Frederick, George, Henry, James, Joseph, John, Richard, Robert, Thomas, and William.  
GIRLS—Anne, Caroline, Charlotte, Fanny, Emma, Eliza, Jane, Laura, Louisa, Lucy, Mary-Anne, and Maria.  
For Names not included in the above, order the General Edition.  
**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
London: Houlston and Stoneman; and all Booksellers.

**THE HOME COMPANION:**  
A WEEKLY MAGAZINE.

**THE MUSTER ROLL.**

"ATTENTION!" We are rapidly progressing towards the completion of our First Volume, which closes with the Fifty-second Number. And having already matured our plans for the Second Volume, we will proceed to state them, after a brief retrospective glance.

We venture to assert, that no publication of the present day comprises, within the limits of a volume, an equal amount of matter of the same standard character as that included in the First Volume of the HOME COMPANION.

Of ENGLISH Standard Literature the Volume will contain, complete and unabridged, *Sir Roger de Coverley*, *The Vicar of Wakefield*, *Picciola*, *Undine*, and *Nature and Art*. Of AMERICAN Literature, *Shadow and Sunshine*, *The Pioneer's Daughter*, *Love's Trials*, *The Catfowls*, and *Caroline and Catharina*. The cost of these works collectively, in their separate forms, even reckoning the English works at the prices of the cheapest unillustrated editions, would be about TWENTY-FIVE SHILLINGS, the American works being chiefly expensive, and not hitherto reprinted in this country.

In addition to the above, the Volume will contain a great number of ORIGINAL Tales, Essays, Enigmas, Biographies, Poems, and Miscellaneous Articles, humorous and instructive, illustrated by THREE HUNDRED ENGRAVINGS. The Price of the Volume, elegantly bound, will be Six Shillings and Sixpence. Cases for binding will be issued immediately upon the close of the volume, price 1s. 6d. each. And we respectfully urge our Subscribers to order immediately the back Numbers to complete their sets, that they may possess a handsome volume a few weeks hence.

THE FUTURE! With No. 53, commencing the Second Volume, will be commenced a NEW AND ORIGINAL TALE of great interest, by the EDITOR, entitled MABEL LEE; OR, THE LIGHTS AND SHADOWS OF AN ORPHAN'S LIFE. All the other Articles will be Original, and be written expressly for the HOME COMPANION. Each Number will contain, in addition to the continuous tale by the Editor, a Complete Story, founded upon a popular drama, under the general title of "TALES FROM CELEBRATED DRAMATISTS," and after the manner of "Lamb's Tales from Shakspeare." These will include, *The Bandman*, *The Maid of Honour*, *The Duke of Milan*, *The Picture*, *The Fatal Doury*, *The Great Duke of Florence*, *The Alchemist*, *The Fair*, *The Blind Woman*, *The Broken Heart*, *The Jew of Malta*, *Faustus*, *Volpone*, *Coriolanus*, *The Merchant of Venice*, *Philoctetes*, *King and No King*, *The Elder Brother*, *Macbeth*, *The Young Stranger*, *Wit without Money*, and various others.

Departments will be opened for the Artist, the Mechanic, the Farmer, the Gardener, the Housewife, and the Jeweller. Under these heads will be given every kind of new discovery, and every fact of interest. Each department

will be under the care of an Editor, whose attention will be earnestly directed to the bringing together of the essence of information and interest relating to the several subjects mentioned, derived from peculiar and authentic sources. Poetry, Biography, Letters, and Correspondence, articles upon Natural History, Mathematics, &c. &c. together with Light and amusing Anecdotes, will complete the arrangements for the New Volume of the HOME COMPANION, the whole giving it the highest title to UNIVERSAL ACCESSION BY THE BRITISH PEOPLE.

And FURTHER! On Saturday, the 2nd of October, will be published THE HOME COMPANION ALMANACK, for 1853. This will be undeniably the greatest literary wonder of the day. It will contain HENRY TOWN'S ENGRAVINGS, designed expressly for the work. These will include, hitherto unpublished Pictures of *Elizabeth*, *Richard III.*, *Henry VIII.*, *James I.*, *Charles I.*, *James II.*, *George I.*, *George II.*, *George III.*, *William IV.*, *Victoria*, &c. &c. Appropriate spaces and numbers will be left for Readers to enter their conjectural answers to the Pastimes published in the Almanack, in comparison with the actual Answers, which will be published in the next Number of the HOME COMPANION. In the centre will be given a LARGE DOUBLE-PAGE ENGRAVING, displaying the *Flags of all Nations*, borne by people in the costumes of their countries, followed by a procession of people in their distinctive dresses, bearing the *Heraldic devices of the principal Counties, Cities, and Towns of England, Ireland, Scotland, and Wales*, with numerical references for explanation. The Almanack will be exactly the size of *Punch's Almanack*, will contain an equal number of engravings by the first artists, and will be charged to our Subscribers, ONE PENCE ONLY! A sale of at least 200,000 is expected, and therefore the Order of the Trade should be immediately registered at our Office, 69, Fleet-street.

**MABEL LEE.**

I have undertaken, at the request of many friends, to write the history of MABEL LEE, whose name alone is fictitious. I confess that I am not given to the invention of Tales, made up of startling and improbable incidents, but being reminded that the life of MABEL LEE is more strange than fiction, and may be written all the more vividly, because absolutely true, I have willingly entered upon the subject, and have already far advanced in its execution. I have never read a novel that interested me half so much as the story of this orphan girl; full of the most remarkable vicissitudes, of many of which I was an actual observer. The Reader must not expect from me a thrilling romance, but a story plainly and truthfully told, that will appeal to every heart, and supply many elements of good example to those who, like MABEL LEE, may have to struggle against the bitter tide of adversity, with a spirit too high and impulsive to submit to the harsh control often imposed upon virtuous but helpless poverty.

THE EDITOR.

**THE CONTENTED WIFE.**

I would not change this happy scene  
For all the earth calls proudly great;  
I would not change my humble home  
For kingly rank or queenly state.  
I would not change my husband's love  
For all that earth can give of fame;  
Nor barter his approving smile  
To wreath a half round bay name!

I would not change my child's sweet face  
For all the new earth's wealth could gain;  
Nor change the certain bliss I feel  
For all ambition might obtain.  
What blessings, great and numberless,  
My God with sweetest hopes hath blest—  
A happy home, endearing friends,  
With health, and love, and true content!

PRIVATE CHARACTER OF A LOCOMOTIVE.—People who may see a locomotive tearing up and down the land at the rate of forty miles an hour, making the earth groan beneath its giant tread, and the heavens reverberate with its fearful blatter, scaring nature with its unearthly din, and frightening all creation from its propriety almost, people who only see it in its terrible aspect, have no idea what eminently social virtues it is endowed with. This is its public character. Its private one is another affair. Now and then, one of these huge monsters, in whose iron bowels number more than a thousand giant hoppers, comes up and stands under our window, smokes away at its giant power, and the most exemplary cooking stove, its huge steam pipes sing a tune as soft and as dulcet as the most amiable tea-kettle, and its lungs puff something as sweetly as an infant in its slumbers. But the demon of noise is there. Let any one but touch its ears, and no venerable spinster's life will be more fiercely let down from those iron hands, and the uproar which was tamed to so soft a strain send forth a yell as if heaven and earth were coming together, and those lungs which first breathed so quietly, cough like a volcano; and off it goes, darkening the heavens with its volume of smoke.

## ONWARD!

**TRANSMISSION OF MOTIVE POWER.**—M Fontanemoreau, of South-street, Finsbury, has patented a plan for the transmission of power in lieu of cog-wheels, and pinions, straps, and bands. This is effected by means of an angularly grooved wheel, with another working therein of a wedge form; and by the grip so obtained any description of machinery may be set in motion.

**NEW STEAM-ENGINE.**—Mr. James Sinclair, of Stirling, according to a local paper, has invented a steam-engine "entirely divested of the complicated machinery commonly in use. It consists of an oscillating cylinder, working in a journal and bush at the bottom; by which the steam is admitted to and escapes from the cylinder, without the aid of any mechanical contrivance, but simply by its own oscillations. The inventor," it is added, "has a small model of it working by water-power, and another of larger construction now in course of progress."

**MAGNETIC TELEGRAPH PROGRESS.**—The various police stations in London and in the suburbs are to be forthwith connected, by means of the magnetic telegraph with each other and with Scotland yard. The electric telegraph has at length connected the metropolis with the principal towns in the west of England. The Admiralty have now the means of instantaneous communication with Plymouth for either transmitting or receiving intelligence relating to matters of importance connected with the arsenal or the port.

**STEAM PROGRESS.**—We learn that the project of establishing a line of steamers between Hull and St. Peterburgh, to go by way of the Gotha Canal instead of the Sound—thus saving some hundreds of miles of stormy sea and dangerous navigation—is about to be realized. A Society with this object has been formed at Stockholm, and eight iron steamers have been ordered for the service. The new line will have the advantage of passing over some of the finest lakes and through some of the most splendid mountain scenery in Sweden, thus affording greater facilities and pleasure to the tourist.

**SCANDINAVIAN EXHIBITION.**—A letter from Copenhagen, of late date, says, that "the palace for the exhibition of Scandinavian manufactures is now completed. The vast edifice constructed according to the plans of Messrs. Hansen and Moeler, architects to the court is of iron. The internal arrangements closely resemble those of the Crystal Palace of London. It covers nearly the whole of the grounds of the palace of Christianburg, at Copenhagen, so that, in fact, it stands within the enclosure of the royal palace, and exactly faces the windows of the state apartments of the royal family. The opening of this first exhibition of Scandinavian arts and manufactures is fixed for the 1st of September next."

**A NEW PLASTIC MATERIAL.**—A Parisian sculptor, M. Duttoit, has obtained an English patent for a chemical combination of certain agents for obtaining a new product to be used in the plastic arts. The patentee combines with gutta percha oxide of zinc, amianthus, and sulphate of baryta, in conjunction with various colours. The gutta percha is first prepared and bleached by being dissolved in rectified naphtha, benzole, or sulphuret of carbon. When the compounds do not possess sufficient elasticity, caoutchouc is added. The gutta percha being prepared, after filtration he places the solution in a still, adds the other ingredients, and stirs the whole well together. Heat is then applied until all the volatile oil is driven off, when the material is removed to the desired moulds. It is said to be suitable for numerous moulded works of art, tissues, or artificial flowers. It may be used as leather, when rolled into sheets, or it may be diluted with naphtha, or benzole, and employed as liquid paint.

**INTERNATIONAL POSTAGE ASSOCIATION.**—The Cheap Colonial and International Postage association, finding that "the influence of the Society has already produced sensible effects in promoting the objects in view, and might be extended much wider by the possession of funds for the purpose of collecting, printing, and circulating information," have resolved to give to the Association a larger basis, by admitting all persons into its ranks who are favourable to the general purpose, on payment of a small yearly subscription. This step goes to disprove the assertion—lately made against it—that the Association was disposed to work in secret, and to rely on official influence rather than on public support for the contemplated reform. Under its new form the Association promises to be even more active and influential than before. Earl Granville has accepted the presidency, and Don Manuel de Yasa, the new honorary Secretary, has begun the subscriptions by a liberal donation of a hundred pounds. At a meeting held at the room of the Society of Arts, a short time since, the Association adopted what may be called a programme of opinion, on which to appeal to the general public for support, in the four following resolutions, which were unanimously carried:—(1.) That it appears to this Association that all the arguments used by Mr. Rowland Hill in favour of the justice of an uniform rate of postage apply certainly as colonial, and probably to foreign correspondence. (2.) That the cost of conveyance, as was proved by Mr. Rowland Hill, depends upon the number of letters, and not upon the distance, and that therefore the justice of an uniform rate is evident. (3.) That the Association welcomes the recognition of this principle in the recent adoption of uniform rates of postage by the colonies. (4.) That the simplicity and convenience of pre-payment also appear to apply to colonial and foreign correspondence. We are pleased to see that steps are now taking in the right direction for accomplishing the desirable object now engaging public attention.

## POETICAL QUOTATIONS.

## CHANGE.

Weep not that the world changes—did it keep  
A stable, changeless course, 'twere cause to weep.—*Bryant.*

Not in vain the distance beckons,  
Forward, forward let us range;  
Let the people join for ever  
Down the ringing grooves of change.—*Tennyson.*

I ask not what change  
Has come over thy heart,  
I seek not what chances  
Have doom'd us to part,  
I know thou hast told me  
To love thee no more,  
And I still must obey  
Where I once did adore.—*Hoffman.*

In bower and garden rich and rare  
There's many a cherish'd flower,  
Whose beauty fades, whose fragrance farts  
Within the flitting hour.  
Not so the simple forest leaf,  
Unprized, unnoticed, lying—  
The same through all its little life—  
It changes but in dying.  
Be such, and only such, my friends,  
Once mine, and mine for ever,  
And here's a hand to clasp in theirs,  
That shall desert them never  
And thou be such, my gentle love,  
True, chance, the world defying,  
And take, 'tis all I have, a heart  
That changes but in dying.—*G. W. Doane.*

## CHARACTER.

Good name, in man and woman, dear my lord,  
Is the immediate jewel of their souls:  
Who steals my purse, steals trash; 'tis something, nothing,  
'Twas mine, 'tis his, and has been slave to thousands;  
But he that fishes from me my good name,  
Robs me of that, which not enriches him,  
And makes me poor indeed.—*Shakespeare's Othello.*

Gnats are unnoticed whereso'er they fly,  
But eagles gazed upon by every eye.—*Shakespeare.*

Stand free and fast,  
And judge him by no more than what you know  
Ingenuously, and by the right laid line  
Of truth, he truly will all styles deserve,  
Of wise, good, just, a man both soul and nerve.

*Shirley's Admiral of France.*

She can't be parallel'd by art, much less  
By nature she'd baffle painters to decypher  
Her exactly, as bad as agnes puzzle doctors.

*Robert Neville's Poor Scholar.*

As through the hedgerow shades the violet steals,  
And the sweet air its modest leaf reveals,  
Her softer charms, but by their influence known,  
Surprise all hearts, and mould them to her own.—*Rogers.*

Though gay as mirth, as curious thoughts sedate,  
As elegance polite, as power elate;  
Profound as reason, and as justice clear,  
Soft as compassion, yet as truth severe.—*Savage.*

With more capacity for love than earth  
Bestows on most of mortal mould and birth,  
His early dreams of good out-stripped the truth,  
And troubled manhood followed baffled youth.—*Byron.*

Though looks and words,  
By the strong mastery of his practiced will,  
Are overruled, the mounting blood betrays  
An impulse in its secret spring, too deep  
For his control.—*Longfellow.*

It is not mirth, the mirth she is too still,  
It is not wit, which leaves the heart more chill,  
But that certain sweetness, a rich with ease,  
Pleases all round it, and the wish to please.—*The New York Times.*

Those who see that my full-blown pride,  
Knew little of what I meant'd within,  
And young will be to thee.—*Tennyson's Anna.*

# PARLOUR PASTIME

## The Trespasser.

THE room being divided by a dead line, visible by means of the pattern of the carpet or a piece of tape, all but one take possession of one of the lots of the vacant lot, and some twelve or fourteen, small articles are scattered about before him on the floor. The object of the game is to steal one by one these articles, so softly as not to be caught by the blind individual; who, as soon as he hears a sound approaching, is at liberty to remove his hand from his eyes and pursue the offender. If caught on the owner's lot, he is put into prison; that is, behind some table, until the game is ended. Here, also, are banished all similarly taken in the fact; but should the blind owner not succeed in taking a single prisoner before his game is all gone, then he is bound by the rules of the game to play the owner over again. Of course the trespassers are safe the moment they cross the boundary line and arrive in their own territory.

## RIDDLES.

I.  
A THING from thee, loved one, I crave—  
A thing which thou canst never have,  
Nor never had from ages past,  
Nor never will while time shall last;  
Yet give it me, dear girl, I pray;  
For if thou wilt, I know thou may.

II.  
We left our little ones at home,  
And whither bent we did not know;  
We, for the church's sake, did roam,  
And lost our lives in doing so.  
We walked in a perfect road,  
With all the wicked full in view;  
We lived for man, we died for God,  
Yet of religion nothing knew.

III.  
No ship her weary way can find  
Without it leaves my first behind,  
My second the seat of care and strife,  
The poor man's hope, the prop of life,  
My fourth in England will be found,  
A little village much renown'd.

IV.  
My first to the fair is applied,  
My next is a palpable blunder,  
My fourth to my first is applied  
Before they were parted asunder.

V.  
WHAT kill'd a poor queen to love much inclined,  
And what on a beggar we commonly find,  
With you and me, together combined,  
Tells the name of an herb which in gardens you find.

## CONUNDRUMS.

1. Why are fine clothes like a horsewhipping?
2. What is the difference between a tired auctioneer and the lot he is selling?
3. How does a labourer thrashing out peas act contrary to his own heart?
4. What colour does a man in difficulties most dislike?
5. When are you like the sun?
6. Why is badly clarified coffee like a falsely-based argument?
7. Why is the *Home Companion* like the victim of sharpers?
8. Why is the hippopotamus from Egypt coming to visit his cousins the pigs like the patriarch Jacob?
9. What garden vegetables remind one of general postmen?
10. Why should a saddle-horse on his journey never want provender?
11. What letters remind one of the head-dress of beaux of the last century?
12. Why is Jenny Lind like the old lady of Threadneedle-street?
13. Why is a first-rate tailor like a good arithmetician?
14. At what two seasons of the year does a farmer's wheat-crop resemble a lady's dress?
15. Why is a bishop like a sailor?
16. When is a drunkard most despondent?
17. Why is a man in love the worst of all to make an economical purchase?
18. If the letter C were to die, why would it be like yielding a point?
19. At what English port should clever punsters dine?
20. Why are shares in an unfinished railway like a fashionable London residence?
21. What English word of four letters has three vowels and three syllables?
22. Why is a man transacting business by himself like the Chancellor of the Exchequer borrowing money?
23. What is that which we chase which yet cannot handle; lose, steal, and give away, and always carry about with us?—J. J. REYNOLDS.

# TRANSFIGURED PLAYING CARDS.

THE FOUR OF HEARTS—A CHARGE OF INFANTRY.

## CHARADES.

I.  
A house, though not of brick or stone,  
And though foundation I have not,  
Still rooms and furniture I own,  
And doors and windows I have got.  
For miles and miles, behold, I ride,  
But never upon land am found  
I've many names and wings beside,  
And what I shake at is the ground.

II.  
What being's most despised by man,  
Yet does him all the good he can,  
Who bore the greatest Prince on earth,  
And gave to righteousness new birth;  
Who does ofttime o'er death prevail,  
And health restore, when doctors fail.

III.  
A comb doth my proud head adorn,  
For dignity I greatly prize,  
I am the herald of the morn,  
And order sluggards to arise.

## PRACTICAL PUZZLES.

A CAPITAL PUZZLE AT THE DINNER-TABLE.  
LAY a sixpence between two half-crowns, and place upon the larger coins a glass, as in the diagram. Remove the sixpence without displacing either of the half-crowns, or the glass.

II.  
CUT a piece of card-board about four inches long, the shape of the diagram, and make three holes in it as represented. The puzzle is to make one piece of wood pass through, and at the same time exactly fill each of the three holes.

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 701.

PICTORIAL CHARADE—See page.

ARITHMETICAL RECREATIONS—1. 3 4-oth eggs for a penny. 2. 100. 3. 25 yards.

## OUR CORNER-CUPBOARD!

Why is a soldier like a shoe?—Because he is listed, trained, has ten drills (tendrils), and shoots!

How did Jonah ~~feel~~ when he was in the whale's belly?—Very much down in the mouth, and inclined to blubber!

An Irish footman, who got a situation at the west end of London, on entering a room where there was a vase with golden fish, exclaimed, "Well, by J—, this is the first time I ever saw red herrings alive!"

If thou study law and physics, endeavour  
To know both and to need neither.

ANAGRAMS.—Every one will admit that *Astronomers* are moon-starches; now who can deny that the *Telegraph* is a great help; or that *Lawyers* are sly wares? There are some who deem *Radical* reform a rare mad frolic.

THREE FISH FOR DINNER.—Scene—an Eating-house. "Now, waiter, what's to pay?" *Waiter*.—"What have you had, sir?" "Three fish." *Waiter*.—"Only brought up two, sir." "No, three; I had two mackerel, and one smelt!" [Exit Waiter.]

A nobleman who was very ignorant, being at the same table with Descartes, and seeing him eat of several nice dishes with pleasure; "How!" said he to him, "do philosophers meddle with dainties?" "Why not?" answered Descartes; "is it to be imagined that the wise God created good things only for fools?"

"I fear," said a minister to his flock, "when I explained to you in my last charity sermon, that philanthropy was the love of our species, you must have understood me to say specie, which may account for the smallness of the collection. You will now prove, I hope, by your present contribution, that you are no longer labouring under the same mistake."

A schoolmaster in Paris wished to prove that he was the finest person in the world. He argued thus:—Europe is the finest quarter of the world; France is the finest country in Europe; Paris is the finest town in France; the University is the finest place in Paris; my room is the finest in the University; I am the finest in my room; ergo, I am the finest person in the world.

HERE lies Pat Steele.—

That's very true;

Who was he? What was he?—

What's that to you?

"My James is a very good boy," said an old lady, "but he has little fallings, for none of us are perfect." He threw the cat in the fire, flung his grandmother's wig down the cistern, put his daddy's powder-horn in the stove, tied the coffee-pot to Jowler's tail, let off squibs in the barn, took my cap-bobbin for fishing lines, and tried to stick a fork in his sister's eye; but these are only childish follies—he's an excellent boy, after all."

PREPARING FOR A STORM.—A few nights ago, Mr. Bodkin, who had been out taking his glass and pipe, on going home late, borrowed an umbrella; and when his wife's tongue was loosened, he sat up in bed and suddenly spread out the parapluie. "What are you going to do with that thing?" said she. "Why, my dear, I expected a very heavy storm to-night, and so I came prepared." In less than two minutes, Mrs. Bodkin was fast asleep.

A certain lawyer had his portrait taken in his favourite attitude—standing with his hand in his pocket. His friends and clients all went to see it, and everybody exclaimed, "Oh, how like! it's the very picture of him." An old farmer only dissented. "Taint like!" exclaimed everybody, "just show us wherein 'taint like.'" "Taint—no 'taint," responded the farmer; "don't you see he has got his hand in his own pocket? 't would be as like again if he had it in somebody else's."

## PHILOSOPHICAL EPIGRAM.

SAYS the Earth to the Moon, "You're a pilfering jade,

What you've stole from the Sun is beyond all belief."

Fair Cynthia replies, "Madam Earth, hold your prate,

The *recluse* is always as bad as the thief."

DOMESTIC DEFINITIONS.—*Home*. The place where children have their own way, and married men resort when they have nowhere else to keep themselves. *Wife*. The woman who is expected to purchase without means, and sew on buttons before they come off. *Baby*. A thing on account of which its mother should never go the opera, consequently need never have a new hat. *Dinner*. The meal which is expected to be in exact readiness whenever the master of the house happens to be at home to eat it, whether at twelve, or half-past three.

MANY excellent puns derive their sources from the olden times, for our ancestors much delighted in the exercise of ingenious puns; for instance, a string of epigrams surpassing all others, may be seen in a scarce work published in the reign of James I. A specimen—a divine, willing to play more with words than to be serious in the expounding of his text, spoke thus in one part of the sermon:—"This day I shew we must *die* all; yet, notwithstanding, all houses are turned into *ale houses*; our ears are turned into *cats*; our paradise into a *par* of *die*; our marriage, into a *marry* age; our matrimony, into a *mother* of *moths*; our divines into *dry* clipes. It was not so in the days of Noah, *at* *not* *it*."

## OUR MEMORANDUM BOOK!

SOCIABILITY.—We are but passengers of a day, whether it is in a stage-coach, or in the immense machine of the universe; then, why should we not endeavour to make the way as pleasant to each other as possible? Short as our journey is, it is long enough to be tedious to him who talks in his corner, sits uneasy himself, and allows his neighbours to make him tide uneasy also.

ALPHABETS.—The English alphabet contains twenty-four letters; to which, if we add *j* and *v*, consonants, there will be twenty-six; the French contains twenty-three; the Hebrew, Chaldean, Syriac, and Samaritan, twenty-two each; the Arabic twenty-eight; the Persian thirty-one; the Turkish thirty-three; the Georgian thirty-six; the Coptic thirty-two; the Muscovite forty-three; the Greek twenty-four; the Latin twenty-two; the Slavonic twenty-seven; the Dutch twenty-six; the Spanish twenty-seven; the Italian twenty; the Ethiopic and Tartarian, each two hundred and two; the Indians of Bengal twenty-one; the Burmese nineteen; the Chinese have, properly speaking, no alphabet, except we call their whole language by that name; their letters are words, or rather hieroglyphics, amounting to about eighty thousand.

## THE HUSBAND.

FROM THE GREEK.

Faithful as a dog, the lonely shepherd's pride;

True as the helm, the bark's protecting guide;

Firm as the shaft, that props the towering dome;

Sweet as the shipwreck'd seaman's land and home;

Lovely as a child, a parent's sole delight;

Radiant as morn, that breaks nocturn night;

Grateful as streams, that in some deep recess,

With hills unhop'd the panting traveller bless,

Is he, that links with me his chain of life,

Names himself lord, and deigns to call me WIFE.

## THE WIFE.

IN IMITATION OF THE ABOVE.

Beautiful as young day, when the sweet season's waking;

Joyous as the bird of song, when the gay morn is breaking;

Mild as Zephyr's softest sigh, on Flora's bosom breathing;

Chaste as that fair queen, who found the art of endless wreathing;

Constant as Apollo's flower, which blooms but in his beaming;

Fond as the moon of that bright star, upon her pathway gleaming;

Graceful as the slightest reed, upon the green bank waving;

Courteous as the rippling stream, which that green bank is laying;

Yet great in soul, and high in mind, the charm, the bliss of life

Is she, the gentlest of her kind, I proudly call MY WIFE.

PLANTING TREES.—The best month for planting trees is November; observing the old saying of a celebrated gardener, "Take them with their old leaves to their new graves."—Just as the sap begins to go down and the leaves to turn, there can be no better time for planting all sorts of fruit and other deciduous trees; but with respect to ornamental shrubs, and more particularly evergreens, early planting is of the greatest consequence. When the weather is open, fruit-trees and forest-trees may be planted from the beginning of October to the end of February; but those that are planted before Christmas will do the best, especially if the following summer should be very hot and dry. But evergreens must be planted early, so that October is a better month for them than November, that the soil may be settled about the roots before the frosts come, and that the trees may have at least some hold of the ground before they have to encounter the heat of the sun and the cold east winds of March, the most trying month they have to stand against. It is folly to ask a gardener whether it is a good time to plant, if he is standing in the market with trees to sell. Persons who have done so, and, at their recommendation, planted evergreens in February and March, found that they almost all died; while to the gardener, who was paid for his trees, it was no loss at all; but, on the contrary, he had to supply others at Michaelmas. "In the borders of my pleasure-garden," says a practical gardener, "I have no shrubs but evergreens; and the more I view them in the winter, the more I rejoice that I planted no others. Always green and cheerful in the gloomy months of winter, they give a beauty to my garden, which it otherwise would not possess. The Portugal and the common laurel, the broad-leaved phil-larex, the red cedar, and evergreen oak—these, as they grow to some considerable height, may (with here and there a yew) be planted in the back-ground, and form a rich variety; while these—the Grecian and Siberian arbor vite, the juniper, the arbutus, the prunus, the silver-berry, the laurel-tin, &c., should be planted in the fore-ground—especially the laurel-tin, which is handsome in its growth, as well as beautiful in its flower. As it is rather a tender shrub, it is better to buy them in pots, and then turn them out carefully, and plant them in a sheltered and warm situation, with the soil adhering to the roots. But no evergreen should be planted too thickly, as they do not like the knife, and few persons have resolution enough to remove a tree before it has materially injured, and perhaps spoiled the growth of its neighbour. Where the soil is good, and the situation open, evergreens planted in October will make some very vigorous shoots the second spring, and will fill up the ground they are intended to occupy with astonishing rapidity. In situations where it may be desirable to plant a few trees, I would by all means recommend the Scotch. It looks coarser and less inviting to the eye than other trees when it is young; but it is a tree which increases every year of its growth, losing that stiffness and awkwardness which are the characteristics of all in general, and becoming richly adorned in its bark."

WILLIAM J. VIAN, Sec.

... Cornhill, some side of the way at the Royal Exchange.

Chesapeake; 47, Bishopsgate Street Within.

Letter: "The young man has two pots, but he will not sell them. I want you to send me the pots for other questions."

Letter: "The young man has two pots, but he will not sell them. I want you to send me the pots for other questions."

### Editor's Note-Book.

#### DOMESTIC HINTS:—No. 20.

**China and Glass Ware.**—The best material for cleaning either porcelain or glass-ware, is Fuller's earth; but it must be beaten into a fine powder, and carefully cleared from all

rough or hard particles, which might endanger the polish of the brilliant surface. In cleaning porcelain it must also be observed that some species require more care and attention than others, as every person must have observed that china-ware in common use frequently loses some of its colours. The red, especially of vermilion, is the first to go, because that colour, together with some others, is laid on by the Chinese after burning. The modern Chinese porcelain is not, indeed, so susceptible of this rubbing or wearing off, as vegetable reds are now used by them instead of the mineral colour. Much of the red now used in China is actually produced by the snails extracted from the cuttings of scarlet cloth, which have long formed an article of exportation to Canton. It ought to be taken for granted that all china or glass-ware is well tempered; yet a little careful attention may not be misplaced, even on that point: for though ornamental china or glass-ware are not exposed to the action of hot water in common domestic use, yet they may be injudiciously immersed in it for the purpose of cleaning; and, as articles intended solely for ornament, may not be so highly annealed as others, without any fraudulent negligence on the part of the manufacturer, it will be proper never to apply water to them beyond a tepid temperature. An ingenious and simple mode of annealing glass has been some time in use by chemists. It consists in immersing the vessel in cold water, gradually heated to the boiling point, and suffered to remain till cold, when it will be fit for use. Should the glass be exposed to a higher temperature than that of boiling water, it will be necessary to immerse it in oil. Having thus guarded against fractures, we naturally come to the best modes of repairing them when they actually take place, for which purpose various mixtures have been proposed; and it will here be sufficient to select only those which excel in neatness and facility. Perhaps, the best cement, both for strength and invisibility, is that made from mastic. The process, indeed, may be thought tedious; but a sufficient quantity may be made at once to last a lifetime. To an ounce of mastic add as much highly rectified spirits of wine as will dissolve it. Soak an ounce of isinglass in water until quite soft, then dissolve it in pure rum or brandy, until it forms a strong glue, to which add about a quarter of an ounce of gum ammoniac, well rubbed and mixed. Put the two mixtures together in an earthen vessel over a gentle heat; when well united, the mixture may be put into a phial and kept well stopped. When wanted for use, the bottle must be set in warm water, when the china or glass articles must be also warmed and the cement applied. It will be proper that the broken surfaces, when carefully fitted, shall be kept in close contact for twelve hours at least, until the cement is fully set; after which the fracture will be found as secure as any part of the vessel, and scarcely perceptible. It may be applied successfully to marble, and even to metals. When not provided with this cement, and in a hurry, the white of an egg well beaten with quicklime, and a small quantity of very old cheese, form an excellent substitute, either for broken china, or old ornamental glass-ware. It is also a fact well ascertained, that the expressed juice of garlic is an everlasting cement, leaving no mark of fracture, if neatly done. These are fully sufficient for every useful purpose; but we may still further observe, in respect to the cement of quick lime, that it may be improved, if, instead of cheese, we substitute the whey produced by boiling milk and vinegar, separating the curd carefully, and beating up with half a pint of it, the whites of six eggs, adding the sifted quick-lime until it forms a thick paste, which resists both fire and water.

**DIRECTIONS FOR MARRIAGE.**—G. A.—It exceeds computation. The hand of Arabia is sometimes carried three hundred miles over the Mediterranean, by the sweeping winds. The hands and feet of bronze statues are in time wasted away by the kisses of devotees; marble steps are worn by the crowds of kneeling pilgrims in Catholic countries; and the gentle dropping of water will in time perforate a rock. The minute must be the particular watchword in each of these cases.

**SILVER.**—G. A.—Common silver is a potential, butious plant, found growing wild in some parts of this country, which gives it reason to believe that it may be indigenous, but it is probably that it was originally brought from Asia.

It is cultivated for medical use in great abundance in Cambridgeshire and Essex, formerly about Sutton Walden, but it is now confined to Sturford. It flowers in September; the blossoms are extremely beautiful, resembling in form the spring crocus, but of a very rich violet colour, and having a brilliant golden pistil, three-lobed.

**LIGHTNING CONDUCTORS.**—S. C.—Closed windows are dangerous during lightning, because the inner sides of the frames acquire an opposite electricity to the outside, and then any conducting body is likely to concentrate the action on the inside. Metallic bodies, picture-frames, coated mirrors, bell-wires, &c., display electricity by induction, during a storm. The best lightning conductor is lead or copper, on the ridge of the roof, with perfect continuation of metal pipes into the ground.

**THE USE OF SILK.**—J. A. T.—Silk is an agreeable and healthy material. Used in dress, it retains the electricity of our bodies; in the drapery of our rooms and furniture covers, it reflects the sunbeams, giving them a quicker brilliancy, and it heightens colours with a charming light. It possesses a cheerfulness of which the dull surfaces of wool and linen are destitute. It promotes cleanliness, and will not readily imbibe dirt. Its continually growing use by man, accordingly, is beneficial in many ways. Grace and beauty even owe something to silk.

**FERMENTED LIQUORS.**—A. B.—The subject has already been investigated, and it has been indubitably proved that an ingredient in the composition of pale ale is strychnine. It is the great end of the science of chemistry to detect by careful analysis every species of matter that exists in bodies, however complicated in their manufacture these may be; and by reducing them to their primitive or simple elements, show incontestably of what they are composed. In the case to which you allude Professor Liebig was called in to test, by practical experiment, the composition of the ale submitted to his proofs; and all those who are inclined to doubt the authority of so eminent a chemist may follow their own tastes, and perhaps they will be able, like him, after a little experience to arrive at the same result.

AN ALL-ING DEMONSTRATION.

**THE IRISH SUBMARINE TELEGRAPH.**—M. X. Y.—The cable lately sunk between Holyhead and Howth weighed 110 tons, was 70 miles long, and was submerged in 18 hours, being the greatest exploit yet in connection with submarine dynamics.

**INTELLECTUAL GREATNESS.**—L. A.—It was not the prowess of war alone that made eternal the fame of Athens, or the renown of Rome? By no means. The citizens of Athens, many of them, were scholars; and Athens, in consequence, became the glory of Greece—

"Of Freedom's birth-place, Freedom's home,  
Where Freedom's children joy to roam."  
Take away Homer and Demosthenes and Socrates and Plato, with a host of others of like character, and could it be said, with propriety, that Greece ever was a great nation, or that the Grecians were a great people? But these men were not military men, and probably they were not wealthy men. But they were intellectual men. Without them, Greece would be as destitute of renown as is Central Africa.

**METALLIC TREES.**—M. C.—The lead-tree is produced as follows:—Put into a glass bottle about half an ounce of sugar of lead, and fill up to the neck with distilled or rain water; then fasten to the cork or stopper, a piece of zinc wire, so that it may hang in the centre; then place the bottle where it may remain undisturbed. The wire will soon be covered with crystals of lead, precipitated from the solution, and assuming a tree-like form very pleasing to the eye. For the first time, as before, and put in three drachms of muriatic acid, and about ten drops of nitric acid. The tin tree has a more interesting appearance than the lead tree. The silver tree is prepared by a solution of four drachms of nitrate of silver, in distilled or rain water, as before; to which add about an ounce of quick-silver.

**CONSECRATION REQUIRED.**—D. E. (the value of a Spanish doubloon is 25 s.). A. C. (the Queen Dowager is the widow of Philip). E. F. (William the Conqueror first made the title of Earl hereditary, giving it in fee to his nephew, and allocating them for the support of their estate the third part of the Sheriff's court, turning out of all pleas of the law whence they had the title. At present the title is accompanied by no territory, private or judicial rights, but confers nobility, and a hereditary seat in the House of Lords). X. M. (Herzick is, of all our old poets, the most perfect imitator of the customs of the harvest field). D. H. (Geoponics means the science of cultivating the earth). G. E. (you; the Latin word for the general guardian of all orphans and minors throughout the realm). G. A. (the Viking were Northmen who infested the European seas in the eighth, ninth, and tenth centuries. They were generally the sons of northern kings, who bestowed themselves to piracy, as a means of becoming distinguished, and of obtaining an independent command). R. S. (yes; steel alloys with rhodium in razors made of rhodium, and with gold and nickel; also with platinum, in the proportion one platinum, eight steel, with the finest polish). E. U. (the principle by which a balloon rises in the atmosphere, is exactly the same as that which causes the ascent of a cork from the bottom of a vessel filled with water. The weight of the volume of air which it displaces must exceed the weight of the balloon, and all that it carries with it). H. G. (No; one block can only print one colour; and, therefore if five or six colours form the design, and all be printed by blocks, there must be five or six blocks, all equal in size, but the raised part in each block corresponding with the depressed part in all the other blocks. The principle involved is precisely the same as that displayed in floor-slab printing). U. T. (we do not think you are likely to succeed better in the United States than here; the trade of brick-making is mostly all done there by the use of machinery). E. R. (the odorous matter of flowers is inflammable, and arises from an essential oil. When growing in the dark, their odour is diminished, but restored in the light; and it is strongest in sunny climates. The fraxinella takes fire in hot evenings, by burying a candle near its root). P. R. (No; the sensitiveness of the pig to pain is as acute as that of most other animals. It even suffers under the irritation arising from the punctures of goats and other small insects, and endeavours to protect itself from their persecutions by rolling in moist places and covering himself with mud). E. M. (casting the fly is a knack, and cannot well be taught but by experience. The spring of the rod should do the chief work, and not the labour of your arm). E. C. D. (No; there is no instrument equal to the organ in magnitude and power. The sublimity of its effects is known and felt by everybody. Few that have listened to the religious service of our venerable cathedrals and have not experienced the feelings so well expressed by Milton:—

"But let my duo feet never fail,  
To walk the cloister's studious pale,  
And love the high embayer'd roof,  
With antique pillars massy proof,  
And storied windows richly dight  
Shedding a dim religious light.  
There let the pealing organ blow  
To the full voiced choir below.  
In service high and anthem clear,  
As may with sweetness through mine ear,  
Dissolve me into ecstasies,  
And bring all heaven before mine eyes.")

**A NATURALIST.** (Yes; every species of spider produces its own kind of web, each in accordance with the size and structure of the animal). E. F. (the discoverer of the optic nerves is reputed to have been N. Varole, a surgeon and physician of Bologna, about the year 1538). J. W. (we believe the first oratorio in London was performed in Lincoln's Inn theatre, in Portugal-street, in 1735). G. A. (the flies are unsuitable). J. S. (there are seven classes of clouds, the cirrus, cumulus, stratus, cirrocumulus, alto-stratus, cumulo-stratus, nimbus). V. A. (the height of humidity is two miles in the arctic regions, and four and a half at the equator). M. L. (the ossification of soft parts of bodies arises from the deposit of phosphate and carbonate of lime on the part). E. R. (all animals ruminant which have horns and cloven feet). T. M. (thanks for your suggestions).

*"He then pronounced the few solemn words of the priest, and laid her out."*

## UNDINE: A MINIATURE ROMANCE.

(Continued from page 106.)

"Then pray, for goodness sake, father, let us follow her," cried Huldbrand anxiously.

"Wherefore should we?" replied the old man; "it would be a sin were I to suffer you, all alone, to search after the foolish girl amid the loneliness of night; and my old limbs would fail to carry me to this wild rover, even if I knew to what place she has betaken herself."

"Still we ought, at least, to call after her, and beg her to return," said Huldbrand, and he began to call in tones of earnest entreaty: "Undine! Undine! come back, come back!"

The old man shook his head, and said: "All your shouting, however loud and long, will be of no avail; you know not as yet, sir knight, what a self-willed thing the little wilding is." But still, even hoping against hope, he could not himself cease calling out every minute, amid the gloom of night: "Undine! ah dear Undine! I beseech you, pray come back,—only this once."

It turned out, however, exactly as the fisherman had said. No Undine could they hear or see; and as the old man would on no account consent that Huldbrand should go in quest of the fugitive, they were both obliged at last to return into the cottage. There they found the fire on the hearth almost

gone out, and the mistress of the house, who took Undine's flight and danger far less to heart than her husband, had already gone to rest. The old man blew up the coals, put on kindling stuff and billets of wood, and by means of the renewed flame, hunted for a jug of wine, which he brought and set between himself and his guest.

"You, sir knight, as well as myself," said he, "are anxious on the silly girl's account, and it would be better, I think, to spend part of the night in chatting and drinking, than keep turning and turning on our rush-mats, and trying in vain to sleep. What is your opinion?"

Huldbrand was well pleased with the plan; the fisherman pressed him to take the empty seat of honour, its worthy occupant having now left it for her couch; and they relished their beverage and enjoyed their chat, as two such good men and true ever ought to do. To be sure, whenever the slightest thing moved before the windows, or at times when even nothing was moving, one of them would look up and exclaim, "There she comes!"—Then would they continue silent a few moments, and afterwards, when nothing appeared, would shake their heads, breathe out a sigh, and go on with their talk.

But since they were both so pre-occupied in their minds, as to find it next to impossible to dwell upon any subject separate from Undine, the best plan they could devise was, that the old fisherman should relate, and the knight should hear, in what manner Undine had come to the cottage. So the fisherman, giving an account of the circumstances, began as follows:

"It is now about fifteen years, since I one day crossed the wild forest with fish for the city market. My wife had remained at home as she was wont to do; and at this time for a reason of more than common interest, for although

we were beginning to feel the advances of age, God had bestowed upon us an infant of wonderful beauty. It was a little girl, and we already began to ask ourselves the question, whether we ought not, for the advantage of the newcomer, to quit our solitude, and, the better to bring up this precious gift of Heaven, to remove to some more inhabited place. Poor people, to be sure, cannot in these cases do all you may think they ought, sir knight; but still it behoves every one to do as much for his children as he is able.

"Well, I went on my way, and this affair would keep running in my head: it put my mind into a perfect whirl. This tongue of land was most dear to me, and I shrank from the thought of leaving it, when, amidst the bustle and broils of the city, I was obliged to reflect in this manner by myself; 'In a scene of tumult like this, or at least in one not much more quiet, I, too, must soon take up my abode.' But in spite of these feelings, I was far from murmuring against the kind providence of God; on the contrary, when I received this new blessing, my heart breathed a prayer of thankfulness too deep for words to express. I should also speak an untruth, were I to say, that anything befell me, either on my passage through the forest to the city, or on my returning homeward, that gave me more alarm than usual, as at that time I had never seen any appearance there, which could terrify or annoy me. In those awful shades the Lord was ever with me, and I felt his presence as my best security."

Thus speaking, he took his cap reverently from his bald crown, and continued to sit, for a considerable time, in a state of devout thoughtfulness. He then covered himself again, and went on with his relation:

"On this side the forest, alas! it was on this side that woe burst upon me. My wife came wildly to meet me, clad in mourning apparel, and her eyes streaming with tears. 'Gracious God!' I cried, 'where is our child? Speak!'

"With the Being on whom you have called, dear husband," she answered; and we now entered the cottage together, weeping in silence. I looked for the little corpse, almost fearing to find what I was seeking; and then it was I first learned how all had happened.

"My wife had taken the little one in her arms, and walked out to the shore of the lake. She there sat down by its very brink; and while she was playing with the infant, as free from all fear as she was full of delight, it bent forward on a sudden, seeing something in the water, a perfect fairy wonder of beauty. My wife saw her laugh, the dear angel, and try to catch the image in her tiny hands; but in a moment,—with a motion swifter than sight,—he sprang from her mother's arms, and sunk in the lake, the watery glass into which she had been gazing. I searched for our lost darling again and again; but it was all in vain; I could nowhere find the least trace of her.

"Well, our little one was gone. We were again childless parents, and were now on the same evening sitting together by our cottage hearth. We had no desire to talk, even would our tears have permitted us. As we thus sat in mournful stillness, gazing into the fire, all at once we heard something without, a slight rustling at the door. The door flew open, and we saw a little girl, three or four years old, and more beautiful than I am able to tell you, standing on the threshold, richly dressed, and smiling upon us. We were struck dumb with astonishment, and I knew not for a time whether the tiny form were a real human being, or a mere mockery of enchantment. But I soon perceived water dripping from her golden hair and rich garments, and that the pretty child had been lying in the water, and stood in immediate need of our help.

"'Wife,' said I, 'no one has been able to save our child for us; still, we doubtless ought to do for others what would make ourselves the happiest parents on earth, could any one do us the same kindness.'

"We undressed the little thing, put her to bed, and gave her something to drink; at all this she spoke not a word, but only turned her eyes upon us, eyes blue and bright as sea or sky, and continued looking at us with a smile.

"Next morning we had no reason to fear that she had received any other harm than her wetting, and I now asked her about her parents, and how she could have come to us. But the account she gave was both confused and incredible. She must surely have been born far from here, not only because I have been unable for these fifteen years to learn anything of her birth, but because she then spoke, and at times continues to speak, many things of so very singular a nature that we neither of us know, after all, whether she may not have dropped among us from the moon. Then, her tall, rans upon golden castles, crystal domes, and heaven knows what extravagances besides. What of her story, however, she related with most distinctness, and what appeared to have in it some shadow of likelihood, was this, that while she was once taking a sail with her mother on the great lake, she fell out of the boat into the water; and that when she first recovered her senses, she was here under our trees, where the gay scenes of the shore filled her with delight.

"We now had another care weighing upon our minds, and one that caused us no small perplexity and uneasiness. We of course very soon determined to keep and bring up the child, we had found in place of our own darling that had been drowned; but who could tell us whether she had been baptized or not? She herself could give us no light on the subject. When we asked her the question, she commonly made answer, that she well knew she was created for God's praise and glory; and that as to what might promote the praise and glory of God, she was willing to let us determine.

"My wife and I reasoned in this way: 'If she has not been baptized, there can be no use in putting off the ceremony; and if she has been, it is more dangerous, in regard to the duties of religion, to do too little than too much.'

"Taking this view of our difficulty, we now endeavoured to hit upon a

good name for the child, since while she remained without one, we were often at a loss, in our familiar talk, to know what to call her. We at length concluded that Dorothea would be most suitable for her, as I had somewhere heard it said, that this name signified a *Gift of God*, and surely she had been sent to us by Providence as a gift, to comfort us in our misery. She, on the contrary, would not so much as hear Dorothea mentioned; she insisted, that as she had been named Undine by her parents, Undine she ought still to be called. It now occurred to me, that this was a heathenish name, to be found in no calendar, and I resolved to ask the advice of a priest in the city. He too would hear nothing of the name of Undine, even for a moment; and yielding to my urgent request, he came with me through the enchanted forest, in order to perform the rite of baptism here in my cottage.

"The little maid stood before us so prettily adorned, and with such an air of gracefulness, that the heart of the priest softened at once in her presence; and she had a way of coaxing him so adroitly, and even of braving him at times with so merry a quiver, that he at last remembered nothing of his many objections to the name of Undine.

"Thus then was she baptized Undine; and during the holy ceremony, she behaved with great propriety and gentleness, wild and wayward as at other times she invariably was. For in this my wife was quite correct, when she mentioned the name, anxiety, and vexation the child has occasioned us. If I should relate to you—"

At this moment the knight interrupted the fisherman, with a view to direct his attention to a deep sound, as of a rushing flood, which had caught his ear, within a few minutes, between the words of the old man. And now the waters came pouring on with redoubled fury before the cottage windows. Both sprang to the door. There they saw, by the light of the now risen moon, the brook which issued from the wood rushing wildly over its banks, and whirling onward with it both stones and branches of trees in its rapid course. The storm, as if awakened by the uproar, burst forth from the clouds, where immense masses of vapour poured over the moon with the swiftness of thought; the lake roared beneath the wind, that swept the foam from its waves; while the trees of this narrow peninsula grouched from root to topmost branch, as they bowed and swung above the torrent.

"Undine! for pity's sake, Undine!" cried the two men in an agony. No answer was returned; and now, regardless of everything else, they hurried from the cottage, one in this direction, the other in that, searching and calling.

### CHAPTER III.

THE longer Huldbrand sought Undine beneath the shades of night, and failed to find her, the more anxious and confused he became. The impression, that she was a mere phantom of the forest, gained a new ascendancy over him; indeed, amid the howling of the waves and the tempest, the cackling of the trees, and so entire a transformation of the scene, that it discovered no resemblance to its former calm beauty, he was tempted to view the whole peninsula, together with the cottage and its inhabitants, as little more than some mockery of his senses; but still he heard, afar off, the fisherman's anxious and incessant shouting, "UNDINE!" and also his aged wife, who, with a loud voice, and a strong feeling of awe, was praying and chanting hymns amid the commotion.

At length, when he drew near to the brook which had overflowed its banks, he perceived by the moonlight, that it had taken its wild course directly in front of the haunted forest, so as to change the peninsula into an island.

"Should it be," he breathed to himself, "that Undine has ventured a step within that fearful wood, what will become of her?—perhaps it was all owing to her sportive and wayward spirit, because I could give her no account of my adventures there;—and now the stream is rolling between us, she may be weeping alone on the other side, in the midst of spectral horrors!"

A shuddering groan escaped him, and clambering over some stones and trunks of overthrown pines, in order to step into the impetuous current, he resolved, either by wading or swimming, to seek the wanderer on the further shore. He felt, it is true, all the dread and shrinking we creeping over him, which he had already suffered by daylight among the now tossing and roaring branches of the forest. More than all, a tall man in white, whom he knew but too well, met his view, as he stood grinning and nodding on the grass beyond the water; but even monstrous forms like this only impelled him to cross over toward them, when the thought rushed upon him, that Undine might be there alone, and in the agony of death.

He had already grasped a strong branch of a pine, and stood supporting himself upon it in the whirling current, against which he could with difficulty keep himself erect; but he advanced deeper in with a courageous spirit. That instant a gentle voice of warning cried near him: "Do not venture, do not venture! that old man, the stream, is too tricky to be trusted!"—He knew the soft tones of the voice; and while he stood as it were entranced, beneath the shadows which had now duskily veiled the moon, his head swam with the swell and rolling of the waves, as he saw them momentarily rising above his knee. Still he disdained the thought of giving up his purpose.

\* Some of these images may remind the reader of the vivid pictures of "The Buccaneer," that rich contribution to the permanent literature of America:

"The acid is driving wildly over head,"  
"The sea run high;  
Their white tops, flashing thro' the night,  
Give to the eager, straining eye,  
A wild and shifting light."

"If you are not really there, if you are merely gambolling round me like a mist, may I too bid farewell to life, and become a shadow like you, dear, dear Undine!" Thus calling aloud, he again moved deeper into the stream. "Look round you, ah, pray look round you, beautiful young stranger! why rush on death so madly?" cried the voice a second time close by him; and looking sideways, as the moon by glimpses unveiled its light, he perceived a little island formed by the flood, and, reclined upon its flowery turf, beneath the high branches of embowering trees, he saw the smiling and lovely Undine.

Oh with what a thrill of delight, compared with the suspense and pause of a moment before, the young man now plied his sturdy staff! A few steps freed him from the flood, that was rushing between himself and the maiden, and he stood near her on the little spot of green-sward, in secret security, covered by the primeval trees that rustled above them. Undine had partially risen, within her tent of verdure, and she now threw her arms around his neck, so that she gently drew him down upon the soft seat by her side.

"Here you shall tell me your story, my handsome friend," she breathed in a low whisper; "here the cross old people cannot disturb us. And, besides, our roof of leaves here will make quite as good a shelter, it may be, as their poor cottage."

"It is happiness itself," cried Huldbrand; and folding her in his arms, he kissed the lovely and affectionate girl with fervour.

The old fisherman, meantime, had come to the margin of the stream, and he shouted across to the young lovers: "Why how is this, sir knight? I received you with the welcome which one true-hearted man gives to another; and now you sit there caressing my foster-child in secret, while you suffer me in my anxiety to wander through the night in quest of her."

"Not till this moment did I find her myself, old father," cried the knight across the water.

"So much the better," said the fisherman; "but now make haste, and bring her over to me upon firm ground."

To this, however, Undine would by no means consent. She declared, that she would rather enter the wild forest itself with the beautiful stranger, than return to the cottage, where she was so thwarted in her wishes, and from which the handsome knight would soon or late go away. Then closely embracing Huldbrand, she sang the following verse with the warbling sweetness of a bird:

'A RILL would leave its misty vale,  
And fortunes wild explore;  
Weary at length it reached the main,  
And sought its vale no more.'

The old fisherman wept bitterly at her song, but his emotion seemed to awaken little or no sympathy in her. She kissed and caressed her new friend, who at last said to her: "Undine, if the distress of the old man does not touch your heart, it cannot but move mine. We ought to return to him."

She opened her large blue eyes upon him in perfect amazement, and finally spoke with a slow and lingering accent: "If you think so—it is well; all is right to me, which you think right. But the old man over there must first give me his promise, that he will allow you, without objection, to relate what you saw in the wood, and—Well, other things will settle themselves."

"Come, only come!" cried the fisherman to her, unable to utter another word. At the same time, he stretched his arms wide over the current toward her, and, to give her assurance that he would do what she required, nodded his head: this motion caused his white hair to fall strangely over his face, and Huldbrand could not but remember the nodding white man of the forest. Without allowing anything, however, to produce in him the least confusion, the young knight took the beautiful girl in his arms, and bore her across the narrow channel, which the stream had torn away between her little island and the solid shore. The old man fell upon Undine's neck, and found it impossible either to express his joy, or to kiss her enough; even the ancient dame came up, and embraced the recovered girl most cordially. Every word of censure was carefully avoided; the more so, indeed, as even Undine, forgetting her waywardness, almost overwhelmed her foster-parents with caresses and the prattle of tenderness.

When at length, after they were able to realise the joy of recovering their child, they seemed to have come to themselves, morning had already dawned, opening to view and brightening the waters of the lake; the tempest had become hushed; the small birds sang merrily on the moist branches.

As Undine now insisted upon hearing the recital of the knight's promised adventures, the aged couple good-humouredly consented to gratify her wish. Breakfast was brought out beneath the trees, which stood behind the cottage toward the lake on the north, and they sat down to it with delighted hearts. —Undine lower than the rest (since she would by no means allow it to be otherwise) at the knight's feet on the grass. These arrangements being made, Huldbrand began his story, in the following manner.

#### CHAPTER IV.

"It is now about eight days, since I rode into the free imperial city, which lies yonder on the farther side of the forest. Soon after my arrival, a splendid tournament and running at the ring took place there, and I spared neither my horse nor my lance in the encounters."

"Once, while I was pausing at the lists, to rest from the brisk exercise, and was handing back my helmet to one of my attendants, a female figure of extraordinary beauty caught my attention, as, most magnificently attired, she stood looking on, at one of the balconies. I learned, on making inquiry

of a person near me, that the name of the young lady was Bertalda, and that she was a foster-daughter of one of the powerful dukes of this country. She too, I observed, was gazing at me, and the consequences were such as we young knights are wont to experience: whatever success in riding I might have had before, I was now favoured with still better fortune. That evening I was Bertalda's partner in the dance, and I enjoyed the same distinction during the remainder of the festival."

A twinge of pain in his left hand, as it hung carelessly beside him, here interrupted Huldbrand's relation, and drew his eye to the part affected. Undine had fastened her pearly teeth, and not without some keenness too, upon one of his fingers, appearing at the same time very gloomy and displeased. On a sudden, however, she looked up in his eyes with an expression of tender melancholy, and whispered almost inaudibly:

"You blame me for being rude, but you are yourself the cause."

She then covered her face, and the knight, strangely embarrassed and thoughtful, went on with his story:

"This lady Bertalda, of whom I spoke, is of a proud and wayward spirit. The second day I saw her, she pleased me by no means so much as she had the first, and the third day still less. But I continued about her, because she showed me more favour than she did any other knight; and the result of my indiscretion was, that I playfully asked her to give me one of her gloves."

"When you have entered the haunted forest all alone," said she; "when you have explored its wonders, and brought me a full account of them, the glove is yours."

"As to getting her glove, it was of no importance to me whatever, but the word had been spoken, and no honourable knight would permit himself to be reminded of such a proof of valour a second time."

"I thought," said Undine, interrupting him, "that she felt an affection for you?"

"It did appear so," replied Huldbrand.

"Well!" exclaimed the maiden, laughing, "this is beyond belief; she must be very stupid, to drive from her one who was dear to her! And, worse than all, into that ill-omened wood! The wood and its mysteries, for all I should have cared, might have waited a long while."

"Yesterday morning, then," pursued the knight, smiling brightly upon Undine, "I set out from the city, my enterprise before me. The early light lay rich upon the verdant turf. It shone so rosy on the slender boles of the trees, and there was so merry a whispering among the leaves, that in my heart I could not but laugh at people who feared meeting anything to terrify them in a spot so delicious. I shall soon trot through the forest, and as speedily return," I said to myself in the overflow of joyous feeling; and ere I was well aware, I had entered deep among the green shades, while of the plain that lay behind me, I was no more able to catch a glimpse."

"Then the conviction for the first time impressed me, that in a forest of so great extent I might very easily become bewildered, and that this perhaps might be the only danger which was likely to threaten those who explored its recesses. So I made a halt, and turned myself in the direction of the sun, which had meantime risen somewhat higher; and while I was looking up to observe it, I saw something black among the boughs of a lofty oak. My first thought was, 'It is a bear!' and I grasped my weapon; the object then accosted me from above in a human voice, but in a tone most harsh and hideous: 'If I overheard here do not gnaw off these dry branches, wise-acre Sir Noodle, what shall we have to roast you with, when midnight comes?' And with that it grinned, and made such a rattling with the branches, that my courser became mad with affright, and rushed furiously forward with me, before I had time to see distinctly what sort of a devil's beast it was."

"You must not name it," said the old fisherman, crossing himself; his wife did the same without speaking a word; and Undine, while her eyes sparkled with delight, looked at the knight and said: "The best of the story is, however, that as yet they have not actually roasted you. But pray make haste, my handsome young friend. I long to hear more."

The knight then went on with his adventures: "My horse was so wild that he well nigh rushed with me against limbs and trunks of trees. He was dripping with sweat, through terror, heat, and the violent straining of his muscles. Still he refused to slacken his career. At last, altogether beyond my control, he took his course directly up a stony steep; when suddenly a tall white man flashed before me, and threw himself athwart the route my mad steed was taking. At this apparition he shuddered with new affright, and stopped trembling. I took this chance of recovering my command of him, and now for the first time perceived, that my deliverer, so far from being a white man, was only a brook of silver brightness, foaming near me in its descent from the hill, while it crossed and arrested my horse's course with its rush of waters."

"Thanks, thanks! dear Brook," cried Undine, clapping her little hands. But the old man shook his head, and deeply musing, looked vacantly down before him.

"Hardly had I well settled myself in my saddle, and got the reins in my grasp again," Huldbrand pursued, "when a wizard-like dwarf of a man was already standing at my side, diminutive and ugly beyond conception, his complexion of a brownish yellow, and his nose scarcely of less magnitude than all the rest of him. The fellow's mouth was slit almost from ear to ear, and he showed his teeth with a smirking smile of idiotic courtesy, while he overwhelmed me with bows and scrapes innumerable. The scene now becoming excessively irksome, I thanked him in the fewest words I could well use, turned about my still trembling charger, and purposed either to seek another adventure, or, should I meet with none, to take my way back to the city; for the sun, during my wild chase, had passed the meridian, and

was now hastening toward the west. But this villain of a manikin sprang at the same instant, and with a turn as rapid as lightning stood before my horse again. "Clear the way there!" I cried fiercely; "the beast is wild, and will make nothing of running over you."

"He will, will he!" cried the imp with a snarl, and snorting out a laugh still more frightfully idiotic. "Pay me, first pay what you owe me!—I stopped your fine little nag for you; without my help, both you and he would be now sprawling below there, in that stony ravine: Ugh! from what a horrible plunge I've saved you."

"Well, pray don't stretch your mouth any wider," said I, "but take your money and off, though every word you say is false. It was the brook there, you miserable thing, and not you that saved me."—And at the same time I dropped a piece of gold into his wizard cap, which he had taken from his head while he was begging before me.

"I then trotted off, and left him; but, to make bad worse, he screamed after me, and on a sudden, with inconceivable quickness, he was close by my side. I started my horse into a gallop; he galloped on with me, impossible for him as it appeared; and with this strange movement, half ludicrous and half horrible, forcing at the same time every limb and feature into distortion, he held up the gold piece, and screamed at every leap: 'Counterfeit! false! false coin! counterfeit!' and such was the strange sound that issued from his hollow breast, you would have supposed, that at every scream he must have tumbled upon the ground dead. All this while, his disgusting red tongue hung lolling from his mouth.

"Discomposed at the sight, I stopped and asked: 'What do you mean by this screaming? Take another piece of gold, take two, but leave me!'

"He then began again his hideous salutations of courtesy, and screeled out as before: 'Not gold, it shall not be gold, my smart young gentleman: I have too much of that trash already, as I will show you in quick time.'

"At that moment, and thought itself could not have been more instantaneous, I seemed to have acquired new powers of sight. I could see through the solid green plain, as if it were green glass, and the smooth surface of the earth were round as a globe, and within it I saw crowds of goblins,\* who were pursuing their pastime, and making themselves merry with silver and gold. They were tumbling and rolling about, heads up and heads down; they pelted one another in sport with the precious metal, and with irritating malice blew gold-dust in one another's eyes. My odious companion stood half within and half without; he ordered the others to reach him up a vast quantity of gold; this he showed to me with a laugh, and then flung it again ringing and clinking down the measureless abyss.

"After this contemptuous disregard of gold, he held up the piece I had given him, showing it to his brother goblins below and they laughed themselves half dead at a bit so worthless, and hissed me. At last, raising their fingers, all smatched with ore, they pointed them at me in scorn, and wilder and wilder, and thicker and thicker, and madder and madder the crowd were clamouring up to where I sat gazing at these wonders. Then terror seized me, as it had before seized my horse. I gave him both spurs to the quick; and how far he rushed with me through the forest during this second of my wild heats, it is impossible to say.

"At last, when I had now come to a dead halt again, the cool of evening was around me. I caught the gleam of a white-foot-path through the branches of the trees; and presuming it would lead me out of the forest towards the city. I was desirous of working my way into it; but a face perfectly white and indistinct, with features ever changing, kept thrusting itself out and peering at me between the leaves. I tried to avoid it; but wherever I went, there too appeared the unearthly face. I was maddened with rage at this interruption, and determined to drive my steed at the appearance full tilt, when such a cloud of white foam came rushing upon me and my horse, that we were almost blinded, and glad to turn about and escape. Thus from step to step it forced us on, and ever aside from the foot-path, leaving us, for the most part, only one direction open. But when we advanced in this, it kept following close behind us, yet did not occasion the smallest harm or inconvenience.

"When at times I looked about me at the form, I perceived that the white face which had splashed upon us its showers of foam, was resting on a body equally white and of more than gigantic size. Many a time too I received the impression, that the whole appearance was nothing more than a wandering stream or torrent, but respecting this I could never attain to any certainty. We both of us, horse and rider, became weary, as we shaped our course according to the movements of the white man, who continued nodding his head at us, as if he would say: 'Perfectly right! perfectly right!'—And thus, at length, we came out here, at the edge of the wood, where I saw the fresh turf, the waters of the lake, and your little cottage, and where the tall white man disappeared."

"Well, Heaven be praised that he is gone!" cried the old fisherman; and he now began to consider how his guest could most conveniently return to his friends in the city. Upon this, Undine began tittering to herself, but so very low that the sound was hardly perceivable. Huldbrand, observing it, said: "I had hoped you would see me remain here with pleasure; why then do you now appear so happy, when our talk turns upon my going away?"

"Because you cannot go away," answered Undine. "Pray make a single attempt; try with a wherry, with your horse, or alone, as you please, to cross that forest stream which has burst its bonds. Or rather, make no trial at all, for you would be dashed to pieces by the stones and trunks of trees, which you see driven on with such violence. And as to the lake, I am well acquainted with that; even my father dares not venture out with his wherry far enough to help you."

\* Kobolds or sprites

Huldbrand rose, smiling, in order to look about, and observe whether the state of things were such as Undine had represented it to be; the old man accompanied him, and the maiden in mockery, went gambolling and playing her antics beside them. They found all, in fact, just as Undine had said; and that the knight, whether willing or not willing, must submit to remaining on the island, so lately a peninsula, until the flood should subside.

When the three were now returning to the cottage, after their ramble, the knight whispered the little girl in her ear:

"Well, dear Undine, how is it with you? Are you angry on account of my remaining?"

"Ah," she pettishly replied, "not a word of that. If I had not bitten you, who knows what fine things you would have put into your story about Bertalda!"

## CHAPTER V.

At some period of your life, my dear reader, after manifold triumphs and repulses in the crusade of the world, you may have reached a situation where you were happy; that love for the calm of our own fire-side, which we all feel as an affection born with us, again rose within you; you imagined that your home would again bloom forth, as from a cherished grave, with all the flowers of childhood, the purest and most impassioned love; and that in such a spot it must be delightful to dwell, and build your tabernacle for life.

Whether you were mistaken in this persuasion, and afterwards made a severe expiation for your error of judgment, it suits not my purpose to inquire, and you would be unwilling yourself, it may be, to be saddened by a recollection so ungrateful. But again awake within you that foretaste of bliss, so inexpressibly sweet, that angelic salutation of peace, and you will be able perchance, to realise something of the knight Huldbrand's happiness, the tender visions of his heart, while he remained on the point of land, now surrounded by the lake.

He frequently observed, and no doubt with heartfelt satisfaction, that the forest stream continued every day to swell and roll on with a more impetuous sweep; that, by tearing away the earth, it scooped out a broader and broader channel; and that the time of his seclusion on the island became, in consequence, more and more extended. Part of the day he wandered about with an old cross-bow, which he found in a corner of the cottage and had repaired, in order to shoot the water-fowl that flew over; and all that he was lucky enough to hit, he brought home for a good roast in the kitchen. When he came in with his booty, Undine seldom failed to greet him with a scolding because he had cruelly deprived her dear merry friends of life, as they were sporting above in the blue ocean of the air; nay more, she often wept bitterly when she viewed the waterfowl dead in his hand. But at other times, when he returned without having shot any, she gave him a scolding equally serious, since, owing to his indolent strolling and awkward handling of the bow, they must now put up with a dinner of pickerel and eel-fish. Her playful taunts ever touched his heart with delight; the more so, as she afterwards strove to make up for her pretended ill-humour with that most endearing of prattle, of which lovers alone are able to understand the value.

In this familiarity of the young people, their aged friends saw a resemblance to the feelings of their own youth: they appeared to look upon them as betrothed, or even as a young married pair, that lived with them in their age, to afford them assistance on their island, now torn off from the mainland. His retired situation too, strongly impressed the young Huldbrand with the feeling, that he was already Undine's bridegroom. It seemed to him, as if, beyond those encompassing floods, there were no other world in existence, or at any rate as if he could never cross them, and again associate with the world of other men; and when at times his grazing steed raised his head and neighed to him, seemingly inquiring after his knightly achievements and reminding him of them, or when his coat-of-arms sternly shone upon him from the embroidery of his saddle and the caparisons of his horse, or when his sword happened to fall from a nail, on which it was hanging in the cottage, and flashed on his eye as it slipped from the scabbard in its fall—he quieted the dubious suggestions of his mind, by saying to himself:

"Undine cannot be a fisherman's daughter; she is, in all probability, a native of some remote region; and a member of some illustrious family."

There was one thing, indeed, to which he had a strong aversion: this was hearing the old dame reprimanding Undine. The wild girl, it is true, commonly laughed at the reproof, making no attempt to conceal the extravagance of her mirth; but it appeared to him like touching his own honour; and still he found it impossible to blame the aged wife of the fisherman, since Undine always deserved at least ten times as many reprimands as she received: so he continued to feel in his heart an affectionate tenderness for them all, even for the ancient mistress of the house, and his whole life flowed on in the calm stream of contentment.

But still there came some interruption at last. The fisherman and the knight had been accustomed at dinner, and also in the evening, when the wind roared without, as it rarely failed to do towards night, to enjoy together a flask of wine. But now their whole stock, which the fisherman had from time to time brought with him from the city, was at last exhausted, and they were both quite out of humour at the circumstance. That day Undine laughed at them excessively, but they were not disposed to join in her pleasantries with the same gaiety as usual. Towards evening she went out of the cottage, to escape, as she said, the sight of two such lengthened and tiresome faces.

While it was yet twilight, some appearances of a tempest seemed to be again mustering in the sky, and the waves already rushed and roared around

them: the knight and the fisherman sprung to the door in terror, to bring home the maiden, remembering the anguish of that night when Huldbrand had first entered the cottage. But Undine met them at the same moment, clapping her little hands in high glee.

"What will you give me," she cried, "to provide you with wine? or rather, you need not give me anything," she continued; "for I am already satisfied, if you look more cheerful, and have a livelier flow of spirits, than throughout this last most wearisome day. Only come with me; the forest stream has driven ashore a cask; and I will be condemned to sleep a whole week, if it is not a wine-cask."

The men followed her, and actually found, in a bushy cove of the shore, a cask, which inspired them with as much joy as if they were sure it contained the generous old wine for which they were thirsting. They first of all, and with as much expedition as possible, rolled it towards the cottage; for a heavy shower was again rising in the west, and they could discern the waves of the lake, in the fading light, lifting their white foaming heads, as if looking out for the rain, which threatened every instant to pour upon them. Undine helped them as much as she was able; and as the shower, with a roar of wind, came suddenly sweeping on in rapid pursuit, she raised her finger with a merry menace toward the dark mass of clouds, and cried:

"You cloud, you cloud, have a care!—beware how you wet us; we are some way from shelter yet."

The old man reproved her for this sally, as a sinful presumption; but she laughed to herself with a low titling, and no one suffered any evil from her wild behaviour. Nay more, what was beyond their expectation, they reached their comfortable hearth unwet, with their prize secured; but the moment the cask had been broached, and proved to contain wine of a remarkably fine flavour, then the rain first poured unrestrained from the black cloud, the tempest raved through the tops of the trees, and swept far over the billows of the deep.

Having immediately filled several bottles from the cask, which promised them a supply for a long time, they drew round the glowing hearth; and, comfortably secured from the tempest, they sat tasting the flavour of their wine, and bandying their pleasantries.

As reflection returned upon him, the old fisherman suddenly became extremely grave, and said:

"Ah, friends, here we sit, rejoicing over this rich gift, while he to whom it first belonged, and from whom it was wrested by the fury of the stream, must there also, it is more than probable, have lost his life."

"His fate, I trust, was not quite so melancholy as that," said Undine, while, smiling, she filled the knight's cup to the brim.

But he exclaimed:

"By my unsullied honour, old father, if I knew where to find and rescue him, no exposure to the night, nor any thought of peril, should deter me from making the attempt. But I give you all the assurance I am able to give, that provided I again reach an inhabited country, I will find out the owner of this wine, or his heirs, and make double and triple reimbursement."

The old man was gratified with this assurance; he gave the knight a nod of approbation, and now drained his cup with an easier conscience and a more delicate relish.

Undine, however, said to Huldbrand:

"As to the repayment and your gold, you may do whatever you like. But what you said about your venturing out, and searching, and exposing yourself to danger, appears to me far from wise. I should cry my very eyes out, should you perish there on such a wild jaunt; and is it not true, that you would prefer staying here with me and the good wine?"

"Most assuredly," answered Huldbrand, smiling.

"Well," replied Undine, "you spoke unwisely then. For charity begins at home: our neighbour ought not to be our first thought; and whatever is a calamity to him, would be one in our own case also."

The mistress of the house turned away from her, sighing and shaking her head, while the fisherman forgot his wonted indulgence toward the graceful little girl, and thus reproved her:

"That sounds exactly as if you had been brought up by heathens and Turks;" and he finished his reproof by adding: "May God forgive both me and you,—unfeeling child."

"Well, say what you will, this is what I think and feel," replied Undine, "be they who they may that brought me up,—and how can a thousand of your words help it?"

"Silence!" exclaimed the fisherman, in a voice of stern rebuke; and she who with all her wild spirit was extremely alive to fear, shrunk from him, moved close up to Huldbrand, trembling, and breathed this question in the lowest tone possible:

"Are you also angry, dear friend?"

The knight pressed her soft hand, and tenderly stroked her locks. He was unable to utter a word; for his vexation, arising from the old man's severity towards Undine, closed his lips; and thus the two couples sat opposite to each other, at once heated with anger and in embarrassed silence.

(To be continued.)

"PROFESSIONAL" DIGNITY.—Now-a-day we find "the march of intellect" has destroyed all vulgar distinctions, and a few days ago we perused an advertisement in which a "shaving shop" is offered for sale "in consequence of the present occupant's retiring from the PROFESSION." This is, in our opinion, carrying the levelling system too far. It can only be matched by the coolness of the chimney-sweeper who lately told a police magistrate that he could not proceed with his case because "another gentleman of the profession," who was a material witness, "had taken his lady down to Ramsgate, and it was quite uncertain when he would return."

## CAROLINE AND CATHARINA.

(Continued from page 714.)

THINGS were in this situation, when one Sunday evening Clayton informed him, that on the following day was to commence the session of the Court which was to decide his fate. It was not without a thrill of excitement that he heard this announcement, calmly as he had awaited the day—no man can be otherwise than excited in a crisis whose contingencies, though they affect him alone, depend upon others. The gambler who bets upon a game played by another, is far more excited than if he played himself. But with Allen the excitement was short-lived; and when on the following day he entered the court-room, and looked around upon the motley crowd always in attendance in such places, his eye was as calm, and the beating of his heart as regular, as if he had no stake in the game about to be played, by the legal gamblers before him.

When he entered, the judge was not yet on the bench; and the members of the bar were lounging about that tobacco precinct, some smoking, some talking and laughing, some poring over long, ill-written papers or large calf-bound books, and all big with the ponderous interests depending upon them, and the eloquence and learning with which they were "crammed" for the occasion. A crowd was collected in the room, impatiently awaiting the opening of the court, during the progress of which many expected cause for exultation, many feared defeat; and a still larger number neither wished for success nor feared defeat, but only came to pick up an occasional fee as jurymen, when the panel should be exhausted, and laugh over the agonies and foul passions of other men, when dissected and laid bare by the merciless operators within the bar. Many were witnesses, also; and the idle lawyers were scanning their motley faces, with many shrewd remarks as to whether this man could speak the truth with such a face, whether that were not a witness of a false *alibi*, or another the leading witness of a malicious prosecution. They all agreed—and those who were most experienced were most decided in the opinion—that there were in that crowd at least fifty perjurers ready to be sworn, and at least fifty more false oaths, to be taken innocently, under the influence of mistake, forgetfulness, prejudice, and confusion. Among the suitors, too, there was variety enough; but it was the variety of the same species—just as the leopard and the cat are of the same species, differing only in particulars. With a few honourable exceptions, they all bore the marks of litigiousness upon their faces—a mixture of obstinacy, cunning, and dishonesty, which is so constantly before the lawyer, that he almost thinks an honest face a *lunus naturæ*. Here was the sturdy farmer, litigating with his neighbour about a division fence, whose position would never have been disputed, but for a quarrel about a neighbouring road; and now both were willing to sink their paternal acres in a cost-bill, rather than give an inch of land for peace. Here stood a knavish horse-trader, brought here by his duple to expiate his sharper tendencies, and swallow up, in fees and costs, the value of both the horses traded.

"I say, Joe," said one of the younger members of the Bar to another, "isn't that the fellow that sued Tom Carter for slander?"

"Yes," replied the other; "why?"

"If he wants any damages, he had better not make profit of himself before the jury," said the first.

"You think his face a letter patent, authorizing him to commit whatsoever crime he may have been charged with?" laughed the other.

"Or," rejoined the first, "a mandamus from the High Court of Fate, commanding him to do it, as a condition of his being."

And both the wits laughed loudly at their own conceit. And the object of the jest—a black-browed fellow, with small, watery, gray eyes—showed his teeth in a complacent grin, utterly unconscious that he had furnished the matter of their amusement.

Beside this fellow stood an old offender against all laws of "nine and thine;" and he too laughed pleasantly with the lawyers, though out of ear-shot—for all such people think it best to keep terms with the lawyers, never knowing what "a day may bring forth." Behind this last was standing a notorious usurer, tall, hook-nosed, and stooping; and as his little gray eyes wandered over the merry group of lawyers, it was astonishing to see how much alike were the three pairs of optics in this little group. Here was a "young and tender" rascal, who, having married one of the heirs of a man of moderate wealth, was now in court to get a partition of his real estate, so that her portion might follow the ready cash she had inherited; and bashfulness, and fear, and cunning, each reigned alternately in his face. Not far from him was seen a red-faced man, whose first object was to escape by "hook or crook"—or if that was not practicable, then to "stave off" the debts for which he stood defendant here; and he was now protesting various good intentions, if he could only get a little time, &c., all of which his legal auditor believed—of course.

Neither Clayton nor Carlin was in the room when Allen entered, nor could he see Thorpe among the crowd; although that gentleman was seated quite near him, talking in the lowest tones to a man in a broad-brimmed white hat, who looked as if he might influence some votes. Allen walked back from the bar, ascending several steps which led to a kind of amphitheatre upon which the seats for spectators were arranged. These and the galleries were all filled by men, except the rear-most tiers; and along those were seated some twenty or thirty ladies, attracted perhaps, by interest in some cause to be tried during the present term. Their attendance was not unusual there—and it is a pity it is not more common in other places—but, unfamiliar as was Allen with courts, he felt flashed by their presence, suspecting that they had been attracted by the hope of hearing his trial. He was not far wrong either: for, excepting a few who resort to every public place,

merely to find a crowd and be observed, there was not one among that score of rustling, fluttering spectators, who would have been there that day for any other reason.

At the end nearest Allen sat Maria Thorpe, and next to her Mary Bryce. And as he walked unconsciously nearer them, the former turned away her head with a glance of great disdain, and the latter imitated her as best she could, by throwing her fat hands up towards the ceiling—a gesture which the reader already knows, was, with her, expressive of even opposite emotions. The acting was, however, not perceived by Vernon, and therefore, was soon terminated—being succeeded by a very deep breath, which threatened hooks-and-eyes and corset string most imminently. Allen's attention was riveted by a form some distance from him, on the same tier; for beneath the close hood and under the folds of a plain green veil, he thought he recognized one but too well known. It was a lady dressed in plain black, with nothing to distinguish her from others to a common eye, except a hand of most exquisite mould and whiteness, which held away the veil to enable her to see the crowd before her. That hand was not a stranger to him; and though it held the gauze in such a manner as to conceal from him the face that corresponded with it, he knew each feature of that face and saw them graven in his memory as plainly as if nothing interposed.

It was Cara, gazing anxiously among the crowd, where she expected him to be. Gradually she turned her face towards the spot where he stood, with his eyes eagerly bent upon her hand. The veil was thrown back, and her peerless beauty, enhanced rather than diminished by a slight paleness, was revealed in all its fullness. At the same moment her eyes met his, and she shrank suddenly back as if in alarm; but the next moment she half rose up as if to go to him; and again she sank back, her face flushed crimson, and her hand trembling so much that she could scarcely draw down her veil, while she returned Allen's deep salutation.

"Who is that that Vernon is bowing to?" said Mary Bryce; and she leaned forward to look along the row of faces, until her head touched the shoulder of a man in front of her; but the veil was down too soon, she could not gratify her curiosity.

She had not, however, given it up; and probably would not have done so, if she had been forced to lean upon the shoulder of every man in the house, had she not been diverted by something more engrossing—when her attention was attracted by a movement at the door. Those who were leaning on the railing round the bar precipitately fell back, and through the passage thus opened walked the judge so impatiently expected. He was a tall, thin man, with gray hair and a massive countenance, whose chief expression was severity. He had risen from the humblest rank of his profession, through no other talents than those which are classed under the word energy, and with no particular recommendation except an inflexible love of justice. One would suppose that this would have been the quality of all others best fitting him for his station; but the lawyers thought not so. "For," said they, "a judge sits on the bench to administer the law, what the experience of ages, and the wisdom of many able judges, has determined is most just in the long run, and *not* to administer what his notions may mistake for justice. The length of a man's foot, according to Coke, would be as safe a measure as his ideas of justice, by which to be guided in judgment; as one man has a long foot, and another a short foot, so one man's notion of justice may be broad and another's limited. Admit this principle, and with each successive judge you have a new code of laws; in the end you will find it had been better even to have had a partial and sometimes unjust system, to which men might become accustomed, than this no-system at all." But whether they were right or not, Judge Lausung was universally respected as a clear-headed and upright man. And when he took his seat upon the bench, and gravely set his hat beside him, the murmur which had filled the room ceased entirely, or fell to a whisper. The lawyers seated themselves decorously, took off their hats, and threw away their cigars—the clerk opened his desk and fumbled with his papers, and the sheriff proclaimed the opening of the term.

Immediately behind the judge came several members of the bar, and among them Clayton and Carlin, with another—a short man, of some forty years of age, whom Allen heard with some interest named as Mr. Elliot, the State's Attorney. They all took their places without noticing the crowd around them; apparently unconscious that hundreds of eyes were directed upon them, and that hundreds of hearts fluttered with excitement, in anticipation of what each one was to say and do before the end of the term.

The grand and petit juries having been called, the former sworn, charged, and sent about their business, and the latter enjoined to remember the overwhelming importance of their functions, "and not part the court without leave," the judge, who seemed for going through the docket at a gallop, addressed the gentlemen of the bar.

"I shall first call the people's docket, gentlemen," said he, "and the counsel for the defence, in each case, will please state whether or not they are ready for trial. The prosecution are ready, of course."

"The court will consider," commenced Elliot jumping to his feet—

"The court will consider nothing, sir," said the judge, tartly interrupting him, "which is likely to delay the administration of justice."

"Of course not; but—"

"And," continued the judge, not heeding him, "it is the right of every defendant to have a speedy trial. It is presumed that those who exhibit charges are always ready to prove them. The People v. Smith—who is for Smith? Are you ready for trial, sir?"

"I believe not, sir," said a lawyer, rising, "but we will try to be by the middle of this week."

"Set for Wednesday," said the judge, writing on his docket. "The People v. Harrison."

"In that case I enter a motion for a continuance," said another.

"File your affidavit, then," said the judge, "and let it be disposed of now."

The lawyer scratched a few hieroglyphics on a piece of paper, told his client to swear to it, filed it without letting him read it, and the continuance was granted.

"The People v. Thomas," read the judge.

"We are willing that a plea of guilty shall be entered to the first count in the indictment, if Mr. Elliot will strike out the other," said Mr. Carlin, rising slowly from his chair.

"I have no objections," said Elliot.

"Let it be entered," said the judge; and by paying his fine for one offence, the man got rid of two others; the State's Attorney avoided a contest with a formidable antagonist, and Carlin's indulgence was gratified by winning his fees without an effort.

"The People v. Allen Vernon," said the judge.

"In that case," said Thorpe, rising calmly from a corner of the courtroom, "on the part of the prosecution, we are ready for trial."

"What say the defence?" asked the judge.

"We are not quite ready," said Clayton, rising in his turn; "but I think we will be if allowed a week to prepare."

"A week!" Thorpe exclaimed. "That would be equivalent to a continuance; and if delay is the object, we demand that the motion be made now."

"We have no disposition to delay the matter unreasonably," said Clayton, mildly; "but we claim a moderate time for preparation."

"You are entitled to that, of course," said the judge; but seeing Vernon come forward and talk eagerly to Clayton, he waited his further action.

"Of course you desire no delay," said Clayton in answer to Allen; "I knew that all the time." Then turning to the judge he continued; "If the court please, Mr. Vernon has just told me that he desires nothing more than a speedy and impartial trial. His counsel could have wished a little more time; but he is extremely averse to remaining longer under this imputation; and he therefore instructs us to say, that we will be ready for trial to-morrow morning."

"Set for to-morrow morning, first case," said the judge writing; and immediately the house began to thin—most of those present being there only to hear Allen's trial. A smile passed between the old members of the bar as the order was made—a smile of intelligence, not of derision; for those experienced tacticians understood full well that the argument of the case was already commenced—was commenced by Clayton.

"Adjourn court till to-morrow morning, nine o'clock."

"Pretty well done!" said Carlin, as they left the court house together.

"What?" asked Clayton.

"Your opening of the case," answered the elder.

"It was opened by Thorpe before me," said his junior, "though I was glad of the opportunity to make a favourable first impression. The theory of the trial by jury supposes a perfectly independent tribunal, in which twelve men, totally uninfluenced by the opinions of others, sit in judgment on the testimony alone. But it is not in the nature of things, that twelve men, or any other number of men, should be so completely isolated as not to see and feel the prevailing opinion in the bystanders. Though no demonstration of approval or of disapprobation be made—though neither word nor act nor gesture may indicate a preference, yet something in the very atmosphere, something in the looks of the crowd, conveys to a jury, as infallibly as words could do, a knowledge of what others think and feel. And independent as jurymen may be, it is impossible—absolutely impossible—that they should not be affected by the knowledge. Men have an instinctive shrinking from opposition to what is called 'public sentiment,' and a corresponding desire to be with their neighbours in opinion."

"And hence," said Carlin, taking up the thread—"and hence arises the importance of making first impressions favourably, even upon the bystanders, not one of whom will have any direct influence in the decision."

People who know nothing of law and lawyers except from novels—where there is generally necessary to the development of the plot, some one who combines villainy with such knowledge and capacity, as only lawyers have—such people will say, that this theory of Clayton's was only part of a system of trickery, and the practice under it only a legal mode of covering up the truth. But those who object to legal subtlety because corrupt men sometimes—often—make it subservient to bad ends, may, with equal reason, discard every good thing on earth. The cause of religion suffers because evil men will "steal the livery of heaven to serve the devil in;" but it only suffers because men are habitually illogical—confounding the thing itself with its semblance or abuse, pronouncing the truth a lie because a liar pretends to believe it.

## CHAPTER XXI.

"As thou urgest justice, be assured

Thou shalt have justice, more than thou desirest."—SHAKESPEARE.

LONG before the hour appointed for the opening of the court, a large and eager crowd had assembled—probably in precisely the same spirit which would have brought them together to see a bull-fight or a bear-baiting. Among them might be recognized many of the faces which had gazed so eagerly down from the elevated benches the day before; the most of those who had left the court-house when the time of Allen's trial was fixed, had now returned, and with them had come many more, moved by the same curiosity. The upper tiers of seats, too, were filled by ladies in greater numbers than on the day before; and as Allen entered and cast his eyes almost involuntarily to the point where Cara had sat before, he again ob-

served the plain black dress, the close, small bonnet and the drawn veil, which hid the pale face of her whose heart beat far more tumultuously at this crisis than even his. This time, however, the veil was not withdrawn,—the face was not revealed; no sign told him that his presence was noted. No sign told him—no; but had he seen the heart within, could he have felt the pulse which throbbed so full, he would have known that his entrance was not unheeded. She had been looking for him long, had nerved herself to draw aside her veil and smile her confidence and love, she was determined that no consideration should induce her to act as if she felt the faintest fear or distrust; she resolved to let all the world see, if they wished, that she at all events had not prejudged him; but, when he came actually before her, and the moment for her courage had arrived, her hand trembled too much to allow her to draw away the veil; she felt that her face was too much flushed to be uncovered; and with a self-reproachful pang, she sat still under his wistful gaze, and let him pass without a sign of recognition or encouragement. She almost hated herself for it a moment afterwards; but it was then too late; he had entered the bar and seated himself beside Clayton, with his back towards her, and was engaged in earnest conversation. She had resolved to be firm, and the resolution of such a nature is of some avail; but the crowd reared her, the anticipation of what was to come, and yet could not be hastened, agitated and unsettled her. Could she have been called at once to the stand, and sworn now in the presence of the assembled multitude, she felt that she would be calm. But the protracted waiting, the deferred expectation, the uncertainty, the interest at stake, all combined to shake her nerves. She drew a deep breath, however, as Allen sat down out of her sight, and determined to be calm. Situated as she was—alone, unsupported, afflicted, and alarmed—calmness would have been a great triumph. The lady who sat beside her—some commonplace acquaintance—chattered like a magpie, caressing—about the court, about the lawyers, the judge, the crowd, and worst of all, about Allen. She wished Clara to point out to her the man to be tried, and seemed surprised when Clara replied simply—“I do not see him.” This was becoming serious; she was about to move to another seat, where she could possess her soul in silence, if not in peace, when her movement was arrested by the appearance of the judge. Clara gazed at him with an interest which no judge had ever inspired in her before; she thought, in her ignorance, that it was he who was to decide a question, to her most important.

Gillam, the sheriff, stepped forward at a nod from the judge.

“*Oyes! Oyes!*” he proclaimed. “This court has now met pursuant to adjournment.” And immediately all hats came off, and the hitherto careless-looking lawyers sank noiselessly beside their desks, and forthwith became the most absorbed men in the world. The crowd settled themselves gradually in their seats, leaning back and making themselves comfortable for a long sitting. Many of them drew out quids of tobacco and filled their cheeks, so that they might give their whole attention to the court. The shuffling of feet and clacking of benches gradually subsided, while the judge and the sheriff concurred in frowning ominously at the dense crowd, and the clerk looked inquiringly at the former for orders to read. As the noise diminished, which it did very fast when the people caught a sight of the clouded brow of the judge, that cloud gradually disappeared; and when it had become so still that the busy pens of the lawyers might be heard all over the house—(what noisy pens some lawyers have, by-the-bye!)—he turned with a grave face and nodded to the clerk. The sheriff, who had till now stood forward, like a mastiff before his master, waiting for a hiss to spring upon his enemy, observing that the judge was satisfied, cleared his brow and quietly sat down.

The record occupied but a short time, during which the crowd sat, impatiently awaiting the spectacle they had come to see. The clerk put away his book and sat down, and all eyes were turned upon Thorpe, who arose and announced that the prosecution were now ready to proceed with the case of the People v. Vernon.

“Have the defence any preliminary motion?” asked the judge.

“No, sir,” said Clayton, slowly rising and unfolding a paper which appeared to be a copy of the indictment. “We had intended to enter a motion to quash the indictment—which is manifestly defective in several points—but our client instructs us that he does not wish to avoid a trial upon any technical point of law. All he desires is a fair trial, in which the issue shall be, is he guilty or innocent. But our duty requires that we should so make up the record as not to prejudice his interests. We are therefore willing that the motion should be entered and overruled without argument.”

“That is scarcely usual,” said the judge. “Perhaps on consultation you will conclude to argue the motion?”

“They are too well aware of its futility,” said Thorpe, with a sneer.

“Our object,” said Clayton, calmly, “is to bring the real perpetrator of this crime to speedy punishment; and upon a motion to quash we cannot introduce evidence to this end. We ask, therefore, that the motion may be entered.”

“We consent to the course he suggests,” said the State’s attorney.

“Let it be so entered,” said the judge. “Are you ready for trial?”

Both parties answered in the affirmative.

“Call the jury, then,” said the judge; and while the clerk was arranging his lottery of names, the crowd settled back once more into their seats—satisfied that they were not to be balked of their sport by the interposition of anything formal or technical. They had felt as a crowd of spectators at a Spanish bull-fight might be supposed to feel, when accident prevents the appearance of the bull; and they now felt as the same crowd would feel when the zeal of the managers has provided a substitute.

“What the deuce does Clayton mean by throwing away his chances in this way?” asked a junior member of the bar of his neighbour.

“He must have ‘two bullets and a blagger,’” answered the other, drawing his illustrations from another game, which occupied far more of his thoughts than the legal game, his ostensible occupation.

“But somebody may have ‘the age’ of him,” said the other, winking as if he, too, was familiar with that “other game.”

His neighbour made no reply, but leaned back against the wall, and closing his eyes, betook himself to slumber—a refreshment far from unnecessary, since that “game” had usurped the most of sleep’s appropriate hours on the night preceding. Several of the lawyers gathered up their papers, and to the astonishment of the eager crowd, walked leisurely and indifferently out of court—feeling no interest in any contest of which they were not combatants.

Meantime the routine of calling, swearing, and examining the jurors went slowly on. Many were rejected because they had already formed opinions, some were peremptorily challenged, some challenged for ‘cause,’ and not a few either because their faces did not promise well, or they had been known to be refractory or wrong-headed on previous juries. Some were challenged by the prosecution because the defence seemed too willing to take them; and in one instance, Clayton had abstained from questioning a juror whom he did not want to take, in order that he might save one of his own challenges, by inducing the other party to send him away on suspicion. The stratagem was successful, and the point was gained. Some sharp conversation passed between the counsel, the judge interposed as if to quell a threatened outbreak, and each party sat quietly down, smiling covertly at the dulness of any in supposing them agitated or incensed. Each was endeavouring to exasperate the other, to secure an advantage over him; and both failed completely. The crowd expected to see a regular pitched battle; but the lawyers smiled incredulously, and the sheriff never took his feet from the table where he had comfortably deposited them. At last the tiresome ceremony was over—all the twelve jurymen answered to their names—and the crowd again settled themselves in their seats.

“Go on, gentlemen,” said the judge, and Thorpe rose to open the case for the prosecution. He knew that his witnesses were men whom his art could not influence, and he knew that he was closely watched by men fully equal to the task of exposing his artifice. He was therefore careful to appear candid and open. His manner was that of a man who performs an unpleasant duty, but performs it resolutely, though kindly. His voice was pitched low; and its notes, always musical, now became feeling and regretful. His words were spoken calmly and almost reluctantly. He seemed to be uttering the honest convictions of his heart; and no one there who did not know him thoroughly, would for a moment have suspected that he was engaged in one of the most pleasing occupations that had ever called him before a jury. No one there saw the hatred rankling in his heart, the fell determination to crush a rival, the thirst of revenge which moved him to the consummation of his purpose.

“Gentlemen of the jury,” said he, “you are empanelled to try an issue, in whose decision you will pronounce upon the guilt or innocence of the prisoner at the bar, charged with the high crime of forgery. You occupy a responsible position, gentlemen; you have undertaken a duty, for the faithful performance of which you will have to answer to the community of which you are a part, to the offended laws of the land, and to your own consciences. I know this responsibility must appear to you a heavy one, and in truth it is so. But its weight will, I think, be in no small degree diminished by the knowledge that you have a plain path open before you, leading not obscurely to a conclusion. If you feel that to pass upon the liberty of this young man be an ungrateful task, the pain of the reflection cannot but be diminished by the knowledge that he has justly incurred the penalty you are called upon to inflict. If the case were a doubtful one, gentlemen—if there could be the least doubt of the prisoner’s guilt—while the conflict would be embarrassing to you, it would be a relief to me; for I assure you, could I hesitate for a moment in coming to a conclusion upon the testimony, I should not be here as prosecuting counsel.”

“One of the most unpleasant things in the life of a lawyer is his being often placed in positions, where his duty requires him to resist and dispute the claims of those for whom he feels friendship. How much more irksome must this duty be gentlemen, when it falls to his lot to prosecute, for an infamous crime, one for whom he has cherished respect and even attachment! I feel embarrassed on the present occasion by these considerations—considerations, for alluding to which, since they are personal to myself, I must claim your indulgence.”

“Were this a common case, gentlemen, I should make no such allusions. But it is not so. It is, on the contrary, peculiar in all its phases. It is a crime very seldom committed, because easy of detection, and punished severely; and in this case it has been committed under peculiar circumstances. The manner of its commission, the motive, the time, the persons upon whom committed, and the relations of the prisoner to those persons, are all alike singular. But the strangest of all the strange things connected with the case, is the reckless and hardened openness with which the fraud was perpetrated. Though this openness, gentlemen, may tend to disembarass you, and is in that view fortunate, it is, in another view, unfortunate, since it cannot but shake that salutary confidence in human nature, once held by those who would far sooner have suspected each other of this crime than the prisoner at the bar; since it gives a painful lesson, teaching how abandoned may be the hearts of those with whom we are in daily conversation, and who possess our unlimited confidence.”

He proceeded to give a clear, and withal nearly impartial, account of what the evidence was to be; remarked briefly upon circumstantial evidence, giving it justly the first rank in the scale of testimony, and closed his address.

(To be continued.)

## PICCIOLA:

OR,

## THE PRISON FLOWER.

(Continued from page 711.)

"Has he willed it? Ought he to will it?" replied the pious man, rising with dignity, and laying his hand affectionately on the shoulder of his companion. "Doubt may, perhaps, be necessary to humble the pride of our reason. What would be virtue, if its reward were certain beforehand? What would become of free-will? The mind of man is immense, not infinite; it is at once expanded and contracted. It is expanded to make him comprehend his dignity, and enable him to rise to God by the contemplation of his works; it is contracted to make him feel his dependence on that same God. Man here below can only see a part, faith does the rest—My God! my God!" exclaimed Gerhardt, clasping his hands with fervour, and raising toward heaven his eyes, wet with tears—"grant me thy strength to raise this fallen spirit, who wishes to rise towards thee. Lend me thy aid to assist this immortal soul, now ignorant of itself, to resume its flight. Let my words be persuasive, since my heart is convinced. But here, what can an advocate do to the cause, where all nature brings its unanimous testimony? Is there even so much as that necessary? A flower, an insect, is sufficient to proclaim thy Almighty power, to reveal to man his future destiny. Oh! let this plant here finish its work. Is it not, my God, like all thy creatures, enlightened by thy sun, and fertilised, by the breath that emanates from thee?"

The old man then appeared to forget himself in a silent ecstasy—doubtless he was praying inwardly; and when he turned towards his companion, he found him with both his hands on the back of the rustic bench, his head resting on them, and his features also presenting an expression of holy meditation.

## CHAPTER XXII.

In the purified heart of Charney the blood flowed more calmly; in his enlightened mind, softer, more consoling, more affectionate thoughts succeeded each other. Thus, like the Piémontese sage, he felt a vague desire to expand his soul in tenderness; he then thought with delight on beings whom, by links of gratitude or friendship, he could attach to himself. Amongst these, Josephine, Gerhardt, and Ludovico first offered themselves to people his celestial world. Then, like shadows, two female forms appeared on the extremities of this rainbow of love that had come after the storm, as we see in the pictures of some churches, two seraphim, their heads bent forwards, their robes floating, their wings half spread to mark the limits of Eden.

One of these shades was the fairy of his dreams, Picciola, the young girl, that pure image born of the perfumes of his flowers; the other, the angel of his prison, his second Providence, Teresa Gerhardt.

By a strange contradiction, the first, which only existed in idea, alone offered itself to his memory under a clear, distinct, and fixed form. He saw her slightly contract her brow, her eye sparkle, her lips smile. Such she had appeared to him in his dreams,—such he had always found her. As to Teresa, his eyes having never rested upon her, or at least believing he had never seen her, but through an illusion, when, in his transports of gratitude, he invoked her as herself, under what features could she appear before him? The seraph had her face veiled; and if Charney wished to turn aside the veil, it was still the countenance of Picciola that appeared—Picciola multiplying herself suddenly, whatever he might do, to receive the homage of the heart destined for her rival.

One morning, the prisoner, when quite awake, thought himself completely a prey to this singular hallucination. The day was just begun. Already up, he was thinking of Gerhardt. This latter supposed his liberation was near; and his adieu of the evening had been expressed with such touching indications of sorrow, that the count had not been able to sleep during the night, so much did the idea of this separation agitate him. After having walked some time up and down his room, his eye turned mechanically towards the bench of conference, where, the evening before, he had conversed of the daughter with the father, when in the court of the prison, on that same bench, through one of the grey fogs of autumn, he suddenly saw a young woman sitting. She was alone, and appeared to be attentively considering his plant. Charney immediately thought of Teresa—of her arrival.

"It is she," said he; "and I am going to see her for a moment, then never to see her more! and my old companion will follow her!"

As he said this, the young woman turned her head towards him, and the countenance which he then perceived was again, and again, and always, that of Picciola! In amazement, he passed his hand over his brow, his eyes—touched his clothes, the cold bars of his window, to assure himself that this time he was not in a dream.

The young woman rose, advanced a few steps towards him, and smiling—confused—saluted him with a timid gesture. Charney did not reply either to this gesture, or to that smile: he looked fixedly on the graceful form that moved through the mist; it was the very same which he had formerly seen in the fêtes he gave to Picciola—the same features that constantly pursued him in his thoughts and reveries; and supposing himself attacked by a feverish delirium, he threw himself on his bed to recover his senses. Some minutes after his door opened, and Ludovico entered.

"Alas! alas! good and bad news, signor count!" said he; "one of my

birds is going to fly away,—not over the walls, but through the door. So much the better for him; so much the worse for you!"

"What! is it then for to-day?"

"I think not, signor count: however, it cannot be long, for the act is signed in Paris, they say, and it must be on the road to Turin. At least the *Giovana* told her father so before me."

"What!" cried Charney, half rising from his bed, "she is arrived?—she is here?"

"At Fénestrella since yesterday, in the evening, with a permission in proper form to come amongst us. Unfortunately, the orders do not allow the drawbridge to be lowered so late for a woman. She was obliged to put off her visit till to-day. I knew it very well myself, but I took care not to tell the poor old man: he would not have closed an eye through the night, and the time would have appeared too long, if he had known his daughter was so near him! This morning she was up before the sun, and came with the dawn, to wait, in the midst of the fog, at the gate of the citadel, the worthy creature of a good God!"

"But," interrupted Charney, astonished and confused, "has she not remained some time in the court, sitting on the bench?"

And he hurried towards the window, cast a glance into the court, and turning towards Ludovico, said:

"She is there no longer!"

"Certainly not; she is there no longer, but she was there," replied he. "Yes, she stayed there while I went up to prepare the good man for the visit: for people sometimes die of joy. Joy, as it seems, resembles strong liquors: a little drop at a time is good; but we must not empty the gourd at a single draught. Now they are together, very happy both, and I, seeing them so full of joy—*pro Bacco!*—I felt suddenly sad. I thought of you, signor count—of you, who would soon have to remain without a companion; and I am come to remind you, that you still have Ludovico, and Picciola also. She is beginning to lose her leaves, but that is the effect of the season; we must not despise her for that."

And he went away, without waiting for Charney's reply.

As to him, not yet recovered from his surprise and emotion, he endeavoured to explain this singular vision, and began at length to think that the sweet image assumed by Picciola the young girl, might have been no other than that of Teresa, half seen by him formerly at the little grated window, and the remembrance of which had doubtless been unconsciously retraced in his dreams.

Whilst he was reasoning thus, the murmur of two voices reached his ear from the top of the stair, and he heard a light, timid foot gliding down the steps, scarcely touching the stone, by the side of the well-known one of the old man. This regular sound soon ceased at his door. He started; but Gerhardt alone appeared.

"She is here," he said, "and waits you by the plant."

Charney followed him silently, without having the power to articulate a word, and his heart full of constraint and sadness, rather than pleasure.

Was it the embarrassment of presenting himself before a woman to whom he owed everything, and towards whom he could not acquit himself? Did he remember the manner in which that morning he had received her smile and salute? Then as the separation approached, did he feel his courage and his resignation fail? Whichever of these causes it might be, and perhaps of many others also, when he presented himself before her, in his manners, in his language, no one could have recognised the brilliant Count de Charney; the ease of the man of the world, the firmness of the philosopher, had given place to a stammering awkwardness, to which Teresa, no doubt, owed that appearance of coldness and reserve which was shown in her answers and manner.

Notwithstanding all the endeavours of Gerhardt to place his daughter and friend on an equal footing with one another, the conversation at first only turned on the common-places of hope and consolation for the future. Recovered from his first agitation, Charney only saw indifference on the calm features of the Turinese, and easily persuaded himself that in the services she had rendered him, she had only obeyed the impulse of her own adventurous character, or the command of her father.

Then he almost regretted having seen her; for should he find again, when thinking of her, all her former charm? Whilst they were sitting all three on the bench, Gerhardt contemplating his daughter, and Charney uttering some cold words without meaning, as Teresa was turning towards her father, a large medallion that hung round her neck, and had been hidden in a fold of her dress, escaped. Charney saw on one side of it the white hairs of the old man, and on the other a dried flower, carefully preserved between the silk and the crystal. It was the flower that he himself had sent to her by Ludovico.

What! that flower—she had kept it, preserved it precious, near the hair of her father!—of her father whom she adored! The flower of Picciola no longer shone in the hair of the young girl; it reposed on her heart! That sight entirely changed Charney's feelings. He again examined Teresa, as if she had just undergone a metamorphosis, and he discovered what he had not before seen. In fact, her face, turned towards her father, was enlightened with a double expression of tenderness and serenity; she appeared then beautiful as Raffaele's virgins are beautiful—as pure and loving souls are beautiful! Charney slowly followed with his eye that graceful, animated profile, where gentleness and strength, energy and timidity, harmonised so well together! It was long since he had contemplated a human face so resplendent with the light of youth, beauty, and virtue! He was enchanted with the sight; and after having glanced over the elegant form of her neck, shoulders, and figure, his eyes returned to the medallion, on which they earnestly fixed.

"You have not, then, disdained my poor present?" said he, in a low voice; but low as he spoke, Teresa turned quickly towards him, and her first impulse was to replace the ornament; but, at the same time, and in her turn, she examined the change that had passed over the features of the count, and both blushed at the same time.

"What is the matter, my child?" asked Gerhardi, seeing her emotion.

"Nothing," said she; and immediately resuming, as if she feared denying to herself a pure and honourable feeling; "it was the medallion. Here, my father, is your hair." Then turning towards Charney—"See, sir, here is the flower that I received from you, and which I keep,—which I shall always keep!"

There was in her words—in the tone of her voice—in that instinctive modesty which induced her to address her explanation to her father as well as to the stranger—so much at once of frankness and modesty, an expression so tender and so chaste, that Charney felt a delight such as he had never before experienced.

The rest of the day passed in the expression and effusions of a friendship which seemed to increase every minute. Setting aside the secret attraction that draws us towards each other, intimacy always proceeds in proportion to the time we know permitted us to accomplish the circle of our new affections.

Charney and Teresa had never spoken before that day; but they had thought so much of one another, and so few hours remained to them, perhaps! Thus, when Charney, from a feeling solely of etiquette and politeness, was going to retire, wishing, he said, after so long an absence, to leave the father and daughter quite alone to the happiness of their reunion—

"You quit us!" cried Teresa, retaining him by a look, whilst Gerhardi stopped him with his hands. "Are you, then, a stranger to my father—or to me?" added she, in a tone of pleasing reproach.

The better to make him comprehend how little his presence constrained her, she began to detail all she had done from her quitting Fénelastra, and the means she had employed to unite the two captives. Having finished her recital, she begged Charney to commence his, and to tell her the employment of his time, and his occupations with Picciola.

He then began the history of the first period of his captivity; his weariness of mind, and his manual labours; the welcome arrival of his plant, its progressive development; and Teresa, with a gay and curious air, pressed him with questions on each of his discoveries.

Seated between the two speakers, Gerhardi, holding, in each of his hands, the hand of the daughter who was just restored to him, and of the friend he was going to leave, listened and looked at them by turns, with a mingled feeling of joy and sadness. But sometimes the hands of the old man approached each other, and consequently those of Charney and Teresa. Then the two young people, agitated and embarrassed, with speaking looks, were silent with their voices. At length the young girl, without any appearance of prudery or affectation, gently disengaged her hand, and laying it on her father's shoulder, carelessly leaned her head on it in a graceful attitude, and smilingly turned her eyes towards Charney, to ask him to continue.

Emboldened and led on by so much grace and self-possession, he came at length to the relation of his dream beside his plant. I have said that these were the great events of his life during his solitude. He spoke of that simple, attractive young girl, in whom Picciola was personified; and whilst with warmth, with transport, he sketched her portrait, the countenance of Teresa gradually lost its smile, and her bosom heaved while listening to him.

The narrator took care not to name the true model of the sweet image; but, finishing the history and misfortunes of his plant, he described the moment when, by order of the commandant, the dying Picciola was going to be torn from the earth before his eyes.

"Poor Picciola!" cried Teresa; "ah! thou belongest to me also, dear little one! for I contributed to thy deliverance!"

And Charney, transported with joy, thanked her in his heart for that adoption, which thus established a holy community between him and her.

### CHAPTER XXIII.

CHARNEY certainly would very willingly and for ever have renounced liberty, fortune, the world, if his days could have thus flowed on in prison—between Teresa and her father. That young girl—he loved her as he had never loved. That sentiment,—at once passionate and gentle, bitter and soothing, like an acid fruit which pleases the mouth while irritating it,—until then a stranger to his soul, now took possession of it. It was revealed to him by the agonies of an unknown joy, by emotions of tenderness which comprehended all things—God, man, and the whole of nature. He felt as though his mind, heart, bosom, were expanding and enlarging, to contain the hopes, the projects, the sensations, which were crowding upon him.

The next day all three were again in the court, by the side of the plant—the two friends on the bench, Teresa opposite to them on a chair, which Ludovico had had the forethought to bring down.

She had brought some female work with her—embroidery: and, happiness on her features, her countenance coloured with the hue of health and pleasure, her head following the movements of her needle, raising her eyes at the same time with her hand, she cast her smile by turns on her father and Charney, throwing in some gay, trifling observations in the midst of their grave conversation. Then, at length, she rose, and without caring for interrupting the two thinkers, she pressed her father in her arms, and kissed his gray hair.

That conversation which she interrupted was not resumed; Charney fell into deep meditation.

Was he loved by Teresa? At this inquiry, which he addressed to himself,

two opposing feelings agitated him at the same time: he feared to believe it—he trembled to doubt it. She had preserved the flower he had given, and had promised to keep it for ever; she was agitated when, in the evening, their hands approached on the old man's knees; her bosom heaved at the recital of his passionate dreams; but those words, uttered in so tender a voice, were spoken before her father. What interpretation could he give to those flattering signs—signs of pity, interest, and devotion? Had she not given him proofs of it long before this interview, when their eyes had not yet met—when they had never exchanged a word? Fool! fool! who believes so easily he has a place in that heart, which is entirely filled by a sentiment of filial tenderness, and mistakes the modest shrinkings of a maiden for the palpitations of love.

What matter? he loves her; he will love her long—for ever; and for a phantom, henceforth insufficient, substitute that angelic reality.

That love he will lock up in his own heart; to seek to make it shared would be a crime. Why should he poison so fair a future? Are they not destined to live separated from each other;—she free and happy in the midst of a world where she will not be long in choosing a husband; he alone, in his prison, where he must remain with Picciola and his eternal remembrance of an instant?

Thus the part of Charney was soon taken; from that day, from that moment, he will affect indifference towards Teresa, or at least he will wrap himself up in the false semblance of calm, tranquil friendship. Woe to her, woe to both, if she loved him!

Full of these fine projects, when he roused himself from his reflections, he heard the father and daughter carrying on a lively conversation.

She was entirely occupied by the prospect of her father's approaching deliverance, and appeared to be trying to convince the old man of it, who, either feignedly or from conviction, was affirming that the year would certainly end before his captivity.

"I know the delays of Court; so little a thing is sufficient to suspend the justice or good intentions of powerful men!"

"If it be thus," said Teresa, "to-morrow I will return to Turin to hasten the execution of their promises."

"Why should we be in such a hurry?" said Gerhardi.

"What! do you, then, prefer your confined dark room, and this wretched court, to your house and beautiful gardens of La Colline?"

This disposition evinced by Teresa, the kind of impatience she showed to leave Fénelastra, ought to have pleased Charney, by proving to him that he was not loved, and that the danger he dreaded for her was far from being imminent. Yet what favoured his wishes so well, distressed him so much as to make him at once forget his intended part. He affected neither indifference, nor calm, tranquil friendship. A prey to painful vexation, he could not help showing it; but Teresa did not appear to pay any attention to him, except to joke with him on his silence and discontented air; and again she resumed her arguments, to prove that if the decree was much longer delayed, she must immediately go to Menou, and even to the Emperor, to Paris, if necessary!

She, usually so considerate, so reserved, seemed suddenly under the influence of an incomprehensible desire to jest and talk.

"What is the matter with thee this morning?" said her father, quite astonished to see her thus gay before the poor captive whom they were so soon going to leave behind them.

Charney knew not what to think of her.

It was, that Teresa also had made the same reflections as Charney. The day before she had not felt the approach of love, but she had discovered that it had long been in her heart. Like Charney, she would willingly accept it for herself, with its risks and its perils; but, like him, also, she dreaded it for the other; and this joy of loving, this fear of being loved, led her into those contradictions to herself, and that profusion of words, by which she strove to stifle the feelings of her heart.

But soon all these efforts, all this attempt to disguise their true sentiments, suddenly failed of themselves on both sides at once. Calmly attentive to the accounts of Gerhardi, who was telling them how often he had known prisoners, whose pardon had been publicly announced, vainly wait the effect of it during whole months, they suffered themselves to be convinced with pleasure, with delight; it might have been said, that, henceforth and for ever, that prison might serve them for an asylum, so many projects succeeded one another for the next and for the following days; and that, united there with their guardian angel, the captives now had but one thing to dread—liberty for one only!

All three having recovered their serenity, the philosophers had resumed their discussions, and Teresa her embroidery and joyous conversation.

A pale ray of sunshine enlivened the court, and lightened up the countenance of Teresa; the wind, which was rising, slightly agitated the folds and ribands of her collar; and, for an instant suspending her work, her head thrown back, shaking her hair from her brow, she seemed delighting in air, light, and happiness, when suddenly the little door of the yard opened.

Captain Morand, followed by an officer and Ludovico, came to notify to Gerhardi that the act of his liberation was arrived. Gerhardi was to quit the prison immediately; a carriage waited near the glacis of the place, to transport him and his daughter to Turin!

On the entrance of the commandant, Teresa had risen. She soon sunk again upon her chair, took up her work, and, in the look that she then threw on Charney, he might have seen how rapidly were effaced from that noble countenance the lively colour and the joyous smiles. But Charney himself remained on the bench, with his head bowed down, while they were communicating to Gerhardi the papers which re-established him in his honour, and restored him to liberty. The preparations for departure could not be long.

Ludovico had already come down from the chamber of the former prisoner, with the trunk containing his effects. The officer waited to accompany him to Turin. The hour of separation was come. Teresa rose again, and appeared occupied in endeavouring to put her work into her bag, and arranging her collar; then she tried to draw on her gloves; she could not do it.

Charney now, summoning all his resolution, advanced towards Gerhardt, and opened his arms:

"Adieu, my father!"

"My son! my dear son!" sobbed his old companion—"Courage—depend on us—adieu! adieu!"

He pressed him some time to his bosom, then suddenly loosening him from his embrace, he turned towards Ludovico; and the better to hide his emotion, addressed to him some last useless recommendations for him whom he left alone. Ludovico made no answer, but offered his arm to the old man, who required support.

In the mean time, Charney approached Teresa, to take leave of her also. One hand on the back of the chair, her eyes fixed on the ground, she stood melancholy and motionless in her place, as though she would never quit that residence. When she saw Charney beside her, she recovered herself, and looked at him some moments without saying anything. He was pale and dejected, and words seemed to fail his lips. Suddenly forgetful of her resolutions, she stretched her hand towards the plant of the captive.

"It is our Picciola whom I take to witness," said she. She could articulate no more.

One of her silk mittens, which she held in her hand, dropped: Charney picked it up, impressed a kiss upon it, and silently returned it to her.

Teresa took the mitten, and with it dried the tears that gushed from her eyes, and then returned it to Charney, with a last look of love, a last smile of hope.

"*Au revoir!*" she exclaimed; and she led her father out of the little court.

The count followed them with his eyes; they were gone; the little door had long closed between them and him; and he remained as if petrified, his eye fixed on that spot, and his hand still convulsively pressing to his heart the little mitten of Teresa.

### CONCLUSION.

A PHILOSOPHER has said that greatness must be lost to be appreciated: he might have said the same of fortune, of happiness, of all those pleasant advantages to which the mind so easily becomes habituated.

Never did the prisoner so fully value the wisdom of Gerhardt, the virtues and charms of his daughter, as after the departure of his two guests. Deep dejection succeeded to the vivid excitement of a day. The efforts of Ludovico, the cares that Picciola claimed, were not sufficient to remove it; yet those germs of strength and of morality, drawn from the source of his sweet studies, at length produced their fruit, and he recovered his spirits.

During the struggle his character was perfected. He had at first blessed his solitude, which permitted him to converse with himself of his absent friends; afterwards he saw with joy some one come and sit on the bench, where the old man's place had remained empty.

Of his new companions, the first and the most assiduous was the chaplain of the prison, that good priest whom he had formerly repulsed so harshly. Informed by Ludovico of the deep sadness to which the prisoner was a prey, he presented himself, forgetful of the past, to offer his consolations; and they were received with gratitude. Better disposed towards mankind, Charney was not long in loving him; and the rustic seat again became the bench of conference. The philosopher praised the wonders of his plant, and those of nature; he repeated the lessons of the old Gerhardt: the priest, without entering into the discussion of dogmas, spoke of the sublime morality of Christ; and each derived support from the other.

The second visitor was the commandant of the fortress, Captain Morand. Known better, he was a very good sort of man, with his heart in a military situation; that is to say, he only tormented his people by word of command; he almost reconciled Charney to subaltern tyrants.

At length Charney paid his adieu to the abbé as well as to the captain. One fine day, when he least expected it, the gates of the prison were opened for him also.

On his return from Austerlitz, Napoleon, entreated by Josephine, who perhaps had had some intercessor with her for the prisoner of Fénestrella, had an account given him of the seizure that had been made there. They brought the linen manuscripts to the emperor, which had been deposited in the archives of the minister of justice; he looked over them himself, and, after a mature examination, declared aloud that the Count de Charney was a madman, but a madman henceforward harmless.

"He who can thus prostrate his intellect before a blade of grass," said he, "may make an excellent botanist, but no longer a conspirator. I grant him pardon; let his estates be restored to him; and let him cultivate them himself, if such be his good pleasure!"

Charney then, in his turn, quitted Fénestrella! But he did not go alone. Could he separate himself from his first, his constant friend! After having had it transplanted into a large box well filled with good earth, he brought his Picciola away in triumph—Picciola, to whom he owes his reason; Picciola, who has saved his life; Picciola, from whose bosom he has drawn his consoling emotions; Picciola, who has made him acquainted with friendship and love; Picciola, in short, who has just restored him to liberty!

And as he was crossing the drawbridge of the fortress, a large, rough hand was suddenly extended towards him.

"Signor count," said Ludovico, stifling strong emotion, "give me your hand; now we can be friends,—since you are going,—since you quit us,—since we shall not see one another again!—Thank God!"

Charney threw himself on his neck.

"We shall see one another again, my dear Ludovico! Ludovico, my friend!"

And after having embraced him,—after having pressed his hand a hundred time,—he left the citadel.

He had passed the esplanade,—left behind him the hill on which the fortress was situated,—crossed the bridge thrown over the Clusane, and was already turning for the road to Suss: a voice was still raised, crying aloud from the ramparts,

"Adieu, signor count! Adieu, Picciola!"

Six months after, a rich equipage stopped before the state prison of Fénestrella. A traveller got out, and asked for Ludovico Ritti. It was the old captive, come to pay a visit to his friend the jailor. A young lady leaned her two hands affectionately on the arm of the traveller. That young lady was Teresa Gerhardt, countess of Charney. Together they visited the court, and the chamber, formerly inhabited by ennui, incredulity, and hopelessness. Of all the despairing sentences that had blackened the white walls, one only remained:

"Science, talents, beauty, youth, fortune—all here below, are powerless to bestow happiness."

Teresa added, "Without love!"

A kiss that Charney imprinted on her brow confirmed what she had thus written.

The count had come to beg Ludovico to be godfather to his first child, as he had been to Picciola; and he found that he must hold himself in readiness towards the end of the year.

Their mission accomplished, they returned to Turin, where Gerhardt expected them in their beautiful domain of La Colline.

Near his own private apartments, in the centre of a rich bed, enlightened and warmed by the rays of the rising sun, Charney had placed his plant, that no other might interfere with its growth. By his order no strange hand was to interfere with it, its culture, its health. He had forbidden it. He alone was to watch over it. It was an occupation, a duty, a debt, imposed by his gratitude.

How rapidly the days passed on then! Surrounded by large gardens—on the borders of a river—under a beautiful sky—Charney tasted the life of the happy of the world. Time added a new charm—a new strength to all these bonds; for habit, like the ivy of our walls, cements and consolidates what it cannot destroy. The friendship of Gerhardt, the love of Teresa, the blessings of those who lived beneath his roof—nothing was wanting to his happiness; and the moment arrived when that happiness would be still more increased. Charney became a father!

Oh! then his heart overflowed with bliss. His tenderness for his daughter seemed to redouble that which he bore to his wife. He was never tired of contemplating, of adoring them both. To leave them for a moment was a punishment!

In due time Ludovico arrived to keep his promise; he first wished to visit his former god-daughter—that of the prison. But, alas! in the midst of these transports of love—of that happiness which filled the habitation of La Colline—the source of all its joys, of all that happiness,—*la povera Picciola* was dead!—dead for want of attention!

END OF PICCIOLA.

### THE FIRST BORN.

Like the sweet snowdrop 'mid its sheltering leaves,  
So lay my babe within its cradle bed;  
Its little hands were folded on its breast,  
And calm as angels' brow its quiet sleep;  
One tiny foot from 'neath the mantle's folds  
Had strayed, all stainless from the dust of earth.  
I hush'd the song that hung upon my lips,  
For voice like mine wrought not such blissful repose,  
But music, such as cherubs chant in heaven,  
Had lull'd the slumb'erer in the arms of peace.  
I bent me o'er the couch of this sweet babe,  
And all the gushing tenderness of love  
Came welling up from my fond, happy heart!  
A mother's pangs were all forgotten then,  
All lost in the overwhelming tide of love.  
Just then the babe awoke, and turned its soft

Blue eyes up to my own, and smiled. It was  
His first bright smile, and to my spirit seem'd  
Like heaven's blessing on the holy bond.  
Oh! there are moments in this fleeting life  
When every pulse beats love, and the soft air  
Is full of fragrance from a purer clime.  
And then how sweet it is to pray—far better  
Than to praise—that is the voice of gladness,  
But deepest joy doth vent itself in prayer:  
And thus my o'erfraught heart found sweet relief.  
O God! I thank thee for this precious gift;  
Oh! make me pure, my spirit fresh baptize,  
That I may guard my precious treasure well.  
Nor dim its brightness by a breath of sin;  
But, with a sleepless vigil in a world  
Of guile, be faithful to the holy trust,  
And bear it back to thee when thou shalt call.  
A polish'd jewel for my Maker's crown.

PERSEVERANCE is often not only a substitute for ability, but it is something more. Many a one of very ordinary capacity has, by dint of the same valuable quality which enabled the tortoise in the fable to out-journey the hare, accomplished wonderfully greater things than another possessing superior abilities, but less perseverance.

# THE HOME COMPANION

IN ACCIDENT, DISEASE, EMERGENCY, HEALTH,  
AND SICKNESS;  
BEING  
A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.  
PRICE ONE PENNY. ALWAYS ON SALE

A MIDSUMMER PRESENT FOR A GOOD BOY OR GIRL.  
Now ready, price 1s. 6d., beautifully bound, with a fine Steel Plate, and 70 Engravings on Wood.

**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
This beautiful little Volume is made the more attractive to the Young, by having the Christian Name of the Receiver elegantly impressed in Silver upon the cover. Thus—

A STORY-BOOK FOR MASTER EDWARD!  
A STORY-BOOK FOR MISS ELIZABETH!

The following Names may be had to order:  
BOYS—Charles, Edward, Frederick, George, Henry, James, Joseph, John, Richard, Robert, Thomas, and William.  
GIRLS—Anne, Caroline, Charlotte, Fanny, Emma, Eliza, Jane, Laura, Louisa, Lucy, Mary-Anne, and Maria.

For Names not included in the above, order the General Edition,  
**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
London: Houlston and Stoneman; and all Booksellers.

## THE MUSTER ROLL.

"ATTENTION!" We are rapidly progressing towards the completion of our First Volume, which closes with the Fifty-second Number. And having already matured our plans for the Second Volume, we will proceed to state them, after a brief retrospective glance.

We venture to assert, that no publication of the present day comprises, within the limits of a volume, an equal amount of matter of the same standard character as that included in the First Volume of the HOME COMPANION.

Of ENGLISH Standard Literature the Volume will contain, complete and unabridged, *Sir Roger de Coverley*, *The Vicar of Wakefield*, *Piccolini*, *Undine*, and *Nature and Art*. Of AMERICAN Literature, *Shadow and Sunshine*, *The Pioneer's Daughter*, *Love's Trials*, *The Californians*, and *Caroline and Catharina*. The cost of these works collectively, in their separate forms, even reckoning the English works at the prices of the cheapest unillustrated editions, would be about TWENTY-FIVE SHILLINGS, the American works being chiefly expensive, and not hitherto reprinted in this country.

In addition to the above, the Volume will contain a great number of ORIGINAL Tales, Essays, Enigmas, Biographies, Poems, and Miscellaneous Articles, humorous and instructive, illustrated by THREE HUNDRED ENGRAVINGS. The Price of the Volume, elegantly bound, will be Six Shillings and Sixpence. Cases for binding will be issued immediately upon the close of the volume, price 1s. 6d. each. And we respectfully urge our Subscribers to order immediately the back Numbers to complete their sets, that they may possess a handsome volume a few weeks hence.

THE FUTURE! With No. 53, commencing the Second Volume, will be commenced a NEW AND ORIGINAL TALE of great interest, by the EDITOR, entitled MABEL LEE; OR, THE LIGHTS AND SHADOWS OF AN ORPHAN'S LIFE. All the other Articles will be Original, and be written expressly for the HOME COMPANION. Each Number will contain, in addition to the continuous tale by the Editor, a Complete Story, founded upon a popular drama, under the general title of "TALES FROM CELEBRATED DRAMATISTS," and after the manner of "Lamb's Tales from Shakspeare." These will include, *The Bondman*, *The Maid of Honour*, *The Duke of Milan*, *The Picture*, *The Fatal Dowry*, *The Great Duke of Florence*, *The Alchemist*, *The Fox*, *The Silent Woman*, *The Broken Heart*, *The Jew of Malta*, *Faustus*, *Victoria Corrombosa*, *The Maid's Tragedy*, *Philaster*, *King and No King*, *The Elder Brother*, *Boadicea*, *The Loyal Subject*, *Wit without Money*, and various others.

Departments will be opened for the Artist, the Mechanic, the Farmer, the Gardener, the Housewife, and the Juvenile. Under these heads will be given every kind of new discovery, and every fact of interest. Each department will be under the care of an Editor, whose attention will be earnestly directed to the bringing together of the essence of information and interest relating to the several subjects embraced, derived from peculiar and authentic sources.

Essays, Biographies, Letters from Correspondents, articles upon Natural History, Enigmas, &c., &c., together with a light and agreeable miscellany, will complete the arrangements for the New Volume of the HOME COMPANION, the whole giving it the highest title to UNIVERSAL RECEPTION BY THE BRITISH PEOPLE.

AND FURTHER! On Saturday, the 2nd of October, will be published THE HOME COMPANION ALMANACK, for 1853. This will be undeniably the greatest literary wonder of the day. It will contain EIGHTY-ONE ELABORATE ENGRAVINGS, designed expressly for the work. These will include, hitherto unpublished *Pictorial Enigmas*, *Chronicles*, *Notions*, *A Comic Biography*, *Amusing Experiments in Natural Philosophy*, *Comic Cards*, *Humorous Tales*, &c. Appropriate spaces and numbers will be left for Readers to enter their conjectural answers to the Puzzles published in the Almanack, for

comparison with the actual Answers, which will be published in the 1st Number of the HOME COMPANION. In the volume will be given a DOUBLE-PAGE ENGRAVING, displaying the *Page of Nations*, people in the costumes of their countries, followed by a procession of people in their distinctive dresses, bearing the Heraldic devices of the principal Kings, Queens, and Princes of England, Ireland, Scotland, and Wales, with numerous references for explanation. The Almanack will be the size of French's Almanack, will contain an equal number of pages, and will be charged to our Subscribers, ONE PENNY ONLY! A sale of at least 200,000 is expected, and therefore the Office of the Trade should be immediately registered at our Office, 10, Pall Mall street.

## MABEL LEE.

I have undertaken, at the request of many friends, to write the history of MABEL LEE, whose name alone is fictitious. I confess that I am not given to the invention of Tales, made up of startling and improbable incidents, but being reminded that the life of MABEL LEE is more strange than fiction, and may be written all the more vividly, because absolutely true, I have willingly entered upon the subject, and have already far advanced in its execution. I have never read a novel that interested me half so much as the story of this orphan girl; full of the most remarkable vicissitudes, of many of which I was an actual observer. The Reader must not expect from me a thrilling romance, but a story plainly and truthfully told, that will appeal to every heart, and supply many elements of good example to those who, like MABEL LEE, may have to struggle against the bitter side of adversity, with a spirit too high and impulsive to submit to the harsh control often imposed upon virtuous but helpless poverty.

THE EDITOR.

# THE HOME COMPANION:

A WEEKLY MAGAZINE.

## INGENUITY AND SKILL.

It would be amusing to count up the "many men of many minds," who have attempted to invent perpetual motion. Some of these minds were imbued with real genius, and it was a loss to the world when that genius was employed upon an effort to produce what has been proved to be impossible. Thousands of days and millions of money have been wasted upon this shape perpetual motion, and yet it continues to be a favourite project; and not a year passes without some such wonderful invention being announced as perfectly successful.

Model after model has been made and rejected, of course; for until a machine can be invented with self-existing power—the power to set itself in motion, as well as to continue it, there can be no perpetual motion. This self-existent, independent power belongs alone to the Almighty Creator.

Many other attempts at invention seem equally absurd. A bird is a very beautiful object, and as it glides or flits through the air, excites the envy of man, and he is dissatisfied to plod along upon the earth; he would fain compete with the bird in his own element. Hitherto, however, no flying-machine has proved successful, for the balloon is yet an unwieldy, unmanageable affair. It cannot, however, be proved impossible that a flying-machine can be constructed that will outstrip the carrier pigeon in speed; but a man of inventive genius would be foolishly wasting time, money, and strength upon such a doubtful project.

It is true that many important discoveries in mechanics have resulted from the efforts of mistaken men, while pursuing a different object, but far more have arisen from what is termed accident. To the man of right religious faith, there is nothing accidental—he sees in every minute circumstance or combination an overruling Providence; neither is there any such thing as accident to the mechanical philosopher—he finds a cause adequate to produce every effect or result, or if he cannot discover it, he knows, certainly, that such cause exists; accidents, then, are only such to the irreligious and the ignorant.

To discover, is to find out something which was already in existence, but which had not been previously known. To invent, is to make a new combination of materials for a special purpose. A discovery of vast importance may come to the knowledge of a man without any effort of his own; an invention requires thought, and oftentimes long and patient labour, before it can be brought to perfection.

But discovery and invention go hand in hand. The article glass is said to have been discovered. The old Roman writer, Pliny, gives the following account of this discovery:—A merchant vessel, laden with nitre, or fossil alkali, was driven ashore on the coast of Palestine, near the river Belus. The sailors hunted up some provisions, and when they cooked them, placed kettles upon pieces of the fossil alkali, and then made a fire under them. The sand upon which the alkali was placed became mixed with it, and solidified by the action of fire.

This hint was taken, and some ingenious person invented a use for the new material, perhaps a drinking vessel, or a flower vase. So wonderful a conjurer was the ignorant discoverer, who first rendered glass malleable, that Pliny asserts that he had his house demolished; and another Roman historian goes further, and says the unfortunate man was beheaded by order of the

**Emperor Tiberius.** The use of glass was known in very ancient times among the Phœnicians, Egyptians, and Chinese; yet the very material seems not to have been known to the Romans until it was discovered in the manner which Pliny relates.

Steam had been known for ages to possess vast power; yet, from time to time, those circumstances called accidental discoveries took place. In 1698, Captain Savery, having emptied a flask of wine at a tavern, threw the flask on the fire, and called for a basin of water. A small quantity of wine remaining in the flask began to boil, and steam issued from the mouth. The captain seized the flask with a gloved hand, and plunging the mouth of the flask into the water, that liquid immediately rushed into the vessel, and filled it. To a common observer this fact would have been of little consequence, but Captain Savery was a man of inventive genius; he immediately set himself to work to make a practical use of his discovery, and invented a steam-engine, which was, "in reality, the germ of the steam-engine as we now have it."

When Oliver Evans, an American, was an apprentice to a wagon-maker, he tried to invent some way of propelling land-carriages without horse or other animal power. He made experiments to give them perpetual motion, which proved so unsuccessful, that he was about giving up the notion of making a carriage go all by itself. But some boys were one day playing with a gun; they poured into it a small quantity of water, and plugged up the touch-hole, crammed down wads, and held the gun over the fire. Off went the wads, with a loud report. Here was the power Evans had so long wanted to propel his land-carriages—the mighty power of steam. But how was he to apply it? Here his invention was taxed to the utmost. He had to encounter incredulity and ridicule. What! a carriage go by steam? The man must be crazy! Evans was too poor in purse, and perhaps had not sufficient knowledge to carry out his own invention to a successful result, but the prophetic prediction which has, since his death, been successfully accomplished, remains as a testimony of his inventive genius.

"The time will come when people will travel in stages (coaches) moved by steam-engines, from one city to another, almost as fast as birds fly—fifty or twenty miles an hour. Passing through the air with such velocity, changing the scenes in such rapid succession, will be the most exhilarating exercise. A carriage will set out from Washington in the morning, the passengers will breakfast at Baltimore, dine at Philadelphia, and sup in New York, the same day. To accomplish this, two sets of railways will be laid, so nearly level as not in any way to deviate more than two degrees from a horizontal line, made of wood or iron, or smooth paths of broken stone or gravel, with a rail to guide the carriages, so that they may pass each other in different directions, and travel by night as well as by day."

Here, surely, was the germ of "the locomotive," the mighty iron horse, which accomplishes far more than even the sanguine Evans would have dared to hope.

But because Evans could not accomplish all that he wished, he did not let the discovery he had made pass away from his own mind, without producing an important result. "His steam-engine, the first ever invented on the high-pressure principle, is the only one that can be applied on railways, and is now in universal use on the Mississippi and other rapid rivers, where great power is required."

Scientific men of that day denounced Evans and his plans as utterly chimerical, and attempted to demonstrate their absurdity; and one of them went so far as to make out an elaborate report to the Philosophical Society of Philadelphia, to show "the entire impossibility of rendering steamboats useful."

It too frequently happens that men of inventive genius have but little perseverance and industry, consequently they leave to others to finish what they begin, or to follow out what they suggest, so that they lose the fame and the emolument which results in the end from the invention.

A father was heard to say, "I would rather my son would only know enough to come in when it rains, than to be a mechanical genius."

"Why so?"

"Because men of genius are poor as church mice all their lives."

This was a mistake, for genius frequently meets with its due reward. But supposing the man of inventive talent does not become rich, if he possesses means enough to make him free from actual want, he may be quite as happy, and even more so, than a rich man without genius. Remember the wise injunction of Sydney Smith:—"Be what nature intended you for, and you will succeed; be anything else, and you will be ten thousand times worse than nothing."

**THE MORAL CHARACTER OF PIGS.**—Some folks accuse pigs of being filthy in their habits, and negligent in their personal appearance. But whether food is best eaten off the ground, or in a China plate, is, it seems to us, merely a matter of taste and convenience, on which pigs and men may honestly differ. They ought, then, to be judged charitably. At any rate, pigs are not filthy enough to chew tobacco, nor poison their breath by drinking whiskey. As to their personal appearance, you don't catch a pig playing the dandy, nor picking his way up the muddy streets in kid alippers. Pigs have some excellent traits of character. If one chances to wallow a little deeper in some mire-hole than his neighbour, and so carries off and comes in possession of more of the earth than his brethren, he never assumes an extra importance on that account; neither are his brethren stupid enough to worship him for it. Their only question seems to be, is he still a hog? If he is, they treat him as such. And when a hog has no merits of his own, he never puts off any aristocratic airs, nor claims any particular respect on account of his family connections. They understand, full well, the common sense maxim, "Every pig must stand upon its own bottom."

## ONWARD!

**FISH PADDLES FOR STEAMERS.**—A working shipwright at Liverpool, according to the local Journal, has patented (or secured for six months at least, that capitalists may see) an invention for the propulsion of vessels by paddles shaped and working like fish fins, by means of which the inventor, Mr. Hampson, offers to beat both screw and wheel paddle.

**SELF-ACTING BREAKS TO RAILWAY CARRIAGES.**—A trial has been made on the South-Western Railway of a means of applying self-acting breaks, with a view to prevent accidents. On all occasions of stopping, it is said, the breaks acted satisfactorily: when the speed was great, and the stoppage sudden, the self-acting breaks brought the wheels to a "dead lock;" on other occasions not applying themselves so forcibly. When the train was backed, the breaks were instantaneously thrown out of action by the guard.

**CRYSTAL PALACE IN DENMARK.**—Some time ago it was announced that a "Crystal Palace" had been erected at Copenhagen, for an exhibition of Scandinavian manufactures. This edifice having been completed, and stocked with articles representing the industry of the three Scandinavian nations, was opened very lately, with a good deal of pomp, by the king of Denmark, attended by the royal princes, the ministers, and the great dignitaries of the kingdom. The structure is of considerable beauty and extent.

**THE NEW YORK EXHIBITION.**—The opening is definitively fixed for Monday, 2nd May, 1853. Ample funds, it is reported, have been subscribed to carry out the undertaking in a brilliant manner, and all parties join in forwarding its success. The corporation has granted a site for the building—the Legislature has incorporated the Association—the Customs has constituted the building a bonded warehouse—and the Company undertake to carry out and bring back, if unsold, all articles intended for exhibition, free of expense to the owners.

**A BRITISH INDUSTRIAL UNIVERSITY.**—In a preceding page it was announced in our columns that there was reason to believe his Royal Highness the Prince Consort "contemplated the foundation of a great building and establishment, in which theory would be combined with practice in the advancement of science and art, by a concentration of talent and skill." We believe we may now state, without any impropriety, that in all probability the surplus of £160,000 and upwards, in the hands of the Royal Commission of the Great Industrial Exhibition of 1851, will be devoted to the foundation of an Industrial University in London. This central concentration of science and industry will ultimately be organized, with radii or branch institutions, throughout the whole country; but we scarcely think that the Royal Commissioners, as has been stated, have as yet formed any definite scheme for the establishment of such a university, although it is their known design to carry out the idea.

**NEW ACT ON PHARMACY.**—Among the public Acts passed in the late session was one for regulating the qualifications of pharmaceutical chemists. It is declared to be expedient for the safety of the public that persons exercising the business or calling of pharmaceutical chemists in Great Britain, should possess a competent practical knowledge of pharmaceutical and general chemistry, and other branches of useful knowledge. Further, it is declared that it is expedient to prevent ignorant and incompetent persons from assuming the title of, or pretending to be, pharmaceutical chemists, and to that end it is desirable that all persons, before assuming such title, should be examined as to their skill, and that a register should be kept by some legally authorised officer of all such persons. The charter of the pharmaceutical chemists is confirmed by this Act. By-laws are to be framed, and to be approved by the Secretary of State. A registrar is to be appointed, and all members, associates, &c., of the society at the passing of the Act are entitled to be registered. The examiners are to grant certificates of competency. All persons registered as pharmaceutical chemists are eligible to be elected members, as also assistants and apprentices. No person is to assume the title of pharmaceutical chemist unless registered, under penalties to be recovered in England and Scotland. The Act took effect from the 30th ult., when it received the Royal assent.

**THE ELECTRIC CLOCK.**—Among all the wonders of that wonder-working principle, electricity, whether we view its power in the instantaneous conveyance of information between distant places, its agency in blasting rocks in safety, the deposition of metals from their solutions, or others of its numerous appliances, there is not one of them which strikes the mind as more extraordinary or interesting than its application as a prime mover for the measurement of time. "We believe," says a contemporary, in speaking of this subject, "that the first idea of working clocks by electricity is due to Mr. Alexander Bain, who commenced putting it in practice in 1837. His first attempt was to make a common clock transmit its time to other clocks at a distance, by the action of electro-magnets, in which he was perfectly successful. The next step was the application of the electric power to work single clocks, so that no winding might be required, and the common clock be dispensed with altogether; and, in prosecuting his experiments, Mr. Bain, in 1842, discovered that a plate of zinc and one of copper, buried in the earth, gave a uniform and continuous force of sufficient power to work clocks of any size, from the smallest mantel time-piece to large church clocks. The cost of its plates is a trifle, and it has been ascertained that they will retain their efficacy for years. It is now shown to be possible that all the principal clocks in the kingdom might be united to keep time with one governing one, which again derives its moving power from the earth, without winding up or need of attendance of any kind from one year's end to the other." Mr. Bain's warehouse for these clocks is 43, Old Bond-street.

CHARADE.

My first where'er you want a  
jaunt  
Will help you on your way;  
My second will present his  
paw,  
If you teach him the way.  
My whole will yield its com-  
fort where  
Young Fido plays before the  
chair.

PARLOUR PASTIME.

*The Miraculous Vessel.*

TAKE a tin vessel of about six inches in height, and three in diameter, and having a mouth of only a quarter of an inch wide; and in the bottom of the vessel make a number of small holes, of a size sufficient to admit of a common sewing needle. Plunge the vessel into water, with its mouth open, and when it is full, cork it, and take it out again; then, as long as the vessel remains corked, no water will come out of it, but as soon as it is uncorked, the water will immediately issue from the small holes at the bottom. It must be observed, however, that if the holes at the bottom of the vessel be more than one-sixth of an inch in diameter, or if they be too numerous, the experiment will not succeed; for, in this case, the pressure of the air against the bottom of the vessel will not be sufficient to confine the water.

PRACTICAL PUZZLE.

These dogs are dead you well may say:  
Add four living wires, they'll run away!

TRANSFIGURED PLAYING CARDS.

THE TWO OF CLUBS.—TIME PAST WITHOUT PASTIME.

ENIGMA.

SPECTATOR I of Numa's happy reign; (1)  
Of Scotia's beauteous queen by sister slain; (2)  
I've seen Orestes and his faithful friend; (3)  
Witness'd of Troy's prolonged siege the end. (4)  
My brow grew dark when Zion's temple burn'd; (5)  
And routed Poles to Austria return'd. (6)  
I've gaz'd on Plato, Cromwell, Brougham and Homer; (7)  
On Magna Charta, and Boerhaave's diploma. (8)  
I saw the convict Frost receive his doom; (9)  
But never saw the two young princes' tomb. (10)  
Caractacus in chains, at Rome I saw, (11)  
And Peter put to death by Nero's law. (12)  
My favour'd votaries in the west do dwell, (13)  
Yet by my aid, do goods in Bond-street sell. (14)  
Painters and architects my presence crave, (15)  
But Mahomet and Paul I could not save. (16)  
Napoleon sought my aid; (17) and once I caus'd  
Another victory, as I, silent, paus'd. (18)  
I'm fond of flowers, yet one I cannot bear, (19)  
Though sweet its odour, and its beauty rare. (20)  
I love not Christmas, or the opera's show, (21)  
Yet I to weddings and executions go. (22)  
To me Perelope her work reveal'd (23)  
Yet its unravelling from me conceal'd. (24)  
Happy for men the day when I was born, (25)  
They know not when from them I may be torn; (26)  
But since it's doom'd that Heav'n I us'er shall see, (27)  
May no eternal future wait for me! (28)—M. R.

ANSWERS TO THE PASTIME OF LAST EVENING.

Page 717.

CONUNDRUMS.—1. They make one smart. 2. The one is knocked up and the other is knocked down. 3. Its pulse is beating while he is beating his foot. 4. A dun. 5. When you rise in the morning. 6. Because the grounds are unsettled. 7. It is taken in by everybody. 8. Because he was a stranger in the land of Ham. 9. Scarlet runners. 10. Because he always has a bit in his mouth. 11. Powder and quinine (two p's and q's). 12. Because her notes are good and will change the gold anywhere. 13. He is clever with his figures. 14. When it is sown and gathered. 15. Because he lives on the sea (can). 16. When he is out of spirits. 17. He always has a dear object in his eye. 18. It would be coded (C dead). 19. At Whitstable (Wit's table). 20. Because the calls are frequent. 21. I-o-ta. 22. He is a good thing a loan (alone). 23. The human heart.

CHARADES.—1. A SWIF. 2. An Ass. 3. A Cock.

PRACTICAL PUZZLES.—1. After having placed the glass and coins as before, simply scratch the table-cloth with the nail of the fore finger, in the direction you would have the diamonds to move, and it will answer immediately. The diamonds are necessary—for this reason the trick is never suited to be brought out or done in a dark room. 2. Take a round cylinder of wood of the diameter of the circular hole, and of the height of the square hole. Having drawn a straight line across the end, divide it into two equal parts, cut an equal section from either side to the edge of the circular hole.

[illegible]

handed his own suit into the room they had left for the females to dry. The aged stranger thanked them in a manner the most humble and courteous, but on the knight's offering him his splendid cloak to wrap round him, he could not be persuaded to take it, but chose instead an old gray over-coat that belonged to the fisherman.

They then returned to the common apartment. The mistress of the house immediately offered her great chair to the priest, and continued urging it upon him, till she saw him fairly in possession of it.

"You are old and exhausted," said she, "and are moreover a man of God."

Undine shoved under the stranger's feet her little cricket, on which at all other times she used to sit near to Huldbrand, and showed herself, in thus promoting the comfort of the worthy old man, in the highest degree gentle and amiable. On her paying him these little attentions, Huldbrand whispered some raillery in her ear, but she replied gravely:

"He is a minister of that Being who created us all, and holy things are not to be treated with lightness."

The knight and the fisherman now refreshed the priest with food and wine, and when he had somewhat recovered his strength and spirits, he began to relate how he had the day before set out from his cloister, which was situated afar off, beyond the great lake, in order to visit the bishop, and acquaint him with the distress into which the cloister and its tributary villages had fallen, owing to the extraordinary floods. After a long and wearisome wandering, on account of the rise of the waters, he had been this day compelled towards evening to procure the aid of a couple of boatmen, and cross over an arm of the lake which had burst its usual boundary.

"But hardly," continued he, "had our small ferry-boat touched the waves, when that furious tempest burst forth, which is still raging over our heads. It seemed as if the billows had been waiting our approach, only to rush upon us with a madness the more wild. The oars were wrested from the grasp of my men in an instant; and shivered by the resistless force, they drove farther and farther out before us upon the waves. Unable to direct our course, we yielded to the blind power of nature, and seemed to fly over the surges toward your remote shore, which we already saw looming through the mist and foam of the deep. Then it was at last, that our boat turned short from its course, and rocked with a motion that became more and more wild and dizzy: I know not whether it was overset, or the violence of the motion threw me overboard. In my agony and struggle at the thought of a near and terrible death, the waves bore me onward, till I was cast ashore here beneath the trees of your island."

"Yes, an island!" cried the fisherman. "A short time ago it was only a point of land. But now, since the forest stream and lake have become all but mad, it appears to be entirely changed."

"I observed something of it," replied the priest, "as I stole along the shore in the obscurity; and hearing nothing around me but a sort of wild uproar, I perceived, at last, that the noise came from a point, exactly where a beaten foot-path disappeared. I saw caught the light in your cottage, and ventured hither, where I cannot sufficiently thank my heavenly Father, that, after preserving me from the waters, he has also conducted me to such pious people as you are; and the more so, as it is difficult to say, whether I shall ever behold any other persons in this world except you four."

"What mean you by those words?" asked the fisherman.

"Can you tell me, then, how long this communion of the elements will last?" replied the spiritual man. "And the years of my pilgrimage are many. The stream of my life may easily sink into the ground and vanish, before the overflowing of that forest stream shall subside. And, indeed, taking a general view of things, it is not impossible that more and more of the foaming waters may rush in between you and your forest, until you are so far removed from the rest of the world, that your small fishing canoe may be incapable of passing over, and the inhabitants of the continent entirely forget your age amid the dissipation and diversions of life."

At this melancholy foreboding, the old lady shrunk back with a feeling of alarm, crossed herself, and cried:

"May God forbid!"

But the fisherman looked upon her with a smile, and said:

"What a strange being is man! Suppose the worst to happen: our state would not be different, at any rate your own would not, dear wife, from what it is at present. For have you, these many years, been farther from home than the borders of the forest? And have you seen a single human being beside Undine and myself?—It is now only a short time since the coming of the knight and the priest. They will remain with us, even if we do become a forgotten island; so, after all, you will derive the best advantage from the disaster."

"I know not," replied the ancient dame, "it may be so; still it is a dismal thought, when brought fairly home to the mind, that we are for ever separated from mankind, even though, in fact, we never do know nor see them."

"Then you will remain with us, then you will remain with us!" whispered Undine, in a voice scarcely audible and half singing, while with the intense fervour of the heart she moved more and more closely to Huldbrand's side. But he was immersed in the deep and strange musings of his own mind. The region on the farther side of the forest-river, since the last words of the priest, seemed to have been withdrawing farther and farther, in dim perspective, from his view; and the blooming island on which he lived, grew green and smiled more freshly before the eye of his mind. His bride glowed like the fairest rose, not of this obscure nook only, but even of the whole wide world; and the priest was now present.

Beside these hopes and reveries of love, another circumstance influenced him; the mistress of the family was directing an angry glance at Undine,

because, even in the presence of their spiritual director, she was leaning so fondly on the knight; and it seemed as if she was on the point of breaking out in harsh reproof. Then was the resolution of Huldbrand taken: his heart and mouth were opened; and, turning towards the priest, he said,

"Father, you here see before you an affianced pair, and if this maiden and these aged and worthy people of the island have no objection, you shall unite us this very evening."

The aged couple were both exceedingly surprised. They had often, it is true, anticipated an event of this nature, but as yet they had never mentioned it; and now when the knight made the attachment known, it came upon them like something wholly new and unexpected. Undine became suddenly grave, and cast her eyes upon the floor in a profound reverie, while the priest made inquiries respecting the circumstances of their acquaintance, and asked the old people whether they gave their consent to the union. After a great number of questions and answers, the affair was arranged to the satisfaction of all; and the mistress of the house went to prepare the bridal apartment for the young couple, and also, with a view to grace the nuptial solemnity, to seek for two consecrated tapers, which she had for a long time kept by her.

The knight in the meanwhile busied himself about his golden chain, for the purpose of disengaging two of its links, that he might make an exchange of rings with his bride. But when she saw his object she started from her trance of musing and exclaimed:

"Not so! my parents by no means sent me into the world so perfectly destitute; on the contrary, they foresaw, even at so early a period, that such a night as this would come."

Thus speaking, she was out of the room in a moment, and a moment after returned with two costly rings, of which she gave one to her bridegroom, and kept the other for herself. The old fisherman was beyond measure astonished at this; and his wife, who was just re-entering the room, was even more surprised than he, that neither of them had ever seen these jewels in the child's possession.

"My parents," said Undine, "made me sew these trinkets to that beautiful raiment, which I wore the very day I came to you. They also charged me, on no account whatever to mention them to any one before my nuptial evening. At the time of my coming, therefore, I took them off in secret, and have kept them concealed to the present hour."

The priest now cut short all further questioning and wondering, while he lighted the consecrated tapers, placed them on a table, and ordered the bridal pair to stand opposite to him. He then pronounced the few solemn words of the ceremony, and made them one; the elder couple gave the younger their blessing; and the bride, slightly trembling and thoughtful, leaned upon the knight.

The priest then spoke plainly and at once:

"You are strange people after all; for why did you tell me that you were the only inhabitants of the island? So far is this from being true, I have seen, the whole time I have been performing the ceremony, a tall, stately, man, in a white mantle, stand opposite to me, looking in at the window. He must be still waiting before the door, if peradventure you would invite him to come in."

"God forbid!" cried the old lady, shrinking back; the fisherman shook his head without opening his lips, and Huldbrand sprang to the window. It appeared to him, that he could still discern some vestige of a form, white and indistinct as a vapour, but it soon disappeared in the gloom. He convinced the priest that he must have been mistaken in his impression; and now, inspired with freedom and familiarity of perfect confidence, they all sat down together round a bright and comfortable hearth.

## CHAPTER VII.

BEFORE the nuptial ceremony, and during its performance, Undine had shown a modest gentleness and maidenly reserve; but it now seemed as if all the wayward freaks that effervesced within her, were foaming and bursting forth with an extravagance only the more bold and unrestrained. She teased her bridegroom, her foster-parents, and even the priest, whom she had just now revered so highly, with all sorts of childish tricks and vagaries; and when the ancient dame was about to reprove her too frolicsome spirit, the knight by a few serious and expressive words, imposed silence upon her, by calling Undine his wife.

The knight was himself, indeed, just as little pleased with Undine's childish behaviour as the rest; but still, all his winking, hemming, and expressions of censure were to no purpose. It is true, whenever the bride observed the dissatisfaction of her husband,—and this occasionally happened,—she became more quiet, placed herself beside him, stroked his face with caressing fondness, whispered something smilingly in his ear, and in this manner smoothed the wrinkles that were gathering on his brow. But the moment after some wild whim would make her resume her antic movements, and all went worse than before.

The priest then spoke in a kind although serious tone:

"My pleasant young friend, surely no one can witness your playful spirit without being diverted; but remember betimes so to attune your soul, that it may produce a harmony ever in accordance with the soul of your wedded bridegroom."

"SOUL!" cried Undine, with a laugh, nearly allied to one of derision, "what you say has a remarkably pretty sound, and for most people, too, it may be a very instructive rule and profitable caution. But when a person has no soul at all, how, I pray you, can such attuning be then possible? And this in truth is just my condition."

The priest was much hurt; but continued silent in holy displeasure, and turned away his face from the maiden in sorrow. She, however, went up to him with the most winning sweetness, and said:

"Nay, I entreat you, first listen to some particulars before you frown upon me in anger; for your frown of anger is painful to me, and being means ought you to give pain to a creature that has itself done nothing injurious to you. Only have patience with me, and I will explain to you every word of what I meant."

It was evident that she had come to the resolution to give a full account of herself, when she suddenly faltered, as if seized with an inward shuddering, and burst into a passion of tears. They were none of them able to understand the intenseness of her feelings, and, with mingled emotions of fear and anxiety, they gazed on her in silence. Then wiping away her tears and looking earnestly at the priest, she at last said:

"There must be something lovely, but at the same time something most awful, about a soul. In the name of God, holy man, were it not better that we never shared a gift so mysterious?"

Again she paused and restrained her tears, as if waiting for an answer. All in the cottage had risen from their seats, and stepped back from her with horror. She, however, seemed to have eyes for no one but the holy man: a fearful curiosity was painted on her features, and this made her emotion appear terrible to the others.

"Heavily must the soul weigh down its possessor," she pursued, when no one returned her any answer, "very heavily! for already its approaching image overshadows me with anguish and mourning. And, alas, I have till now been so merry and light-hearted!"

And she burst into another flood of tears, and covered her face with her veil.

The priest, going up to her with a solemn look, now addressed himself to her, and conjured her by the name of God most holy, if any evil or spirit of evil possessed her, to remove the light covering from her face. But she sunk before him on her knees, and repeated after him every sacred expression he uttered, giving praise to God, and protesting "that she wished the well-being of the whole world."

The priest then spoke to the knight:

"Sir bridegroom, I leave you alone with her whom I have united to you in marriage. So far as I can discover, there is nothing of evil in her, but assuredly much that is wonderful. What I recommend to you in domestic life is—prudence, love, and fidelity."

Thus speaking he left the apartment, and the fisherman with his wife followed him, crossing themselves.

Undine had sunk upon her knees; she uncovered her face, and exclaimed, while she looked fearfully round upon Huldbrand:

"Alas, you will now refuse to regard me as your own; and still I have done nothing evil, poor unhappy child!"

She spoke these words with a look so infinitely sweet and touching, that her bridegroom forgot both the confession that had shocked, and the mystery that had perplexed him; and hastening to her, he raised her in his arms. She smiled through her tears, and that smile was like the dawn playing upon a small stream.

"You cannot desert me!" she whispered, with a confiding assurance, and stroked the knight's cheeks with her little soft hands. He was thus in some degree withdrawn from those terrible apprehensions, that still lay lurking in the recesses of his soul, and was persuading him that he had been married to a fairy, or some spiteful and mischievous being of the spirit-world; but, after all, only this single question, and that almost unawares, escaped from his lips:

"Dearest Undine, pray tell me this one thing: what was it you meant by 'spirits of earth' and 'Kühleborn,' when the priest stood knocking at the door?"

"Mere fictions! mere tales of children!" answered Undine, laughing, now quite restored to her wonted gaiety. "I first awoke your anxiety with them, and you finally awoke mine. This is the end of the story and of our nuptial evening."

"Nay, not exactly that," replied the enamoured knight, extinguishing the tapers, and a thousand times kissing his beautiful and beloved bride, while, lighted by the moon that shone brightly through the windows, he bore her into their own bridal apartment.

## CHAPTER VIII.

THE fresh light of morning awoke the young married pair. Undine bashfully hid her face beneath their covering, and Huldbrand lay lost in silent reflection. Whenever during the night he had fallen asleep, strange and horrible dreams of spectres had disturbed him; and these shapes grinning at him by stealth, strove to disguise themselves as beautiful females; and from beautiful females they all at once assumed the appearance of dragons. And when he started up, aroused by the intrusion of these hideous forms, the moonlight shone pale and cold before the windows without; he looked affrighted at Undine, in whose arms he had fallen asleep, and she was reposing in unaltered beauty and sweetness beside him. Then pressing her rosy lips with a light kiss, he again fell into a slumber, only to be awakened by new terrors.

When he had now perfectly awoke, and well considered all the circumstances of this coimection, he reproached himself for any doubt that could lead him into error in regard to his lovely wife. He also earnestly begged her pardon for the injustice he had done her, but she only gave him her fair hand, heaved a sigh from the depth of her heart, and remained silent.

But a glance of fervent tenderness, an expression of the soul beaming in her eyes, such as he had never witnessed there before, left him no undoubting assurance, that Undine was conscious of no evil design against him whatever.

He then rose with a serene mind, and, leaving her, went to the common apartment, where the inmates of the house had already met. The three were sitting round the hearth with an air of anxiety about them, as if they feared trusting themselves to raise their voice above a low apprehensive undertone. The priest appeared to be praying in his inmost spirit, with a view to avert some fatal calamity. But when they observed the young husband come forth so cheerful, a brighter hope rose within them, and dispelled the cloudy traces that remained upon their brows: yes, the old fisherman began to be facetious with the knight, but in a manner perfectly becoming, so that his aged wife herself could not help smiling with great good-humour.

Undine had in the meantime got ready, and now entered the door; when all were on the point of rushing to meet her, and yet all continued standing in perfect adoration, so changed, and at the same time so familiar was the young woman's appearance. The priest, with paternal affection beaming from his countenance, first went up to her, and as he raised his hand to pronounce a blessing, the beautiful bride, trembling with devotion, sunk on her knees before him; she begged his pardon in terms both respectful and submissive, for any foolish things she might have uttered the evening before, and entreated him, in a pathetic tone, to pray for the welfare of her soul. She then rose, kissed her foster-parents, and, after thanking them for all the kindness they had shown her, said:

"O, I now feel in my inmost heart, how much, how infinitely much you have done for me, you dear, dear friends of my childhood."

At first she was wholly unable to tear herself away from their affectionate caresses; but the moment she saw the good old mother busy in getting breakfast, she went to the hearth, applied herself to cooking the food and putting it on the table, and would not suffer her aged friend to take the least share in the work.

She continued in this frame of spirit the whole day; calm, kind, attentive—at the same time, a little mistress of a family, and a tender, modest young woman. The three who had been longest acquainted with her, expected every instant to see her capricious spirit break out in some whimsical change or sportive vagary. But their fears were quite unnecessary. Undine continued as mild and gentle as an angel. The priest found it all but impossible to remove his eyes from her, and he often said to the bridegroom:

"The bounty of Heaven, sir, making me its unworthy instrument, entrusted to you last evening an invaluable treasure; regard and cherish it as you ought to do, and it will promote your temporal and eternal welfare."

Toward evening Undine was hanging upon the knight's arm with lowly tenderness, while she drew him gently out before the door, where the setting sun shone richly over the fresh grass, and upon the high slender boles of the trees. Her emotion was visible; the dew of sadness and love swam in her eyes, while a tender and fearful secret hovered upon her lips, but sighs, and those scarcely perceptible, were all that made known the wish of her heart. She led her husband farther and farther onward without speaking. When he asked her questions, she replied only with looks, in which, it is true, there appeared to be no immediate answer to his inquiries, but yet a whole heaven of love and timid attachment. Thus they reached the margin of the swollen forest-stream, and the knight was astonished to see it gliding away with so gentle a murmuring of its waves, that no vestige of its former swell and wildness was now discernible.

"By morning it will be wholly drained off," said the beautiful woman with an accent of weeping, "and you will then be able to travel, without anything to hinder you, whithersoever you will."

"Not without you, dear Undine," replied the knight, laughing; "for pray remember, even were I disposed to leave you, both the church and the spiritual powers, the emperor and the laws of the realm would require the fugitive to be seized and restored to you."

"All this depends on you, all depends on you," whispered his little companion, half weeping and half smiling. "But I still feel sure that you will not leave me; I am in truth too fondly attached to you to fear that misery. Now hear me over to that little island which lies before us. There shall the decision be made. I could easily, indeed, slip through that mere rippling of the water without your aid, but it is so grateful to rest in your arms; and should you determine to put me away, I shall have sweetly rested in them once more . . . for the last time."

Huldbrand was so full of strange anxiety and emotion, that he knew not what answer to make her. He took her in his arms and carried her over, now first realizing the fact, that this was the same little island from which he had borne her back to the old fisherman, the first night of his arrival. On the farther side he placed her upon the soft grass, and cherished with a lover's fondness the hope of sitting near his beautiful bride; but she said to him:

"Not here, if you please,—there, over against me. I shall read my doom in your eyes, even before your lip pronounces it: now listen very attentively to what I shall relate to you." And she began:

"You must know, my dear love, that there are beings in the elements, which bear the strongest resemblance to the human race, and which, at the same time, but seldom become visible to you. The wonderful salamanders sparkle and sport amid the flames; deep in the earth the meagre and malicious gnomes pursue their revels; the forest spirits belong to the air, and wander in the woods; while in the seas, rivers, and streams, live the wide-spread race of water-spirits. These last, beneath sounding domes of crystal, through which the sky appears with sun and stars, inhabit a region of light and beauty; lofty coral trees glow with blue and crimson fruits in

their gardens; they walk over the pure sand of the sea, among exquisitely variegated shells, and amid whatever of beauty the old world possessed, such as the present is no more worthy to enjoy—creations which the floods covered with their secret veils of silver; and now the noble monuments sparkle below, stately and solemn,\* and hedged by the water, which loves them, and calls forth from their crevices delicate moss-flowers and enwreathing tufts of sedge.

"New the nation that dwell there are very fair and lovely to behold, for the most part more beautiful than human beings. Many a fisherman has been so fortunate as to catch a view of the delicate maiden of the waters, while she was floating and slinging upon the deep. He then spread to remotest shores the fame of her beauty, and to such wonderful females men are wont to give the name of Undines. But what need of saying more?—You, my dear husband, now actually behold an Undine before you."

The knight would have persuaded himself that his lovely wife was under the influence of one of her odd whims, and that she was only amusing herself and him with her extravagant inventions. He wished it might be so. But with whatever emphasis he said this to himself, he still could not credit the hope for a moment: a strange shivering shot through his soul; unable to utter a word, he gazed upon the sweet speaker with a fixed eye. She shook her head in distress, heaved a sigh from her full heart, and then proceeded in the following manner:

"In respect to the circumstances of our life, we should be far superior to yourselves, who are another race of the human family,—for we also call ourselves human beings, as we resemble them in form and features,—had we not one evil peculiar to ourselves. Both we, and the beings I have mentioned as inhabiting the other elements, vanish into air at death, and go out of existence, spirit and body, so that no vestige of us remains; and when you hereafter awake to a purer state of being, we shall remain where sand, and sparks, and wind and waves remain. We, of course, have no souls; the element moves us, and again is obedient to our will while we live, though it scatters us like dust when we die; and as we have nothing to trouble us, we are as merry as nightingales, little gold fishes, and other pretty children of nature.

"But all beings aspire to rise in the scale of existence higher than they are. It was, therefore, the wish of my father, who is a powerful water-prince in the Mediterranean Sea, that his only daughter should become possessed of a soul, although she should have to endure many of the sufferings of those who share that gift.

"Now, the race to which I belong have no other means of obtaining a soul, than by forming with an individual of your own the most intimate union of love. I am now possessed of a soul; and I, the very soul itself, thank you, dear Huldbrand, with a warmth of heart beyond expression; and never shall I cease to thank you, unless you render my whole future life miserable. For what will become of me, if you avoid and reject me? I was not, permitted, however, to retain you as my own by artifice. And should you decide to cast me off, then do it now, and return alone to the shore. I will plunge into this brook, where my uncle will receive me; my uncle, who here in the forest, far removed from his other friends, passes his strange and solitary existence. But he is powerful, as well as revered and beloved by many great rivers; and as he brought me hither to our friends of the lake, a light-hearted and laughing child, he will also restore me to the home of my parents, a woman, possessing a soul, full of affection, and heir to suffering."

She was about to add something more, when Huldbrand, with the most heartfelt tenderness and love, clasped her in his arms, and again bore her back to the shore. There, amid tears and kisses, he first swore never to forsake his affectionate wife, and esteemed himself even more happy than Pygmalion, for whom Venus gave life to his beautiful statue, and thus changed it into a beloved wife. Supported by his arm, and cherishing within her the sweet confidence of affection, Undine returned to the cottage; and now she first realized, with her whole heart, how little cause she had for regretting what she had left, the crystal palaces of her mysterious father.

#### CHAPTER IX.

NEXT morning, when Huldbrand awoke from slumber, and perceived that his beautiful wife was not by his side, he began to give way again to his wild imaginations: these represented to him his marriage, and even the charming Undine herself, as only a shadow without substance, a mere illusion of enchantment. But she entered the door at the same moment, kissed him, seated herself on the bed by his side, and said:

"I have been out somewhat early this morning, to see whether my uncle keeps his word. He has already restored the waters of the flood to his own calm channel, and he now flows through the forest, a rivulet as before, in a lonely and dreamlike current. His friends too, both of the water and the air, have resumed their usual peaceful tenor; all in this region will again proceed with order and tranquillity; and you can travel homeward without fear of the flood, whenever you choose."

It seemed to the mind of Huldbrand, that he must be wrapt in some

reverie or waking dream, so little was he able to understand the nature of his wife's strange relative. Notwithstanding this, he made no remark upon what she had told him, and her infinite sweetness soon lulled every misgiving and discomfort to rest.

Some time afterward, while he was standing with her before the door, and surveying the verdant point of land, with its boundary of bright waters, such a feeling of bliss came over him in this cradle of his love, that he exclaimed: "Shall we then, so early as to-day, begin our journey? Why should we? It is probable that, abroad in the world, we shall find no days more delightful than those we have spent in this little asylum, so secret and so secure. Let us remain here, and enjoy two or three more of its glorious sunsets."

"Just as my lord shall command," replied Undine, meekly. "Only we must remember that our aged friends will, at all events, think of my departure with pain; and should they now, for the first time, discover the true soul in me, and how fervently I can now love and honour them, their feeble eyes would surely become blind with weeping. As yet, they consider my present calm and exemplary conduct as of no better promise than my former occasional quietness,—merely the calm of the lake just while the air remains tranquil,—and they will now become as much accustomed to cherish a little tree or flower, as they have been to cherish me. Let me not, then, make known to them this newly-bestowed, this love-inspired heart, at the very moment they must lose it for this world; and how could I conceal what I have gained, if we continued longer together?"

Huldbrand yielded to her representation, and went to the aged couple to confer with them respecting his journey, on which, however, he proposed to set out that very hour. The priest offered himself as a companion to the young married pair; and, after their taking a short farewell, he held the bridle while the knight lifted his beautiful wife upon his horse; and with rapid step they crossed the dry channel with her toward the forest. Undine wept in silent but intense emotion; the old people, as she moved away, were more clamorous in the expression of their grief. They appeared to feel, at this moment of separation, a presentiment of what they were losing in their affectionate foster-daughter.

The three travellers had reached the thickest shades of the forest without interchanging a word. It would have been a picturesque sight, in that hall of leafy verdure, to see the figure of this lovely female sitting on the noble and richly-ornamented steed; on her right hand the venerable priest in the white garb of his order; on her left the blooming young knight, clad in splendid raiment of scarlet, gold, and violet, girt with a sword that flashed in the sun, and attentively walking beside her. Huldbrand had no eyes but for his wife; Undine, who had dried her tears of tenderness, had no eyes but for him; and they soon entered into the mute and voiceless converse of looks and gestures, from which, after some time, they were awakened by the low discourse which the priest was holding with a fourth traveller, who had meanwhile joined them unobserved.

He wore a white gown, resembling in form the dress of the priests' order, except that his hood hung very low over his face, and that the whole drapery floated in such wide folds around him, as obliged him every moment to gather it up and throw it over his arm, or by some management of this sort to get it out of his way, and still it did not seem in the least to incommode him in his movement. When the young couple became aware of his presence, he was saying:

"And so, venerable sir, many as have been the years I have dwelt here in this forest, I have never received the name of hermit in your sense of the word. For, as I said before, I know nothing of penance, and I think, too, that I have no particular need of it. Do you ask me why I am so attached to the forest? It is because its scenery is so peculiarly picturesque, and affords me so much pastime, when, in my floating white garments, I pass through its world of leaves and dusky shadows;—and then a sweet sunbeam glances down upon me, at times, before I think of it."

"You are a very singular man," replied the priest, "and I should like to have a more intimate acquaintance with you."

"And who, then, may you be yourself, to pass from one thing to another?" inquired the stranger.

"I am called Father Heillmann," answered the holy man, "and I am from the cloister of Our Lady of the Salutation, beyond the lake."

"Well, well," replied the stranger, "my name is Kühleborn; and were I a stickler for the nice distinctions of rank, I might with equal propriety require you to give me the title of noble lord of Kühleborn, or free lord of Kühleborn; for I am as free as the birds in the forest, and, it may be, a trifle more so. For example, I now have something to tell that young lady there."

And before they were aware of his purpose, he was on the other side of the priest, close to Undine, and stretching himself high into the air, in order to whisper something in her ear. But she shrunk from him in terror, and exclaimed:

"I have nothing more to do with you."

"Ho, ho!" cried the stranger, with a laugh, "what sort of a marriage have you made, then, so monstrous and genteel, since you no longer know your own relations? Have you no recollection, then, of your uncle Kühleborn, who so faithfully bore you on his back to this region?"

"However that may be," replied Undine, "I entreat you never to appear in my presence again. I am now afraid of you; and will not my husband fear and forsake me, if he sees me associate with such strange company and kindred?"

"You must not forget, my little niece," said Kühleborn, "that I am with you here as a conductor; otherwise those madcap spirits of the earth, the

\* No reader of English poetry need be reminded of Southey's admirable description of the City of Babel, in his "Curse of Kehama."

"In sun-light and sea-green,  
The shadowed palaces were seen  
Of that proud city, whose superb abodes  
Were built by giants for the immortal gods.  
How silent and how beautiful they stand,  
Like things of nature!"

gnomes that haunt this forest, would play you some of their mischievous pranks. Let me, therefore, still accompany you in peace; even the old priest there had a better recollection of me than you appear to have, for he just now assured me that I seemed to be very familiar to him, and that I must have been with him in the ferry-boat, out of which he tumbled into the waves. He certainly did see me there, for I was no other than the water-spout that tore him out of it, and kept him from sinking, while I safely wafted him ashore to your wedding."

Undine and the knight turned their eyes upon Father Heilmann; but he appeared to be moving forward, just as if he were dreaming, or walking in his sleep, and no longer to be conscious of a word that was spoken. Undine then said to Kùhleborn:

"I already see yonder the end of the forest. We have no further need of your assistance, and nothing now gives us alarm but yourself. I therefore beseech you, by our mutual love and good-will, to vanish, and allow us to proceed in peace."

Kùhleborn seemed to be transported with fury at this: he darted a frightful look at Undine, and grinned fiercely upon her. She shrieked aloud, and called her husband to protect her. The knight sprung round the horse as quick as lightning, and, brandishing his sword, struck at Kùhleborn's head. But, instead of severing it from his body, the sword merely flashed through a torrent, which rushed foaming near them from a lofty cliff; and with a splash, which much resembled in sound a burst of laughter, the stream all at once poured upon them, and gave them a thorough wetting. The priest, as if suddenly awaking from a trance, coolly observed:

"This is what I have been some time expecting, because the brook has descended from the steep so close beside us,—though at first sight, indeed, it appeared to resemble a man, and to possess the power of speech."

As the waterfall came rushing from its crag, it distinctly uttered these words in Huldbrand's ear:

"Rash knight! valiant knight! I am not angry with you; I have no quarrel with you; only continue to defend your charming little wife with the same spirit, you bold knight! you rash blade!"

After advancing a few steps further, the travellers came out upon open ground. The imperial city lay bright before them; and the evening sun, which gilded its towers with gold, kindly dried their garments that had been so completely drenched.

## CHAPTER X.

THE sudden disappearance of the young knight, Huldbrand of Ringstetten, had occasioned much remark in the imperial city, and no small concern among those of the people who, as well on account of his expertness in tourney and dance as in consequence of his mild and amiable manners, had become attached to him. His attendants were unwilling to quit the place without their master, although not a soul of them had been courageous enough to follow him into the fearful recesses of the forest. They remained, therefore, at their public-house, in the indulgence of idle hope, as men are wont to do, and, by the expression of their fears, kept the fate of their lost lord fresh in remembrance.

Now when the violent storms and floods had been observed immediately after his departure, the destruction of the handsome stranger became all but certain: even Bertalda had quite openly discovered her sorrow, and detested herself for having induced him to take that fatal excursion into the forest. Her foster-parents, the duke and duchess, had meanwhile come to take her away, but Bertalda persuaded them to remain with her until some certain news of Huldbrand should be obtained, whether he were living or dead. She endeavoured, also, to prevail upon several young knights, who were assiduous in courting her favour, to go in quest of the noble adventurer in the forest. But she refused to pledge her hand as the reward of the enterprise, because she still cherished, it might be, a hope of its being claimed by the returning knight; and no one would consent, for a glove, a riband, or even a kiss, to expose his life to bring back a rival so very dangerous.

When Huldbrand now made his sudden and unexpected appearance, his attendants, the inhabitants of the city, and almost all the people, rejoiced. We must acknowledge, indeed, that this was not the case with Bertalda; for although it might be quite a welcome event to others, that he brought with him a wife of such exquisite loveliness, and Father Heilmann as a witness of their marriage, Bertalda could not but view the affair with grief and vexation. She had in truth become attached to the young knight with her whole soul; and then her mourning for his absence or supposed death, had been more unreservedly shown than she could now have wished.

But notwithstanding all this, she conducted herself like a prudent woman in circumstances of such delicacy, and lived on the most friendly terms with Undine, whom the whole city looked upon as a princess that Huldbrand had rescued in the forest from some evil enchantment. Whenever any one questioned either herself or her husband relative to surmises of this nature, they had wisdom enough to remain silent, or wit enough to evade the inquiries. The lips of Father Heilmann had been sealed in regard to idle gossip of every kind; and, besides, on Huldbrand's arrival, he had immediately returned to his cloister; so that people were obliged to rest contented with their own wild conjectures; and even Bertalda herself ascertained nothing more of the truth than others.

In addition to all this, Undine daily regarded this young lady with increasing fondness.

"We must have been heretofore acquainted with each other," she often used to say to her, "or else there must be some mysterious connection between us; for it is incredible that one individual so perfectly without cause,

I mean without some deep and secret cause, should be so fondly attached to another as I have been to you from the first moment of our meeting."

And even Bertalda could not deny that she felt a confiding impulse, an attraction of tenderness, toward Undine, much as she deemed this fortunate rival the cause of her bitterest disappointment. Under the influence of this mutual regard, they found means to persuade, the one her foster-parents, and the other her husband, to defer the day of separation to a period more and more remote; nay, more, they had already begun to talk of a plan for Bertalda's accompanying Undine to Castle Ringstetten, near one of the sources of the Danube, and spending some considerable time with her.

Once, on a fine evening, while they were promenading the city by star-light, they happened to be talking over their scheme just as they passed the high trees that bordered the public walk. The young married pair, though it was somewhat late, had called upon Bertalda to invite her to share their enjoyment; and all three proceeded familiarly up and down beneath the dark blue heaven, not seldom interrupted in their converse by the admiration which they could not but bestow upon the magnificent fountain in the middle of the square, and upon the wonderful rush and shooting upward of its water. All was sweet and soothing to their minds; among the shadows of the trees stole in glimmerings of light from the adjacent houses; a low murmur as of children at play, and of other persons who were enjoying their walk, floated around them; so lonely were they, and sharing at the same time so much of social happiness, under a serene sky, and amid the living world, that whatever had appeared difficult by day, now became smooth and easy of its own accord, and the three friends could no longer see the slightest cause for hesitation in regard to Bertalda's taking the journey.

At that instant, while they were just appointing the day of their departure, a tall man approached them from the middle of the square, bowed respectfully to the company, and spoke something in the young bride's ear. Though displeased with the interruption and its cause, she walked aside a few steps with the stranger, and both began to whisper, as it seemed, in a foreign tongue. Huldbrand thought he recognized the strange man of the forest; and he gazed upon him with a look so intense and immovable, that he neither heard nor answered the astonished inquiries of Bertalda. All at once Undine clasped her hands with delight, and turned back toward the stranger, laughing; he, frequently shaking his head, retired with a hasty step and discontented air, and descended into the fountain. Huldbrand now felt perfectly certain that his conjecture was correct, but Bertalda asked:

"What, then, dear Undine, did the master of the fountain wish to say to you?"

Undine secretly laughed within herself, and made answer:

"The day after to-morrow, my dear child, when the anniversary of your name-day\* returns, you shall be informed."

And this was all she could be prevailed upon to disclose. She merely asked Bertalda to dinner on the appointed day, and requested her to invite her foster-parents; and soon afterward they separated.

"Kùhleborn?" said Huldbrand to his lovely wife, with an inward shudder, when they had taken leave of Bertalda, and were now going home through the darkening streets.

"Yes, it was he," answered Undine, "and he would have wearied me with stupid warnings and forebodings without end. But in the midst of his senseless trash, what was altogether the reverse of his intention, he delighted me with a most wholesome piece of news. If you, my dear lord and husband, wish me to acquaint you with it now, you need only command me, and I will freely and from my heart tell you all without reserve. But would you confer upon your Undine a very, very peculiar pleasure, only wait till the day after to-morrow, and then you too shall have your share of the surprise."

The knight was quite willing to gratify his wife in regard to what she had requested with so beautiful a spirit; and this spirit she discovered yet more, for while she was that night falling asleep, she murmured to herself, with a smile: "How she will rejoice and be astonished at what her master of the fountain has told me,—the dear, happy Bertalda!"

## CHAPTER XI.

THE company were sitting at dinner; Bertalda, adorned with jewels and flowers without number, the presents of her foster-parents and friends, and resembling some goddess of spring, sat beside Undine and Huldbrand at the head of the table. When the sumptuous repast was ended, and the dessert was placed before them, permission was given that the doors should be left open: this was in accordance with the good old custom in Germany, that the common people might enjoy the privilege of seeing the splendour and sharing the festivity of their superiors. Among these spectators the servants carried round cake and wine.

Huldbrand and Bertalda waited with secret impatience for the promised explanation, and never, except when they could not well help it, removed their eyes from Undine. But the beautiful woman still continued silent, and merely smiled to herself with secret and heartfelt satisfaction. All who were made acquainted with the promise she had given, could perceive that she was every moment on the point of revealing a secret, which she felt to be of an exciting nature; and yet, as children sometimes delay fasting their

\* A literary friend, from whose kindness I have derived the best aid in reviving and correcting my version, informs me that this term refers to a German custom of celebrating not only the birth-day, but also the name-day, that is, the day which in the almanac bears the person's Christian name. The old almanacs contained a name for each day in the year, being either the name of a saint or some other remarkable personage in history.

choicest dainties, she still withheld the communication, with a denial, that made it the more desired. Bertalda and Huldbrand partook of the same delightful feeling, while in anxious hope they were expecting the unknown disclosure, which they were to receive from the lips of their friend.

At this moment several of the company pressed Undine to give them a song. This appeared to her to be quite a well-timed request, and, ordering her lute to be brought, she sung the following words:

"Mingling so bright,  
Wild flowers so gay,  
Where high grass so dewy  
Covers the wavy lake's border.

"On the meadow's verdant bloom,  
What glimmers there so white?  
Have wreaths of snowy blossoms,  
Soft-floating, fallen from heaven?

"Ah, see! a tender infant!—  
It plays with flowers unwitting;  
It strives to grasp morn's golden beams.  
O where, sweet stranger, where's your home?

Afar from unknown shores,  
The waves have wafted hither  
This helpless little one.

"Nay, clasp not, tender darling,  
With thy hand the flowers;  
No hand returns the pressure,  
The flowers are strange and mute.

"They clothe themselves in beauty,  
They breathe a rich perfume,

But cannot fold around you  
A mother's loving arms;—  
Far, far away that mother's fond embrace.

"Life's early dawn just opening faint,  
Your eye yet beaming Heaven's own smile,  
So soon your tenderest guardians gone;—  
Severe, poor child, your fate,—  
All, all to you unknown.

"A noble duke has cross'd the mead,  
And near you check'd his steed's career:  
Wonder and pity touch his heart;  
With knowledge high and manners pure  
He rears you,—makes his castle home  
your own.

"How great, how infinite your gain!  
Of all the land you bloom the loveliest,  
Yet, ah! the priceless blessing,  
The bliss of parents' fondness,  
You left on strands unknown."

'That priceless blessing,  
The bliss of parents' fondness,'

it was beyond our power to give you."

"But we must hear, also, what happened to the poor parents," said Undine, as she struck the chords, and sung:

"Through her chambers roams the mother,  
Searching, searching everywhere;  
Seeks and knows not what, with yearning,  
Childless house still finding there.

"Childless house!—O sound of anguish!  
She alone the anguish knows,  
There by day who led her dear one,  
There who rock'd his night-repose.

"Deceit buds again are swelling,  
Sunshine warms again the shore,

Ah, fond mother, cease your searching,  
Comes the loved and lost no more.

"Then when ails of eve are fresh'ning,  
Home the father wends his way;  
While with smiles his voice he's veiling,  
Gushing tears his heart betray.

"Well he knows, within his dwelling  
Still as death he'll find the gloom,  
Only hear the mother moaning,—  
No sweet babe to smile him home."

"O tell me, in the name of God tell me, Undine, where are my parents?" cried the weeping Bertalda. "You certainly know, you must have discovered them, you wonderful woman, for otherwise you would never have thus torn my heart. Can they be already here? May I believe it possible?"

Her eye glanced rapidly over the brilliant company, and rested upon a lady of distinction, who was sitting next to her foster-father.

Then, with an inclination of her head, Undine beckoned toward the door, while her eyes overflowed with the sweetest emotion.

"Where, then, are the poor parents waiting?" she asked, and the old fisherman, diffident and hesitating, advanced with his wife from the crowd of spectators. Swift as the rush of hope within them, they threw a look of inquiry, now at Undine, and now at the beautiful lady, who was said to be their daughter.

"It is she!—it is she, there, before you!" exclaimed the restorer of their child, with the imperfect utterance of rapture, and both the aged parents embraced their recovered daughter, weeping aloud and praising God.

But, shocked and indignant, Bertalda tore herself from their arms. Such a discovery was too severe for her proud spirit to bear, especially at the moment when she had doubtless expected to see her former splendour increased, and when hope was picturing to her nothing less brilliant than a royal canopy and a crown. It seemed to her as if her rival had contrived all this, and with the special view to humble her before Huldbrand and the whole world. She reproached Undine, she abused the old people, and even such offensive words as "deceiver, bribed and perjured impostors," burst from her lips.

The aged wife of the fisherman then said to herself, but in a very low voice: "Ah, my God! what a worthless vixen of a woman she has grown! and yet I feel in my heart that she is my child."

The old fisherman, however, had meanwhile folded his hands, and offered up a silent prayer that she might not be his daughter.

Undine, faint and pale as death, turned from the parents to Bertalda, from Bertalda to the parents; she was suddenly cast down from all that heaven of happiness, of which she had been dreaming, and plunged into an agony of terror and disappointment, of which until now she had never formed even a dream.

"Have you, then, a soul? Can you really have a soul, Bertalda?" she cried again and again to her angry friend, as if with vehement effort she would rouse her from a sudden delirium or some distracting dream of night, and restore her to reason.

But when Bertalda became every moment only more and more enraged, as the disappointed parents began to weep aloud, and the company, with

much warmth of dispute, were espousing opposite sides, she discovered a prompt and admirable presence of mind: she begged for the liberty of speaking in this her husband's dining-hall; and so worthy of praise was her purpose, and so earnest were her expressions and tones, that all around her were in an instant hushed to silence. She then advanced to the upper end of the table, where, both humbled and haughty, Bertalda had seated herself, and, while every eye was fastened upon her, spoke in the following manner:

"My friends, I am grieved to see you appear so dissatisfied and disturbed. This entertainment of mine, which you are interrupting with your heated discussion, I had hoped would prove a satisfaction to you and myself. Ah, my God! I knew nothing of these your heartless maxims, these your unnatural ways of thinking; and never, so long as I live, I fear, shall I become reconciled to them. The disclosure I have made, it seems, is unwelcome to you; it has produced all this excitement and confusion; but I am not to blame for such a result. Believe me, little as you may imagine this to be the case, it is wholly owing to yourselves. One word more, therefore, is all I have to add, but this is one that must be spoken: I have uttered nothing but truth. Of the certainty of the fact I give you the strongest assurance; no other proof can I or will I produce; but this I will affirm in the presence of God. The individual who gave me this information, was the very person who decoyed the infant Bertalda into the water, and who, after thus taking her from her parents, placed her on the green grass of the meadow, where he knew the duke was to pass."

"She is an enchantress," cried Bertalda, "a witch, that has intercourse with evil spirits. She has even now confessed it herself."

"Never!—I deny it," replied Undine, while a whole heaven of innocence and truth beamed from her eyes. "I am no witch; look upon me; see and acknowledge the injustice of her words."

"Then she utters both falsehood and folly," cried Bertalda, "and she is unable to prove that I am the child of these low people. My noble parents, I entreat you to take me from this company, and out of this city, beyond the breath of calumny and abuse. Nothing but detraction meets me here."

But the aged duke, a man of honourable feeling, remained unmoved by her excited state, and his lady remarked:

"We must thoroughly examine the circumstances of this matter. God forbid that we should move a step from this hall before we do so."

Encouraged by this kind word, the aged wife of the fisherman drew near, made a low obeisance to the duchess, and said:

"Exalted and pious lady, you have opened my heart. Permit me to tell you, that if this evil-disposed maiden is my daughter, she has a mark, like a violet, between her shoulders, and another of the same kind on the instep of her left foot. If she will only consent to go out of the hall with me—"

"I will not consent to uncover myself before the peasant woman," interrupted Bertalda, haughtily turning her back upon her.

"But before me you certainly will," replied the duchess, with solemnity. "You will follow me into that room, young woman, and the worthy old lady shall go with us."

The three disappeared, and the rest continued where they were, in the hush of almost unbreathing expectation. In a few minutes the females returned, Bertalda pale as death; and the duchess said:

"Truth must be acknowledged as truth; I therefore declare that our lady hostess has spoken with perfect correctness. Bertalda is the fisherman's daughter; no further proof is required; and this is all of which, on the present occasion, you need to be informed."

The princely pair went out with their adopted daughter; the fisherman, in consequence of a sign from the duke, followed them with his wife. The other guests retired in silence, or but imperfectly suppressing their murmurs, while Undine sunk weeping into the arms of Huldbrand.

## CHAPTER XII.

THE lord of Ringstetten would certainly have been more gratified had the events of this day been different; but even such as they now were, he could by no means look upon them as unwelcome, since his wife had discovered so much discretion, kindness of spirit, and cordial affection.

"If I have given her a soul," he could not help saying to himself, "I have assuredly given her a better one than my own."

And now what chiefly occupied his mind, was to soothe and comfort his weeping wife, and even so early as the morrow to remove her from a place which, after this cross accident, could not fail to be distasteful to her. Yet it is certain that the opinion of the public concerning her was not changed. As something extraordinary had long before been expected of her, the mysterious discovery of Bertalda's parentage had occasioned little or no surprise; and every one who became acquainted with the disclosure of Bertalda's story, and with the violence of her behaviour on that occasion, was only disgusted and set against her. Of this state of things, however, the knight and his lady were as yet ignorant; besides, whether the public condemned Bertalda or herself, the one view of the affair would have been as distressing to Undine as the other; and thus they came to the conclusion, that the wisest course they could take was to leave behind them the walls of the old city with all the speed in their power.

With the earliest beams of morning, a brilliant carriage, for Undine, drove up to the door of the inn; the horses of Huldbrand and his attendants stood near, stamping the pavement, impatient to proceed. The knight was leading his beautiful wife from the door, when a fish-girl came up and met them in the way.

(To be continued.)

## THE PAST AGES.

BY RICHARD MANSQN.

THE PAST AGES! As we repeat the words the pages of history unfold, and the records of times long gone stand openly revealed, and we see the visionary forms of all the great warriors, statesmen, philosophers, and knaves, who strove above their fellows to excel in the great battle of life,—and venerable ones too are seen, who in their day and time bore to a sinning world the messages of its God. Greece and Rome pass on before us,—the soldier, the poet, the orator, are gone! The princely magnificence of Nineveh—its gorgeous halls, its emblematic sculptures, its wide extended palaces—flit mistily before us—are past us—are vanished. Rude tribes are seen, with flocks and herds, the sole occupants of a fertile soil,—those, too, are gone! And still on goes the shadowy panorama—but in vain we look for man, or signs of his all-altering hand. No man! no house! no boat!—all, all untouched,—all, all unseen by aught of human kind!

But must we not stop here? Can our adventurous flight go further? Six thousand years have fled before us—the limit assigned to man's history here—has been attained. What more is there to know? On, press on, and as the antehominal world passes in review, mark how strange, how far surpassing all romance are the marvellous scenes it can show.

See where the gay city of Paris now stands, a deep ocean rolls its foaming waves! What are those we see on shore? Monkeys skipping up and down, tropical birds and monstrous serpents, opossums, squirrels and racoons. The fox and the wolf are there, and animals too of now unseen shape,—the Anoplothere and the Xiphodon, and a strange-looking creature, a sort of link between the tapir and the horse, with but three toes on each foot, and provided with a short proboscis to aid it in its search after food: Palæotherium is its name.

But on we go, and lo! new animals appear before us—a creature some twenty feet long, with legs ten feet in length, and a huge, unwieldy body, and a head like that of an elephant, with strong and powerful proboscis is seen quietly lying on the muddy banks of an inland lake. It slowly stirs its sluggish body, and without exerting itself, plunges into the water and swims off towards a small island. It lands, and see, now you can perceive the use of its two large tusks, curved downwards, as in the walrus. They are two pickaxes, and well does the monster use them in his researches after his vegetable food.

And now again on! The elephant, the deer, the mammoth, the rhinoceros, are seen living in regions now covered with the ice and snow of a Siberian winter; but here comes another strange monster; a dull, heavy-looking brute, as big as a rhinoceros, but with a monstrous head, and it, too, has a proboscis. You see it feeding on the twigs and branches of trees, and walking leisurely along. Mark its head: it has four horns; one pair in front, like those of a cow; and another pair, palmated like those of an elk, placed behind. Such is the Sivatherium of the Sewalik hills. And here we must stop; we have gone through hundreds, through thousands, through millions of years, and yet we have millions to pass through ere we arrive at the first signs of life. How grand a study to produce such knowledge to carry us back so far into the past ages of our world's history!

There is a romance about the science that can achieve such things, that can assure us, nay, more, can prove to us, that for ages upon ages ere man trod this earth, it was the habitation of creatures of gigantic size, and uncouth form, who enjoyed, without fear of man's taking it away, God's blessing—life!

Having travelled back through the epoch of the pachyderms and gigantic mammalia of the tertiary, before us now, in one vast lengthened sheet, extends the ocean of the chalk. No land is near to break the dread monotony. No graceful palm, no sturdy oak, no even rush or lowly grass—all seen—all deep, all rolling, tossing surge. Truly did our noble Byron address it—

"Such as creation's dawn beheld, thou rollest now!"

As it rolls now, so rolled it then, when through its dashing spray nought but the sharp-fanged, slinky reptile paddled—fit company for all the varied swarm of powerful fish that thronged its waters. And mark; there's one—in haste we pass, for ages yet untold loom in the distance. How quick and agile in his motions—swiftly he stems the wave with the strong help of powerful paddles and large vertical tail; his mouth, wide open, seems filled with teeth. Gone is the Mosasaurus, and quickly too the rest. See, there's a fish, one third of which is head; and, oh, what hordes of sharks! but stay, what's this so quietly swimming along, just like a little bag, with animated strings at its mouth? The Mazaripite: the bag is its stomach, and the strings are as many arms expanding in search of prey, and when they have found any, bringing it into the mouth or stomach entrance.

Did you not mark that fish—one bound, one plash, and down it sank like lead; and there, another, and another. What ails them? Ah, look there! See those full eyes, that horrid beak, more like a parrot's than aught else, those powerful arms each studded as it were with sharpened barbed fish-hooks. One moment watch the wily monster, down he sinks, but still his eyes glare up. A fish swims slowly over him—up in an instant, with wide spread tentacles he seizes the unsuspecting prey; deep sink the hooks into the soft belly, and the Bellemnite can at its ease tear off and feed upon its finny victim's flesh.

And here, too, are creatures of forms well-known—we pass the turtle and the crab, the starfish, and sponges in abundance; but still on—and again a change!

Far on the bright horizon, again land comes to view; but still the sea rolls

on and breaks upon the shore, as if it maddly felt a check, and could not rest while it was not overcome. And so it dashes on, and all the while works its own loss, for while it wears away, all that it does wear down goes but to form new bounds, new limits to its empire.

Had man, one solitary man, lived then, would he have ever thought that all the life around him would become extinct—that fishes turned to stone, that sponges changed to flint, and, stranger still, that animals, in so minute that twenty-two thousand in a row would measure but an inch, and turned to chalk, could by any possibility be of utility to any living creature? Assuredly not: and yet, so it is. Flint and chalk are both used in no inconsiderable degree, and from them and their imbedded fossils comes one page of the vast history of the past we are endeavouring to unfold. Cavil against it who may, aloud these fossil bones proclaim the fact, that God's wisdom framed our planet, and caused it to receive its fit inhabitants; at a period so remote that man's poor, puny thought can but wonder at, without understanding its immense antiquity.

And now the sea is past, and the green clothed shore appears, bright with tropical vegetation, and animated with the still strange forms of antehominal monsters. Tall pines and ferns of varied shape, and a dense growth of underwood, are seen clothing the distant scene, and as we pass, the quiet hum of the golden beetle and the quick buzz of the swift dragon-fly exulting in the freedom of life, are borne to our ears by the gentle breeze.

Let us stay a moment at you point, and gaze upon the tranquil scene. How lovely all appears—no quiet—all so undisturbed. Here is the point we are to rest upon. Ah! we have been wrong. Did you not hear that shriek of pain? What was it?

No longer do we gaze upon a tranquil, lovely picture; but on one where life to live has to destroy life, and where the existence of one depends on the death of another. That horrid monster yonder, small though he be, has just devoured the little quadruped that played without fear by that green tree. What jaws the thing has got—sharp-pointed teeth show what it feeds upon. Look at it! after another victim. Away it runs, for in its turn a larger reptile is pursuing it. See, it will be caught. No! How extraordinary a monster! It throws its crocodile-like head back, bends its long neck, and spreading out its wings, upward it goes. Could man have ever thought of aught more horrible than this? Mark its flight: it's off to sea, and now recovered from its fright, down quick it swoops, and carries up—snatched from the deep—a fish. Now down again, you see it swimming on the waves. But its career is near an end. Behind it comes a reptile of huge size and wondrous form. One powerful effort with its paddles, a quick snapping of the jaws, and before the Pterodactyl can be off, it has become the prey of the Plesiosaurus; another monster, approximating to the crocodile, its neck four times as long as its body, its spoon-shaped jaws containing no less than a hundred teeth: its neck swells gradually down until it joins the body, and the body again tapered off until it forms the tail—the whole perhaps some thirty feet in length; and to propel it in the water and probably to assist its locomotion on the land it has four strong paddles, by which it can surprise its living prey. Such is the Plesiosaur.

Turn again to the land. Crash, crash, crash, and the ferns and lowly shrubs are trodden down beneath the feet of some approaching animal, an enormous body elevated some fifteen feet above the ground, and extending some forty feet in length. Supported on powerful legs, appears an enormous body; but though so big, so vast in size, and having such sharp and awful-looking teeth, the creature does not live on flesh, satiates its appetite on no quivering limbs, but nipping off the tender plant, the monstrous-sized Iguanodon can rank itself among the "vegetarians."

But on again: sharks in abundance, more Bellemnites; and see that pretty shell, the Ammonite,—aye, whole fleets of them, and Nautili, too. Examine for a moment the curled up Ammonite. There, now we've caught one. It is just like a cuttle-fish inside a shell. How it rings its cold and slimy tentacula about, and all the rest are gone—frightened at the loss of their companion, they drew their bodies into their shells, and sank for safety to the bottom of the deep. Off, what a splendid shell, "soulstuffed all over with Nature's chisellings!" Let the creature go; that dead shell floating by will satisfy abundantly all our curiosity. You see where the dead animal dwelt, the shell does not seem all hollow; for, but a little way in, there is a shelly partition that stops us, and in it there is a small hole near the top of the shell. Just break it open—ah! it is fashioned inside like some of our own boats, divided into water-tight boxes; these made it float, or rather helped it; but what is the use of the tube running through these chambers? That tube is called the siphuncle, and kept up the vitality of the shell; without which it would have dried and broken off, and thus destroyed the buoyancy of the creature. When it wants to swim it protrudes its body, and the increased surface offered to the water, aided by the chambers, straightway brings it to the surface; and when again it wants to sink, in it goes, and the increased gravity speedily sends it down. As Richardson says:

"The Nautilus and the Ammonite were launched in friendly strife,  
Each sent to float in its tiny boat on the wild wide sea of life.  
And each could swim on the ocean's brim, and when weary its sail could fur,  
And sink to sleep in the great sea deep, in its palace all of pearl."

(To be continued.)

**HUMILITY.**—Humility is a virtue strongly recommended by all, though practised by a very few, and yet it is a subject to which everybody lends a willing ear. The master thinks it good doctrine for his servants, the laity for the clergy, and the clergy for the laity; but certain it is that nothing makes us so acceptable in the sight of the Deity and man, as to rise high by our own exertions, and yet sink low in virtuous humility.

## CAROLINE AND CATHARINA.

(Continued from page 727.)

"In conclusion, gentlemen," he said, "I have to repeat that no one will rejoice more sincerely than we, if the prisoner at the bar shall be able to establish his innocence. But so long as this damning array of evidence remains unexplained, we can hope for no such result."

He sat down; and Clayton rose to open the defence.

"We are not disposed, gentlemen," said he, "to attempt to better our cause by forestalling the testimony; since, after all, your verdict must depend upon what is proven. The plea, as you have heard, is 'Not Guilty'; and the truth of this plea we expect to establish by evidence, and not argument or oratory. We shall certainly not controvert anything said by the counsel for the prosecution, in support of circumstantial evidence; and if, in the course of this trial, we give no example of its force—if we afford no opportunity to the counsel to apply his theory—we will be content to abide a verdict against us."

With this brief and, to both spectators and lawyers, inexplicable address, he sat calmly down—quietly nodding to Thorpe to proceed.

## CHAPTER XXII.

"Let it work—"

For 'tis the sport, to have the engineer  
Hoist with his own petard; and 't shall go hard,  
But I will delve one yard below their mines,  
And blow them at the moon."—SHAKESPEARE.

As Clayton finished his short address and sat down, a close observer might have seen a slight paleness overspread Thorpe's cheek, for a very brief moment; but an effort to command himself was at once successful; he leaned back in his chair and gazed, with the most disengaged air possible, over the dense crowd, now filling every seat. His eye fell upon Cara's face, shown for a moment, as she drew aside her veil to observe what was going forward. A calm, though somewhat cynical smile played around his mouth, and lit up his eyes; but he turned them from her, and seemed to be absorbed in watching the crowd, while his colleague, the State's attorney, called the names of the witnesses.

Major Bryce, John (Colonel "John") Talbot, and Uriah Manning were called, and all sworn together. The two latter were told to sit down, and the first was called to the stand. Up to this time, deep as had been the interest in the case, there had been a low murmuring in the court, which all the efforts of Gillam and his deputies were insufficient to silence; but as the major took the stand, it entirely ceased. Every eye was bent upon him; and, as if he knew it and enjoyed his importance, he erected himself pompously, and looked proudly around upon the crowd. The attorney for the State commenced the examination, while Thorpe still gazed out over the bar.

"I wish you, major," said he, "to tell the jury whether or not you were acquainted with Allen Vernon in May of last year."

"I was, sir," said the major; "he went to Mexico with me."

"Yes," said the attorney; "will you now relate to the jury what conversation took place between you in regard to that trip?"

"I will, sir. It had been suggested to me that Mr. Vernon would make a good clerk in my department in the army; and accordingly I made a proposition to him, which he accepted. There was, however, one difficulty in the way: his father was old, and unable to support himself during his son's absence; and Allen said he would have to borrow the money to support him. I asked him from whom he could borrow it; and on finding he did not know, I suggested the name of Mr. Manning, as one from whom he would probably be able to get it. I asked him, at the same time, what security he would be able to give; and he answered that a mortgage upon his house was the only security in his power. I suggested personal security; he said he knew of no one whom he could ask, but added that my offer (of the clerkship) was so advantageous that nothing should prevent his getting the money."

"He was determined to have the money at any cost, then?" said the attorney.

"He seemed so, sir," said the major, "if I might judge by what he said."

"Well," continued the lawyer, "was this all he said?"

"It was all he said at that time. A short time afterwards he came to me to ask when we would probably leave for the seat of war; and in the course of the conversation, he informed me that he had succeeded in borrowing the money he wanted."

"Did he tell you how he had succeeded?"

"No; I asked him,—but he either did not hear, or thought proper not to notice my question, and I said no more."

"How long was Vernon with you in Mexico?"

"Between seven and eight months," said the major.

"Did you ever recur to this subject?"

"Yes," he replied; "once, and but once: I asked him how he had raised the money to support his father during his absence. He did not appear very communicative—indeed, he seemed averse to talking about it—and replied that a friend had kindly consented to endorse for him."

"Did he tell you who that friend was?"

"He did not; and though I said something equivalent to a question, he made no reply, and soon afterwards left me. I inferred that he did not wish to talk about it, and therefore never recurred to the subject."

"You will be so good, major," said Carlin, blandly, "as to give the jury the benefit of your knowledge only—reserving your inferences for some place where they are admissible."

"I shall tell the truth, sir," said the major, bristling up.

"I would be a heretic to doubt it, major, for a moment," said Carlin; "but still, I insist upon having your knowledge, *only*."

The major did not deign a reply; and the attorney said—

"You may take the witness, gentlemen," with quite an air.

"I understand you to say, major," commenced Carlin, "that it had been suggested to you that Vernon would make a good clerk?"

"I said so, sir," answered the major, with the air of a man over whom ingenuity could gain no advantage.

"Will you be good enough to tell the jury by whom this suggestion was made?"

"It was made by Colonel Thorpe," said the major.

"Tell us now what he said on the occasion."

The State's attorney bounced to his feet and objected to the testimony as irrelevant, and consuming time unnecessarily. Carlin was about to reply, when the court stopped him.

"It is unnecessary to reply, Mr. Carlin," said the judge. "This court cannot undertake to say, at this stage of the inquiry, precisely, what is relevant and what is not: injustice might be done by excluding testimony on this ground, whereas, if it be really irrelevant its admission can do no wrong excepting the consumption of time. And probably this objection would be of no force, since more time must be consumed in arguing and deciding the point, than would be taken up in answering the question."

The attorney sat down in chagrin, and Carlin repeated the question.

"Well," said the major, "I do not recollect all he said. But if my memory serves me, he made the suggestion on the ground that Vernon was a young artist, to whom an opportunity of painting fine scenery might be an advantage. I saw the propriety of the suggestion, and adopted it immediately."

"Major," said Carlin, "try to recollect: did he say nothing about its being convenient to himself, to get Vernon out of the way by some means?"

The jury turned their eyes quickly upon the witness, as did also all who had not been looking at him, and awaited his answer.

"He said nothing of the kind," said the witness; and all eyes were immediately turned from him to Carlin.

"He did not make a confident of you, then?" said the latter.

"Not upon that subject," replied the major.

"I suppose," said Thorpe, rising calmly, and speaking for the first time, "there can be no question about the irrelevancy of this testimony. But since it seems in some way pointed at me—how I cannot conjecture—I shall make no objection to it. It is, however, due to myself to state that the witness is perfectly correct—the suggestion *was* made upon the precise ground stated."

"Go on, Mr. Carlin," said the judge, bowing to Thorpe.

"I have but one more question to ask," said Carlin, after consulting with Clayton. "It is this, major—How long have you known Mr. Vernon, and what has been his character?"

"I have known him from boyhood," said the major, "and until this charge, never heard a word to his disparagement—on the contrary, his character has been, in all relations of life, so far as I know, perfectly irreproachable."

"So is every man's character before he commits his first crime," said Thorpe with a smile, which, like all his smiles, partook largely of the nature of a sneer.

"And so," said Carlin, "is many a man's character after he has committed many crimes."

"True enough," said Thorpe carelessly, and turned away.

"I consider it proven," whispered Carlin to Clayton, "that Thorpe is guilty; for if he had not been, he would have applied my remark to our client."

Clayton nodded, and told the major he could go down. Carlin had gained his point—he had awakened the attention of the jury, and connected Thorpe, in their minds, with the case. This object secured, the amount of direct testimony necessary to establish his defence was greatly diminished. He smiled complacently to himself, and mysteriously at the jury and bystanders. It was evident to all that he thought something gained; and to no one was it more evident than to Thorpe himself. He evinced his consciousness of the fact, by throwing off the listlessness which he had put on, and assuming the initiative in examining the next witness called to the stand. The light of his eyes became deeper, and the lines of his face harder; while his voice, bereft of its usual music, sounded cold and stern. He was evidently nerved for a struggle; and when he drew his chair forward, the State's attorney instinctively gave way, as to one who had a right to take precedence of him. This change took place while they were awaiting the slow and feeble movements of the senior Manning, who was the next witness. Vernon had seen him but once since the day on which he announced to him the death of his son; and so great was the change in his appearance, that he could scarcely recognize him. His form was bent low as if with age, and his wan, wasted face was cadaverous in the extreme. His step was infirm and tottering; and when he spoke, his voice was thin, low, and broken. The court directed a chair to be handed him; and when he sat down, it seemed to be with an effort patiently to endure great pain.

"Mr. Manning," said Thorpe in his now hard tones, "are you acquainted with Allen Vernon, the prisoner here?"

The old man turned his shaking head towards the place where Allen sat, and bowed in affirmation.

"Be so good as to relate to the jury where, when, and how you became acquainted with him."

The old man hesitated a moment, as if to recall a wandering memory, and then answered:

"Mrs. Bryce bids me say, that the Major will not be at home for several hours; but if you will return at four o'clock you may probably find him."

"I think it was in the month of May in last year, that I first saw him. He came one day to my counting-room, and applied to me to borrow a thousand dollars. He offered me real estate security—a mortgage, I think, upon a house on Franklin-street—but I refused to lend upon this security, and he went away. He, however, asked me before he left me, what kind of security I would take, and whether John Talbot would do? I answered yes, and he then left me. Afterwards he returned with a note signed by himself, with Talbot's name as surety, for one thousand dollars."

"Is that it?" said Thorpe, holding up the paper.

The old man took it, and examined it.

"It is, sir," he replied, at length. "I forgot to mention that I wrote the note at Vernon's request, at his first visit; and when he returned with it signed, as I said, I paid him the money on it, and took the note. I held it for several months without discovering the forgery; and indeed I do not know now whether the signature is not genuine."

"We will prove that by another witness," said Thorpe. "Gentlemen, you may examine Mr. Manning."

"When and where did you next see Mr. Vernon?" asked Carlin.

"On the second of April last—I remember the date, for I closed my office the same day," said the witness. "He came into my counting-room to announce to me the news of the death of my son, who was killed in Mexico."

"Have you heard that news from any one else?"

"Yes; from Colonel Thorpe. He told me how it happened the same day on which Mr. Vernon told me he was dead."

"What did he tell you?" asked Carlin, after consultation.

"Mr. Carlin," said the judge, "that question seems to me very wide of this inquiry."

"I beg the indulgence of the court," said Carlin, rising; "I would not have put the question now, had I not understood the counsel for the prosecution to waive all objections as to relevancy in questions connected with himself. We think we can show a conspiracy to procure our client's conviction; and it unfortunately happens that this is the only way to approach it."

"I have no objection to the question," said Thorpe, smiling. It was evident, however, that he was tortured almost beyond endurance. He set his teeth hard, his lips grew ashy pale, and his eye smaller and darker, as Carlin repeated the question.

"He said," answered Manning, "that my son had left the camp at Agua Nueva in company with Mr. Vernon; and that, when the latter returned to the camp, he reported that Hugh had been killed in endeavouring to reach it with him. But he said that he had afterwards given a different account of my son's death—so that, Vernon being the only witness, and contradicting himself, it was hard to tell what the truth was, or whether, in fact, the Mexicans had any agency in his murder."

"You understood him to insinuate, then," said Carlin, "that Vernon had himself compassed your son's death?"

"He did not say so," said Manning, "but I understood him to mean something of the kind."

"Did he give you any reason why Vernon should wish to put Hugh out of the way?"

"Yes, sir; he said Hugh was probably a witness in some way against him in this case."

"In some way, you say: did he specify how?"

"He said that Hugh had been in the house at work, on the same day on which the forgery was committed, and must have known something of it; which had no doubt induced Vernon to put him out of the way."

"Had you then told Thorpe, or any one else, that Hugh was with Vernon on that day?"

"No, sir," said Manning; "but I supposed Thorpe knew it from Colonel Talbot."

"We will see about that hereafter," said Carlin. "Tell the jury now, if you please, how your son came to be there on that day."

"Mr. Vernon employed him to put up some sort of rack, and he was then at work doing so. When Mr. Vernon came in with the note, Hugh was with him. I know that he had just come from Vernon's, because he brought his tools in with him—the same he had taken away with the rack."

"I think you told me the other day," said Carlin, "that you had the means of verifying the precise time when Vernon got the money."

"I have, sir; it is my practice—or was when I made a loan of money—to put down in my book the precise hour at which each note became due. I generally, also, noted it upon the margin of the note. I did this after an expensive lawsuit in which I was once involved, in consequence of a dispute as to the time of the day when a note was due."

Every lawyer pricked up his ears; and the younger ones looked out upon the wondering crowd with a smile of superior knowledge, whispering each to his neighbour; "That was under the old statute of '18."

"Let me see that note," said Carlin. "I find here, 'Due fifteen minutes after eleven, A.M., May 16, 1847,' is that the time?"

"It is, sir. You told me to bring my book, and (taking up a calf-bound ledger) here is the same entry."

"We wish the jury to note this point particularly," said Carlin; and the jury all leaned forward, as if to give greater attention, though each already understood it perfectly.

"That's a good symptom, at all events," whispered Carlin.

"Now," he continued, aloud, "tell us how you happened to discover the forgery before the maturity of the note?"

"Colonel Talbot came to my house," replied Manning, "and asked me if I had a note for one thousand dollars signed by Mr. Vernon as principal, and by himself as security. I replied that I had, and supposing he had come

to take it up, I took the note out and showed it to him. He immediately pronounced it a forgery; and said the first he had known of its existence was through a letter he had that morning received from Mexico."

"Did he tell you from whom that letter came?" asked Carlin.

"He did not; but I inferred from the conversation—"

"Stop!" thundered Thorpe, in a voice quivering with passion. "Tell only what passed, and leave the inference for the jury!"

"Ah!" said Carlin. "The galled jade winces."

Thorpe recovered himself immediately, and rose from his seat.

"If the court please," said he, "I have permitted this course of examination without objection, because I saw there was an effort to be made, in some way, to cast suspicion upon myself. Now in all I have done in the matter, I have been actuated by but one motive—the desire to see justice done to a young man, for whom I had a very high esteem. I therefore desire no concealment; and though the letter now referred to was a private one from myself, as legal adviser, to Colonel Talbot, I hope he will consent that it may be read. Indeed, I demand that such parts of it as refer to this subject shall now be given to the jury."

"This is precisely what we wish," said Carlin, rising; "and our only object is to have suspicion rest where it belongs."

"Where is the letter?" asked the judge.

"At the request of Mr. Clayton," said Colonel Talbot, rising, and stepping forward, "I brought it into court. It is here, dated, 'October 24, 1846.'"

"Read what relates to this matter," said the judge.

"Here is the passage," said Talbot: "He had been speaking of some unfinished business, when he changes the subject, and writes thus: 'I was glad to hear that you had reconsidered your resolution in regard to young Mr. Vernon. You recollect you told me you had refused to sign a note to Uriah Manning with him for one thousand dollars. He is a very deserving young man; and I was therefore pleased to hear, which I did to-day for the first time, that you had changed your mind, and thus enabled him to join this expedition.' This is all there is in the letter on the subject," continued Talbot; "the remainder relates to private business."

"That's enough," said Carlin. "We will now proceed with Mr. Manning. You have heard," he continued to the latter, "that Thorpe says in this letter that he had, on that day, October 24, 1846, learned, for the first time, that Colonel Talbot had signed this note; is that true?"

"It is not, Sir," said Manning: "I told him of it before he went to Mexico. I knew Talbot and the elder Vernon had been a long time enemies; I was therefore surprised to see Talbot's name on the note; and, knowing that Thorpe was familiar with his affairs, I showed him the note and asked an explanation."

"You knew that he was familiar with Talbot's affairs? Did he say anything further?"

"I do not recollect distinctly; but since Mr. Clayton called my attention to it the other day, I think I remember that I said something to him about his interests suffering in consequence of the reconciliation which he had related to me."

"Explain a little more minutely," said Carlin.

"Well," said Manning, after an objection had been made and peremptorily overruled, "I had heard that Thorpe was to be married to Colonel Talbot's daughter; and when I found Talbot endorsing for Vernon, I thought perhaps some new arrangements had been made; and joked Thorpe accordingly."

"What reply did he make?"

"He smiled, and said his interests were in no permanent danger."

Several other questions were asked, with a view of eliciting any facts which fortune might have thrown into the knowledge of the witness. Lawyers treat witnesses as anglers do trout streams; throwing their hooks in for whatever fish may happen to come in their way, always hoping that it may prove of the right species; whipping the waters where there are no fish to catch, and not unfrequently abusing them afterwards—when their angling has been of little avail. Carlin fished Manning to the bottom; not satisfied with his success, and persisting in his cross-examination, until Clayton became uneasy lest he might weaken the force of what he had gained, by leading the jury to think he was not satisfied with his success.

When at last he announced that he was done, every one expected a rigid re-examination by Thorpe. But that gentleman contented himself with asking him to repeat, that this note had been written by himself and given to Vernon—that Vernon had brought it back to him signed with Talbot's name—and that he had paid Vernon the money upon it. This course was well calculated; for when he sent Manning away and calmly called up Talbot, every one felt that Vernon's chance of acquittal was but slight.

Talbot came upon the stand with evident reluctance; but whether it was because the cross-examination of Manning had shaken his convictions, or for some other reason, Carlin's ingenuity was not acute enough to divine. He gave his testimony in the most straightforward manner—telling the story simply and plainly, with no indication of bias or desire to convict or acquit. He was too honest to colour the truth wilfully against any one; and all who were acquainted with him knew that he was not likely to be prejudiced in Vernon's favour. It is unnecessary to do more than recapitulate the outline. He related the conversation in which Allen had asked him to endorse the note—his taking it under advisement, concluding not to "break a business rule," as he expressed it—his leaving the note at Allen's house, as the reader knows, and the manner in which the note had next come to his hands. From what had passed on the examination of Manning, Thorpe knew it was necessary to be cautious. He therefore contented himself with bringing distinctly before the jury the facts above-stated, and turned him over to

Carlin. A consultation of several minutes ensued, before the latter spoke, but when he did so, he rose from his chair, and passing round the little desk before him commenced the cross-examination in a manner which gave some indication of the importance he attached to it.

"Colonel Talbot," said he, "at what hour on the morning of this forgery did you leave home?"

"It was just in time to reach the train for L—," said he. "I had barely time to get a ticket and take my seat. I think it must have been a little before ten o'clock—the cars start at a quarter-past ten—at least, they did then."

"You must have been on the road then twenty minutes."

"About that length of time; and, adding ten minutes for my detention at Vernon's house, brings me to the time stated."

"Do you recollect the terms of the note you left for Vernon?"

"Not precisely," said Talbot: "I have already stated its substance."

"Is that the same?" he asked, handing Talbot a paper.

"It is, sir, the very same!" he exclaimed. "I left it on the table in the south-eastern corner of the room!"

"Read it," said Thorpe; "it is sufficiently authenticated by the source from whence it comes."

"Do you think so?" asked Carlin, meaningly. "But stop, Colonel Talbot; we are not ready to give it to the jury yet. You have forgotten one circumstance," he continued, handing the paper to Clayton. "Who was in that room when you wrote that note?"

"A young man whom I did not know—I afterwards found he was the son of Mr. Manning."

"Have you ever told any one he was present until now?"

"Nobody but Colonel Thorpe."

"When did you first tell him?"

"On the day after the death of the elder Mr. Vernon. I remember his announcing that event introduced the subject."

"Are you quite sure that you had never mentioned it before?"

"I am. I was unwilling to do anything to cast a suspicion on any one; and, but for this prosecution, I would have been still silent."

"Do you recollect the date of Vernon's death?"

"I have it in my pocket-book, I think."

Thorpe sprang to his feet. "I have suffered this to go on as long as patience can be expected to go," said he, in a deep, stern tone. "I know my rights, and intend to insist upon them. I object to allowing the witness to read anything. Let him speak from memory."

Carlin was about to speak, but the judge interposed. "The witness may refresh his memory," said he, "by looking at any note or memorandum made at the time."

"He died on the fourth, and was buried on the sixth of April," said Talbot, after examining the book.

"Then you first told Thorpe of young Manning on the seventh?"

"Either on the sixth or seventh—certainly not before."

A movement among the jury showed the effect of this answer. Carlin waited a few moments to allow the impression to be felt, and then proceeded as before—

"Were you ever in Vernon's house before that day?"

"No, sir; and have never been there since."

"We wish the jury particularly to observe this answer," said Carlin, "as upon this point depends much of our defence." The jury again manifested their attention, and he proceeded—

"I am about to ask you a question, colonel, which I should not ask were it not absolutely necessary to the defence of an innocent man. You need not be very particular as to details; but simply answer 'yes' or 'no' to the question, whether or not it has been understood in your family, up to about the time of this forgery, that Colonel Thorpe was to be your son-in-law?"

"I submit to the court," said Thorpe, rising, whether this is allowable?"

"It seems to be a question of some delicacy," said the judge; "and I will, therefore, leave it to the discretion of the witness to answer it or not."

"I would have preferred not to have my private affairs the subject of discussion here; but since the question has been asked, it might lead to misconception if I refused to answer. I say, therefore, such was the fact; and that about the time stated it ceased to be so. I hope I shall not be required to say more."

"Certainly not, colonel," said Carlin; "I will pass to another point. When did Allen Vernon first enter your house?"

"About two months before this forgery," answered the Colonel.

"That will do. Take the witness." And he sat down.

"Colonel Talbot," said Thorpe coolly, "these gentlemen have wandered from the case. Let us return to it. Please repeat to the jury what you said about this note in the first place?"

Talbot recapitulated his former testimony, giving each point with precision, and telling heavily upon jury and crowd. The excitement of the cross-examination was over—the reaction had come, and Thorpe was calmly and skillfully taking advantage of it. When he told the Colonel to sit down, and announced that the prosecution was through with the testimony—although the cross-examination had been damaging to Thorpe—no one could yet see its bearing, and all considered Vernon's case a hopeless one.

(To be continued.)

WITTY sayings are as easily lost as the pearls slipping off a broken string; but a word of kindness is seldom spoken in vain. It is a seed which, even when dropped by chance, springs up a flower.

## THE HOME COMPANION IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS;

BEING

A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.

PRICE ONE PENNY. ALWAYS ON SALE.

### A MIDSUMMER PRESENT FOR A GOOD BOY OR GIRL.

Now ready, price 1s. 6d., beautifully bound, with a fine Steel Plate, and 70 Engravings on Wood.

**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
This beautiful, little Volume is made the more attractive to the Young, by having the Christian Name of the Receiver elegantly impressed in Silver upon the cover. Thus—

### A STORY-BOOK FOR MASTER EDWARD! A STORY-BOOK FOR MISS ELIZABETH!

The following Names may be had to order:

**BOYS**—Charles, Edward, Frederick, George, Henry, James, Joseph, John, Richard, Robert, Thomas, and William.  
**GIRLS**—Anne, Caroline, Charlotte, Fanny, Emma, Eliza, Jane, Laura, Louisa, Lucy, Mary-Anne, and Maria.

For Names not included in the above, order the General Edition,  
**AUNT MARY'S STORIES FOR YOUNG PEOPLE.**  
London: Houlston and Stoneman; and all Booksellers.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### A GOOD REPUTATION.

THE young live much in the future. They are fond of gazing into its unknown depths, and of endeavouring to trace the outline, at least, of the fortunes that await them. With ardent hope, with eager expectation, they anticipate the approach of coming years, confident that they will bring to them naught but unalloyed felicity. But they should allow their anticipations of the future to be controlled by a well-balanced judgment, and moderated by the experience of those who have gone before them.

In looking to the future, there is one important inquiry which the young should make: What do I most desire to become in mature life? What position am I anxious to occupy in society? What is the estimation in which I wish to be held by those within the circle of my acquaintance?

The answer to these inquiries, from the great mass of young people, can well be anticipated. There are none among them who desire to be disrespected and shunned by the wise and good; none who are anxious to be covered with disgrace and infamy; none who seek to be outcasts and vagabonds in the world. The thought that they were doomed to such a condition would fill them with alarm.

Every discreet youth will exclaim, "Nothing would gratify me more than to be honoured and respected, as I advance in years; to move in good society; to have people seek my company, rather than shun it; to be looked up to as an example for others to imitate, and to enjoy the confidence of all around me."

Surely there can be none so blind to the future, so lost to their own good, as to prefer a life of infamy, and its ever-accompanying wretchedness, to respectability, prosperity, and true enjoyment. But how are these to be obtained? Respectability, prosperity, the good opinion of community, do not come simply at our bidding. We cannot reach forth our hands and take them, as we pluck the ripe fruit from the bending branch. Neither will wishing or hoping for them shower their blessings upon us. If we would obtain and enjoy them, we must labour for them—EARN them. They are only secured as the well-merited reward of a pure and useful life.

The first thing to be aimed at by the young should be the establishment of a GOOD CHARACTER. In all their plans, anticipations, and prospects for future years, this should form the grand starting-point—the chief corner-stone. It should be the foundation of every hope and thought of prosperity and happiness in days to come. It is the only basis on which such a hope can mature to full fruition.

A good character, established in the season of youth, becomes a rich and productive moral soil to its possessor. Planted therein, the Tree of Life will spring forth in vigorous growth. Its roots will strike deep and strong in such a soil, and draw thence the utmost vigour and fruitfulness. Its trunk will grow up in majestic proportions; its wide-spreading branches will be clothed with a green, luxuriant foliage; and at length each limb and bough shall bend beneath the rich, golden fruit, ready to drop into the hand.

Beneath its grateful shade you can find rest and repose, when the heat and burden of life come upon you; and of its delicious fruit you can pluck and eat, and obtain refreshment and strength when the soul becomes wearied with labour and care, or the weight of years. Would you behold such a tree? Remember, it grows alone on the soil of a good reputation. Labour to prepare such a soil.

To a young man, a good character is the best capital he can possess to start

with in life. It is much better, and far more to be depended on than gold. Although money may aid in establishing a young man in business, under favourable circumstances, yet without a good character, he cannot succeed. His want of reputation will undermine the best advantages, and failure and ruin will sooner or later, overtake him with unerring certainty.

When it is known that a young man is well-informed, industrious, attentive to business, economical, strictly temperate and moral, a respecter of the Sabbath, the Bible, and religion, he cannot fail to obtain the good opinion and the confidence of the whole community. He will have friends on every hand, who will take pleasure in encouraging and assisting him. Blessed with health, such a youth cannot fail of success and permanent happiness.

But let it be known that a young man is ignorant, or indolent—that he is neglectful of business, or dishonest—that he is given to intemperance, or disposed to visit places of dissipation, or to associate with vicious companions, and what are his prospects? With either one or more of these evil qualifications fixed upon him, he is hedged out of the path of prosperity.

To cover up such characteristics for a great length of time, is a moral impossibility. Remember this, I beg of you. It is beyond the power of mortals to conceal vicious habits and propensities for any long period. And, when once discovered, who will repose confidence in such a youth? Who will trust him, or encourage him, or countenance him? Who will give him employment? Who will confide anything to his oversight? Who will render him assistance in his business affairs, when he is straitened and in need of the aid of friends?

How can the young secure a good character? Its worth, its importance, its blessings we have seen. Now, how can it be obtained? This is a question worthy the serious consideration of every youth. Let me say, in reply, that a good character cannot be inherited. However respectable and worthy parents may be, their children cannot share in that respect, unless they deserve it by their own merits. If they would inherit their parents' good name they must imitate their parents' virtues.

A good character cannot be purchased with gold. The glitter of gold cannot conceal an evil and crabbed disposition, a selfish soul, a corrupt heart, or vile passions and propensities. A good character cannot be obtained by simply wishing for it. It is only by persevering industry and patient toil, contented to take one step at a time, that his wish is gratified, and the good character secured.

Let the young fix their eyes upon this prize of a good reputation—the only end worth striving for in life. Let them studiously avoid evil practices, corrupt associates, and vicious examples. Let them patiently and faithfully lay the foundations of virtuous habits, and practice the lessons of wisdom and the precepts of religion, and in due time the prize shall be theirs. The spotless wreath of a virtuous character shall rest upon their brow, and the commendation, the confidence, and the good-will of man shall accompany them.

### MY BOOK.

Come out, old honest friend—"my book,"  
This winter night, so drear and cold;  
Come out—from out thy dusty nook—  
And talk to me as wont of old:  
My lamp grown dim, I will retrim;  
My fire shall be renewed, I trow;  
For this is meet when two friends greet—  
And such two friends as I and thou.

My life has changed since last we met;  
Thou'lt mind, I think, that summer time  
When, every hour, my heart was set  
To music breathed in thy sweet rhyme:  
My life has changed—yet still a place  
My heart has sacred kept for thee;  
And, of all other friends, no face  
Than thine to-night would welcome be.

Nor is this strange, when I reflect  
How thoughtless late I've been of thee,  
Who always, spite of my neglect,  
Has proved so true a friend to me;  
Who always had a word of cheer,  
Just fitting for my mood of mind,  
And one that I believed sincere,  
As it was ever warm and kind.

Then leave old friend, thy dusty place;  
Come, bring to-night back "other days,"  
And, sitting here, thus face to face,  
Rechant to me thy charming lays;  
For they have power, thou knowest, of old,  
To take from me all fear of ill,  
And, by their tenderness, to mould  
My stubborn passions to their will.

**THE ROSE.**—The rose in all countries, and in all times, has been held as the queen of flowers. The name, as it came to us, is from the Greek *rhodon*; it has relation to the colour, red. The Greeks took their impressions of the rose, and matters of state in the vegetable kingdom, from the Egyptians, Persians, and other nations of Asia. Everywhere it is the type of beauty and love. The Greeks had more taste than imagination, and they found in their beautiful fables the luxuriant growth of Oriental fancy. They have this tradition:—The god of Love made a present to Harpocrates, the god of Silence, of a beautiful rose, the first that had been known, to engage him not to discover any of the secrets of his mother, Venus; and hence it has become a custom to have a rose placed in their rooms of mirth and entertainment, that under the assurance thereof, they might lay aside all restraint, and speak what they pleased. Thus did the rose become a symbol of silence, and *sub rosa*, under the rose, denotes as much as to be out of danger of any disclosure. In India, and other portions of the East, the rose was beauty, and its perfume made it in their imaginations, a match for the sweetest of nature's music; and hence the nightingale was married to the rose. Flowers are delightful to all. The tasteful Athenians, who had a market for the sale of them, were obliged to pass sumptuary laws to restrain the extravagance of purchasers. Such was the passion in every mind in the East for flowers, that from them has been made a universal language of friendship, affection, and love. It is one of no difficult acquirement, and fragments have been diffused far and wide. Roses are ornaments of the altar of Hyman, and vases of lilies are placed upon the grave of youth and innocence.

## ONWARD!

**SCIENTIFIC BALLOON ASCENT.**—The second balloon ascent for scientific purposes, under the direction of the Kew Committee of the Council of the British Association was lately made from Vauxhall, in the Nassau Balloon—Mr. Green being again the driver. The ascent took place at 20 minutes before 5 in the evening; and the observers, Messrs. Welch and Nicklin, remained up nearly three hours—the descent being safely effected about five or six miles from the Boxmoor station, at 35 minutes past 7. The greatest altitude attained was somewhat less than on the former occasion—being 19,000 feet; and the lowest temperature experienced was the same,—viz. 7° of Fahrenheit. The air at this altitude was found to be extremely dry.

**AUSTRALIAN GOLD.**—The *Duchess of Northumberland* has arrived from Sydney with 4,694 ounces of gold, valued at £18,200. The *Nelson* has arrived from Melbourne with 23,000 ounces. The *Derwent* has arrived with 2,684 ounces, valued at £10,786. The *Vanguard* sailed on the 16th of the same month with 15,465 ounces, valued at £61,860; and another is on her way with 85,000 ounces of gold, which, at the price of 80s. per ounce, would be equal to about £340,000. Great difficulty was experienced in obtaining a sufficient number of hands to navigate the vessels to England, and the *Vanguard* had been obliged to pay as much as from £45 to £50 per man for the run home.

**DISCOVERY OF A NEW PLANET.**—Mr. Hind, of Mr. Bishop's Observatory, Regent's-park, has discovered another planet, being the sixth he has detected during the past five years, a sufficient proof that the members of the planetary system must be far more numerous than was formerly supposed. It is in the constellation Aquarius, and will be readily seen with a telescope of very ordinary power. In brightness it equals a star of the ninth magnitude, and appears to have the same yellowish tinge that has been noticed about Pallas, Melpomene, and others of the same group of planets. At 11h. 36m. 38sec., Greenwich mean time (Aug. 22), its right ascension was 22h. 22m. 29.7sec., and its north polar distance 97° 32' 14"; the diurnal motion in right ascension is 53sec. towards the west, and in N. P. D. about 6m. towards the south.

**PROGRESS IN AUSTRALIA.**—Australia, Emigration, and Gold, are still the great topics. The emigration is assuming the dimensions of an Exodus. About forty vessels, varying from 500 to 2,000 tons, have recently sailed to the different provinces of Australia, laden with eager and happy emigrants—and it is to be observed that these forty vessels are the contribution of three ports only—London, Liverpool, and Plymouth—to the noble fleet of merchantmen which now cover the seas between England and Australia engaged in conveying the surplus labour of the Old Country to the vacant fields of the New. From most of the other ports of England and Scotland, an Australian emigration is also in progress. From the Clyde there is already a steady efflux; and we observe that even Sunderland has added an Australian liner to the crowd of rough and dusky colliers which cluster about the outlet of her famous Wear River. It is computed that, taking a series of weeks together, the emigration from the United Kingdom to all parts of Australia amounts to more than 4,000 souls per week. At such a rate, the annual drain upon the home population would be more than 200,000 persons: and it is not improbable that the total emigration of the present year from all parts of the United Kingdom may approach towards half-a-million of souls. This is a prodigious fact;—and it will produce consequences which not the most sagacious person amongst us can foretell, even in their most immediate bearings. We are gratified to observe, that the policy of helping hale and industrious paupers to proceed to Australia by loans or donations from the parish, is receiving some share of the attention which it deserves. Where the applicant for relief is willing to undertake the voyage, and is eligible as an emigrant, a few pounds spent in providing him with a passage is, beyond all question, the best form in which the cause of charity can be served and the competition for wages lessened. Up to the present time gold does not appear to have been discovered in the province of South Australia, the capital of which is Adelaide; but the latest newspapers from that capital are filled with accounts and rejoicings connected with the successful issue of an attempt made by Captain Tolmer, one of the Police Commissioners of the colony, to explore a practicable overland route from Adelaide to the Diggings at Mount Alexander, in the province of Victoria,—that is, the province or district known until last year as the Melbourne, or Port Philip, district. Captain Tolmer appears to have successfully carried through his scheme in February last; and the result is, that a route or line of march well supplied with water, about 338 miles in length, and which Captain Tolmer traversed in eight days, has been opened out between the Port of Adelaide and the Gold regions. On this route a Government escort is to be established for the conveyance of gold, at the rate of 2 per cent. on the value; and Captain Tolmer began the traffic by carrying back with him to Adelaide upwards of a quarter of a ton of the precious metal. A newspaper before us gives a long list of the names of the persons from, and to whom the multitude of small packages making up this quarter of a ton of gold were addressed:—and some very curious speculations are suggested on running the eye over this matter-of-fact invoice. There are no ladies among the consignees,—but nearly all the consignees are of the gentle sex. Husbands, brothers, lovers, appear to have gone to the diggings,—and have dedicated the first-fruits of their good fortune to those near connections of the other sex who would not follow them to the rude scenes of the new Colonies. This is a gratifying fact, and tends to elevate our opinion of the rougher sex.

## POETICAL QUOTATIONS.

## CHARACTER.

The angels sang in heaven when she was born.—*Longfellow*.  
Devoted, anxious, generous, void of guile,  
And with her whole heart's welcome in her smile.—*Mrs. Norton*.

## CHARITY.

Gold is no good, but if it be spend;  
God giveth gold for none other end.—*Spenser's Shepherd's Calendar*.

Charity ever  
Finds in the act reward, and needs no trumpet  
In the receiver.—*Beaumont and Fletcher's Sea Voyage*.

It was sufficient that his wants were known,  
True charity makes others' wants their own.  
*Robert Dauborne's Poor Man's Comfort*.

For true charity  
Though ne'er so secret finds a just reward.—*May's Old Couple*.

For his bounty,  
There was no winter in't; an autumn 'twas  
That grew the more by reaping.—*Shakespeare's Antony and Cleopatra*.

Nothing truly can be term'd mine own  
But what I make mine own by using well.  
Those deeds of charity which we have done  
Shall stay for ever with us; and that wealth  
Which we have so bestow'd, we only keep;  
The other is not ours.—*Middleton*.

'Mongst all your virtues  
I see not charity written, which some call  
The first-born of religion; and I wonder  
I cannot see it in yours. Believe it, sir,  
There is no virtue can be sooner miss'd,  
Or later welcomed; it begins the rest,  
And sets them all in order.—*Ibid*.

Take physic, pomp;  
Expose thyself to feel what wretches feel;  
That thou may'st shake the superflux to them,  
And show the heavens more just.—*Shakespeare's Lear*.

Think not, the good,  
The gentle deeds of mercy thou hast done,  
Shall die forgotten all; the poor, the prisoner,  
The fatherless, the friendless, and the widow,  
Who daily own the bounty of thy hand,  
Shall cry to heav'n, and pull a blessing on thee.—*Rowe's Jane Shore*.

How few, like thee, inquire the wretched out,  
And court the offices of soft humanity!  
Like thee, reserve their raiment for the naked,  
Reach out their bread to feed the crying orphan,  
Or mix the pitying tears with those that weep!—*Ibid*.

Great minds, like heaven, are pleas'd in doing good,  
Though the ungrateful subjects of their favours  
Are barren in return.—*Rowe's Tamerlane*.

The secret pleasure of a generous act  
Is the great mind's great bribe.—*Dryden's Don Sebastian*.

Is there a variance? enter but his door,  
Balk'd are the courts, and contest is no more.  
Despairing quacks with curses left the place,  
And vile attorneys, now an useless race.—*Pope's Moral Essays*.

In faith and hope the world will disagree,  
But all mankind's concern is charity.  
All must be false that thwart this one great end;  
And all of God, that bless mankind, or mend.—*Pope's Essay on Man*.

Self-love thus push'd to social,—to divine,  
Gives thee to make thy neighbour's blessing thine.  
Is this too little for the boundless heart?  
Extend it—let thine enemies have part,  
Grasp the whole worlds of reason, life, and sense,  
In one close system of benevolence:  
Happier as kinder, in what'er degree;  
And height of bliss but height of charity.—*Ibid*.

O, rich man's son! there is a toil,  
That with all others level stands;  
Large charity doth never soil,  
But only whitens soft white hands;—  
This is the best crop for thy lands;  
A heritage it seems to me,  
Worth being rich to hold in fee.—*J. R. Lowell*.

PARLOUR PASTIME.

*A Curious Chemical Experiment, called the Tree of Diana.*

MAKE an amalgam, without heat, of two drams of leaf-silver with one dram of quicksilver. Dissolve this amalgam in two ounces, or a sufficient quantity, of pure nitrous acid of a moderate strength; dilute the solution in about a pound and a half of distilled water, agitate the mixture, and preserve it for use in a glass bottle with a ground stopper. When you would make your tree, put into a phial the quantity of an ounce of the above preparation, and add to it about the size of a pea of an amalgam of gold or silver as soft as butter: the vessel must then be left at rest, and soon afterwards small filaments appear to issue out of the ball of amalgam, which quickly increase, and shoot out branches in the form of shrubs. A metallic arboration, somewhat similar, may be produced in the following manner:—Dissolve a little sugar of lead in water, and fill a phial with the solution. Pass a wire through the cork, and affix to the upper part of the wire a small bit of silver or zinc, in such a manner that it may be immersed in the solution not far from its surface. Set the phial in some place where it may remain undisturbed, and in about twenty-four hours you will perceive the lead beginning to shoot round the wire. This process will continue going on slowly till you have a beautiful metallic tree. If you have a wide-mouthed phial, or glass jar, the experiment may be pleasingly diversified, by arranging the wire in various forms.

REBUSES.

I.  
A venomous insect, if transposed,  
Will name the juice of a tree;  
And if one letter more you add,  
A desile you will see.

II.  
A mechanical power, read backwards, will make  
A feast of which I have no wish to partake.—ANNA S. H.

PRACTICAL PUZZLE.

THE PUZZLE OF THE CROSS.

Cut out of a single piece of paper, and with one cut of the scissors, a PERFECT CROSS, and all the other forms in the annexed engraving:

CONUNDRUMS.

1. Why was Titian's fat daughter Mary, like William Cobbett?
2. Which letter in the alphabet is most useful to a deaf old woman?
3. In which month do ladies talk least?
4. What is the difference between fish alive, and live fish?
5. Why is an old woman who cannot work, like a young woman who can work and does work?
6. Why is a wall-eye like a note of interrogation?
7. Why is an egg underdone like the same overdone?
8. What town in Devonshire will denote a woman making a wry face?
9. Why is a pig like the letter N?
10. Why is Paris like the letter F?
11. What snuff-taker is that, whose box gets the fuller the more snuff he takes?
12. Why is a clergyman unlikely to be an impartial critic on dramatic performance?
13. Where did Noah strike the first nail in the ark?
14. Why is the letter S like a furnace in a battery?
15. How many sides are there to a tree?
16. Why is a lover like a crow?
17. Why is a pig with a curled tail like the ghost in "Hamlet"?
18. Why is a town in Essex like a noisy dog?
19. Where did the Emperor Napoleon stand when he landed at St. Helena?
20. What is that which is too much for one; enough for two; but worse than nothing for three?
21. Which is the greatest Friday in the year?
22. What word is that, which, when a letter is taken from it, makes you sick?
23. Why are Dissenters like vermin?

ARITHMETICAL QUESTIONS.

I.  
If I can plant with seventeen trees  
Twice fourteen rows, in each row three,  
A friend of mine I then shall please,  
Who says he'll give them all to me.

II.  
A country woman carrying eggs to a garrison where she had three guards to pass, sold at the first half the number she had, and half an egg more; at the second, the half of what remained, and half an egg more; and at the third, the half of the remainder and half an egg more. When she arrived at the garrison, she had three dozen still to sell. How was this possible, without breaking any of the eggs?

TRANSFIGURED PLAYING CARDS.

THE SIX OF DIAMONDS.—CUTTING CAPERS.

CHARADES.

I.  
A word which signifies to make additions,  
That which the letter d from f partitions,  
Together with the French for ugly placed,  
Will name a queen whose presence Bushey graced.

II.  
My first at the work-table often is used,  
And for clothing in winter is seldom refused:  
Of my second was told many wonderful tales,  
When fairies and elves flitted by on the gales:  
My whole on a map of Old England you'll see;  
'Tis a small town of Kent, and not far from the sea.

ANSWERS TO THE PASTIME OF LAST EVENING.

Page 783.

PICTORIAL CHARADE.—CAR PET.

PRACTICAL PUZZLE:

See now the four lines. "Tally-ho!"  
We've touch'd the dogs, and away they go!

ENIGMA:

The sun's bright rays pour'd down on  
Rome's campaign, (1)  
And saw Queen Mary by her sister  
slain. (2)  
The sun looks down on every faithful  
friend, (3)  
And of most battles sees the various  
end. (4)  
Its rays were "quite eclipsed" when Zion  
blazed, (5)  
Six centuries ago. On wretched Poles,  
amazed, (6)  
And many famous men, (7) its rays looked  
down,  
Smiling on freedom's signs, and science's  
crown. (8)  
Its beams beheld the prisoner doom'd, but  
yet, (9)  
They fell not where the hapless Edward  
slept. (10)  
Peter, Caractacus, and many more, (11)  
Met death in daylight, as they did of  
yore. (12)  
Peruvians worship still the "greater  
light," (13)  
Which well assists each cockney trades-  
man's sight. (14)

Artists on sun-beams date. (15) But a  
dark midnight  
Did Paul and Mahomet effect their  
flight. (16)  
On Austrian plains Napoleon bless'd the  
sun, (17)  
As Joshua on Gibeon had also done. (18)  
"The night-blowing carous," a splendid  
sower. (19)  
Blooms after twilight, in some midnight  
hour. (20)  
Short winter's days. (21) But the patient  
sun  
Delights in morning fêtes, and sees stern  
justice done. (22)  
By daylight did Penelope her weaving  
do. (23)  
At night the whole day's work she'd  
undo. (24)  
Happy are men, bless'd by the sun's warm  
rays, (25)  
Yet know not when that when that sun  
will end his days. (26)  
Its glories light will not in heaven be  
known. (27)  
For God hath promised us a brighter  
His own. (28)

## OUR CORNER CUPBOARD!

If necessity is the mother of invention, who is the father?

Nothing is so dangerous as to pretend to be in love with a woman—the reality is sure to follow.

When a man is a little pale, thoughts of kicking the bucket naturally suggest themselves.

How many fine hats serve as a cover for worthless heads, and how many painted shirt-bosoms cover a hollow cavern where a heart should be lodged!

A dog with a wooden leg was seen lately in St. Charles-street, New Orleans, getting along quite comfortably.

A lady meeting a girl who had lately left her service, inquired, "Well, Lucy, where do you live now?" "Please ma'am, I don't live now, I'm married," replied the girl.

Mrs. Grumphy thinks that there are now so many books, that the people need not take the trouble to think at all, as they can find all they want to say in the books.

When a Kentucky judge, some years since, was asked by an attorney, upon some strange ruling, "Is that law, your honour?" he replied, "If the court understand herself, and she think she do, it are!"

An Irish lad, having been asked if the man who had just flogged him was his own father, replied, "Yes, sure enough, he's the parent iv me; but he trades me as if I was his son by another father and mother!"

Poetry permits her votaries to indulge in many metaphorical ideas, but the latest one we have met is positively the most original. Hear!

"With eye of fire, majestic he rose,  
And spoke divinely through his double-barrell'd nose."

A person asking Diogenes what was the best dinner-hour, was answered "Any hour." "Nay," said the man, "any hour will not suit rich and poor too." "But it will, though," retorted the philosopher; "a rich man can dine any hour that he likes; but a poor man, any hour that he can."

PRINTING versus PUBLISHING.—A young lady explained to a printer the other day the distinction between printing and publishing; and at the conclusion of her remarks, by way of illustration, she said, "You may print a kiss upon my cheek, but you must not publish it."

"Here's your money, dolt. Now, you intolerable jackass, tell me why your soundreilly master wrote me eighteen letters about that contemptible sum?" said an exasperated debtor. "I'm sure, sir, I can't tell, sir; but if you'll excuse me, sir, I think it were because seventeen letters didn't fetch the cheese!"

A hen-pecked husband, whose wife must have been an exceedingly "emancipated" female, and splendidly qualified to lecture upon the "woman's rights" question, wrote the following epitaph after her demise:

"Sacred to the memory of Mrs. Betsey Rhett,  
Who was a whole team and horse to let!"

SCENE ON BOARD AN ATLANTIC STEAMER.—"Can I do anything for you in Europe, Mr. Smith?" "Yes—send me an elephant." "By mail?" "Yes—but if males are scarce, a female will do." "Shall I put it in a box, or do it up in a piece of paper?" "Why, as you would not think of sending an elephant without his trunk, suppose you put the elephant into the trunk!"

It was always considered a great affair for a youth to teach his grandmother how to suck eggs. This is the way it was done by one promising sprout:—"You see, grandma, we perforate an aperture in the apex, and a corresponding aperture in the base, and by applying the egg to the lips and forcibly inhaling the breath, the shell is entirely discharged of its contents." "Bless my soul!" exclaimed the old lady, "what wonderful improvements they do make! Now, in my younger days, they just made a hole in both ends, and sucked."

DEFINITION OF A HUSBAND.—The English language is a copious one. If we had not been previously aware of the fact, it would have been made evident to our understanding by reading the following paragraph in a Scotch paper:—"What is a husband? Hear a lady's definition. 'He is,' said she, 'a snarling, crusty, sullen, testy froward, cross, gruffy, moody, crabbed, snappish, tart, splenetic, surly, dry, brutish, fierce, morose, waspish, currish, boorish, fretful, peevish, huffish, sulky, towzily, fractious, rugged, blustering, capitious, ill-natured, rusty, churlish, growling, maundering, upish, grating, frumpish, humorsome, envious dog in a manger, who neither eats himself nor lets others eat.'"

GOOD.—In company, an English lady, half jocularly of course, attributed a very polite readiness for wine to the fair daughters of Erin. "I believe that in Ireland," she observed, "it is quite customary for a lady, if she only catches the eye of a gentleman earnestly directed to her at the dinner-table, to say, 'Port, if you please.' Promptitude is the order of the day." "Yes," replied the Irish lady, not over-pleased with the insinuation, and determined to repay it with interest, "and the promptitude takes another direction in your country, madam." "How do you mean?" "Why, when an English lady finds a gentleman's eye upon her at the table, I understand she averts her countenance, and blushing, says in her gentlest tones, 'You must ask papa!'"

## OUR MEMORANDUM BOOK!

BLUE DRESSES.—The beautiful ultramarine blue prints (cotton) which have been so much worn, is fixed by an ingenious process, that may be thus briefly described. The blue is mixed with white of egg, which, in the raw state, is perfectly soluble in water; it is then put into the steam-chest in the usual way, when the white of egg is, so to speak, boiled, and being then insoluble in water, the colour is fixed. The most beautiful goods exhibiting the greatest variety of design and colours, are obtained by this process of printing with steam colours, and subsequently with blocks, in the manner of block-printing.—*Art Journal*.

THE HOUSEHOLD OF SYMPATHY.—Happy, thrice happy, the families in whose narrow circle no heart can grieve or rejoice alone—no glance, no smile can be unreturned—and where friends say to each other daily, with notions rather than words,—"Thy joys, thy happiness, are mine too." Beautiful is the peaceful, the quiet home, which protectingly encloses the weary pilgrim of earth, which collects around the friendly blazing hearth—the old man, leaning on the staff, the strong middle-aged man, the loving wife, and happy children, who dance and sport around in their blessed earthly heaven, and who finish a day passed in innocence with grateful prayers upon their smiling lips.

INFLUENCE OF THE MOON UPON THE WEATHER.—A Paris astronomer has published the results of twenty years' observations upon the influence of the moon upon the weather. From the new moon to the first quarter it rained (during the period of twenty years embraced in the calculations) 764 days; from the first quarter to the full moon it rained 845 days; from the full moon to the last quarter it rained 761 days; and from the last quarter to the new moon it rained 696 days. So that during the moon's increase there were 1,609 rainy days, and during her decrease only 1,457—a difference of 152 days. This difference is more likely to have been accidental than the result of any natural cause, and the conclusion which we derive from the statement is, that the moon has no influence upon the weather.

FREQUENT DRINKING.—Labourers in the fields, in hot weather, who are always drinking and yet always dry, would do well to try Major Denham's plan, instead of pouring down their throats such quantities of beer and cyder, the money expended in which would obtain for them a nourishing meal of beef or mutton. For health and strength, in regard to drink, the half is better than the whole. Frequent drinking after the sun has risen, should always be avoided; it causes the same sickness, drooping, and thirst in the animal, that may be observed in the vegetable kingdom. Plants may be completely saturated with water at night, and will preserve their freshness through the whole of the following day, though exposed to the sun; but if slightly watered in the morning, how different is their appearance! So it is with man. During the whole of our desert travelling, on going to rest, I always drank freely, seldom venturing to put the cup again to my lips till the following night; yet I suffered less from the heat and thirst than my companions, who usually drank during the day.

"DARE forsake what you deem wrong;

Dare to walk in wisdom's way;

Dare to give where gifts belong;

Dare God's precepts to obey.

"Do what conscience says is right;

Do what reason says is best;

Do with willing mind and heart;

Do your duty, and be blest."

CLIMATE OF ENGLAND.—The main temperature of England may be taken as follows:—in the month of January, 47 degrees of Fahrenheit's thermometer; and April, 47; in July, 69; and in October 46 degrees. The average temperature of one year with another is found not to vary more than 4½ degrees. The heat of London is about 2 degrees greater than that of the surrounding country; and there are places in Devonshire, Cornwall, and other parts of the south coast, where the heat is as much as seven degrees above the average. Penzance is believed to be the place least visited by the cold. The largest proportion of rain falls in the north west of England, particularly in Westmoreland and Lancashire, owing to the neighbourhood of those counties to the sea, and the height of their mountains, which attract the clouds. The quantity of rain there is often double of what falls elsewhere: but the mean quantity of rain falling throughout England may be taken at 1,483 inches in January; 1,786 inches in April; 2,516 inches in July; and 2,078 inches in October.

THE MORNING AIR.—There is something in the morning air that, while it defies the penetration of our proud and shallow philosophy, adds brightness to the blood, freshness to life, and vigour to the whole frame—the freshness of the lip, by the way, is, according to Dr. Marshall Hall, one of the surest marks of health. If ye would be well, therefore—if ye would have your heart dancing gladly, like the April breeze, and your blood flowing like an April brook—up with the lark—"the merry lark," as Shakespeare calls it, which is "the ploughman's clock," to warn him of the dawn; up and breakfast on the morning air—fresh with the odour of budding flowers and all the fragrance of the maiden spring;—up from your nerve-destroying down bed, and from the foul air, pent within your close drawn curtains, and, with the sun, "walk o'er the dew of yon high eastern hills." But we must defend the morning air from the aspersions of those who sit in their clove, off-settles, and talk of the chilling dew and the unwholesome damps of the dawn. We have all the facts in our favour that the fresh of the morning is uniformly wholesome; and, having the facts, we pitch such shallow philosophy to fools who have nothing else for a foot-ball.

### Editor's Note-Book.

**DOMESTIC HINTS:—No. 22.**  
**Preserving Fruit.**—The grand secret of preserving is to deprive the fruit of its water of vegetation in the shortest time possible; for which purpose the fruit ought to be gathered just at the point of proper maturity. An ingenious French writer considers fruit of all kinds as having four distinct periods of maturity—the maturity of vegetation, of honeyfication, of expectation, and of coction. The first of these he considers as the period when, having gone through the various vegetable processes up to the ripening, it appears ready to drop spontaneously. This, however, is a period which arrives sooner in the warm climate of France than in the colder orchards of England; but its absolute presence may be ascertained by the general falling out of the rind, by the bloom, by the smell, and by the facility with which it may be plucked from the branch. But even in France, as generally practised in England, this period may be hastened, either by cutting circularly through the outer rind at the foot of the branch, so as to prevent the return of the sap, or by bending the branch to a horizontal position on an espalier, which nearly answers the same purpose. The second period, or that of honeyfication, consists in the ripeness and flavour which fruits of all kinds acquire if plucked a few days before arriving at their first maturity, and preserved under a proper degree of temperature. Apples may acquire or arrive at this second degree of maturity upon the tree, but it too often happens that the flavour of the fruit is thus lost, for fruit over ripe is always found to have parted with a portion of its flavour. The third stage, or of expectation, as the theorist quaintly terms it, is that which is acquired by pulpy fruits, which, though sufficiently ripe to drop off the tree are yet even then hard and sour. This is the case with several kinds both of apples and pears, not to mention other fruits, which always improve after keeping in the confectionery,—but with respect to the medlar and the quince this maturity of expectation is absolutely necessary. The fourth degree of maturity, or of coction, is completely artificial, and is nothing more nor less than the change produced upon fruit by the aid of culinary heat. We have already pointed out the first object necessary in the preservation of fruit, its maturity of vegetation; and we may apply the same principle to flowers or leaves which may be gathered for use. The flowers ought to be gathered a day or two before the petals are ready to drop off spontaneously on the setting of the fruit; and the leaves must be plucked before the season has begun to rob them of their vegetable juices. The degree of heat necessary for the purpose of drying must next be considered, as it differs considerably with respect to different substances. Flowers or aromatic plants require the smallest increase of heat beyond the temperature of the season, provided that season be genial: something more for rinds or roots, and a greater heat for fruits; but this heat must not be carried to excess. Philosophic confectioners may avail themselves of the thermometer; but practice forms the best guide in this case, and therefore we shall say, without speaking of degrees of Fahrenheit or Reaumur, that if the necessary heat for flowers is one, that for rinds or roots must be one and a quarter, that for fruits one and three quarters, or nearly double of what one may be above the freezing point.

**LOVE OF BURIAL PLACES.**—E. R.—The feeling is no doubt poetical, as may be proved from the many celebrated men who have signalled their love of gardens and shrubberies, by causing themselves to be buried in them. Flaubert was interred in the groves of Académie; Sir William Temple gave orders for his heart to be enclosed in a silver casket, and then placed under a sun-dial opposite his library window. Rousseau was buried in the Island of Poplars, in the garden of Ermenonville; Horne Tooke was buried in his own garden; Bismarck often walked to a fountain in the Island of St. Helena, and said to his confidential companions, "If it is destined that I die on this rock, let me be buried in this place," pointing to some willows near the fountain he so frequently visited.

**EATING.**—E. B.—Every animal eats as much as it can procure, and as much as it can hold. A cow eats but to sleep, and sleeps but to eat; and content with eating all day long, "twice it lays the table," and eats its dinner over again. A whale swallows ten millions of living shrimps at a draught; a nursing canary-bird eats its own bulk in a day; and a caterpillar eats five hundred times its weight before it lies down to rise a butterfly. The mouse and the maggot eat the very world in which they live, they pebble and build in their own roast beef; and the hyena, for want of better, eats himself. Yet a maggot has not the gout, and a whale is not subject to sciatitis. Nor does Captain Lyon inform us that an Esquimaux is troubled with the tooth-ache, dyspepsia, or hysterics, though he eats ten pounds of seal, and drinks a gallon of oil at a meal, and though his meal lasts as long as his meat. But if eating is to produce diseases, which of all the nosology would be absent from the carcass of Captain Cochrane's Siberian friend, who eats 40lbs of meat, with 20lbs. of rice porridge at a sitting?—Go to!—this will answer you.

**EMPIRICISM.**—N. F.—We cannot say, but as you state it, we think it would be better to have recourse to a quack, if he can cure our disorder, although he cannot explain it, than to a physician, if he can explain our disease but cannot cure it. In a certain consultation of physicians in this kingdom, they all differed about the nature of an intermittent, and all of them were ready to define the disorder. The patient was a king; at length an empiric, who had been called in, thus interposed: "Gentlemen, you all seem to differ about the nature of an intermittent, permit me to explain it, an intermittent, gentlemen, is a disorder which I can cure, and which you cannot."

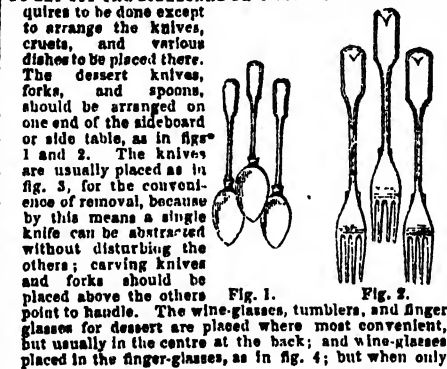

**GURRA PRACHA.**—L. E.—Being impervious to water, it is better to use it in winter than summer for soles, and then the risk is not so great of its detaching itself from the portion of the leather to which it may have adhered. Its applications are almost endless, not only to the useful purposes of life, but even science has, in several instances, laid it under contribution to its advancement. Being one of the most powerful negative electrics, it may be used for insulating positive electric surfaces, or for developing quantities in place of the glass cylinder. A thin sheet of it wrapped round a bottle or wooden cylinder, and turned by hand, will give a copious supply of the fluid for experiment. From the plasticity of its character at a certain heat, it is capable of taking any form, from the minutest ornament of the lady's boudoir up to that most formidable and elastic instrument of destruction known as

live, they pebble and build in their own roast beef; and the hyena, for want of better, eats himself. Yet a maggot has not the gout, and a whale is not subject to sciatitis. Nor does Captain Lyon inform us that an Esquimaux is troubled with the tooth-ache, dyspepsia, or hysterics, though he eats ten pounds of seal, and drinks a gallon of oil at a meal, and though his meal lasts as long as his meat. But if eating is to produce diseases, which of all the nosology would be absent from the carcass of Captain Cochrane's Siberian friend, who eats 40lbs of meat, with 20lbs. of rice porridge at a sitting?—Go to!—this will answer you.

A LIFE PRESERVER.

**TO LAY OUT THE SIDEBOARD ON TRAY.—E. F.**—Little requires to be done except to arrange the knives, cruets, and various dishes to be placed there. The dessert knives, forks, and spoons, should be arranged on one end of the sideboard or side table, as in figs 1 and 2. The knives are usually placed as in fig. 3, for the convenience of removal, because by this means a single knife can be abstracted without disturbing the others; carving knives and forks should be placed above the others, as in fig. 4; but when only

one glass is used, that is placed in the centre, mouth downwards. At very large or fashionable dinners, the finger-glasses are sometimes placed on the dinner table with the plain and coloured wine-glasses in them, and the same reloaded, are placed on again at dessert. The cruet, sauce, &c., are placed at one end, and the vegetable, &c., in the centre front of the sideboard.

**COWARDICE.**—C. U.—That cowardice is indelible which the love of power cannot overcome. In the heat and frenzy of the French revolution, the contentions of place and power never sustained the smallest diminution; appointments and offices were never pursued with more eagerness and intrigue, than when the heads of those who gained them, had they been held on merely by pieces of sticking plaster, could not have sat more loosely on their shoulders. Demagogues sprung up like mushrooms, and the crop seemed to be fertilized by blood; although it repeatedly happened that the guillotine had finished the favourite, before the plasterer had finished the model, and that the original was dead, before the bust was dry.

**COMMUNICATIONS RECEIVED:—P. A.** (Just as water burns potassium, calcium, &c., so it heats all other alkaline bodies, by imparting its oxygen to them; and this union and loss of bulk is the cause of earthquakes, volcanoes, hot-springs, &c.). **M. A.** (No; it is unjust for any employer to occupy a servant's time for which he does not pay). **A. BUILDING** (the Moorish arch is described by centres above the base line). **C. U.** (one-half die before the age of twenty-six, and two-thirds before that of fifty). **L. R.** (worms increase as moles are destroyed, mice as owls are shot, and rats, mice, &c., as foxes are diminished). **A. NATURALIST** (all countries have their peculiar insects; those of China differ from those of Europe and Africa. Those on the east and west sides of the Andes are different). **J. W.** (No; waste and increased density reduces every hundred tons of pig-iron to seventy of wrought-iron). **P. L.** (butter is half or two-thirds sweet). **R. A.** (shells consist of carbonate of lime and animal gluten). **M. A.** (all enamel paintings to be perfect, should be in copper or gold). **C. L.** (the art of sacred interpretation is called *exegesis*). **P. F.** (No; excessive fermentation is always injurious to liquors). **P. C. A.** (the most famous museum in Italy is that in the Vatican). **IMAGINER** (atmospheric tides are certain periodical changes in the atmosphere, similar to those of the ocean, and produced from nearly the same causes; of this description are the equinoctial gales). **A. B. C.** (it will go out otherwise. A constant draught of air is necessary to support a fire). **P. C.** (the beautiful colour of the ruby is caused by its chromic acid). **THOMAS** (*ciclosis* is an Italian word signifying one who dangles about females). **D. A.** (No; animal food is the most required in the decline of life). **E. F.** (fore-shortening is an artistic term used in painting, signifying the art of correctly conveying to the mind the impression of the entire length of an object, when represented as viewed in an oblique or receding position). **C. L.** (we believe English glue is universally allowed to be the best in the world). **E. F.** (No, the Gothic language is not entirely extinct, for fragments of it are found in our own). **JOCKY** (Yes; the temper of a horse may be known by his physiognomy, as well as that of a man, and we would advise you, if you can, always to avoid a quarrel with one that has a frowning look). **P. A. R.** (No; the proper essence of melody lies in its expression, which must be in accordance with the nature of its subject). **E. A.** (the stamp duty on newspapers used to be fourpence; it is now a penny; and the duty on each advertisement used to be three shillings and sixpence, which is now reduced to one shilling and sixpence). **J. W. S.** (It is the wood of the Norway fir that is called white deal). **R. M.** (metal pins were not known in England till the 16th century). **P. C. S.** (it is not all gold that glitters, and although the news from "the diggings" is remarkably dazzling, still there may be a good deal more brass in it, than real gold. No doubt some fortunes have been luckily found, but many more have been lucklessly searched for). **C. R. C.** (the lines are by the elegant Lovelace:—

"Stone walls do not a prison make,  
Nor iron bars a cage;  
Minds innocent and quiet, take  
That for an hermitage.")

**S. R.** (Yes; in some cities of America females are employed as compositors). **P. C.** (it takes three thousand loads of timber to build a 74 gun s.s.). **DAVID** (all winged insects undergo some kind of metamorphosis). **E. L.** (the ignis fatuus is occasioned by an ascent from the ground of phosphuretted hydrogen gas, decomposed from animal and vegetable remains, whose own motions ignite it in the air. It is vulgarly called *Will o' the Wisp*, or *Jack o' Lantern*).

*"And she vanished into the side of the boat."*

## UNDINE: A MINIATURE ROMANCE.

(Continued from page 742.)

"We have no occasion for your fish," said Huldbrand, accosting her; "we are this moment setting out on a journey."

Upon this the fish-girl began to weep bitterly; and then it was that the young couple first perceived it was Bertalda. They immediately returned with her to their apartment, when she informed them, that, owing to her unfeeling and violent conduct of the preceding day, the duke and duchess had been so displeased with her, as entirely to withdraw from her their protection, though not before giving her a generous portion. The fisherman, too, had received a handsome gratuity, and had, the evening before, set out with his wife for his beloved peninsula.

"I would have gone with them," she pursued, "but the old fisherman, who I called my father—"

"He certainly is your father, Bertalda," said Undine, interrupting her. "Pray consider what I tell you: the stranger, whom you took for the master of the water-works, gave me all the particulars. He wished to dissuade me from taking you with me to Castle Ringstetten, and therefore disclosed to me the whole mystery."

"Well, then," continued Bertalda, "my father—if it must needs be so—my father said, 'I will not take you with me until your mind and manners are changed. If you will venture to come to us alone through the ill-omened forest, that shall be a proof of your having some regard for us. But come not to me as a lady; come merely as a fish-girl.'—I am determined, therefore, to do just what he commanded me; for since I am abandoned by all the world, I will live and die in solitude, a poor fish-girl, with parents equally poor. The forest, indeed, appears very terrible to me. Horrible spectres make it their haunt, and I am so timorous. But how can I help it? I have only come here at this early hour, to beg the noble lady of Ringstetten to pardon my unbecoming behaviour of yesterday. Dear madam, I have the fullest persuasion that you meant to do me a kindness, but you were not aware how severely you would wound and injure me; and this was the reason that, in my agony and surprise, so many rash and frantic expressions burst from my lips. Forgive me—ah, forgive me! I am in truth so unhappy already. Only consider what I was but yesterday morning, what I was even at the beginning of your yesterday's festival, and what I am at the present moment!"

Her words now became inarticulate, lost in a passionate flow of tears, while Undine, bitterly weeping with her, fell upon her neck. So powerful was her emotion, that it was a long time before she could utter a word. At length she said:

"Dearest Bertalda, do not despair; you shall still go with us to Ringstetten; all shall remain just as we lately arranged it; only, in speaking to me, pray continue to use the familiar and affectionate terms that we have

been wont to use, and do not pain me with the sound of 'madam' and 'noble lady' any more. Consider, we were changed for each other, when we were children, even then we were united by a like fate, and we will strengthen this union with such close affection as no human power shall dissolve. Only, first of all, you must go with us to Ringstetten. As to the manner in which we shall share our sisterly enjoyments, we will leave that to be talked over after we arrive."

Bertalda looked up to Huldbrand with timid inquiry. He pitied her in her affliction, took her hand, and begged her, with the greatest tenderness, to entrust herself to him and his wife.

"We will send a message to your parents," continued he, "giving them the reason why you have not come;"—and he would have added more about his worthy friends of the peninsula, when, perceiving that Bertalda shrank in distress at the mention of them, he waived the subject. He took her under the arm, lifted her first into the carriage, then Undine, and was soon trotting blithely beside them; so persevering was he, too, in urging forward their driver, that in a short time they had left the limits of the city, and with these a crowd of painful recollections; and now the ladies experienced a satisfaction more and more exquisite, as their carriage rolled on through the picturesque scenes which their progress was continually presenting.

After a journey of some days, they arrived, on a fine evening, at Castle Ringstetten. The young knight being much engaged with the overseers and menials of his establishment, Undine and Bertalda were left alone. Eager for novelty, they took a walk upon the high rampart of the fortress, and were charmed with the delightful landscape, which fertile Suabia spread around them. While they were viewing the scene, a tall man drew near, who greeted them with respectful civility, and who seemed to Bertalda much to resemble the director of the city fountain. Still less was the resemblance to be mistaken, when Undine, indignant at his intrusion, waved him off with an air of menace; while he, shaking his head, retreated with rapid strides, as he had formerly done, then glided among the trees of a neighbouring grove, and disappeared.

"Do not be terrified, Bertalda," said Undine; "the odious monster of the fountain shall do you no harm this time." And then she related to her the particulars of her history, and who she was herself,—how Bertalda had been taken away from the people of the peninsula, and Undine substituted in her place. This relation at first filled the young woman with amazement and alarm; she imagined her friend must be seized with a sudden alienation of mind. But, from the consistency of her story, she became more and more convinced that all was true, it so well agreed with her former adventures, and still more from that inward feeling, with which truth never fails to make itself known to us. She could not but view it as an extraordinary circumstance, that she was herself now living, as it were, in the midst of one of those wild fictions of romance which she had formerly heard related for mere amusement. She gazed upon Undine with awe, but could not avoid feeling a shudder, which seemed to separate her from her friend; and she could not but be extremely astonished when the knight, at their evening repast, showed himself so kind and affectionate towards a being who appeared, after the discoveries just made, more to resemble a phantom of the spirit-world than one of the human race.

### CHAPTER XIII.

THE WRITER of this history, because it touches his own heart, and because he wishes it may equally move the hearts of others, begs you, dear reader, to grant him a single indulgence. Excuse him, if he now passes over a considerable period of time, and gives you only a general account of its events. He is well aware that, perfectly conforming to the rules of art, and step by step, he might delineate the process by which Huldbrand's warmth of attachment for Undine began to decline, and to be transferred to Bertalda; how Bertalda gradually became more and more attached, and met the young man's glance with a glow of love; how they both seemed rather to fear the poor wife, as a being of another species, than to sympathise with her; how Undine wept, and her tears produced remorse in the knight's heart, yet without awakening his former tenderness, so that his treatment of her would discover occasional impulses of kindness, but a cold shuddering would soon drive him from her side, and he would hasten to the society of Bertalda, as a more congenial being of his own race;—all this, the writer is aware, he could describe with the minute touches of truth; and perhaps this is the course that he ought to pursue. But his heart would feel the task to be too melancholy; for, having suffered calamities of this nature, he is impressed with terror even at the remembrance of their shadows.

You have probably experienced a similar feeling yourself, my dear reader, for such is the inevitable allotment of mortal man. Happy are you, if you have rather endured than inflicted this misery, since, in matters of this kind, more blessed is he that receives than he that gives. For in this case, when such remembrances come over the mind, only a soft pensiveness steals into the soul, and perhaps a tender tear trickles down your cheek, while you regret the fading of the flowers, in which you once took a delight so exquisite. But of this no more; we would not linger over the evil, and pierce our hearts with a thousand separate pangs, but just briefly hint the course of events, as I said before.

Poor Undine was extremely distressed, and the other two were far from being happy; Bertalda in particular, whenever she was in the slightest degree opposed in her wishes, attributed the cause to the jealousy and oppression of the injured wife. In consequence of this suspicious temper, she was daily in the habit of discovering a haughty and imperious demeanour, to which Undine submitted in sad and painful self-denial; and such was the

blind delusion of Huldbrand, that he usually supported the impropriety in the most decisive terms.

What disturbed the inmates of the castle still more, was the endless variety of wonderful apparitions which assailed Huldbrand and Bertalda in the vaulted passages of the building, and of which nothing had ever been heard before within the memory of man. The tall white man, in whom Huldbrand but too well recognised Undine's uncle Kühleborn, and Bertalda the mysterious or spectral master of the water-works, often passed before them with threatening aspect and gestures; more especially, however, before Bertalda, so that she had already several times fainted and fallen through terror, and had in consequence frequently thought of quitting the castle. But partly owing to her excessive fondness for Huldbrand, as well as to a reliance on what she termed her innocence, since no declaration of mutual attachment had ever been distinctly made, and partly, also, because she knew not whither to direct her steps, she lingered where she was.

The old fisherman, on receiving the message from the lord of Ringstetten, that Bertalda was a welcome guest in his family, returned answer in some lines almost too illegible to be deciphered, but still the best his advanced life and long disuse of writing permitted him to form.

"I have now become," he wrote, "a poor old widower, for my beloved and faithful wife is dead. But bereaved and disconsolate as I am, sitting solitary in my cottage, I prefer Bertalda's remaining where she is, to her living with me. One thing is all I have to ask, which is this, that she do nothing to hurt my dear Undine, or to make her unhappy. Should she be thus guilty, she must expect, what she will certainly have, the visitation of a father's curse."

The last words of this letter, awful as they were, Bertalda flung to the winds; but the permission to remain from home, which her father had granted her, she remembered, and clung to as a peculiar indulgence, just as we all are wont to do in like circumstances.

One day, a few moments after Huldbrand had ridden out, Undine called together the domestics of the family, and ordered them to bring a large stone, and carefully to cover with it a magnificent fountain that was situated in the middle of the castle court. The servants ventured to hint, as an objection, that it would oblige them to bring their water from the valley below, which was at an inconvenient distance. Undine smiled with an expression of melancholy.

"I am sorry, dear children," replied she, "to increase your labour; I should prefer to bring up the water-vessels myself, but this fountain must indeed be closed. Believe me when I say that it must be done, and that by doing it we only avoid a greater evil,—one that may well be called a calamity."

The domestics were all delighted to gratify their gentle mistress; and making no further inquiry, they seized the enormous stone. While they were raising it in their hands, and were now on the point of adjusting it over the fountain, Bertalda came running to the place, and cried, with an air of command, that they must stop; that the water she used, so improving to her complexion, she was wont to have brought from this fountain, and that she would by no means allow it to be closed.

This time, however, Undine, while she showed her usual gentleness and more than her usual resolution, remained firm to her purpose; she said it belonged to her, as mistress of the house, to direct the regulations of the establishment according to her best judgment, and that she was accountable in this to no one but her lord and husband.

"See, O pray, see!" exclaimed the dissatisfied and indignant Bertalda, "how the beautiful water is curling and curving, winding and waving there, as if disturbed at being shut out from the bright sunshine, and from the cheerful view of the human countenance, for whose mirror it was created."

In truth, the water of the fountain was agitated, and foaming, and hissing in a surprising manner; it seemed as if there were something within possessing life and will, that was struggling to free itself from confinement. But Undine only the more earnestly urged on the accomplishment of her command. This earnestness was scarcely required. The servants of the castle were as happy in obeying their sweet-tempered lady, as in opposing the haughty spirit of Bertalda; and with whatever rudeness the latter might even scold and threaten, still the stone was in a few minutes lying firm over the opening of the fountain. Undine leaned thoughtfully over it, and wrote with her beautiful fingers on the flat surface. She must, however, have had something very acrid and corrosive in her hand; for when she retired, and the domestics went up to examine the stone, they discovered various strange characters upon it, which none of them had seen there before.

When the knight returned home toward evening, Bertalda received him with tears, and complaints of Undine's treatment of her. He threw a severe look at his poor wife, and she cast down her eyes in evident distress. Still she spoke with great firmness:

"My lord and husband, you never reprove even a bond-slave, before you hear his defence, how much less, then, your wedded wife!"

"Speak; what moved you to this singular conduct?" said the knight, with a gloomy countenance.

"I could wish to tell you when we are entirely alone," said Undine, with a sigh.

"You can tell me equally well in the presence of Bertalda," he replied.

"Yes, if you command me," said Undine; "but do not command me. Pray, pray, do not!"

She looked so humble, affectionate, and obedient, that the heart of the knight was touched, and softened, as if it felt the influence of a ray from better times. He kindly took her arm within his, and led her to his apartment, where she spoke as follows:

"You already know something, my beloved lord, of Kühleborn, my evil-

disposed uncle, and have often felt displeasure at meeting him in the passages of this castle. Several times has he terrified Bertalda even to swooning. He does this because he possesses no soul, being a mere elemental mirror of the outward world, while of the world within he can give no reflection. Then, too, he sometimes observes that you are displeased with me—that in my childish weakness I weep at this; and that Bertalda, it may be, is laughing at the same moment. Hence it is that he conceives every sort of wrong and unkindness to exist, and in various ways mixes with our circle unbidden. What do I gain by reproving him, by showing displeasure, and sending him away? He does not believe a word I say. His poor imperfect nature affords him no conception that the vicissitudes and satisfactions of love have so mysterious a resemblance, and are so intimately connected, that no power on earth is able to separate them. Even in the midst of tears, a smile is dawning on the cheek, and smiles call forth tears from their secret recesses."

She looked up at Huldbrand, smiling and weeping, and he again felt within his heart all the magic of his former affection. She perceived it, and pressed him more tenderly to her, while amid tears of joy she went on thus:

"When the disturber of our peace would not be dismissed with words, I was obliged to shut the door upon him; and the only entrance by which he has access to us, is that fountain. His connection with the other water-spirits, here in this region, is cut off by the valleys that border upon us, and his kingdom first commences farther off on the Danube, in whose tributary streams some of his good friends have their abode. For this reason I caused the stone to be placed over the opening of the fountain, and inscribed characters upon it, which baffle all the efforts of my suspicious and passionate uncle, so that he now has no power of intruding either upon you, or me, or Bertalda. Human beings, it is true, notwithstanding the characters I have inscribed there, are able to raise the stone without any extraordinary trouble whatever; there is nothing to prevent them. If, therefore, this be your resolve, remove it according to Bertalda's desire; but she assuredly knows not what she asks. The rude Kühleborn looks with peculiar ill-will upon her; and should much come to pass that he has imperfectly predicted to me, and which is quite likely to happen, without your meaning any evil, —I fear, my husband, that you yourself would be exposed to peril."

Huldbrand felt the generosity of his amiable wife in the depth of his heart, since she had been so active in confining her formidable defender, and even at the very moment she was suffering in consequence of the reproaches of Bertalda. Influenced by this feeling, he pressed her in his arms with the tenderest affection, and said with emotion:

"The stone shall remain unmoved; all remains, and ever shall remain, just as you choose to have it, my dear, very dear Undine!"

At these long-withheld expressions of tenderness, she turned his caresses with lowly delight, and ending what she had to say, observed:

"My dearest husband, since you are so very kind and indulgent to-day, may I venture to ask a favour of you? Pray observe, it is with you as with summer. Even amid its highest splendour, summer puts on the flaming and thundering crown of glorious tempests, in which it strongly resembles a king and god on earth. You, too, are sometimes terrible in your rebukes; your eyes flash lightning, while thunder resounds in your voice; and although this may be quite becoming to you, I in my folly cannot but sometimes weep at it. But never, I entreat you, discover such violence toward me on a river, or even when we are near a piece of water. For if you should, my relations would acquire a right to exercise authority over me. They would tear me from you in their fury with inexorable force, because they would conceive that one of their race was injured; and I should be compelled, as long as I lived, to dwell below in the crystal palaces, and never dare ascend to you again; or should they send me up to you, O God! that would be infinitely more deplorable still. No, no, my beloved husband, let it not come to that, if your poor Undine is dear to you."

He solemnly promised to do as she desired, and, infinitely happy and full of affection, the married pair returned from the apartment. At this very moment Bertalda came with some work-people, whom she had meanwhile ordered to attend her, and said, with a fateful air, which she had assumed of late:

"Well, now the secret consultation is at an end, it is to be hoped the stone may be permitted to come down. Go out, workmen, and execute your business."

The knight, however, highly resenting her impertinence, said, in brief and very decisive terms, "The stone remains where it is;" he reproved Bertalda also for the vehement and undisciplined spirit that she had discovered towards his wife. Whereupon the workmen, smiling with secret satisfaction, withdrew; while Bertalda, pale with rage, hurried to her room.

When the hour of supper came, no Bertalda appeared; they waited for her in vain. They sent for her; but the domestic found her apartments empty, and brought back with him only a sealed billet, addressed to the knight. He opened it in alarm, and read:

"I feel with shame that I am only the daughter of a poor fisherman. That I for one moment forgot this, I will make expiation in the miserable hut of my parents. Farewell, with your beautiful wife!"

Undine was troubled at heart. With passionate emphasis she entreated Huldbrand to hasten after their friend, who had flown, and bring her back with him. Alas! she had no occasion to urge him. His passion for Bertalda again burst forth, with vehemence. He hurried round the castle, inquiring whether any one had seen which way the fair fugitive had gone. He could gain no information, and was already in the court upon his horse, determining to take, at a venture, the road by which he had conducted Bertalda to the castle; when there appeared a shield-boy, who assured him that he had met the lady on the path to the Black Valley. Swift as the impulse of passion, the knight sprang through the gate in the direction pointed out,

without hearing Undine's voice of agony, as she cried after him from the window:

"To the Black Valley? O, not there!—Huldbrand, not there!—or if you will go, for God's sake take me with you!"

But when she perceived that all her calling was of no avail, she ordered her white palfrey to be instantly saddled, and followed the knight, without permitting a single servant to accompany her.

#### CHAPTER XIV.

THE Black Valley lies secluded far among the mountains. What its present name may be, I am unable to say. At the time of which I am speaking, the country people gave it this appellation from the deep obscurity produced by the shadows of lofty trees, more especially by a crowded growth of firs, that covered this region of moor-land. Even the brook, which ascended into it from among the crags, assumed the same dark hue, and exhibited nothing of that cheerful aspect which streams are wont to wear, that have the blue sky immediately over them.

It was now the dusk of evening, and the view between the heights had become extremely wild and gloomy. The knight, in great anxiety, skirted the border of the brook; he was at one time fearful that by delay he should allow the fugitive to advance too far before him; and then, again, in his too eager rapidity, he was afraid he might somewhere overlook and pass by her, should she be desirous of concealing herself from his search. He had in the meantime penetrated pretty far into the valley, and felt assured of soon overtaking the maiden, provided he were pursuing the right track. The fear, indeed, that he might not as yet have gained it, made his heart beat with more and more of anxiety. In the stormy night, which was now impending, and which always hovered more fearfully over this valley, where would the delicate Bertalda shelter herself, should he fail to find her? At last, while these thoughts were darting across his mind, he saw something white glimmer through the branches on the ascent of the mountain. He felt quite certain that the object he discerned was Bertalda's robe, and he directed his course toward it. But his horse refused to go forward; he reared with a fury so uncontrollable, and his master was so unwilling to lose a moment, that (especially as he saw the thickets were altogether impassable on horseback) he dismounted, and, having fastened his snorting steed to an elm, worked his way with caution through the matted underwood. The branches, moistened by the cold drops of the evening dew, smote his forehead and cheeks; thunder muttered remotely on the further side of the mountains; and everything put on so strange and mystic an appearance, that he began to feel a dread of the white figure, which now lay at a short distance from him upon the ground. Still he could see with perfect clearness that it was a female, either asleep or in a swoon, and dressed in long white garments, such as Bertalda had worn the past day. Approaching quite near to her, he made a rustling with the branches, and a ringing with his sword,—but she did not move.

"Bertalda!" he cried, at first low, then louder and louder; yet she heard him not. At last, when he uttered the dear name with an energy yet more powerful, a hollow echo, from the mountain-summits around the valley, returned the deadened sound—"Bertalda!" Still the sleeper continued insensible. He stooped low, with a view to examine her countenance, but the darkness of the valley and the obscurity of twilight would not allow him to distinguish her features. While with agonising uncertainty he was bending near to her, a flash of lightning suddenly shot across the valley. By this stream of light he saw a frightfully distorted visage close to his own, and a hoarse voice reached his ear:

"You enamoured shepherd, give me a kiss!"

Huldbrand sprang upon his feet with a cry of horror, and the hideous figure rose with him.

"Home!" it cried with a deep murmur; "the fiends are abroad. Home! or I have you!" And it stretched toward him its long white arms.

"Malicious Kühleborn," exclaimed the knight with restored energy, "if Kühleborn you are, what business have you here?—what's your will, you goblin?—There, take your kiss!" And in fury he flashed his sword at the form. But the form vanished like vapour; and a rush of water giving the knight a thorough drenching, left him in no doubt with what foe he had been engaged.

"He wishes to frighten me back from my pursuit of Bertalda," said he to himself; "he imagines that I shall be terrified at his senseless enchantments, and resign the poor distressed girl to his power, so that he can wreak his vengeance upon her at will. But, impotent spirit of the flood! he shall find himself mistaken. What the heart of man can do, when it exerts the full force of its will, the strong energy of its noblest powers, of this the feeble enchanter has no comprehension."

He felt the truth of his words, and that, in thus giving utterance to his thoughts, he had inspired his heart with fresh courage. Fortune, too, appeared to be in league with him; for, before reaching his fastened steed, he distinctly heard the voice of Bertalda, where she was now weeping and now moaning not far before him, amid the roar of the thunder and the tempest, which every moment increased. He flew swiftly toward the sound, and found the trembling maiden, just as she was attempting to climb the steep, hoping to escape from the dreadful darkness of this valley. He stepped before her, while he spoke in tones of the most soothing tenderness; and bold and proud as her resolution had so lately been, she now felt nothing but the liveliest gratitude, that the man whom she so passionately loved would rescue her from this frightful solitude, and extending to her his arms of welcome, would still cast a brightness over her existence in their re-union.

at the castle. She followed almost unresisting, but so spent with fatigue, that the knight was glad to accompany and support her to his horse, which he now hastily unfastened from the elm: his intention was to lift the fair wanderer upon him, and then to lead him carefully by the reins through the uncertain shades of this lowland tract.

But, owing to the mad appearance of Kühleborn, the horse had become wholly unmanageable. Rearing and wildly snorting as he was, the knight must have used uncommon effort to mount the beast himself; to place the trembling Bertalda upon him was impossible. They were compelled, therefore, to return home on foot. While with one hand the knight drew the steed after him by the bridle, he supported the tottering Bertalda with the other. She exerted all the strength in her power, in order to escape from this vale of terrors as speedily as possible; but weariness weighed her down like lead, and a universal trembling seized her limbs, partly in consequence of what she had suffered from the extreme harassment with which Kühleborn had pursued her, and in part from her continual fear, arising from the roar of the tempest and thunder amid the mountain forest. At last she slid from the arm of her conductor, and, sinking upon the moss, she said:

"Only let me lie here, my noble lord. I suffer the punishment due to my folly, and I must perish here through faintness and dismay."

"Never, Bertalda, will I leave you," cried Huldbrand, vainly trying to restrain the furious animal he was leading; for the horse was all in a foam, and began to chafe more ungovernably than before, till the knight was glad merely to keep him at such a distance from the exhausted maiden as would secure her from still greater fear and alarm. But hardly had he withdrawn five steps with the frantic steed, when she began to call after him in the most sorrowful accents, fearful that he would actually leave her in this horrible wilderness. He was at a loss what course to take. He would gladly have given the enraged beast his liberty; he would have let him rush away amid the night, and exhaust his fury, had he not shuddered at the thought that, in this narrow defile, his man-shed hoofs might come trampling and thundering over the very spot where Bertalda lay.

During this extreme peril and embarrassment, a feeling of delight shot through him, when he heard the rumbling wheels of a wagon, as it came slowly descending the stony way behind them. He called out for help: answer was returned in the deep voice of a man, bidding them have patience, but promising assistance; and two horses of greyish-white soon after shone through the bushes, and near them their driver, in the white frock of a carter; and next appeared a great sheet of white linen, with which the goods he seemed to be conveying were covered. The whitish greys, in obedience to a shout from their master, stood still. He came up to the knight, and aided him in checking the fury of the foaming charger.

"I know well enough," said he, "what is the matter with the brute. The first time I travelled this way, my horses were just as wilful and headstrong as yours. The reason is, there is a water-spirit haunts this valley, and a wicked wight they say he is, who takes delight in mischief and witcheries of this sort. But I have learned a charm; and if you will let me whisper it in your horse's ear, he will stand just as quiet as my silver greys there."

"Try your luck, then, and help us as quick as possible!" said the impatient knight.

Upon this the wagoner drew down the head of the rearing courser close to his own, and spoke some half-dozen words in his ear. The animal instantly stood as still and subdued as usual, except his quick panting and snoking sweat produced by his recent violence.

Huldbrand had little time to inquire by what means this had been effected. He agreed with the man, that he should take Bertalda in his wagon, where, as he said, a quantity of soft cotton was stowed, and he might in this way convey her to Castle Ringstetten; the knight could accompany them on horseback. But the horse appeared to be too much exhausted to carry his master so far. Seeing this, the man advised him to mount the wagon with Bertalda. The horse could be attached to it behind.

"It is down-hill," said he, "and the load for my greys will therefore be light."

The knight accepted his offer, and entered the wagon with Bertalda; the horse followed patiently after, while the wagoner, sturdy and attentive, walked beside them.

Amid the silence and deeper obscurity of the night, the tempest became more and more remote and hushed; in the comfortable feeling of their security and their commodious passage, a confidential conversation arose between Huldbrand and Bertalda. He reproved her in the most gentle and affectionate terms for her resentful flight; she excused herself with humility and emotion; and from every tone of her voice it was clear, just as a lamp guides a lover amid the secrecy of night to his waiting mistress, that she still cherished her former affection for him. The knight felt the force of what she said far too powerfully to regard the import of her words, and his replies related merely to the impression he received,—to the feeling and not the confession of love.

In the midst of this interchange of murmured feelings, the wagoner suddenly shouted with a startling voice:

"Up, my greys, up with your feet! Hey, my hearts, now together show your spirit! Do it handsomely! remember who you are!"

The knight bent over the side of the wagon, and saw that the horses had stepped into the midst of a foaming stream, and were, indeed, almost swimming, while the wheels of the wagon were rushing round and flashing like mill-wheels, and the teamster had got on before to avoid the swell of the flood.

"What sort of a road is this? It leads into the middle of the stream!" cried Huldbrand to his guide.

"Not at all, sir," returned he with a laugh, "it is just the contrary. The stream is running in the middle of our road. Only look about you, and see how all is overflowed."

The whole valley, in fact, was covered and in commotion, as the waves, suddenly raised and visibly rising, swept over it.

"It is Kühleborn, that devil of a water-spirit, who wishes to drown us!" exclaimed the knight.

"Have you no charm of protection against him, companion?"

"Charm! to be sure I have one," answered the wagoner, "but I cannot, and must not, make use of it before you know who I am."

"Is this a time for riddles?" cried the knight. "The flood is every moment rising higher, and what does it concern me to know who you are?"

"But mayhap it does concern you, though," said the guide, "for I am Kühleborn."

Thus speaking, he thrust his head into the wagon, and laughed with a distorted visage; but the wagon remained a wagon no longer; the greyish-white horses were horses no longer; all was transformed to foam, all sunk into the waves that rushed and hissed around them; while the wagoner himself, rising in the form of a gigantic surge, dragged the vainly-struggling courser under the waters, then rose again huge as a liquid tower, swept over the heads of the floating pair, and was on the point of hurrying them irrecoverably beneath it; when, at that instant, the soft voice of Undine was heard through the uproar,—the moon emerged from the clouds, and by its light Undine became visible on a rising ground of the valley. She rebuked, she threatened the flood below her; the menacing and tower-like billow vanished, muttering and murmuring; the waters gently flowed away under the beams of the moon; while Undine, like a hovering white dove, dipped down from the knoll, seized the knight and Bertalda, and supported them to a green spot of turf on the hillock, where, by her earnest efforts, she soon restored them, and dispelled their terrors. She then assisted Bertalda to mount the white palfrey, on which she had herself been borne to the valley, and thus all three returned homeward to Castle Ringstetten.

## CHAPTER XV.

AFTER this last adventure, they lived at the castle undisturbed and in peaceful enjoyment. The knight was more and more impressed with the heavenly goodness of his wife, which she had so beautifully discovered by her instant pursuit, and by the rescue she had effected in the Black Valley, where the power of Kühleborn again commenced. Undine herself felt that peace and security which the mind never fails to experience, so long as it has the consciousness of pursuing the path of rectitude; and she had this additional comfort, that, in the newly-awakened love and regard of her husband, Hope and Joy were rising upon her with their myriad beams of promise.

Bertalda, on the other hand, showed herself grateful, humble, and timid, without taking to herself any merit for so doing. Whenever Huldbrand or Undine began to explain to her their reason for covering the fountain, or their adventures in the Black Valley, she would earnestly entreat them to spare her the recital, since the fountain had occasioned her too much shame, and the Black Valley too much terror, to be made topics of conversation. With respect to these, therefore, she learned nothing farther from either of them; and why was it necessary that she should be informed? Peace and Joy had evidently taken up their abode at Castle Ringstetten. They enjoyed their present blessings in perfect security; and in relation to the future, they now imagined it impossible that life could produce anything but pleasant flowers and fruits.

In this grateful union of friendship and affection, winter came and passed away; and spring, with its foliage of tender green and its heaven of softest blue, succeeded, to gladden the hearts of the three inmates of the castle. The season was in harmony with their minds, and their minds imparted their own lives to the season. What wonder, then, that its storks and swallows inspired them also with a disposition to travel! On a bright morning, while they were taking a walk down to one of the sources of the Danube, Huldbrand spoke of the magnificence of this noble stream; how it continued swelling as it flowed through countries enriched by its waters; with what splendour Vienna rose and sparkled on its banks; and how it grew lovelier and more imposing almost the whole of its progress.

"It must be a glorious privilege, once in our life, to trace its course down to Vienna!" Bertalda exclaimed, with warmth; but, immediately resuming the humble and modest demeanour she had recently shown, she paused, and blushed in silence.

This incident, slight as it may appear, was extremely touching to Undine; and, with the liveliest wish to gratify her friend, she said:

"Who, then, shall prevent our taking this little voyage?"

Bertalda leaped up with delight, and the two females the same moment began the work of imagination, painting this enchanting trip on the Danube in the most brilliant colours. Huldbrand, too, agreed to the project with pleasure; only he once whispered, with something of alarm, in Undine's ear;

"But, at that distance, Kühleborn becomes possessed of his power again?"

"Let him come,—let him come," she answered, with a laugh; "I shall be there, and he dares do none of his mischief in my presence."

Thus was the last impediment removed; they prepared for the expedition, and soon set out upon it with lively spirits and the brightest hopes.

But be not surprised, O man, if events continually happen very different from what you expect. That malicious power which lies in ambush for our destruction; delights to lull its chosen victim asleep with sweet songs and golden delusions; while, on the other hand, the messenger of Heaven, sent

to rescue us from peril, often thunders at our door with the violence of alarm and terror.

During the first days of their passage down the Danube, they were unusually gratified. The farther they advanced upon the waters of this proud river, the views became more and more picturesque and attractive. But amid scenes otherwise most delicious, and from which they had procured themselves the purest delight, the stubborn Kühleborn, dropping all disguise, began to show his power of annoying them. He had few other means of doing this, indeed, than by mere tricks and illusions, for Undine often rebuked the swelling waves or the contrary winds, and then the insolence of the enemy was instantly humbled and subdued; but his attacks were renewed, and Undine's admonition again became necessary; so that the pleasure of this little water-party was completely destroyed. The oarsmen, too, were continually whispering to one another in disney, and eyeing their three superiors with distrust; while even the servants began more and more to form dismal surmises, and to watch their master and mistress with looks of suspicion.

Huldbrand often said to himself, in the silence of his soul, "This comes to pass when like marries not like,—when a man forms an unnatural union with a female of the sea." Excusing himself, as we are most of us so fond of doing, he frequently pursued a train of thought like this:—"I did not, in fact, know that she was a maid of the sea. It is my misfortune, that my steps are haunted and disturbed by the wild humours of her kindred, but it is not my crime."

Making reflections like these, he felt himself in some measure strengthened; but, on the other hand, he only the more entertained a feeling of ill-humour against Undine, almost amounting to malevolence. He cast upon her glances of fretfulness and ill-nature, and the unhappy wife but too well understood their meaning. One day, grieved by this unkindness, as well as exhausted by her unremitting exertions to frustrate the artifices of Kühleborn, while rocked and soothed by the gentle motion of the bark, she toward evening fell into a deep slumber. But hardly had she closed her eyes, when every person in the boat, in whatever direction he might look on the water, saw the head of a man, beyond imagination frightful: each head rose out of the waves, not like that of a person swimming, but quite perpendicular, as if firmly fastened to the watery mirror, and still moving on with the progress of the bark. Every one wished to show to his companion what terrified himself, and each perceived the same expression of horror on the face of the other, only his hand and eye were directed to a different quarter, as if to a point where the monster, half laughing and half threatening, rose opposite to himself.

When, however, they wished to make one another understand the sight and all cried out, "Look there!" "No, there!" the frightful heads all became visible to each, and the whole river around the boat swarmed with faces of the most horrible expression. All raised a scream of terror at the sight, and Undine started from sleep. The moment she opened her eyes upon the mad group, the deformed visages disappeared. But Huldbrand was made furious by the frequent recurrence of these hideous visions. He would have burst out in wild imprecations, had not Undine, with the most submissive air and in the gentlest tone of supplication, thus entreated him:

"For God's sake, my husband, do not express displeasure against me here!—we are on the water."

The knight was silent, and sat down absorbed in a profound reverie. Undine whispered in his ear:

"Would it not be better, my love, to give up this foolish voyage, and return to Castle Ringstetten in peace?"

But Huldbrand murmured, in a voice expressive of the embittered state of his mind:

"So I must become a prisoner in my own castle? and not be allowed to breathe a moment but while the fountain is covered? Would to Heaven that our fratricidal union—"

At these fatal words, Undine pressed her fair hand on his lips with the most touching tenderness. He said no more, but, assuming an air of composure, pondered on all that Undine had lately warned him to avoid.

Bertalda, meanwhile, had given herself up to a crowd of wild and wandering thoughts. Of Undine's origin she knew a good deal, but not the whole, and the terrible Kühleborn had, more especially, remained to her an awful and yet in every view an impenetrable mystery; never, indeed, had she once heard his name. Musing upon this series of wonders, she unclasped, without being fully conscious of what she was doing, a golden necklace, which Huldbrand, on one of the preceding days of their passage, had bought for her of a travelling trader; and she was now letting it swing in sport just over the surface of the stream, while in her dreamy mood she enjoyed the bright reflection it threw on the water, so clear beneath the glow of evening. That instant a huge hand flashed suddenly up from the Danube, seized the necklace in its grasp, and vanished with it beneath the flood. Bertalda shrieked aloud, and a laugh of mockery and contempt came pealing up from the depth of the river.\*

The knight could now restrain his wrath no longer. He started up,

\* This fine passage of Pouqué bears a strong resemblance to a finer one in Southey's "Thalaba," Book v.

"And he drew off Abdalad's ring,  
And cast it in the gulf.  
A skinny hand came up,  
And caught it as it fell,  
And peals of devilish laughter shook the Cave."

The reader, I, ne takes any interest in these coincidences of genius, may compare with these passages the account of King Arthur's death, in Percy's Ballads, where a hand comes Arthur's sword

gazed fiercely upon the deep, poured forth a volley of reproaches, heaped curses upon all who interfered with his connection or troubled his life, and dared them all, water-spirits or mermaids, to come within the sweep of his sword.

Bertalda, meantime, wept for the loss of the ornament so very dear to her heart; and her tears were to Huldbrand as oil poured upon the flame of his fury; while Undine held her hand over the side of the boat, dipping it in the waves, softly murmuring to herself, and only at times interrupting her strange mysterious whisper, when she addressed her husband in a voice of entreaty:

"Do not reprove me here, Huldbrand; throw whatever blame upon others you will, but me, show me no unkindness here. Surely you know the reason!"

And, in truth, though his tongue was trembling with excess of passion, he with strong effort kept himself from articulating a single word against her.

She then brought up in her wet hand, which she had been holding under the waves, a coral necklace of such exquisite beauty, such sparkling brilliancy, as dazzled the eyes of all who beheld it.

"Take this," said she, holding it out with affectionate sweetness to Bertalda; "I have ordered it to be brought, to make some amends for your loss, and do not be troubled any more, poor child."

But the knight rushed between them, and, snatching the beautiful ornament out of Undine's hand, hurled it back into the flood, and in a flame of rage, exclaimed:

"So, then, you have a connection with them for ever? In the name of all witches and enchanters, go and remain among them with your presents, you sorcerers, and leave us human beings in peace!"

But poor Undine, with a look of mute amazement and eyes streaming with tears, gazed on him, her hand still stretched out, just as it was when she had so kindly offered her brilliant gift to Bertalda. She then began to weep with more and more of impassioned anguish, like a tender child, all innocence and bitterly grieved. At last she said, in a tone of voice the most faint and affecting:

"Alas, dear friend, all is over,—farewell! They shall do you no harm; only remain true, that I may keep them from you. But I, alas! must go away, I must go away even in this early dawn of youth and bliss. O woe, woe, what have you done! O woe, woe!"

And she vanished over the side of the boat. Whether she plunged into the stream, or whether, like water melting into water, she flowed away with it, they knew not, her disappearance so much resembled both united, and neither by itself. But she was gone gliding on with the Danube, instantly and completely; only little waves were yet whispering and sobbing around the boat, and they seemed almost distinctly to say,

"O woe, woe! Ah! remain true! O woe!"

But Huldbrand, in a passion of burning tears, threw himself upon the deck of the bark, and a deep swoon soon wrapped the wretched man in a blessed forgetfulness of misery.

## CHAPTER XVI.

THE brief period of our mourning—ought we to view it as a misfortune, or as a blessing? I mean that deep mourning of the heart, which gushes up from the very well-springs of our being; that mourning which becomes so perfectly one with the lost object of our affection, that this even ceases to be a lost thing to the sorrowing heart: and which desires to make the whole life a holy office dedicated to the image of the departed, until we too pass that boundary which separates it from our view.

Some men there are, indeed, who have this profound tenderness of spirit, and who thus consecrate their affections to the memory of the departed; but still their mourning softens into an emotion of gentle melancholy, having none of the intenseness of the first agony of separation. Other and foreign images intervene, and impress themselves upon the mind; we learn at last the transitory nature of everything earthly, even from that of our affliction; and I cannot therefore but view it as a misfortune, that the period of our mourning is so brief.

The lord of Ringstetten learnt the truth of this by experience; but whether he derived any advantage from the knowledge, we shall discover in the sequel of this history. At first, he could do nothing but weep,—weep as bitterly as the poor amiable Undine had wept, when he snatched out of her hand that brilliant ornament, with which she so beautifully wished to make amends for Bertalda's loss. And then he stretched his hand out as she had done, and wept again like her with renewed violence. He cherished a secret hope that even the springs of life would at last become exhausted by weeping; and when we have been severely afflicted, has not a similar thought passed through the minds of many of us with a painful pleasure? Bertalda wept with him, and they lived together a long while at the castle of Ringstetten in undisturbed quiet, honouring the memory of Undine, and having almost wholly forgotten their former attachment.

To encourage Huldbrand in this conduct, the good Undine, about this time, often visited his dreams; she soothed him with soft and affectionate caresses, and then went away again, weeping in silence, so that when he awoke, he sometimes knew not how his cheeks came to be so wet,—whether it was caused by her tears, or only by his own.

But as time advanced, these visions became less frequent, and the severity of the knight's sorrow was softened; still he might never while he lived, it may be, have entertained any other wish than thus to think of Undine in silence, and to speak of her in conversation, had not the old fisherman arrived unexpectedly at the castle, and earnestly insisted on Bertalda's re-

turning with him, as his child. He had received information of Undine's disappearance, and he was not willing to allow Bertalda to continue longer at the castle with the unmarried lord.

"For," said he, "whether my daughter loves me or not is at present what I care not to know; but her good name is at stake, and where that commands or forbids, not a word more need be said."

This resolution of the old fisherman, and the fearful solitude, that, on Bertalda's departure, threatened to oppress the knight in every hall and passage of the deserted castle, brought a circumstance into distinct consciousness, which, owing to his sorrow for Undine, had of late been slumbering and completely forgotten,—I mean his attachment to the fair Bertalda; and this he made known to her father.

The fisherman had many objections to make to the proposed marriage. The old man had loved Undine with exceeding tenderness, and it was a doubtful conclusion to his mind, that the mere disappearance of his beloved child could be properly viewed as her death. But were it even granted that her corpse were lying stiff and cold at the bottom of the Danube, or swept away by the current to the ocean, still Bertalda would not be guiltless in her death, and it would be wrong for her to step into the place of the poor banished wife. The fisherman, however, had felt a strong regard also for the knight; this, and the entreaties of his daughter, who had become much more gentle and respectful, as well as her tears for Undine, all exerted their influence; and he seems to have been forced at last to give up his reluctance, for he remained at the castle without objection, and a courier was sent off expressly to father Heilmann, who, in former and happier days, had united Undine and Huldbrand, requesting him to come and perform the ceremony at the knight's second marriage.

But the holy man had hardly read through the letter from the lord of Ringstetten, ere he set out upon the journey, and made much greater dispatch on his way to the castle, than the messenger from there had made in reaching him. Whenever his breath failed him in his rapid progress, or his old limbs ached with fatigue, he would say to himself:

"Perhaps I may still be in season to prevent the commission of a crime; then sink not, weak and withered body, before I arrive at the end of my journey."

And with renewed vigour he pressed forward, hurrying on without rest or repose, until, late one evening, he entered the embowered court-yard of the castle of Ringstetten.

The betrothed pair were sitting arm-in-arm under the trees, and the aged fisherman in a thoughtful mood sat near them. The moment they saw father Heilmann, they rose with a spring of joy, and pressed round him with expressions of cordial welcome. But he, in the fewest words possible, urged the bridegroom to accompany him into the castle; and when Huldbrand stood mute with surprise, and delayed complying with his earnest request, the pious priest said to him:

"Why do I then defer speaking, my lord of Ringstetten, until I can address you in private? There is no occasion for the delay of a moment. What I have to say as much concerns Bertalda and the fisherman as yourself; and what we must inevitably hear, it is best to hear as soon as possible. Are you then so very certain, knight Huldbrand, that your first wife is actually dead? It hardly appears so to me. I will say nothing, indeed, of the mysterious situation in which she may be now existing; in truth I know nothing of it with certainty. But that she was a most devoted and faithful wife, so much is beyond all dispute. And for fourteen nights past, she has appeared to me in a dream, standing at my bedside, wringing her tender hands in anguish, and imploring me with deep sighs: 'Ah, prevent him, dear father, I am still living! Ah! save his life! Ah! save his soul!'"

"What this vision of the night could mean, I was at first unable to divine, then came your messenger, and I have now hastened hither, not to unite, but, as I hope to separate, what ought not to be joined together. Leave her, Huldbrand! Leave him, Bertalda! He still belongs to another; and do you not see on his pale cheek the traces of that grief which the disappearance of his wife has produced there? That is not the look of a bridegroom, and the spirit breathes the presence on my soul; 'If you do not leave him, you will never, never be happy!'"

The three felt, in their inmost hearts, that father Heilmann spoke the truth; but still they affected not to believe him, or they strove rather to resist their conviction. Even the old fisherman had become so infatuated, that he conceived the marriage to be now indispensable, as they had so often, during the time he had been with them, mutually agreed to the arrangement. They all, therefore, with a determined and gloomy eagerness, struggled against the representations and warnings of the spiritual man, until, shaking his head, and oppressed with sorrow, he finally quitted the castle, not choosing to accept their offered shelter even for a single night, or indeed so much as to taste a morsel of the refreshment they brought him. Huldbrand persuaded himself, however, that the priest was a mere visionary or fanatic, and sent at day-break to a monk of the nearest monastery, who, without scruple, promised to perform the ceremony in a few days.

#### CHAPTER XVII.

It was at the earliest moment of dawn, when night begins faintly to brighten into morning twilight, that Huldbrand was lying on his couch half waking and half sleeping. Whenever he attempted to compose himself to sleep, he was seized with an undefined terror, that made him shrink back from the enjoyment, as if his slumbers were crowded with spectres. But whenever he awoke and sought to rouse himself, the wings of a swan seemed to

The betrothed are called bride and bridegroom in Germany

be waiving around him, and soothing him with the music of their motion, and thus in a soft delusion of the senses he sunk back into his state of imperfect repose.

At last, however, he must have fallen perfectly asleep; for, while the melody of the swan-wings was murmuring around him, he seemed to be lifted by their regular strokes, and to be wafted far away over land and sea, and still their music swelled on his ear most sweetly.

"The music of the swan! the song of the swan!" he could not but repeat to himself every moment; "is it not a sure foreboding of death?"

Probably, however, it had yet another meaning. All at once he seemed to be hovering over the Mediterranean Sea. A swan sang melodiously in his ear, that this was the Mediterranean Sea. And while he was looking down upon the waves, they became transparent as crystal, so that he could see through them to the very bottom.

At this a thrill of delight shot through him, for he could see Undine where she was sitting beneath the clear domes of crystal. It is true, she was weeping very bitterly, and such was the excess of her grief, that she bore only a faint resemblance to the bright and joyous being she was during those happy days they had lived together at the castle of Ringstetten, both on their arrival and afterward, a short time before they set out upon their fatal passage down the Danube. The knight could not avoid dwelling upon all this with deep emotion, but it does not appear that Undine was aware of his presence.

Kühleborn had meanwhile approached her, and was about to reprove her for weeping, when she assumed the boldness of superiority, and looked upon him with an air so dignified and commanding, that he was well-nigh terrified and confounded by it.

"Although I too now dwell here beneath the waters," said she, "yet I have brought my soul with me. And therefore I may well be allowed to weep, little as you may conceive the meaning of such tears. They are even a blessed privilege, as everything is such a privilege, to one inspired with the true soul."

He shook his head with disbelief of what she said, and after the recollection of a moment, replied:

"And yet, niece, you are subject to our laws of the element, as a being of the same nature with ourselves; and should *he* prove unfaithful to you and marry again, you are obliged to take away his life."

"He remains a widower to this very hour," replied Undine, "and he still loves me with the passion of a sorrowful heart."

"He is, however, a bridegroom withal," said Kühleborn, with a chuckle of scorn, "and let only a few days wear away, and then comes the priest with his nuptial blessing, and then you must go up and execute your share of the business, the death of the husband with two wives."

"I have not the power," returned Undine, with a smile. "Do you not remember? I have sealed up the fountain forever, not only against myself but all of the same race."

"Still, should he leave his castle," said Kühleborn, "or should he once allow the fountain to be uncovered, what then? for doubtless he thinks there is no great number in such trifles."

"For that very reason," said Undine, still smiling amid her tears, "for that very reason he is this moment hovering in spirit over the Mediterranean Sea, and dreaming of this voice of warning which our conversation affords him. It is for this that I have been studious in disposing the whole vision."

That instant Kühleborn, inflamed with rage, looked up at the knight, wrathfully threatened him, stamped upon the ground, and then, swift as the person that moved him, sprang up from beneath the waves. He seemed to swell in his fury to the size of a whale. Again the swans began to sing, to waive their wings, to fly; the night seemed to be soaring away over mountains and streams, and at last to night at Castle Ringstetten, where he awoke upon his couch.

Upon his couch he actually did awake, and his attendant, entering at the same moment, informed him that father Heilmann was still lingering in the neighbourhood; that he had, the evening before, met with him in the forest, where he was sheltering himself under a bow, which he had formed by interweaving the branches of trees, and covering them with moss and fine brushwood; and that to the question,

"What he was doing there, since he had so firmly refused to perform the nuptial ceremony?" his answer was:

"There are yet other ceremonies to perform, beside those at the altar of marriage; and though I did not come to officiate at the wedding, I can still officiate at a very different solemnity. All things have their seasons, and for this we must wait. Besides marrying and mourning are by no means so very far from each other, as every one, not wilfully blinded, must know full well."

In consequence of these words and of his dream, the knight made a variety of reflections, some wild and some not unminged with alarm. But a man is apt to consider it very disagreeable to give over an affair which he has once settled in his mind as certain, and therefore all went on just according to the old arrangement.

#### CHAPTER XVIII.

SHOULD I relate to you the events of the marriage festival at Castle Ringstetten, it would seem to you as if you were viewing a crowded assemblage of bright and joyous things, but all overspread with a black mourning crape, through whose darkening veil the whole splendour appeared less to resemble pleasure, than a mockery of the nothingness of all earthly joys.

It was not because some spectral confusion disturbed the scene of festivity, for the castle, as we well know, had been secured against the mischief and menaces of water-spirits. But the knight, the fisherman, and all the guests, were unable to banish the feeling that the chief personage of the feast was still wanting, and that this chief personage could be no other than the amiable Undine, so dear to them all.

Whenever a door was heard to open, all eyes were involuntarily turned in that direction; and if it was nothing but the steward with new dishes, or the cup-bearer with a supply of wine of higher flavour than the last, they again looked down in sadness and disappointment; and the flashes of wit and merriment which had been passing at times from one to another ceased, and were succeeded by tears of mournful remembrance.

The bride was the least thoughtful of the company, and, therefore, the most happy; but even she occasionally found it difficult to realize the fact, that she was sitting at the head of the table, wearing a green garland and gold-embroidered garments, while Undine was lying a corpse, stiff and cold, at the bottom of the Danube, or carried out by the current into the ocean. For, ever since her father had suggested something of this sort, his words were continually sounding in her ear; and this day, in particular, they would neither fade from her memory nor give over their intrusion.

Evening had scarcely arrived, when the company returned to their homes; not dismissed by the impatience of the bridegroom, as wedding parties are sometimes broken up, but constrained solely by painful associations, joyless melancholy, and forebodings of evil. Bertalda retired with her maidens, and the knight with his attendants, to undress; but these young bridesmaids and bridesmen, such was the gloomy tenor of this festival, made no attempt to amuse bride or bridegroom with the usual pleasantry and frolicsome good-humour of the occasion.

Bertalda wished to awake a livelier spirit: she ordered them to spread before her a brilliant set of jewels, a present from Huldbrand, together with rich apparel and veils, that she might select from among them the brightest and most beautiful for her dress in the morning. The attendants eagerly seized this opportunity of gratifying both their young mistress and themselves; and while, with many wishes and promises of happiness, they indulged their love of talking in her presence, and declared how charmed they were with all they saw, they failed not to extol the beauty of the new-married lady with their liveliest eloquence. They became more and more absorbed in this admiration and flattery, until Bertalda at last, looking in a mirror, said with a sigh:

"Ah, but do you not see plainly how freckled I am growing? Look here on the side of my neck."

They looked at the place, and found the freckles, indeed, as their fair mistresses had said; but they called them mere beauty-spots, the faintest touches of the sun, such as would only heighten the whiteness of her delicate complexion. Bertalda shook her head, and still viewed them as a blemish.

"And I could remove them," she said at last, sighing. "But the castle fountain is covered, from which I formerly used to have that precious water to purifying to the skin. O, had I this evening only a single flagon of it!"

"Is that all?" cried an alert waiting-maid, laughing, as she glided out of the apartment.

"She will not be so frantic," said Bertalda, in a voice of inquiry and agreeably surprised, "as to cause the stone-cover of the fountain to be taken off this very evening."

That instant they heard the tread of men already passing along the courtyard, and could see from the window where the damsel, so kindly officious, was leading them directly up to the fountain, and that they carried ladders and other instruments on their shoulders.

"It is certainly my will," said Bertalda, with a smile, "if it does not take them too long."

And, charmed with the conviction that the merest hint from her was now sufficient to accomplish what had formerly been refused with a painful reproof, she looked down upon their operations in the bright moonlight of the castle court.

The men seized the enormous stone, as if they must exert all their strength in raising it; some one of their number indeed would occasionally sigh, when he recollected they were destroying the work of their former beloved mistress. Their labour, however, was much lighter than they expected. It seemed as if some power, from within the fountain itself, aided them in raising the stone.

"It certainly appears," said the workmen to one another in astonishment, "as if the confined water were become a jet or spouting fountain." And the stone rose more and more, and almost without the assistance of the work-people, rolled slowly away upon the pavement with a hollow sound. But an appearance, from the opening of the fountain, filled them with awe, as it rose like a white column of water: at first, they imagined it to be a spouting fountain, until they perceived the rising form to be a pale female, veiled in white. She wept bitterly, raised her hands above her head, and wrung them with anguish, as with slow and solemn step she moved toward the castle. The servants shrunk back, and fled from the fountain; while the bride, pale and motionless with horror, stood with her maidens at the window. When the figure had now come close beneath their room, it looked up to them and uttered the low moaning of misery, and Bertalda thought she recognised through the veil the pale features of Undine. But the mourning form passed on as sad, reluctant, and lingering, as if going to the place of execution. Bertalda screamed to her maids to call the knight; not one of them dared to stir from her place; and even the bride herself became again mute, as if trembling at the sound of her own voice.

While they continued standing at the window, overpowered with terror and

motionless as statues, the mysterious wanderer had entered the castle, ascended the well-known stairs, and traversed the well-known halls, her tears ever flowing in silent woe. Alas, with what different emotions had she once wandered through these rooms!

The knight had in the mean time dismissed his attendants. Half undressed and in deep dejection, he was standing before a large mirror; a wax taper burned dimly beside him. At this moment he heard a low tapping at his door, the least perceptible touch of a finger. Undine had formerly tapped in this way, when she wished to amuse him with her endearing sportiveness.

"It is all illusion! a mere streak of fancy!" said he to himself. "I must to my nuptial bed."

"You must, indeed, but to a cold one!" he heard a voice, choked with sobs, repeat from without; and then, as he saw in the mirror, that the door of his room was slowly, slowly opened, and the white wanderer entered, and gently secured it behind her.

"They have opened the fountain," said she in a low tone, "and now I am here, and you must die."

He felt, in the shock and death-pang of his heart, that this must indeed be his doom; but, covering his eyes with his hands, he cried: "Do not, in my death hour, do not drive me to distraction with terror. If you have a visage of horror behind that veil, do not lift it! Take my life, but let me not see you!"

"Alas!" replied the wanderer, "will you not then look upon me once more? I am as beautiful as when you wooed me on the peninsula!"

"O would to God it were so!" sighed Huldbrand, "and that I might die by a kiss from you!"

"Most willingly do I grant your wish, my dearest love," said she. And as she threw back her veil, her dear face met his view, smiling with celestial beauty. Trembling with love and the awe of approaching death, the knight stooped to give and receive the embrace. She kissed him with the holy kiss of heaven; but she relaxed not her hold, pressing him more passionately in her arms, and weeping as if she would weep away her soul. Tears rushed into the knight's eyes, while a thrill both of bliss and agony shot through his heart, until at last he expired, sinking softly back from her fair arms, and resting upon the pillow of his couch, a corpse.

"I have wept him to death!" said she to some domestic, who met her in the ante-chamber; and passing through the terrified group, she went slowly out and disappeared in the fountain.

## CHAPTER XIX.

FOUR HUNDRED YEARS had returned to the castle as soon as the death of the lord of Ringstetten was made known in the neighbourhood; and he arrived at the very hour when the monk who had married the unfortunate couple was hurrying from the door, overcome with dismay and horror.

When Father Hellmann was informed of this, he replied: "It is all well; and now come the duties of my office, in which I have no need of an assistant."

He then began to console the bride, now become a widow, small as was the advantage her worldly and light-minded spirit derived from his kindness.

The old fisherman, on the other hand, though severely afflicted, was far more resigned in regard to the fate of his son-in-law and the calamity of his daughter; and while Bertalda could not refrain from accusing Undine as a murderess and fiend-like enchantress, the old man calmly said: "The event, after all, could not have happened otherwise. I see nothing in it but the judgment of God; and no one, I am sure, could have his heart more pierced by the death of Huldbrand, than she who was obliged to accomplish his doom, the poor forsaken Undine!"

He then assisted in arranging the funeral solemnities as suited the rank of the deceased. The knight was to be interred in a village church-yard, in whose consecrated ground were the graves of his ancestors; a place which they, as well as himself, had endowed with rich privileges and gifts. His shield and helmet lay upon his coffin, ready to be lowered with it into the grave, for lord Huldbrand of Ringstetten had died the last of his race; the mourners began their sorrowful march, hitting their melancholy songs amid the calm unclouded heaven; Father Hellmann preceded the procession, bearing a lofty crucifix, while Bertalda followed in her misery, supported by her aged father.

While proceeding in this manner, they suddenly saw in the midst of the dark-habited mourning females, in the widow's train, a snow-white figure, closely veiled, and wringing its hands in the wild vehemence of sorrow. Those next to whom it moved, seized with a secret dread, started back or sideways; and owing to their movements, the others, next to whom the white stranger now came, were terrified still more, so as to produce almost a complete disarrangement of the funeral train. Some of the military escort were emboldened to address the figure, and attempt to remove it from the procession, but it seemed to vanish from under their hands, and yet was immediately seen advancing again, with slow and solemn step, among the followers of the body. At last, in consequence of the shrinking away of the attendants, it came close behind Bertalda. It now moved so slowly, that the widow was not aware of its presence, and it walked meekly on behind, neither suffering nor creating disturbance.

This continued until they came to the church-yard, where the procession formed a circle round the open grave. Then it was that Bertalda perceived her unbidden companion, and, prompted half by anger and half by terror, she commanded her to depart from the knight's place of final rest. But the veiled female, shaking her head with a gentle refusal, raised her hands towards Bertalda in lowly supplication, by which she was greatly moved, and

could not but remember with tears, how Undine had shown such sweetness of spirit on the Danube, when she held out to her the coral necklace.

Father Heilmann now motioned with his hand, and gave order for all to observe perfect stillness, that over the body, whose mound was well-nigh formed, they might breathe a prayer of silent devotion. Bertalda knelt without speaking; and all knelt, even the grave-diggers, who had now finished their work. But when they rose from this breathing of the heart, the white stranger had disappeared. On the spot where she had knelt, a little spring, of silver brightness, was gushing out from the green turf, and it kept swelling and flowing onward with a low murmur, till it almost encircled the mound of the knight's grave; it then continued its course, and emptied itself into a calm lake, which lay by the side of the consecrated ground. Even to this day, the inhabitants of the village point out the spring;—and they cannot but cherish the belief, that it is the poor deserted Undine who in this manner still fondly encircles her beloved in her arms.

END OF UNDINE.

## THE HUNTERIAN MUSEUM.

It is with a feeling of pleasure that the pedestrian, bent on a visit to this interesting museum, finds himself emerging from the crowded thoroughfares of the city into the great square of Lincoln's-inn Fields. Around are fine, old mansions, fraught with historic recollections. Here it was that Babington and his youthful associates perished in the prime of manhood, when, having sought to dethrone their sovereign, they precipitated the doom of the ill-fated Scottish Mary. Here Lord Russell was led to the scaffold; that distinguished and admirable man, whose trial has given both to poets and historians subjects of enduring excellence.

But a more extended and deeper interest centres here. Scarcely a town or village in the remotest parts of England is without its youthful aspirants for the honours and emoluments of a profession, the entrance to which is through Lincoln's-inn Fields.

Admire the noble proportions and graceful beauty of the stately portico, which owes much to the chaste and impressive designs of Mr. Barry. The College of Surgeons was built before his time, yet widely different in appearance, and we owe to him its present dignified and harmonious aspect.

Many persons are passing beneath the portico into the Hall. Let us follow them. Some proceed into the inner vestibule, with its low roof and open pillars, towards the theatre, others into the Secretary's room, on the left: the latter are mostly young and gentlemanly-looking men: they are going to register their names for examination. Success to you, young aspirants after knowledge! your profession opens to you the means of diffusing continually recurring benefits to mankind!

Turning from the secretary's room, we look around and see in the far corner on the left, a staircase ascending to the Council-room and Library, and the doorway to the Theatre. We enter, and see a gallery on three sides, with crimson seats, wainscoted walls, and a square panelled roof, in the centre of which is a skylight. Above us is the Student's-gallery; in front a wooden floor, with a table for the lecturer, and seats rising on either side. One single bust recalls the memory of John Hunter.

Lavater and Spurzheim, if contemplating the rows of faces that look steadily from the members'-gallery and the body of the theatre towards the lecturer's table, might recognise many to whom humanity is deeply indebted. Expressions of thought and intellect always acute, sometimes of the highest character, is indelibly written on many a face and brow. Presently a small door beside the table opens, and the head of the College enters with the gilt mace, which he lays reverently on the table. Members of the Council follow; lastly the lecturer, in a black robe with crimson edgings, and at once commences his lecture. One, we remember to have heard, was on the brain of fishes. The lecturer described, in brief but expressive language, the process of declension from the brain of creation's lord, through inferior animals and birds, to such creatures as inhabit the water, showing how clearly each individual and species is linked with that above and below it. The lecturer lastly pointed to the extraordinary development of brain in the shark, the most energetic perhaps among the finny tribes, as opposed to those which imbed themselves in mud and become torpid nearly half the year.

Leaving the theatre, a handsome staircase, with its roof of delicately tinged green hue, and its entablature having a richly sculptured frieze, conducts us to the landing at the top, where are busts of Cheselden and Sir W. Banks. On the right, a door opens into the Library; on the left, into the Council-room. What a noble apartment is the library—how wide and lofty! How pleasing the waiving and glimmering of the trees in the gardens, seen through the lower range of windows.

Portraits of Sir Caesar Hawkins, by Hogarth, and of Serjeant-Surgeon Wiseman, of Charles II.'s time, are conspicuous among others; but the greatest gem in the College is the cartoon of Holbein's picture of the Grant of the Charter to the Barber-Surgeons. A smaller room is entered from the west end of the library—it is called the Museum Library.

The other extremity of the building presents a door opening into the Council-room, where sits the awful conclave of Examiners. We have no business there at the present moment—no, not even to peep at a chair, and he who sits therein; while right and left and front, are extended a line of grave faces. Ah! that poor youth, nervous, excited, trembling—well for him that sense and memory do not fail under the important and deliberate questions that successively reach his ears!

He has a widowed mother, perhaps, who has parted with everything to procure for her son a professional education. Many who wish him well are walking to and fro on the pavement in front of the College, looking anxiously from time to time at the windows of an anteroom, attached to the one where the young student undergoes his examination. They well know what sacrifices have been made to meet expenses till the examination-day; perhaps even an appointment waits the final decision to be immediately accepted or lost for ever. There he is—his usually pale face flushed with success. He exclaims, with emotion, "All's right!" and hurries on to make glad his mother's heart.

The antechamber contains refreshments for the students, who are often completely overcome by anxiety and previous study.

Here we are in the Museum! What a magnificent apartment, in form, proportion, size, and general appearance! Not lighted, as you observe, by windows in the side walls, nor yet by lanterns from above, but by a series of windows set in a deep cove, extending all round the building, between the top of the wall and the ceiling; the effect is delightful, and equally beneficial as regards the contents of the museum. The walls exhibit three stories; first, glass-cases placed between half pillars of the Doric style; secondly, a gallery having preparations in glass vessels, with a balcony; and thirdly another gallery. Two ranges of solid, broad, glazed cases, breast high, extend down the floor of the room, from side to side; and such, in short, is the shell of the Museum, but how shall we comprehend somewhat of its invaluable contents? Perhaps almost everything that imagination can conceive, as required for the study of physical life, is here brought within the student's reach, having been sought for in every part of the known world. Dissected organs of plants and animals are classed according to their different vital functions, and each class is so arranged as to present every variety of form, beginning from the simplest, and passing upwards to the most complex.

In walking through the museum, the mind is almost bewildered by its overpowering multiplicity of objects. The eye passes along a seemingly interminable series of skeletons; first of quadrupeds, as llamas, zebras, rams, antelopes, deers, armadillos, squirrels, seals, lions, cats, and wolves, bears, monkeys, kangaroos, creatures of all forms, and varying instincts, from regions covered with snow that rarely melts, to the sultry regions of the line, and such as pertain to intermediate climates; then of birds, from the exquisite little humming-bird, the creature of sunbeams and ambrosia, to the giant ostrich; and, lastly, of fishes and of reptiles. Skulls of all nations, presenting different varieties of the one great family of man, are extensively arranged. The high and ample forehead of the most gifted races through numerous gradations, with that of the least intellectually developed.

Adorning the open railing of the balcony which projects in front of the first gallery, in its entire sweep around the Museum, are the horns of every known animal. We may try to span that gigantic specimen over the entrance into the museum, by extending our arms at full stretch, but vain will be our attempt. They were borne by the extinct Irish elk or stag, among primeval forests in the remotest periods of Ireland's history.

A beautiful series of preparations show the gradual growth of such antlers as are carried proudly in the present day through many an English park, from the first putting forth of the tender sprout, with its blood-vessels and soft velvet-like covering, to their full expansion.

Isolated skeletons, placed on pedestals, are prominent objects at the ends and in the centre of the room. Beside the door of the entrance is a cast of the hinder parts of the megatherium, one of those stupendous animals which have no representatives on earth. This enormous quadruped was unknown in Europe till the viceroy of Buenos Ayres sent to the museum at Madrid a considerable portion of a gigantic skeleton, and subsequently portions of two other skeletons followed. Men came from all parts to contemplate such prodigies, but the general characteristics of the animal could not be ascertained till remains were collected by Sir Woodbine Paris, from the river Salado, which runs through the flat alluvial plains to the south of Buenos Ayres. Three dry seasons had succeeded one after the other, causing the waters of the river to become low, and consequently uncovering those huge remains that would otherwise have still escaped observation.

The dimensions of the megatherium, whose gigantic skeleton is now before us, are about fourteen feet in length, and about eight in height; the upper part of its tail must have measured at least two feet across. Its thigh-bone is twice the size of the largest known elephant; its heel bone actually weighed more than the entire foot of the great elephant whose skeleton is in the museum, and its fore-foot must have exceeded a yard in length. "Thus heavily constructed," says Dr. Buckland, "he could neither run, nor leap, nor climb, nor burrow under ground, and all his movements must have been necessarily slow; but what need of rapid motion in a creature whose occupation of digging roots for food was almost stationary?" His entire frame was an apparatus of colossal mechanism, exactly adapted to the work he had to do, strong and ponderous in proportion as the work was heavy, and calculated to be the vehicle of life and enjoyment to a gigantic race of quadrupeds, which, although they have ceased to be accounted among the living inhabitants of our planet, have left in their fossil bones imperishable monuments of the consummate skill with which they were constructed. The ancestor of this huge creature undoubtedly passed with others of the animal creation, before our first father, when they received names from him. This is evident; for in cleaning the bones on their arrival at the college, some small portions of animal matter were discovered, changed into the peculiar fatty and waxy substance first brought to light during the last century. The inference I have mentioned was, therefore, justly drawn, "unless," as wrote an intelligent anatomist, "we dare to suppose that the soft animal matter was imperishable as the fossil bones themselves."

Opposite the megatherium is a heavy-looking skeleton of the hippopotamus or river-horse, the supposed Behemoth of the book of Job. Down the centre of the rooms are numerous small objects of great interest; a series of teeth belonging to the elephant, who changes them at least twelve times; teeth of animals in various stages of growth; vascular organs of the human body, sponges, and fossil shells. On our left is a fine cast of a negro; on our right the amazingly tall skeleton of Charles Byrne, or O'Brien, the Irish giant—that unhappy man, who killed himself by drinking, at the early age of twenty-two. Either from the dread of being exposed to public gaze in the Hall of Surgeons, or else from looking upon himself as a kind of half-monster, he desired to be sunk in the sea, trusting that all traces of him would disappear. Such, however, was not his lot, and this noble, though bony edifice, once tenanted by an immortal spirit, has beside it, in strange contrast, the skeleton of Mdlle. Cruchani, a Sicilian girl ten years old. The little being was only twenty inches high; and this is her brief history:—Her mother was an Italian woman, the wife of a soldier in the Duke of Wellington's army. Having been exposed to great hardships during the peninsular war, and frightened into fits by a monkey previous to her confinement, this infant was reared with great difficulty; it became consumptive, and being brought to London was publicly exhibited in Bond-street, where it was much visited, by medical men especially, to whom it became an object of considerable interest. The poor child could at length walk alone, but with no confidence; her sight was quick, and vividly attracted by bright objects; she delighted in everything that glittered, and was mightily pleased with fine clothes. Her voice was shrill and low, and she had some taste for music, her disposition was mild and affectionate, and consequently very susceptible of kindness. Neither did she appear deficient in intellect, having learned to speak a few words in English. Her death occurred in 1824, the year of her coming to England.

On the same pedestal is a minute and beautifully-constructed ivory skeleton of the human form.

Stop! do not go on too fast, nor yet look too intently at the strange contrast between gigantic and dwarfish proportions. Observe the colossal structure of the largest living quadruped, the Indian elephant. Wonderful creature!—thy skeleton measures twelve feet four inches in height—thy horns among palms and citrons, in a sunny clime—thy dying-place, Exeter Change—thy name, "Chunuy." Who has not heard of Chunuy, whose sad history excited no ordinary interest,—that sagacious, affectionate, and noble quadruped, whom it was needful to destroy?

A giraffe and Bactrian camel flank the skeleton of poor Chunuy on either side.

A door on the left opens into another museum, equally lofty, but comparatively small; it is chiefly devoted to preparations of extraordinary surgical cases of disease, which few may perhaps contemplate without feelings of deep thankfulness for their exemption from similar calamities. Here is a cast of the hand which united the Siamese twins, and a row of mummies standing upright in open wooden boxes. The embalmed wife of the once notorious Martin Van Butchell occupies one of them, with a parrot or some similar bird in the case beside her. We look, as a matter of course, familiarized by long habit, on mummies brought from Egypt, but we cannot help recoiling from the sight of a countrywoman denied the rights of burial in a Christian land. An Egyptian mummy, in its inner case, unopened, and of great antiquity, holds a near position; and in affecting contrast with this artificially preserved human being, is a figure painful to behold, seated, monkey-fashion, on a high pedestal, the chin resting upon its knees, and its shrivelled hands pressed against its sunken cheeks. Sad is the history connected with its discovery—the melancholy object itself a fearful memento of the dreadful lengths to which superstition conducts its votaries. Tradition had long pointed in Peru to a certain sepulchre, as the site of a voluntary sacrifice of the life of a Curaca, one of the orders of nobles next in rank to members of the royal family. The district wherein stood this sepulchre was that of Caxumarea, and the governor determined to ascertain the truth of the current opinion. The tomb was opened accordingly, and at the depth of ten, or eight, feet three bodies were exhumed—of a female, who crumbled to dust on exposure to the air; a child, now in the museum of Buenos Ayres; and the man upon whom we are now gazing. The three stood, most probably, in the relationship of husband, wife, and child. This dreadful entombing is believed to have taken place shortly before the arrival of Pizarro, or between the years of 1530 and 1531. The preservation of the bodies was owing to the peculiar nature of the soil. An axe or bludgeon of green jade stone was drawn out, as also a large ball of very fine thread, or worsted, placed under the arm of the child, a symbol, most probably, of its undeveloped career.

Again in the open air. Rain falls gently, but deeply, and the lilacs and hawthorns give out a sweeter fragrance. Let us wait till the shower is somewhat abated, and meanwhile I can tell you some particulars concerning the history of John Hunter. You cannot forget his bust in front of the pedestal on which stands the giant elephant, the only one which decorates the museum. His ample and intellectual forehead, his benevolent features, the fine expression of his countenance, are indeed worthy of remembrance.

John Hunter was born in 1728, at Long Calderwood, near Glasgow. His father was a small farmer, himself one of nine children. Left fatherless, while yet a stripling, and having but scarce means of improvement, he mostly spent his time in field sports till the age of seventeen. Weary, at length, of such an unprofitable mode of life, he went to Glasgow, and laboured there industriously in the workshop of his brother-in-law, a cabinet-maker. The three years thus spent were invaluable to him, as forming habits of manual dexterity which subsequently became available in his scientific pursuits; and thus time went on till the fame of his brother, as an anatomical and scientific lecturer, roused his hitherto dormant wish for similar attainments. His

brother, to whom he wrote without hesitation a letter expressive of his hopes, cordially invited him to London, and John Hunter, laying aside his plane and hammer, reached the great city, and became the pupil of the Surgeon Cheselden, attending with him the Hospital of Chelsea, and afterwards engaging himself to Pott, in connection with St. Bartholomew's Hospital. The change was, however, too sudden from manual labour to intense mental application, and Hunter was constrained to relax his studies. He obtained, therefore, the appointment of staff-surgeon to a regiment that was ordered to a milder climate; from whence he returned at the end of three years to recommence that distinguished career which rendered his name immortal. A young man has often many trials to overcome, and such was the case with Hunter. "Have you five guineas in your pocket?" said he one day to Mr. F. Nicol, "if so, lend them me, and we will go halves." "Halves in what?" was the natural inquiry,—"Why halves in a magnificent tiger, dying in Castle-street." The money was lent, and the great anatomist made off rejoicing. Previous to this request, the foundation of the comprehensive museum, which we have just seen, was laid, in some exquisitely prepared specimens, which gradually went on increasing till the time of John Hunter's death, when they amounted to at least ten thousand preparations, obtained at the cost of seventeen thousand pounds.

Thus ends the brief history of this great anatomist; a history which recalls to mind a remark once made, when considering the excellent deeds of a comparatively humble individual,—“See how much good a single man can do.” Ladies are not admitted at the Hunterian Museum.

## THE TOY OF THE GIANT'S CHILD.

FROM THE GERMAN OF PRINCE ALBERT.

It is the lofty Inselberg—a mountain high and strong—  
Where once a noble castle stood—the  
giants held it long;  
Its very ruins now are lost, its site is waste  
and lone,  
And if he looks for giants there, they are  
all dead and gone.

The giant's daughter once came forth, the  
castle gate before,  
And played with a child's delight before  
her father's door:  
Then sauntering down the precipice, the  
girl will gladly go,  
To see, perchance, how matters went in  
the little world below.

With few and hasty steps she pass'd the  
mountain and the wood,  
At length approaching near the place  
where dwelt mankind, she stood;  
And many a town and village fair, and  
many fields so green,  
Brought her wondering eyes appear'd, a  
strange and curious scene.

And as she gazed, in wonder lost, on all  
the scenes around,  
She saw a peasant at her feet a tilling of  
the ground,  
The little creature crawl'd about so slowly  
here and there,  
And, lighted by the morning sun, his  
plough shone out so fair;

"Oh, pretty plaything!" cries the child,  
"I'll take it home with me."  
Then with her infant hands she spread her  
kerchief on her knee,  
And cradling man, and horse, and plough,  
so gently on her arm,  
She bore them home quite cautiously,  
afraid to do them harm.

She hastens with joyous steps and glad (we  
know what children are),  
And spying soon her father out, she  
shouted from afar—  
"Oh father! dearest father! what a play-  
thing I have found!  
I never saw so fair a one upon our mountain  
ground!"

Her father sat at table then, and drank his  
wine so mild,  
And smiling with a parent's smile, he  
ask'd the happy child—  
"What struggling creature hast thou  
brought so carefully to me?  
Thou leapt' at for very joy, my girl! come,  
open, let us see!"

She open'd her kerchief cautiously and  
gladly, you may deem,  
And show'd her eager sire the plough, the  
peasant, and his team;  
And when she'd placed before his sight the  
new found pretty toy,  
She clapp'd her hands, and scream'd  
aloud, and cried for very joy.

But her father look'd quite seriously, and  
shaking low his head,  
"What hast thou brought me here, my  
girl?—this is no toy," he said.  
"Go take it to the vale again, and put it  
down below:  
The peasant is no plaything, child! how  
could'st thou think him so?"

"So go without a sigh or sob, and do my  
will," he said:  
"For know, without the peasant, girl, we  
none of us had bread;  
'Tis from the peasant's hardy stock the  
race of giants are;  
The peasant is no plaything, child—no,  
God forbid he were!"

THE MISER AND HIS TREASURE. — A miser, having amassed an immense sum of money by denying himself the common necessities of life, was much embarrassed where to lodge it in security. After much consideration, he fixed upon a corner in a retired field, where he deposited his treasure in a hole which he had dug for that purpose. His mind was now for a moment at ease; but he had not proceeded many paces on his way home, when his anxiety returned, and he could not forbear going back to see that everything was safe. This he repeated so often that he was observed by a man who was looking over a hedge in an adjacent meadow. He, concluding that something extraordinary must be the occasion of these frequent visits, marked the spot, and coming in the night, and discovering the prize, carried it away. Early the next morning the miser renewed his visit, when, finding his treasure gone, he broke out in the most bitter exclamations. A traveller who was passing, moved by his complaint, enquired the cause. "Alas!" replied the miser, "I have sustained a most irreparable loss. Some villain has robbed me of a sum of money which I buried under this stone." "Buried!" returned the traveller, with a look of surprise; "why did you not keep it in your house, that it might be ready for your daily wants?" "What!" replied the miser, with an air of astonishment and indignation, "do you imagine I so little know the value of money? On the contrary, I had prudently resolved to lay it by, and not to touch a single shilling of it." "If that was your resolution," answered the traveller, "you have only to put this stone in the place of your treasure, and it will answer all your purposes just as well."

## CAROLINE AND CATHARINA.

(Continued from page 746.)

## CHAPTER XXIII.

Six or seven witnesses were called and sworn, and told to stand aside for the present; when a long consultation ensued between Carlin and Clayton. Vernon meanwhile leaning back abstracted and melancholy. He had protested against several questions put by his counsel, but without effect: they met him with the reply that they were absolutely necessary to his defence, and that his circumstances admitted no scruples of overstrained delicacy. Weary and dejected, he had relapsed into silence; and it was remarked that in all the consultations of his counsel, he bore no part—leaving them to manage the case as best they might, and scarcely manifesting any interest in the testimony. After a pause of several minutes, during which the falling of a pin in the court might have been heard, Clayton beckoned Colonel Talbot to him, and whispered with him. He seemed to hesitate a moment, and then walked out of the bar towards the back part of the house. He approached his daughter, who still sat veiled as at first, and after talking a moment with her, gave her his hand, and brought her forward. As she approached the clerk's bar, she threw back her veil, revealing a face "pale as monumental marble," and quivering with excitement. Her father stood beside her while she was being sworn, and then accompanied her in silence to the witness box. The crowd looked on with the most intense interest, and the jury drew up together as if to catch each breath of her testimony.

"The witness must stand alone," said Thorpe sternly.

"We ask permission for her father to remain with her," said Clayton.

"Go on, sir," said the judge. "No harm can be done by that course."

"Colonel Talbot," said Clayton, rising, "we will examine you first. Is that the note you left for Mr. Vernon on the day of this forgery?"

"It is, sir." He read aloud the note, which the reader remembers.

"Hand it to your daughter, if you please," Miss Talbot," he continued to Cara, "did you ever see that paper before?"

"Yes, sir," said she, "I had it in my possession a long time." Her voice trembled a little at first, and she took her father's arm, as if to support herself. But she grew firmer as she proceeded, and when she answered the next question the tremour had vanished.

"Tell the jury, if you please, how, when, and where, it came to your possession."

"I found it on the parlour floor at home, on the same day on which this crime is said to have been committed. It was lying on the floor at the end of a sofa."

"Can you account for its being there?"

"Not with certainty," she replied. "But it was lying precisely where Mr. Thorpe had been sitting."

All eyes were turned upon Thorpe—those of the jury evidently full of suspicion. But that gentleman sat calmly looking at the witness, his face wearing a cynical, even amused smile. When Cara was brought to the stand, had any one noticed him, he might have seen his nerves shaken; but he had now recovered his composure, and his face wore an expression of conscious strength to triumph.

"When did you first discover the paper?" Clayton continued.

"Almost immediately after he went out."

"What time did he enter the house on that morning?"

"I do not know the exact hour," she answered, "but it must have been a little more than an hour after my father left the house."

"Then, if I understand you," said Clayton, "you testify, that you first observed this note immediately after Thorpe's departure: that it lay precisely where he sat, and that he entered the house somewhere near eleven o'clock in the morning?"

"Yes, sir," she replied; and Clayton sat down.

"Miss Talbot," said Thorpe, commencing in a calm, insinuating tone. "was there no one else in that room that morning, besides your father?"

"Yes, sir," she replied; "Mr. Vernon was there also. He came in almost immediately after my father went away—within ten minutes at least—and was not gone much longer than that when you entered."

"This is where you went, then," said Carlin in an aside to Allen, "when you left Hugh to put up the rack?"

Vernon nodded, and turned again to Cara.

"Can you now state positively," Thorpe continued, "that this note was not on the floor when I came in?"

"I cannot," she replied, "because I do not know when it was written. I only think it could not have been there."

"Still, you are not sure?"

"No, sir—it might have been lost by Mr. Vernon—but—"

"And so it was," interrupted Thorpe, cutting short her reply, and sitting down with a smile of triumph. It was a moment of intense excitement; had Clayton suffered her to retire now, the cause would have been lost. But he had calculated upon this; he knew that Thorpe had met Vernon going away from the house on that morning; and he saw by the smile on his lips that he remembered it now. He determined, therefore, to allow Thorpe to fall into the pit dug for him—to let him draw out testimony about Vernon, and then re-examine, with a view of showing that Vernon could not have committed the crime.

"Wait one moment, colonel," he said, rising, "let me ask her two or three questions more. Miss Talbot," he continued to Cara, "will you repeat what you said about the time of Mr. Vernon's entrance?"

"I said he entered the house a very few minutes after my father left it."

"How long after? Long enough for your father to have ridden to Vernon's house in Franklin-street, to write this note there, and for Vernon to come with it to your father's house in Jefferson street?"

"No, sir—my father could scarcely have been much beyond Franklin-street when Mr. Vernon entered the house, even if he had driven very rapidly."

"How long did Mr. Vernon remain with you?"

"I do not remember precisely—but not longer than an hour—perhaps not more than half an hour."

"It was physically impossible, then, that this note should have been written and got there when Vernon entered?"

"Stop!" said Thorpe, "leave that for the jury."

"Very well," said Clayton, "the jury will see the point. We will not detain you longer, Miss Talbot."

As Cara passed near Allen he bowed deeply, smiling gratefully. She returned the salute with a smile; and, turned as her face was towards the crowd, every one in the house could see her. Mary Bryce, among others, observed her, and threw those fat hands into the air, with a gasp of alarm, at the "shocking impropriety;" and yet she was then sitting with her foot upon the seat before her, and below her several boys and young men had forgotten the trial entirely, in titillating at the view of her fat ankles.

"Andrew Brady," was next called; and answering to the call, a respectable-looking man, of some fifty years, apparently in ill-health, came forward.

"Mr. Brady," said Clayton, "where did you live in May of last year?"

"In the same place where I now live," replied the witness, "in Franklin-street, directly opposite Mr. Vernon's."

"Were you in your house on the 16th of that month?"

"I was—and for several days before and after. I do not know that it was the sixteenth; but I recollect seeing Colonel Talbot enter Vernon's house whatever day that was."

"Tell the jury, if you please, what you observed on that morning."

"Well," said the old man, taking the chair offered him by the sheriff, "I was confined to the house by illness, and amused myself by watching the passengers in the street. On the morning of which I speak, I was, as usual, sitting by the window, when I observed young Manning enter Vernon's house with some sort of rack on his arm. A few minutes afterwards, Mr. Vernon came out and walked away, in the direction of Jefferson-street. He had not been gone more than fifteen or twenty minutes, when a carriage stopped at the door, and a gentleman stepped out and entered, whom I was surprised to recognize as Colonel Talbot. I was surprised, because I knew that he and the elder Mr. Vernon were not upon good terms. He stayed but a few minutes, when he came out, and re-entering his carriage, drove off towards the railroad station at the head of Franklin-street. He was just out of sight, when I observed Colonel Thorpe approach the gate and enter. He knocked at the door and then entered. He was in the house a few minutes—perhaps as many as fifteen—when he came out and walked down Franklin-street, towards Jefferson street in the same direction taken by Vernon. About fifteen or twenty minutes afterwards, Mr. Vernon returned and entered the house. He stayed within but a short time, when he and the younger Manning came out together, and crossing Franklin-street, entered Main-street, and passed out of sight. I saw Mr. Vernon return alone some time afterwards. My memory of these things, I suppose, is made more distinct by my surprise in seeing Colonel Talbot enter, where I knew he was not in the habit of going."

"You may take him," said Clayton to Thorpe, and sat down.

"Mr. Brady," the latter commenced, "is your recollection so distinct as to enable you to swear positively to the order in which these persons entered that house?"

"I suppose," said Brady, "it is possible that I may be mistaken; but it is hardly probable,—indeed not at all probable."

"Still, it is possible?"

"O yes, sir."

"Well, now tell me whether you have not related these circumstances before—I call your attention particularly to the point of Manning's presence there on that morning."

"I have never related them," said the witness, "but once. That was about three weeks ago: I heard that Talbot had left this note at Vernon's house unsigned: I immediately recollected having seen him enter the house, and, on reflection, recollected also the visitors who had entered before and after him. I met Mr. Clayton, and related the circumstance to him: I suppose he had me subpoenaed here to-day."

Thorpe continued his examination nearly an hour—turning the testimony in every conceivable way, and endeavouring by all those time-honoured arts practised by lawyers, to confuse the witness or make him falter. It was all in vain: every one saw, as the examination proceeded, that Thorpe was despairing, and that so far from confusing the witness, he was really losing his own self-possession. Clayton leaned calmly back, and watched his fiery struggles with an aspect denoting the same feelings with which a naturalist watches the convulsive struggles of the insect he has impaled. Clayton was kind at heart—unwilling to inflict pain uselessly at any time,—but he had also a deep love of justice, and to see "the fowler taken in his own net," gratified the instincts of the man and the habits of the lawyer. At last Thorpe gave in; and leaning back, with a face whose chagrin and disappointment he strove hard to conceal, he waved his hand to the witness to go down. He saw that nothing was to be gained by cross-examination, that all depended upon the argument; and feeling his strength, he resolved to rely upon that alone. His bosom swelled with the consciousness of his power, and he longed at once to rise and tear away the fleshless target that encompassed him. But he must wait; his was the closing speech; these addresses were to be made before his; there could be no reply, and knowing this, his face cleared, and reassumed its ancient smile.

(To be continued.)

## WORK OF GREAT INTEREST.

**UNCLE TOM IN ENGLAND; OR, A PROOF THAT BLACK'S WHITE:** being an Echo to the American "UNCLE TOM," by Mrs. BECHER STOWE. Published on TUESDAY the 14th of September, in boards, Price 1s.

London: JOHN BENNETT, 69, Fleet-street; and all Booksellers.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

### OUR NEW VOLUME.

In addition to the attractions we have already announced to appear in our New Volume, we are happy to add a Series of Illustrated TALES of SCOTTISH SONG, by JOHN SMITH, the Scottish Vocalist; and also SKETCHES of LIFE in AUSTRALIA, communicated from the spot, with Original Plans and Views, highly interesting to all who intend to emigrate, or whose friends may have already taken their departure.

As already announced, in the Second Volume, will be commenced a NEW and ORIGINAL TALE of great interest, by the EDITOR, entitled MABEL LEE; OR, THE LIGHTS and SHADOWS of AN ORPHAN'S LIFE. All the other Articles will be Original, and be written expressly for the HOME COMPANION. Each alternate Number will contain, in addition to the continuous tale by the Editor, a Complete Story, founded upon a popular drama, under the general title of "TALES FROM CELEBRATED DRAMATISTS," and after the manner of "Lamb's Tales from Shakspeare." Those will include, *The Bondman, The Maid of Honour, The Duke of Milan, The Picture, The Fatal Dowry, The Great Duke of Florence, The Alchemist, The Fair, The Silent Woman, The Broken Heart, The Jew of Malta, Faustus, Iulian Corrobbona, The Maid's Tragedy, Philaster, King and No King, The Elder Brother, Boadicea, The Loyal Subject, Wit without Money,* and various others.

Departments will be opened for the Artist, the Mechanic, the Farmer, the Gardener, the Housewife, and the Juvenile. Under these heads will be given every kind of new discovery, and every fact of interest. Each department will be under the care of an Editor, whose attention will be earnestly directed to the bringing together of the essence of information and interest relating to the several subjects embraced, derived from peculiar and authentic sources.

Essays, Biographies, Letters from Correspondents, articles upon Natural History, Enigmas, &c., &c., together with a light and agreeable miscellany, will complete the arrangements for the New Volume of the HOME COMPANION, the whole giving it the highest title to UNIVERSAL RECEPTION BY THE BRITISH PEOPLE.

### THE ALMANACK

Is NOW READY, and is undoubtedly the greatest wonder of the year. We confidently assert that the Readers of the HOME COMPANION will thank us for affording them a very rich treat. Such an Almanack has never been published before. We quote the following brief preface to the Almanack itself:

"THE EDITOR of the HOME COMPANION having designed the whole of this Almanack upon an entirely original and novel plan, offers a few words in explanation thereof. The title page is full of graphic humour. It will be found to contain upwards of ONE HUNDRED comic figures, of the most lively and varied character. The lower portion of the page represents allegorically, Knowledge destroying Ignorance and Vice. At the top and bottom of each Calendar page will be found PICTORIAL CHARADES, each of which represents a word of two syllables—the first division of the picture illustrates the first syllable—the second division the second syllable—and the whole design the complete word. Thus the Charade No. 1, my first is 'break,' my second 'fast,' my whole 'breakfast!' The PICTORIAL ENIGMAS are constructed upon a different principle, which will be sufficiently understood by a glance at the letter-press which accompanies them. The same remark applies to the EXPERIMENTS IN NATURAL PHILOSOPHY, which will be found not only pleasing, but highly instructive. The Calendar is enlivened by numerous conundrums, and humorous notices of historical events. For the purpose of heightening the amusement afforded by the Almanack, it has been deemed proper to withhold the answers to the Pastime. These will appear in No. 53 of the "Home Companion." We give numbers and spaces for the reader to write down the answers he conjectures to be correct, so that by obtaining No. 53 he may have a capital evening's amusement by ascertaining how far he is successful. The Editor hopes that he may be privileged to issue a similar Almanack for many years. Several works projected by him having been wholly or partially pirated by persons who could find no other solution to the Enigma of their prosperity, but by appropriating his ideas, he takes this opportunity of intimating that there is little likelihood of the plan of this Almanack being pirated, for the outlay upon it has been so great, that it will require a sale of TWO HUNDRED THOUSAND COPIES TO MAKE UP THE FIRST COST. It is undeniably the cheapest Almanack ever issued, and the only one of its kind."

## MABEL LEE.

I have undertaken, at the request of many friends, to write the history of MABEL LEE, whose name alone is fictitious. I confess that I am not given to the invention of Tales, made up of startling and improbable incidents, but being reminded that the life of MABEL LEE is more strange than fiction, and may be written all the more vividly, because absolutely true, I have willingly entered upon the subject, and have already far advanced in its execution. I have never read a novel that interested me half so much as the story of this orphan girl, full of the most remarkable vicissitudes, of many of which I was an actual observer. The Reader must not expect from me a thrilling romance, but a story plainly and truthfully told, that will appeal to every heart, and supply many elements of good example to those who, like MABEL LEE, may have to struggle against the bitter side of adversity, with a spirit too high and impulsive to submit to the harsh control often imposed upon virtuous but helpless poverty.

THE EDITOR.

## IMPROVEMENT OF THE MIND.

No truth in science or morals, or any skill or accomplishment which a man obtains is ever lost to him. Some time in his life he will find it useful. Youth is the season of acquirement, and maturer years the time of action; and the action of maturer years will be perfect or imperfect in an exact ratio with our earlier acquirements. As but few young men venture upon the uncertain experiment of business immediately on becoming of age, most of them have several years of freedom from its absorbing cares, and an opportunity for study, in which many things may be learned, that will, some-time in after life, be found of great importance. The character of these studies should be governed very much by the particular calling in which a young man is engaged. As, for instance, if he have chosen commercial pursuits, he will find an acquirement of a knowledge of the modern languages a very important means of future advancement. If honest and competent as a clerk, he may be selected as best fitted, from his acquaintance with German, French, or Spanish, to conduct a voyage as supercargo, that will not only materially increase his income, but give him an opportunity of seeing foreign nations and coming into actual business contact with them—that most important means of enlarging our ideas, correcting false impressions, and maturing our judgments in those matters of the world that are so essential to success. And so of every other pursuit or calling in which a young man may be engaged. Some particular branch of information will be found to aid materially his advancement therein, and secure his future well-doing. How to direct aright his efforts, every one must decide for himself, from the circumstances of his own position.

But even where no means of using the information proposed to be obtained is presented to the mind, every opportunity for improvement should be embraced, and those branches of knowledge cultivated that accord best with the tastes and inclinations. One or two hours of well-directed study, each day, will furnish the mind, in a few years, with a vast amount of information on all subjects, not a single item of which will be valueless, but, some time in life, be of use to the possessor.

Books of facts and books of principles should make by far the larger portion of a young man's reading, and works of fancy and fiction be resorted to only as mental recreations, or the means of improving the taste. The first are essential to the formation of his rational mind; they contain the food by which it is nourished, and from which it grows into maturity and vigour. If, instead of this kind of reading, mere fiction be resorted to, a puny intellectual growth will be the consequence, and instead of there being the soundness of true mental force and discrimination, there will be only the weakness of a trifling sentimentality. History, biography, and travels, furnish the mind with the main facts to be obtained by mere reading, while the more abstract facts of science, more necessary than these to be known, must be acquired by something more than this superficial mode—by patient and laborious study; but this patience and labour receive a rich reward. Another and equally important branch of reading is that of mental and moral philosophy. There is danger here of acquiring false views; for these abound in nearly every philosophical work extant. History records the naked facts that have transpired; biography tells the story of a man's life; and the book of travel opens up to us the manners, customs, and peculiarities of other nations. We read them all, and form our own conclusions from the facts stated. But books of philosophy come to us as grave teachers, with precepts for our government in actual life. They assume to understand the constituents of the human mind, and to lay down laws for its government. Of these books there are many, and all with systems more or less variant with each other. They cannot all be true, of course. "What, then, am I to do? Who is to lead me into a true system of philosophy?" we hear asked; and we answer, "Your own reason, guided by an earnest desire for the truth for its own sake." "Prove all things, and hold fast that which is good."

This, at first sight, may seem a very unsatisfactory kind of advice; but it is the only advice we can conscientiously give. No man can truly believe anything that he does not understand; and therefore nothing can be truth to him that does not come within the scope of his own reason. Systems of philosophy, when presented to him, ought to be examined; but nothing that they advance should be received as truth, unless his own rationality approve. The test of

all truth is its ability to lead to good. To take a thing for granted because it is gravely stated as truth by a man who has the reputation of being a great philosopher, is the worst of folly. Even if the proposition be true, it is a truth to no one unless it be rationally perceived. A man may assent to it, but it is not a living, but only a dead assent. He is none the wiser.

As the precept, "Man, know thyself," is to all one of vital moment, and as no man can properly know himself unless he understand something of his mental and moral nature, we will make a few plain statements on the subject, from which any one may derive clear ideas, and be able to understand his own mental operations, and the laws that govern them. Such a knowledge will enable him to separate the wheat from the chaff in books, and store up the wheat in the garner of his innermost thoughts.

The mind of man is threefold. It consists of affection, thought, and power; or will, understanding, and action. The will is man's love, or very life, the moving impulse of his being; his understanding gives a form to this affection, clothing it in thoughts; and from both together flows forth activity. In the will of man, which is his love, or life, resides his ends; these work by his understanding, or reasoning faculty, in the procurement of means to their gratification; and when all is prepared, from both flows forth activity in real life. It will require but little reflection to make this clearly apparent. A man has some end in view, which is a desire for something; this is the first impulse he feels. He never thinks first, but always feels or desires first, and thought is but the consequence. As just said, a man has some end in view, which is a desire for something; immediately his reasoning powers awake, and eagerly search about for the means by which that end may be obtained; but still a man might desire for ever, and think for ever, and no effect would be produced, if both affection and thought did not consummate themselves in action. In the erection of a house, the first thing is a desire for a building suitable for a certain purpose; then the understanding takes up the matter, and wisely determines what is to be done, and decides upon the best modes of doing it; and, lastly, all the machinery required is put in operation, and the building is completed, the end accomplished.

That all this is true, the simplest mind can see at a glance. Now, we wish further to say, that whatever be the quality of the mind's affection, such will be the quality of the thoughts that are prompted by this affection, and such the quality of the ultimate action; if good, good; if bad, bad. An evil will acts by false thoughts, and produces evil actions; while a good will acts by true thoughts, and produces good actions.

This philosophy of the human mind, simple and comprehensive as it is, is now seen to be eminently practical. It causes a man to think well of his ends; and the quality of these he can see in his actions, for they reflect the ends which govern a man as clearly as a mirror reflects his face. If the act be wrong, the end in view, from which that action flowed as a natural result, must be wrong also; for a sweet fountain cannot send forth bitter waters.

Ever keeping in view this law of the human mind, the young adventurer on the sea of metaphysical knowledge will at all times be able to determine his position, and to discriminate between the true and false lights by which he is compelled to steer his soul-laden bark.

Man's study of himself, aided by certain data in the outset, is full of interest, and fraught with the most important results. He who carefully observes the operations of his own mind, is soon able to correct false views, and soon acquires a soundness of thinking on all subjects. He makes a stronger impression on society; his influence widens daily.

Very many considerations might be urged upon young men by which to make them feel the importance of improving their minds in every possible way; the highest consideration we can urge is that of man's duties to common society, and the impossibility of his discharging them efficiently, unless every power of his mind be cultivated to the extent of the opportunities afforded him. But too few are able to feel so unselfish a consideration as this, and they must be moved by the lower influences of respectability, eminence, or the possession of wealth, all, or some of which, are the rewards that follow the cultivation of man's intellectual ability. An ignorant man may get rich, but he cannot rise into intellectual society; he can never be anything in the world except a mere money-maker, nor be esteemed for anything but his wealth. He contributes nothing toward the world's true advancement; he is, after all, but a drone in the social hive; and when he dies, his memory soon perishes with him, unless he provides for having it inscribed upon some imposing edifice, built by the money he could no longer use for his own selfish purposes—to no truly great man an enviable fame.

**MEN OF LOW ESTATE BUT LOFTY SOULS.**—Heyne, the celebrated German classical scholar, stands pre-eminent. His father was a poor weaver, who was not able to pay even at the lowest rate for his instruction in the common elements of learning. The youth had a strong desire to learn Latin; and a son of his schoolmaster consented to teach him at fourpence a week; but Heyne was unable to pay even this pittance. One day he was sent for bread; and as he went he pondered sorrowfully on this great object of his wishes, and entered the bakery in tears. On learning the cause of his grief, the kind-hearted baker promised to pay the fee required, at which Heyne says he was quite intoxicated with joy; and as he ran ragged and barefoot through the streets tossing the loaf of bread in the air, it slipped from his hand and rolled into the gutter. This accident, and a sharp reprimand from his mother, who could not well afford such a loss, brought him to his senses. He continued his lessons for nearly two years, when his young teacher told him he had taught him all he knew. Heyne afterwards was celebrated for his great superiority in classical learning; so that at his death, it was said the university where he was Professor, had lost its chief distinction and honour for half a century.

## ONWARD!

**NEW BRICK-MAKING APPARATUS.**—Messrs. Woodworth and Mower, of the United States, have taken out an English patent for some new brick-making apparatus, in which percussion is used to consolidate the plastic materials in the moulds. A sliding mould-charger is in connection with the ram, or piston, in such manner as to render it a part of the mould some time after a percussion of the ram. The moulds have inclined sides, and are connected with machinery, which lifts the moulded article previous to a second percussion, so that it does not adhere to the mould, and allows the compressed air to escape.

**THE DUBLIN INDUSTRIAL EXHIBITION.**—Mr. Benson's design has been adopted for the Exhibition building of next year, presenting a front to Merrion-square of 300 feet. The main feature of the elevation consists of a semi-circular projection, which forms the eastern termination of the central hall, which will be 425 feet in length, and 100 feet in height, covered by a semi-circular roof in one span of 100 feet. On each side of this hall, and running parallel to it for the same length, will be a hall 50 feet wide, with domed roofs, and 65 feet high, and two compartments 25 feet wide, and divided into sections of 25 feet square, forming convenient divisions for the purposes of classification. Over these compartments will be spacious galleries, running the length of the building. The available area of ground-floor will be 147,704 feet. Of wall space there will not be less than 87,000 feet.

**A NEW RAILWAY PROJECT.**—The *Constitutionnel* of France announces a railway project which, if carried out, will have a great social as well as political importance. It is a scheme for connecting the three capitals, Paris, Lisbon, and Madrid, by means of a system of iron ways. The three governments, described as vividly interested in the idea, have engaged to favour, by all the means at their disposal, the formation of Companies willing to execute the works, and to guarantee, so far as each is concerned, the fulfilment of all the conditions stipulated for in the convention. The line is to run from Paris to Madrid, and from Madrid to Lisbon. This will be good news to the hosts of summer tourists, whose vacation is confined to a few weeks, and to whom the south-west of Europe has hitherto been a sealed book. With such a road as is here announced, the Alhambra will soon become as well known as St. Mark's, the bull-fights of Madrid as the horse-races of the Corso.

**CRIMINAL STATISTICS OF 1851.**—The Criminal Tables for the past year, which have lately been published, afford pleasing evidence that the decrease of crime, as compared with the amount ten years ago, continues to be maintained. For, although the slight increase of 4.2 per cent. marks the returns of 1851, as compared with those of 1850, the increase of population may be most fairly adduced as a satisfactory cause for this increase. The commitments during the last ten years stand thus:

|       |         |       |         |
|-------|---------|-------|---------|
| 1842  | 31,309  | 1847  | 28,833  |
| 1843  | 29,591  | 1848  | 30,349  |
| 1844  | 26,512  | 1849  | 27,816  |
| 1845  | 24,503  | 1850  | 26,813  |
| 1846  | 25,107  | 1851  | 27,960  |
| Total | 136,852 | Total | 141,771 |

**SUBMARINE TELEGRAPH EXTENSION.**—The Turin correspondence of the *Gazette de Suive* refers to a great scheme of submarine telegraph extension. The telegraphic lines at Charing-cross are already connected with the French lines to Lyons, whence the corresponding wires will soon enable them to reach—by way of Chambery—Turin and Genoa on the Mediterranean. From this latter point it is proposed that the Sardinian government should lay down a line to Spezia, whence the Submarine Company would carry it under water to the little island of Gorgona, and across it, and then again under water to Bastia. The French government, if this scheme be realised, will then take up the work, carrying the lines to Corsica; whence a great gutta serena tube will be laid to Cagliari in Sicily. From Sicily to the African coast is supposed to be a practicable distance; and Signor Bouelli, whose plans we are describing, proposes, when that shore is reached, to make Tunis a great telegraphic station;—whence France would carry a system of wires to Bongie and Algiers; and England another system to Tripoli, Alexandria, Cairo, and Suez.

**REGULATING TIME BY THE MAGNETIC TELEGRAPH.**—The method of regulating the time of a whole country by a chosen meridian, through the instrumentality of the magnetic telegraph, is about to be introduced into Germany. Dr. Erb, professor of astronomy in the university of Heidelberg, has obtained a grant of land from the corporation of Bamberg—a town on the river Regnitz, in Northern Bavaria,—on which he proposes to erect a high tower, on the top of which will be placed an electrical clock, like the one at Charing-cross. The necessary powers have all been conceded to Dr. Erb by the government at Munich; and the works, it is said, will be forthwith commenced. In itself, Bamberg is a well-selected point for such purposes as a general regulation of time for Germany. It is as nearly as possible in the centre of the Teutonic lands. It is connected by the Leipzig line with the system of northern and eastern railways; the Augsburg line enables it to touch, at the same moment, Stuttgart, Munich, and the Lake of Constance,—the Frankfurt branch brings it into communication with the Rhenish cities from Basle to Düsseldorf. It has also the immense advantage of lying on the great water-route of central Europe by means of the Ludwig Canal, between the Danube and the Rhine, the North Sea, and the Euxine. With a proper feeling for the distinction which these works will confer on their city, the municipality of Bamberg have made a free gift of the site selected by Dr. Erb for his tower.

## PARLOUR PASTIME.

*A curious Trick of Legerdemain, called the two Convertible Coins.*

TAKE two sovereigns, which may be counterfeits, and two shillings, and grind part of them away on one side only, so that they may be about half the common thickness, and quite thin at the edge. Then rivet a sovereign and a shilling together, and lay one of these double pieces, with the shilling uppermost, on the palm of your hand, at the bottom of your three first fingers, and the other piece, with the sovereign uppermost, in like manner on the other hand. Having done this, bid the company take notice in which hand is the sovereign, and in which the shilling; and, as you shut your hands, turn the pieces dexterously over, and when you open them again, the shilling and the sovereign will appear to have changed places. This, perhaps, may appear to be a very trifling trick, and so it certainly is when known; but by deceptions similar to this, many celebrities excite universal admiration.

## ENIGMA.

My present task, ye riddlers, is t'nfold  
What's better far, and dearer too than gold.  
Without my aid the parson could not preach;  
Without my aid the tutor could not teach;  
Without my aid the poet could not write;  
Without my aid the hero could not fight;  
Without my aid the plodder could not sow;  
Without my aid the rustic could not mow;  
Without my aid the miser could not hoard.  
His paltry pelf, with which his coffer's stor'd:  
The soldier brave, upon the hostile plain,  
For want of me to quell his foes, is slain;  
The sailor bold, when on the ocean tost,  
For want of me to save his life, is lost.  
The faithful fair one, and the love-sick swain,  
Oft wish for me to fix the roseate chain,—  
When I refuse, they feel despair's keen pain.  
Part of mankind salute me with respect;  
Part of mankind pass by me with neglect;  
But mark, while those are recompensed with gain,  
Behold the heedless punish'd for disdain.  
Then fair ones mind, unto these hints attend,  
And when you find me treat me as a friend.

## ARITHMETICAL QUESTIONS.

I.

A cunning servant agreed with a master who was unskilled in numbers, to serve him 11 years—without any other reward for his services than the produce of one wheat grain for the first year, and that produce to be sown the second year, and so from year to year, until the end of the time. Now supposing the increase to be uniformly in a tenfold proportion; and 7,680 grains of wheat to fill a pint measure; how much would his 11 years' wages amount to, estimating the corn at 6s. per bushel?

II.

If 100 stones be placed in a right line, exactly a yard asunder, and the first a yard from a basket; what length of ground must a person go who picks them up singly, returning with them one by one to the basket?

## PRACTICAL PUZZLE.

Cut a piece of thin wood the shape indicated by the diagram, and having perforated it as above, draw a piece of string, with a smaller heart attached at the end, through No. 1, pass it behind, and bring it through 2 before, and through 3, and so on to 6, when a loop must be made so as to enclose that part of the string which runs from 2 to 3. The puzzle is to remove the string from the large heart altogether, without unfastening the loop.

## CHARADE.

My first is equally friendly to the friend and the lover, the toper and the student. My second is light's opposite; yet they are frequently seen hand in hand; and their union, if judicious, gives much pleasure. My whole is tempting to the touch, grateful to the sight, but fatal to the taste.

## TRANSFIGURED PLAYING CARDS.

THE FOUR OF CLUBS.—A CLUB-HOUSE WHERE MATCHES ARE MADE.

## CONUNDRUMS

1. Who is that lady, whose visits nobody wishes, though her mother is welcomed by all parties?
2. Who was the greatest man that England ever produced?
3. Why is a drunken man like a Quaker?
4. What is that which few like to give away, and yet nobody wishes to keep?
5. If I raise a fallen man, what tradesman do I resemble?
6. Why is a proud woman like a music-book?
7. Of what trade or profession was Adam?
8. Behold the worst of all beings, and you will discover mischief still remaining.
9. What word is that in the English language, of one syllable, which, by taking away the two first letters, becomes a word of two syllables?
10. What does a stone become in the water?
11. Which of the cardinal virtues will water resemble when just frozen?
12. What viand is that which denotes a lean wife, roasted; with the ruin of man for sauce?
13. Why does a radical wear a white hat?
14. Where did the Witch of Endor live?
15. Why is a soldier in battle like idleness?
16. Where was Peter when the candle went out?
17. Why is Virgil, translated, like hatred?

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 733.

## REBUSES.—Sap, Asp, Pass. 2. Lever, Revel.

PRACTICAL PUZZLE.—Take a piece of writing paper about three times as long as it is broad, say six inches long and two wide. Fold the upper corner down, as shown in Fig. 1; then fold the other upper corner over the first, and it will appear as in Fig. 2. You next fold the paper in half lengthwise, and it will appear as in Fig. 3. Then the last fold is made lengthwise also in the middle of the paper, and it will exhibit the form of Fig. 4: which when cut through with the scissors in the direction of the dotted line, will give all the forms mentioned.

CONUNDRUMS.—1. Because she was a great Polly Titian. 2. A.—Because it makes her REAR. 3. In February, because it is the shortest. 4. There is a difference. 5. Because one is notable, and the other not-able. 6. Because 'tis a queer-eye. 7. Because it is hardly done. 8. Cockermouth. 9. Because he makes a sty nasty. 10. It is the capital of France. 11. A pair of snuffers. 12. Because he has taken orders. 13. On the head. 14. Because it makes hot sweat. 15. Two, inside and outside. 16. Because he has an attachment to carry on (carrion). 17. It can a tale (tell) unfold. 18. Because it is Barking. 19. On the West. 20. A secret. 21. Shrove-Tuesday. 22. Musick. 23. They are in de-as.

CHARADES.—1. ADD-RE-LAIDE. 2. WOOL-WICH.

## OUR CORNER CUPBOARD!

**A KENTUCKY BASS.**—We have a bass singer here who can go so low that it takes three men to get him up again.

"I'll take your part," as the dog said when he robbed the out of her portion of the dinner.

If "reserve is a debt to prudence," then dumb men are the most prudent fellows in the world.

A lady, on being separated from her husband, changed her religion; being determined, she said, to avoid his company in this world and the next.

On Lake Champlain they troll for pickerel with a piece of *stear*, shaped like the bowl of a spoon, to which hooks are attached. Even fish bite at "the tin."

**CURRAN.**—Curran was once asked what an Irish gentleman, just arrived in England, could mean by perpetually putting out his tongue. "I suppose," replied the wit, "he's trying to catch the English accent."

**DIDEROT** has said, that in order to write well on the subject of females, it would be necessary to dip the pen in the dyes of the rainbow, and dry the paper with powder borrowed from the wings of the butterfly.

**NAIVETE.**—Children sometimes light on odd turns of expression. One hearing that his mother had lost a long lawsuit, ran home, and said, "Dear mamma, I am so glad you have lost that nasty process that used to plague you so."

**LORD LOUGHBOROUGH.**—Lord Loughborough rallying a physician, one day, on the inefficacy of his prescriptions, the doctor said, he defied any of his patients to find fault with him. "That," answered the witty lord, "is exactly what Jack Ketch says."

**SHAME.**—An Irish lady wrote to her lover, begging him to send her some money. She added, by way of postscript, "I am so ashamed of the request I have made in this letter, that I sent after the postman to get it back; but the servant could not overtake him."

**HOW TO GET AN ENEMY.**—Lend a man a small sum of money for a day. Call upon him in a week for it. Wait two months. In three months insist upon his paying you. He will get angry, denounce and speak of you in abusive terms. We have seen this experiment tried repeatedly, and never knew it to fail.

A boy was lately asked, "Who killed Abel?" He promptly replied, "Andrew Jackson." This equals the catechetical examination of a lad living in the wildest regions of the green mountains:—"Into what state did the fall bring mankind?" asked the teacher. With a most rueful expression of countenance, the urchin bawled out "Varmounts."

**SCENE IN COURT.**—Not long since one of the learned counsel in a small suit deemed it necessary to shake the testimony of a Mr. Samuel Butterworth by impugning his veracity. A witness was called to the stand. "Do you know Samuel Butterworth?" "Yes." "What is Butterworth?" "Two and tenpence a pound, although some folks have paid as high as three shillings."

**PASSION.**—A certain member of Parliament is well known to have possessed a most irritable temper. His footman, desiring to be dismissed, "Why do you leave me?" said he. "Because, to speak the truth, I cannot bear your temper." "To be sure, I am passionate, but my passion is no sooner off than it is on again."

**EXPECTORATING JOKES.**—We spit upon the Baltimore platform.—*New York Tribune.* Then you cannot expect to rate as a Whig.—*Rock der American.* He can, if he *chews*.—*Lynn News.* That will depend some upon the disposition of the old sagers.—*Clinton Courier.* Well, supposing he has old Pennsylvania and Virginia to back her?—*Lowell's Populi.* He'll end in smoke as usual.—*Crypt Bag.*

**OLD BAILEY WIT.**—A man was tried for stealing a pair of boots from a shop-door in Holborn, with which he ran away. Judge, to shoemaker who had pursued and seized the prisoner—"What did he say when you caught him?" Witness—"My lord, he said he took the boots in joke." Judge—"And pray, how far was he off when you caught him?" Witness—"About forty yards, please your lordship." Judge—"I am afraid this is carrying the joke too far;" and he condemned the prisoner.

A young woman meeting a learned doctor, in the square of a certain town, asked him where she might find a shopkeeper whom she wanted. The doctor gave the following direction:—"Move your pedestrian digits along the diagonal of this rectangle, in a line perpendicular to the earth's equator, till you arrive at the junction of the two sides. Diverge then to the left, at right angles—Perge for about fifty paces in that quadrangle, and you will have ocular demonstration of him, standing in an orifice made in an edifice for the purpose of Illumination."

**SHORT DAYS AND LONG NIGHTS.**—A certain vivacious writer, like most wits, is a lover of conviviality, which frequently leads him to spend the whole night in company, and all the next morning in bed. On one of these occasions, an old female relation having waited on him before he had arisen, began to read him a familiar lecture on prudence; which she concluded by saying, "Ah! I see plainly that you'll shorten your days." "Very true, madam," replied he, "but, by the same rule, you must admit that I shall lengthen my nights."

## OUR MEMORANDUM BOOK!

**THE INCONVENIENCE OF GREATNESS.**—"Tis a pity a man should be so potent that all things must give way to him. Fortune therein sets you too remote from society, and places you in too great solitude. The casiness and mean facility of making all things bow under you, is an enemy to all sorts of pleasure. This is to slide—not to go; this is to sleep, and not to live. Conceive a man accompanied with omnipotency, you throw him into an abyss. He must beg disturbance and opposition as an alms.

**PERFECTION.**—That historian who would describe a favourite character as faultless, raises another at the expense of himself. Zeuxis made five virgins contribute their charms to his single picture of Helen; and it is as vain for the moralist to look for perfection in the mind, as for the painter to expect to find it in the body. In fact, the sad realities of life give us no great cause to be proud either of our minds or of our bodies; but we can conceive in both the possibility of much greater excellence than exists. The statue of the Belvidere Apollo is quite as likely to be married, as he that will have no wife until he can discover a woman that equals the Venus of Cleomeles.

**ENVY.**—When a statue had been erected by his fellow-citizens of Thasos, to Theagenes, a celebrated victor in the public games of Greece, we are told that it excited so strongly the envious hatred of one of his rivals, that he went to it every night, and endeavoured to throw it down by repeated blows, till at last unfortunately successful, he was able to move it from its pedestal, and was crushed to death beneath it on its fall. This, if we consider the self-consuming misery of envy, is truly what happens to every envious man. He may throw down his rival's glory; but he is crushed in his whole soul beneath the glory which he overturns.

**DISINTERESTED GIFTS.**—The most disinterested of all gifts are those which kings bestow on undeserving favourites; first, because they are purely at the expense of the donor's character; and secondly, because they are sure to be repaid with ingratitude. In fact, honours and titles so conferred, or rather so misplaced, dishonour the giver, without exalting the receiver; they are a splendid sign to a wretched him; an illuminated frontispiece to a contemptible misal; a lofty arch overshadowing a gutter. Count millions lifted up from obscurity by their vices, and splendid, only because they reflect the rays of royal munificence, may be compared to those few, which the sun raises up from a swamp, merely to obscure the beams which were the cause of their elevation.

**DIFFICULTY.**—The word "difficulty" is simply a relative term. "There are a thousand difficulties in the way," is true; "There is no difficulty at all," is also true. The truth of the statement, in each case, depends upon the speaker. There is no difficulty in the thing to be done; the difficulty lies solely in the inability of the proposer. That little child is struggling hard to lift the footstool on which it has been sitting; it cannot. Whence the difficulty? That blind old man makes serious "sport" to thousands, by hurling an amphitheatre to the ground. You could not have done it. Why not? Samson found no difficulty. One of the current falsities of society is, "The thing cannot be done." Yes, it can. Anything can be done, provided it do not involve a contradiction in terms, or a violation of immutable law. Material difficulties will not yield to manual power, except by a very slow process; but bring in mind, and embody it in art, and the difficulty vanishes. Mind masters matter, and art is mind in action.

**PLEASURES OF READING IN YOUTH.**—"The greatest pleasure in life (says Hazlitt) is that of reading while we are young. I have had as much of this pleasure, perhaps, as any one. As I grow older, it fades; or else, the stronger stimulus of writing takes off the edge of it. At present, I have neither time nor inclination for it; yet I should like to devote a year's entire leisure to a course of the English novelists; and, perhaps, clap on that old sly knave, Sir Walter to the end of the list. It is astonishing how I used formerly to relish the style of certain authors, at a time when I myself despaired of ever writing a single line. Probably this was the reason. It is in mental as in natural ascent—intellectual objects seem higher when we look down from any given elevation above the common level. My three favourite writers, about the time I speak of, were Burke, Jannius, and Rousseau. I was never weary of admiring, and wondering at the felicities of the style, the turns of expression, the refinements of thought and sentiments; I laid the book down to find out the secret of so much strength and beauty, and took it up again in despair, to read on and admire. So I passed whole days, months, and, I may add, years; and have only this to say now, that, as my life began, so I could wish that it may end.

**AN AMERICAN SERVANT'S RIGHTS.**—I was told at Boston of a gentleman in the neighbourhood, who, having engaged a farm-servant, found him very satisfactory in all respects, except that he invariably came into the house, and into his master's room, with his hat on. "John," he said to him one day, "you always keep your hat on when you come into the house." "Well, sir, haven't I a right to?" "Yes, I suppose you have." "Well, if I have a right to, why shouldn't I?" This was a power from one man to another where all have equal rights. So, after a moment's reflection, he shrewdly asked, "Now, John, what'll you take—how much more wages will you ask to take off your hat when you come in?" "Well, that requires consideration, I guess." "Take the thing into consideration, then, and tell me to-morrow morning." The morrow comes. "Well, John, have you considered what additional wages you are to have for taking your hat off?" "Well, sir, I guess it's worth a dollar a month." "It's settled then, John; you shall have another dollar a month." And the gentleman retained a good servant, while John's hat was always in his hand when he entered the house.

# THE BEST IS THE CHEAPEST.

The best Congee Tea ..... 3s. 3d. per lb.  
The best Imperial Souchong ..... 4s. 6d. ..  
The best Mysore Gunpowder ..... 5s. 6d. ..  
The best Plantation Coffee ..... 1s. 6d. ..  
The best Old Mocha Coffee ..... 1s. 4d. ..  
40s., worth, or upwards, sent carriage free to any part of  
England, by PAUL & CO., Tea Merchants, No. 8,  
King William-street, City, London.

**GLENFIELD PATENT STARCH,** used  
in the Royal Laundry, and Wetherpoon's Steam-  
ing Confectionery.—Sold by all respectable Grocers and  
Druggists.—Glasgow: H. Wetherpoon & Co., 40, Dunlop-  
street, City. London: Wetherpoon & Co., 40, King William-  
street, City.

**SMART YOUNG MEN.**—For your HATS  
go to PARKER'S noted Wholesale and Retail Hat  
Warehouses, opposite Shoreditch Church, where you can  
select from Fifty different Shapes of the best Style and  
Workmanship in London. A first class Hat, in every  
prime shape, 6s. 6d. You are respectfully invited to select  
your shape from the window.—Note, PARKER'S, 127 and  
129, opposite Shoreditch Church, and City road, one door  
from Old-street.

"Costly thy habit as thy purse can buy,  
But not express'd in fancy—rich, not gaudy;  
For the apparel oft proclaims the man."—*Hamlet.*

**EVERY WELL-DRESSED MAN KNOWS**  
how difficult it is to find a tailor who thoroughly un-  
derstands the peculiarities of each figure, and can suit its  
requirements with a well-cut gentlemanly fitting garment,  
in which ease and taste being equally regarded, the eye of  
the observer is pleased with its graceful effect, while the  
comfort of the wearer is secured. Hence it is that so few  
feel "at home" during the first day's wear of any new  
garment, and so many are apparently doomed to appear in  
clothes, however costly, that never can become adapted to  
their forms. To remedy so manifest a deformity in cos-  
tume, FREDERICK FOX adopts this means of making  
known that he has practically studied both form and  
fashion in their most comprehensive meaning, and in the  
course of an extensive private connexion has clothed every  
conceivable development during the past thirteen years,  
always adapting the garment, whether coat, waistcoat, or  
trousers, to the exigencies of its individual wearer, and the  
purposes it is intended to serve, thus invariably attaining  
elegance of fit with that regard for economy which the  
spirit of the age dictates.—F. FOX, practical tailor, 73,  
Cuthill, same side of the way as the Royal Exchange.

**A GREAT LUXURY.**  
**PAYNE'S ROYAL OSBORNE SAUCE,**  
prepared by Her Majesty's Chemist, in the Isle of  
Wight, specially patronised by the Royal Yacht Squadron,  
exhibited and used at the Great Exhibition of 1851, is con-  
sidered the premier sauce for fish, game, hot and cold  
meats, soups, gravies, &c.  
"We have tasted, and relished, many piquant sauces, but  
the Royal Osborne beats them all."—*Sun*, April 24, 1851.  
Sold wholesale by Rumsey, 3, Queen-street place, London;  
retail, by Fortnum & Mason, and sauce-vendors generally.

**LANCELOTT'S PATENT PORTABLE**  
**COOKING STOVES,** for Australian Gold-Diggers,  
Farmers, and others. Also, Improved Portable Copper,  
for Washing, Brewing, Tallow-melting, &c.; and Gold-  
Diggers' Wash pans, and Iron Pails, and Baskets, at prices  
that will enable the Australian Adventurer, with little  
trouble, to clear a profit of about £1,000 per cent. imme-  
diately on reaching his new home.

A variety always on hand at Davis's Iron Works, 11,  
Barbican, London.  
Coffee-drinkers going to the Colonies should take with  
them one of Davis's Hand Coffee-Roasters.

**WHEN YOU FURNISH, OBTAIN,** Post-  
free, on application, DEANE, DRY & Co.'s Gene-  
ral Furnishing Priced List, enumerating more than 300  
articles selected from the various departments of their  
establishment, requisite in fitting up a Family Residence.  
The stock includes TABLE CUTLERY, ELECTRO-  
PLATE, LAMPS, PAIRER MACHINES, FEN-  
TERS AND FIRE IRONS, IRON BEDSTEADS, BRIT-  
ANNIA METAL, Fine and Japan Ware, Turnery,  
Brushes, &c., &c. Established A.D. 1760.  
DEANE, DRY, and Co. (opening to the Monument),  
London-bridge.

## THE HOME COMPANION PORTFOLIO.

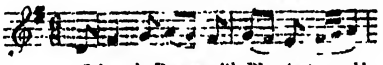

We strongly recommend to our subscribers the adop-  
tion of the "HOME COMPANION PORTFOLIO," for the  
preservation of the Weekly Numbers or the Monthly  
Parts. These Portfolios are made with elastic cords at  
the back, to hold Fifty-two Numbers, or Twelve Monthly  
Parts, which comprise one Volume. At the end of each  
year they may be taken out and bound, and the Portfolio  
may be employed to preserve the Numbers or Parts of the  
successive Volumes. The Portfolio is a most valuable  
outlet, and is sold by the preservation of the Numbers,  
which, hereafter, may be difficult to obtain. The Port-  
folio is beautifully embossed, and illuminated with silver,  
by a new invention introduced by LEITCH, Fox, and  
Hodges. It is an ornament for the drawing-room table—  
Order of any Bookseller.

**GUTTA PERCHA.**  
Just published, price 1d.  
**A FEW WORDS TO JOURNEYMEN**  
**SHOEMAKERS ABOUT GUTTA PERCHA:**  
what it will do, and what they may do, to turn it to their  
advantage. Illustrated with Wood Engravings, showing a  
never-failing Method of attaching Gutta Percha to Leather  
Soles. By THOMAS HORTON, Shoemaker.  
London: Partridge and Oakley, Paternoster-row. May be  
had of all Booksellers and Newsamen, or by sending two  
Postage Stamps.

Just published, price One Shilling.  
**CLEANINGS FROM THE GOLD FIELDS.**  
**A GUIDE FOR THE EMIGRANT IN AUSTRALIA**  
By an Australian Journalist. With Illustrations, from  
Drawings taken on the spot by J. S. FROST, Esq., and four  
Maps.  
Addey and Co., No. 21, Old Bond-street, London.

**NATIONAL EDUCATION.**  
Now publishing, the cheapest and best Series of Educa-  
tional Books ever issued, entitled  
**ILLUSTRATED TWO-PENNY SCHOOL**  
**BOOKS,** divided into the following Series:  
1. First Spelling & Reading. 7. Geology.  
2. Second ditto & ditto. 8. Astronomy.  
3. Graduated Grammar. 9. Natural History.  
4. Writing & Composition. 10. English History.  
5. Arithmetic. 11. Physical Training.  
6. Geography. 12. Moral Culture.  
Forming Vol. I., price 1s. 6d., Forming Vol. II., price 1s. 6d.  
The Numbers may be had separately, price 2d., and the  
Numbers and Volumes will always be kept in print.

**FOR PARENTS AND NURSES.**  
Now ready, at all Booksellers, price 1s.,  
**INFANTHOOD AND CHILDHOOD: A**  
**POPULAR GUIDE TO ITS MANAGEMENT AND**  
**TREATMENT;** with Supplement, containing the best  
Modes of preparing the Diet of the NURSE. By JACOB  
DIXON, Surgeon, Apothecary, and Accoucheur; formerly  
Resident Medical Officer of the Charlotte street Lying-in  
and Sick Dispensary. Author of "A FAMILIAR TREA-  
TISE ON INFANTICIDE."  
London: Houlston and Stoneman, Paternoster-row.  
Post free, from the Author, 25, Bedford row, London, for  
Twelve Stamps.

"Handel's 'JUDAS MACCABEUS.'"  
  
O lovely Peace, with Plenty crown'd  
**NOVELLO'S MUSICAL PRESENTS.**  
—Octavo Editions of HANDEL'S Israel in Egypt, 6s. 6d.;  
Messiah, 6s. 6d.; Samson, 7s. 6d.; Judas Maccabeus,

Three Masses by Mozart, Haydn, and Beethoven, 8s. 6d.;  
—LONDON SACRED MUSIC WAREHOUSE, 69, DEAN-STREET,  
Soho, and 21, Pall Mall.  
Catalogues, postage-free, six penny stamps.

**ANDERSON'S PORTABLE SPRING**  
**PRESSURE SPECTACLES** that never shift their  
position, but when removed from the face immediately col-  
lapse. Double eye glass to open and close with one hand  
only, to fix on the nose or place before the eyes at the  
option of the wearer. Invention of the utmost Import-  
ance. Sold by Messrs. HARRIS AND SON, 52, Great  
Russell-street, London; and all appointed Agents through-  
out the kingdom.

**FIFTY THOUSAND CURES BY DU**  
**HARRY'S delicious REVALENTA ARABICA**  
**FOOD,** without medicine, inconvenience, or expense, (as  
it saves fifty times its cost in other remedies.) Cure No.  
71, of Dyspepsia.—From the Right Hon. the Lord Stuart  
de Decies:—"I have derived considerable benefit from Du  
Harry's Revalenta Arabica Food, and consider it due to  
yourself and the public to authorize the publication of  
these lines.—Stuart de Decies.—Cure No. 49,532.—  
"Fifty years' insupportable agony from dyspepsia, nervous-  
ness, asthma, cough, constipation, flatulency, spasms, sick-  
ness at the stomach, and vomiting, have been removed by  
Du Harry's excellent Food.—Maria Jolly, Wortham Ling,  
near Duss, Norfolk." In capsules, suitably packed for  
all climates, and with full Instructions.—1 lb., 2s. 6d.;  
2 lb., 4s. 6d.; 5 lb., 11s.; 12 lb., 22s.; super refined, 5 lb.,  
2s.; 10 lb., 3s. The 10 lb. and 12 lb. carriage free on re-  
ceipt of Post-office order.—Harry Du Barry and Co., Re-  
gent-street, London; also at 60, Gracechurch-street; 4,  
Cheapside; 48, Bishopsgate-street Within.

**HOLLOWAY'S OINTMENT AND PILLS**  
**WONDERFULLY EFFICACIOUS IN CURING**  
**SCROFULA.**—Mr. L. FORDGE, shoemaker, of Figue,  
Aberdeenshire, suffered for a long time from a large wound  
in his thigh, from which disordered pieces of the bone came  
out. He was at the Aberdeen Infirmary for several weeks,  
but in defiance of the treatment there adopted, he became  
so much worse, that the surgeon advised him to have the  
limb amputated: on his objecting to this, he was discharged  
as incurable, when he commenced using Holloway's Oint-  
ment and Pills, which have so effectually cured him, that  
he is able to resume his work, and now enjoys most excel-  
lent health.—Sold by all Druggists, and at Professor Hol-  
loway's Establishment, 244, Strand, London.

# PAGE WOODCOCK'S WIND PILLS.

For WIND in the STOMACH, windy spasms, indi-  
gestion, heart-burn, palpitation of the heart, jaundice,  
hiccoughs, and all complaints having their origin in a  
disordered state of the stomach. They are purely vegetable,  
being composed entirely of vegetable extracts; hence in all  
cases where the stomach does not rightly perform its office,  
they are at once the most harmless, pleasant, and efficacious  
remedy possible. These pills, by their peculiar action,  
give a tone to the stomach and bowels, disperse wind,  
assimilate with the food, and purify the blood. The sale of  
these pills is unprecedented: 2,000 boxes have been sold in  
Lincolnshire in three months—a sale which no other medi-  
cine ever obtained, in so limited a circle, in so short a  
time. They are a sterling medicine, far superior to the  
numerous quack medicines of the day, most of which are  
only intended to enrich the pockets of the quacks, and not  
for the actual cure of diseases.

(Testimonial from a Clergyman of Lincoln.)  
"MR. WOODCOCK.—Sir, Having derived much advan-  
tage from your 'Wind Pills,' I have much pleasure in re-  
commending them to others, in the hope that by so doing  
it may be the means of alleviating and ultimately remov-  
ing pain and suffering, and of remunerating you in some  
degree for the preparation of so useful a medicine."  
"A MINISTER OF RAGBURY."  
Sole Wholesale and Retail, in London, at Mr. Fairing-  
don-street; 10, Bow Church-yard; 67, St. Paul's Church-  
yard, and 68, Cornhill; and may be obtained through all  
Medicine Vendors, or sent free by post on receipt of the price  
in stamps (pre-paid), by PAGE D. WOODCOCK, Chemist,  
Lincoln. Price 1s. 1d., 2s. 6d., and 4s. 6d. per box.

**TEETH.**  
129, Strand, and 55, Connaught-terrace, Hyde-park.  
Teeth, 5s. each; a complete Set, 45s.

**MR. JONES, Inventor and Manufacturer**  
**OF IMPROVED ARTIFICIAL TEETH.** They  
are permanent, never change colour, break, or decay, and  
are better adapted for Articulation and Mastication than  
any hitherto in use. Attendance from 10 till 6.

**BEAUTIFUL HAIR, WHISKERS, EYEBROWS, &c.,**  
**MAY be with certainty obtained by using a**  
very small portion of ROSALIE COUPELLE'S  
**PARISIAN POMADE** every morning, instead of any oil  
or other preparation. A fortnight's use will, in most in-  
stances, show its surprising properties in producing and  
curling Whiskers, Hair, &c., at any age, from whatever  
cause deficient, as also checking grayness, &c. Persons  
who have been deceived by imitations of this Pomade,  
puffed off by so-called "Testimonials," as spurious as the  
article they represent, will do well to make ONE TRIAL  
of the only genuine preparation. Price 2s. per pot. Sent  
free by post, with instructions, &c., on receipt of 2d. post-  
age stamp, by Madame COUPELLE, Ely place, Holborn,  
London; where she may be consulted daily, from 2 till 5.  
Testimonials.—Dr. Erasmus Wilson: "It is undoubtedly  
the best preparation I know."—Mr. Yates, hair-dresser,  
Milton: "The young man has now a good pair of whis-  
kers; I want you to send me two pots for other customers."

**SUPERFLUOUS HAIRS.** FRY'S PASTA  
removes superfluous hairs in a few minutes (warranted  
not to injure the most delicate skin). This preparation  
for ten years has enjoyed an extensive and successful  
patronage. All persons can use the Pasta with ease and  
safety. Mrs. Fry will forward a packet, free by post, to  
any part of the kingdom, on receipt of a post office order,  
or stamps, price 1s. 6d. Full directions for use and testi-  
monials proving its efficacy, are enclosed with each packet.  
Prepared by Mrs. LUCIA FRY, 17, Great Canterbury-  
place, Lambeth road, London. Wholesale Agents, HAWLEY  
and SON, London; RAINES and Co., Edinburgh, and 40,  
Hanover-street, Liverpool; BLANCKMANN and Co., Bridge-  
street, York.

**TO EMIGRANTS AND VOYAGERS.**  
**MOORE AND BUCKLEY'S PATENT**  
**CONCENTRATED MILK** will be found a great  
 desideratum, as it supplies Fresh Milk at all times. It is  
preserved in hermetically sealed tins, which will keep sweet  
in the hottest climate many days after being opened, each  
tin producing seven times the quantity of pure milk.  
The milk is most admirable; none should go to sea  
without it.—*Captain O'Malley, H. M. S. Assistance,*  
25th October, 1851

Commis-sions of Cocoa and Chocolate are invited to try  
**MOORE AND BUCKLEY'S COCOA AND MILK, AND**  
**CHOCOLATE AND MILK,** which are combinations of the  
finest Trinidad Cocoa and the choicest English and French  
Chocolates with the Patent Concentrated Milk, in hermeti-  
cally sealed tins. These delicious preparations are wholly  
free from the admixtures so common in the packet cocoas,  
and, considering their quality, are equally inexpensive.  
For example, a breakfast cup of PURE COCOA, combined  
with Milk and Sugar, can be had at the cost of a Penny,  
by merely adding boiling water.

The PRIZE MEDAL at the GREAT EXHIBITION was  
awarded to these preparations.  
**MOORE AND BUCKLEY'S MILK** is a combination of  
the Concentrated Milk with pure Fatina, and will be  
found a light and nourishing diet for Invalids as well as  
Infants, requiring only boiling water for its instant prepa-  
ration.

The whole of the above are prepared under the immedi-  
ate inspection of Mr. Moore, the Patentee, who was for  
many years the ordinary medical attendant of the Royal  
Family, in London.  
The finest FRENCH CHOCOLATES imported, and in every  
variety.  
**MOORE AND BUCKLEY,** RAZOR, Abney Farm and  
Works, 38, Stamford-street; Wholesale Depot, 4, Upper East  
Smithfield, London. Sold by all the Provision Merchants,  
and most of the respectable Grocers and Chemists in the  
Kingdom.

### Editor's Note-Book

#### DOMESTIC HINTS.—No. 23.

**A Kitchen Garden.**—This is one of the most important parts of general domestic economy, whenever the situation of a house will permit a family to avail themselves of its assistance, in aid of butchers' bills. It is, indeed, much to be regretted, that small plots of ground, in the immediate vicinity of the metropolis more especially, are too often frittered away into shrubberies and baby gardens, when they might more usefully be employed in raising vegetables for the family, during the week-day residence in town, than wasting their sweetness on the smoky air, in all the pride of lilac, hollyhock, and butchers' buttons, to be merely snuffed to, by the whole immigrating household on the day of rest. With a little care and attention, a kitchen garden, though small, might be rendered not only useful, but, in fact, as ornamental as a modern grass carpet; and the same expense incurred to make the ground a labyrinth of sweets, might suffice to render it agreeable to the palate, as well as to the olfactory nerves, and that even without offending the most delicate optics from Snowhill or St. Mary Axe. For the general management of such a wished-for change, we must of course refer to the numerous didactic books on the subject. It is only in accordance with our plan, to give the hint, and to record such novel points as may facilitate the proposed arrangement. It is one objection to the adoption of a kitchen garden in front of the dwelling, or in sight of the family apartments, that its very nature makes it rather an eye-sore, than otherwise, at all seasons. This, however, is an objection that may be readily got over, by a little attention to neatness and good order: whilst the plants themselves, if judiciously attended to, and the borders sown or planted with ranunculus, polyanthus, nigellotette, &c. in succession, will really be ornamental. But then, in cutting the plants for use, the business must be done neatly, all useless leaves cleared from the ground, the roots no longer wanted taken up, and the ravages of insects to be guarded against by sedulous extirpation. It will also be found a great improvement, where space will admit of it, to surround the beds with neat espalliers, with fruit trees, or even gooseberry and currant bushes trained along them, instead of these being suffered to grow in a state of ragged wilderness.

**HESTITATION.**—E. F.—Hesitation is a sign of weakness, for inasmuch as the comparative good and evil of the different modes of action about which we hesitate are seldom equally balanced, a strong mind should perceive the slightest inclination of the beam with the glance of an eagle, particularly as there are cases where the preponderance will be very minute, even although there should be life in one scale and death in the other. It is recorded of the late Earl of Berkeley, that he was suddenly awakened at night in his carriage by a highwayman, who, ramming a pistol through the window, and presenting it close to his breast, demanded his money, exclaiming at the same time, that he had heard that his lordship had boasted that he never would be robbed by a single highwayman, but that he should now be taught the contrary. His lordship putting his hand into his pocket replied, "Neither could I now be robbed, if it was not for that fellow who is looking over your shoulder." The highwayman turned round his head, when his lordship, who had drawn a pistol from his pocket instead of a purse, shot him on the spot.

**GENIUS.**—L. A.—We suspect the genuineness of eccentric genius; yet, in conversation, Dante was taciturn or satirical. Butler was silent or caustic; Gray and Alfieri seldom talked or smiled. Descartes, whose vocations formed him for meditation and solitude, was silent. Rousseau was remarkably trite in conversation—not a word of fancy or eloquence warmed. Milton was unapproachable and even irritable, when much pressed by talk of others. Addison and Moliere were only observers in society; and Dryden has very honestly told us, "My conversation is dull and slow—my humour is saturnine and reserved; in short, I am not one of those who endeavour to break jests in company, or make repartees."

**ASTIRING.**—A. U.—We agree with you, but when we hear persons gravely affirm that they have made up their minds to forego this or that improper enjoyment, we often think that it would be quite as prudent if they could also make up their bodies as well. Falstaff would have been as abominable at the banquet as a hermit, and as firm in the battle as a hero, if he could but have gained over the consent of his belly, in the one case, and of his legs in

the other. He that strives for the mastery, must join a well-disciplined body to a well-regulated mind; for with mind and body, as with man and wife, it often happens that the stronger vessel is ruled by the weaker, although in moral, as in domestic economy, matters are best conducted where neither parties are unreasonable, and where both are agreed.

**WORDS.**—C. G.—Words are in this respect like water, that they often take their taste, flavour, and character from the mouth out of which they proceed, as the water from the channels through which it flows. Thus, were a spendthrift to discourse of generosity with a miser, a demagogue to declaim on public good to a patriot, or a bigot to define truth to a philosopher, ought we to wonder if the respective parties mutually misunderstood each other? Since, on these particular terms, each is his own lexicographer, and prefers his own etymologies to the industry of a Skinner, the real learning of a Junius, or the assumed authority of a Johnson.

**CONCERTS.**—M. A.—No, a concert is not so intellectual as an opera, therefore it cannot be ranked as a higher enjoyment, although by enabling the reflective faculties to be partially free, it admits of greater power of concentration being given to the musical sense to indulge itself. Never having had the honour of being admitted to the concerts given by the Queen in Buckingham Palace, we cannot speak of them further than by reports. They are, of course, of the very highest classical kind. Those of the Beethoven Rooms, and of the Manchester square Rooms, are similarly selected, and these, we can say, possess all those sublime characteristics which belong to the highest schools of the musical art. Julien's concerts cannot be ranked high. They are no doubt at the very top of their species; but it is rather a noisy than an artistic kind. His school might be denominated the *thundering school*, as the effects which he sometimes produces through the instrumentality of his performers, have frequently produced terrific results in their utterance. The music of the Elton Serenaders has been breathed through such a black atmosphere that it has been much too thick to enter our delicate aural organ, but it evidently has in it all the elements of a Dutch concert which we have lately term

THE STRIFE OF MUSIC.

**EVIL COMPANY.**—P. S.—The following beautiful allegory we have, for your sake, translated from the German:—Sophronius, a wise teacher, would not suffer even his grown up son and daughters to associate with those whose conduct was not pure and upright. "Dear father," said the gentle Eulalia to him one day, when he forbade her, in company with her brother, to visit the volatile Lucinda; "dear father, you must think us very childish, if you imagine we could be exposed to danger by it." The father took in silence a dead coal from the hearth, and reached it to his daughter. "It will not burn you, my child, take it." Eulalia did so, and behold her beautiful white hand was soiled and blackened, and, as it chanced, her white dress also. "We cannot be too careful in handling coals," said Eulalia, in vexation. "Yes, truly," said the father; "you see, my child, that coals, even if they do not burn, blacken; so it is with the company of the vicious."

**PIGEON HOUSES.**—A. C.—Dove-cots or pigeon houses are of several kinds. If it is intended to keep a large number, the upper floor of a stable, or other building may be fitted up for them. Bricks may be removed from the walls, and stopping tiles fixed. The holes should not be too large, or too numerous, and should always have a southern aspect. Small dove-cots may be made of a cask, or boarded box placed upon a pole or against the wall, taking care to prevent the entrance, or approach of rats. The top should be covered with thatch, so contrived as to shelter the sides from the heat of the sun, and the coldness of the wind. On the sides and top should be resting-boards, on which the birds may bask in the sun. The rearing and training of pigeons require great care, for both domesticated and fancy birds are very delicate. Cleanliness and

a plentiful supply of fresh water is, as with other tamed animals, the first requisite.

**NATIONAL PECULIARITIES.**—F. K.—To make the singular distinctions your question requires, we should say an Irishman fights before he reasons, a Scotchman reasons before he fights, an Englishman is not particular as to the order of precedence, but will do either to accommodate his customers. A modern general has said, that the host troops would be as follows: An Irishman half drunk, a Scotchman half starved, and an Englishman with his belly full.

**COMMUNICATIONS RECEIVED.**—A. M. (No; by degrading the female character, you most effectually degrade your own.) G. L. (It is a violation of all the relations of friendship; when we stretch out our hand to a friend we should never clench our fist.) P. S. (we should not advise you.) It may be taken as a general rule that young people in their anger mean less than they say; old people more.) E. L. (Albert Durer was both a painter and an engraver.) M. A. (it was George the Fourth.) E. F. (your reasoning is false. He that has a truly great mind, wants nothing to make him greater.) I. W. (our twentieth of the population in France is considered as poor, and one-sixth in the United Kingdom.) G. A. (Turnpikes were so called from poles or bars, swung on a staple, and turned either way when dues were paid.) E. A. (Roman statues were classed according to their drapery.) G. A. (the United States have twenty millions of sheep, which yield annual fifty millions pounds of wool, worth twenty millions of dollars.) I. E. (No; in the newest solid rock formations, whales, seals and birds appear; above these, and animals of enormous size, birds and fresh-water shells all in concrete rocks.) A. B. (No; the centrum of a large crocodile will admit the thumb.) J. S. (we insert your feeling lines—

TO ALICE.

Farewell, Alice! kindest, fairest,  
Dearest of thy gentle sex;  
Since thy love another shares  
May he ne'er thy bosom vex!  
Fate hath made me love in blindness,  
Made me shed for you the tear,  
Made me feel its deep unkindness,  
Parting us for ever here.  
Charming woman! gentlest, dearest,  
May your path be one of peace!  
Still my heart shall claim thee nearest,  
Till its latest throbs shall cease.  
Wilt'er my faults, yet there's a virtue,  
Dwelling in my bosom's core,  
Thinking of you cannot hurt you,  
Though we're doom'd to meet no more.  
In love's sadness, tears are stirring  
From the fountains of mine eyes,  
And each liquid pearl at parting,  
Shines with blissful memories.  
Fare-you-well, then, Alice, dearest!  
None knows what I feel for thee,  
Though thy heart another shares it,  
Still, perhaps, you think of me!

C. M. (we believe it is undecided; but lime-stone is the most metalliferous of the secondary rocks, and lead and copper are the metals usually found in it.) B. F. (the tests of a probable mine are mineral waters, trees or grass discoloured, metallic ore or sand, and the products of borax.) E. L. (Monkshead is the acornite of botany, and is a poisonous plant bearing a fine blue flower.) S. R. (Mosale work probably originated in the East, but received its perfection from the Greeks, and was common with the Romans.) C. D. (the most celebrated light-house of antiquity was on the Isle of Pharos.) C. B. (No, in proportion as friction is removed we observe a tendency in motions to become more and more permanent and uniform.) E. U. (the first recorded novels are the Milesian tales of Archidoro.) P. C. (the American sea-land cotton is the most valuable of any.) D. C. (No, Portsmouth Dock-yard is the largest; it covers one hundred acres; Plymouth ninety-six; Woolwich thirty-six.) V. V. (the Scotch sabbath evening schools commenced in 1787.) T. E. (the effervescent quality of many mineral waters is occasioned by the carbonic acid which they contain.) T. M. (the best goose-feathers are brought from Somersetshire.)

96, Fleet-street, London.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 49.—Vol. I.

SATURDAY, DECEMBER 4, 1852.

[PRICE ONE PENNY.]

*"As the father gazes with rapture on his first child, the creature in whom he has given life, so did Henry survey, with transporting glori, his brother, dressed for the first time as a canon, to preach at his parish church."*

## NATURE AND ART.

BY MRS. INCHBALD.

### CHAPTER I.

At a time when the nobility of Britain were said, by the poet laureate, to be the admirers and protectors of the arts, and were acknowledged by the whole nation to be the patrons of music, William and Henry, youths under twenty years of age, brothers, and the sons of a country shopkeeper who had lately died insolvent, set out on foot for London, in the hope of procuring, by their industry, a scanty subsistence.

As they walked out of their native town, each with a small bundle at his back, each observed the other drop several tears; but, upon the sudden meeting of their eyes, they both smiled with a degree of disdain at the weakness in which they had been caught.

"I am sure," said William (the elder), "I don't know what makes me cry."

"Nor I neither," said Henry; "for though we may never see this town again, yet we leave nothing behind us to give us reason to lament."

"No," replied William, "nor anybody who cares what becomes of us."

"But I was thinking," said Henry, now weeping bitterly, "that if my poor father were alive, he would care what was to become of us: he would not have suffered us to begin this long journey without a few more shillings in our pockets."

At the end of this sentence, William, who had with some effort suppressed his tears while his brother spoke, now uttered, with a voice almost inarticulate,

"Don't say any more; don't talk any more about it. My father used to tell me, that when he was gone we must take care of ourselves; and so we must. I only wish," continued he, giving way to his grief, "that I had never done anything to offend him while he was living."

"That is what I wish too," cried Henry. "If I had always been dutiful to him while he was alive, I would not shed one tear for him now that he is gone: but I would thank Heaven that he had escaped from his creditors."

In conversation such as this, wherein their sorrow for their deceased parent seemed less for his death than because he had not been so happy when living as they ought to have made him; and wherein their own outcast fortune was less the subject of their grief, than the reflection what their father would have endured, could he have beheld them in their present situation.—in conversation such as this, they pursued their journey till they arrived at that metropolis which has received, for centuries past, from the provincial towns, the bold adventurer of every denomination—has stamped his character with experience and example; and while it has bestowed on some coronets and mitres—on some the lasting fame of genius—to others has dealt beggary, infamy, and untimely death.

After three weeks passed in London, a year followed, during which William and Henry never sat down to a dinner, or went into a bed, without hearts glowing with thankfulness to that Providence, who had bestowed on them such unexpected blessings; for they no longer presumed to expect (what still they hoped they deserved) a secure pittance in this world of plenty. Their experience, since they came to town, had informed them, that to obtain a permanent livelihood is the good fortune but of a part of those

Henry had received in his life many thanks from his brother; but such was not a vain man. He generally thought his brother in the right, and consequently submitted with patience; but though he had little self-love, he had for his wife an unbounded affection: on the present occasion, therefore, he began to raise his voice, and even (in the course of expression) showed anger to lift his hand; but the sudden and affecting recollection of what he had done for the dean—the pains, the toils, the hopes, and the fears, he had experienced when soliciting his preferment—this recollection overpowered his speech, weakened his arm, and deprived him of every active force, but that of flying out of his brother's house (in which they then were) as swift as lightning, while the dean sat proudly contemplating—that he had done his duty.

For several days Henry did not call, it was his custom, to see his brother. William's marriage drew near, and he sent a formal card to invite him on that day; but not having had the condescension to name his sister-in-law in the invitation, Henry thought proper not to accept it; and the joyful event was celebrated without his presence. But the ardour of the bridegroom was not so vehement as to overcome every other sensation—he missed his brother; that heartfelt cheerfulness with which Henry had ever given him joy upon every happy occasion—even amidst all the polite congratulations of his other friends—seemed to the dean mournfully wanting. This derogation from his felicity he was resolved to resent; and for a whole year three brothers, whose adversity had entwined closely together; prosperity separated.

Though Henry, on his marriage, paid so much attention to his brother's prejudices, as to take his wife from her public employment, this had not so entirely removed the scruples of William, as to permit him to think her a worthy companion for Lady Clementina, the daughter of a poor Scotch earl, whom he had chosen merely that he might be proud of his family; and, in return, suffer that family to be ashamed of his.

If Henry's wife were not fit company for Lady Clementina, it is to be hoped that she was company for angels: she died within the first year of her marriage, a faithful and affectionate wife, and a mother.

When William heard of her death, he felt a sudden shock; and a kind of fleeting thought glanced across his mind, that had he known she had been so near her dissolution, she might have been introduced to Lady Clementina; and he himself would have called her sister. That is (if he had defied his fleeting idea) they would have had no objection to have met this poor woman for the last time; and would have descended to the familiarity of kindred, in order to have wished her a good journey to the other world.

Or, is there in death something which so raises the abjectness of the poor, that, on their approach to its sheltering abode, the arrogant believer feels the equality he had before denied, and trembles?

The wife of Henry had been dead near six weeks before the dean heard the news: a month then elapsed in thoughts by himself, and consultations with Lady Clementina, how he should conduct himself on this occurrence. Her advice was—

"That, as Henry was the younger, and by their stations, in every sense the dean's inferior, Henry ought first to make overtures of reconciliation."

The dean answered,

"He had no doubt of his brother's good-will to him; but that he had reason to think, from the knowledge of his temper, he would be more likely to come to him upon an occasion to bestow comfort, than to receive it; for instance, if I had suffered the misfortune of losing my ladyship, thy brother, I have no doubt, would have forgotten his resentment and—"

She was offended that the loss of the vulgar wife of Henry should be compared to the loss of her—she lamented her indiscretion in forming an alliance with a family of no rank, and implored the dean to wait till his brother should make some concession to him, before he renewed the acquaintance.

Though Lady Clementina had mentioned on this occasion her indiscretion, she was of a prudent age—she was near forty—yet, possessing rather a handsome face and person, she would not have impressed the spectator with a supposition that she was near so old, had she not constantly attempted to appear much younger. Her dress was fantastically fashionable, her manners affected all the various passions of youth, and her conversation was perpetually embellished with accusations against her own "heedlessness, thoughtlessness, carelessness, and childlike folly."

There is, perhaps, in each individual, one parent motive to every action, good or bad. Be that as it may, it was evident that, with Lady Clementina, all she said or did, all she thought, or looked, had but one foundation—vanity. If she were nice, or if she were negligent, vanity was the cause of both; for she would contemplate with the highest degree of self-complacency "what such an one would say of her elegant person, or what such an one would think of her interesting neglect."

If she complained she was ill, it was with the certainty that her languor would be admired; if she boasted she was well, it was that the spectator might admire her glowing health; if she laughed, it was because she thought it made her look pretty; if she cried, it was because she thought it made her look prettier still. If she scolded her servants, it was from vanity, to show her knowledge superior to theirs; and she was kind to them from the same motive; that her benevolence might excite their admiration. How could it be otherwise, in the company of her equals, from the vanity of comparing herself with them, she who boasted even to domestic slaves in the presence of her superiors, that her rank, told her she was superior to them?—To this vanity she had no remedy; for what vanity does not possess?—She had become an old maid, from vanity, believing no one had loved

worthy of her merits; and when her power of reflection was not taken up, as it is doubted, she married from vanity, to repel the obloquy of her failing charms. In a word, her vanity was of that magnitude, that she had no self-judgment but that she was happy in her own opinion; and it would have been impossible to have convinced her that she thought vain of herself, because she thought so well, as to be assured that her own thoughts understood her.

That, which in a weak woman is called vanity, in a man of sense is termed pride. Make one degree stronger, or the other a degree weaker, and the dean and his wife were infected with the selfsame folly. Yet let not the reader suppose that this failing (however despicable) had spread from either bosom all traces of humanity. They are human creatures who are meant to be portrayed in this little book; and where is the human creature who has not some good qualities to soften, if not to counterbalance, his bad ones?

The dean, with all his pride, could not wholly forget his brother, and dedicate from his remembrance the friend that he had been to him, and resolved, therefore, in spite of his wife's advice, to make him come to him, which he had no doubt Henry's good-nature would instantly accept; and more he became acquainted with all the vain and selfish propensities of Lady Clementina, the more he felt a returning affection for his brother. How could he suspect how much he loved him, till, after sending to request him to inquire for him) he learned that, on his wife's decease, unable to support her loss in the surrounding scene, Henry had taken the child she bore him in his arms, shaken hands with all his former friends—passing over his brother in the number—and set sail in a vessel bound for Africa, with a party of Portuguese and some few English adventurers, to people that the uninhabited part of an extensive island.

This was a resolution, in Henry's circumstances, worthy a man of singular sensibility; but William had not discerned, till then, that every act of Henry's was of the same description; and, more than all, his eyes were turned towards him. He staggered when he heard the tidings; at first thought them untrue; but quickly recollected, that Henry was capable of surprising deeds. He recollected, with a force which gave him torture, the benevolence his brother had ever shown to him—the favours he had heaped upon him—the insults he had patiently endured in requital!

In the first emotion which this intelligence gave the dean, he forgot the dignity of his walk and gesture: he ran with frantic enthusiasm to every corner of his deepery where the least vestige of what belonged to Henry remained; he pressed close to his breast, with tender agony, a coat of his, which by accident had been left there; he kissed and wept over a walking-stick which Henry once had given him; he even took up with delight a music-book of his brother's, nor would his poor violin have then excited his anger.

When his grief became more calm, he sat in deep and melancholy meditation, calling to mind when and where he saw his brother last. The recollection gave him fresh cause of regret. He remembered they had parted on his refusing to suffer Lady Clementina to admit the acquaintance of Henry's wife. Both Henry and his wife he now contemplated beyond the reach of his pride; and he felt the meanness of his former, and the impetuosity of his future haughtiness towards them.

To add to his self-reproaches, his tormented memory presented to him the exact countenance of his brother at their last interview, as it changed; while he censured his marriage, and treated with disrespect the object of his conjugal affection. He remembered the anger repressed, the tear bursting forth, and the last glimpse he had of him, as he left his presence, most likely for ever.

In vain he now wished that he had followed him to the door; that he had once shaken hands and owned his obligations to him before they had parted. In vain he wished too, that, in this extreme agony of his mind, he had such a friend to comfort him as Henry had ever proved.

### CHAPTER III.

THE avocations of an elevated life erase the deepest impressions. The dean in a few months recovered from those which his brother's departure first made upon him; and he would now at times even condemn in anger, Henry's having so hastily abandoned him and his native country, in resentment, as he conceived, of a few misfortunes which his usual fortune should have taught him to have borne. Yet was he still desirous of his return, and wrote two or three letters expressive of his wish, which he anxiously endeavoured should reach him. But many years having elapsed without any intelligence from him, and a report having arrived, that he and all the party with whom he went, were slain by the savage inhabitants of the island, William's despair of seeing his brother again caused the desire to diminish; while attention and affection to a still nearer and dearer relation than Henry had even been to him, now closely engaged his mind.

Lady Clementina had brought him a son, on whom, from his infancy, he doted; and the boy, in ripper years, possessing a handsome person, and striking a quickness of parts, gratified the father's darling passion, pride, as well as the mother's vanity. The dean had, besides this child, a domestic comfort highly gratifying to his ambition; the bishop of ———— became intimately acquainted with him soon after his marriage, and from his daily visits had become as it were a part of the family. This was much honour to the dean, not only because his superior in the church, but was of that rank of the church whose blood is ennobled by a race of nobles, and in which all others on the plain were counted in humble respect. The dean's pride rolled on in pride and grandeur; the bishop had the dean

passing their time in attending levees and in talking politics; Lady Clementina passing hers in attending routs and in talking of *heresies*, till the son arrived at the age of thirteen.

Young William passed his time, from morning till night, with persons who taught him to walk, to ride, to talk, to think like a man—a foolish man instead of a wise child, as nature designed him to be.

This unfortunate youth was never permitted to have one conception of his own—all were taught him; he was never once asked, "what he thought;" but men were paid to tell him "how to think." He was taught to revere such and such persons, however unworthy of his reverence; to believe such and such things, however unworthy of his credit; and to act so and so, on such and such occasions, however unworthy of his feelings.

Such were the lessons of the tutors assigned him by his father. Those masters whom his mother gave him did him less mischief; although they distorted his limbs, and made his manners effeminate, they did not interfere beyond the body.

Mr. Norwyne (the family name of his father, and though but a school-boy he was called *Mister*) could talk on history, on politics, and on religion; surprisingly to all who never listened to a parrot or magpie: for he merely repeated what had been told to him, without one reflection upon the sense or probability of his report. He had been praised for his memory; and to continue that praise, he was so anxious to retain every sentence he had heard, or he had read, that the poor creature had no time for one native idea, but could only redeliver his tutor's lessons to his father, and his father's to his tutors. But whatever he said or did was the admiration of all who came to the house of the dean, and who knew he was an only child. Indeed, considering the labour that was taken to spoil him, he was rather a commendable youth; for, with the pedantic folly of his teachers, the blind affection of his father and mother, the obsequiousness of the servants, and flattery of the visitors, it was some credit to him that he was not an idiot or a brute; though when he imitated the manners of a man, he had something of the latter in his appearance; for he would grin and bow to a lady, catch her fan in haste when it fell, and hand her to her coach, as thoroughly void of all the sentiment which gives grace to such tricks as a monkey.

One morning, in winter, just as the dean, his wife, and darling child had finished their breakfast at their house in London, a servant brought in a letter to his master, and said "the man waited for an answer."

"Who is the man?" cried the dean, with all that terrifying dignity with which he never failed to address his inferiors, especially such as waited on his person.

The servant replied with a servility of tone equal to the haughty one of his master, "he did not know; but that the man looked like a sailor, and had a boy with him."

"A begging letter, no doubt," cried Lady Clementina.

"Take it back," said the dean, "and bid him send up word who he is, and what is his errand."

The servant went, and returning, said,

"He comes from on board a ship; his captain sent him, and his errand is, he believes, to leave a boy he has brought with him."

"A boy!" cried the dean; "what have I to do with a boy? I expect no boy. What boy? What age?"

"He looks about twelve or thirteen," replied the servant.

"He is mistaken in the house," said the dean. "Let me look at the letter again."

He did look at it, and saw plainly that it was directed to himself. Upon a second glance, he had so perfect a recollection of the hand, as to open it instantaneously; and, after ordering the servant to withdraw, he read the following:

"Zocotora Island, April 6.

"My dear Brother William,

"It is a long time since we have seen one another; but I hope not so long, that you have quite forgotten the many happy days we once passed together.

"I did not take my leave of you when I left England, because it would have been too much for me. I had met with a great many sorrows just at that time; one of which was the misfortune of losing the use of my right hand by a fall from my horse, which accident robbed me of most of my friends; for I could no longer entertain them with my performance as I used to do, and so I was ashamed to see them or you; and that was the reason I came hither to try my fortune with some other adventurers.

"You have, I suppose, heard that the savages of the island put our whole party to death? But it was my chance to escape their cruelty. I was heart-broken for my comrades; yet, upon the whole, I do not know that the savages were much to blame,—we had no business to invade their territories; and if they had invaded England, we should have done the same by them. My life was spared, because, having gained some little strength in my hand, during the voyage, I pleased their king when I arrived there, with playing on my violin.

"They spared my child too, in pity to my lamentations, when they were going to put him to death. Now, dear brother, before I say any more to you concerning my child, I will first ask your pardon for any offence I may have ever given you in all the time we lived so long together. I know you have often found fault with me; and I dare say I have been very often to blame; but I here solemnly declare that I never did anything purposely to offend you, but merely all I could to oblige you; and I can solemnly declare that I never saw you there, in consequence of an hour's recalcitration, for anything you might say to me which I thought harsh.

"Now, dear William, after being in this island eleven years, my weakness in my hand has unfortunately returned; and yet there has been no appearance

of complaint, the uninformed islanders think it is all my obliquity, and that I will not entertain them with my music, which makes me say that I cannot, and they have imprisoned me, and threaten to put my son to death if I persist in my stubbornness any longer.

"The anguish I feel in my mind takes away all hope of the recovery of strength in my hand; and I have no doubt but that they intend, in a few days, to put their horrid threat into execution.

"Therefore, dear brother William, hearing, in my prison, of a most uncommon circumstance, which is, that an English vessel is lying at a small distance from the island, I have intrusted a faithful negro to take my child to the ship, and deliver him to the captain, with a request that he may be sent (with this letter) to you, on the ship's arrival in England.

"Now, my dear, dear brother William, in case the poor boy should live to come to you, I have no doubt but you will receive him; yet excuse a poor fond father, if I say a word or two which I hope may prove in his favour.

"Pray, my dear brother, do not think it the child's fault, but mine, that you will find him so ignorant—he has always shown a quickness and a willingness to learn, and would, I dare say, if he had been brought up under your care, have been by this time a good scholar—but you know I am no scholar myself. Besides, not having any books here, I have only been able to teach my child by talking to him; and in all my conversations with him I have never taken much pains to instruct him in the manners of my own country; thinking, that if ever he went over he would learn them soon enough, and if he never did go over, that it would be as well he knew nothing about them.

"I have kept him, also, from the knowledge of everything which I have thought pernicious in the conduct of the savages, except that I have now and then pointed out a few of their faults, in order to give him a true conception and a proper horror of them. At the same time I have taught him to love, and to do good to his neighbour, whoever that neighbour may be, and whatever may be his failings. Falseness of every kind I included in this precept as forbidden, for no one can love his neighbour and deceive him.

"I have instructed him, too, to hold in contempt all frivolous vanity, and all those indulgences which he was never likely to obtain. He has learned all that I have undertaken to teach him; but I am afraid you will yet think he has learned too little.

"Your wife, I fear, will be offended at his want of politeness, and perhaps proper respect for a person of her rank; but indeed he is very tractable, and can without severity be amended of all his faults, and though you will find he has many, yet, pray, my dear brother,—pray, my dear brother William, call to mind he has been a dutiful and affectionate child to me; and that, had it pleased Heaven we had lived together for many years to come, I verily believe I should never have experienced one mark of his disobedience.

"Farewell, for ever! my dear, dear brother William: and if my poor, kind, affectionate child should live to bring you this letter, sometimes speak to him of me; and let him know that for twelve years he was my sole comfort; and that, when I sent him from me, in order to save his life, I laid down my head upon the floor of the cell in which he was confined, and prayed that Heaven might end my days before the morning."

This was the conclusion of the letter, except four or five lines which (with his name) were so much blotted, apparently with tears, that they were illegible.

## CHAPTER V.

WHILE the dean was reading to himself this letter, his countenance frequently changed, and once or twice the tears streamed from his eyes. When it was finished, he exclaimed,—

"My brother has sent his child to me, and I will be a parent to him." He was rushing towards the door, when Lady Clementina stopped him.

"Is it proper, do you think, Mr. Dean, that all the servants, in the house should be witnesses to your meeting with your brother and your nephew in the state in which they must be at present? Send for them into a private apartment."

"My brother!" cried the dean, "Oh, that it were my brother! The man is merely a person from the ship, who has conducted his child hither."

The bell was rung, money was sent to the man, and orders given that the boy should be shown up immediately.

While young Henry was walking up-stairs, the dean's wife was weighing in her mind in what manner it would most redound to her honour to receive him; for her vanity taught her to believe that the whole inquisitive world pried into her conduct, even upon every family occurrence.

Young William was wondering to himself what kind of an unpolished monster his beggarly cousin would appear; and was contemplating how much the poor youth would be surprised and awed by his superiority.

The dean felt no other sensation than an impatient desire of beholding the child.

The door opened—and the son of his brother Henry, of his benefactor, entered.

The habit he had on when he left his father, having been of slight texture, was worn out by the length of the voyage, and he was in the dress of a school-boy. Though about the same age with his cousin, he was something taller, and though a strong family resemblance appeared between the two youths, he was handsomer than William, and from a deficiency of eyes and countenance, a quick impudence in his eye, which denoted a suspicious curiosity and childish surprise at every new object which presented itself—He appeared younger than his informed and well-bred cousin.

He walked into the room, not with a dictated obsequiousness, but with a hurrying step, a half-pleased, yet a half-frightened look, an instantaneous survey of every person present, not as demanding what they thought of him, but expressing almost as plainly as in direct words, what he thought of them. For all alarm in respect to his safety and reception seemed now wholly forgotten, in the curiosity which the sudden sight of strangers, such as he had never seen in his life before, excited; and as to himself, he did not appear to know there was such a person existing: his whole faculties were absorbed in others.

The dean's reception of him did honour to his sensibility, and his gratitude to his brother. After the first affectionate gaze, he ran to him, took him in his arms, sat down, drew him to him, held him between his knees, and repeatedly exclaimed, "I will repay to you, all I owe to your father."

The boy, in return, hugged the dean round the neck, kissed him, and exclaimed,—"Oh, you are my father!—you have just such eyes, and such a forehead: indeed you would be almost the same as he, if it were not for that great white thing which grows upon your head!"

Let the reader understand, that the dean, fondly attached to every ornament of his dignified function, was never seen (unless caught in bed) without an enormous wig. With this, young Henry was enormously struck; having never seen so unbecoming a decoration, either in the savage island from whence he came, or on board the vessel in which he sailed.

"Do you imagine," cried his uncle, laying his hand gently on the reverend habilitament, "that this grows?"

"What is on my head grows," said young Henry, "and so does that which is upon my father's."

"But now you are come to Europe, Henry, you will see many persons with such things as these, which they put on and take off?"

"Why do you wear such things?"

"As a distinction between us and inferior people: they are worn to give an importance to the wearer."

"That is just as the savages do: they hang brass nails, wire, buttons, and cuttings of beads all over them, to give them importance."

The dean now led his nephew to lady Clementina, and told him she was his aunt, to whom he must behave with the utmost respect.

"I will, I will," he replied; "for she, I see, is a person of importance too: she has, very nearly, such a white thing upon her head as you have!"

His aunt had not yet fixed in what manner it would be advisable to behave; whether with intimidating grandeur, or with amiable tenderness. While she was hesitating between both, she felt a kind of jealous apprehension that her son was not so engaging either in his person or address as his cousin; and therefore she said,—

"I hope, dean, the arrival of this child will give you a still higher sense of the happiness we enjoy in our own. What an instructive contrast between the manners of the one, and of the other!"

"It is not the child's fault," returned the dean, "that he is not so elegant in his manners as his cousin. Had William been bred in the same place he would have been as unpolished as this boy."

"I beg your pardon, sir," said young William, with a formal bow and a sarcastic smile; "I assure you, several of my tutors have told me, that I appear to know many things as they were by instinct."

Young Henry fixed his eyes upon his cousin, while, with steady complacency, he delivered this speech; and no sooner was it concluded, than Henry cried out in a kind of wonder,—

"A little man! as I am alive, a little man! I did not know there were such little men in this country! I never saw one in my life before!"

"This is a boy," said the dean, "a boy not older than yourself."

He put their hands together, and William gravely shook hands with his cousin.

"It is a man," continued young Henry—then stroked his cousin's chin.

"No, no; I do not know whether it is or not."

"I tell you again," said the dean, "he is a boy of your own age; you and he are cousins, for I am his father."

"How can that be?" said young Henry: "he called you sir."

"In this country," said the dean, "polite children do not call their parents father and mother."

"Then don't they sometimes forget to love them as such?" asked Henry.

His uncle became now impatient to interrogate him in every particular concerning his father's state. Lady Clementina felt equal impatience to know where the father was; whether he were coming to live with them, wanted anything of them, and every circumstance in which her vanity was interested. Explanations followed all these questions; but which exactly agreeing with what the elder Henry's letter had related, require no recital here.

That vanity which presided over every thought and deed of Lady Clementina, was the protector of young Henry within her house: it represented to her how amiable her conduct would appear, in the eye of the world, should she condescend to treat this destitute nephew as her own son; what envy such heroic virtue would excite in the hearts of her particular friends, and what grief in the bosoms of all those who did not like her.

The dean was a man of no inconsiderable penetration; he understood the thoughts which upon this occasion passed in the mind of his wife; and in order to insure her kind treatment of the boy, instead of reproaching her for the cold manner in which she had at first received him, he praised her tender and sympathetic heart for having shown him so much kindness, and thus stimulated her vanity to be praised still more.

With this mother's own son, far from apprehending a rival in this savage boy, was convinced of his own pre-eminence, and felt an affection for him—though rather as a foil than as a cousin. He sported with his igno-

rance upon all occasions, and even lay in wait for circumstances that might expose it: while young Henry, strongly impressed with everything which appeared new to him, expressed, without reserve, the questions which those novelties excited; wholly careless of the construction put on his observations.

He never appeared either offended or abashed when laughed at: he still pursued his questions, and still discovered his wonder at many replies made to him, though "simpleton," "poor silly boy," and "idiot," were reiterated around him from his cousin, his aunt, and their constant visitor the bishop.

His uncle would frequently undertake to instruct him; so, indeed, would the bishop: but Lady Clementina, her son, and the greatest part of her companions, found something so irredeemably ridiculous in his remarks, that nothing but immoderate laughter followed: they thought such folly had even merit in the way of entertainment, and they wished him no wiser, such was their thoughtlessness.

Having been told, that every morning, on first seeing his uncle, he was to make a respectful bow, and coming into the dean's dressing-room, just as he was out of bed, his wig lying on the table, Henry appeared at a late hour of the two he should bow to—at last he gave the preference to his uncle; but, afterwards, bowed reverently to the wig. In this, he did what he conceived was proper, from the introduction which the dean, on his first arrival, had given him to this venerable stranger; for, in reality, Henry had a contempt for all flattery—and had called even his aunt's jewels, when they were first shown to him, "trumpery," asking "what they were good for?" But being corrected in this disrespect, and informed of their high value, as, like a good convert, gave up his reason to his faith; and becoming, like all converts, over-zealous, he now believed there was great worth in all gaudy appendages, and even respected the earrings of Lady Clementina almost as much as he respected herself.

It was to be lamented, that when young Henry had been several months in England, had been taught to read, and had, of course, in the society in which he lived, seen much of the enlightened world, yet the natural expectation of his improvement was by no means answered.

Notwithstanding the sensibility, which upon various occasions he manifested in the most captivating degree, notwithstanding the seeming gentleness of his nature upon all occasions, there now appeared, in most of his inquiries and remarks, a something which demonstrated either a stupid or troublesome disposition: either dulness of conception, or an obstinacy of perseverance in comments, and in arguments, which were glaringly false.

Observing his uncle one day offended with his conclusion, and hearing him say to him, in a very angry tone, "You shall never drive me again!"

The moment the man quitted the room, Henry (with his eyes fixed in the deepest contemplation) repeated five or six times, in a half-whisper to himself,—

"You shall never drive me again."

"You shall never drive me again."

The dean at last called to him, "What do you mean by thus repeating my words?"

"I am trying to find out what you meant," said Henry.

"What! don't you know?" cried his enlightened cousin: "Richard is turned away: he is never to get upon our coach-box again, never to drive any of us more."

"And was it a pleasure to drive us, cousin? I am sure I have often pitied him: it rained sometimes very hard when he was on the box; and sometimes Lady Clementina has kept him a whole hour at the door all in the cold and snow: was that pleasure?"

"No," replied young William.

"Was it honour, cousin?"

"No," exclaimed his cousin, with a contemptuous smile.

"Then, why did my uncle say so to him, as a punishment, he should never—"

"Come hither, child," said the dean, "and let me instruct you; your father's negligence has been inexcusable. There are in society," continued the dean, "rich and poor; the poor are born to serve the rich."

"And what are the rich born for?"

"To be served by the poor."

"But suppose the poor would not serve them?"

"Then they must starve."

"And so poor people are permitted to live, only upon condition that they wait upon the rich?"

"Is that a hard condition? or if it were, they will be rewarded in a better world than this."

"Is there a better world than this?"

"Is it possible you do not know there is?"

"I heard my father once say something about a world to come; but he stopped short, and said I was too young to understand what he meant."

"The world to come," returned the dean, "is where we shall go after death; and there no distinction will be made between rich and poor—all persons will there be equal."

"Ay, now I see what makes it a better world than this. But cannot this world try to be as good as that?"

"In respect to placing all persons on a level, it is utterly impossible; God has ordained it otherwise."

"How! has God ordained a distinction to be made, and will not make any himself?"

The dean did not proceed in his instructions: he, not being able to think his brother in the right, and that the boy was too young, or too weak to comprehend the subject.

## CHAPTER VI.

In addition to his ignorant conversation upon many topics, young Henry had an incorrigible misconception and misapplication of many words. His father having had but few opportunities of discoursing with him, upon account of his attendance at the Court of the Savages, and not having books in the island, he had consequently many words to learn of this country's language, when he arrived in England: this task his retentive memory made easy to him; but his childish inattention to their proper signification still made his want of education conspicuous.

He would call *compliments*, *lies*—*reserve* he would call *pride*—*state* *limps*, *ostentation*—and for the words *war* and *battle*, he constantly substituted the word *massacre*.

"Sir," said William to his father, one morning as he entered the room, "do you hear how the cannons are firing, and the bells ringing?"

"Then I dare say," cried Henry, "there has been another massacre."

The dean called to him in anger, "Will you never learn the right use of words? You mean to say a battle."

"Then, what is a massacre?" cried the frightened but still curious Henry.

"A massacre," replied his uncle, "is when a number of people are slain—"

"I thought," returned Henry, "soldiers had been people?"

"You interrupted me," said the dean, "before I finished my sentence. Certainly, both soldiers and sailors are people; but they engage to die by their own free will and consent."

"What! all of them?"

"Most of them."

"But the rest are massacred?"

The dean answered, "The number who go to battle unwillingly, and by force are few; and for the others, they have previously sold their lives to the state."

"For what?"

"For soldiers' and sailors' pay."

"My father used to tell me, we must not take away our own lives; but he forgot to tell me, we might sell them for others to take away."

"William," said the dean to his son, his patience tired with his nephew's persevering nonsense, "explain to your cousin the difference between a battle and a massacre?"

"A massacre," said William, rising from his seat, and fixing his eyes alternately upon his father, mother, and the bishop (all of whom were present) for their approbation, rather than the person's to whom his instructions were to be addressed—"a massacre," said William, "is when human beings are slain, who have it not in their power to defend themselves."

"Dear cousin William," said Henry, "that must ever be the case with every one who is killed."

After a short hesitation, William replied, "In massacres people are put to death for no crime, but merely because they are objects of suspicion."

"But in battle," said Henry, "the persons put to death are not even suspected."

The bishop now condescended to end this disputation, by saying emphatically,—

"Consider, young savage, that in battle neither the infant, the aged, the sick, nor infirm are involved, but only those in the full prime of health and vigour."

As this argument came from so great and reverend a man as the bishop, Henry was obliged, by a frown from his uncle, to submit, as one refuted; although he had an answer at the point of his tongue, which it was torture to him not to utter. What he wished to say, must ever remain a secret. The church has its terrors as well as the law; and Henry was awed by the dean's tremendous wig, as much as Paternoster-row is awed by the attorney-general.

If the dean had loved his wife but moderately, seeing all her faults clearly as he did, he must frequently have quarrelled with her: if he had loved her with tenderness, he must have treated her with a degree of violence in the hope of amending her failings; but having neither personal nor mental affection towards her, sufficiently interesting to give himself the trouble to contradict her will in anything, he passed for one of the best husbands in the world. Lady Clementina went out when she liked, staid at home when she liked, dressed as she liked, and talked as she liked, without a word of disapprobation from her husband, and all—because he cared nothing about her.

Her vanity attributed this indulgence to inordinate affection; and observers in general thought her happier in her marriage than the beloved wife who bathes her pillow with tears by the side of an angry husband, whose affection is so excessive, that he unkindly upbraids her because she is—less than perfection.

The dean's wife was not so dispassionately considered by some of his acquaintances as by himself; for they would now and then hint at her follies; but this great liberty she also conceived to be the effect of most violent love; or most violent admiration; and such would have been her construction had they commended her follies—had they totally slighted, or had they despised her.

Amongst those acquaintances, the aforesaid bishop, by far the most frequent visitor, did not come merely to lounge an idle hour, but he had a more powerful motive; the desire of fame, and dread of being thought a man respecting large offences for unimportant services.

The dean, if he did not possess him the renown he wished, still preserved him from the apprehended censure.

The elder William was to his negligent or ignorant superiors in the church.

such as an apt boy at school is to the rich dances—William performed the prelature tasks for them, and they rewarded him, not indeed with toys or money, but with their countenance, their company, their praise. And scarcely was there a sermon preached from the pulpit, part of the bench, in which the dean did not fashion some periods; blot out some inelegant phrases, render some obscure sentiments intelligible, and was the certain person, when the work was printed, to correct the press.

This honourable and right reverend bishop delighted in printing and publishing his works, or rather the entire works of the dean, which passed for his; and so degradingly did William, the shopkeeper's son, think of his own highest extraction, that he was blinded, even to the loss of honour; by the lustre of this noble acquaintance: for though, in other respects, he was a man of integrity, yet, when the gratification of his friend was in question, he was a liar: he not only disowned his giving him any aid in any of his publications, but he never published any thing in his own name, without declaring to the world, "that he had been obliged for several hints on the subject, for many of the most judicious corrections; and for those passages in page so and so (naming the most eloquent parts of the work); to his noble and learned friend, the bishop."

The dean's wife being a fine lady, while her husband and his friend porced over books, or their own manuscripts, at home, she ran from house to house, from public amusement to public amusement; but much less for the pleasure of seeing than for that of being seen. Nor was it material to her enjoyment whether she were observed, or welcomed where she went, as she never entertained the smallest doubt of either, but rested assured that her presence roused curiosity and dispensed gladness all around.

One morning she went forth to pay her visits, all smiles, such as she thought captivating: she returned all tears, such as she thought no less endearing.

Three ladies accompanied her home, entreating her to be patient under a misfortune to which even kings are liable,—namely, defamation.

Young Henry, struck with compassion at grief, of which he knew not the cause, begged to know "what was the matter?"

"Inhuman monsters, to treat a woman thus!" cried his aunt in a fury, casting the corner of her eye into a looking-glass to see how rage became her.

"But comfort yourself," said one of her companions; "few people will believe you merit the charge."

"But few! if only one believe it, I shall call my reputation lost, and I will shut myself up in some lonely hut, and for ever renounce all that is dear to me!"

"What! all your fine clothes?" said Henry, in amazement.

"Of what importance will my best dresses be, when nobody would see them?"

"You would see them yourself, dear aunt; and I am sure nobody admires them more."

"Now you speak of that," said she, "I do not think this gown I have on becoming; I am sure I look—"

The dean with the bishop, (to whom he had been reading a treatise just going to the press, which was to be published in the name of latter, though written by the former,) now entered, to inquire why they had been sent for in such haste.

"Oh, dean! oh, my lord bishop!" she cried, resuming that grief which the thoughts of her dress had for a time dispelled, "my reputation is destroyed: a public print has accused me of playing deep at my own house, and winning all the money!"

"The world will never reform," said the bishop: "all our labour, my friend, is thrown away."

"But is it possible," cried the dean, "that any one has dared to say this of you?"

"Here it is in print!" said she, holding out a newspaper.

The dean read the paragraph; and then exclaimed, "I can forgive a falsehood spoken—the want of conversation may excuse it; but to write and print an untruth is unpardonable,—and I will prosecute this publisher."

"Still the falsehood will go down to posterity," said Lady Clementina; "and after-ages will think I was a gambler."

"Comfort yourself, my dear madam," said young Henry, wishing to console her, "perhaps after-ages may not hear of you, nor even the present age think much about you."

The bishop now exclaimed, after having taken the paper from the dean, and read the paragraph, "It is a libel, a rank libel, and the author must be punished."

"Not only the author, but the publisher," said the dean.

"Not only the publisher, but the printer," continued the bishop.

"And must my name be bandied about by lawyers in a common court of justice?" cried Lady Clementina; "how shocking to my delicacy!"

"My lord, it is a pity we cannot try them in an ecclesiastical court," said the dean with a sigh.

"Or by the Indian delinquent bill," said the bishop with vexation.

"So totally innocent as I am!" she vociferated with sobs. "Everyone knows I never touch a card at home, and this libel charges me with playing at my own house; and though, whenever I do play, I own I am apt to win, yet it is merely for my amusement."

"Win or not win, play or not play," exclaimed both the churchmen, "this is a libel—no doubt, no doubt, a libel."

Poor Henry's confined knowledge of his native language, tormented him so much with curiosity upon this occasion, that he went softly up to his uncle and asked him, in a whisper, "What is the meaning of the word libel?"

(To be continued.)

## THE PAST AGES.

BY RICHARD MANSON.

(Continued from page 743.)

Again, who can gaze on the vast profusion of reptile life in the past ages, and on the singular combinations of structure that are twisted in so many of the powerful saurians, for the purpose of providing for the gratification of their carnivorous appetites, and at the same time believe that God is a god of love; unless he sees that the fierce and terrible attacks of their powerful assailants were but merciful dispensations towards the animals destroyed, and that "the speediest fate, though violent and terrible, is best."

With such feelings only can we look on the voracious monsters of the Lias in a proper spirit, for otherwise disgust and horror take possession of our minds and almost efface our astonishment at these ancient monarchs of the deep.

One more only, of this period, can we notice; for while we gaze in awe, and with almost unconscious eye, new scenes loom on in the distance, and a dark fringe on the horizon betokens the advent of fresh epochs.

Met playmate for the Plesiosaur, fit inmate for the abode dwelt in by the fierce shark and bulky Cetiosaur, was the dreadful Ichthyosaurus. See where the ocean foams in crimson waves—sure evidence of death. Aye, there he comes—the huge black head, some eight feet long, and the teeth encircled jaws appear above the foam, and as the monster slowly paddles past we see his glaring eye fixed on us. But what an eye—what extent would an orbit of forty inches in circumference not embrace? Nor is it merely its size that makes it wonderful; but, like the owl, the outer-coat of it is made up of moveable, thin, bony plates, by which its sight can be adapted to near or distant objects, as the creature wills. Note, too, his length,—full forty feet: his black and shiny skin, his paddles, and his tail. But see, the water boils, as off he goes, propelled by the quick striking paddles, to some new scene of carnage. Our last glimpse is had of the Liassic Ichthyosaurus. Well could we say of him, as a great poet sang of a character of still blacker hue:—

"With head uplift above the waves, and eyes  
That sparkling blazed; his other parts, besides,  
Prone on the flood extending long and large,  
Lay floating many a load."

Again the shore is reached—a broad, flat strand, where the gently rippling tide plays softly on. Ah, here again we find inhabitants before us; unlike all we have ever seen—new combinations of "kind Nature's plan." Here at our feet, the Rynchosaurus (*ῥύνχος*, a beak; *σαῦρος*, a lizard), with the body of a lizard, the feet of a bird, and the beak of a turtle. Birds, as big as ostriches; crocodiles, and tortoises, are here and there discernible; and among them, just on the shore, watch you strange object; something like a frog, of immense size, as large as the rhinoceros, but with head like a crocodile, teeth like ivory lancets, and skin covered with bony plates; it travels on along the shore, and leaves as it goes the impress of its hand-like feet on the sandy beach. Ah, who would think that those fugacious markings shall remain, and that in future ages, when that sand shall have become sandstone, and they may be digging it to supply his wants; he shall in amazement come upon them, and shall from them discover the form and structure of the creature now before us, and giving it a title descriptive of its structure, shall call it Cheirotherium.\* We are now at the period of the Trias. The dark fringe on the horizon has developed into a glorious mass of vegetation, extending further than the eye can reach. Quick, let us pass the intervening space, and enter on the boundaries of the luxuriant epoch of the carboniferous.

There is something beautiful in the aspect of a forest, when the sun, glancing down his life-giving beams, casts a flood of brightness over the quaint, fantastic shapes which the clusters of leaves assume, and vivifying what it touches, like a few bold strokes on a tame picture, yet but increases the gloom—heightening, by contrast, the sombre appearance of the shade.

Varied, indeed, is the scenery we are passing through! See you large swamp, with waving trees growing among fogs and vapours, like the rank long grass in a damp churchyard, and flourishing in mighty beauty in a semi-liquid mass of stagnant, putrid water, and decaying, rotten leaves.

\* Straight, with tapering stem, from out the pulpy ground, strikes up toward heaven the graceful Calamite, with bright green linear leaves; and all around the surface of the swamp, in rich abundance, mark the different ferns and smaller plants, that, by their fragile frame and quick decay, serve to increase the soft morass. Sustained, too, on a firm basis—matted, as it were, to the ground by its wide-spreading roots, the lofty Sigillaria towers high above the waters. Pass closer to it, and note its elegantly fluted stem, marked with the scars of long-dead leaves. But now we reach a brighter scene. "Soft mossy bowers beneath these canopies extend." Bright flowers and gorgeous plants bloom 'mid the old gray trunks of ancient trees; and round yon lofty stem the busy insect flies. Another sculptured tree, rising up some seventy feet, with linear leaves ranged round the stem: it is the Lepidodendron.

But hark yon distant rumble!—Haste on! for see the lightning flashing down among the tall, rank-growing forest!—And darker still it grows! How horrible!—the damp, decaying smell—the sombre vegetation—and, worse than all, the solemn, awful stillness, unbroken by aught but the undulating breeze, that seems to stir and move some plants, and to avoid the rest; or the quick-repeated thunder-roll,—all go to form a scene too terrible for man's endurance.

Through miles and miles of forest on we go; and here again the sea!—It

\* Perhaps better known as the Labyrinthodendron.

is the ocean of the Old Red Sandstone! But who can venture to describe what the "poet of Geology," has himself occupied his pen upon?

Cast down your glance into the sparkling deep, and you will see the objects of his study. There goes the Cephalaspis, clad in strong armour, with head defended by a large enamelled plate of bone, and appearing in outline like a bright crescent, with a shining sword inserted in the centre. As it swims about among its strange companions. And there is another animal—a fish too—Pterichthys is its name. It is not large—not many inches long—and nothing is it like. Imagine the carapace or shield of a small animal to be furnished with a gradually tapering tail, a head of no large size, but flat, and from the junction of the head and body a pair of long, hard paddles to extend. Paddles, however, they are not, but weapons of defence, and the fish progresses only by its tail.

But we must pass them all, and give our parting look at all the varied forms that

"—sporting with quick glance, show to the sun  
Their waved coats dropp'd with gold."

And now the fishes are more scarce, and over the muddy bottom we see strange creatures crawling. We have entered the last scene of our journey, and the Silurian ocean's billows roll calmly on. Before us, where the towering waves rise up in quickened swell, the coral Zoophytes work at their endless task:

"We see the living pile ascend,  
The mausoleum of its architects."

Further on, too, in the crystal waters, we can see the feathery Graptolite waving its elegant stems; and crawling on the bottom of the clear sea, we can notice the most extraordinary feature of the Silurian fauna—the Trilobites; of all sizes are they, from one inch to six—a strange animal truly—crustaceous too—covered with a shell composed of a number of plates or moveable segments, something like the horny covering of the shrimp. Notice its prominent eyes, one on each side of the head. Strange eyes are those—the cornea of each contains no less than 400 divisions or lenses; and thus each of those small creatures is provided with 800 eyes.† Carnivorous, like so many of the creatures we have passed, we see them feeding on the worms and polyps with which they are surrounded.

But look a little further on at that elegant creature, gracefully bending its jointed stem. Did we not know that it is one of the Crinoides, we would at once pronounce it to be a beautiful plant. Covered over with a delicate, almost transparent substance, similar to the covering or living gelatine of the mushroom coral (*Fungia actiniformis*), it flourishes at the bottom of the ocean.

"Shrunk down within its purple stem to sleep,  
Now feels the water, and again  
Awakening, blossoms out  
All its green anther necks."

A long stem, with its roots in the soft mud, throws itself upwards, and supports a cup-like head, from which proceed its jointed arms. And see the use it makes of them, as bending to-and-fro with the gentle wave, its outstretched arms seize on the prey brought within reach by the current.

But here we close. Millions on millions of years have passed in review before us, and millions on millions still lie unexplored—but naught that we can enter on. Stern rocks of granite—upheaved mountains—volcanoes—earthquakes—convulsive throes of bubbling rock—till all ends in one vast chaos.

What strange knowledge has our journey taught us! True, too, its revelation—that ages on ages—time incalculable, ere man was seen on earth, creatures of exquisite beauty and surpassing strangeness existed—as, too, did others, of bulk so huge, of proportions so enormous, of aspect so terrific, that, before their restored forms, imperfect though the restorations be, all poetic legends of dragons and fiery serpents sink into utter nothingness; and the astonished imagination halts appalled at the gigantic structure and growth forms presented by the relics of an animal life.

\* Hugh Miller, Esq.: so styled by the talented authoress of "Calab Field and Adam Greave."

† According to Kirby and Spence, vol. iii., 25,000 have been counted in a beetle.

ACTIVITY OF THE SWALLOW.—The wonderful activity displayed by these birds forms a striking contrast to the slow habits of most other animals. It may be fairly questioned whether, among the whole feathered tribes which Providence has formed to adorn this part of creation, there are any that in the same space of time pass over an equal extent of surface with the swallow. Let a person take his stand, on a fine summer evening, by a new-mown field, meadow, or river shore, for a short time, and, among the numerous individuals of this tribe that fit before him, fix his eye on a particular one, and follow, for a while, all its circuitous labyrinths—its extensive sweeps—its sudden, rapidly reiterated excursions, little inferior to the lightning itself,—and then attempt, by the powers of mathematics, to calculate the length of the various lines it describes. Alas! even his omnipotent fluxions would avail him little here, and he would abandon the task in despair. Yet, that some definite conception may be formed of this extent, let us suppose that this bird flies, in his usual way, at the rate of one mile in a minute, which, from the many experiments I have made, I believe to be within truth; and that he is so engaged for ten hours every day; and farther, that this active life is extended to ten years, (many of our smaller birds being known to live much longer, even in a state of domestication;) the amount of all these, allowing three hundred and sixty-five days to a year, would give us two millions one hundred and ninety thousand miles; more than eighty-seven times the circumference of the globe.—Wilson's Ornithology.

## CAROLINE AND CATHARINA.

(Continued from page 762.)

"Henry Brady!" was called; and firm as was his self-reliance, his countenance changed, and he rose to his feet, as if to be prepared for a conflict. Conscience, which, it is said, "makes cowards of us all," had the opposite effect upon him—it roused and made him desperate. He knew nothing of what was to be proven by the witness; yet his memory conjured up images of events, which had transpired on a certain night but a few months before—when his own hand had dealt a blow for his safety. He remembered well that Brady was a non-commissioned officer, attached to the right flank guard on that night; and conscience made him feel that it was of this that testimony was about to be offered. He was excited; indeed, he had been so from the beginning of the trial; and it may be doubted whether all the success he proposed to himself would have been an adequate compensation for the torture of that day. The weather was not warm for the season; and yet the sweat stood in large drops upon his brow; and though his features were composed, excepting his eye, his attitude and bearing spoke of the consuming fire within. It cost him a mighty effort to retain his self-possession; for both Carlin and Clayton were still watching him with that steady but sinister gaze, which was so full of meaning to his guilty conscience. But he succeeded in calming himself, at least outwardly; and though the veins upon his forehead swelled like cords, he stood like a lion in the toils, but still unconquered, as if ready to rend the first who should approach him.

"It is a pity, by Jove!" exclaimed Carlin in a whisper, "that powers such as that man has should be so perverted!" Like all intellectual men he recognized and admired mental power wherever it was found.

"Mr. Brady," said Clayton, as the corporal was sworn, and hobbled forward on crutches—the consequence of a wound at Buena Vista, for which he had been discharged—"were you or not attached to the army on the twentieth of February last?"

"I was in the line of the army, sir," replied the young man.

"Where were you on that night?"

"I was one of the corporals of the guard, stationed at the *cañon* at Buena Vista."

"How many prisoners were brought to the guard that night?"

"Only one, sir."

"Did you or not overhear a conversation between the prisoner and any other person?"

"I did, sir."

He was about to proceed, when Thorpe stopped him. "I think," said he, addressing the court in a tone, whose suppressed passion was too evident, "sufficient latitude has been allowed in this cause; and while the defence confined themselves to the limits of the United States, we were not disposed to object. They wish now to take a wider range, and we have no more patience; we object to the testimony peremptorily!"

"What is the object of your question?" asked the judge.

"It has been shown," said Clayton, "that an attempt has been made by Colonel Thorpe to create the impression that young Manning's death was compassed by Vernon, to get him out of the way. We now propose to show by the witness that Colonel Thorpe was himself the mover of the attempt upon the lives of both Manning and Vernon. We can prove this—" his tongue was arrested in mid-speech. Thorpe sprang like a tiger at his throat; and drawing a heavy knife was about to plunge it to his heart, when a blow from a heavy hand behind him felled him to the floor! The court was immediately in commotion—the men rushing within the bar, and the women screaming with terror. The judge called upon the officers to keep order, while the sheriff, who had given the timely blow, stooped down and took the knife from Thorpe's relaxed hand. Several minutes elapsed before order could be restored, when Gillam lifted the prostrate form of Thorpe, and placed him on a chair. His face was pale and distorted, and a stream of frothy, light-coloured blood ran from his mouth and nostrils. A physician was in attendance immediately. He announced that a blood-vessel had been ruptured, and ordered his patient to be removed at once from the court.

When order was at last restored, the State's attorney asked that the trial might be suspended until the following morning.

"It is now very near the hour of adjournment," said he, "and I could wish a little time to reflect upon the course most proper to be taken by me under the extraordinary circumstances."

"Are the defence willing to consent?" asked the judge.

"We are not, sir," said Clayton. "Mr. Vernon must not rest under this charge an hour longer than we can avoid."

"Not another minute!" said a voice from the crowd, which made Vernon start from his feet. A young man in full regimental uniform pushed his way through the crowd, and entering the bar revealed the person of Hugh Manning. Vernon sprang forward, and extended both hands; but, before he reached him, the arms of his father were about his neck, and the old man was weeping like a child! Again the court was in commotion; for a crowd once excited, like a fire once kindled, will ignite again and again, more easily each successive time; and nothing will prevent it but the separation of the mass of combustibles. The sheriff at last restored order again; and by some persuasion finally induced the old man to relinquish his hold upon Hugh, until he could be sworn and examined.

"It is quite unnecessary," said the State's attorney. "I consider it proven that Mr. Vernon is not guilty, and am therefore willing that a *nolle prosequi* should be entered."

"That will not satisfy us," said Clayton. "We cannot suffer this inquiry to stop until we have proven who did this forgery."

Hugh was sworn, and Clayton was about to examine him, when some one drew his attention to the railing round the bar. He whispered with the man a moment, and having consulted with Carlin, returned.

"If the court please," he said, "I have just been informed of the death of Colonel Thorpe. Under the circumstances we deem it improper to pursue this investigation farther than will be done in asking one question. It is this—Do you or do you not know who did not commit this forgery?"

"Without the consent of the prosecution," said the judge, "that form of question cannot be allowed."

"I have no objection to his answering," said the attorney.

"Well," said Hugh, "I do know, for I saw it done. I have, moreover, the note which was written and substituted for Colonel Talbot's. It was not written by Mr. Vernon, and it was not written by me, as I have just heard some were foolish enough to hint. I would have told Mr. Vernon all about this transaction in Mexico, but for reasons which I will give him at some future time. I fell into the usual mistake of soldiers, and supposed that whosoever else might be taken or killed, certainly I should escape; and so kept silence."

The State's attorney had no questions to ask—the case was given to the jury without argument; and without leaving their seats they made up and returned a verdict of, "NOT GUILTY."

As Allen came out of the court-house, he found Colonel Talbot and his daughter standing near the door, waiting for his carriage. The former turned as Vernon stepped out, and at once offered him his hand.

"I have done you injustice, sir," said he, with a nearer approach to frankness than generally marked his manner. "Let me atone for it as publicly as possible."

"No atonement is necessary, colonel," said Allen, taking his hand without hesitation. "The plot against me was too well managed to imply injustice in those who believed me guilty."

"Nevertheless," said Cara, "it was an unjust suspicion. But for the last few days my father's convictions have been much shaken."

"They have, indeed," said the colonel. "But here is the carriage; will you not ride home with us, Allen?"

The invitation was too tempting, and it was too frankly given to be declined. Allen stepped into the carriage and rode away.

"Now," said the colonel, when they were seated in Cara's drawing-room, "I have a word or two to say, and then I will leave you alone. Cara has told me the secret of her deep interest in your trial, and I promised her that if you could establish your innocence, and still wished what she says you did wish, there should be no objection on my part. Do you still wish it?"

Allen began to pour forth a mass of gratitude in a manner too confined not to be at once understood.

"Very well," interrupted Talbot. "I see how it is. I have sometimes thought my course towards your father may have been too harsh. Let my consent now, in some measure atone for it. There she is—take her!"

He turned as he spoke, and left the room. Allen stood for a moment as if bewildered, Cara still sitting on the sofa.

"You don't want me then?" she said, with a smile.

Allen sprang towards her with all his former eagerness—her face was turned to his as he took her in his arms, and—But let us imitate the colonel, and discreetly leave them to their communion. The scene was not fit for other eyes.

## CHAPTER THE LAST.

"And so without more circumstance at all.

I hold it fit that we shake hands and part."—SHAKESPEARE.

EARLY on the day after the trial, Vernon and Hugh were together, each recounting to the other his adventures since their sudden parting among the mountains.

"A few days after this," said Hugh—we take up the story where we left it—"I was suddenly startled in my room by the entrance of Catharina, who told me that a squadron of Urrea's lancers were entering the valley. I rose from the couch where I was laying, and attempted to follow her to a place of security; for although I had gained strength very fast under Catharina's care, I was still too weak to fight, almost too weak to stand. But before we could cross the courtyard another detachment rushed furiously in, firing without discrimination upon all who appeared, Mexicans as well as Texans, and showering curses as profusely as bullets. Luckily, we were both untouched; and in a few moments the captain of the detachment rode forward and announced to us the pleasant fact that we were both his prisoners. We were led away together—and this was the only alleviation of my fate. Even this, however, did not last long; for as soon as the other squadron came up, the officer, who appeared to be the senior, ordered Catharina to be released. They led her away, though not without some demonstrations of the spirit you have seen in her. I saw her no more till about a month ago, when I found her in Matamoras. She is now at the 'American.'"

"You are married, then?" said Allen, in surprise.

"Yes," Hugh answered. "I was unwilling to part from her again, for fear we might not meet so fortunately. She demurred to the demand at first, on the ground that her mourning term was not closed. But she yielded to my entreaties, when I told her I was on my way home, and might not be able ever to return. It was the delay necessary to this affair which kept me so long away—which was so near making my arrival too late."

"But what did the guerillas do with you?" asked Allen.

"I believe they were strongly inclined to kill me at first; but finding that

"I have to repeat, that no one will rejoice more sincerely than we, if the prisoner at the bar shall be able to establish his innocence."

death was likely to come soon enough, they left me to perish in a miserable *rancho* just outside the valley. You remember it, perhaps—on the banks of the river as you enter from towards Monterey? Here I lay two weeks, and when you visited the valley, I must have been there. It is on the opposite side of the stream from the road usually travelled, and was thus not visited by any one, except the old woman and her boy, to whom I am indebted for my life. At the end of the two weeks, a straggling party of the same cut-throats who desolated the valley returned to it; and finding me able to ride, they placed me on a horse and galloped away with me towards the south. We rode thus for several days, when, to my infinite satisfaction, they at last drew their reins and introduced me to their *commandante*—a black-whiskered fellow, with a sword nearly as long as himself. I have forgotten the name of the little town—but I happen to recollect that it was not more than one hundred miles from Tampico; and upon this knowledge I predicated all my hopes of escape.

"I immediately feigned great weakness—though, thanks to an excellent constitution, I was as strong as ever, only a little pale and thin. For nearly two weeks more I kept up the deception—even asking the support of a Mexican's arm when I walked out to take a little air. I told the *commandante* I was losing strength every day, when in fact I was strong enough to tear him limb from limb. They ceased to watch me almost altogether—no doubt thinking that the one man whose aid I always asked was a guard quite sufficient. I gained in my rambles thus, a complete knowledge of the directions, roads, &c.; and among other useful items, I found that the road to Tampico ran out of the town, in the same direction in which I usually walked. About a mile from the town was situated a large *rancho*—and here, the longest walks we took generally ended. Among other things about this place, I observed several very fine horses—and with the freedom generated by a soldier's life, determined that one of them should be mine.

"I at last succeeded in possessing myself of a carbine, taken from some American, and a pair of pistols. These I secreted in my room until night, when I determined to give my friends the slip. There was but one egress to my room, and before this a sentinel walked every night. On that evening I waited in vain for the fellow, who came on at ten o'clock, to go to sleep, as he was in the habit of doing. For some reason or other, however, on this night, he was very wakeful. I thought I would have to kill him, and several times stepped towards the door to do it. At last, however, I thought of a better plan. I called him to me and told him I wanted some wine, for which I was willing to pay handsomely—showing him in the starlight a half-dollar—the only coin the thieving rascals had left me, and that only because it eluded their search. The fellow grasped at the coin—but I drew it back, telling him he could not have it until he brought me some wine. He wanted to wait till he was relieved; but I told him I would be asleep then, and would not want the wine. He at last consented to go after it; and while he was gone I quietly stepped out and walked off. I knew he would not dare to give the

alarm, since, if he did, his desertion would be known; while, if my absence were not discovered till morning, he would get off clear, in the uncertainty as to which sentinel had let me escape. (Their sentinels, like ours, are changed every two hours.)

"I walked as rapidly and as noiselessly as possible to the *rancho*, where I found no difficulty in saddling one of the finest horses in the yard. Mounting him, I rode quietly off—taking it easily for an hour or two, and then pushing rapidly on. I rode all night, without stopping for a moment, except to let my horse drink, and in the morning must have been more than forty miles on my way to Tampico. When my escape was discovered, and whether any pursuit was made I never knew, for, as you may imagine, I did not wait to see. In the morning, a while after sunrise, I got a bowl of goat's milk from a woman at a little *rancho* on the road, and asked her the way to San Luis Potosi. She shook her forefinger at me, and I rode on—she screaming after me that that was the road to Tampico. She did not know which *was*, but she evidently knew this was *not*, the road to San Luis. I watered my horse at a little stream which crossed the road, and then put him into a gallop, which in about four hours brought me in sight of the waters of the Gulf. An hour or two after dark, I was hailed in English—the happiest sound I ever heard—and found myself in Tampico—having made one hundred miles in a little more than eighteen hours. The horse, I regretted to find, when I got up next day, had died during the night; but after such an escape, it was not in my nature to think of slight misfortunes.

"I remained at Tampico a week, when I took passage for Matamoras, where I arrived about six weeks ago. I hastened from thence to Monterey, where I heard of your return home. Knowing the importance of my testimony to you, I laid the matter at once before General Taylor, tendered my resignation, which was accepted, and started home. At Matamoras, as I expected, I found Catharina, we were married, and here I am."

"So I see," said Vernon, with a smile. "But I must see Catharina—can you not take me to her now?"

"By all means," said Hugh. And the friends set out for the hotel where Hugh had taken his bride on his return; ashamed, perhaps, of his father's dingy building and mean furniture. We will not pause on their visit, but move forward to another scene.

\* A gesture among the Mexicans, expressing ignorance or negation.

(To be continued.)

**EXPERIENCE IN ANIMALS.**—Old birds are not so easily approached within gun-shot as young ones; old foxes are less easily caught in traps, and old stags show more cunning. On newly-discovered islands the birds and animals have no fear of man, and the seals and other animals do not move at his approach; but a very short experience teaches them what their safety consists in.

## REVIEW.

## UNCLE TOM IN ENGLAND; OR, A PROOF THAT BLACK'S WHITE. HOULSTON AND STONEMAN, PATERNOSTER-ROW.

AMONGST the many productions, in every department of literature, which are daily being issued from the home as well as the foreign press, there is none, in the region of imagination, that has, for some time, excited greater interest than Mrs. Beecher Stowe's American work, of which an "echo" is before us. For three parts of a century the public of this country have been familiar with the horrors of the Slave Trade; they have shuddered over the narrations of misery, which it has been the portion of many of their sable brethren to endure, and have raised their voice against it as an exemplification of unmitigated inhumanity on the side of the white man. Still slavery goes on, perhaps not increasing, but at such a steady pace as to require every possible human effort of legitimate power to bring it to an end. The great object of the book before us is to aid in this direction. It is a strong appeal to the tenderest sentiments of humanity; and manifests, on the part of the writer, the warmest enthusiasm in the cause he has espoused, and the deepest convictions of the evils he would expose. Its plot is perfectly distinct from that of Mrs. Stowe, although the author has, in some degree, connected the narratives, exhibiting characteristically traits of negro life with great truth and beauty, and expressing them with a fluency, fervour, and feeling, that rises the attention, almost, in spite of ourselves.

The story opens with a rich and redolent sketch of the coast of Africa, basking beneath the brilliant glories of an unclouded sun, and then introduces us to a slave-veel, lying in the offing, waiting to embark her sable cargo of human beings. This scene, and the ship under way, the following graphically told scene of the harrowing system of treatment to which the miserable wretches are subjected, is presented before us:

"The day breaks again! the sun ascends with his everlasting splendour, and shines down his constant smile upon the world. The waves are bright and blue as yesterday, and the winds as free and favouring as the slaver's heart can wish. But who can tell the terrors of the past night! How many hearts have been broken! What bitter torments have racked the breasts!—what visions of ravished homes and ruined loves have torn the hearts and maddened the brains of the doomed victims in this floating hell. Many were the prayers, which these poor heathens offered up to such a god as they had been taught to know, that he might deliver them out of their bondage,—that he might avenge their wrongs upon their captors, or end at once their woes by sinking them in the briny deep.

As the day opens, the different sailors of the crew become more active, as one by one they jump from their hammocks, and come up and pace the deck.

Standing about mid-ships, and splicing a piece of rope, is a big man, with enormous whiskers, thick eyebrows passing directly across the nostril, large ears, high jaws, and altogether colossal form and features. He is in immediate charge over the living cargo; and, having just brushed the cobwebs of sleep from his eyes, he is going below to look after the safety of the freight. But before he goes to make his examination, he deliberately splices one of the thongs of his cat-o'-nine-tails, which had flown off through the dexterity with which the corrective instrument was last used, and, having completed the operation, he flings it out, and jerks his arm and wrist to get the necessary flexion, that he may miss an aim, or throw away a blow. All being ready, he summons two blacks, Petro and Jack, to go down with him, to lend a hand in any operation he may find necessary.

In a moment he is heard cutting and slashing in all directions, upon discovering that some of the captives have been endeavouring to sever their fetters, or that they address imprecations to him as he passes by; for he has long been devoted to this calling, and knows well every angry sentiment uttered by the poor Africans.

"What's here?" said he, coming to one of the divisions; and he proceeds to answer his own query by seizing hold of the legs of a woman, and dragging out her dead body. "Here Petro!" he added, pointing significantly with his finger, upon which Petro disappeared up the ladder, bearing the body across his shoulders. A heavy plunge into the sea indicated that Petro had fulfilled his errand.

A little further on, and he pauses again. Taking hold of another body, he half draws it out,—then, dropping the legs, he stops to put a quid of tobacco into his mouth. Then kneeling down, he catches hold roughly of one of the eyelids, holds it up, takes a secondary glance at the glazed eyeball, and then, with the same significant thrust of the finger, dismisses Jack on a similar errand. Another heavy plunge into the sea explains the result.

Again he halts, with Petro by his side. "Haul her out," and she—that is, the third piece of perishable goods—is hauled out. His expression, however, is that of doubt; so flourishing his cat, he strikes home at the body, and finding that the flesh quivers, and an arm moves, he says gloomily, and with the air of one who has been troubled uselessly, "Shove her back!" and she is shoved back.

This tragedy has many acts, of which the next is the finale, for the first morning of the Slaver at sea. He comes to the spot where the unhappy

wretch who leaped from the boat had been chained, and he finds it covered with gore. The other victims, reddened by the blood of their dead companion, have pushed his corpse away from them as far as possible, and lie huddled up in an opposite corner. Upon examining the corpse he finds that, being a strong man, the unhappy wretch had torn a piece of sheet iron from a beam, and had opened a vein in his throat, by which he had died. Unfastening the fetters from around the feet of the dead body, he delivered it to the custody of Petro, who, though his limbs were well practised, failed to lift it.

"Him too fat, massa, hu! hu!" exclaims Petro, with a broad grin, and a shrug of the shoulders. "Him twa at once, and no mistake. Here, Jack, what you stan' dere' for doin' nuffin'; len' a han', will yer now, or 'll holler out to massa!"

"Wall, 'than, if you want me to len' a han', why not say so, guffar, eh? Aint I ollers willin' to len' a han'. Dere now, your liffin' nuffin'," said Jack, straining himself to the utmost.

"Now, den," said Petro, "lif' fa'r. Wall, there now, that jus too bad, I tell'r."

"Why, I's liffin' above a notch, I tell yer. Now, then; now, mine, I'm gwine to lif'; now, cum on!"

"Cum on!" said Petro; and, by sundry shufflings and haulings, they got the body upon deck.

It was a man of noble make. Of true African cast, his skin was of jet black; but he wore an unusually intellectual expression. His hair receded far over the temples of a high forehead; his shoulders were square; his chest broad; his hips were well set, and his form displayed a truly classic mould; there was still a strong definition upon his upper lip.

"Will massa be step on deck a minute?" said Petro, sticking his head, with an air of great fright, down through the hatch.

"What 'a the matter?" said the overlooker.

"Oh, no, massa, massa; but yer see yer's sartly life in him yet. He's a 'human' in him!"

"Oh, he's a fool—he might have been worth a thousand dollars, but he'll never pick up again now—so over with him." It was done.

Fourteen slaves were thus emancipated by death and murder at the close of the first night.

The remainder of the voyage passed without any remarkable events; for on board a slaver, the death of a captive or two is matter of little moment, and is always looked upon as a necessary occurrence. In all, twenty-eight victims died during the voyage. Once or twice there was an alarm upon a vessel coming in sight being mistaken for an English cruiser; but with this exception, and a few heavy squalls, one of which nearly threw the vessel on her beam ends, nothing of importance occurred. Now and then, during the voyage, a few of the slaves were brought on deck for air and exercise, and then an armed guard paraded with them. At other times, the crew lolled about the ship, and, gathering together, sung rude songs, such as—

"Ho! ho! heave ho!

What's the matter now boys, ho!

Run out the long gun, there's business to be done, boys,

Ho! ho! heave ho!

"Ho! ho! heave ho!

What's the matter now boys, ho!

We're safe in port, so now for the girls, boys,

Ho! ho! heave ho!"

Two black children, having recovered from their fright and injuries, and some of the sailors having taken notice of them on account of their interesting ways, would draw near while the seamen sung, and look wistfully into their faces, always holding each others' hands, and often embracing lovingly, and whispering words which none understood but themselves. After a little while they began to imitate the songs and sayings of the sailors, and this caused a great deal of merriment. The captain, having little else to employ his time, devoted a portion of it to teaching them various odd pranks; they could climb up the ropes and perform dexterous gymnastics upon the deck; and the captain called them MARROSSI and ROSETTA, to which names they soon readily answered.

At length the ship arrived in the harbour of Charleston, the American flag of stars and stripes floating at its mainmast."

This quotation may be taken as a fair specimen of the author's style, and the luminous mode in which he places his pictures before the eye of the imagination. Through the whole extent of the work, consisting of 220 pages the interest is never for a single moment permitted to flag; scene after scene rapidly succeeds each other, as vividly drawn as the paintings of a moving panorama; and every one leaving an impression perfectly distinct from that which has gone before it, or that which is to follow. The rapidity with which the work has been written too, astonished. In seven days, the author informs us, it was composed, printed, and ready for sale; evincing a fluency and facility of composition rarely to be met with, even in this age of railroad speed. This rapidity has, no doubt, been the occasion of some slips of the pen; but these are very few, and mere verbalisms, not at all injuring the text of the story.—That the work will be eminently successful, there can be no doubt; there having been during the first week of its issue, we understand, no fewer than TEN THOUSAND copies of it disposed of, which its great merits, coupled with its extremely low price, must yet vastly extend. We only regret that our limited space will not admit of our giving some more of the striking scenes with which the performance abounds; but, indeed, this would scarcely be fair, considering the cheapness of the work, which every one desirous of getting a true insight into the horrors of the slave traffic, ought immediately to purchase and peruse.

## WORK OF GREAT INTEREST.

**UNCLE TOM IN ENGLAND: OR, A PROOF THAT BLACK'S WHITE:** being an Echo to the American "UNCLE TOM," by Mrs. BRONNER STOWE. In ornamental covers. Price 1s.

London: JOHN BENNETT, 69, Fleet-street; and all Booksellers.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## OUR NEW VOLUME.

In addition to the attractions we have already announced to appear in our New Volume, we are happy to add a Series of Illustrated TALES OF SCOTTISH SONG, by JOHN SKEWER, Lecturer on Scottish Song; and also SKETCHES OF LIFE IN AUSTRALIA, communicated from the spot, with Original Plans and Views, highly interesting to all who intend to emigrate, or whose friends may have already taken their departure.

As already announced, in the Second Volume, will be commenced a NEW AND ORIGINAL TALE of great interest, by the EDITOR, entitled MABEL LEE; OR, THE LIGHTS AND SHADOWS OF AN ORPHAN'S LIFE. All the other Articles will be Original, and be written expressly for the HOME COMPANION. Each alternate Number will contain, in addition to the continuous tale by the Editor, a Complete Story, founded upon a popular drama, under the general title of "TALES FROM CELEBRATED DRAMATISTS," and after the manner of "Lamb's Tales from Shakspeare." These will include, *The Bondman, The Maid of Honour, The Duke of Milan, The Picture, The Fatal Dowry, The Great Duke of Florence, The Alchemist, The Fox, The Silent Woman, The Broken Heart, The Jew of Malta, Faustus, Vittoria Corombona, The Maid's Tragedy, Philaster, King and No King, The Elder Brother, Roadside, The Loyal Subject, Wit without Money*, and various others.

Departments will be opened for the Artist, the Mechanic, the Farmer, the Gardener, the Housewife, and the Juvenile. Under these heads will be given every kind of new discovery, and every fact of interest. Each department will be under the care of an Editor, whose attention will be earnestly directed to the bringing together of the essence of information and interest relating to the several subjects embraced, derived from peculiar and authentic sources.

Essays, Biographies, Letters from Correspondents, articles upon Natural History, Enigmas, &c., &c., together with a light and agreeable miscellany, will complete the arrangements for the New Volume of the HOME COMPANION, the whole giving it the highest title to UNIVERSAL RECEPTION BY THE BRITISH PEOPLE.

## THE ALMANACK

Is NOW READY, and is undoubtedly the greatest wonder of the year. We confidently assert that the Readers of the HOME COMPANION will thank us for affording them a very rich treat. Such an Almanack has never been published before. We quote the following brief preface to the Almanack itself:

"THE EDITOR of the HOME COMPANION having designed the whole of this Almanack upon an entirely original and novel plan, offers a few words in explanation thereof. The title page is full of graphic humour. It will be found to contain upwards of ONE HUNDRED comic figures, of the most lively and varied character. The lower portion of the page represents allegorically, Knowledge destroying Ignorance and Vice. At the top and bottom of each Calendar page will be found PICTORIAL CHARADES, each of which represents a word of two syllables—the first division of the picture illustrates the first syllable—the second division the second syllable—and the whole design the complete word. Thus the Charade No. 1, my first is 'break,' my second 'fast,' my whole 'breakfast!' The PICTORIAL ENIGMAS are constructed upon a different principle, which will be sufficiently understood by a glance at the letter-press which accompanies them. The same remark applies to the EXPERIMENTS IN NATURAL PHILOSOPHY, which will be found not only pleasing, but highly instructive. The Calendar is enlivened by numerous conundrums, and humorous notices of historical events. For the purpose of heightening the amusement afforded by the Almanack, it has been deemed proper to withhold the answers to the Pastime. These will appear in No. 53 of the "Home Companion." We give numbers and spaces for the reader to write down the answers he conjectures to be correct, so that by obtaining No. 53 he may have a capital evening's amusement by ascertaining how far he is successful. The Editor hopes that he may be privileged to issue a similar Almanack for many years. Several works projected by him having been wholly or partially pirated by persons who could find no other solution to the Enigma of their prosperity, but by appropriating his ideas, he takes this opportunity of intimating that there is little likelihood of the plan of this Almanack being pirated for the outlay upon it has been so great, that it will require a sale of two HUNDRED THOUSAND COPIES to REAP THE FIRST COST. It is undeniably the cheapest Almanack ever issued, and the only one of its kind."

## MABEL LEE.

"I have undertaken, at the request of many friends, to write the history of MABEL LEE, whose name stands in fiction. I confess that I am not given to the invention of Tales, made up of sterling and admirable incidents, but being reminded that the life of MABEL LEE is more strange than fiction, and may be written all the more vividly, because absolutely true, I have willingly entered upon the subject, and have already far advanced in its execution. I have never read a novel that interested me half so much as the story of this orphan girl; full of the most remarkable vicissitudes, of many of which I was an actual observer. The Reader must not expect from me a thrilling romance, but a story plainly and truthfully told, that will appeal to every heart, and supply many elements of good example to those who, like MABEL LEE, may have to struggle against the bitter tide of adversity, with a spirit too high and impulsive to submit to the harsh control often imposed upon virtuous but helpless poverty."

THE EDITOR.

## AMUSEMENTS.

EVERY young man should enter upon life with an earnest purpose. He will have need of patience, fortitude, energy, and intense thought, in overcoming the difficulties that must be encountered before his day of trial be over. Life has been called a warfare, and truly so called. It is a warfare with enemies, both within and without—enemies of the flesh and enemies of the spirit. He has to contend, in the world, against the selfishness that would crush every man's interest in the attainment of its own ends; and to contend with the same spirit of selfishness in his own heart, that is ever prompting him to seek an advantage at the sacrifice of other's good. Happy for him, if, when he falls into temptation, he do not fall in temptation, but stand fast by his integrity.

"If life, then, be so grave a matter, what has man to do with amusements?" we hear asked. "In these conflicts with foes within and without, one would think the heart could never heave up with a glad emotion, the eye never brighter, nor the lip smile."

And such could never be the case, if the strife were incessant—if, after a fierce conflict, there did not come a season of repose, in which both mind and body could rest, and be refreshed and invigorated for new combats. It has been argued—and it is evidently a true position—that inaction is not the rest that re-invigorates the exhausted energies of either the mind or body, but a new direction of effort, by which new muscles of the body, or new faculties of the mind, are brought into activity. The true repose, then, which should follow every life conflict—and they are of almost daily occurrence—is an entire diversion of the thoughts and feelings into some new channel. If this be not done, there can be no rest: for the current of thought will flow on unchecked, until the mind becomes diseased, and looses half its power.

And herein we see the use of amusements, or those innocent employments that divert the mind, and fill it with pleasing emotions. After the business of the day is over, these come in their natural order, to refresh and strengthen for new efforts; and it is more in accordance with the dictates of right reason to seek for re-invigoration in these than in dull inaction. To play a game of draughts or chess will do a man more good, after a day of labour and care, than to spend his evening in lounging on the sofa. And he will find the gay doings of a social party of far more benefit to him, if he make one of, and enter into the spirit of that party, than he will to sit out his evening, brooding over the disappointments and crosses of the day, or sadly contemplating the trials of to-morrow.

Amusements, therefore, we hold to be essential to the health of both body and mind. But, like every other good, they are liable to be perverted; and the young are more in danger of perverting them than those who have passed the prime of life. Nearly all the various amusements, public and private, that are entered into at this day, are innocent and useful in themselves, although some of them are sadly perverted to evil ends. Dancing, games, concerts, the opera, scenic representations, &c., are all good in themselves, and may be enjoyed innocently and beneficially by all. In cards, for instance, there is no evil abstractly, nor in a game of cards; but gambling is a great evil—one from which every honest mind shrinks with horror. When made a school of morals, the stage is a powerful teacher of truth, because it shows us vice or virtue in living personifications; but as it now is, we are compelled to acknowledge that it is a poor place of resort for the strengthening of virtuous principles.

At all suitable times, young men will find it useful to seek for recreations and innocent amusements. It will give their minds a healthier tone, and bring them into associations different from business associations, by which they will be able to see new phases of character, and judge more kindly of their fellow-men. In business, each one seeks his own interest; there is no generous deference to the interests of others, and men grow daily more and more selfish; but in social intercourse, one defers to another; there is the form of self-sacrifice for the good of others, at least, and we would then believe no little of its essence.

From this brief presentation of the subject, every one must see that the views taken by those who have adverted against amusements, as either sinful or entirely useless, are erroneous, and founded upon false notions of man's moral nature. Our life here is for the development and perfection of our characters as immortal beings, created originally in true order, and now

## ONWARD!

afforded all possible means for a return to true order. In true order, every affection of the mind, when it comes into activity, produces delight; and as a love of good is the vital principle of true order, when man is restored to what he has lost, his highest and purest delight will be in doing good. Delight or pleasure, then, is not evil, but good, provided it does not flow from the consummation of an evil purpose. It is the healthy reaction of the mind upon orderly effort, and strengthens and prepares it for new and higher efforts. Take away all delight as the reward of effort, and see how quickly the cheek fades and the eye grows dim.

If, then, delight or pleasure be not wrong in the abstract, the seeking of amusements, as means of recreation, after the mind is overwheeled by long and oft-repeated efforts, cannot be wrong; and this every mind not sadly warped by false views must see. But to seek amusements as a means of "killing time," as some do, or as the occupations instead of the occasional recreations of life, is to pervert them from their true object, and to make them highly injurious, instead of beneficial. To engage, night after night, in a trial of skill in games,—to spend two or three evenings every week at balls and parties, or attending theatric or operatic performances,—must enervate instead of strengthening the mind, and will inevitably hinder any young man from rising into distinguished positions of usefulness in society. After the business of the day, the mind will ordinarily find a means of healthy reaction in intellectual pursuits, which form a part of some leading purpose by which a man's life is governed; amusements come in as occasional means of restoring the wasted energies, and should be entered into at intervals, as absolutely essential to the continued healthy activity of our minds.

## THE CHILD'S FOOTSTEPS.

There is a sound most musical and sweet,  
A sound that ever bringeth joy to me,  
And thoughts of innocence for angels meet,  
And warmest love in all its purity:  
'Tis the light-bounding step, all gay and fleet,  
Of happy childhood, with its tiny feet.

No noiseless gliding, as on sin intent,  
Nor slow and measured entrance at the door;  
Each footstep, with a music eloquent,  
Resounds clear on winding stair or polished floor;  
And ere the little dimpled face appears,  
The quick, sweet sound hath charm'd away  
my cares.

Whether in satin slipper delicate,  
Or in its native freedom springing by;  
If in proud palace halls its petted fate,  
Or in the lowly home of poverty;  
Alike its buoyant gladness charms the ear,  
And bringeth thoughts of heavenly beauty near.

I wonder not, if, in His lowly guise,  
Surrounded by the hidden and the vile,  
A sudden splendour lit the Saviour's eyes,  
And His lips parted with a holy smile,  
When, with their upward, sunny gaze,  
drew nigh  
The little fearless forms of Infancy.

Ah, blessed little ones! Their rosy charms  
Lean'd on His bosom, all unpaied by fear;  
Serenely resting in His mighty arms  
Who framed the glory of each starry sphere,  
No thoughts of sinful years for them arose;  
No grief or shame to mar their sweet repose.

Then let His lowly followers not disdain  
To guard such flower-like beauty for their Lord,  
Nor deem the moments wasted, while they  
Fair Infants include obedient to His Word.  
Nay, rather let us, as their bloom we view,  
Seek our own innocent pleasures to renew.

**POPULAR DEFINITIONS.**—What is Fashion? Dinners at midnight, and headaches in the morning? What is Wit? That peculiar kind of talk that leads to pulled noses and broken heads. What is Joy? To count your money and find it overrun a hundred pounds. What is Conscience? Something that the guilty feel every time it thunders. What is Knowledge? To be away from home when people come to borrow books or umbrellas. What is Contentment? To sit in the house and see other people stuck in the mud. What is Justice? The opinion of twelve jurymen. What is Ambition? A desire to become possessed of a wooden leg, and half an eyebrow.

**ANECDOTE OF A GAME COCK.**—On the memorable 1st of June (Lord Howe's victory) Captain Berkeley commanded the Marlborough, and broke through the French line between L'Impetueux and Le Mutius, each of superior force, and engaged them both. On going into action the captain ordered all the live stock to be thrown overboard, but at the humble request of his crew permitted them to retain an old game cock, with which they (the crew) had fought several times, and always with success. Though the coop was thrown into the sea, the cock was allowed to range the deck at liberty. In action the Marlborough was so severely handled by her opponents that half the crew were disabled, her captain carried wounded below, her mainmast shot away, and the remainder of the men driven from their quarters. At the very juncture when the Marlborough was on the point of striking, there chanced one of those lulls in the roar of the thundering cannon often experienced in general action. In that momentary silence, when the falling of a rope might be heard, the old game cock, who had escaped the human carnage, hopped up upon the shattered stump of a mainmast, and, with a loud and triumphant flapping of his wings, sent forth such a long and lusty challenge as to be heard in every part of the disabled ship. No individual spoke in reply to the homely but touching alarm; one universal and gallant cheer from the broken crew arose; they remembered the indomitable courage of the bird that sat undismayed above the bleeding horrors of the deck, and every soul on board who could drag their limbs to quarters remained the guns, resumed the action, and forced each of their opponents to surrender. A silver medal was struck by order of Admiral Berkeley; it was hung upon the neck of the old game cock, who, in the parks, and around the princely halls of Goodwood, passed the remainder of his downy days in honour and safety.

**GOING A-HEAD WITH A VENGEANCE.**—Within the last quarter of a century we have made great progress in locomotion, but we were not prepared for the startling project of Mr. D. S. Brown, who proposes to reach America in 48 hours, and make the voyage to India and back in a fortnight. Mr. Brown intends to put his theory into practice by vessels of quite different construction to those at present in use.—*Atlixing Journal.*

**IRISH INDUSTRIAL EXHIBITION.**—The committee for conducting the Industrial Exhibition to be held in Dublin next year, propose to set apart a portion of the edifice for the purpose of exhibiting, besides sculpture, pictures, not being portraits, in oil and water-colours, frescoes, drawings, and engravings. As this form of Art was excluded from the Great Exhibition in Hyde Park, it may be well to direct attention to this arrangement of the Irish committee, in order that our English artists may prepare to assist the objects of the gathering by their contributions.

**AUSTRALIAN COTTON.**—The report of Mr. Bayley, President of the Manchester Chamber of Commerce, on some specimens of Australian cotton submitted to him by Dr. Laing, opens up new views of prosperity and wealth for the colony. The specimens were grown at various localities on the eastern shores of Australia. One of the experimental crops, grown at Ipawich, on the Breunell river, consisted of 920 lbs. of cotton in the seed on an acre. Of a sample of this lot, Mr. Bayley says:—"The cotton grown by Mr. Douglas is really beautiful, and worth, if properly cleaned, 2s. a pound. Such superior and excellent attributes of perfect cotton have been rarely seen in Manchester, and prove indisputably the capability of Australia to produce cotton of the most beautiful and useful description, at rates of value varying from 6d. to 2s. 6d. per pound."

**THE ELECTRIC TIME BALL AND CLOCK AT CHARING-CROSS.**—After several days of careful experiment the arrangements for carrying out these novel and interesting telegraphic phenomena were completed, and henceforward the inhabitants of the metropolis may confidently rely upon the descent of the Strand time ball simultaneously with that at Greenwich at 1 p.m. In connection with the ball, the elegant four-dialled electric clock opposite the company's Strand telegraph station at Charing-cross will also show correct time; but it may be as well to state that the minute hand moves only when the minute has been completed, and therefore a person wishing to set a watch must wait until he sees the minute hand suddenly move; the instant it stops will be "Greenwich mean time." This clock is also under the influence of the voltaic current transmitted from Greenwich. The ball falls daily at one o'clock (Sundays included), but should any unforeseen obstruction occur, it will descend at two o'clock, but failure is seldom anticipated, as the arrangements made by the company, in conjunction with the Astronomical Royal at Greenwich, and the South-Eastern Railway Company, are of so perfect a nature as to ensure unerring success.

**FRAUDS AND ADULTERATIONS IN TRADE.**—A late report of the Analytical Sanitary Commission, published in the *Lancet*, records the results of microscopical and chemical analyses of vinegar. It appears that out of twenty-eight samples, purchased at the houses of various retailers, in different parts of town, and the productions of almost every maker of any note, by whom the metropolis and its suburbs are supplied, only four were free from sulphuric acid (oil of vitriol); that twenty-four were adulterated with this corrosive mineral acid; that two contained it in a small quantity; that in three it was present in considerable amount; that twelve contained it in very considerable amount; and that in seven it was present in immense quantity. The report publishes, as usual, the names of the parties selling and the makers of the adulterated articles, together with the names of the four makers and the vendors of the pure article. The fact that the vinegar of these four makers was found to be entirely free from sulphuric acid or oil of vitriol is regarded as important, inasmuch as it proves that the use of that highly objectionable acid, even in small quantities, is not necessary to insure the preservation of vinegar, and shows that its addition is made rather for the purpose of increasing its apparent strength. The report concludes by publishing a letter from Mr. Fletcher, surgeon, of Bromsgrove, showing how families may manufacture for themselves, by a very simple process, a pure vinegar for the table or for the purpose of pickling, by using sugar, treacle, and water, and the fungus known as the vinegar-plant, and thus make themselves independent of dishonest manufacturers. The following opinion from Dr. Ure has been obtained by persons interested in the coffee-trade, with a view to its circulation among the retail dealers previously to the new Excise regulations coming into force. It was maintained by the late Chancellor of the Exchequer, that there was no reliable method of detecting the adulteration of coffee with chicory. The error of this statement was demonstrated by the *Lancet*, but it has been thought advisable to take further steps to make a simple process generally known:—"No problem in science is simpler or more certain than the detection of chicory, or of similar substances, in coffee powder. Ground roasted coffee imparts to cold water merely a pale sherry colour, whereas, when it is adulterated with ground roasted chicory it communicates a brown colour, of greater or less intensity, to cold water. If three glass tubes, set upright, be charged respectively with a few grains weight of—1. pure coffee; 2. of pure coffee mixed with a little chicory; 3. of coffee mixed with much chicory; and into each of these tubes a like quantity of cold water be poured, and if, after agitation the tubes be set upright at rest, the solid particles will soon fall to the bottom, and the transparent liquid in the stems of the tubes will show, by the variable depths of the tinctures, the presence and proportion of coffee and chicory in each of them. An apparatus for making this experiment may be had for 1s., and would give test results of sufficient precision."

# PALLOU PASTIME.

## A Curious Recreation with Sympathetic Ink, called the Book of Fate.

MAKE a book, consisting of seventy or eighty leaves, and in the cover at the end of it, let there be a case which opens next to the back, that it may not be perceived. At the top of each right-hand page, write any question you please, and at the beginning of the book, let there be a table of those questions, with the number of the pages in which each are to be found. They write with common ink on separate papers, each about half the size of the pages, the same questions that are in the book; and under each of them, write with the ink made with the litharge of lead, or the solution of blunuth, the answer. Soak a double paper in a vivifying ink, made of quick lime and orpiment, or the liver of sulphur, and just before you make the experiment, place it in the case that is in the cover of the book. Having done this deliver some of the papers on which the questions are written, to the company; and after they have chosen such as they wish to have answered, let them put them into those leaves where the same questions are contained; then shutting the book for a few minutes, the sulphureous spirit, with which the paper in the cover of the book is impregnated, will penetrate the leaves, and make the answer visible, which will be of a brown colour, and more or less deep, in proportion to the time the book has been closed.

## ENIGMAS.

1.  
Not far from St. Paul's a dependant on trade  
To a grandee of credit his homage once paid;  
A scholar was he, and of learning profound,  
And the gentleman much in his words did abound.  
His friend with a nod having call'd him more near,  
And whisper'd him something, not proper to hear,  
He bowing, march'd off—when at taking a glass,  
I ask'd who that complaisant visitor was?  
His friend paused awhile—then replied, "Sir, that man  
Is commander-in-chief of a numerous clan;  
'Tho' I can with a look, you see, keep him in awe,  
I'll assure you to some he's viceroy, or bashaw.  
His origin's Dutch, as his title displays;  
Like that state, o'er his vassals, despotic he sways;  
And without any trial, in passionate sallies,  
Sends hundreds together fast bound to the galleys,  
Having learnt long ago the chief art of a sov'reign  
As Machiavel taught, to distribute and govern.  
Add to which, in his honour he's nice to a point,  
And can scarce bear a word that is placed out of joint;  
Still full of his knowledge, imposed on the crowd,  
And no man in Europe more things e'er avow'd.  
To hear him, you'd swear he could execute wonders,  
Yet no man alive is so guilty of blunders.  
Nay, more—when the whim he takes into his head,  
The living he quits to converse with the dead.  
Therefore, when you meet him, I'd have you be civil,  
For I can assure you he deals with the devil."

11.  
WITHOUT me you could do nothing; and the Creator himself employed me when he made the world; consequently, as you will readily believe, I was in being even at the deluge. Directed by me, the sun rises and sets, the planets move in their several orbits, and the moon attends to illuminate the hemisphere; he only who formed me can destroy me; and the thousands who abused me whilst living, would give worlds, if they possessed me, to prevent their dissolution.

## PRACTICAL PUZZLES.

PLACE a sixpence in the bottom of a glass, and over the latter put a half-crown, as in the diagram. The puzzle is to remove the small coin from beneath the larger one, without touching either of the coins, or touching or upsetting the glass.

I have a lodging-house in which there are five boarders, all of whom have applied to me to let them cultivate the garden, but they require me to divide the ground around the house into five portions of the same shape and size, giving each two trees. Unless I can do it, I am I shall send my lodgers.

## TRANSFIGURED PLAYING CARDS.

"THE DAYS WHEN WE WENT GIPSYING."

"A DEED WITHOUT A NAME."

## CONUNDRUMS.

1. Why is a schoolboy, who has but just begun to read, like knowledge itself?
2. What weapon is that which names a good fish?
3. What is the difference between a soldier and a woodman?
4. Why should fine ladies squeezing wet linen, remind us of going to church?
5. Why is a huntsman like juvenile card-players?
6. What foreign letter names the territory of a duke?
7. Why was the parliament of the Commonwealth like Samson?
8. What English verb do I name, by addressing a Turkish governor with reverence?
9. What step must I take to remove the letter A from the alphabet?
10. Why is whatever we speak like the juice of grapes?
11. Why is a person with his eyes closed like a defective schoolmaster?
12. Why is an avaricious man like one with a short memory?
13. What is that which lives in winter, dies in summer, and grows with its root upward?
14. What quarter of the sky do I name, by saying—A vowel is behind?
15. Why is a man walking to a town like one endeavouring to prevent a blow?
16. Why is the sun like people of fashion?

## ARITHMETICAL QUESTIONS.

SUPPOSE a farmer has a calf, which at the end of three years begins to breed, and afterwards brings a female calf every year, and that each calf begins to breed in like manner at the end of three years—bringing forth a cow-calf every year; and that these last breed in the same manner, and so on in regular succession. It is required to determine the whole stock at the end of twenty years.

11.  
A person left by will one half of his property to his son, one third to his daughter, and the remainder, which was £1,000, to his widow. What were their respective fortunes?

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 766.

## ENIGMA.—POWER.

ARITHMETICAL QUESTIONS. 1. £67,816 16s. 8d. 2. 3 miles, 1,300 yards. PRACTICAL PUZZLE.—Loosen the string and draw the loop through the hole in the case it behind, and bring it through No. 1, and slip it over the small hearts; the string may be easily drawn out.

## REARADE.—NIGHT-SHADE.

CONUNDRUMS.—1. Miss Maudslayi. 2. Daniel Lambert. 3. The spirit moves him. 4. A bed. 5. An up-bearer. 6. She is full of air. 7. A gendarme. 8. Devil (evil). 9. Plague (ague). 10. Woe. 11. Just ice. 12. A roasted spine rib of pork, with apple sauce. 13. To cover his head. 14. At Endor. 15. He is in action. 16. In the dark. 17. It is a version (aversion).

### Editor's Note-Book.

**DOMESTIC HINTS.**—No. 24. *Washing.*—The most important department of domestic economy naturally includes the wash-house, into which philosophy has found its way for the application of many

useful principles, and much useful practice. When water is hard, and will not readily unite with soap, it will always be proper to boil it before use; which will be found sufficiently efficacious. If the hardness depends solely upon the impregnation of lime, in the form of what modern chemistry designates as a subcarbonate. The philosophical reason for this is, that the lime, by some secret process of nature, is united to a portion of carbonic acid, which causes it to be suspended in the water; but, in the process of boiling, the carbonic acid unites with the neutral carbonic acid, and is carried off with it into the atmosphere. Even exposure to a portion of water so impregnated, leaving it to stand for twenty-four hours, will produce this effect in a great degree upon spring water so impregnated, leaving it to stand for twenty-four hours. In both cases the water ought to be carefully poured off from the sediment, and the neutralized lime, when freed from its extra quantity of carbonic acid, falls to the bottom by its own gravity. Boiling, however, has no effect, when the hardness of the water proceeds from lime united with the sulphuric acid, or sulphate of lime of the modern chemistry; and it is with lime, neutralized, or brought to its proper state, by the application of common wood ashes from the kitchen grate, or of barilla, now called soda, or the domestic ashes, or pearl ash; by the more scientific process of dropping in a solution of subcarbonate of potash. Each of these unites with the sulphuric acid, and separates it from the lime, which gravitates, as in the former case, to the bottom. Having thus philosophically explained the means of the washing-tub, we may offer a saving hint in order to economize the use of soap, which is to put any quantity of pearl-ash into a large jar, covered from the dust; in a few days the alkali will become liquid, which must be diluted by double its quantity of soft water with its equal quantity of new-slacked lime. Boil it half an hour, frequently stirring it; adding as much more hot water, and drawing off the liquor, when the residuum may be boiled afresh, and drained, until it ceases to feel acrid to the tongue. Much soap and much manual labour also may be saved by dissolving alum and chalk in brain water, in which the linen ought to be boiled, then well rinsed out, and exposed to the natural process of bleaching. Soap may also be totally dispensed, or nearly so, in the getting up of muslins and chintzes, which should always be treated agreeable to the oriental manner; that is, to wash them in plain water, and then boil them in souges or rice water; after which they ought not to be submitted to the operation of the smoothing iron, but rubbed smooth with these processes. The economy which must result from these processes renders their consideration important to every private family; in addition to which we must state that the improvements in philosophy extend to the laundry as well as to the wash-house.

**ETYMOLOGY OF THE WORD "BANKRUPT."**—R. E.—The establishment of the first traders in exchange who dealt in open market places, is said to have consisted in a bare bench or counter (*bancus*, Lat., *bancus*, Ital.); which bench we are told, in case of the trader's failure, was broken up, by way of public stigma. Hence the name of banker or bench; and hence, as some presume, the etymology of the term Bankrupt.

**WORK.**—R. A. S.—No; to be able to work, and to have it to do are the highest sources of man's happiness. Carlyle speaking of this very subject says:—"There is a perennial nobleness and even sacredness in work. Were he never enlightened, forgetful of his high calling, there is always hope in a man that actually and earnestly works; in lifeless slumber there is perpetual despair. Work, never so Manumitted; mean, is in communication with Nature. The real desire to get work done, will itself lead one more and more to truth, to Nature's appointments and regulations, which are truth."

**MAN.**—R. E.—In our opinion the application is reversed. In naval architecture, the rudder is first fitted in, and then the hull is put on board, and last of all, the sails and the sails. It is a r otherwise in the fitting up and forming of man; he is launched into the world with the cargo of his faculties aboard; and all the while of his passions set; but it is the long and painful work of his life, to acquire the ballast of experience, and to form the rudder of reason; hence, it too often happens that the ballast

vessel is shipwrecked before he has laid in the necessary quantity of ballast, or that he has been so long in completing the rudder, that the vessel is become too crazy to benefit by its application.

**THE PINNACLE OF ART.**—R. L. A.—No. Only a few is it given to attain the highest and noblest point of art. Literally speaking, we can all of us only approach it, and we have already reached our goal when we can acknowledge and attain the point which the Almighty has placed as the limit of our capacities. In this world we can only purpose—only live in revolutions—the true goal lies far beyond us, and consists here in the true and proper appreciation of that which lies around us in this manifold world. Thus the Almighty Creator has revealed himself gently and simply to our weak senses through the medium of Nature. He does not speak to us with his own voice, because we are too weak to understand him; but through Nature he beckons us towards himself, and in every moss, and in every pebble is hidden a secret cypher, which may never be copied or fully read, but which, nevertheless, we may understand.

**PICTURE.**—A. P.—The term, as understood in the Fine Arts, signifies the last touch applied to a picture. It always constitutes the difference between excellence and mediocrity. Small pictures, which are to be closely examined, require the most careful finish, but in larger works too much attention to this detracts from their boldness and vigour. The great masters, therefore, study effect rather than finish. Hence their productions are to be viewed from a distance rather than close; when a few masterly strokes, delivered with an apparently unpractised and careless hand, will convey to the observer's eye, the characteristics of the artist's style of giving to his performances his

—FINISHING TOUCHES.

**MIXTURE OF COLOURS.**—G. U.—It is only amongst ourselves and the aristocratic Americans of the Union where the cry is kept up. At El Dorado, in Central America, the system of amalgamating the black and white inhabitants is largely carried into effect. Mr. Stephens dined at the house of a respectable merchant, and thus describes it:—"At the head of the table was a British officer and opposite to him a mulatto. On his left was another officer, and opposite to him also a mulatto. By chance, a place was made for me between the two coloured gentlemen. Some of my countrymen, perhaps, would have hesitated about taking it—but I did not. Both were well dressed, well educated, and polite. They talked of their mahogany works, of England, hunting, horses, ladies, and wine. And before I had been an hour in Balize, I learned that the great work of practical amalgamation—the subject of so much controversy at home—had been going on quietly for generations: that colour was considered a mere matter of taste, and that some of the most respectable inhabitants had black wives and mulatto children, whom they educated with as much care, and made money for with as much zeal, as if their skins were perfectly white.

**QUEEN ANNE'S FARTHING.**—F. C.—The erroneous supposition that only three of these farthings were struck in Queen Anne's reign is founded on the fact that there were some pattern or proof coins, which got into circulation, in addition to the coin which was really in use. Several hundreds of Queen Anne's farthings were struck, and those bearing the inscription and lettering given in the annexed diagram are not very rare. The common far-

thing of Queen Anne is worth, to collectors, from seven to twelve shillings, while the pattern coins fetch from one to five pounds.

**ORIGIN OF THE WORD "SOLEISM."**—P. S.—Soul, or Pampelopolia, was a colony of the Athenians, the inhabitants of which in time forgetting their native tongue, spoke a barbarous language—hence, anything rude or uncivilized is termed a soleism.

**COMMUNICATIONS RECEIVED.**—C. A. (playing cards were invented about 1300 for the amusement of the King of France). J. S. (it is impossible to say; the Chinese, Japanese, Hindus, and Chaldeans, claim indefinite antiquity). E. F. (No; when a bar of iron is in the magnetic equator, it loses all power on a needle). K. G. (shells are carbonate of lime; bones, phosphate of lime). R. N. (No; there are no organic remains till we come to strata of limestone). R. S. (It was Richard I. who changed the title of the chief magistrates of London from Bailiff to that of Mayor). D. A. (marl is a Saxon word for marrow; hence, a valuable unctuous clay is so called, as being the fatness of the earth). P. C. (the brilliant tint of the rising and setting of the sun, are caused by the refrangibility of the intercepting vapours). F. L. (there are deeper mines on the continent; for example, there is Prutenburg in Bohemia, a mine one thousand yards below the earth's surface. This we believe is the deepest in the world). R. A. (No; neither a woman nor a minor can be outlawed). G. E. (the first monument erected in St. Paul's was that of Howard). F. G. (No; it is upon respiration that the degree of animal heat depends). P. C. (it is undoubtedly to the Greeks that we are indebted for the highest cultivation of all the imitative arts). E. U. (potash softens hard water by decomposing the earthy salts in it). U. F. (the lyre and the harp resemble each other, and are used synonymously. The lyre of the Greeks was similar to the harp of the moderns). P. C. (the sum expended in England for shawls alone is immense, being about £2,000,000). S. A. (when lace is manufactured from silk it is called blonde lace). T. S. (the invention of lamps is ascribed to the Egyptians and from Egypt they were carried into Greece). L. B. (not at all; children learn to speak by imitable imitation). M. O. (the stimulating power of manure is derived from ammonia). F. V. (No; the circumstance alluded to occurred during the reign of our present Queen). J. S. (we insert your Scottish song of

JOHNNIE COOPER.

*Air: Cock up your Beaver.*

When young Johnnie Cooper first came to court me  
A handsomer lad he never could see  
His cheeks were the bloom of the deep blushing heather,  
When a round my mob's sweet kisses would gather,  
His kisses would gather, when blushing like heather,  
Would fly o'er my cheeks as his kisses would gather  
His teeth shone like gowans when beaming with dew,  
And glanced with the kindness of a that is true,  
His lips were like cherries in fine summer weather  
Oh how could I help their sweet kisses to gather,  
Kisses to gather, when blushing like heather,  
Would fly o'er my cheeks as his kisses would gather  
His eyes with their brightness my heart would love tried,  
The mark that I saw them, the mark I admired;  
Whist o'er them each bonnie brow in like a feather,  
As oft round my mouth his sweet kisses would gather,  
Sweet kisses would gather, when blushing like heather,  
Would fly o'er my cheeks as his kisses would gather  
But ah! the fell whiskey on Johnnie caught hold,  
And in the could grave soon his beauty laid cold.  
Nae mair will my cheeks tak' the bloom of the heather,  
As a round my mob's sweet kisses would gather,  
Sweet kisses would gather—nae blushing like heather  
Will fly o'er my cheeks now—the kisses will gather.

\* Mountain daisies.

**E. A. R.** (nitrogen is the gas that remains after air has lost its oxygen). A. J. A. (No; we should say that sublimity and grandeur were the elements of the style of Michel Angelo). X. X. (labour is the produce of intellectual greatness. You must remember that there is no royal road to learning, and in proportion to the well-ordered steadiness of your labours, so in proportion will be the accumulation of your intellectual attainments. It is quite true that in the paths of poetry and light literature, there are some brains, as it were, ready made for its production, but these are so few, comparatively speaking, they must be called rather the exception, than the rule).

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 50.—Vol. I.

SATURDAY, DECEMBER 11, 1852.

PRICE ONE PENNY.

"His eye was fixed on this object, and regardless where he placed his feet, he soon shrunk back with horror, on perceiving they had nearly trod upon a new-born infant, lying on the ground!"

## NATURE AND ART.

BY MRS. INCHBALD.

(Continued from page 774)

"A libel," replied the dean, in a raised voice, "is that which one person publishes to the injury of another."

"And what can the injured person do," asked Henry, "if the accusation should chance to be true?"

"Prosecute," replied the dean.

"But, then, what does he do if the accusation be false?"

"Prosecute likewise," answered the dean.

"How, uncle! is it possible that the innocent behave just like the guilty?"

"There is no other way to act."

"Why, then, if I were the innocent, I would do nothing at all, sooner than I would act like the guilty. I would not persecute—"

"I said *prosecute*," cried the dean in anger. "Leave the room you have no common sense."

"Oh, yes, now I understand the difference of the two words, but they sound so much alike, I did not at first observe the distinction. You said 'the innocent *prosecute*, but the guilty *persecute*.' He bowed (convinced as he thought), and left the room.

After this modern star-chamber, which was left sitting, had agreed on its

mode of vengeance, and the writer of the libel was made acquainted with his danger, he waited, in all humility, upon Lady Clementina, and assured her, with every appearance of sincerity,—

"That she was not the person alluded to by the paragraph in question, but that the initials which she had conceived to mark out her name were, in fact, meant to point out Lady Catherine Newland."

"But, sir," cried Lady Clementina, "what could induce you to write such a paragraph upon Lady Catherine? She *never* plays."

"We know that, madam, or we dared not to have attacked her. Though we must circulate libels, madam, to gratify our numerous readers, yet no people are more in fear of prosecutions than authors and editors: therefore, unless we are deceived in our information, we always take care to libel the innocent; we apprehend nothing from them—their own characters support them—but the guilty are very tenacious, and what they cannot secure by fair means, they will employ force to accomplish. "Dear madam, be assured I have too much regard for a wife and seven small children, who are maintained by my industry alone, to have written anything in the nature of a libel upon your ladyship."

## CHAPTER VII.

ABOUT this period the dean had just published a pamphlet in his own name, and in which that of his friend the bishop was only mentioned with thanks for hints, observations, and condescending encouragement to the author.

This pamphlet glowed with the dean's love for his country, and such a country, as he described, it was impossible not to love.

"Salubrious air, fertile fields, wood, water, corn, grass, sheep, oxen, fish, fowl, fruit, and vegetables," were depicted with the most prodigal hand; "valiant men, virtuous women; statesmen wise and just; tradesmen abounding in merchandise and money; husbandmen possessing peace, ease, plenty; and all ranks liberty."

This brilliant description, while the dean read the work to his family, so charmed poor Henry, that he repeatedly cried out,—

"I am glad I came to this country."

But it soon happened that, a few days after, Lady Clementina, in order to render the delicacy of her taste admired, could eat of no one dish upon the table, but found fault with them all. The dean at length said to her—

"Indeed you are too nice: reflect upon the hundreds of poor creatures who have not a morsel or a drop of anything to subsist upon, except bread and water; and even of the first a scanty allowance, but for which they are obliged to toil six days in the week, from dawn to dusk."

"Pray, uncle," cried Henry, "in what country do these poor people live?"

"In this country," replied the dean.

Henry rose from his chair, ran to the chimney-piece, took up his uncle's pamphlet, and said,

"I don't remember your mentioning them here."

"Perhaps I have not," answered the dean, coolly.

Still Henry turned over each leaf of the book; but he could meet only with luxurious details of "the fruits of the earth, the beasts of the field, the birds of the air, and the fishes of the sea."

"Why here is provision enough for all the people," said Henry; "why should they want? why do not they go and take what of these things?"

"They must not," said the dean, "unless they will starve."

"What uncle, does no part of the earth, nor anything which the earth produces, belong to the poor?"

"Certainly not."

"Why did you not say so, then, in your pamphlet?"

"Because it is what everybody knows."

"Oh! then what you have said in your pamphlet is only what—nobody knows?"

There appeared to the dean, in the delivery of this sentence, a satirical acrimony, which his irritability as an author could not but perceive.

An author, it is said, has more acute feelings in respect to his works than any artist in the world beside.

Henry had some cause, on the present occasion, to think this observation just; for no sooner had he spoken the foregoing words, than his uncle took him by the hand out of the room; and leading him to his study, there he enumerated his various faults, and having told him "it was for all those, too long permitted with impunity, and not merely for the present impudence, that he meant to punish him," ordered him to close his chamber for a week.

In the mean time, the dean's pamphlet (less hurt by Henry's critique than he had been) was proceeding to the tenth edition, and the author's literary reputation beyond what he had ever conferred on his friend the bishop.

The style, the energy, the eloquence of the work, was echoed by every reader who could afford to buy it—some few enlightened ones excepted, who chiefly admired the author's invention.

The dean, in the good-humour which the rapid sale of his book produced, once more took his nephew to his bosom; and although the ignorance of young Henry upon the late occasions had offended him very highly, yet this selfsame ignorance, evinced a short time after upon a different subject, struck his uncle as productive of a most rare and exalted virtue.

Henry had frequently, in his conversation, betrayed the total want of all knowledge in respect to religion or futurity; and the dean, for this reason, delayed taking him to church till he had previously given him instructions wherefore he went.

A leisure morning arrived; on which he took his nephew to his study, and implanted in his youthful mind the first unconfused idea of the Creator of the universe.

The dean was eloquent, Henry was all attention: his understanding, expanded by time to the conception of a God; and not warped by custom, from the sensations which a just notion of that God inspires, dwell with delight and wonder on the information given him: lessons which, transfused into the head of a senseless infant, too often produce, throughout his remaining life, an impious indifference to the truths revealed.

Yet, with all that astonished, that respectful sensibility which Henry showed on this great occasion, he still expressed his doubts, and put questions to the dean with his usual simplicity till he felt himself convinced.

"What!" cried he, after being informed of the attributes imparted from the Supreme Being, and having received the injunction to call frequently to His sight and morning—"what! am I permitted to speak to Him?"

"At all times," replied the dean.

"How! whenever I like?"

"Whenever you like," returned the dean.

"I durst not," cried Henry, "make so free with the bishop, nor dare any of his attendants."

"The bishop," said the dean, "is the servant of God, and therefore must be treated with respect."

"With more respect than his Master?" asked Henry.

The dean not replying immediately to this question, Henry, in the rapidity

"What what say I to say, when I speak to the Almighty?"

"First thank him for the favours he has bestowed on you."

"What favours?"

"You amaze me," cried the dean, "by your question: Do not you live in ease, in plenty, and happiness?"

"And do the poor and the unhappy thank him too, uncle?"

"No wonder," replied the dean, "for having been made a rational creature."

"And does my aunt, and all her card-parties, glorify him for that?"

The dean again made no reply, and Henry went on to other questions, till his uncle had fully instructed him as to the nature and the form of prayer; and now, putting into his hands a book, he pointed out to him a few short prayers, which he wished him to address to Heaven in his presence.

While Henry bent his knees, as his uncle had directed, he trembled, turned pale, and held, for a slight support, on the chair placed before him.

His uncle went to him, and asked him what was the matter.

"Oh," cried Henry, "when I first came to your door with my poor father's letter, I shook for fear you would not look upon me; and I cannot help feeling even more now than I did then."

The dean embraced him with warmth, gave him confidence, and retired to the other side of the study, to observe his whole demeanour on this new occasion.

As he beheld his features varying between the passions of humble fear and fervent hope, his face sometimes glowing with the rapture of thanksgiving, and sometimes with the blushes of contrition, he thus exclaimed apart—

"This is the true education on which to found the principles of religion. The fervour conceived by Heaven in granting the freedom of petitions to its throne can never be conceived with proper force but by those whose most tedious moments are spent in prayer. Unthinking government of themselves! to insult the Deity with a form of worship, in which the mind is so much, say, worse, has repugnance; and, by the very nature of things, is vain, ineffectual even in age, devotion."

Henry's attention was so fully fixed that he forgot there was a spectator of his fervour: but as he heard young William enter the chamber, and even speak to his father.

At length, rising from his knees, he approached his uncle, and with a sedateness in his air, which gave the latter a very favourable opinion of the state of his youthful companion's mind.

"So, Mr. Henry," cried William, "you have been obliged, at last, to say your prayers."

The dean informed his son, that to Henry, it was no punishment to pray.

"It is the strongest joy I ever knew," said William, inadvertently.

"He is right," said Henry. "I was frightened when I first knelt; but when I came to the words which art in Heaven, they gave me courage; for I knew how precious and kind a father is, beyond any one else."

The dean then embraced his nephew, let fall a tear to his poor brother Henry's remembrance, and admonished the youth to show himself equally obedient to other instructions as he had done to those which inculcate duty.

## CHAPTER VIII.

The interim between youth and manhood was passed by young William and young Henry in studious application to literature; some casual mistakes in our customs and manners on the part of Henry, some too close adherences to them on the side of William.

Their different characters when boys were preserved when they became men. Henry still retained that natural simplicity which his early destiny had given him; he wondered still at many things he saw and heard, and at times would venture to give his opinion, contradict, and even act in opposition to persons whom long experience and the approbation of the world had placed in situations which claimed his implicit reverence and submission.

Unchanged in all his boyish tastes, young William, now a man, was never known to infringe upon the statutes of good-breeding, even though sincerity, his own free-will, duty to his neighbour, with many other plebeian virtues and privileges, were the sacrifice.

William inherited all the pride and ambition of the dean, Henry all his father's humility. And yet, so various and extensive is the acceptance of the word pride, that, on some occasions, Henry was proud even beyond his cousin. He thought it far beneath his dignity even to honour, or contemplate with awe, any human being in whom he saw numerous failings; nor would he, to ingratiate himself into the favour of a man above him, stoop to one servility, such as the haughtiness William fully practised.

"I know I am called proud," one day, said William to Henry.

"Dear cousin," replied Henry, "it must be only, then, by those who do not know you; for to me you appear the humblest creature in the world."

"Do you really think so?"

"I am certain of it," answered he, "you always give me your opinion to that of persons in a superior state, but never inferior to their understanding? Would, else, their weak judgment immediately change yours, though before you had been decided on the opposite side? I have known many, I have more people than you; but I never will stoop to act as to speak contrary to my feelings."

"Then, you will never be a great man."

"No, Mr. Henry, I shall be a great man."

so prodigiously astonished at the distinction, the attention, the many offices of civility paid her by him, in preference to her idolised sisters, that her gratitude for such unexpected favours had sometimes (even in his presence and in that of her family) nearly drowned her eyes with tears. Yet they were only trifles, in which Henry had the opportunity or the power to give her testimony of his regard—trifles, often more grateful to the sensible mind than efforts of high importance; and by which the proficient in the human heart will accurately trace a passion, wholly concealed from the dull eye of the unskilled observer.

The first cause of amazement to Rebecca in the manners of Henry was, that he talked with *her* as well as with her sisters; no visitor else had done so. In appointing a morning's or an evening's walk, he proposed her going with the rest; no one had ever required her company before. When he called and she was absent, he asked where she was; no one had ever missed her before. She thanked him most sincerely, and soon perceived that, at those times when he was present, company was more pleasing even than books.

Her astonishment, her gratitude, did not stop here—Henry proceeded in attention—he soon selected her from her sisters, to tell her the news of the day; answered her observations the first; once gave her a sprig of myrtle from his bosom in preference to another who had praised its beauty; and once—never-to-be-forgotten kindness—sheltered her from a hasty shower with his *parapluie*, while he lamented, to her drenched companions, that he had but *one* to offer.

From a man whose understanding and person they admire, how dear, how impressive on the female heart is every trait of tenderness! Till now, Rebecca had experienced none, not even of the parental kind; and merely from the overflowings of a kind nature (not in return for affection) had she ever loved her father and her sisters. Sometimes, repulsed by their severity, she transferred the fulness of an affectionate heart upon birds, or the brute creation; but now, her alienated mind was recalled and softened by a sensation that made her long to complain of the burden it imposed. Those obligations, which exact silence are a heavy weight to the grateful; and Rebecca longed to tell Henry, that even the forfeit of her life would be too little to express the full sense she had of the respect he paid to her. But as modesty forbade not only every kind of declaration, but every insinuation purporting what she felt, she wept through sleepless nights from a load of suppressed explanation; yet still she would not have exchanged this trouble for all the beauty of her sisters.

#### CHAPTER X.

OLD John and Hannah Primrose, a prudent, hardy couple, who, by many years of peculiar labour and peculiar abstinence, were the least poor of all the neighbouring cottagers, had an only child (who has been named before) called Agnes; and this cottage girl was reckoned, in spite of the beauty of the elder Miss Rymers, by far the prettiest female in the village.

Reader of superior rank! if the passions which rage in the bosom of the inferior class of human kind are beneath your sympathy, throw aside this little history, for Rebecca Rymer and Agnes Primrose are its heroines.

But you, unprejudiced reader, whose liberal observations are not confined to stations, but who consider all mankind alike deserving your investigation; who believe that there exist, in some, knowledge without the advantage of instruction; refinement of sentiment independent of elegant society; honourable pride of heart without dignity of blood; and genius destitute of art to render it conspicuous,—you will, perhaps, venture to read on, in hopes that the remainder of this story may deserve your attention, just as the wild herb of the forest, equally with the cultivated plant in the garden, claims the attention of the botanist.

Young William saw in young Agnes even more beauty than was beheld by others; and on those days when he felt no inclination to ride, to shoot, or to hunt, he would contrive, by some secret device, the means to meet with her alone, and give her tokens (if not of his love) at least of his admiration of her beauty, and of the pleasure he enjoyed in her company.

Agnes listened, with a kind of delirious enchantment, to all her elevated and eloquent admirer uttered; and in return for his praises of her charms, and his equivocal replies in respect to his designs towards her, she gave to him her most undisguised thoughts, and her whole enraptured heart.

This harmless intercourse (as she believed it) had not lasted many weeks before she loved him: she even confessed she did, every time that any unwonted mark of attention from him struck with unexpected force her insatuated senses.

It has been said by a celebrated writer, upon the affection subsisting between the two sexes, that "there are many persons who, if they had never heard of the passion of love, would never have felt it." Might it not with equal truth be added, that there are many more, who having heard of it, and believing most firmly that they feel it, are nevertheless mistaken? Neither of these cases was the lot of Agnes. She experienced the sentiment before she ever heard it named in the sense with which it had possessed her—joined with numerous other sentiments: for genuine love, however rated as the chief passion of the human heart, is but a poor dependant, a retainer upon other passions—admiration, gratitude, respect, esteem, pride in the object. Divest the boasted sensation of these, and it is no more than the impression of a twelve-month, by courtesy, or vulgar error, termed love.

Agnes was furnished with the rarest structure of the human frame, and destined by the tenderest thrillings of the human soul, to inspire and to experience real love: but her nice taste, her delicate thoughts, were so refined beyond the sphere of her own station in society, that nature would have produced this prodigy of attraction in vain, had not one of superior education

and manners assailed her affections; and had she been accustomed to the conversation of men in William's rank of life, she had, perhaps, treated William's addresses with indifference: but, in comparing him with her familiar acquaintance, he was a miracle! His unremitting attention seemed the condescension of an elevated being; whom she looked up to with reverence, with admiration, with awe, with pride, with sense of obligation—and all those various passions which constitute true, and never-to-be-eradicated, love.

But in vain she felt, and even avowed with her lips, what every look, every gesture, had long denoted; William, with discontent, sometimes with anger, upbraided her for her false professions, and vowed that while one tender proof, which he fervently besought, was wanting, she did but aggravate his misery by less endearments.

Agnes had been taught the full estimation of female virtue; and if her nature could have detested any one creature in a state of wretchedness, it would have been the woman who had lost her honour; yet, for William, what would not Agnes forfeit! The dignity, the peace, the serenity, the innocence of her own mind, love soon encouraged her to fancy she could easily forego; and this same overpowering influence at times so forcibly possessed her, that she even felt a momentary transport in the contemplation of so precious a sacrifice to him. But then she loved her parents; and their happiness she could not prevail with herself to barter even for *his*. She wished he would demand some other pledge of her attachment to him; for there was none but this, her ruin in no other shape, that she would deny at his request. While thus she deliberated, she prepared for her fall.

Bred up with strict observance both of his moral and religious character, William did not dare to tell an unequivocal lie even to his inferiors—he never promised Agnes he would marry her; nay even, he paid so much respect to the forms of truth, that no sooner was it evident that he had obtained her heart, her whole soul entire—so that loss of innocence would be less terrifying than separation from him—no sooner did he perceive this, than he candidly told her he could never make her his wife. At the same time, he lamented "the difference of their births, and the duty he owed his parent's hopes," in terms so pathetic to her partial ear, that she thought him a greater object of compassion in his attachment even than herself; and was now urged by pity to remove the cause of his complainings.

One evening Henry accidentally passed the lonely spot where William and she constantly met; he observed his cousin's impassioned eye, and her affectionate yet fearful glance. William, he saw, took delight in the agitation of mind, in the strong apprehension mixed with the love of Agnes: this convinced Henry that either he or himself was not in love; for his heart told him he would not have beheld such emotions of tenderness mingled with such marks of sorrow, upon the countenance of Rebecca, for the wealth of the universe.

The first time he was alone with William after this, he mentioned his observation on Agnes's apparent affliction, and asked why her grief was the result of their stolen meetings?

"Because," replied William, "her professions are unlimited, while her manners are reserved; and I accuse her of loving me with unkind moderation, while I love her to distraction."

"You design to marry her, then?"

"How can you degrade me by the supposition?"

"Would it degrade you more to marry her than to make her your companion?—to talk with her for hours in preference to all other company?—to wish to be endeared to her by still closer ties?"

"But all this is not raising her to the rank of my wife."

"It is still raising her to that rank for which wives alone were allotted."

"You talk wildly! I tell you I love her; but not enough, I hope, to marry her."

"But too much, I hope, to undo her?"

"That must be her own free choice—I make use of no unwarrantable methods."

"What are the warrantable ones?"

"I mean, I have made her no false promises—offered no pretended settlement—vowed no eternal constancy."

"But you have told her you love her; and, from that confession, has she not reason to expect every protection which even promises could secure?"

"I cannot answer for her expectations; but I know, if she should make me as happy as I ask, and I should then forsake her, I shall not break my word."

"Still she will be deceived; for you will falsify your looks."

"Do you think she depends on my looks?"

"I have read in some book, 'Looks are the lover's sole dependence.'"

"I have no objection to her interpreting mine in her favour; but then, for the consequences, she will have herself, and only herself, to blame."

"Oh, Heaven!"

"What makes you exclaim so vehemently?"

"A forcible idea of the bitterness of that calamity which inflicts self-reproach! Oh, rather deceive her—leave her the consolation to reproach you, rather than herself."

"My honour will not suffer me."

"Exert your honour, and never see her more."

"I cannot live without her."

"Then live with her by the laws of your country; and make her and yourself both happy."

"Am I to make my father and my mother miserable? They would disown me for such a step."

"Your mother, perhaps, might be offended, but your father could not. Remember the sermon he preached but last Sunday, upon—the shortness of

this life—contempt of all riches and worldly honours in balance with a quiet conscience—and the assurance he gave us, that the greatest happiness enjoyed upon earth was to be found under a humble roof, with heaven in prospect."

"My father is a very good man," said William; "and very instead of being satisfied with a humble roof, he looks impatiently forward to a bishop's palace."

"He is so very good, then," said Henry, "that perhaps, seeing the dangers to which men in exalted stations are exposed, he has such extreme philanthropy, and so little self-love, he would rather that himself should brave those perils incidental to wealth and grandeur than any other person."

"You are not yet civilised," said William; "and to argue with you is but to instruct without gaining instruction."

"I know, sir," replied Henry, "that you are studying the law most assiduously, and indulge flattering hopes of rising to eminence in your profession; but let me hint to you, that though you may be perfect in the knowledge how to administer the commandments of men, unless you keep in view the precepts of God, your judgment, like mine, will be fallible."

The dean's family passed this first summer at the new-purchased estate so pleasantly, that they left it with regret when winter called them to their house in town.

But if some felt concern in quitting the village of Anfield, others, who were left behind, felt the deepest anguish. Those were not the poor; for rigid attention to the religion and morals of people in poverty, and total neglect of their bodily wants, was the dean's practice. He forced them to attend church every Sabbath; but whether they had a dinner on their return was too gross and temporal an inquiry for his spiritual fervour. Good of the soul was all he aimed at; and this pious undertaking, besides his diligence as a pastor, required all his exertion as a magistrate; for to be very poor and very honest, very oppressed yet very thankful, is a degree of sainted excellence not often to be attained, without the aid of zealous men to frighten into virtue.

Those, then, who alone felt sorrow at the dean's departure, were two young women, whose parents, exempt from indigence, preserved them from suffering under his unprying piety; but whose discretion had not protected them from the bewitching smiles of his nephew, and the seducing wiles of his son.

The first morning that Rebecca rose, and knew that Henry was gone till the following summer, she wished she could have laid down again and slept away the whole long interval. Her sisters' peevishness, her father's austerity, she foresaw, would be insupportable, now that she had experienced Henry's kindness, and he was no longer near to fortify her patience. She sighed—she wept—she was unhappy.

But if Rebecca awoke with a dejected mind and an aching heart, what were the sorrows of Agnes? The only child of doting parents, she never had been taught the necessity of resignation—untutored, unlearned, unused to reflect, but knowing how to feel; what were her sufferings when, on waking, she called to mind that William was gone, and with him gone all that excess of happiness which his presence had bestowed, and for which she had exchanged her future tranquillity.

Loss of tranquillity even Rebecca had to bemoan: Agnes had still more—the loss of innocence.

If William remained in the village, shame, even conscience, perhaps, might have been silenced; but, separated from her betrayer, parted from the joys of guilt, and left only to its sorrows, every sting which quick sensibility could sharpen, to torture her, was transfixed in her heart. First came the recollection of a cold farewell from the man whose love she had hoped her yielding passion had for ever won; next flashed on her thoughts her violated person; next, the crime incurred; then her cruelty to her parents; and, last of all, the horrors of detection.

She knew that as yet, by wariness, care, and contrivance, her meetings with William had been unsuspected; but, in this agony of mind, her fears forbade an informer who would defy all caution; who would stigmatize her with a name—dear and desired by every virtuous female—abhorrent to the blushing harlot—the name of mother.

That Agnes, thus impressed, could rise from her bed, meet her parents and her neighbours with her usual smile of vivacity, and voice of mirth, was impossible; to leave her bed at all, to creep down stairs, and reply in a faint, broken voice to questions asked, were, in her state of mind, mighty efforts, and they were all to which her struggles could attain for many weeks.

William had promised to write to her while he was away: he kept his word; but not till the end of two months did she receive a letter. Fear for his health, apprehension of his death during this cruel interim, caused an agony of suspense, which, by representing him to her distracted fancy in a state of suffering, made him, if possible, still dearer to her. In the excruciating anguish of uncertainty, she walked with trembling steps through all weathers (when she could steal half a day while her parents were employed in labour abroad) to the post-town, at six miles' distance, to inquire for his long-expected, long wished-for letter. When at last it was given to her, that moment of consolation seemed to repay her for the whole time of agonising terror she had endured.

"He is alive!" she said, "and I have suffered nothing."

She hastily put this token of his health and his remembrance of her into her bosom, rich as an empress with a new-acquired dominion. The way from home, which she had trod with heavy pace, in the fear of renewed disappointment, she skimmed along, on her return, swift as a doe: the cold did not pierce, neither did the rain wet her. Many a time she put her hand upon the prize she possessed, to find if it were safe: once, on the road, she took it from her bosom, curiously viewed the seal and the direction, then replacing it, did not move her fingers from their fast grips, till she arrived at her own house.

Her father and her mother were still absent. She drew a chair, and placing it near to the only window in the room, seated herself with ceremonial order; then gently drew forth her treasure, laid it on her knee; and with a smile that almost amounted to a laugh of gladness, once more inspected the outward part before she would trust herself with the excessive joy of looking within.

At length the seal was broken—but the contents still a secret. Poor Agnes had learned to write as some youths learn Latin; so short a time had been allowed for the acquirement, and so little expert had been her master, that it took her generally a week to write a letter of ten lines, and a month to read one of twenty. But this being a letter on which her mind was deeply engaged, her whole imagination aided her slender literature, and at the end of a fortnight she had made out every word. They were these:

"DEAR AGNES,—I hope you have been well since we parted: I have been very well myself; but I have been teased with a great deal of business, which has not given me the time to write to you before. I have been called to the bar, which engages every spare moment; but I hope it will not prevent my coming down to Anfield with my father in the summer.

"I am, dear Agnes,

"With gratitude for all the favours you have conferred on me,

"Yours, &c.

"W. N."

To have beheld the illiterate Agnes trying for two weeks, day and night, to find out the exact words of this letter, would have struck the spectator with amazement, had he also understood the right, the delicate, the nicely proper sensations with which she was affected by every sentence it contained.

She wished it had been kinder, even for his sake who wrote it; because she thought so well of him, and desired still to think so well, that she was sorry at any faults which rendered him less worthy of her good opinion. The cold civility of his letter had this effect—her clear, her acute judgment felt it a kind of prevarication to promise to write—and then write nothing that was hoped for. But, enthralled by the magic of her passion, she shortly found excuses for the man she loved, at the expense of her own condemnation.

"He has only the fault of inconstancy," she cried; "and that has been caused by my change of conduct. Had I been virtuous still, he had still been affectionate." Bitter reflection!

Yet there was a sentence in the letter, that, worse than all the tenderness left out, wounded her sensibility; and she could not read the line, *gratitude for all the favours conferred on me*, without turning pale with horror, then kindling with indignation at the common-place thanks which insultingly reminded her of her innocence given in exchange for unmeaning acknowledgments.

## CHAPTER XI.

ABSENCE is said to increase strong and virtuous love, but to destroy that which is weak and sensual. In the parallel between young William and young Henry, this was the case; for Henry's real love increased, while William's turbulent passion declined in separation: yet had the latter not so much abated, that he did not perceive a sensation, like a sudden shock of sorrow, on a proposal made him by his father, of entering the marriage state with a young woman, the dependent niece of lady Bendham; who, as the dean informed him, had signified her lord's and her own approbation of his becoming their nephew.

At the first moment William received this intimation from his father, his heart revolted with disgust from the object, and he instantly thought upon Agnes with more affection than he had done for many weeks before. This was from the comparison between her and his proposed wife; for he had frequently seen Miss Sedgely at Lord Bendham's, but had never seen in her whole person or manners the least attraction to excite his love. He pictured to himself an unpleasant home with a companion so little suited to his taste, and felt a pang of conscience, as well as of attachment, in the thought of giving up for ever his poor Agnes.

But these reflections, these feelings, lasted only for the moment: no sooner had the dean explained why the marriage was desirable, recited what great connections and what great patronage it would confer upon their family, than William listened with eagerness, and both his love and his conscience were, if not wholly quieted, at least for the present hushed.

Immediately after the dean had expressed to Lord and Lady Bendham his son's sense of the honour and the happiness conferred on him, by their condescension in admitting him a member of their noble family,—Miss Sedgely received from her aunt nearly the same shock as William had done from his father. For she (placed in the exact circumstance of her intended husband) had frequently seen the dean's son at Lord Brudham's, but had never seen in his whole person or manners the least attraction to excite her love. She pictured to herself an unpleasant home with a companion so little suited to her taste; and at this moment she felt a more than usual partiality to the dean's nephew, finding the secret hope she had long indulged, of winning his affections, so near being thwarted.

But Miss Sedgely was too much subjected to the power of her uncle and aunt to have a will of her own, at least to dare to utter it. She received the commands of Lady Bendham with her accustomed submission, while all the consolation for the grief they gave her was, "that she resolved to make a very bad wife."

"I shall not care a pin for my husband," said she to herself; "and so I will dress and visit, and go just as I like—he dares not be unkind because of my aunt. Besides, now I think again, it is not so disagreeable to marry him as if I were obliged to marry him any other family, because I shall see his cousin Henry as often, if not oftener, than ever."

For Miss Sedgely—whose person he did not like, and with her mind thus disposed—William began to force himself to shake off every little remaining affection, even all pity, for the unfortunate, the beautiful, the sensible, the doting Agnes; and determined to place in a situation to look down with scorn upon her sorrows, this weak, this unprincipled woman.

Connections, interests, honours, were powerful advocates: his private happiness William deemed trivial, compared to public opinion; and to be under obligations to a *poor* wife's relation, gave greater renown in his servile mind than all the advantages which might accrue from his own intrinsic independent worth.

In the usual routine of pretended regard, and real indifference, sometimes disgust, between parties allied by what is falsely termed *prudence*, the intended union of Mr. Norwynch with Miss Sedgely proceeded in all due form; and at their country-seats at Anfield, during the summer, their nuptials were appointed to be celebrated.

William was now introduced into all Lord Benthams's courtly circles; his worldly soul was entranced in glare and show; he thought of nothing but places, pensions, titles, retinues; and steadfast and alert, unshaken in the pursuit of honours, neglected the lesser means of rising to preferment—his own endowments. But in this round of attention to pleasures and to study, he no more complained to Agnes of "excess of business." Cruel as she had once thought that letter in which he thus apologised for slighting her, she at last began to think it was wondrous kind; for he never found time to send her another. Yet she had studied with all her most anxious care to write him an answer; such a one as might not lessen her understanding, which he had often praised, in his esteem.

Ah, William! even with lesser anxiety your healing, ambitious heart panted for the admiration of an attentive auditory, when you first ventured to harangue in public! With far less hope and fear (great as yours were) did you first address a crowded court, and thirst for its approbation on your efforts, than Agnes sighed for your approbation, when she took a pen and awkwardly bewailed over a sheet of paper. Near twenty times she began—but to a gentleman—and one she loved like William—what could she dare to say? Yet she had enough to tell, if shame had not interposed—or if remaining confidence in his affection had but encouraged her.

Overwhelmed by the first, and deprived of the last, her hand shook, her head drooped, and she dared not communicate what she knew must inevitably render her letter unpleasing; and still more depreciate her in his regard, as the occasion of incumbrance, and of injury to his moral reputation.

Her free, her liberal, her venturous spirit, subdued, intimidated by the force of affection, she only wrote,—

"Sir,—I am sorry you have so much to do, and should be ashamed if you put it off to write to me. I have not been at all well this winter—I never before passed such a one in all my life, and I hope you will never know such a one yourself in regard to not being happy—I should be sorry if you did—think I would rather go through it again myself than you should. I long for the summer, the fields are so green, and everything so pleasant at that time of the year: I always do long for the summer, but I think never so much in my life as for this that is coming—though sometimes I wish that last summer had never come. Perhaps you wish so too—and that this summer would not come either.

"Hope you will excuse all faults, as I never learnt but one month.

"Your obedient humble servant,

A. P."

## CHAPTER XII.

SUMMER arrived—and lords and ladies, who had partaken of all the dissipation of the town, whose opera-houses, gaming-houses, and various other houses, had detained noble nights from their peaceful home, were now poured forth from the metropolis, to imbibe the wholesome air of the farmer and peasant, and disseminate, in return, moral and religious principles.

Among the rest, Lord and Lady Benthams, strenuous opposers of vice in the poor, and gentle supporters of it in the rich, never played at cards, or had concerts on a Sunday, in the village, where the poor were spies; he there never gazed, nor drank, except in private; and she banished from her doors every woman of sullied character. Yet poverty and idleness are not the same; the poor can hear, can talk, sometimes can reflect; servants will tell their equals how they live in town; listeners will smile and shake their heads; and thus hypocrisy, instead of cultivating, destroys every seed of moral virtue.

The arrival of Lord Benthams's family at Anfield announced to the village that the dean's would quickly follow. Rebecca's heart bounded with joy at the prospect. Poor Agnes felt sinking, a foreboding tremor, that wholly interrupted the joy of her expectations. She had not heard from William for five tedious months; she did not know whether he loved or despised—whether he thought of or had forgotten her. Her reason argued against the hope that he loved her; yet hope still subsisted; she would not abandon herself to despair while there was doubt: she had frequently been deceived by the appearance of circumstances; and perhaps he might come all kindness, perhaps even not like her the less for that indisposition which had changed her bloom to paleness, and the sparkling of her eyes to a pensive languor.

Henry's sensations, on his return to Anfield, were the selfsame as Rebecca's were—sympathy in thought, sympathy in affection, sympathy in virtue, made them so. As he approached near to the little village, he felt more light than usual. He had committed no trespass there, dreaded no person's reproach or inquiry; but his arrival might prove, at least to one object, the source of rejoicing.

William's sensations were the reverse of these. In spite of his ambition,

and the flattering view of one day accomplishing all to which it aspired, he often, as they proceeded on their journey, eyed the gaiety of Henry, and felt an inward monitor, that told him, he must first act like Henry, to be as happy.

His intended marriage was still, to the families of both parties (except to the heads of the houses) a profound secret. Neither the servants, nor even Henry, had received the slightest intimation of the designed alliance; and this to William was matter of some comfort.

When men submit to act in contradiction to their principles, nothing is so precious as a secret. In their estimation, to have their conduct known is the essential mischief; while it is hid, they fancy the air but half contaminated; and to the moiety of a crime they reconcile their feelings. All in progression, the whole, when disclosed, appears trivial. He designed that Agnes should receive the news from himself by degrees, and in such a manner as to console her, or at least to silence her complaints; and with the wish to soften the regret which he still felt on the prudent necessity of yielding her wholly up when his marriage should take place, he promised to himself some intervening hours of private meetings which he hoped would produce satiety.

While Henry flew to Mr. Rymer's house with a conscience clear, and a face enlightened with gladness; while he met Rebecca with open-hearted friendship and frankness, which charmed her soul to peaceful happiness; William skulked around the cottage of Agnes, dreading detection; and when towards midnight he found the means to obtain the company of the sad inhabitant, he grew so impatient at her tears and sobs, at the delicacy with which she withheld her carresses, that he burst into bitter upbraidings at her coyness; and at length (without discovering the cause of her peculiar agitation and reserve) abruptly left her, vowing never to see her more.

As he turned away, his heart even congratulated him that he had made so discreet a use of his momentary disappointment, as thus to shake her off at once without further explanation or excuse.

She, ignorant and illiterate as she was, knew enough of her own heart to judge of his, and to know that such violent affections and expressions, above all, such a sudden, heart-breaking manner of departure, were not the effects of love, nor even of humanity. She felt herself debased by a ruffian; yet still, having loved him when she thought him a far different character, the blackest proof of the deception could not erase a sentiment formed whilst she was deceived.

She passed the remainder of the night in anguish; but with the cheerful morning some cheerly thoughts consoled her. She thought, perhaps William by this time had found himself to blame; had conceived the cause of her grief and her distant behaviour, and had pitied her.

The next evening she waited, with anxious heart, for the signal that had called her out the foregoing night; in vain she watched, counted the hours, and the stars, and listened to the nightly stillness of the fields around; they were not disturbed by the tread of her lover. Daylight came; the sun rose in its splendour; William had not been near her, and it shone upon none so miserable as Agnes.

She now considered his word, "never to see her more," as solemnly passed; she heard anew the impressive, the implacable tone in which the sentence was pronounced; and could look back on no late token of affection, on which to found the slightest hope that he would recall it.

Still, reluctant to despair—in the extremity of grief, in the extremity of fear for an approaching crisis which must speedily arrive—she (after a few days had elapsed) trusted a neighbouring peasant with a letter to deliver to Mr. Norwynch, in private.

This letter, unlike the last, was dictated without the hope to please: no pains were taken with the style, no care in the formation of the letters: the words flowed from necessity; strong necessity guided her hand.

"Sir,—I beg your pardon—pray don't forsake me all at once—see me one time more—I have something to tell you—it is what I dare tell nobody else—and what I am ashamed to tell you—yet pray give me a word of advice—what do I don't know—I then will part, if you please, never to trouble you, never any more—but hope to part friends—pray do, if you please—and see me one time more. Your obedient,

A. P."

These incorrect, inelegant lines produced this immediate reply.

"TO AGNES PRIMArose.

"I have often told you that my honour is as dear to me as my life: my word is a part of that honour—you heard me say I would never see you again. I shall keep my word."

When the dean's family had been at Anfield about a month, one misty morning, such as portends a sultry day, as Henry was walking swiftly through a thick wood, on the skirts of the parish, he suddenly started on hearing a distant groan, expressive, as he thought, both of bodily and mental pain. He stopped to hear it repeated, that he might pursue the sound. He heard it again; and though now but in murmurs, yet, as the tone implied excessive grief, he directed his course to that part of the wood from whence it came.

As he advanced, in spite of the thick fog, he discerned the appearance of a female stealing away on his approach. His eye was fixed on this object; and, regardless where he placed his feet, he soon shrunk back with horror, on perceiving they had nearly trod upon a new-born infant, lying on the ground. A lovely male child, entered on a world where not one preparation had been made to receive him.

"Ah!" cried Henry, forgetting the person who had fled, and with a smile of compassion on the helpless infant, "I am glad I have found you; you give more joy to me, than you have done to your hapless parents. Poor dear," concluded he, while he took off his coat to wrap it in; "I will take care of you while I live; I will live for you, rather than you shall want—but first I will carry you to those who can at present do more for you than myself."

(To be continued.)

## AN INCIDENT IN THE LIFE OF WASHINGTON.

As the barge gained the opposite bank, one of the rowers leaped ashore, and made it fast to the root of a willow which hung its broad thick branches over the river. The rest of the party disembarked, and, uncovering, saluted their commander, who respectfully returned their courtesy. "By ten o'clock you may expect me," said Washington. "Be cautious—look well that you are not surprised. There are no times for trifling." "Depend upon us," replied one of the party. "I do," he responded, and bidding them farewell, departed along the banks of the river.

That evening a party was to be given at the house of one of his old and valued friends, to which he, with several other American officers, had been invited. It was said that he participated in festivity, more especially at that period, when every moment was fraught with danger; nevertheless, in respect to an old acquaintance, backed by the solicitations of Rufus Ragsdale, he had consented to relax from the toils of military duty, and honour the party, for a few hours, with his presence. After continuing his path for some distance, along the river's side, he struck off into a narrow road, bordered thickly with brushwood, tinged with a thousand eyes of departing summer—here and there a gray crag peeped out from the foliage, over which the green ivy and scarlet woodbine hung in wreathy dalliance; at other places, the arms of the shehnut and mountain ash met in leafy fondness, and cast a gloom, deep almost as night. Suddenly a crashing among the branches was heard, and like a deer a young Indian girl bounded into the path, and stood full in his presence. He started back with surprise, laid his hand upon his sword—but the Indian only fell upon her knees, placed her finger on her lips, and by a sign with her hand, forbade him to proceed. "What seek you, my wild flower?" said the general. She started to her feet, drew a small tomahawk from her belt of wampum, and imitated the act of scalping an enemy—then again waving her hand as forbidding him to advance, she darted into the bushes, leaving him lost in amazement.

"There is danger," said he to himself, after a short pause, and recovering from his surprise. "That Indian's manner betokens me no good, but my trust is in God; he has never yet deserted me;" and resuming his path, he shortly reached the mansion of Rufus Ragsdale. In the midst of the hilarity, the sound of a cannon burst suddenly upon the ear, startling the guests, and suspending the dance. Washington and the officers looked at each other with surprise, but their fears were quickly dispelled by Ragsdale assuring them that it was only a discharge of ordnance in honour of his distinguished visitors. The joy of the moment was again resumed; but the gloom of suspicion had fallen upon the spirit of Washington, who now sat in moody silence apart from the happy throng. A slight tap upon his shoulder at length roused him from his abstraction, and looking up he perceived the person of the Indian standing in the bosom of a myrtle bush close to his side. "Hail again here!" he exclaimed with astonishment; but she motioned him to be silent, and kneeling at his feet, presented him with a bouquet of flowers. Washington received it, and was about to place it in his breast, when she grasped him firmly by the arm, and pointing to it, said in a whisper—"Snake! snake!" and the next moment mingled with the company, who appeared to recognize and welcome her as one well-known and esteemed.

Washington regarded the bouquet with wonder; he saw nothing in it to excite his suspicion; her words and singular appearance had, however, sunk deeply into his heart, and looking closer upon the nosegay, to his surprise he saw a small piece of paper in the midst of the flowers. Hastily he drew it forth and confounded and horror-stricken read—"Beware! you are betrayed!"

It was now apparent that he was within the den of the tiger, but to quit it abruptly might only draw the consummation of treachery the speedier upon his head. He resolved, therefore, to disguise his feelings, and trust to that Power which had never forsaken him. The festivities were again renewed, but almost momentarily interrupted by a second sound of the cannon. The guests now began to regard each other with mistrust, while many and moody were the glances cast upon Ragsdale, whose countenance began to show symptoms of uneasiness, and ever and anon he looked from the window out upon the broad green lawn which extended to the river, as if in expectation of some one's arrival.

"What can detain them?" he muttered to himself. "Can they have deceived me? Why answer they not the signal?" At that moment a bright flame rose from the river, illuminating, for a moment, the surrounding scenery, and showing a small boat, filled with persons, making rapidly toward the shore. "All's well," he continued; "in three minutes I shall be the possessor of a coronet, and the cause of the Republic be no more." Then gaily turning to Washington, he said—"Come, general, pledge me to the success of our arms."

The eye of Ragsdale, at that moment, encountered the scrutinizing look of Washington, and sunk to the ground; his hand trembled violently—even to so great a degree as to partly spill the contents of the goblet. With difficulty he conveyed it to his lips, then retiring to the window, he waved his hand, which action was immediately responded to by a third sound of the cannon, at the same moment the English anthem of "God save the King" burst in full volume upon the ear, and a band of men, attired in British uniforms, with their faces hidden by masks, entered the apartment. The American officers drew their swords, but Washington, cool and collected, stood with his arms folded upon his breast, and quietly remarked to them—"Be calm, gentlemen; this is an honour we did not anticipate." Then turning to Ragsdale, said—"Speak, sir; what does this mean?"

"It means," replied the traitor, placing his hand upon the shoulder of Washington, "that you are my prisoner. In the name of King George, I arrest you." "Never!" exclaimed the general. "We may be cut to pieces, but surrender we will not. Therefore, give way," and he waved his sword to the guards who stood with their muskets levelled as if ready to fire, should they attempt to escape. In an instant, were their weapons reversed, and dropping their masks, to the horror of Ragsdale, and the agonizing surprise of Washington, his own brave party, whom he had left in charge of the barge, stood revealed before him. "Be silent, traitor!" exclaimed the commander. "In ten minutes from this moment, let him be a spectacle between the heavens and the earth." The wife and daughter, clinging to his knees in supplication, but an irrepressible oath had passed his lips, that never again should treason receive his forgiveness. "For me, the traitor Arnold should receive his forgiveness, but not for the traitor Ragsdale," he said, while the tears rolled down his cheeks, "at the agony of the wife and daughter, for my own life, I need not, but the liberty of my native land—the welfare of millions, demand this sacrifice for the sake of humanity I pity him; but by my oath, and now in the presence of heaven, I swear I will not forgive him."

## SPRING CLEANING.

THE melancholy days have come, the saddest of the year. Of cleaning paint, and scrubbing floors, and scouring for and near; Meep'd in the corners of the room the ancient dust lay quiet. Nor rose up at the father's tread, nor to the children's riot; But now the carpets all are up, and from the mistress calls to man and maid to wield the broom and mop.

Where are those rooms, those quiet rooms, the house but now practised, Wherein we dwell, nor dream'd of dirt, so cosy and contented? Alas! they've turn'd all upside down that quiet suite of rooms, With sops and suds, and soap and sand, and tubs and pails and brooms; Chairs, tables, stands, are standing round, at sixes and at sevens, While wife and housemaids fly about like meteors through the heavens.

The parlour and the chamber floors were clean'd a week ago; The carpets shook, and windows wash'd, as all the neighbours know; But still the rancidum had escaped—the table piled with books, Pens, ink, and paper all about, peace in its very looks—

Will tell the women on them all, he says the plague on men, And then they vanish all away, books, paper, ink, and pen.

And now when comes the master home, as come he must o' nights, To find all things are "set to rights," that they have "let to rights," When the sound of driving wheels is heard, though the house is far from town, And the carpet-woman's on the stairs, that harbinger of ill, He looks for papers, books or bills, that all were there before, And sighs to find them on the dock or in the drawer no more.

And then he grinsly thinks of her, who set this fuss afloat, And wishes she were out at once in a very leaky boat. He meets her at the parlour door, with hair and cap away, With sleeves turn'd up, and apron in hand, defence in her eye, He finds quite small, and knows full well there's nothing to be said, So holds his tongue, and drinks his tea, and sneaks away to bed.

A SUFFRAGER.

ANECDOTE OF DEAN SWIFT.—Dean Swift was once travelling through one of the rural parishes some leagues from London, and introducing himself to the parson as a member of the same profession, was invited to partake of his fraternal hospitalities. The dean consented, and accompanied the parson to his church next morning. And there the dean had the satisfaction of hearing one of his own sermons preached by an ignorant "Bible-banger," without a hint or word of acknowledgment. When the services were over, the dean asked the preacher how long it took him to write such a sermon.—"O!" said the minister, "I wrote that in about two hours."—"Did you, indeed?" said the dean, in reply; "why it took me over two months to write that very sermon."

RENOUNCING BACHELORISM.—The editor of an American newspaper went to another State, and took to himself a wife. On his return home, and on resuming the editorial chair, he thus discourses:—"And in announcing the fact of our return home with a rib, we cannot refrain from expressing our profound disgust of bachelorism and bachelors—and we expect to be disgusted with both—several weeks. We are well aware that, in days gone by, we occasionally made ourselves ridiculous in the eyes of sensible men, by upholding the bachelor state as the only life of happiness, independence, and earthly glory. But we were young and green then, and of course knew but one side of the subject. Now stand up here, you consumed ugly pictures of humanity, rejoicing in the name of bachelors, and answer us a few questions. What are you fit for in this world? What interest have you in the generations yet unborn you read of? Where will you be when old men, if your vile habits ever permit you to arrive at a good old age? Won't you be like lonely, scarred, and scathed trees standing in a big clearing without a companion, and your life unprotected from the frosts by young saplings and shrubs at your feet? Or won't you be like pumpkins in a corn-field, more prominent because of your prodigious ugliness, than the stalks at your side laden with golden grain? Hold your heads up, and talk like men, whether you can act so or not. Now don't you feel ashamed of yourselves? Look at the girls about you; all smiling and sagacious, heads overflowing with love ready to be spilled on the first good fellow that can touch their sympathies—feelings rich as cream, which by a kindred spirit can soon be worked into butter, and spread over your life, till you are as happy as the birds of spring. Look at 'em, and feel the disgusting position you occupy in the cabbage-garden of humanity—what are you holding back for? Now, just return—put on your best looks and your other coat—visit the girls, get cream them—then propose, get accepted, marry—and—the country will rely on you as a faithful and well-disposed citizen."

## A VISION OF CONSOLATION.

THE tempest of grief, which, for a time had raged so wildly in the heart of Mrs. Freeland, exhausted by its own violence, sobbed itself away, and the stricken mother passed into the land of dreams.

To the afflicted sleep comes with a double blessing. Rest is given to the wearied body and to the grieving spirit. Often, very often, the Angel of Consolation bends to the dreaming ear, and whispers words of hope and comfort; that from no living lips had yet found utterance.

And it was so now with the sleeping mother. A few hours only had passed since she stood looking down, for the last time, on the fair face of her youngest born. Over his bright blue eyes, into whose heavenly depths she had so loved to gaze, the pale lids had closed for ever. Still lingered around his lips the smile left there by the angels, as, with a kiss of love, they received his parting spirit. In the curling masses of his rich, golden hair, the shadows nestled away, as of old, while his tiny fingers held a few white blossoms, as with a living grasp? Was it death, or sleep? So like a sleeping child the sweet boy lay, that it seemed every moment, as if his lips would unclose, his eyes open to the light, and his voice come to the listening ear with its tones of music.

If to the mother had come this illusion, it remained not long. Wild with grief, she turned away as the sweet face she had so loved to gaze upon was hidden from her straining eyes for ever.

Hidden from her eyes did we say? Only hidden from her natural eyes. Still he was before the eyes of her spirit in all his living beauty.—But to her natural affections, he was lost—even as he had faded from before her natural eyes; and, in the agony of bereavement, it seemed that her heart would break. Back to her darkened chamber she went. Her nearest and dearest friends gathered around, seeking lovingly to sustain her in her great afflictions; but she refused to be comforted.

At length, as at first said, the tempest of grief, which, for a time, raged so violently in the heart of Mrs. Freeland, sobbed itself away, and the stricken mother, passed into the land of dreams.

For the most part, dreams are fantastic. Yet, they are not always so. In states of deep sorrow, or strong trial, when the heart turns from the natural world, hopeless of aid or consolation, truth often comes in dreams and similitudes.

The mother found herself in the company of two beautiful maidens, in the very flower of youth: and as she gazed earnestly into their faces, which seemed transparent from an inward celestial light, she saw expectation therein, a loving expectation. They stood beneath the eastern portico of a pleasant dwelling, around which stately trees—the branches vocal with the songs of feathered minstrels—lifted their green tops far up into the crystal air. Flowers of a thousand hues and sweet odours were woven into forms and figures of exquisite beauty upon the carpet of living green spread over the teeming earth; while groups of little children sported one with another, and mingled their happy voices with the melody of birds.

Yet, amid all this external joy and beauty, the hand of grief still lay upon the mother's heart: and when she looked upon the sportive infants around her, she sighed for her own babe.—Even as she sighed, one of the maidens turned to her, and said, while her whole countenance was lit up with a glow of delight:—

"It has come. A new babe is born unto heaven."

And, as she spoke, she gathered her arms quickly to her bosom, and the wondering mother saw lying thereon her own child! The other maiden was already bending over the infant—already had she greeted its coming with a kiss of love. Quickly both retired within the dwelling, and the bereaved mother went with them, eager to receive the babe she had lost.

"Oh, my child! My child!" she said. "Give me my child!" And ere the words had died upon her lips, the maiden who had received the babe gave it into her arms, when she clasped it with a wild delight, and rained tears of gladness upon its face.

For a time the two maidens looked upon the mother in silence—and in their bright countenances love and pity were blended. At length one of them said to her—and she smiled sweetly, and spoke with an exquisite, penetrating tenderness—

"Your heart is full of love for your babe?"

"He is dearer to me than life—dearer than a thousand lives," replied the mother quickly, drawing the babe closer to her bosom.

"Love seeks to bless the object of its regard."

There was a meaning in the words and tone of the maiden, as she said this, that caused the mother to look into her face earnestly.

"This is not the land of sickness, of sorrow, of death," resumed the maiden, "but the land of eternal life and blessedness. Into this land your babe has been born. You are here only as a visitant, and must soon return, to bear a few more trials and pains, a few more conflicts with evil—but the end is your preparation for these heavenly regions."

A shadow fell instantly upon the mother's heart. Tears rushed to her eyes, and she drew her arms more tightly about her babe.

"Shall we keep this babe in our heavenly home; or will you bear it with you back to the dark, cold, sad regions of mortality?"

"Do not take from me my more than life!" sobbed the mother wildly. "Oh! I cannot give you my child." And more eagerly she hugged it to her breast.

For a time there was silence. Then one of the maidens gently laid her hand upon the mother, and she lifted her bowed head.

"Come," said the maiden.

The mother arose, and the two walked into the open air, and passing through

the group of children sporting on the lawn and in the gardens, went for what seemed the space of a mile, until they came to a forest, into the depths of which they penetrated; and, for a time, the farther they went, the darker and more gloomy it became, until scarcely a ray of light from the arching sky came down through the dense and tangled foliage. At last they were beyond the forest.

"Look!" said the companion.

The mother lifted her eyes—the babe had strangely passed from her arms. A dwelling, familiar in aspect, stood next, and through an open window she saw a sick child lying upon a bed, and knew it as her own. Its little face was distorted by pain and flushed with fever, and as it tossed restlessly to and fro, its moans filled her ears. She stretched forth her hands, yearning to give some relief; even as she did so, the scene faded from her view, and next she saw an older child, bearing still the lineaments of her own. There was the same broad, white forehead and clustering curls; the same large bright eyes, and full ruddy lips; but, alas! not the soft veil of innocence which had given the features of the babe such a heavenly charm. The fine brow was contracted with passion; the eyes flashed with an evil light, and the lips were tightly drawn, and with something of defiance, against the teeth. The boy was resisting, with a stern determination, the will of the parents—was setting at naught those early salutary restraints which are the safeguard of youth.

"Oh! my unhappy boy!" cried the mother.

The scene changed as she spoke. The boy, now grown up to manhood, once more stood before her. Alas! How had the light of innocence faded from his countenance, giving place to a shadow of evil, the very darkness of which caused a cold shudder to pass through the mother's frame.

"Look again," said the maiden, as this scene was fading.

But the mother hid her face in her hands, and turned weeping away.

"Look again."

And this time there was something so heart-cheering in the maiden's voice, that the mother lifted her tearful eyes. She was back again in the beautiful place from which she had gone forth a little while before, and her babe, beautiful as innocence itself, lay sweetly sleeping in the arms of the lovely maiden, who had received it on its first entrance into Heaven. With a heart full of joy, the mother now bent over the slumbering babe, kissing it again and again.

"Grieving mother," said the angel-maiden, in tones of flute-like softness, "God saw that it would not be good for your child to remain on earth, and he, therefore, removed it to this celestial region, where no evil can ever penetrate. To me, as an angel-mother, it has been given; and I will love it, and care for it, with a love as pure and tender as the love that yearns in your bosom. As its infantile mind opens, I will pour in heavenly instruction, that it may grow in wisdom, and become an angel. Will you not let me have it freely?"

"But why may I not remain here and be its heavenly mother? Oh! I will love and care for it with a tenderness and devotion equal to, if not exceeding yours."

Even while the mother spoke, there was a change. She saw before her other objects of affection. There was her husband, sitting in deep dejection, sorrowing for the loss of one who was dear as his own life; while three children, the sight of whom stirred her maternal heart to its profoundest depths, lay sleeping in each other's arms, the undried tears yet glistening on their lashes.

The wife and mother stretched forth her hands towards these beloved ones, eager to be with them again, and turn their grief into gladness. But, in a moment, there passed another change. The pleasant home in which her children had been sheltered for years, no longer held them; the fold had been broken up, and the tender lambs scattered. One of these little ones the mother saw, sitting apart from a group of sportive children, weeping over some taskwork. The bloom on her cheek had faded—its roundness was gone—the light of her beautiful eyes was quenched in tears. And, as she looked, a woman came to the child and spoke to her harshly. She was about springing forward, when another scene was presented. Her first-born, a noble-spirited boy, to whose future she had ever looked with pride and pleasure, stood before her. Alas! how changed. Everything about him showed the want of a mother's care and considerate affection, and from his dear young face had already vanished the look of joyous innocence she had so loved to contemplate.

Again the mother was in the presence of the angel-maiden, to whose loving arms a good God had confided the babe, which, in his wisdom, he had removed from the earth. And the angel-maiden, as she looked first at the babe in her arms, and then at the mother, smiled sweetly, and said,—

"He is safe here; will you not let him remain?"

And, with a gushing heart, the mother answered,—

"Not for worlds would I take him with me into the outer life of nature. Oh! no. He is safe—let him remain."

"And you will return to those who still need your love and care?"

"Yes—yes!" said the mother, earnestly, "let me go to them again. Let me be their angel on earth."

There came, now, another change. The mother was back again in her chamber of sorrow, and undried tears were yet upon her cheeks. But, she was comforted and reconciled to the great affliction which had been sent, for good, from heaven.

Those who saw Mrs. Freeland in the first wild grief that followed the loss of her babe, wondered at her serene composure when she came again among them. And they wondered long, for she spoke not of this Vision of Consolation. It was too sacred a thing to be revealed to any save the companion of her life.

MRS. INCHBALD.

THIS lady, whose name is well known as the authoress of "The Simple Story," "Nature and Art," and a host of dramatic pieces, was born at Stan- ingfield, a farm in the neighbourhood of Bury St. Edmonds, in the county of Suffolk, on the 15th of October, 1753. Her father, who died in her infancy, left a large family of daughters, all, but particularly Elizabeth, the subject of this memoir, remarkable for personal beauty. At the age of sixteen she is described as being "tall, slender, straight, of the purest complexion, and most beautiful features; her hair of a golden auburn, and her eyes full at once of spirit and sweetness." Her education had, however, been totally neglected; and although she possessed a strong love of reading, it was not to be expected that her choice should always be the wisest. Nor are we surprised that ill-directed reading, and a casual acquaintance with some member of the Norwich Theatre, should early have inspired her with a passion for the stage.

Her first effort to gratify this inclination was an application to the Norwich manager, which was unsuccessful. Her disappointment did not damp her resolution; and in April, 1772, she secretly left her home, and repaired to London, where she found herself in a situation of great difficulty. More than one of her sisters, it is true, had married, and were settled in London; but her object would have been frustrated had they been aware of her presence. She had, therefore, intended to seek a distant relation, who lived in the Strand; but on reaching the house, she found her friend had retired from business, and was settled in North Wales. It was near ten o'clock at night, and her distress at this disappointment moved the compassion of the people of the house, who kindly offered her a lodging for the night. This civility, however, awakened her suspicions: she had read in "Clarissa Harlowe" of various modes of seduction practised in London, and feared that similar intentions were meditated against her. These reflections occurring directly after she had accepted of the proffered accommodation, and being strengthened by an appearance of prying curiosity in her entertainers, Elizabeth suddenly seized her band-box (all her luggage), and, without a word of explanation, rushed out of the house, and left them to conjecture that she was either a maniac or an impostor. She ran she knew not whither; at length she stopped at a house where a bill in the window proclaimed that there were "Lodgings to let," and was on the point of being received under the feigned character of a milliner's apprentice, when the man, from whose house she had escaped, and who had followed her, came up, and threw her into woeful confusion. She was treated as an impostor, threatened with the watch-house, and at length turned into the street. Here she wandered till two o'clock in the morning, when she found herself at Holborn-bridge. Seeing the York stage, which she understood to be full, set off, she entered the inn, pretended she was a disappointed passenger, and solicited a lodging. Here she remained for the night, and the next day was told that another York stage would set off in the evening. This intelligence being communicated with an air of suspicion, which was extremely mortifying, she immediately took out all the money she had, to her last halfpenny, and absolutely paid for a journey she never intended to take. The landlady, now satisfied, invited her to breakfast, but, this she declined, saying she was in haste to visit a relation. Thus she escaped the expense of a breakfast, and, on returning to the inn, stated that her relation wished her to remain in town a few days longer. By this means she secured her apartment, and avoided the expense of living at the inn, by subsisting on what she could afford to purchase in her walks, whilst the people at the inn supposed her to be entertained by her relation. Her finances were at length exhausted, that, for the last two days that she

remained at the inn, she subsisted on two halfpenny rolls, and the water contained in the bottle in her bed-room. Meantime she occupied herself in seeking an engagement with some theatre, and was willingly listened to by several managers, her beauty procuring her a ready hearing; but, alas! it also procured her insulting offers, which she indignantly rejected. It was under these circumstances that she sought advice from Mr. Inchbald, an actor of reputation, and a man of middle age, whom she had seen at Bury St. Edmonds, and accidentally met in London. He did all he could to soothe her sorrow, and calm the distress she felt at the conduct she had experienced, and recommended marriage as her only protection. "But who would marry me?" cried she. "I would," replied Mr. Inchbald, with eager warmth. "If you would have me." The lady consented, and they were married in a very few days after this singular declaration. Although there was very little love, on the lady's side at least, in this connection, yet they lived comfortably together: it is true that some domestic discords are recorded by Mrs. Inchbald in a diary, some fragments of which have been preserved, chiefly on account of Mrs. Inchbald's desiring to appropriate some portion of their gains to the relief of her sisters, who had fallen into difficulties, a motive which Mr. Inchbald strenuously opposed. Further than this, no disagreement appears to have interrupted the harmony of their union.

Mr. Inchbald carried his wife to Bristol, where she appeared in the character of Cordelia; they subsequently went to Edinburgh, and continued there some years, deriving sufficient emolument from their joint labours to enable them to live comfortably. Mr. Inchbald's health began to fail, and on leaving Edinburgh (a step, according to some biographers, caused by a disagreement with Mrs. Yates, the celebrated actress,) she and her husband paid a visit to France, where Mr. Inchbald proposed to follow the profession of a painter, having a tolerable knowledge of that art. This scheme was unsuccessful, and, on their return from France, they were reduced to great straits for want of money, and found considerable difficulty in procuring permanent engagements. Liverpool, Birmingham, and various other places, were visited without success, until at length they found a haven at York, where they resided until the death of Mr. Inchbald, in 1779. At York their gains amounted to about two guineas and a half a week, from which they contrived to save somewhat, and Mrs. Inchbald was enabled to afford a little assistance to her sisters, two of whom were now widows, and in very reduced circumstances.

After her husband's death, Mrs. Inchbald still continued her profession, and in the beginning of the next year accepted a short engagement at Edinburgh; she then returned to York, but soon finally quitted it, and proceeded to the metropolis, where she had procured an engagement, and where she continued to perform till 1789, when she retired from the stage. Her success as an actress was never great, her histrionic powers not rising above the level of respectability; but her fine face and elegant figure gave her great advantages. Immediately on her arrival in London, she began that course of industry and economy which she pursued to the end of her life, and on account of which she has frequently incurred the unworthy reproach of avarice. It is true she worked incessantly, and saved every possible penny; but, for what did she do this? For her own gratification?—to enjoy the sordid pleasure of gloating over her increasing treasure? Was it for this she denied herself comforts, and sometimes even necessities? No. Her exertions were all made, and her gains were all applied, for the relief of her aged and infirm relatives. Speaking of one of them in a letter to a friend, she thus expresses herself:—"Poor woman, she is now so infirm that she cannot walk a few paces without resting—her hair as white as snow, and her teeth are all gone." And again:—"Many a time this winter, when I cried with cold, I said to myself, 'But, thank God, my sister has not to stir from her room; she has her fire lighted every morning, all her provision bought, and brought to her ready cooked: she would be less able to bear what I bear.' And how much more would I have to suffer, but from this reflection! It almost made me warm when I reflected that she felt no cold."—"I say no, to all the vanities of the world, and perhaps soon shall have to say that I allow my poor infirm sister a hundred a year. I have raised my allowance to eighty; but, in the rapid stride of her wants, and my obligation as a Christian to make no selfish refusal to the poor, a few months, I foresee, must make the sum a hundred." For such objects as these did this noble-minded woman toil and save.

When she settled in London, she began to occupy her leisure hours in the composition of dramatic pieces; and though full half-a-dozen of the MSS. written in a vile cramped hand, on whitey-brown paper (for the sake of economy), and full of orthographical errors, had been rejected, still she persevered, and at length prevailed on Colman, the manager of the Haymarket Theatre, to read a farce called "The Mogul's Tale." It was performed with great applause in 1784, and Mrs. Inchbald received a hundred guineas. Fortune now began to smile on her; the rejected plays were brought forward, and managers no longer took fright at the whitey-brown paper. Mrs. Inchbald rapidly produced a variety of dramatic pieces, for which she received sums increasing in amount as her fame became better established: for the comedy of "I'll tell you What," produced in 1785, she received three hundred pounds, besides a considerable sum for copyright. She had begun her first novel, "The Simple Story," several years before, and had shown the sketch of it to John Keble, in one of her provincial tours, soon after her return from France. She now drew forth the neglected MSS. and completed "The Simple Story," which was published in 1791. Her second novel, "Nature and Art," did not appear until 1796. Besides producing these works, and numerous dramatic pieces, she edited a very good collection of English plays, with short notices of each. This edition is still held in esteem.

Mrs. Inchbald continued her life of honorable exertion and virtuous self-denial till the year 1821, when she died at her residence, Kensington, in her sixty-ninth year.

## A PANTHER HUNT.

FROM THE GERMAN OF GERSACKER.

BARKING and yelping, with noses close to the ground, three noble hounds of rare breed pushed through the thickly-grown wood, sometimes losing the track midst the withered leaves, then, snuffing about the decayed and prostrate trees, they would once more resume the chase in full cry—a sure sign that their pursuit was of the bear or panther, and not the plumb-footed stag, which if it did at times lure them for a brief period from the path, never rendered them wholly untrue to it.

They had now reached a spot where their foe had evidently been for a time, and must have crossed their road; for, stopping for a moment, they sought, whimpering wildly, more eagerly than ever through the closely hanging parasitical plants which, like a living wall, encircled the place, then returning again and again to the centre, renewed their howls and lamentations as before.

Suddenly the bushes parted, and a young man on a small black Indian pony, cutting by one vigorous stroke, with the broad hunting-knife he held in his hand, the creepers which threatened to drag him off his horse, leaped in directly between the hounds, who, delighted at the appearance, fawned upon him for an instant, then, urged to redoubled zeal, by the neighbourhood of their master, proceeded anew in their search.

"So, so! my brave dogs!" cried the young hunter, stopping to replace his knife in its sheath, and laying the rifle, which he carried on his shoulder, on the saddle before him. "So, right! seek!—seek you here, on the road, and this time I think we shall succeed in nabbing the pig-stealer that has escaped us so often. Hurrah," shouted he, raising himself in the saddle as he saw the oldest of the dogs taking the lead, and, followed closely by the others, plunge at once into the thicket. "Hurrah." And throwing his gun again across his shoulder, as he seized the reins in his right hand and pressed his heels against the pony's side, he flew in wild bounds after the dogs. On the way lay trunks of trees, overgrown bushes, marshy sloughs and slimy channels, but nothing could repress their ardour. Onward and onward still they went, followed by the black pony snorting and foaming, and its rider lurching loudly with delight. Once more the hounds stopped, but this time from no uncertainty as to the path their enemy had taken; for, barking and howling, they sprang at one of the mightiest oaks on the upland, gnawing with rage the roots and bark of the noble tree which had afforded shelter to their foe, and thus hindered their pursuit of him. The hunter now arrived at the chosen spot, and, without staying to check his horse, he leaped in one bound, which almost oversteered the animal, from out his saddle, and began with eager glance to search throughout the thick leaves of the tree, round which the dogs were jumping in so much exultation, and soon espied, betwixt two of the branches, the form of some living creature, which, clinging closely to the boughs, seemed to deem itself altogether unnoticed and concealed. It was, indeed, sufficiently dark amidst the shade of the thick foliage, for a less practised eye than that of our young hunter of the forest to have remained some time in doubt as to the description of animal which so earnestly sought to shun his observation. But Weston's eagle eye soon recognised in the crouching figure and long tail, which it could not perfectly conceal, the panther's cub, and raised his gun to fetch it more certainly from its height, while the dogs, breathless with expectation, looked now towards the rifle, from which they momentarily expected to see the flash, and now towards the summit of the oak, in whose branches they knew their enemy to be. But in vain was the low whine, with which they hoped to hasten the proceedings of their master: he seemed suddenly to change his mind, and, laying his gun aside, he commenced once more a cautious and attentive examination of the tree. Measured, at length, apparently, of that which he desired to know, he unbuckled the belt in which his knife and tomahawk were stuck, and, taking off his hunting-shirt, again returned towards the oak, from which the dogs, though anxiously observant of his every movement, had never once removed their eyes.

"I will try," he murmured to himself—"and take it alive; for, if I bring a young panther to Little Rock, I shall readily obtain my ten or fifteen dollars for it; but if, on the other hand, I shoot it, its skin will be worth nothing. The old one must have left it, as I cannot see it anywhere in the tree, and, for ten dollars, one may for once bear a few scratches from the young chap. So, look out, Master Panther, I'm coming."

With these words he went to his pony, which was grazing quietly hard by, unslung a rope from around its neck, buckled on his girdle again, in which he replaced his knife, but left the tomahawk behind, and began to ascend the mighty tree: drawing the rope three times round the stem, which he could not firmly clasp, and, fastening the ends together, he seized it sometimes with the right and sometimes with the left arm, and by its assistance cautiously mounted up to the top; while the hounds, comprehending instantly what he meant, jumped with delight around the oak. Slowly, then, indeed, but surely, he climbed nearly forty feet up the slender body ere he arrived at the first branch: when, stopping for a moment to rest himself and take breath, he felt if his knife was still secure, and looked up towards the young panther, which remained almost motionless, and clinging to the same branches as at first. Weston then slung the rope, which he no longer needed, round his shoulder, and, making use of the twigs as rails for his natural ladder, he ascended quickly and lightly towards the cub, which, though it did not move in the least, still kept its fiery eyes fixed on its approaching foe. But yet wilder glances were watching the progress of our hunter, who was wholly unconscious of the proximity of so grim and dangerous a foe—none other than the mother of the cub, who lay, with tail gently waving, in one of the higher branches that stood beside, with branches interlaced in that in which he was, ready for the spring, and staring but to await his nearer approach.

ere, with a vigorous bound, she threw herself, tooth and claw, upon the audacious man who would dare to seize her offspring. Carelessly, then, swinging from bough to bough, Weston was now close upon the young one, who, raising itself gently, after the fashion of a cat, with its back up, stood upon the branch and looked down upon the hunter as if not perfectly comprehending the danger to be apprehended from him.

Weston stopped, and, taking the rope from off his shoulder, he formed a noose with it to catch over the panther's head; then, settling himself grimly between two branches, he looked up in expectation of the proper moment for attack, and saw, directly opposite, and hardly ten paces from him, the glowing eyes of the female as she sat down in readiness for the spring.

Brought up from childhood in the woods, and well acquainted with the dangers which so often threaten the solitary sportsman, Weston remained, in this fearful moment, presence of mind enough to place the body of the tree between him and his enemy, ere the latter could divine his intention; and this he fortunately succeeded in effecting just in time, as that instant the dark figure of the panther leaped upon the spot he had quitted, and gazed with fiery eyes on the undaunted hunter, who, with his left arm clasped around a branch, held in his right hand his long knife, as with every breath he drew he expected to see the enraged animal spring down upon him. She, however, intimidated by the eye he kept firmly fixed upon her, was satisfied to know the safety of her young, and to lie attentively marking every movement of her foe at scarcely six paces from him. At this moment, Weston first believed he was lost: for, even if able to use his knife, a good, stout weapon, against his grim antagonist, still the place on which he stood, and from whence the slightest false step would dash him headlong to the ground, was by no means suitable for so fearful a struggle.

But perceiving then that his adversary was content with merely watching him, he swiftly but cautiously, and without any rash movement, which might irritate the monster, replaced the knife in his sheath, and slowly commenced his retreat. The panther, seeing him remove further and further away followed him leisurely; and often did he feel for his weapon, as he saw her about to take a leap, yet without ever daring to bring himself to an open and eye to eye encounter.

Arriving, then, once more at the last branch, he again fastened the rope around the stem and slid as quickly as possible down it. The dogs, meanwhile, driven almost to despair by perceiving their enemy in the branches without being able to get at her, jumped and howled in a heart-breaking manner about. At length Weston once more regained the firm ground, with clothes torn, blood oozing from his arms, cut by the rough bark of the tree, his knees trembling, and strength exhausted. But not one moment did he allow himself for repose; but, hastening to where his gun was laid, he seized and levelled it towards the panther's fancied place of security. Vain, however, were all his efforts to hold the heavy barrel steady for a second—his limbs shook; so he was compelled to throw himself down to rest, yet without withdrawing his eyes an instant from the form of the animal, which was now close to the stem, and its young one, no longer apprehensive of danger, with tail uplifted, stretched itself comfortably on the bough beside its mother. Weston soon recovered himself, and, seizing once more his rifle, took a long and steady aim, until the distant hills reverberated with the echo of its thunder. The beast, pierced through by the ball, drew itself together, and sprang in furious haste from bough to bough, the branches bending beneath her weight, until she gained the lofty summit of the tree, when having reached the highest point, and striving to get still further, the slender foliage gave way and she toppled over, clutching with powerful claws at every leaf and twig in her descent, till, with a mighty crash, midst the expectant howling of the dogs, she fell at Weston's feet. There was now no further impediment to the capture of the young one, who had followed the mother in terror to the lowest branches of the tree: but Weston's nerves had been too strained in his first attempt to admit of his trying the perilous path anew. So, reloading his gun, he brought it in one shot within reach of the dogs, who flew upon it in a fury.

In a brief space, the skins were thrown across the pony's back, and away trotted our bold hunter, followed by his hounds, in search of new dangers and fresh prey.

**CITY ANTIQUITIES.**—For some time past excavations have been making on Tower-hill, close to the fragment of the old city wall, which was given up by the Corporation a few years since to be pulled down, but was saved by the interposition of the Woods and Forests. This fragment, in the almost entire absence of any other remains of the great wall which once surrounded the city, is very interesting, the upper part is probably not older than the time of Henry III., but the lower is Roman. The recent excavations have revealed some of this Roman masonry, which had been concealed by houses and other buildings. It was in excellent preservation; the facing-stones were quite perfect, and the rows of red tiles remained to the extent of two or three layers. Close to this portion of the wall, and piled up to a considerable height, was a mass of cut and sculptured stones, which appear to have formed part of some buildings of magnitude such as, around in Roman London. Some of these had been foundation-stones, others were portions of cornices, pilasters, and columns, and one was the base of a millstone in lava. The most attractive of these stones is now in the British Museum. It is 5 feet in length, and at one end has sculptured foliage, bound by strings. Another large flat slab (upwards of 5 feet in length) is inscribed with letters, some of which are 9 inches in length; they apparently belong to a sepulchral inscription of which only three lines remain. The other stones have been carefully removed by Mr. W. J. Hall, to whom the grounds have been leased by the Commissioners of Woods and Forests, and will be kept in safety until a convenient place can be found for their preservation.

## WORK OF GREAT INTEREST

**UNCLE TOM IN ENGLAND; OR, A PROOF THAT BLACK'S WHITE:** being an Echo to the American "UNCLE TOM," by Mrs. BECHER STOWE. In ornamental cover. Price 1s.

London: JOHN BERNARD, 68, Fleet-street; and all Booksellers.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## OUR NEW VOLUME.

In addition to the attractions we have already announced to appear in our New Volume, we are happy to add a Series of Illustrated TALES OF SCOTTISH SONG, by JOHN SIMES, Lecturer on Scottish Song; and also SKETCHES OF LIFE IN AUSTRALIA, communicated from the spot, with Original Plans and Views, highly interesting to all who intend to emigrate, or whose friends may have already taken their departure.

As already announced, in the Second Volume, will be commenced a NEW AND ORIGINAL TALE of great interest, by the EDITOR, entitled MABEL LEE; OR, THE LIGHTS AND SHADOWS OF AN ORPHAN'S LIFE. All the other Articles will be Original, and be written expressly for the HOME COMPANION. Each alternate Number will contain, in addition to the continuous tale by the Editor, a Complete Story, founded upon a popular drama, under the general title of "TALES FROM CELEBRATED DRAMATISTS," and after the manner of "Lamb's Tales from Shakspeare." These will include, *The Bondman, The Maid of Honour, The Duke of Milan, The Picture, The Fatal Dowry, The Great Duke of Florence, The Alchemist, The For, The Silent Woman, The Broken Heart, The Jew of Malta, Faustus, Filina Corombona, The Maid's Tragedy, Philaster, King and No King, The Elder Brother, Boadicea, The Loyal Subject, Wit without Money,* and various others.

Departments will be opened for the Artist, the Mechanic, the Farmer, the Gardener, the Housewife, and the Juvenile. Under these heads will be given every kind of new discovery, and every fact of interest. Each department will be under the care of an Editor, whose attention will be earnestly directed to the bringing together of the essence of information and interest relating to the several subjects embraced, derived from peculiar and authentic sources.

Essays, Biographies, Letters from Correspondents, articles upon Natural History, Enigmas, &c., &c., together with a light and agreeable miscellany, will complete the arrangements for the New Volume of the HOME COMPANION, the whole giving it the highest title to UNIVERSAL RECEPTION BY THE BRITISH PEOPLE.

## THE ALMANACK

IS NOW READY, and is undoubtedly the greatest wonder of the year. We confidently assert that the Readers of the HOME COMPANION will thank us for affording them a very rich treat. Such an Almanack has never been published before. We quote the following brief preface to the Almanack itself:

"THE EDITOR of the HOME COMPANION having designed the whole of this Almanack upon an entirely original and novel plan, offers a few words in explanation thereof. The title page is full of graphic humour. It will be found to contain upwards of ONE HUNDRED comic figures, of the most lively and varied character. The lower portion of the page represents allegorically, Knowledge destroying Ignorance and Vice. At the top and bottom of each Calendar page will be found PICTORIAL CHARADES, each of which represents a word of two syllables—the first division of the picture illustrates the first syllable—the second division the second syllable—and the whole design the complete word. Thus the Charade No. 1, my first is 'break,' my second 'fast,' my whole 'breakfast.' The PICTORIAL ENIGMAS are constructed upon a different principle, which will be sufficiently understood by a glance at the letter-press which accompanies them. The same remark applies to the EXPERIMENTS IN NATURAL PHILOSOPHY, which will be found not only pleasing, but highly instructive. The Calendar is enlivened by numerous conundrums, and humorous notices of historical events. For the purpose of heightening the amusement afforded by the Almanack, it has been deemed proper to withhold the answers to the Pastimes. These will appear in No. 53 of the 'Home Companion.' We give numbers and spaces for the reader to write down the answers he conjectures to be correct, so that by obtaining No. 53 he may have a capital evening's amusement by ascertaining how far he is successful. The Editor hopes that he may be privileged to issue a similar Almanack for many years. Several works projected by him having been wholly or partially pirated by persons who could find no other solution to the Enigmas of their prosperity, but by appropriating his ideas, he takes this opportunity of intimating that there is little likelihood of the plan of this Almanack being pirated, for the only way upon it has been so great, that it will require a sale of TWO HUNDRED THOUSAND COPIES TO REPAIR THE FIRST COST. It is undeniably the cheapest Almanack ever issued, and the only one of its kind."

## MABEL LEE.

"I have undertaken, at the request of many friends, to write the history of MABEL LEE, whose name alone is fictitious. I confess that I am not given to the invention of tales, made up of startling and impossible incidents, but being reminded that the life of MABEL LEE is more strange than fiction, and may be written all the more vividly, because absolutely true, I have willingly entered upon the subject, and have already far advanced in its execution. I have never read a novel that interested me half so much as the story of this orphan girl; full of the most remarkable vicissitudes, of many of which I was an actual observer. The Reader must not expect from me a thrilling romance, but a story plain and truthfully told, that will appeal to every heart, and supply many elements of good example to those who, like MABEL LEE, may have to struggle against the bitter tide of adversity, with a spirit too high and impulsive to submit to the harsh control often imposed upon virtuous but helpless poverty."

THE EDITOR.

## ACCOMPLISHMENTS.

Music, dancing, and a truly polished and graceful manner in social intercourse, with a knowledge of those modes and forms that are founded upon a just regard of man for man, which prevail in society, are known as accomplishments. With regard to the first of these, there is but little difference of opinion; the second has many warm advocates, and many bitter and unrelenting opponents, who see in it evil, and only evil; and there are some who appear to think any serious regard to the latter, especially the making of rules for observance, a sign of weakness and folly.

As respects music, it is clear to us, that, if a person have any taste at all in that way, he ought by all means to cultivate it. It will not only extend greatly his own means of enjoyment, but give him the power of contributing much to the enjoyment of others. We do not think it would be wise for him to devote all his leisure time to music, to the neglect of other and graver pursuits; but there are times when the mind wears of thought, and will be refreshed and strengthened to attempt new efforts, if its slumbering affections be awakened into life and activity by music. While words give utterance to the thoughts of the mind, music expresses its affections; and thoughts when uttered, and feelings when expressed, are in greater fullness and power. So well satisfied are we that there is great use in the cultivation of music, that we believe all men who are ignorant of the sciences have defects which no cultivation of the intellect alone can possibly overcome.

Against dancing much has been urged, but nothing that we have seen having any basis in rational truth. It has been called sinful; but nothing is sinful, except what is done from evil intent. Some have said that it awakens impure thoughts; but they who allege this either have impure minds or have never danced. Such is well known not to be the case. It is a frivolous waste of time, say others, and unworthy the dignity of men and women. If it is made to interfere with any duty, it is certainly a waste of time; as to the "dignity," the objection will be worth considering, when it is understood in what a man's true dignity consists. It is a fact worthy of observation, that the most strenuous opposers of dancing are those who have least charity, so called, for their neighbours; and that one of these persons will spend an evening in animadverting upon the faults and foibles of others, and indulging in a spirit of ill-will and censoriousness, while those engaged in dancing during the time have been blessing each other with a spontaneous and generous reciprocation of the kindest feelings. It is a bolder spirit, indeed, that does not feel kindly emotions while threading the graceful mazes of a cotillon, every step and every emotion of the body harmonising with sweet music.

The whole truth, in regard to the objections against dancing which prevail lies in the fact that it is erroneously imagined that all pleasures are incompatible with religion, than which there cannot possibly be a greater mistake. The pleasures of sense are not evil in themselves, but good; the evil lies in their perversion and abuse. The partaking of food is a highly-gratifying sensual pleasure; but it is not evil, except where eating is abused to the injury of the health. It cannot be evil for the ear, so finely attuned, to take in the harmonies of music; although for any one to neglect all the duties of life in giving himself up to the enjoyment of music, would certainly be a great evil. It cannot be evil to enjoy the odour of sweet flowers, nor to delight in viewing an exquisite picture, or piece of statuary, or a beautiful landscape; and yet these are all pleasures of the senses, so called, though in reality the pleasures of the soul, as it looks out upon and hearkens unto the world of nature, and there sees and hears those things that correspond to affections and principles in itself. The law of our spiritual constitution is, that all things of the mind come into their fullest power and delight in the lowest or sensual plane; and all who hinder in any way this descent of the soul into the orderly plane of its activity, destroy much of its vital force, and take away its power of clear intellectual discrimination.

Dancing is nothing more nor less than graceful movements of the body in time with music, and is joined in by two, three, or a much greater number, all acting in concert. The brightening eye, the glowing cheek, and the smiling lip, attest the pleasure that is felt by each. A pleasure in what? In accomplishing an evil purpose? None will say that. There is delight, and it must be either in good or evil. It is in evil. And if so, in what does it consist? "The dancers are virtuous maidens and young men of good principles, who, to the sound of music have arrayed themselves upon the

floor, and are moving their bodies with harmony with it. It is not evil, we unhesitatingly say, but good; for it is always good for the mind to flow down into external acts that are in themselves innocent, and encourage kindness and good-will from one toward another; and this is precisely what occurs in dancing. The objections against its abuse are as good as objections against the abuse of anything else, but no better. Another use of dancing is, that it gives a young man an easier and more graceful carriage, with more freedom in his social intercourse. It also aids him in acquiring a self-possession in company, which is so necessary for the pleasure of all, yet so hard to attain in mere conversational circles, or even in the half-awkward promenade, into which a stiff and formal sitting party is sometimes broken up by an effort, soon to subside again into its score of little circles, all detached from the rest, and feeling nothing in common with the whole.

By all means take lessons in dancing, if you have not yet done so, we would say to every young man. Don't let an awkward bashfulness prevent your doing so; for it is one of the very best means you can adopt for its correction. You are a social being, and are bound to mingle in society, both for your own good and the good of others. You are under obligations to give your quota to the general enjoyment, and under a like obligation to take your own in return, for the sake of that healthy flow of spirits so essential to the right performance of all our duties in life. And, unless you have those accomplishments that are common in polite society, you can neither give nor receive all the benefits that spring from right social intercourse.

The laws of etiquette, or those conventional forms of good breeding, which prevail in society, when they are founded upon a just regard of man for man, should always be observed. Among these laws, as found in books of etiquette, are many which have in them no vital principle—which are the mere offspring of a sickly pride. They may be known from the fact that they are not based upon a generous consideration of others. These may be observed or not, as any one thinks best; and, when among those who make it a point to observe them, we should think it wise not to interrupt the general good feeling by their violation, unless a principle were involved. It is not wrong in itself to drink tea from your saucer instead of your cup, nor to eat with your knife instead of your fork; still, as these are usages of polite society, a man of good common sense will observe them when in company, no matter how partial he may be to his knife and saucer.

We would recommend to every young man to read carefully one or more books on etiquette and good-breeding, and thereby acquaint himself with the laws that are observed in polite society. We would not, however, advise him to adopt all the forms and observances there laid down, but to take each one, and analyse it carefully, and see upon what it is based—pride, or the kind consideration of others; and where he finds that a violation of the law will subject any one to unnecessary pain or annoyance, he should carefully obey it under all circumstances.

## THE LAST LEAF.

I saw him once before,  
As he passed by the door,  
And again  
The pavement stones resound,  
As he totters o'er the ground  
With his cane.

They say that in his prime,  
'Ere the pruning-knife of Time  
Cut him down,  
Not a better man was found  
By the crier on his round  
Through the town.

But now he walks the streets,  
And he looks at all he meets,  
Sad and wan,  
And he shakes his feeble head.  
That it seems as if he said,  
"They are gone."

The money-marbles rest  
On the lips that he has prest  
In their bloom,  
And the names he loved to hear  
Have been carved for many a year  
On the tomb.

My grandmother has said—  
Poor old lady, she is dead  
Long ago—  
That he had a Roman nose,  
And his cheek was like a rose  
In the snow.

But now his nose is thin.  
And it rests upon his chin,  
Like a staff.  
And a crook is in his back,  
And a me ancholy crack  
In his laugh.

I know it is a sin  
For me to sit and grin  
At him here;  
But the old three-corner'd hat,  
And the breeches, and all that,  
Are so queer.

And if I should live to be  
The last leaf upon the tree  
In the spring,  
Let them smile, as I do now,  
At the old forsaken bough  
Where I cling.

**HOW TO ADMONISH.**—We must consult the gentlest manner and softest seasons of address; our advice must not fall, like a violent storm, bearing down and making those to droop whom it is meant to cherish and refresh. It must descend, as dew upon the tender herb, or like melting flakes of snow; the softer it falls the longer it dwells upon, and the deeper it sinks into the mind. If there are few who have the humility to receive advice as they ought, it is often because there are as few who have the discretion to convey it in a proper vehicle, and to qualify the harshness and bitterness of reproof, against which corrupt nature is apt to revolt, by an artful mixture of sweet and pleasant ingredients. To probe the wound to the bottom, with all the boldness and resolution of a good spiritual surgeon, and yet with all the delicacy and tenderness of a friend, requires a very dexterous and masterly hand. An affable deportment, and a complacency of behaviour, will disarm the most obstinate. Whereas, if, instead of pointing out their mistake, we break out into unseasonable expressions of passion, we cease to have any influence over them; or rather create a feeling antagonistic to the advice we wish to give them.

## ONWARD!

**EVENING CLASSES.**—The annual meeting of the Society by which the Evening Classes are sustained in so many parts of London, has been held at Crosby Hall, and a favourable report was made of the last year's proceedings. The good done by these Evening Classes, as we have reason to know, is almost incalculable. They should be recommended to the attention of young men by all who take an interest in their progress and education.

**RUSSIAN EXPEDITION FOR THE ADVANCEMENT OF SCIENCE.**—An expedition is about to be sent by the Geographical Society of St. Petersburg, to the Russian possessions in North America, and the dependent islands, to make scientific investigations. In addition to the sum awarded by the Society, two Russian noblemen, named Golubkon and Czapski, have severally given the munificent sums of £4,320 and £4,032.

**THE PEOPLE'S PARK AT BATTERSEA.**—The bridge which is to lay open the grounds of Battersea for the service of the crowded population of Chelsea, is proceeding, like most of our social movements, slowly but steadily. While the works at the river are in progress, approaches are making on both sides:—on the Surrey side, from Clapham, Brixton, and Wandsworth; on the Middlesex side, from Kensington, Chelsea, and Fulham. By these means the improvements are expected to be all finished at the same time.

**SEWAGE MANURE.**—From recent experiments it has been found that Mr. Stothert has succeeded in the invention of a means of completely deodorising sewage, and reducing it to a condition thoroughly manageable for application beneficially to agriculture. The precipitate, or sedimentary portion, after being dried, will be applied in a way similar to guano. The clear supernatant water, containing valuable fertilising salts, is applicable as liquid manure either by irrigation on the surface, or by means of pipes, the choking up by sediment from the sewage being completely obviated. Another important use to which the clear liquor may be applied, is for flushing, and at the same time deodorising the sewers. By its power of instantly arresting fermentation, fixing the gases, and deodorising the sewage, it becomes a means of removing the smell of the sewers, and abating the gully nuisance, keeping the sewers clean and free from those pestilential smells and gases which render it an unwholesome employment for workmen to enter them for purposes of repair, &c. The Commissioners present hoped that the process might, without delay, be carried out on a large scale for the benefit of the metropolis.

**THE NEW CRYSTAL PALACE.**—The work of re-constructing the Great Exhibition building at Sydenham is proceeding with great vigour; and that spectacle of well-applied labour, which in Hyde Park excited such unqualified admiration, is about to be successfully repeated. Already the site has been cleared, the foundations to a great extent prepared, a vast mass of materials collected on the ground, and even the plan of the surrounding gardens and their embellishments roughly sketched out. Huge piles of materials arranged so as to be most available, are stacked in order along the ground. There are long rows of iron columns, mountains of sashbars, window-frames, panelling, Paxton gutters, railings, bracings, girders, and other materials, all bearing about them the traces of their late uses, and apparently little deteriorated in condition. There is also an immense accumulation of glass, stowed away in a shed erected for the purpose, and the per-centage of the material destroyed in the transfer from Hyde Park is said to be remarkably small. In laying the foundations, the permanent character of the new structure is shown by the increased size of them, but the old proportions and the rule of having everything a multiple of 24, are preserved. While the actual site of the palace has thus been cleared and prepared for the superstructure, and a pile vast accumulations of materials have been made, the working drawings have also been completed, and a few weeks more will show the whole design growing to reality, with a speed and certainty which the mechanical resources of this country alone render practicable.

**PROGRESS OF EDUCATION IN WALES.**—The *Carmarthen Journal* has an interesting article on the state of education in Wales. Much good has been done by the schools recently established throughout the Principality. In the mining and slate districts of North Wales several new schools are in progress of erection, while those already established are in a state of great efficiency. Upwards of 60 masters, says the journal referred to, are at present in the Carmarvon Training Institution during the harvest meeting, and these instruct no less than 4,500 children in the diocese of Bangor and St. Asaph. At Trawsfynydd, in the heart of the Merionethshire hills, a school has been established, which, considering the scattered state of the population in these mountainous districts, is carried on with remarkable success; but, generally speaking, the physical obstacles to regular attendance at school are so great in the more isolated and hilly parts of the country, as well as in portions of Cardiganshire and Montgomeryshire, that but little good can be at present effected. In the more northern counties, and in Anglesey, the results are highly satisfactory. In South Wales, the various educational institutes are, on the whole, in a very promising state; particularly in the rising town of Aberdare, in Glamorganshire, where great efforts are making to satisfy the scholastic wants of a rapidly increasing population. The chief point of interest in these Welsh schools is the rapid progress of the English tongue—the Italian that is to put the Saxon and Cymric peasant on the same level of opportunity. Some very eccentric individuals are trying to persuade the Welshman that he and his sons are better off without English than they would be with it; but every line of railway into the hill districts helps to proclaim the absurdity of this notion. The Welsh-speaking peasant finds himself unable to travel, traffic, or talk, as prosperously as his neighbour who has condescended to know the common tongue of the land of which his country forms a part.

## PARLOUR PASTIME.

*A curious Chemical Experiment, called the Tree of Diana.*

MAKE an amalgam, without heat, of two drams of leaf silver with one dram of quicksilver. Dissolve this amalgam in two ounces, or a sufficient quantity of pure nitrous acid of a moderate strength: dilute the solution in about a pound and a half of distilled water, agitate the mixture, and preserve it in a glass bottle with a ground stopper. When you would make your tree, put into a phial the quantity of an ounce of the above preparation, and add to it about the size of a pea of an amalgam of gold or silver as soft as butter: the vessel must then be left at rest, and soon afterwards small filaments appear to issue out of the ball of amalgam, which quickly increase, and shoot out branches in the form of shrubs. A metallic arborization somewhat similar, may be produced in the following manner:—Dissolve a little sugar-of-lead in water, and fill a phial with the solution. Pass a wire through the cork, and affix to the upper part of the wire a small bit of silver, or zinc, in such a manner that it may be immersed in the solution, not far from its surface. Set the phial in some place where it may remain undisturbed, and in about twenty-four hours you will perceive the lead beginning to shoot round the wire: this process will continue going on slowly, till you have a beautiful metallic tree. If you have a wide-mouthed phial, or glass jar, the experiment may be pleasingly diversified, by arranging the wire in various forms.

## ENIGMAS.

LIKE the productions of the pregnant earth,  
The jarring elements first gave me birth,  
And some adepts will strenuously report,  
That still my parents are my chief support.  
All o'er the surface of this earthly sphere,  
As much familiar as the clothes we wear;  
And mostly vary with the various climes,  
Affinity preserving with the times;  
Nor, like the prince, can I all parties please,  
No more on land, than on the faithless seas.  
Sometimes I smile, sometimes I weep again;  
Sometimes I frown, then quickly smile again;  
Like blust'ring bullies boldly force my way,  
Anon am passive and as meek as they.  
No Billingsgate e'er yet could scold so loud,  
Nor no quack-doctor so harangue a crowd,  
The country farmer courts me all the year,  
And belles and beaux when gay they would appear.  
Some Virtuosos, of judicial tribe,  
Who rules and maxims to mankind prescribe,  
Making their judgments of the times to come,  
The fall of kingdoms, or the fate of Rome,  
Foretell my temper, which e'er way I incline,  
Either when jovial, or when saturnine.  
My ways are too abstruse, my laws too intricate,  
My source beyond their skill to penetrate;  
I act by latent causes yet unknown,  
Govern'd by power quite foreign to my own.  
Some modern sophs licentiously compare  
My frequent changes to th' inconstant fair.

## II.

I am a constant attendant upon virtue, although the offspring of shame; fair ladies, never do wrong, for fear I should fly in your very faces, and betray you to all who look upon you.

## ARITHMETICAL QUESTIONS.

## I.

A castle wall there was, whose height I found  
Was just one hundred feet above the ground:  
Against the wall a ladder stood upright,  
Of the same length the castle was in height.  
A waggish youth the ladder foot did slide  
Along the ground, just ten feet from the side;  
Now I would know how far the top did fall,  
By pulling out the ladder from the wall?

## II.

At Matlock, near the Peak, in Derbyshire, where there are many surprising natural curiosities, there is a rock by the side of the river Derwent, rising perpendicularly to a wonderful height; which being inaccessible, I endeavoured to measure, and found, by a mathematical calculation, that the distance between the place of observation and the foot of the rock was  $55\frac{1}{2}$  yards, and from the same point to the top of the rock it was  $140\frac{1}{2}$  yards, nearly. Required the height of this stupendous rock?

## III.

THERE are two columns in the ruins of Persepolis, left standing upright: one is 64 feet above the plain, and the other fifty; and between these, in a right line, stands an ancient statue, the head whereof is 97 feet from the summit of the higher, and 86 feet from that of the lower column; the base whereof measures just 76 feet from the centre of the figure's base. From these data, the distance of the tops of the columns is required?

## TRANSFIGURED PLAYING CARDS.

THE ACE OF CLUBS.—HOLDING ON WITH MIGHT AND MAIN.

## REBUSES.

## I.

A numeral, a pronoun, and a syllable that in sound resembles the neighing of a horse, will compound that, without which, even a palace would prove an uncomfortable habitation.

## II.

THE last in a firm, who must work 'till he tire,  
While names more important grow rich and retire;  
That ne'er attain'd good, which all mortals pursue,  
But miss'd by so many for want of a clue;  
The era we date from (I mean it in Latin);  
The dress of the clergy, silk, linen, or satin;  
A youngster who goes of your errands, or digs;  
A thing which old people tuck under their wigs,  
A dark red abyss, whence winds issue, and give  
A response to the question you wish to receive.  
A man who for pleasure gives animals pain,  
And takes that away he can ne'er give again.  
A thing which reflects without speaking a word;  
He to whom the vast plan of our system occur'd.  
A fish, or a queen (which will please you the most)  
Or if you prefer the extremes of a post.  
Unite these initials, and place in a row,  
And then as distinguish'd a hero 'twill show  
As Europe can boast, tho' her annals be long,  
And ages have pass'd since he flourish'd in song.

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 781.

## ENIGMAS.—1. A PRINTER. 2. TIME.

## PRACTICAL PUZZLES.—

1. Blow with considerable force down one side of the glass upon the edge of the half-crown. The sixpence will be expelled by the force of the air, and will fall either upon the upper surface of the half-crown, or upon the table. A little practice will render the performance of this feat very easy.

## 2.

CONUNDRUMS.—1. Because he is learning. 2. Pike. 3. The one supports his arms, the other's arms support him. 4. Because the bells are ringing. 5. Because his game mostly runs on all fours. 6. A Dutch-y. 7. Because it overthrew a House of Lords. 8. O-boy. 9. By B heading the alphabet. 10. Because it is expressed. 11. Because he keeps his pupils in darkness. 12. Because he is always for-giving. 13. An icicle. 14. E-g-g-g. 15. Because he is going to-morrow. 16. Because he turns night into day.

ARITHMETICAL QUESTIONS.—1. 1,276. 2. The son's, £3,000; the daughter's, £2,000.

## OUR CORNER CUPBOARD!

WHY is a pig's tail like a carving knife? Because it is flourished over a ham.

WHY would a spider be a good correspondent? Because he drops a line by every post.

CONTRADICTION.—The report that a Yankee had invented a machine for taking the noise out of thunder.

To be wise we must have experience, as well as the contents of a library in our minds.

A lazy fellow lying down on the grass, said, "Oh! how I do wish that this was called *wish*, and well paid."

"I think our church will last a good many years yet," said a waggish deacon to his minister. "I see the *sleepers* are very sound."

WHEN does a man devote a musical instrument? When he has a piano forte (piano for tea.)

WHAT is that which Adam never saw, never possessed, and yet he gave to each of his children? Parents.

AN Irish paper says, that among those mortally wounded at Waterloo, was Major O'Brien; afterwards Mayor of Dublin.

A QUANDARY.—A baker with both arms in the dough up to his elbows, and a flea in the leg of his trousers.

JOHN says he hates to see women buying furniture at auction rooms. The prettiest then look ugly—their countenances so are for-bidding.

"WHAT is the feminine of hero?" asked a pedagogue of a young hopeful. "*Shero!*" was the prompt answer, which took the dominie all aback.

"Doctor, do you think tight-lacing is bad for the consumption?" "Not at all—it is what it lives on." The doctor's reply was wise as well as witty.

A hailf once, a sentimental man,  
To seize a cobbler went, and thus began:

"Depart—I must have all;"

"If that's the case, thou stupid fool,"

The cobbler said, and handing him a tool,

"Depart, thou hast my awl!"

ONE of the broadest hints to pop the question which it is possible for a young lady to give a gentleman, is to declare to him her intentions of never marrying.

WHY can a person cook eggs sooner in England than in America? Because in England all that he has to do is to steal them, and they immediately become poached eggs.

"You've destroyed my peace of mind, Betsey," said a despairing lover to a truant lass. "It can't do you much harm, John, for 'twas an amazing *small* piece you had, any way."

AN auctioneer exclaimed, "Why, really, ladies and gentleman, I'm giving these things away!" "Are you?" said an old lady present; "well, I'll thank you for that silver pitcher you have in your hand."

"Don't you think Rev. Mr. K. a preacher of great power?" asked a gentleman, in reference to a pompous, long-winded divine, who spoke in a high-keyed, drawing voice. "Yes, high-draw-ic power," was the reply of the person addressed.

THE ASPIRATED "H."—Mrs. Crawford says she wrote one line in her "Kathleen Mavourneen" for the express purpose of confounding the Cockney warblers, who sang it thus—"The 'orn of the 'unter is 'eard on the 'ill;" but Moore had laid the same trap in the "Woodpecker"—"A 'art that is 'umble might 'ope for it 'ere."

AN American, now travelling in Europe, says, "Dutoli babies are the most phlegmatic, contented, independent-looking little creatures on the face of the globe. They never cry. In order to test this, I pinched several of them as I passed in the crowd. One of them slightly yawned; the others merely gazed placidly at me, but made no sign."—Model babies, those.

Tom, taken by Tim his new mansion to view,  
He observed, "Tis a big one, with windows too few."

"As for that," replied Tim, "I'm the builder's forgiver,

For taxes 't will save, and that's good for the *lierr*."

"True," says Tom, "as you live upon farthings and mites,

For the *lierr* 'tis good—but 'tis bad for the *lights*."

THE SCHOOLMASTER AND HIS PUPILS.—"Joseph, where is Africa?" "On the map, sir." "I mean, Joseph, in what continent—the Eastern or the Western continent?" "Well, the land of Africa is in the Eastern continent; but the people, sir, are all of 'em down South." "What are its products?" "Africa, sir, or down South?" "Africa, you blockhead!" "Well, sir, it hasn't got any; it never had any." "How do the African people live?" "By drawing." "Drawing what—water?" "No, sir, by drawing their breath."

A Glasgow paper tells a rich anecdote of a sailor. "Jack," newly off a voyage, and elevated with a glass of grog, is a queer animal. One of this class was a passenger in a railway carriage between Greenock and Port Glasgow, in which was a phlegmatic Jack who was not scrupulous in his phraseology, and the clergyman in a solemn tone expressed his fear that the young man was on the road to the devil. "Well," "don't matter much," replied Jack, "I have got a return ticket!"

## OUR MEMORANDUM BOOK!

CAUSE AND EFFECT.—Infinite are the consequences which follow from a single, and often apparently a very insignificant circumstance. Paley narrowly escaped being a baker. Cromwell was near being strangled in his cradle by a monkey. Henry VIII. is smitten with the beauty of a girl eighteen; and, ere long, "the Reformation beams from Bullen's tower." Charles Wesley refuses to go with his wealthy namesake to Ireland; and the inheritance, which would have been his, goes to build up the fortunes of a Wellesley instead of a Wesley; and to this decision of a school-boy (as Mr Southey observes) Methodism may owe its existence, and England its military, its civil, and political glory.

TIMED RAZORS.—Barbers often tell us that razors get tired of shaving but if laid by for twenty days, they will then shave well. By microscopic examination it is found that the tired razor, from long stropping by the same hand, and in the same directions, has the ultimate particles or fibres of its surface or edge all arranged in one direction; like the edge of a piece of cut velvet; but, after a month's rest, these fibres re-arrange themselves heterogeneously, crossing each other, and presenting a saw-like edge, each fibre supporting its fellow, and hence cutting the beard, instead of being forced down flat without cutting, as when laid by. These, and many other instances, are offered to prove that the ultimate particles of matter are always in motion. And they say that, in the process of welding, the absolute momentum of the hammer causes an entanglement of orbits of motion, and hence a re-arrangement, as in one piece; indeed, in the cold state, a leaf of gold laid on a polished surface of steel, and stricken smartly with a hammer, will have its particles forced into the steel so as to permanently gild it at the point of contact.

MAN A GREAT GALVANIC BATTERY.—The remarkable fact of the existence, in all parts of the body, of an alkaline liquid, the blood, and an acid liquid, the juice of flesh, separated by a very thin membrane, and in contact with muscle and nerve, seems to have some relation to the fact now established of the existence of electric currents in the body, and particularly to those which occur when the muscles contract. The animal body may be regarded as a galvanic engine for the production of mechanical force. This force is derived from the food, and, with food, is derived from the solar rays. A working man, it has been calculated, produces, in twenty-four hours, an amount of heating or thermal effect equal to raising nearly 14,000,000 lbs. to the height of one foot,—heat being one form of mechanical effect. But, from causes connected with the range of temperature, he can only produce, in the form of actual work done, about as much mechanical effect as would raise 3,500,000 lbs. to the height of one foot, and that in twenty-four hours. Even this is a prodigious amount of force; and whether we regard it as derived from heat, electricity, or chemical action, it is ultimately derived from the luminous solar rays, on which vegetation depends.—Gregory's Chemistry.

HOW TO SHOW LOVE FOR A WIFE.—Show love for your wife, and your admiration of her, not in nonsensical compliment; not in picking up her handkerchief or her glove, or in carrying her fan; not, though you have the means, in hanging trinkets or baubles upon her; not in making yourself a fool by winking at and seeming pleased with her foibles, or follies, or faults; but show them by acts of real goodness toward her; prove, by unequivocal deeds, the high value you set on her health, and life, and peace of mind; let your praise of her go to the full extent of her deserts, but let it be consistent with truth and with sense, and such as to convince her of your sincerity. He who is the flatterer of his wife, only prepares her ears for the hyperbolic stuff of others. The kindest appellation that her Christian name affords, is the best that you can use, especially before faces. An everlasting "my dear" is but a sorry compensation for the want of that sort of love that makes the husband cheerfully toil by day, break his rest by night, endure all sorts of hardships, if the life or health of his wife demand it. Let your deeds, and not your words, carry to her heart a daily and hourly confirmation of the fact, that you value her health, and life, and happiness, beyond all other things in this world; and let this be manifest to her, particularly at those times when life is more or less in danger.

RAPIDITY OF THOUGHT IN DREAMING.—A very remarkable circumstance, and an important point of analogy, is to be found in the extreme rapidity with which the mental operations are performed, or rather with which the material changes on which the ideas depend are excited in the hemispherical ganglia. It would appear as if a whole series of acts, that would really occupy a long lapse of time, pass ideally through the mind in one instant. We have in dreams no true perception of the lapse of time—a strange property of mind! for if such be also its property when entered into the eternal disembodied state, time will appear to us eternity. The relations of space, as well as of time, are also annihilated; so that while almost an eternity is compressed into a moment, infinite space is traversed more swiftly than by real thought. There are numerous illustrations of this on record. A gentleman dreamed that he had enlisted as a soldier, joined his regiment, deserted, was apprehended, carried back, tried, condemned to be shot, and at last led out for execution. After all the usual preparations, a gun was fired; he awoke with the report, and found that a noise in an adjoining room had, at the same moment, produced the dream and awakened him. A friend of Dr. Abercrombie's dreamt that he crossed the Atlantic, and spent a fortnight in America. In embarking on his return, he fell into the sea, and awaking in the fright, found that he had not been asleep ten minutes.—Dr. Winstow's Psychological Journal.

### Editor's Note-Book.

**DOMESTIC HINTS.—No. 25.**  
**Economy of Fuel.**—There is no part of domestic economy which everybody professes to understand better than the management of a fire, and yet there is no branch in the

household arrangement where there is a greater proportional and unnecessary waste, than arises from ignorance and mismanagement in this article. It is an old adage that we must stir no man's fire until we have known him seven years; but we might find it equally prudent if we were careful as to the stirring of our own. Anybody, indeed, can take up a poker and toss the coals about; but that is not stirring a fire! In short, the use of a poker applies solely to two particular points—the opening of a dying fire, so as to admit the free passage of the air into it, and sometimes, but not always, through it—or else approximating the remains of a half-burned fire, so as to concentrate the heat, whilst the parts still ignited are opened to the atmosphere. The same observation may apply to the use of a pair of bellows, the mere blowing of which, at random, nine times out of ten will fail; the force of the current of air sometimes blowing out the fire, as it is called, that is, carrying off the caloric too rapidly, and at others, directing the warmed current from the unlighted fuel, instead of into it. To prove this, let any person sit down with a pair of bellows, to a fire only partially ignited, or partially extinguished; let him blow, at first, not into the burning part, but into the dead coals close to it, so that the air may partly extend to the burning coal. After a few blasts let the bellows blow into the burning fuel, but directing the stream partly towards the dead coal; when it will be found that the ignition will extend much more rapidly than under the common method of blowing furiously into the flame at random. If the consumer, instead of ordering a large supply of coals at once, will, at first, content himself with a sample, he may with very little trouble ascertain who will deal fairly with him; and, if he wisely pays ready money, he will be independent of his coal merchant; a situation, which few families, even in genteel life, can boast of. Indeed we cannot too often repeat the truth, that to deal for ready money only, in all the departments of domestic arrangement, is the truest economy. Ready money will always command the best and cheapest of every article of consumption, if expended with judgment; and the dealer, who means to act fairly, will always prefer it. Trust not him who seems more anxious to give credit, than to receive cash. The former hopes to secure custom by having a hold upon you in his books; and continues always to make up for his advance, either by advanced price, or an inferior article; whilst the latter knows that your custom can only be secured by fair dealing. There is, likewise, another consideration, as far as economy is concerned, which is not only to buy with ready money, but to buy at proper seasons; for there is with every article a cheap season and a dear one; and with none more than coals: inasmuch that the master of a family, who fills his coal cellar in the middle of the summer, rather than the beginning of the winter, will find it filled at half the expense it would otherwise cost him; and will be enabled to see December's snows falling without feeling his enjoyment of his fire-side lessened by the consideration that the cheerful blaze is supplied at twice the rate that it need have done, if he had exercised a little more foresight. We must now call to the recollection of our readers, that chimneys often smoke, and that coals are often wasted by throwing too much fuel at once upon a fire. To prove this observation, it is only necessary to remove the superfluous coal from the top of the grate, when the smoking instantly ceases; as to the waste, that evidently proceeds from the frequent imtemperate and injudicious use of the poker, which not only throws a great portion of the small coals among the cinders, but often extinguishes the fire it was intended to foster.

**A GOOD WIFE.**—P. C.—Your question is very difficult to answer; however, we will essay.—A good wife should be like three things; which three things she should not be like. First, she should be like a snail, always keep within her house; but she should not be like a snail, to carry all she has on her back. Secondly, she should be like an echo, speak when she is spoken to; but she should not be like an echo, always to have the last word. Thirdly, she should be like a town-clock, always keep time and regularity; but she should not be like a town-clock, to speak so loud that all the town may hear her.

**A HAPPY MAN.**—F. G.—There is little good to be found in the human heart; and he is a happy man, though we say not a better, who looks merely on the surface, and takes all for gold that glitters, and all for gems that shine. The one may be tinsel, and the other coloured glass;—what matter, if he who wears and he who looks sees not their worthlessness?

**REASON AND PASSION.**—M. L.—The civil war between reason and passion has occasioned two opposite projects for the restoring of peace to mankind, the one, of those who were for renouncing their passions and becoming gods; the other, of those who were for renouncing their reason and becoming beasts. But neither one nor the other could take effect. Reason ever continues to accuse the bareness and injustice of the passions, and to disturb the repose of those who abandon themselves to their dominion; and, on the contrary, the passions remain lively and vigorous in the hearts of those who talk the most of their extirpation.

**THE HUMAN RACE.**—G. A.—It was Wallace who, in 1760, produced a work on the numbers of mankind, developing the principle of increase of numbers being in higher ratio than increase of food, which was only adopted and copied by Malthus. The other was the originator of the idea. When you ask, however, whether the human race and the present system of animal economy will endure as long as the globe and its solar reactions, we have no data to answer your question, but by reference to the past. Casting our eye backward, then, we see races, kinds, and forms, once covering the surface, now no more. We find ages of shelly beings, of reptiles, of pachyderms, and of gigantic creatures. We now find races re-acting on an atmosphere as 79 to 21, and sustained by water 11 to 79. Will these proportions last? Does not oxygen increase and hasten life, and does not water desiccate? We see the human race flowing from the east to the west and south, giving origin of potent results when the tour is completed. We see species after species disappearing from the face of the earth, and even within the limited circle of our own vision we have been the unwilling witness of one fell swoop destroying a whole family, and thereby

TERMINATING A BLIND EXISTENCE.

**PATRIOTS.**—T. Y.—It is difficult to say. In former times patriots tried themselves on two things: their own poverty, and the riches of the state. But poor as these men were, there were kings not rich enough to purchase them, nor powerful enough to intimidate them. In modern times, it would be easier to find a patriot rich enough to buy a king, than a king not rich enough to buy a patriot. Valerius Maximus informs us, that Ælius Pictus tore to pieces, with his own teeth, a woodpecker, because the augur, being consulted, had replied, that if the bird lived, the house of Ælius would flourish, but that if he died, the prosperity of the state would prevail. Modern patriots have discovered that a roasted woodcock is a better thing than a raw woodpecker.

**A PARACHUTE.**—P. U.—If you are ambitious of making an ascent, and, perhaps, a descent, we would advise you to think well before you make the experiment, as chance may not leave it in your power ever to make another. However, a parachute on a small scale may be made without much trouble. Take a square piece of cap or tissue paper, and to each of the corners attach a piece of thread twice as long as the paper is broad. Tie the ends of the strings evenly in a knot together, and affix to the knot a cork of moderate size. Let the whole be dropped from an upper window, and you will see the paper expand, and that its resistance will allow the cork to come only slowly to the earth. As a contrast, it will be worth while to drop a piece of cork, without the paper, out of the window at the same time, to observe how much more rapidly it will come to the

**COMMUNICATIONS RECEIVED.**—M. R. (by all means go home). T. F. (the Provencal poets were Chaucer's originals). P. C. (it is said that aperient medicines, such as salts, improve the vigour and fancy of the mind). M. C. (the largest impressions of any single book are those of Moore's Almanack). E. U. (Painters, poets, and dramatists, have done as much as priests to give currency to gross superstitions). L. S. (Madrid is the capital of Castile and all the Spains). E. G. (the poor under the Mosaic law were entitled to the tithe of every third year; to one-sixtieth of the crops of every year, and to the full half of every seventh year). J. S. (we insert your song—

TO MARY.

O! charming is the hour at e'en, when Mary meets w'  
me,  
Down by the deep and lanesome glen, beside the rowan  
tree,  
There joy leaps in the faceming stream, as down the rocks  
it rolls,  
Like healthy Industry that gilds its daily wark w' smiles  
The polish Art confers on life, my Mary doesna ken,  
But Nature's schule has g'ien her ways, that Art's could  
nevr win,  
And when we meet, twa velvet leaves, blawn frae the red,  
red rose,  
You'd think had lighted on her cheeks, their blushes to  
disclose.  
Like bramble berries black and ripe, and shining in the  
sun,  
Are Mary's een which, lang ago, my ardent love hwe  
wou;  
They speak a heart w' kindness fraught, a soul frae evil  
free,  
And rapture comes w' every glance, my Mary g'ies to  
me.  
'Mang a' the pleasures life can give, there's none like  
those o' love,  
It makes the Paradise below, as well's the Heaven aboe,  
Though gold in heaps should fa' to me, and Fame my  
name should blaw,  
One loving glance o' Mary's een, I wadna gie for a').  
The mountain ash.

T. F. O. (metal pins were not known in England till the 16th century). G. P. (the wood of the Norway fir is called white deal). P. C. (the more succulent a plant is, the more potash it affords). E. E. (No; post-offices were first established in France about 1462, and not in England till 1581). C. U. (a profile generally indicates the intellectual character). U. A. (for what purpose of usefulness the pyramids of Egypt were erected is not exactly known, some think the object was to make astronomical observations). P. F. (rubies are in general about the size of a large plum). M. M. (not at all, we are immeasurably before them in the Arts; the Romans, for example, were altogether ignorant of the true origin of silk). D. E. (Yes; a phosphorescent light is emitted from sugar, if rubbed hard). E. A. (in cutting at whist, the ace is considered the lowest card). H. Y. (the Judge of Arches court is called Dean of Arches). T. M. (Chantry, the sculptor, was born at Norton, near Sheffield, in 1781). M. N. (No; Michael Scott was as much a magician as Prospero; he had the fame of one among the vulgar, and among the learned figured as a philosopher. He was a celebrated linguist, and made an excellent translation of some of the writings of Aristotle. He lived to a great age, and died about 1290). T. M. (No; *embonpoint* does not mean absolute fatness; its signification extends only to a moderate and agreeableness of figure). F. A. (a dragoman is the interpreter attached to European embassies or consulates in the Levant). P. C. (the best coffee comes from Mocha, in Arabia Felix). C. C. (Yes, hemlock is a poison when taken in large quantities, and so is gin, although they may be both sometimes usefully employed in medicine). M. O. (a colour is said to "bear a body," when it is of a nature to be ground so finely, and to mix with the oil so entirely, as to seem only a very thick oil of the same colour; of this nature are white-lead, and ceruse, lamp black, ivory black, and some others). T. E. F. (the drones of a beehive are supposed to be males, that eat but do not work or contribute to the common stock). E. G. R. (the diamond is the hardest and most valuable of all the precious stones).

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 51.—Vol. I.

SATURDAY, DECEMBER 18, 1852.

[PRICE ONE PENNY.]

"At length, she cast herself on her knees before the father of her betrayer, and supplicated he would not punish her with severity, as she most penitently confessed her fault, so far as it related to herself."

## NATURE AND ART.

BY MRS. INCHBALD.

(Continued from page 790.)

Thus Henry said and thought, while he enclosed the child carefully in his coat, and took it in his arms. But, proceeding to walk his way with it, an unlucky query struck him, *where he should go.*

"I must not take it to the dean's," he cried, "because Lady Clementina will suspect it is not nobly, and my uncle will suspect it is not lawfully born. Nor must I take it to Lord Bendham's for the self-same reason; though, could it call Lady Bendham mother, this whole village, nay, the whole country round, would ring with rejoicings for its birth. How strange!" continued he, "that we should make so little of human creatures, that one sent among us, wholly independent of his own high value, becomes a curse, instead of a blessing, by the mere accident of circumstances."

He now, after walking out of the wood, peeped through the folds of his coat, to look again at his charge. He started, turned pale, and trembled to behold what, in the surprise of first seeing the child, had escaped his observation. Around the little throat was a cord, entwined by a slipping noose, and drawn halfway, as if the trembling hand of the murderer had revolted from its dreadful office, and he or she had left the infant to pine away in nakedness and hunger rather than see it die.

Again Henry wished himself joy of the treasure he had found; and more

fervently than before; for he had not only preserved one fellow-creature from death, but another from murder.

Once more he looked at his charge, and was transported to observe upon its serene brow and sleepy eye no traces of the dangers it had passed; no trait of shame either for itself or its parents; no discomposure at the unwelcome reception it was likely to encounter from a proud world. He now slipped the fatal string from its neck; and, by this affectionate disturbance causing the child to cry, he ran (but he scarcely knew whither) to convey it to a better nurse.

He at length found himself at the door of his dear Rebecca; for so very happy Henry felt at the good luck which had befallen him, that he longed to bestow a part of the blessing upon her he loved.

He sent for her privately out of the house, to speak to him. When she came, "Rebecca," said he (looking around that no one observed him),—"Rebecca, I have brought you something you will like."

"What is it?" she asked.

"You know, Rebecca, that you love deserted birds, strayed kittens, and motherless lambs; I have brought something more pitiable than any of these. Go, get a cap and a little gown, and then I will give it you."

"A gown!" exclaimed Rebecca. "If you have brought me a monkey, much as I should esteem any present from you, indeed, I cannot touch it." "A monkey!" repeated Henry, almost in anger: then, changing the tone of his voice, exclaimed in triumph, "It is a child!"

On this he gave it a gentle pinch, that its cry might confirm the pleasing truth he spoke.

"A child!" repeated Rebecca, in amaze.

"Yes, and indeed I found it."

"Found it?"

"Indeed I did. The mother, I fear, had just forsaken it."

"Inhuman creature!"

"Nay, hold, Rebecca! I am sure you will pity her when you see her child; you then will know she must have loved it; and you will consider how much she certainly had suffered, before she left it to perish in a wood."

"Cruel!" once more exclaimed Rebecca.

"Oh, Rebecca, perhaps, had she possessed a home of her own, she would have given it the best place in it; had she possessed money, she would have dressed it with the nicest care; or, had she been accustomed to disgrace, she would have gloried in calling it hers! But now, as it is, it is sent to us—you and me, Rebecca, to take care of it."

Rebecca, soothed by Henry's compassionate eloquence, held out her arms, and received the important parcel; and, as she kindly looked in upon the little stranger, "Now, are not you much obliged to me," said Henry, "for having brought it to you? I know no one but yourself to whom I would have trusted it with pleasure."

"Much obliged to you," repeated Rebecca, with a very serious face; "if I did but know what to do with it—where to put it—where to hide it from my father and sisters."

"Oh, anywhere," returned Henry. "It is very good—it will not cry. Besides, in one of the distant, unfrequented rooms of our old abbey, through the thick walls and long gallery, an infant's cry cannot pass. Yet pray be cautious how you conceal it; for if it should be discovered by your father or sisters, they will take it from you, prosecute the wretched mother, and send the child to the parish."

"I will do all I can to prevent them," said Rebecca; "and I think I call to mind a part of the house where it *must* be safe. I know, too, I can take milk from the dairy, and bread from the pantry, without their being misapprehended, or my father much the poorer. But if—"

At that instant they were interrupted by the appearance of the stern curate at a little distance. Henry was obliged to run swiftly away, while Rebecca returned by stealth into the house with her innocent burden.

### CHAPTER XIII.

THERE is a word in the vocabulary more bitter, more direful in its import, than all the rest. Reader, if poverty, if disgrace, if bodily pain, even if alighted love be your unhappy fate, kneel and bless heaven for its beneficent influence, so that you are not tortured with the anguish of *remorse*.

Deep contrition for past offences had long been the punishment of unhappy Agnes; but till the day she brought her child into the world, *remorse* had been averted. From that day life became an insupportable load, for all reflection was torture. To think, merely to think, was to suffer excruciating agony; yet, never before was thought so intrusive; it haunted her in every spot, in all discourse or company: sleep was no shelter—she never slept but her racking dreams told her—she had slain her infant.

They presented to her view the naked innocent whom she had longed to press to her bosom, while she lifted up her hand against its life. They laid before her the piteous babe whom her eye-balls strained to behold *once more*, while her feet hurried her away for ever.

Often had Agnes, by the winter's fire, listened to tales of ghosts—of the increasing sting of a guilty conscience; often had she shuddered at the recital of murders; often had she wept over the story of the innocent put to death, and stood aghast that the human mind could premeditate the heinous crime of assassination!

From the tenderest passion the most savage impulse may arise: in the deep recesses of fondness, sometimes, is implanted the root of cruelty; and from loving William with unbounded, lawless affection, she found herself depraved so as to become the very object which could most of all excite her own horror.

Still, at delirious intervals, that passion which, like a fatal talisman, had enchanted her whole soul, held out the delusive prospect that "William might yet relent;" for though she had for ever discarded the hope of peace, she could not force herself to think, but that, again blest with his society, she should, at least for the time that he was present with her, taste the sweet cup of "forgetfulness of the past," for which she so ardently thirsted.

"Should he return to me," she thought in those paroxysms of delusion, "I would to him unbosom all my guilt; and as a remoter, a kind of unwary accomplice in my crime, his sense, his arguments, ever ready in making light of my sins, might afford a respite to my troubled conscience."

While thus she unwittingly thought, and sometimes watched through the night, starting with convulsed rapture at every sound, because it might possibly be the harbinger of him, he was busied in carefully looking over marriage articles, fixing the price of residence with his destined bride, or making love to her in formal process. Yet, Agnes, vaunted—she sometimes thought on thee; he could not witness the folly, the weakness, the vanity, the selfishness, of his future wife, without frequently comparing her with thee. When equivocal words, and prevaricating sentences fell from her lips, he remembered with a sigh thy candour—that open sincerity which dwelt upon thy tongue, and seemed to vie with thy undisguised features to charm the listener even beyond the spectator. While Miss Sedgeley eagerly grasped at all the gifts he offered, he could not but call to mind that Agnes's declining hand was always closed, and her looks forbidding every time he proffered such disrespectful tokens of his love. He recollected the softness which beamed from her eyes, the blush on her face at his approach, while he could never discern one glance of tenderness from the eyes of Lord Rend-

ham; and the artificial bloom on her cheeks was nearly as disgusting as the ill-conducted artifice with which she attempted gentleness and love.

But all these impediments were only observed as trials of his fortitude; his prudence could overcome his aversion, and thus he valued himself upon his manly firmness.

'Twas now, that William being rid, by the peevishness of Agnes, most honourably of all future ties to her, and the day of his marriage with Miss Sedgeley being fixed, that Henry, with the rest of the house, learnt what to them was news. The first dart of Henry's eye upon his cousin, when in his presence, he was told of the intended union, caused a reddening on the face of the latter: he always fancied Henry saw his thoughts; and he knew that Henry in return would give him *his*. On the present occasion, no sooner were they alone, and Henry began to utter them, than William charged him, not to dare to proceed; for that, too long accustomed to trifle, the time was come when serious matters could alone employ his time; and when men of approved sense must take place of friends and confidants like him.

Henry replied, "The love, the sincerity of friends, I thought, were their best qualities; these I possess."

"But you do not possess knowledge."

"If that be knowledge which has of late estranged you from all who bear you a sincere affection, which imprints every day more and more upon your features the marks of gloomy inquietude, am I not happier in my ignorance?"

"Do not torment me with your ineffectual reasoning."

"I called at the cottage of poor Agnes the other day," returned Henry: "her father and mother were taking their homely meal alone; and when I asked for their daughter, they wept, and said, Agnes was not the girl she had been."

William cast his eyes on the floor.

Henry proceeded:—"They said a sickness, which they feared would bring her to the grave, had preyed upon her for some time past. They had procured a doctor, but no remedy was found, and they feared the worst."

"What worse?" cried William (now recovered from the effects of the sudden intelligence, and attempting a smile), "do they think she will die? And do you think it will be for love? We do not hear of these deaths often, Henry."

"And if she die, who will hear of that? No one but those interested to conceal the cause; and thus it is that dying for love becomes a phenomenon."

Henry would have pursued the discourse farther; but William, impatient on all disputes except where his argument was the better one, retired from the controversy, crying out, "I know my duty, and want no instructor."

It would be unjust to William to say he did not feel for this reported illness of Agnes: he felt during that whole evening, and part of the next morning; but business, pleasures, new occupations, and new schemes of future success, crowded to dissipate all unwelcome reflections; and he trusted to her youth, her health, her animal spirits, and, above all, to the folly of the gossips' story of *dying for love*, as a surety for her life, and a safeguard for his conscience.

The child of William and Agnes was secreted, by Rebecca, in a distant chamber belonging to the dreary paragonage, near to which scarcely any part of the family ever went. There she administered to all its wants, visited it every hour of the day, and at intervals during the night, viewed almost with the joy of a mother its health, its promised life, and in a short time found she layed her little gift better than anything on earth, except the giver.

Henry called the next morning; and the next, and many succeeding times, in hopes of an opportunity to speak alone with Rebecca, to inquire concerning her charge, and consult when and how he could privately relieve her from her trust, as he now meant to procure a nurse for wages. In vain he called or lurked around the house; for near five weeks all the conversation he could obtain with her was the company of her sisters, who, beginning to observe his preference, his marked attention to her, and the languid, half-smothered transport with which she received it, indulged their envy and resentment at the contempt shown to their charms, by watching her steps when he was away, and her every look and whisper while he was present.

For five weeks, then, he was continually thwarted in his expectation of meeting her alone; and at the end of that period, the whole design he had to accomplish by such a meeting was rendered abortive.

Though Rebecca had, with strictest caution, locked the door of the room in which the child was hid, and covered each crevice, and every aperture through which sound might more easily proceed; though she had surrounded the infant's head with pillows, to obstruct all noise from his crying, yet one unlucky night, the strength of his voice increasing with his age, he was heard by the maid who slept the nearest to that part of the house.

Not meaning to injure her young mistress, the servant next morning simply related to the family what sounds had struck her ear during the night, and whence they proceeded. At first she was ridiculed, for supposing herself awake, when in reality she must be dreaming. But steadfastly persisting in what she had said, and Rebecca's blushes, confusion, and eagerness to prove the maid mistaken, giving suspicion to her charitable sisters, they watched her the very next time she went by stealth to supply the office of a mother; and breaking abruptly on her while feeding and caressing the infant, they instantly concluded it was her own, seized it, and, in spite of her entreaties, carried it down to their father.

That account which Henry had given Rebecca, of his having found the child, and which her own sincerity, joined to the faith she had in his word, made her receive as truth, she now felt would be heard by the present auditors with contempt, even with indignation, as a falsehood. Her slight is easier conceived than described.

Accused, and forced by her sisters, along with the child, before the curate, —his attention to their representation,—his crimsoned face, knit brow, and thundering voice,—struck with terror her very soul. Innocence is not always a protection against fear—sometimes less bold than guilt.

In her father and sisters she saw, she knew, the suspicious, partial, cruel, boisterous natures by whom she was to be judged: and timid, gentle, oppressed, she fell trembling on her knees, and could only articulate, "Forgive me!"

The curate would not listen to this supplication till she had replied to his question, "Whose child is this?"

She replied, "I do not know."

Questioned louder, and with more violence still, how the child came there, wherefore her affection for it, and whose it was? she felt the improbability of the truth still more forcibly than before, and dreaded some immediate peril from her father's rage, should she dare to relate an apparent lie. She paused to think upon a more probable tale than the real one, and as she hesitated, shook in every limb, while her father exclaimed:

"I understand the cause of this terror: it confirms your sisters' fears, and your own shame. From your infancy I have predicted that some fatal catastrophe would befall you. I never loved you like my other children—I never had the cause: you were always unlike the rest, and I knew your fate would be calamitous; but the very worst of my forebodings did not come to this—so young, so guilty, and so artful! Tell me this instant, are you married?"

Rebecca answered, "No."

The sisters lifted up their hands.

The father continued:—"Vile creature! I thought as much. Still I will know the father of this child."

She cast up her eyes to Heaven, and firmly vowed she did not know herself; nor who the mother was.

"This is not to be borne!" exclaimed the curate, in fury. "Persist in this, and you shall never see my face again. Both your child and you I'll turn out of my house instantly, unless you confess your crime and own the father."

Curious to know this secret, the sisters went up to Rebecca with seeming kindness, and conjured her to spare her father still greater grief, and her own and her child's public infamy, by acknowledging herself its mother, and naming the man who had undone her. Emboldened by this insult from her own sex, Rebecca now began to declare the simple truth. But no sooner had she said, that the child was presented to her care by a young man who had found it, than her sisters burst into laughter, and her father into redoubled rage.

Once more the women offered their advice, to confess and be forgiven. Once more the father raved. Beguiled by solicitations, and terrified by threats, like women formerly accused of witchcraft, and other wretches put to the torture, she thought her present sufferings worse than any that could possibly succeed; and felt inclined to confess a falsehood, at which her virtue shrunk, to obtain a momentary respite from reproach: she felt inclined to take the mother's share of the infant, but was at a loss to whom to give the father's. She thought that Henry had entailed on himself the best right to the charge; but she loved him, and could not bear the thought of accusing him falsely.

While, with agitation in the extreme, she thus deliberated, the proposition again was put, whether she would trust to the mercy of her father by confessing, or draw down his immediate vengeance by denying her guilt? She made choice of the former, and, with tears and sobs, owned herself the mother of the boy. But still,—

"Who is the father?"

Again she shrunk from the question, and fervently implored to be spared on that point. Her petition was rejected with vehemence; and the curate's rage increased till she acknowledged Henry was the father.

"I thought so," exclaimed all her sisters at the same time.

"Villain!" cried the curate; "the dean shall know, before this hour is expired, the baseness of the nephew whom he supports upon charity: he shall know the misery, the grief, the shame he has brought on me, and how unworthy he is of his protection."

"Oh, have mercy on him!" cried Rebecca, as she still knelt to her father: "do not ruin him with his uncle, for he is the best of human beings."

"Ay, ay, we always saw how much she loved him," cried her sisters.

"Wicked, unfortunate girl!" said the clergyman (his rage now subsiding, and tears supplying its place), "you have brought a scandal upon us all: your sisters' reputation will be stamped with the colour of yours; my good name will suffer; but that is trivial, your soul is lost to virtue, to religion, to shame!"

"No, indeed!" cried Rebecca: "if you will but believe me."

"Do not I believe you? Have not you confessed?"

"You will not pretend to unsay what you have said," cried her eldest sister; "that would be making things worse."

"Go, go out of my sight!" said her father. "Take your child with you to your chamber, and never let me see either of you again. I do not turn you out of my doors to-day, because I gave you my word I would not, if you revealed your shame; but by to-morrow I will provide some place for your reception, where neither I nor any of your relations shall ever see or hear of you again."

Rebecca made an effort to cling around her father, and once more to declare her innocence; but her sisters interposed, and she was taken, with her reputed son, to the chamber where the curate had sentenced her to remain, till she quitted his house for ever.

The curate, in the disorder of his mind, scarcely felt the ground he trod,

as he hastened to the dean's house to complain of his wrongs. His name procured him immediate admittance into the library—and the moment the dean appeared, the curate burst into tears. The cause being required of such "very singular marks of grief," Mr. Rymer described himself as having been, a few moments ago, the happiest of parents; but that his peace and that of his whole family had been destroyed by Mr. Henry Norwynne, the dean's nephew. He now entered into a minute recital of Henry's frequent visits there, and of all which had occurred in his house that morning—from the suspicion that a child was concealed under his roof, to the confession made by his youngest daughter, of her fall from virtue, and of her betrayer's name.

The dean was astonished, shocked, and roused to anger: he vented reproaches and menaces on his nephew; and, blessing himself in a virtuous son, whose wisdom and counsel were his only solace in every care, sent for William, to communicate with him on this unhappy subject.

William came, all obedience, and heard with marks of amazement and indignation the account of such black villany! In perfect sympathy with Mr. Rymer and his father, he allowed "no punishment could be too great for the seducer of innocence, the selfish invader of a whole family's repose." Nor did William here speak what he did not think—he merely forgot his own conduct; or if he did recall it to his mind, it was with some fair interpretation in his own behalf—such as self-love ever supplies to those who wish to cheat intruding conscience.

Young Henry being sent for, to appear before this triumvirate, he came with a light step and a cheerful face. But, on the charge against him being exhibited, his countenance changed—yet only to the expression of surprise. He boldly asserted his innocence, plainly told the real fact, and with a deportment so perfectly unembarrassed, that nothing but the asseverations of the curate, that his daughter had confessed the whole, could have rendered the story Henry told suspected; although some of the incidents he related were of no common kind. But Mr. Rymer's charge was an objection to his veracity, too potent to be overcome; and the dean exclaimed, in anger:

"We want not your avowal of your guilt—the mother's evidence is testimony sufficient."

"The virtuous Rebecca is not a mother," said Henry, with firmness.

William here, like Rebecca's sisters, took Henry aside, and warned him not to add to his offence, by denying what was proved against him. But Henry's spirit was too manly, his affection too sincere, not to vindicate the chastity of her he loved, even at his own peril. He again and again protested she was virtuous.

"Let her instantly be sent for," said the dean, "and this madman confronted with her." Then adding, that as he wished everything might be conducted with secrecy, he would not employ his clerk on the unhappy occasion: he desired William to draw up the form of an oath, which he would administer as soon as she arrived.

A man and horse were immediately despatched to bring Rebecca: William drew up an affidavit, as his father had directed him—in Rebecca's name solemnly protesting she was a mother, and Henry the father of her child—and now the dean, suppressing till she came the warmth of his displeasure, spoke thus calmly to Henry:

"Even supposing that your improbable tale of having found this child, and all your declarations in respect to it, were true, still you would be greatly criminal. What plea can you make for not having immediately revealed the circumstance to me or some other proper person, that the real mother might have been detected, and punished for her design of murder?"

"In that, perhaps, I was to blame," returned Henry; "but whoever the mother was, I pitied her."

"Compassion on such an occasion was ill-placed," said the dean.

"Was I wrong, sir, to pity the child?"

"No."

"Then how could I feel for *that*, and yet divest myself of all feeling for its mother?"

"Its mother!" exclaimed William, in anger; "she ought to have been immediately pursued, apprehended, and committed to prison."

"It struck me, cousin William," replied Henry, "that the father was more deserving of a prison: the poor woman had abandoned only *one*—the man, in all likelihood, had forsaken *two* pitiable creatures."

William was pouring execrations on "the villain, if such there could be," when Rebecca was announced. Her eyes were half closed with weeping: deep confusion overspread her face; and her tottering limbs could hardly support her to the awful chamber where the dean, her father, and William, sat in judgment, whilst her beloved Henry stood arraigned as a culprit, by her false evidence. Upon her entrance, her father first addressed her, and said, in a stern, threatening, yet feeling tone:

"Unhappy girl! answer me before all present—Have you, or have you not, owned yourself a mother?"

She replied, stealing a fearful look at Henry, "I have."

"And have you not," asked the dean, "owned that Henry Norwynne is the father of your child?"

She seemed as if she wished to expostulate. The curate raised his voice:

"Have you, or have you not?"

"I have," she faintly replied.

"Then here," cried the dean to William, "read that paper to her, and take the Bible."

William read the paper, which in her name declared a monstrous falsehood: he then held the book in form, while she looked like one distracted—wringing her hands, and was near sinking to the earth. At the moment when the book was lifted up to her lips to kiss, Henry rushed to her.

"Stop!" he cried: "Rebecca, do not wound your future peace."

plainly see under what prejudices you have been accused—under what fears you have laboured. Put do not be terrified into the commission of a crime which hereafter will distract your delicate conscience. My requesting you of your father for my wife will satisfy his scruples, prevent your oath—and here I make the demand."

"He at length confessed! Surprising audacity! Complicated villany!" exclaimed the dean; then added, "Henry Norwyme, your first guilt is so enormous—your second, in steadfastly denying it, so base—this last conduct so audacious—that, from the present hour, you must never dare to call me relation, or to consider my house as your home."

William, in unison with his father, exclaimed, "Indeed, Henry, your actions merit this punishment."

Henry answered with firmness, "Influct what punishment you please."

"With the dean's permission, then," said the curate, "you must marry my daughter."

Henry started. "Do you pronounce that as a punishment? It would be the greatest blessing Providence could bestow. But how are we to live? My uncle is too much offended ever to be my friend again; and in this country, persons of a certain class are so educated, they cannot exist without the assistance, or what is called the patronage, of others: when that is withheld, they steal or starve. Heaven protect Rebecca from such misfortune!—Sir (to the curate), do you but consent to support her only a year or two longer, and in that time I will learn some occupation that shall raise me to the eminence of maintaining both her and myself without one obligation, or one inconvenience, to a single being."

Rebecca exclaimed, "Oh, you have saved me from such a weight of sin, that my future life would be too happy passed as your slave."

"No, my dear Rebecca, return to your father's house, return to slavery but for a few years more, and the rest of your life I will make free."

"And can you forgive me?"

"I can love you; and in that is comprised everything that is kind."

The curate, who, hating a few passions and a few prejudices, was a man of some worth and feeling, and felt, in the midst of her distress, though the result of supposed crimes, that he loved this neglected daughter better than he had before conceived; and he now agreed to take her home for a time, provided she were relieved from the child, and the matter so hushed up, that it might draw no imputation upon the character of his other daughter.

The dean did not degrade his consequence by consultations of this nature; but, having penetrated (as he imagined) into the very bottom of this intricate story, and issued his mandate against Henry, as a mark that he took no farther concern in the matter, he proudly walked out of the room, without uttering another word. William as proudly and as silently followed. The curate was inclined to adapt the manners of such great examples: but self-interest, some affection to Rebecca, and concern for the character of his family, made him wish to talk a little more with Henry; who now repeated what he had said respecting his marriage with Rebecca, and promised to come the very next day, in secret, and deliver her from the care of the infant, and the suspicion that would attend her nursing it.

"But, above all," said the curate, "procure your uncle's pardon, for without that—without his protection, or the protection of some other rich man—to marry, to obey God's ordinance, *increase and multiply*, is to want food for yourself and your offspring."

Though this unfortunate occurrence in the curate's family was, according to his own phrase, "to be hushed up," yet certain persons of his, of the dean's, and of Lord Benthams house, immediately heard and talked of it. Among these, Lady Benthams was most of all shocked and offended. She said she never could bear to hear Mr. Rymer either pray or preach again; he had not conducted himself with proper dignity either as a clergyman or a father: he should have imitated the dean's example in respect to Henry, and have turned his daughter out of doors. Lord Benthams was less severe on the seduced, but had no mercy on the seducer—"a vicious youth, without one accomplishment to endear vice." For vice, Lord Benthams thought (with certain philosophers), might be most exquisitely pleasing in a pleasing garb. "But this youth smelt without elegance, without one particle of wit, or an atom of good breeding."

Lady Clementina would not permit the subject to be mentioned a second time in her hearing. Extreme delicacy in woman, she knew, was bewitching; and the delicacy she displayed on this occasion went so far, that she could not even intercede with the dean to forgive his nephew, because the topic was too gross for her lips to name, even in the ear of her husband.

Miss Sedgley, though on the very eve of her bridal-day with William, felt so tender a regard for Henry, that often she thought Rebecca happier in disgrace and poverty, blest with the love of him, than she was likely to be in the possession of friends and fortune with his cousin.

Had Henry been of a nature to suspect others of evil, or had he felt a confidence in his own worth, such a passion as this young woman's would soon have disclosed its existence; but he, regardless of any attractions of Miss Sedgley, equally supposed he had none in her eyes; and thus, fortunately for the peace of all parties, this prepossession ever remained a secret, except to herself.

So little did William conceive that his clownish cousin could rival him in the affections of a woman of fashion, that he even slightly solicited his father that Henry might not be banished from the house, at least till after the following day, when the great festival of his marriage was to be celebrated. But the dean refused, and reminded him, as he was taught, both by his moral and religious character in the eyes of God, and still more in the eyes of men, to show lasting repentance of iniquity like his.

William acquiesced, and immediately delivered to his cousin the dean's wishes for his amendment and a letter of recommendation procured from Lord

Benthams, to introduce him on board a man-of-war; where, he was told, he might hope to meet with preferment, according to his merit, as a sailor and a gentleman. Henry pressed William's hand on parting, wished him happy in his marriage, and supplicated, as the only favour he would implore, an interview with his uncle, to thank him for all his former kindness, and to see him for the last time.

William repeated this petition to his father, but with so little energy, that the dean did not grant it. He felt himself, he said, compelled to resent that reprobate character in which Henry had appeared; and he feared lest the remembrance of his last parting from his brother might, on taking a formal leave of that brother's son, reduce him to some tokens of weakness that would ill become his dignity and just displeasure. He sent him his blessing, with money to convey him to the ship; and Henry quitted his uncle's house in a flood of tears, to seek first a new protectress for his little foundling, and then to seek his fortune.

#### CHAPTER XIV.

THE wedding day of Mr. William Norwyme with Miss Caroline Sedgley arrived; and on that day the bells of every parish surrounding that in which they lived joined with their own in celebration of the blissful union. Flowers were strewed before the new-married pair and favours and ale made many a heart more glad than that of either bridegroom or bride. Upon this day of ringing and rejoicing, the bells were not muffled, nor was conversation on the subject withheld from the ear of Agnes. She heard like her neighbours; and, sitting on the side of her bed in her little chamber, suffered, under the cottage roof, as much affliction as ever visited a palace.

Tyrants, who have imbrued their hands in the blood of myriads of their fellow-creatures, can call their murders "religion, justice, attention to the good of mankind." Poor Agnes knew no sophistry to calm her sense of guilt: she felt herself a harlot and a murderer; a slighted, a deserted wretch, bereft of all she loved in this world, all she could hope for in the next. She complained bitterly of illness, not could the entreaties of her father and mother prevail on her to share in the sports of this general holiday. As none of her humble visitors suspected the cause of her more than ordinary indisposition, they endeavoured to divert it with an account of everything they had seen at church—what the bride wore—how joyful the bridegroom looked—and all the seeming signs of that complete happiness which they conceived was for certain tasted.

Agnes, who, before this event, had at moments suppressed the agonising sting of self-condemnation, in the faint prospect of her lover one day restored, on this memorable occasion lost every glimpse of hope, and was weighed to the earth with an accumulation of despair.

Where is the degree in which the sinner stops? Unhappy Agnes! the first time you permitted indecorous familiarity from a man who made you no promise, who gave you no hope of becoming his wife, who professed nothing beyond those fervent, though slender, affections which attach the rake to the wanton; the first time you interpreted his kind looks and ardent prayers into tenderness and constancy; the first time you descended from the character of purity, you rushed imperceptibly on the blackest crimes. The more sincerely you loved, the more you plunged in danger: from one ungoverned passion proceeded a second, and a third. In the fervency of affection you yielded up your virtue! In the excess of fear, you stained your conscience with the intended murder of your child! and now, in the violence of grief, you meditate—what?—to put an end to your existence by your own hand!

After casting her thoughts around, anxious to find some little bud of comfort on which to fix her longings, eye, she beheld, in the total loss of William, nothing but a wide waste, an extensive plain of anguish. "How am I to be sustained through this dreary journey of life?" she exclaimed. Upon this question she felt, more poignantly than ever, her loss of innocence: innocence would have been her support; but, in place of this best prop to the afflicted, guilt flashed on her memory every time she flew for aid to reflection.

At length, from horrible rumination, a momentary alleviation came;—"But one more step in wickedness," she triumphantly said, "and all my shame, all my sufferings are over." She congratulated herself upon the lucky thought; when, but an instant after, the tears trickled down her face for the sorrow her death, her sinful death, would bring to her poor and beloved parents. She then thought upon the probability of a sigh it might draw from William; and the pride, the pleasure of that little tribute, counterpoised every struggle on the side of life.

As she saw the sun decline, "When you rise again," she thought, "when you peep bright to-morrow morning into this little room to call me up, I shall not be here to open my eyes upon a hateful day—I shall no more regret that you have waked me! I shall be sound asleep, never to wake again in this wretched world—not even the voice of William would then awake me."

While she found herself resolved, and evening just come on, she hurried out of the house, and hastened to the fatal wood; the scene of her dishonour.—the scene of intended murder—and now the meditated scene of suicide.

As she walked along between the close-set trees, she saw, at a little distance, the spot where William first made love to her; and where, at every appointment, he used to wait her coming. She darted her eye away from this place with horror; but, after a few moments of emotion, she walked slowly up to it—shed tears, and pressed with her trembling lips that tree, against which he was accustomed to lean while he talked with her. She felt an inclination to make this the spot to die in; but her preconcerted, and the less frightful death, of leaping into a pool on the other side of the wood, induced her to go onwards.

Presently, she came near the place where her child, and William's, was exposed to perish. Here she started with a sense of the most atrocious guilt; and her whole frame shook with the dread of an approaching, an omnipotent Judge, to sentence her for murder!

She halted, appalled, aghast! undetermined whether to exist longer beneath the pressure of a criminal conscience, or die that very hour, and meet her final condemnation.

She proceeded a few steps farther, and beheld the very ivy-bush close to which her infant lay, when she left him exposed: and now, from this minute recollection, all the mother rising in her soul, she saw, as it were, her babe again in its deserted state; and, bursting into tears of bitterest contrition and compassion, she cried,—

"As I was merciless to thee, my child, thy father has been pitiless to me! As I abandoned thee to die with cold and hunger, he has forsaken, and has driven me to die by self-slaughter."

She now fixed her eager eyes on the distant pond, and walked more softly than before, to rid herself of her agonizing sensations.

Just as she had nearly reached the wished-for brink, she heard a footstep, and saw, by the glimmering of a clouded moon, a man approaching. She turned out of her path, for fear her intentions should be guessed at and opposed; but still, as she walked another way, her eye was wishfully bent towards the water that was to obliterate her love and her remorse—obliterate, for ever, William and his child.

It was now that Henry, who, to prevent scandal, had stolen at that still hour of night to rid the curate of the incumbrance so irksome to him, and take the foundling to a woman whom he had hired for the charge: it was now that Henry came up, with the child of Agnes in his arms, carefully covered all over from the night's dew.

"Agnes, is it you?" cried Henry, at a little distance. "Where are you going thus late?"

"Home, sir," said she, and rushed among the trees.

"Stop, Agnes," he cried; "I want to bid you farewell: to-morrow I am going to leave this part of the country for a long time. So God bless you, Agnes!" Saying this, he stretched out his arm to shake her by the hand.

Her poor heart trusting that his blessing, for want of more potent offerings, might, perhaps, at this tremendous crisis, ascend to Heaven in her behalf, she stopped, returned, and put out her hand to take his.

"Softly!" said he, "don't wake my child: this spot has been a place of danger to him; for underneath this very ivy-bush it was that I found him."

"Found what?" cried Agnes, with a voice elevated to a tremulous scream.

"I will not tell you the story," replied Henry; "for no one I have ever yet told of it would believe me."

"I will believe you, I will believe you," she repeated, with tones yet more impressive.

"Why, then," said Henry, "only five weeks ago—"

"Ah!" shrieked Agnes.

"What do you mean?" said Henry.

"Go on," she intimated, in the same voice.

"Why, then, as I was passing this very place, I wish I may never speak truth again, if I did not find"—here he pulled aside the warm rug in which the infant was wrapt—"this beautiful child."

"With a cord?"

"A cord was round its neck."

"'Tis mine—the child is mine—it is mine—my child—I am the mother and the murderer—I fixed the cord, while the ground shook under me—while flashes of fire darted before my eyes—while my heart was bursting with despair and horror! But I stopped short—I did not draw the noose—I had a moment of strength, and I ran away. I left him living—he is living now—escaped from my hands—and I am no longer ashamed, but overcome with joy that he is mine! I bless you, my dear, my dear, for saving his life—for giving him to me again—for preserving my life, as well as my child!"

Here she took her infant, pressed it to her lips and to her bosom; then bent to the ground, clasped Henry's knees, and wept upon his feet.

He could not for a moment doubt the truth of what she said; her powerful, yet broken accents, her convulsive embraces of the child, even more than her declaration, convinced him she was its mother.

"Good Heaven!" cried Henry, "and this is my cousin William's child!"

"But your cousin does not know it," said she: "I never told him—he was not kind enough to embolden me; therefore do not blame him for my sin! he did not know of my wicked design—he did not encourage me—"

"But he forsook you, Agnes."

"He never said he would not. He always told me he could not marry me."

"Did he tell you so at his first private meeting?"

"No."

"Nor at the second?"

"No; nor yet at the third."

"When was it he told you so?"

"I forget the exact time; but I remember it was on that very evening when I confessed to him—"

"What?"

"That he had won my heart."

"Why did you confess it?"

"Because he asked me, and said it would make him happy if I did so."

"Cruel! dishonourable!"

"Nay, do not blame him: he cannot help not loving me no more than I can help loving him."

Henry rubbed his eyes.

"Bless me, you weep! I always heard that you were brought up in a savage country; but I suppose it is a mistake: it was your cousin William."

"Will you not apply to him for the support of your child?" asked Henry.

"If I thought he would not be angry."

"Angry! I will write to him on the subject, if you will give me leave."

"But do not say it is by my desire. Do not say I wish to trouble him: I would sooner beg than be a trouble to him."

"Why are you so delicate?"

"It is for my own sake—I wish him not to hate me."

"Then thus you may secure his respect. I will write to him, and let him know all the circumstances of your case; I will plead for his compassion on his child, but assure him that no conduct of his will ever induce you to declare (except only to me, who knew of your previous acquaintance) who is the father."

To this she consented: but when Henry offered to take from her the infant, and carry him to the nurse he had engaged, to this she would not consent.

"Do you mean, then, to acknowledge him yours?" Henry asked.

"Nothing shall force me to part from him again. I will keep him, and let my neighbours judge of me as they please."

Here Henry caught at a hope he feared to name before.

"You will, then, have no objection," said he, "to clear an unhappy girl to a few friends, with whom her character has suffered by becoming, at my request, his nurse?"

"I will clear any one, so that I do not accuse the father."

"You give me leave, then, in your name, to tell the whole story to some particular friends, my cousin William's part in it alone excepted?"

"I do."

Henry now exclaimed, "God bless you!" with greater fervour than when he spoke it before; and he now hoped the night was nearly gone, that the time might be so much the shorter before Rebecca should be reinstated in the esteem of her father, and of all those who had misjudged her.

"God bless you!" said Agnes, still more fervently, as she walked with unguided steps towards her home, for her eyes never wandered from the precious subject which caused her unexpected return.

## CHAPTER XV.

HENRY rose early in the morning, and flew to the curate's house, with more than even his usual thirst of justice, to clear injured innocence—to redeem from shame her whom he loved. With eager haste he told that he had found the mother, whose fall from virtue Rebecca, overcome by confusion and threats, had taken on herself.

Rebecca rejoiced; but her sisters shook their heads; and even the father seemed to doubt.

Confident in the truth of his story, Henry persisted so boldly in his affirmations, that, if Mr. Rymer did not entirely believe what he said, he secretly hoped that the dean and other people might; therefore he began to imagine he could possibly cast from his family the present stigma, whether or no it belonged to any other.

No sooner was Henry gone than Mr. Rymer waited on the dean, to report what he had heard; and he frankly attributed his daughter's false confession to the compulsive methods he had adopted in charging her with the offence. Upon this statement, Henry's love to her was abated a solution of his seemingly inconsistent conduct on that singular occasion.

The dean immediately said, "I will put the matter beyond all doubt: for I will this moment send for the present reputed mother; and, if she acknowledges the child, I will instantly commit her to prison for the attempt of putting it to death."

The curate applauded the dean's sagacity: a warrant was issued; and Agnes brought prisoner before the grandfather of her child.

She appeared astonished at the part in which she found herself. Confused, also, with a thousand unexpressed sensations, which the dean's presence inspired, she seemed to prevaricate in all she uttered.

Accused of this prevarication, she was still more disconcerted; said and unsaid; confessed herself the mother of the infant; but declared she did not know, then owned she did know the name of the man who had undone her, but would never utter it. At length, she cast herself on her knees before the father of her betrayer, and supplicated he would not punish her with severity, as she most penitently confessed her fault, so far as it related to herself.

While Mr. and Mrs. Norwynne, just entered on the honeymoon, were sitting side by side, enjoying, with peace and with honour, conjugal society, poor Agnes, threatened, reviled, and sinking to the dust, was hearing, from the mouth of William's father, the enormity of those crimes to which his son had been accessory. She saw the millions written that was to convey her into a prison—saw herself delivered once more into the hands of constables, before her resolution left her of concealing the name of William in her story. She now, overcome with fright, and thinking she should expose him still more in a public court, if, hereafter, on her trial, she should be obliged to name him—she now humbly asked the dean to hear a few words she had to say in private; where she promised she would speak nothing but the truth.

"This was impossible," he said, "no private confessions before a magistrate! All must be done openly."

She urged again and again the same request: it was denied more peremptorily than at first. On which she said,

"Then, sir, forgive me, since you force me to it, if I speak before Mr. Rymer and these men, what I would for ever have kept a secret if I could. One of your family is my child's father."

"Any of my servants?" cried the dean.

"No."

"My nephew?"

"No; one who is nearer still."

"Come this way," said the dean, "I will speak to you in private."

It was not that the dean, as a magistrate, distributed partial decrees of pretended justice—he was rigidly faithful to his trust: he would not inflict punishment on the innocent, nor let the guilty escape; but, in all particulars of refined or coarse treatment, he would alleviate or aggravate according to the rank of the offender. He could not feel that a secret was of equal importance to a poor man to a rich person; and while Agnes gave no intimation but that her delicacy rose from fears for herself, she did not so forcibly impress him with an opinion that it was a case which had weighty cause for a private conference, as when she boldly said a part of *his* family, very near to him, was concerned in her tale.

The final result of their conversation, in an adjoining room was, a charge from the dean, in the words of Mr. Rymer, "to hush the affair up;" and his promise that the infant should be immediately taken from her, and that she should have no more trouble with it.

"I have no trouble with it," replied Agnes: "my child is now all my comfort: and I cannot part from it."

"Why, you inconsistent woman, did you not attempt to murder it?"

"That was before I had nursed it."

"'Tis necessary you should give it up. It must be sent some miles away; and then the whole circumstance will be soon forgotten."

"I shall never forget it."

"No matter: you must give up the child. Do not some of our first women of quality part with their children?"

"Women of quality have other things to love: I have nothing else."

"And would you occasion my son, and his new-made bride, the shame and the uneasiness—"

Here Agnes burst into a flood of tears; and, being angrily asked by the dean, why she blubbered so?

"I have had shame and uneasiness," she replied, wringing her hands.

"And you deserve them: they are the sure attendants of crimes such as yours. If you allured and entrapped a young man like my son—"

"I am the youngest by five years," said Agnes.

"Well, well, repent," returned the dean, "repent, and resign your child. Repent, and you may yet marry an honest man, who knows nothing of the matter!"

"And repent too?" asked Agnes.

Not the insufferable ignorance of young Henry, when he first came to England, was more vexatious or provoking to the dean than the rustic simplicity of poor Agnes's uncultured replies. He at last, in an offended and determined manner, told her that if she would resign the child, and keep the father's name a secret, not only the child should be taken care of, but she herself might, perhaps, receive some favours; but if she persisted in her imprudent folly, she must expect no consideration on her own account; not should she be allowed for the maintenance of the boy, a sixpence beyond the stated sum for a poor man's unlawful offspring.

Agnes, resolving not to be separated from her infant, bowed resignation to this last decree, and, terrified at the loud words and angry looks of the dean, after being regularly discharged, stole to her home; where the smiles of her infant, and the caresses she lavished on it, repaid her for the sorrows she had just suffered for its sake.

Let it here be observed, that the dean, on suffering Agnes to depart without putting in force the law against her, as he had threatened, did nothing as it were, *behind the curtain*. He openly and candidly owned, on his return to Mr. Rymer, his clerk, and the two constables who were attending, that an affair of some little gallantry, in which he was extremely sorry to say his son was rather too nearly involved, required, in consideration of his recent marriage, and an excellent young woman's (his bride's) happiness, that what had occurred should not be publicly talked off; therefore he had thought proper only to reprimand the hussy, and send her about her business."

The curate assured the dean, that upon this, and upon all other occasions, which should, would, or could occur, he owed to his judgment, as his superior, implicit obedience.

The clerk and the two constables most properly said, his honour was a gentleman, and of course must know better how to act than they.

The pleasures of a mother, which Agnes experienced, did not make her insensible to the sorrow of a daughter.

Her parents had received the stranger child, along with a fabricated tale she told "of its appertaining to each other," without the smallest suspicion; but, by the secret diligence of the curate, and the nimble tongue of his elder daughters, the report of all that had passed on the subject of this unfortunate infant soon circulated through the village; and Agnes, in a few weeks, had seen her parents pine away in grief and shame at her loss of virtue.

She perceived the neighbours avoid, or openly sneer at her; but that was little; she saw them slight her aged father and mother upon her account; and she now took the resolution rather to perish for want in another part of the country, than live where she was known, and so entail an infamy upon the few who loved her. She slightly hoped, too, that, by disappearing from the town and neighbourhood, some little reward might be allowed her, for her banishment, by the dean's family. In that she was deceived. No sooner was she gone, indeed, than her guilt was forgotten; but with her guilt her wants. The dean and his family rejoiced at her and her child's departure; but as this mode she had chosen seemed to be no specified condition in the terms proposed to her, they did not think they were bound to pay her for it; and while she was too fearful and bashful to solicit the dean, and too proud

(forlorn as she was) to supplicate his son, they both concluded she wanted for nothing; for to be poor, and too delicate to complain, they deemed incompatible.

To heighten the sense of her degraded, friendless situation, she knew that Henry had not been unmindful of his promise to her, but that he had applied to his cousin in her and her child's behalf: for he had acquainted her that William's answer was, all obligations on his part were now undertaken by his father; for that Agnes, having chosen (in a fit of malignity upon his marriage) to apprise the dean of their former intercourse, such conduct had for ever cancelled all attention due from him to her, or to her child, beyond what its bare maintenance exacted.

In vain had Henry explained to him, by a second application, the predicament in which poor Agnes was involved, before she consented to reveal her secret to his father: William was happy in an excuse to rid himself of a burden; and he seemed to believe what he wished to be true, that she had forfeited all claim to his further notice.

Henry informed her of this unkind reception of his efforts in her favour, in as gentle terms as possible, for she excited his deepest compassion. Perhaps our own misfortunes are the cause of our pity for others, even more than their ills; and Henry's present sorrows had softened his heart to peculiar sympathy in woe. He had unhappily found, that the ardour which had hurried him to vindicate the reputation of Rebecca was likely to deprive him of the blessing of his ever becoming his wife; for the dean, chagrined that his son was at length proved an offender, instead of his nephew, submitted to the temptation of punishing the latter, while he forgave the former. He sent for Henry, and having coldly congratulated him on his and Rebecca's innocence, represented to him the impropriety of marrying the daughter of a poor curate, and laid his commands on him never to harbour such an intention more. Henry found this restriction so severe, that he would not promise obedience; but on his next attempt to visit Rebecca, he met a positive repulse from her father, who signified to him, that the dean had forbidden him to permit their farther acquaintance; and the curate declared, that, for his own part, he had no will, judgment, or faculties, but that he submitted in all things to the superior clergy.

At the very time young Henry had received the proposal from Mr. Rymer of his immediate union with his daughter, and the dean had made no objection, Henry waived the happiness for the time present, and had given a reason why he wished it postponed. The reason he then gave had its weight; but he had another concealed, of yet more import. Much as he loved and looked forward with rapture to that time when every morning, every evening, and all the day, he should have the delight of Rebecca's society, still there was one other wish nearer his heart than this one desire, which, for years, had been foremost in his thoughts, and which not even love could eradicate: he longed, he pined to know what fate had befallen his father. Provided he were living, he could conceive no joy so great as that of seeing him; if he were dead, he was anxious to pay the tribute of filial piety he owed, by satisfying his affectionate curiosity in every circumstance of the sad event.

While a boy, he had frequently expressed these sentiments to both his uncle, and his cousin; sometimes they apprised him of the total improbability of accomplishing his wishes; at other times, when they saw the disappointment weigh heavy on his mind, they bade him wait till he was a man, before he could hope to put his designs in execution. He did wait. But on the very day he arrived at the age of twenty-one, he made a vow that to gain intelligence of his father should be the first important act of his free will.

Previously to this time, he had made all the inquiries possible, whether any new adventure to that part of Africa in which he was bred was likely to be undertaken. Of this there appeared to be no prospect, till the intended expedition to Sierra Leone was announced, and which favoured his hope of being able to procure a passage among those adventurers, so near to the island on which his father was (or had been) prisoner, as to obtain an opportunity of visiting it by stealth.

Fearing contention, or the being dissuaded from his plans if he communicated them, he not only formed them in private, but he kept them secret; and, his imagination filled with the kindness, the tenderness, the excess of fondness he had experienced from his father, beyond any other person in the world, he had thought with delight on the separation from all his other kindred, to pay his duty to him, or to his revered memory. Of late, indeed, there had been an object introduced to his acquaintance, from whom it was bitter to part; but his designs had been planned and firmly fixed before he knew Rebecca; nor could he have tasted contentment even with her, at the expense of his piety to his father.

In the last interview he had with the dean, Henry, perceiving that his disposition towards him was not less harsh than when, a few days before, he had ordered him on board a vessel, found this the proper time to declare his intentions of accompanying the fleet to Sierra Leone. His uncle expressed surprise; but immediately gave him a sum of money, in addition to that he had sent him before, and as much as he thought might defray his expenses; and as he gave it, by his willingness, his look, and his accent, he seemed to say, "I foresee this is the last you will ever require."

Young William, though a very dutiful son, was amazed when he heard of Henry's project, as the serious and settled resolution of a man.

Lady Clementina, Lord and Lady Bredham, and twenty others, wished him a successful voyage, and thought no more about him. It was for Rebecca alone to feel the loss of Henry—it was for a mind like hers alone to know his worth; nor did this last proof of it, the quitting her for one who claimed by every tie a preference, lessen him in her esteem. When, by a message from him, she became acquainted with his design, much as it inter-

ferred with her happiness, she valued him the more for this observance of his duty; the more regretted his loss, and the more anxiously prayed for his return—a return, which he, in the following letter, written just before his departure, taught her to hope for with augmented impatience:

"MY DEAR REBECCA,—I do not tell you I am sorry to part from you—you know I am, and you know all I have suffered since your father denied me permission to see you. But perhaps you do not know the hopes I enjoy, and which bestow on me a degree of peace; and those I am eager to tell you. I hope, Rebecca, to see you again; I hope to return to England, and to overcome every obstacle to our marriage; and then, in whatever station we are placed, I shall consider myself as happy as it is possible to be in this world. I feel a conviction that you would be happy also.

"Some persons, I know, estimate happiness by fine houses, gardens, and parks; others by pictures, horses, money, and various things wholly remote from their own species: but when I wish to ascertain the real felicity of any rational man, I always inquire *whom he has to love*. If I find he has nobody, or does not love those he has, even in the midst of all his profusion of splendour and grandeur, I pronounce him a being in deep adversity. In loving you, I am happier than my cousin William, even though I am obliged to leave you for a time.

"Do not be afraid you should grow old before I return—age can never alter you in my regard. It is your gentle nature, your unaffected manners, your easy cheerfulness, your clear understanding, the sincerity of all your words and actions, which have gained my heart; and while you preserve charms like these, you will be dearer to me with white hairs and a wrinkled face, than any of your sex who, not possessing all these qualities, possess the form and features of perfect beauty. You will esteem me, too, I trust, though I should return on crutches with my poor father, whom I may be obliged to maintain by daily labour.

"I shall employ all my time, during my absence, in the study of some art which may enable me to support you both, provided Heaven will bestow two such blessings on me. In the cheering thought that it will be so, and in that only, I have the courage, my dear, dear Rebecca, to say to you—Farewell!

"H. NORWYNX."

Before Henry could receive a reply to his letter, the fleet in which he sailed put to sea. By his absence, not only Rebecca was deprived of the friend she loved, but poor Agnes lost a kind and compassionate adviser. The loss of her parents, too, she had to mourn: for they both sickened, and both died, in a short time after. And now wholly friendless in her little exile, where she could only hope for toleration, not being known, she was contending with suspicion, rebuffs, disappointment, and various other ills, which might have made the most rigorous of her Auldfield persecutors feel compassion for her, could they have witnessed the throbs of her heart, and all the deep wounds there imprinted.

Still, there are few persons whom Providence afflicts beyond the limits of all consolation—few cast so low as not to feel pride on certain occasions; and Agnes felt a comfort and dignity in the thought that she had both a mind and a body capable of sustaining every hardship which her destiny might inflict, rather than submit to the disgrace of soliciting William's charity a second time. This determination was put to a variety of trials. In vain she offered herself to the strangers of the village, in which she was accidentally cast, as a servant; her child, her dejected looks, her broken sentences, a wildness in her eye, a kind of bold despair which at times overspread her features, her imperfect story, who and what she was, prejudiced all those to whom she applied; and after thus travelling to several small towns and hamlets, the only employer she could obtain was a farmer, and the only employment to tend and feed his cattle, while his men were in the harvest, tilling the ground, or at some other labour which required, at the time, peculiar expedition.

Though Agnes was born of peasants, yet, having been the only child of industrious parents, she had been nursed with a tenderness and delicacy ill suited to her present occupation. But she endured it with patience; and the most laborious part would have seemed light, could she have dismissed the reflection—what it was that had reduced her to such a state. Soon her tender hands became hard and rough, her fair skin burnt and yellow; so that when, on a Sunday, she has looked in the glass, she has started back, as if it were some other face she saw instead of her own. But this loss of beauty gave her no regret: while William did not see her, it was indifferent to her whether she were beautiful or hideous. On the features of her child only, she now looked with joy: there she fancied she saw William at every glance; and, in the fond imagination, felt, at times, every happiness short of seeing him.

By herding with the brute creation, she and her child were allowed to live together, and this was a state she preferred to the society of human creatures, who would have separated her from what she loved so tenderly. Anxious to retain a service in which she possessed such a blessing, care and attention to her humble office caused her master to prolong her stay through all the winter: then, during the spring, she tended his yearning sheep,—in the summer, watched them as they grazed; and thus season after season passed, till her young son could afford her assistance in her daily work. He now could charm her with his conversation as well as with his looks. A thousand times, in the transports of parental love, she has pressed him to her bosom, and thought, with an agony of horror, upon her criminal, her mad intent to destroy what was now so dear, so necessary to her existence.

Still the boy grew up more and more like his father. In one resemblance alone he failed: he loved Agnes with an affection totally distinct from the pitiful and childish gratification of his own self-love; he never would quit her side for all the tempting offers of toys or money; never would eat of rarities given to him, till Agnes took a part; never crossed her will, however

contradictory to his own; never saw her smile that he did not laugh; nor did she ever weep, but he wept too.

## CHAPTER XVI.

FROM the mean subject of oxen, sheep, and peasants, we return to persons; that is, persons of rank and fortune. The bishop, who was introduced in the foregoing pages, but who has occupied a very small space there, is now mentioned again, merely that the reader may know he is at present in the same state as his writings—dying; and that his friend, the dean, is talked of as the most likely successor to his dignified office. The dean, most assuredly, had a strong friendship for the bishop, and now, most assuredly, wished him to recover; and yet, when he reflected on the success of his pamphlet a few years past, and of many which he had written since on the very same subject, he could not but think that he had more righteous pretensions to fill the vacant seat of his much beloved and reverend friend (should fate ordain it to be vacated) than any other man; and he knew that it would not take one moment from that friend's remaining life, should he exert himself, with all due management, to obtain the elevated station when he should be no more.

In presupposing the death of a friend, the dean, like many other virtuous men, always supposed him going to "a better place." With perfect resignation, therefore, he waited whatever change might happen to the bishop; ready to receive him with open arms if he recovered, or equally ready, in case of his dissolution, to receive his dignities.

Lady Clementina displayed her sensibility and feeling for the sick prelate by the extravagance of hysteric fits; except at those times when she talked seriously with her husband upon the injustice which she thought would be done to him, and to his many pamphlets and sermons, if he did not immediately rise to the episcopal honour.

"Surely, dean," said she, "should you be disappointed upon this occasion, you will write no more books for the good of your country!"

"Yes, I will," he replied; "but the next book I write for the good of my country shall be very different, nay, the very reverse of those I have already written."

"How, dean! would you show yourself changed?"

"No; but I will show that my country is changed."

"What! since you produced your last work, only six weeks ago?"

"Great changes may occur in six days," replied the dean, with a threatening accent; "and if I find things have taken a new and improper turn, I will be the first to expose it."

"But before you act in this manner, my dear, surely you will wait —"

"I will wait till the sea is disposed of to another," said he.

He did wait: the bishop died: the dean was promoted to the see of \* \* \*

While the bishop and his son were sailing before prosperous gales on the ocean of life, young Henry was contending with adverse winds, and many other perils, on the watery ocean; yet still his distresses and dangers were less than those which Agnes had to encounter upon land. The sea threatens an untimely death; the shore menaces calamities from which death is a refuge. The afflictions she had already experienced could just admit of aggravation: the addition occurred.

Had the good farmer, who made her the companion of his flocks and herds, lived till now, till now she might have been secure from the annoyance of human-kind; but, thrown once more upon society, she was unfit to sustain the conflict of decorum against depravity. Her master, her patron, her preserver, was dead; and hardly as she had earned the pittance she received from him, she found that it surpassed her power to obtain the like again. Her doubtful character, her capacious mind, her unmethodical manners, were still badly suited to the nice precision of a country housewife; and as the prudent mistress of a family soared at her pretensions, she, in her turn, scorned the narrow-minded mistress of a family.

In her inquiries how to gain her bread free from the cutting reproaches of discretion, she was informed that London was the only private corner where guilt could be secreted undisturbed; and the only public place where, in open day, it might triumphantly stalk, attended by a train of audacious admirers.

There was a charm to the ear of Agnes in the name of London, which thrilled through her soul. William lived in London; and she thought that, while she retired to some dark cellar with her offence, he probably would ride in state with his, and she at humble distance might sometimes catch a glance of him.

As difficult as to eradicate insanity from a mind once possessed, so difficult it is to erase from the lover's breast the deep impression of a real affection. Cocoon may prevail for a short interval, still love will rage again. Not all the ignominy which Agnes experienced in the place where she now was, without a home; not the hunger which she at times suffered, and even at times saw her child endure; not every inducement for going to London, or motive for quitting her present desolate station, had the weight to affect her choice so much as—in London she should live nearer William: in the present spot she could never hope to see him again, but there, she might chance to pass him in the streets; she might pass his house every day unobserved; might inquire about him of his inferior neighbours, who would be unsuspicious of the cause of her curiosity. For these gratifications she should imbibe new fortitude: for these she could bear all hardships which London threatened; and for these she at length undertook, a three weeks' journey to that perilous town on foot—cheering, as she walked along, her innocent and wearied companion.

(To be continued.)

## THE PROGRESS OF DISCOVERY

We are confirmed in the conclusion that the popular diffusion of knowledge is favourable to the growth of science, when we reflect that, vast as the domain of learning is, and extraordinary as is the progress which has been made in almost every branch, we may assume as certain, we will not say that we are in its infancy, but that the discoveries which have been already made, wonderful as they are, bear but a small proportion to those that will hereafter be effected; and that in everything that belongs to the improvement of man, there is yet a field of investigation broad enough to satisfy the most eager thirst for knowledge, and diversified enough to suit every variety of taste, order of intellect, or degree of qualification. For the peaceful victories of the mind, that unknown and unconquered world, for which Alexander wept, is for ever near at hand: hidden, indeed, as yet, behind the veil with which Nature shrouds her undiscovered mysteries, but stretching all along the confines of the domain of knowledge, sometimes nearest when least suspected. The foot has not yet pressed, nor the eye beheld it; but the mind, in its deepest musings, in its wildest excursions, will sometimes catch a glimpse of the hidden realm—a gleam of light from the Hesperian island—a fresh and fragrant breeze from off the undiscovered land.

"Saluban odours from the spiky shore,"

which happier voyagers in after times, shall approach, explore and inhabit. Who has not felt, when, with his very soul concentrated in his eyes, while the world around him is wrapped in sleep, he gazes into the holy depths of the midnight heavens, or wanders in contemplation among the worlds and systems that sweep through the immensity of space—who has not felt as if their mystery must yet more fully yield to the ardent, unwearied, imploring research of patient science? Who does not, in those choice and blessed moments, in which the world and its interests are forgotten, and the spirit retires into the innermost sanctuary of its own meditations, and there, unconscious of everything but itself and the infinite Perfection, of which it is the earthly type, and kindling the flame of thought on the altar of prayer—who does not feel, in moments like these, as if it must at last be given to man to fathom the great secret of his own being—to solve the mighty problem

"Of providence, foreknowledge, will, and fate?"

When we think in what slight elements the great discoveries that have changed the condition of the world have oftentimes originated, on the entire revolution in political and social affairs which has resulted from the use of the magnetic needle; on the world of wonders, teeming with the most important scientific discoveries, which has been opened by the telescope; on the all-controlling influence of so simple an invention as that of moveable metallic types; on the effects of the invention of gunpowder, no doubt the casual result of some idle experiment in alchemy; on the consequences that have resulted, and are likely to result, from the application of the vapour of boiling water to the manufacturing arts, to navigation and transportation by land, on the results of a single sublime conception in the mind of Newton, on which he erected, as on a foundation, the glorious temple of the system of the heavens, in fine, when we consider how, from the great master-principle of the philosophy of Bacon—the induction of Truth from the observation of Fact—has flowed, as from a living fountain, the fresh and still swelling stream of modern science; we are almost oppressed with the idea of the probable connection of the truths already known, with great principles which remain undiscovered,—of the proximity in which we may unconsciously stand, to the most astounding, though unrevealed mysteries of the material and intellectual world.

If, after thus considering the seemingly obvious sources from which the most important discoveries and improvements have sprung, we inquire into the extent of the field, in which farther discoveries are to be made, which is no other and no less than the entire natural and spiritual creation of God—a grand and lovely system, even as we imperfectly apprehend it, but no doubt most grand, lovely and harmonious, beyond all that we now conceive or imagine; when we reflect that the most insulated, seemingly disconnected, and even contradictory parts of the system, are no doubt, bound together as portions of one stupendous whole; and that those which are at present the least explicable, and which most completely defy the penetration hitherto bestowed upon them, are as intelligible, in reality, as that which seems most plain and clear; that as every atom in the universe attracts every other atom, and is attracted by it, so every truth stands in harmonious connection with every other truth; we are brought directly to the conclusion, that every portion of knowledge now possessed, every observed fact, every demonstrated principle, is a clue, which we hold by one end in the hand, and which is capable of guiding the faithful inquirer farther and farther into the innermost recesses of the labyrinth of Nature. Ages and ages may elapse, before it conduct the patient intellect to the wonders of science to which it will eventually lead him; and perhaps with the next step he takes, he will reach the goal, and principles destined to affect the condition of millions beam in characters of light upon his understanding. What was at once more unexpected and more obvious than Newton's discovery of the origin of light? Every living being, since the creation of the world, had gazed on the rainbow; to count had the beautiful mystery revealed itself. And even the great philosopher himself, while dissecting the solar beam, while actually untwisting the golden and silver threads that compose the ray of light, laid open but half its wonders. And who shall say that to us, to whom, as we think, modern science has disclosed the residue truths more wonderful than those now known will not yet be revealed?

It is, therefore, by no means to be feared, that the human mind has

seemed to linger for a long time around certain results—as ultimate principles—that they and the principles closely connected with them are not likely to be pushed much farther; nor, on the other hand, does the intellect always require much time to bring its noblest truths to seeming perfection. It was, we suppose, two thousand years from the time when the peculiar properties of the magnet were first observed, before it became, through the means of those qualities, the pilot which guided Columbus to the American continent. Before the invention of the compass could take full effect, it was necessary that some navigator should practically and boldly grasp the idea that the globe is round. The two truths are apparently without connection; but in their application to practice, they are intimately associated. Hobbes says that Dr. Harvey, the illustrious discoverer of the circulation of the blood, is the only author of a great discovery who ever lived to see it universally adopted. To the honour of subsequent science, this remark could not now, with equal truth, be made. Nor was Harvey himself without some painful experience of the obstacles arising from popular ignorance, against which truth sometimes forces its way to general acceptance. When he first proposed the beautiful doctrine, his practice fell off; people would not continue to trust their lives in the hands of such a dreamer. When it was firmly established and generally received, one of his opponents published a tract *de circulo sanguinis Salomone*, and proved from the twelfth chapter of Ecclesiastes, that the circulation of the blood was no secret in the time of Solomon. The whole doctrine of the Reformation may be found in the writings of Wiclif; but neither he nor his age felt the importance of his principles, nor the consequences to which they led. Huss had studied the writings of Wiclif in manuscript, and was in no degree behind him in the boldness with which he denounced the papal usurpations. But his voice was not heard beyond the mountains of Bohemia; and he expired in agony at the stake, and his ashes were scattered upon the Rhine. A hundred years passed away. Luther, like an avenging angel, burst upon the world, and denounced the usurpations of the church, and rallied the host of the faithful, with a voice which might almost call up those ashes from their watery grave, and form and kindle them again into a living witness of the truth.

Thus Providence, which has ends innumerable to answer, in the conduct of the physical and intellectual, as well as of the moral world, sometimes permits the great discoverers fully to enjoy their fame, sometimes to catch but a glimpse of the extent of their achievements, and sometimes sends them dejected and heart-broken to the grave, unconscious of the importance of their own discoveries, and not merely undervalued by their contemporaries, but by themselves. It is plain that Copernicus, like his great contemporary, Columbus, though fully conscious of the boldness and the novelty of his doctrine, saw but a part of the changes it was to effect in science. After harbouring in his bosom for long, long years that pernicious heresy—the solar system—he died on the day of the appearance of his book from the press. The closing scene of his life, with a little help from the imagination, would furnish a noble subject for an artist. For thirty-five years he has revolved and matured in his mind his system of the heavens. A natural mildness of disposition, bordering on timidity, a reluctance to encounter controversy, and a dread of persecution, have led him to withhold his work from the press, and make known his system but to a few confidential disciples and friends. At length he draws near his end; he is seventy-three years of age, and he yields his work on "The Revolution of the Heavenly Orbs," to his friends for publication. The day at last has come, on which it is to be ushered into the world. It is the 24th of May, 1543. On that day, the effect, no doubt, of the intense excitement of his mind, operating upon an exhausted frame—an effusion of blood brings him to the gates of the grave. His last hour has come; he lies stretched upon the couch from which he will never rise, in his apartment at the Canonry at Frauenberg, East Prussia. The beams of the setting sun glance through the Gothic windows of his chamber; near his bedside is the armillary sphere, which he has contrived to represent his theory of the heavens; his picture, painted by himself, the amusement of his earlier years, hangs before him; beneath it are his astrolabe, and other imperfect astronomical instruments, and around him are gathered his sorrowing disciples. The door of the apartment opens,—the eye of the departing sage is turned to see who enters: it is a friend, who brings him the first printed copy of his immortal treatise. He knows in that book he contradicts all that had ever been distinctly taught by former philosophers; he knows that he has rebelled against the sway of Ptolemy, which the scientific world had acknowledged for a thousand years; he knows that the popular mind will be shocked by his innovations; he knows the attempt will be made to press even religion into the service against him; but he knows that his book is true. He is dying, but he leaves a glorious truth, as his dying bequest to the world. He bids the friend who has brought it place himself between the window and his bedside, that the sun's rays may fall upon the precious volume, and he may behold it once more, before his eyes grow dim. He looks upon it, takes it in his hands, presses it to his breast, and expires. But no, he is not wholly gone. A smile lights up his dying countenance; a beam of returning intelligence kindles in his eye; his lips move; and the friend who leans over him, can hear him faintly murmur the beautiful sentiments which the Christian lyricist of a later age has so finely expressed in verse:

"Ye golden lamps of heaven, farewell, with all your feeble light;  
Farewell, thou ever-changing moon, pale empress of the night;  
And thou, resplendent orb of day, in brighter flames array'd,  
My soul which springs beyond thy sphere, no more demands thy aid.  
Ye stars are but the shining dust of my divine abode.  
The pavement of those heavenly courts, where I shall reign with God."

So died the great Columbus of the heavens.

FAIRBET.

"They approached Cara, who stood happy and smiling beside Allen, quietly receiving the congratulations, some sincere, and not a few envious and spiteful, of the assembled company."

## CAROLINE AND CATHARINA.

(Continued from page 777)

A large party was assembled in Colonel Talbot's house. All that was rich in costume or beautiful in form and feature, floated here in the excitement and flutter of a crowd met for pleasure. Many were here whom we have never seen in the course of our journey through this book, nay, scarcely any whom we have seen, could now be found in all that crowd. Mary Bryce was the sole representative of that social circle, to which we fear we have not done justice. Several months had passed away since the death of her cousin Thorpe; and though some scores of fainting fits, and as many "palpitations" had attested her grief, it was remarked that she never lost any of her flesh, and never allowed her mourning to interfere with her pleasures. On this evening, then, she was in high spirits and higher dress; her father's few months in the service having, (his accounts being now satisfactorily adjusted,) by some *hocus pocus*, best known to quarter-masters and commissaries, wonderfully recruited his finances. Nor was she in the least changed; her voice was as loud, and her manners as free as ever; her manoeuvres to attract attention as transparent, her dress as low in the neck, her movements as fairy-like, and her hands as conspicuous as in former times. She endeavoured always to be near Catharina—now a bride of some months—because about her was generally a larger crowd than in any other part of the room. The beauty and grace of the young Mexican attracted every one; and her fascinations were by no means diminished by the rumour—not altogether so unfounded—that she had brought Hugh a magnificent fortune. Hugh was proud of her, though there was none of that uxorious fondness too often exhibited by young men in his position. The experience acquired in a few months of campaigning, had given him a knowledge of the world; and his intercourse with all kinds of people, had given him a sort of polish, which sat well upon his naturally refined character. The little *brusquerie* still remaining—inseparable from his nature—gave to his manners a piquancy and relish, not possessed by any of those who prided themselves upon their air of *ton*.

He was standing in a quiet corner of the room, talking to Carlin; while Catharina was painfully receiving the familiar attentions, almost caresses, of Mary Bryce, and endeavouring to reply, at the same time, to the profound remarks of a tall, black-whiskered merchant, who affected the exquisite gentleman. Many, who saw this conjunction, smiled knowingly; for they thought, not incorrectly, that Mr. Jenkins was attracted to Catharina's side, as much by the presence of Mary, as by the beauty of the bride. Jenkins was a specimen of that class of men whose fathers raked together in a lifetime of toil enough to enable their sons to enter mercantile business, and set up for fine gentlemen. He had received some two or three thousand dollars from the family estate; and, being remarkably penurious, and not at all scrupulous, had gradually gained money enough to make his hand an

object to young ladies, who "sell themselves to inquietude" for gold. To his limited wealth, he added a presumptuous vanity, which made him very obtuse to the frequent rebuffs to which his vulgarity subjected him. A little affectation of polite reading, and the most abject toadyism to those above him, enabled him to secure a place in society; so that the man, who, by the vulgarity of his origin, and the stupidity and coarseness of his character, was, a few years before, infinitely below the standard of respectability, had now become almost a lion. He had been with the army, too, in the character of a sutler; and his extortions and manifold villainies had given him no small accession of fortune—his success, in a word, had given him impunity for swindling. When he returned, he had at once attracted Mary Bryce's attention—that young lady having failed in her blandishments on Vernon—and there was yet sufficient of the clodpole in him to be flattered by her preference. Among the men, too, she was considered a dashing woman; and being insecure of his own social footing, Jenkins felt that this was precisely the wife he wanted. He was not penetrating enough to see, that, though all the men liked to be with her, none of them respected her; and that the very qualities which made her attractive to them—her license of manner, and her illegitimate affectation of child-like confidence—would make her a dangerous and trustless wife. He had been pampered and spoiled by lion-hunting women; and she thought he was a prize. They were thus, at the period of which we speak—we were about to say betrothed; but a word which implies purity and affection should not be so prostituted. They were, then, "engaged to be married"—a phrase which commits us to nothing—applicable to the pure and the impure alike—and sufficiently descriptive of a compact, founded upon vanity, built up by indelicacy, and completed in folly.

Colonel Talbot was walking uneasily about the room, speaking patronizingly or politely to all his guests, and evidently impatient for the consummation of something for which he was waiting. This was true, too, of all the company. They stood in groups, talking in broken accents, or moved unquietly from place to place. Had it not been for the silks, laces, ribbons, scarfs, and other trappings of a party of pleasure, one might have thought them assembled for a funeral, and that they were now awaiting the corpse. Impatient glances were every moment thrown towards the door opening from the west drawing-room, which the reader will recollect led to Cara's rooms. At last it was seen to open slightly, and a rush was made for the west-room. The crowd ranged themselves closely round it, leaving a space in front of the door unoccupied, except by a tall, grave-looking man in black, who folded his hands and threw his eyes up the ceiling. At last the door was flung open, and passing through, there came a company of six persons, "two and two." The first couple were Clayton and a Miss Linton—a very beautiful woman, whom he afterwards married; the second couple the reader has never seen; and the third were Cara and Vernon! The former was attired—I chronicle this for the benefit of my fair readers—in a dress of simple white, made of the richest material, however, and hanging upon her

fairy-like figure with all the grace and taste of picture drapery. She wore but two ornaments—the marriage-ring and a wreath of diamonds. But far more beautiful than any diamond—happier and brighter than the sparkle of any jewel, was the smile upon her lips. She turned a little pale as she entered and saw the numberless eyes directed at her; but she looked up into Allen's face with an expression of confidence, and the colour returned to her cheek. She pressed close to him, he took her hand in his—and they were married!

"There is one thing, Hugh," said Carlin—they were still talking together while the guests were occupied in congratulating "the happy pair"—"which you have never explained to me; why you did not tell Vernon of Thorpe's forging Talbot's name as soon as he came in. I could never understand it."

"Things very easily explained," said Hugh. "I was anxious that Vernon should go with us to Mexico; and I knew that he could not do so unless he effected this loan. I knew, also, that he would make no further effort to do so, if I told him; and I foolishly thought that I could tell him at any time—soon enough to save him from a false accusation. The note was drawn at twelve months, and I always intended to tell him, in time to send him home before its maturity. One thing after another prevented my doing so, until we were unfortunately separated near Buena Vista, and came near not meeting again."

"He would have been acquitted, any how," said Carlin; "though in some minds there would still have been a doubt."

"And I luckily reached home in time to clear up that doubt," said Hugh. "It has taught me one lesson, at all events: that he who attempts to cover any iniquity, even for a moment, and for a good purpose, is doing a great wrong."

"The affair has not been profitless, then," said Clayton, approaching them with Catharina on his arm, so as to overhear the last sentence.

"There is some soul of goodness in things evil; Would man observingly distil it out."

"I dare say," said Carlin to Catharina, "you think there may be some 'goodness' come out of even so great an evil as war—I know my friend Manning thinks so."

"Good to individuals, perhaps," she said, in those musical tones, thrilling with language, beautifully broken but perfectly pure, "as to me from this war;" she looked at Hugh with a glance which told how deep was her sincerity; "but to nations unmixed evil."

"That is the only subject upon which we have any contention," said Hugh; "and upon that I fear we will never agree."

"If there is danger of a rupture," said Clayton, laughing, "we had better go back." And they turned away again, the glance between Hugh and Catharina as they did so, attesting how groundless was the fear thus jestingly expressed.

"I am afraid," said Carlin, as they passed out of sight, "that Miss Bryce will eat the bride up—let us go to her rescue."

"You think, then," said Hugh, with a smile, "that her attentions are more voracious than voracious?"

They approached Cara, who stood happy and smiling beside Allen, quietly receiving the congratulations, some sincere, and not a few envious and spiteful, of the assembled company. And here, in the first blush of blooming womanhood, let us leave her; with this further chronicle, however, that at this day she is as lovely and as loving, as beautiful and as happy, as upon that evening when she had just entered the garden of life.

Mary Bryce is now Mrs. Jenkins; and if a liberal allowance of flesh, and great apparent spirits are any indication, she, too, is happy in her wedlock. Her time is divided between ostentatious attentions too, and proud exhibitions of a very fat baby (with which she was blessed a year after her marriage), and many demonstrations of interest in the welfare of all her friends. This interest is, by the said friends, not very extravagantly valued—but it is probably as highly valued by them, as is the blessing of the baby by her husband. For Mary, being indispensable in all conspicuous places, and having a salutary horror of babies in public assemblies, devotes upon him the duties of nurse—leaving him at home to perform these pleasant functions, while she blesses the world at large with the pleasures of her edifying manners and conversation. She says "Cara is faded! O! very much faded, indeed!" But her eyes always were sharper than any one's else, and in this case no less so. For the signs of fading are visible to none others.

"She'll be spying before long," said Hugh Manning to Vernon, "that Cara leads a miserable life with you—O! most miserable!" And he threw up his hands with a good imitation of Mary's tragical manner. "But if you can make Cara more miserable than poor deluded Jenkins, stupid as he is, you have powers of torture far above what I suppose."

"What has become of Maria Thorpe?" asked Allen, willing to change the subject—for the recollection of certain unsuccessful blandishments of Mary upon himself, furnished what to another man would have been a flattering explanation of his gloomy anticipations.

"You are so much engrossed by your painting," said Hugh, "that you know absolutely nothing of what goes on around you! She was married yesterday morning to Major Bryce, and they are now gone on their bridal tour to the South."

"When do you go South yourself?"

"Whenever Catharina is ready," answered Hugh. "We want to reach Monterey by the first of December. I have to settle up the estate, and shall then return home to stay. I have settled up my father's estate a month ago. When I get this property in Monterey, I don't know what I shall do with it all."

"Wealth properly used," said Allen, "is a blessing to the possessor and to every one around him."

"What have you and Cara determined upon about going with us?" asked Hugh, after a pause.

"If you do not start before the first of November we will go," answered Allen.

This conversation took place last fall; and now, at the present writing, they are all spending the winter in Monterey. Colonel Talbot has retired from business, possessed of great wealth; and has settled upon Allen and his daughter an income more than sufficient for all their wants—thus enabling Vernon to realize the dream of his life; to pursue his art with the enthusiasm of his character, and the success of every man of true genius. The colonel is a contented man; though his manners are still a little dignified and pompous. His dignity, indeed, is never absent, except to his son-in-law and daughter—and even to them the only jesting which he ever indulges in upon the happy resuscitation of the old form of "Talbot and Vernon."

## ADDRESS TO WEALTHY GENTLEMEN.

Woe! dost thou keep up wealth, which thou must quit?  
Or, what is worse, dost thou try to fly?  
Why dost thou look thyself when thou'rt to fly,  
O man, ordained to die?  
Why dost thou build up stately rooms on high,  
Thou who art underground to lie?  
Thou cover'st and plant'st but no fruit must see,  
For Death, alid is sowing here.  
Thou dost thyself wise and industrious deem,  
A wealthy husband thou wouldst seem:  
Thou'rt a man like a bought slave, thou all the while  
Dost but for others sweat and toil.  
Oftentimes fool! thou needs must meddling be  
In business that concerns not thee.  
Thou when to future years thou extend'st the care,  
Thou dost but in other men's affairs.  
Even aged men, as if they truly were  
Children again, for age prepare,  
Provisions for long travel they design,  
In the last point of their short line.

Wisely thou'nt neglect poor winter hoards  
The stock which summer's wealth affords;  
In grasshoppers, who must in autumn die,  
How vain were such an industry.

Of power and honour the deceitful light  
Might have deceived our cheated sight,  
If it of life the whole small time would stay,  
And be our constant all the day.

The lightning that blazes but in a cloud,  
(Though shining bright and speaking loud.)  
While it begins, concludes its violent race,  
And where it glides it wounds the place.

O scene of fortune, which dost fair appear  
Only to men that stand not near,  
Proud poverty that tinsel bravery wears,  
And, like a rainbow, painted tears!

Be prudent, and the shore in prospect keep  
Only to men that stand not near,  
Placed beneath envy, above envying rise,  
Thy great men, great things desire.

The wise example of the heavenly lark,  
Thy fellow-poet, Cowley, mark,  
Above the clouds let thy proud music sound,  
Thy humble nest, built on the ground.

HELP YOURSELF.—This is the true secret of success, the master-key that unlocks all difficulties, in the various paths of life. *Aide-toi, et le ciel t'aidera*, as the French have it—help yourself, and heaven will help you. The greatest affliction that can befall a young man is to be the recipient of charity—to lean for any length of time upon others for support. He who begins with crutches will end with crutches. It is not in the sheltered garden, but on the rugged Alpine cliffs, where the storm beats most violently, that the hardiest plants are reared. It is not by the use of corks, bladders, and life preservers, that you can best learn to swim, but by plunging courageously into the wave, and buffeting it, like Caesar and Cassius, "with lusty sinews." The moneyed charity of individuals to individuals is one of the greatest curses that afflict society. It is the upas-tree that paralyzes and reduces to the last gasp the moral energy of every man who inhales its poisonous atmosphere. Under the appearance of aiding, it weakens its victims, and keeps them in perpetual slavery and degradation. Cold, consequential, and patronizing, it freezes the recipient into humiliation, and there leaves him, as firmly wedged as Sir John Franklin amid the thick-ribbed ice of the Arctic Ocean. Money bestowed this way is nine times out of ten more truly wasted than if thrown into the sea. It is labour bestowed upon a worthless soil, incapable of yielding anything but a crop of weeds, or feeble plants which never reach maturity. God never intended that strong, independent human beings should be reared by clinging to others, like the ivy to the oak, for support. The difficulties, hardships, and trials of life—the obstacles that one encounters in the road to fortune—are positive blessings. They knit his muscles more firmly and teach him self-reliance, just as by wrestling with an athlete who is superior to us, we increase our own strength, and learn the secret of his skill. Read the history of the rich and poor in all ages and countries, and if you do not find that the "lucky dogs," as they are called, began life at the foot of the ladder, without a finger's "lift" from anybody, while the "unfortunates," who sit along the paths of life more like scarecrows than human beings, attribute the first declension in their fortunes to having been bolstered and propped up by others—we will resign all pretensions to philosophy. All experience shows that this boasted benevolence tends to extinguish the faint sparks of energy in those who partake of it, till having, fallen into the despair and indolence inseparable from a cultivated sense of inferiority, they look upon themselves as beyond the pale of hope, and at last lose even the wish for independence. Those who entertain a really just estimate of their own abilities, and journey through life with a determination to improve themselves by every passing occurrence, and thus give stability to their own minds, may be said to be really independent of the world, and, therefore, the architects of their own position.

## THE GREATEST WONDER OF THE LITERARY WORLD!

SOME delay has arisen in the Publication of

## THE HOME COMPANION ALMANAC.

in consequence of the immense number of Engravings required for it, and the extreme finish with which they have been got up. It is, however, quite ready now, and may be had in any quantities.

Everybody will have this Almanack. There is nothing like it, even at twelve times the price. If our Readers do not find it to be all that we represent, let them doubt our honour, and cease to be our Companions. We know that it will give unqualified satisfaction, and that wherever one copy makes its way, crowds of Purchasers will run for it immediately.

It is perfectly new in its design—stands without a competitor, and will take the lead of every other Almanack for the present year.

## THE PRICE IS ONE PENNY!

Our first Number of the New Volume will shortly appear, with all its improved arrangements.

RUN FOR THE ALMANACK AT ONCE!!

## NOTICE!

WITH No. 53 (commencing the New Volume) of the HOME COMPANION will be presented, GRATIS, No. 1. of a new Tale, "THE PRODIGAL; OR, RICHES AND RUIN," with an Illustration by ANGLAY.

To be continued in 1d. Weekly Numbers—each Number illustrated.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## MARRIAGE.

How oft it has the poet's lyre been string'd to and the sacred institution of marriage—how often has the stern moralist laboured to prove its inestimable felicity—how often has the venerable philosopher left the boundless labyrinth of abstract science to join the consecrated throng—how often has the war-worn warrior, hardened by the din of clanging swords, sought repose in the joys of matrimony—how often has the princely heir, that bears a regal crown, sought a pleasure here, far above all the glittering pomp of a purple robe—how often has the votary of profligacy knelt and received forgiveness and happiness at the shrine of matrimony—and how often have individuals of all classes, and of all nations, found a beacon here, which directs and guides them to that standard of bliss from whence they can wave the banner of continued love and harmony, and bid defiance to the many restless follies of life?

Men, though pursuing various courses, are all endeavouring to gain that grand central boon, happiness. But how opposite are the various means adopted in order to realize this treasure.

The hermit exclaims,

"O! solitude, bliss'd state of man below."

And the more busy and covetous,—

"Drunk with the burning scent of place or power,  
Staunch to the foot of lucre, till they die"

Man was neither created to seclude himself from the scene of life, nor to worship fortune's "glittering wave;" but that he should acknowledge the omnipotent power of his Maker, by promoting those laws and institutions which that power has thought fit, in His wise dispensations, to create for the blessing of man. It is the fundamental duty of man, first to regulate his own actions so that they may prove conducive to his happiness here, and essential to the blessings of eternity, and then to look around him, and, if he is capable, render assistance to others, and not that we should imitate Diogenes, who degraded himself below the brute creation, or Pythagoras, who when invited to a wedding gave this answer;—"I never desire to go to such a feast, or be present at a funeral."

"The first marriage was in Paradise—the first persons conjoined were the first parents of mankind, and the great Dispenser of all good was the Author of their union." With such an example as this, who will not exclaim, with Shakspeare, that marriage "is a pattern of celestial peace?" Indeed we look upon marriage as an institution which creates all those fine ties of love and friendship which soften the heart, and purifies the mind.

The marriage state is sometimes not productive of happiness, but it generally happens where virtue is absent,—

"No means of happiness when virtue yields;  
That basis falling, falls the building too,  
And lays in ruins every virtuous joy."

But these are but few in comparison to the number of marriages that daily occur. When the holy bond is cemented by the ties of continued love, and the heart vibrates at the pleasing impulse, we care little what that undesirable wanderer, the bachelor, may say, for we

"By sweet experience know,  
That marriage, rightly understood,  
Gives to the tender and the good,  
A Paradise below."

"Marriage," says Dr. Johnson, "is evidently the dictate of Nature; men and women are made to be the companions of each other, and therefore I cannot be persuaded but that marriage is one of the means of happiness." It is a state not only suited to the conditions of some few individuals, but appropriated to all persons, under all circumstances—extended to the concave arch of heaven, and of incalculable duration. It will brighten affliction's gloomy countenance, and make sorrow wear a cheerful garment. It will deck the humble and contented cot with almost heavenly bliss, and waft its fragrance even to the most remote recesses of poignant misery.

If we trace marriage to a low state we may there see cheerfulness and contentment depleted even in the white-washed wall and the clean fire-side, where though luxury is unknown, the husband returns from his diurnal labour, and rests in the bosom of felicity, while the scanty mite is sweetened when distributed by a wife's hands. But, say some, how is the marriage state when surrounded by a family? Why, if possible, enjoying more felicity: they, instead of detracting in the least degree from the happiness of this state, present themselves as living images and tokens of love, who live to cheer the parent when life shall almost have spun its web.

Marriage has been, by all nations, whether civilized or barbarous, ancient or modern, held with respect and veneration. We have instances of it on record from the Hebrews, the Greeks, the Romans, &c., &c.; indeed, many burdens have at various periods been imposed upon the bachelors, and honourable rewards offered to those who entered the marriage state. Lycurgus and Augustus enacted many severe laws to that effect. In short, if we turn our attention to the manner in which this ceremony is conducted, whether it be by Arabs, Grecians, Turks, Russians, Spaniards, or Greenlanders, or Laplanders, we shall find that all, in their native ceremony, pay respect and love to this state. The Samoides and Thibets are the most careless: a verbal consent forming the marriage ceremony; in short, the women are allowed a plurality of husbands, but these are rare exceptions.

Many persons take a too superficial view of the marriage life, only looking at the few difficulties with which it is sometimes entailed; and by this means make that appear unproductive of happiness, which was by God himself instituted for the promotion of comfort in all his creatures. If the married man has more anxiety and cares than he who enjoys celibacy, he has, at the same time, a far greater portion of real felicity than the bachelor can possibly enjoy. Bishop Taylor, who seems to have well known the human character, has left some valuable truths on this head, which, though brief, contain much of sterling nature. He says, "Marriage is a school and exercise of virtue; and though marriage has its cares, yet the single life hath desires, which are more troublesome, and more dangerous, and often end in sin, while the cares are but instances of duty and exercises of piety. . . . His kindness is spread abroad, and love is united and made firm as a centre. Marriage is the nursery of heaven. The virgin sends prayers to God; but she carries but one soul to him; but the state of marriage fills up the number of the elect, and hath in it the labour of love, and the delicacies of friendship, the blessings of society, and the union of hearts and hands. . . . Celibacy, like the fly in the heart of an apple, dwells in perpetual sweetness; but sits alone, and is confined, and dies in singularity; but marriage, like the useful bee, builds a house, and gathers sweetness from every flower, and labours and unites into societies and republics, and sends out armies, and feeds the world with delicacies, and exercises many virtues, and promotes the interest of mankind, and is that state of good things to which God hath designed the present constitution of the world."

Marriage, before engaged in, ought to be maturely considered, and formed on the basis of sincerity and affection; when this is not adopted, the result generally is unpropitious. Those marriages, too, that are contracted through the persuasive arts of friends, for the purpose of adding wealth to wealth, not unfrequently prove their stability in a court of justice. But when marriage is raised upon the unshaken rock of love and esteem, the

"Perpetual fountain of domestic sweets"

will never cease to flow, but as time glides on, still flow with an almost more rapid stream.

DANCING.—Though ladies are always more graceful than men, I must here warn them against the modern style of waltzing, which is the reverse of graceful, being little more than a romping twirl, intended only, as far as I can perceive, to make parties giddy. The old waltz, sometimes called the Spanish waltz, was a very graceful dance; but its character is changed, and there is nothing either graceful or pleasing in seeing gentlemen pulling and hauling their partners on, seeing the pretty pairs spinning round and round, jostling against each other, to say nothing of an occasional tumble, till the few who can keep time and step, feel their heads going, and till the ladies are forced to lean, panting, and with flushed cheeks and heaving breast, against the very walls of the room for support. No pretty girl, no young lady, indeed, whether pretty or not, should ever, if she values true and gallant admiration, allow herself to be associated with the recollection of anything that is markedly ungraceful, however harmless in itself, and should never, therefore, dance modern waltzes, polkas, or gallopados.

## ONWARD!

**ADMIRALTY COMMISSION OF SCIENTIFIC INQUIRY.**—The Duke of Northumberland has appointed a commission to visit all the principal ship-building and engineering establishments in the United Kingdom, to collect such facts as they may deem useful for conducting the national establishments, and for the advantage of the mercantile marine.

**PUBLIC BATHS AND WASH-HOUSES.**—The return for the quarter ending Midsummer, 1852, shows that there were 214,369 bathers, and 41,502 washers, at the six establishments in London, during the quarter; the receipts being £3,509 3s. 11d.; being an increase of £1,443 7s. 10d. over the preceding quarter of this year. The returns from Liverpool, Hull, Bristol, Preston, Birmingham, and Maidstone, are equally encouraging, showing the desire there is for cleanliness among the great mass of the people, as well as the capability of these institutions when in active operation.

**FRUITS OF FREE TRADE.**—A correspondent of the *Times* says:—"As one of the fruits of free trade, the Exbridge guardians are sending vegetables into the London market, the inmates being so few that they are unable to consume them. At no time since the union has been opened have there been so few inmates as during this summer, scarcely enough, indeed, to do the necessary work of the house: those remaining consist of the aged, the halt, the lame, and the blind, excepting, indeed, a few children. The duty of the guardians has been almost nominal, two or three of the parishes being entirely free from pensioners."

**EDUCATION IN DRAWING.**—The Committee of Privy Council for Education have recently issued circulars to the Inspectors of Schools, directing them to aid, by every means in their power, the system proposed by the Department of Practical Art for causing elementary drawing to become a part of the national education. It is intended to teach the very simple elements of drawing in all schools willing to bear a small proportion of the necessary expense, and then to admit the qualified scholars to study in a central drawing-school in every town. The importance of the new scheme thus set on foot will be fully appreciated when it is remembered that until the public ignorance in such matters is removed, no extensive or successful effort can be made to raise the standard of taste in our manufacturers.

**INTERNATIONAL POSTAGE ASSOCIATION.**—In reply to the letter addressed by the Society of Arts to the foreign Ministers resident in London, on the subject of international postage, the Ministers of France, Austria, the United States, Spain, Brazil, Sardinia, Portugal, the Hanse Towns, the Netherlands, and Turkey, have expressed their interest and sympathy for the objects of the Association. With the intention of extending the sphere of their operations, the Association intends to form branch societies in the provinces; and they have already received promises of support from Bath, Cork, Cheltenham, Dumbarton, Deal, Dublin, Exeter, Falkirk, Glasgow, Huntingdon, Huddersfield, Halifax, Hastings, Leicester, Leeds, Meithy Tydvil, Manchester, Newcastle, Northampton, Nottingham, Oxford, Portsmouth, Plymouth, Reading, Rotherham, Spalding, Swansea, Sheffield, Sunderland, Staffordshire Potteries, Totnes, Tiverton, Wareham, Wisbeach, and Waterford.

**SEA BATHING IN LONDON.**—In the early development of the railway system, it will be remembered, more than one proposal was made for bringing sea-water from the coast by pipes. We have now before us a prospectus of the London Sea-Water Company, formed for carrying out a somewhat similar enterprise. It is proposed to construct a sea-wall, engine-house, reservoir, and offices at Middlewick, on the eastern coast of Essex; and to lay down a cast-iron main conduit thence through Southminster, Althorn, Latchington, Runwell, Wickford, East Houndon Hill, Gpminster, Horchurch, Langtons, Havering Well, Beacon-Tree Heath, Great Ilford, Stratford, Old Ford-road, Ford-lane, Hackney Wick, and Homerton, to Clapton, terminating in a reservoir formerly used by the East London Waterworks Company, extending over an area of two acres, in Powell's Field. It is intended in the first instance, to construct two bathing establishments—one in the neighbourhood of Finsbury-square for the east, and the other near Cavendish-square for the western districts of London. The erection of the establishments at Middlewick and London, with every other outlay, will not exceed £90,000.

**ELECTRIC TELEGRAPH PROGRESS.**—The extension of the electric telegraph to Hurst Castle in Hants, opposite the Needle rocks in the Isle of Wight, may be considered of national importance. Next year, above a dozen foreign mail-packets will pass the Needles every month, averaging one nearly every other day, on their way to Southampton; and the fact of their approach to the latter place will be known by means of the Hurst Castle Telegraph two hours before their actual arrival. As soon as the extension of the telegraph to Hurst Castle is completed, the Southampton Chamber of Commerce purpose effecting some arrangement with the post-office and railway authorities by which, up to the latest period of the day possible, the foreign mails shall be dispatched to London from Southampton, either by ordinary or special train, immediately on their arrival at the latter port. The railway authorities are opposed to special trains, unless notice of them can be previously given to every portion of their line. By the extension of the electric telegraph to Hurst such notice can be given. It is calculated that, taking into consideration the readiness with which foreign mails can be sorted in the General Post-office, and distributed to all parts of the country from thence, and considering also the rapidity with which the mails will be forwarded to London from Southampton, when the Hurst Castle Telegraph is completed, that the utmost possible convenience will be provided for the public next year.

## POETICAL QUOTATIONS.

## • CHEERFULNESS.

And her against sweet Cheerfulness was placed,  
Whose eyes like twinkling stars in evening clear,  
Were deck'd with smiles, that all sad humours chased  
And darted forth delights, the which her goodly graced.

*Spenser's Faery Queen.*

Cheerful looks make every dish a feast,  
And 'tis that crowns a welcome.—*Massinger.*

Let me play the fool:  
With mirth and laughter let old wrinkles come;  
And let my liver rather heat with wine,  
Than my heart cool with mortifying groans.  
Why should a man whose blood is warm within,  
Sit like his grandsire cut in alabaster? •  
Sleep when he wakes? and creep into the jaundice  
By being peevish!—*Shakspeare's Merchant of Venice.*

When Cheerfulness, a nymph of healthiest hue,  
Her bow across her shoulders flung,  
Her buskins gemm'd with morning dew,  
Blew an inspiring air, that dale and thicket rang.—*Collins's Passions.*

Thus without share in coin or land,  
But well content to hold  
The wealth of Nature in my hand,  
One flail of virgin gold,—  
My love above me like a sun,—  
My own bright thoughts my wings,—  
Through life I trust to flutter on  
As gay as aught that sings.—*R. M. Minns.*

## CHILDHOOD AND CHILDREN.

The whining schoolboy with his satchel,  
And shuning morning face, creeping like snail  
Unwillingly to school.—*Shakspeare's As you like it.*

At first, the infant,  
Mewling and puking in the nurse's arms.—*Ibid.*

Behold, my lords,  
Although the print be little, the whole matter  
And copy of the father: eye, nose, lip,  
The trick of his frown, his forehead; nay, the valley,  
The pretty dimples of his chin, and cheek; his smiles;  
The very mould and frame of hand, nail, finger.

*Shakspeare's Winter Tale.*

The royal tree hath left us royal fruit,  
Which, mellow'd by the stealing hours of time,  
Will well become the seat of majesty,  
And make no doubt us happy by his reign.

*Shakspeare's Richard III.*

Hath he set bounds between their love and me?  
I am their mother, who shall bar me from them?—*Ibid.*

O 'tis a pious boy;  
Bold, quick, ingenious, forward, capable,  
He's all the mother's from the top to toe.—*Ibid.*

Look here and weep with tenderness and transport!  
What is all tasteless luxury to this?  
To these best joys, which holy love bestows?  
Oh Nature, patient nature, thou alone  
Art the true judge of what can make us happy.

*Thomson's Agamemnon.*

O what passions then,  
What melting sentiments of kindly care,  
On the new parents seize.—*Thomson's Seasons.*

Meantime a smiling offspring rises round,  
And mingles both their graces. By degrees,  
The human blossom blows; and every day,  
Soft as it rolls along, shows some new charin,  
The father's lustre, and the mother's bloom.—*Ibid.*

Delightful task! to rear the tender thought,  
To teach the young idea how to shoot,  
To pour the fresh instruction o'er the mind,  
To breathe the enlivening spirit, and to fix  
The generous purpose in the glowing breast!—*Ibid.*

Thank to the gods, my boy has done his duty!—  
Portius, when I am dead, be sure you place  
His urn near mine.—*Addison's Cato.*

Why was my prayer accepted? why did Heaven  
In anger hear me when I ask'd a son?—*Hannah More's Moses.*

## PARLOUR PASTIME.

*A Curious Pyrotechnical Experiment, with Liquid Phosphorus.*

TAKE a piece of common phosphorus, of about the size of a pea, and cutting it very small, put it into a glass of clear water, and boil it in a little earthen vessel over a moderate fire. Then take a phial with a narrow neck, and having plunged it into boiling water, take it out again, and put the boiling mixture immediately into it, stopping the phial instantly with a glass stopper, and covering it with a cement, that the air may in no degree enter. Then, if this mixture be put in a dark room, it will shine for several months, though the phial be not touched; but if it be shaken, especially in warm dry weather, very strong coruscations, like lightning, will dart from the middle of the water; and, if the phial be sufficiently long, or broad, and a piece of paper be pasted over it, any letters or figures which may be written on it will appear strongly illuminated. If any letters or figures be drawn with it on a white wall, in a dark room, they will likewise appear luminous.

## ENIGMAS.

I.

SOME characters two different aspects wear,  
One foul as sin, and one divinely fair,  
An instance I, this general truth to prove,  
Who deadly hate excite, and tenderest love;  
And as in character, in form, you'll see,  
Complexion, dress, the same diversity.  
First you're to learn, I am a living creature,  
But yet observe, I don't possess one feature:  
I'm black, I'm white, I'm yellow, red and brown;  
Sometimes I'm very small, sometimes well grown;  
Slender and delicate I oft appear,  
And, frequently, a coarse plump figure wear;  
In rags am seen, and such a dirty plight,  
All own I am not fit to come in sight:  
Yet oft in gold and silver I appear,  
Adorn'd with braids of lovely colour'd hair  
And pearls and gems of richest lustre wear.  
Now that my shape, complexion, dress, are told,  
My different qualities I'll next unfold.  
Vice, Folly, Vanity, from me proceed,  
And I perform each prudent, virtuous deed;  
In acts of sweet humanity employ'd,  
Yet through my means is innocence destroy'd:  
The greatest earthly blessings I bestow,  
And I create unutterable woe.  
Proud courtiers at my shrine submissive bend,  
And love-sick swains to me petitions send.  
Yet I to courtiers often prove a foe,  
And lovers' hopes as often overthrow.  
I've travell'd into every foreign land,  
And can the languages of all command;  
Yet though so learn'd, I may be thought a dunce,  
When I avow, I can't my name pronounce.  
Though of a wondrous share of pow'r possess'd,—  
For men with crowns and sceptres I invest,  
Give wealth and titles, pensions, or a place,  
Can doom to penury, or foul disgrace—  
Yet, against destiny, I vainly strive,  
Spite of my pow'r, I've oft been burnt alive.

II.

THERE is a certain natural production, neither animal, vegetable, nor mineral; it exists upon the surface of the earth, from two feet to six; it is neither male nor female, but between both. It is often mentioned in the Old Testament, and strongly recommended in the New.

## ARITHMETICAL QUESTIONS.

I.

SAWNEY, a youth with an accomplished air,  
Long courted Moggy, delicate and fair;  
To gain her friendship ev'ry art essays,  
To meet her kindness tries a thousand ways.  
A globular silver snuff-box Sawney buys,  
To give his Moggy—for whose love he sighs;  
Which cost a guinea, as it does appear:  
'Three inches just was the diameter.  
Now Sawney thinks the box is rather small,  
So on the silversmith again does call,  
To change the box—an inch and a quarter more  
Was the diameter, than that before.  
Now, Tyro, tell me what this box would cost,  
And then of your expertness you may boast.

II.

A man overtaking a maid who was driving a flock of geese, said to her—  
"How do you do, sweetheart, where are you going with these 80 geese?"  
"No, sir," said she, "I have not 80; but if I had as many more, half as many more, and 20 geese besides, I should have 80." How many geese had she?

## TRANSFIGURED PLAYING CARDS.

THE EIGHT OF DIAMONDS.—A BRILLIANT COURT.

## CHARADES.

I.

My *first* is a capital character in the annals of Parnassus; my *second* is celebrated in the annals of Billingsgate; and my *third* is a leader in the annals of biography.

II.

With fierce to the battle the soldier has rush'd,  
And returns in my *first* with prond triumph flush'd,  
With what honours, what wealth, can my *second* repay  
The hero, for gaining so glorious a day?  
But, oh! 'tis my *whole*, crimson flower, when blown,  
Shall, presented by woman, his happiness crown.

III.

In light graceful folds, plays my *first* with the gale,  
And yet they provide it firm footing;  
My *next* the cat's ears are, her nose, and her tail;  
My *whole* holds two quarts, if they're put in.

## REBUSES.

I.

My *first* is a king who in England once reign'd,  
The first Norman monarch this country maintain'd;  
My *second's* a god whom the ancients adored,  
Who slew the great serpent that mortals abhor'd;  
My *third* is a city, in history oft nam'd,  
Which for bravery and learning so justly was fam'd;  
And my *last* is the name of a country of old,  
Where God's chosen people were slaves, we are told.  
Now, when the initials of these are combined,  
The name of a town in fair Essex you'll find.

II.

As a proof of genius, and to try your invention,  
Say what, in surprise, we frequently mention,  
A French affirmative (not to be too intrusive)  
The beginning of error, without a conclusive.  
The first of a ford, with a part of a lord,  
And a term in the compass—a peculiar word.  
These connected together, and properly join'd,  
Discover a town, which I leave you to find.

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 797.

## ENIGMAS.—I. THE WEATHER. 2. A BLUSH.

ARITHMETICAL QUESTIONS.—1. Nearly 6 inches, or 128 yards. 3. 160-95630 feet.

REBUSES.—1 C, him, ney—Chimney. 2. Co., happiness. Anno Domini, robes, lad, ear, mouth and/or glass Newton, cel. Esther e'd—Charlemagne

## OUR CORNER CUPBOARD!

WHY is a tight shoe like a fine summer?—Because it makes the corn grow.

WHY is Burton's brewery like a Jew's coffee-house?—Because He brews drink there.

LEGAL INFORMATION.—If you bite a man's nose off, what are you bound by law to do?—*Keep the piece.*

AN indirect way of getting a glass of water at a watering-place, is to call for a third cup of tea.

As shoes that have nail-points projecting upwards through the heel, so is a peevish wife.

HE that accustoms himself to buy superfluities, may, ere long, be obliged to sell his necessities.

THE patient mule which travels night and day, will, in the end, go farther than the Arabian courser.

A DANDY is generally supposed to be about one-fourth walking-stick, and the rest—kid gloves and hair.

"My brethren," said Swift, in a sermon, "there are three sorts of pride—of birth, of riches, and of talents. I shall not now speak of the latter, none of you being liable to that abominable vice."

Old Gentleman to precocious Child—"Well, my little darling, I have brought you some sugar-plums; you shall have them when I go away." Precocious Child—"Oh, then, give them to me, and go away now!"

AN Irishman being asked on a late trial for a certificate of his marriage, bared his head, and exhibited a huge scar, which looked as though it might have been made with a fire-shovel. The evidence was satisfactory.

PRAY, is it owing to the weather,  
That U and I can't dine together?  
Why no—the reason is, d'ye see,  
U cannot come till after T.

A gentleman being asked whether he was seriously injured when a steam-boiler exploded, is said to have replied, that he was so used to being blown up by his wife, that mere steam had no effect on him.

IN the reign of Queen Elizabeth, if bad fish was sold to the poor, the knavish fishmonger was decorated with a necklace of his own unsavoury commodity, and was then perched on a stand in the market.

AMERICAN SHREWDSNESS.—"My child, take those eggs to the store, and if you can't get ninepence a dozen, bring them back." Jemmy went, as directed, and came back again, saying, "Mother, let me alone for a trade; they all tried to get 'em for a shilling, but I screwed 'em to ninepence."

A servant-girl was talking of the loss her sister had recently sustained in the death of a devoted husband. "Poor Mary!" said she, "though George has been dead near six months, yet she grinds her teeth even now whenever she thinks of him!"

"Plaze, sir," said an Irishman to a traveller, "would yez be so oblaiging as to take me great coat, here, to Boston wit' yez?" "Yes," said the man in the wagon, "but how will you get it again?" "Oh, that's mighty aisy, so it is," said Pat, "for shure I'll remain inside uv it."

AN Irishman, who had a pig in his possession, was observed to adopt the constant practice of filling it to repletion one day and starving it the next. On being asked his reason for doing so, he replied, "Och, sure, and isn't it that I like to have bacon with a strake o' fat and a strake o' lane aqually me after 't other?"

AN outside passenger by a coach had his hat blown over a bridge, and carried away by the stream. "Is it not very singular," said he to a gentleman who was seated beside him, "that my hat took that direction?" "Not at all," replied the latter; "it is natural that a beaver should take to the water."

Two widowers were once condoling together on the death of their wives; one of them exclaimed, with a sigh, "Well may I bewail my loss, for I had so few differences with the dear deceased, that the last day of my marriage was as happy as the first." "There I surpass you," said his friend, "for the last day of mine was happier."

MONEY, 'tis said, is evil's root,  
Yet justly we may doubt it;  
Who can expect good thriving fruit  
From any stock without it?

A domestic, newly engaged, presented to his master one morning a pair of boots, the leg of one of which was much longer than the other. "How comes it, you rascal, that these boots are not of the same length?" "I really don't know, sir; but what bothers me the most is, that the pair down-stairs are in the same fix."

"Papa," said a little boy to his parent the other day, "are not sailors, very, very small men?" "No, my dear," answered the father, "pray, what leads you to suppose that they are so small?" "Because," replied the young idea, smartly, "I read the other day of a sailor going to sleep in his watch."

HOOK AND CROOK.—Strongbow, on entering Waterford Harbour, observed a castle on one shore, and a church on the other; inquiring what they were, he was told it was the castle of Hook, and the church of Crook. "Then," said he, "we must enter and take the town by Hook or by Crook." Hence the proverb to this day.

## OUR MEMORANDUM BOOK!

THE CHIEF GOOD.—Cæsus placed the chief good in riches; Periander, of Corinth, in honour; Socrates, in knowledge; Plato, in idleness; Orpheus, in beauty; Milo, the Cretonian, in bodily strength; Thales, the Milesian, in the union of prudence and knowledge; Pittacus, in benevolence; Aristotle, in the practice and operation of virtue; and Epicurus affirms that happiness is the chief good, and virtue the only happiness.

A PATERN WOMAN.—A good housewife should not be a person of "one idea," but should be equally familiar with the flower-garden and flour-barrel; and though her lesson should be to lessen expense, the scent of a fine rose should not be less valued than the cent in the till. She will, doubtless, prefer a yard of shrubbery to a yard of satin. If her husband is a skilful sower of grain, she is equally skilful as a sewer of garments; he keeps his hoes bright by use, she keeps the hose of the whole family in order.

A BENEFICIAL RULE.—The following fact is mentioned by Dr. W. C. Taylor, as having occurred within his knowledge. A gentleman who employed several labourers, made it a rule never to pay any sum, however small, without getting a receipt. The shame which those who were unable to write their names felt in getting their marks, though no observation was made on the circumstance, had a perceptible effect in inducing them to seek instruction for their children, and, in more than one instance, for themselves.

There's not a flower that decks the vale;  
There's not a beam that lights the mountain;  
There's not a shrub that stirs the gale;  
There's not a wind that stirs the fountain;  
There's not a hue that paints the rose;  
There's not a leaf around us lying,  
But in its use or beauty shows  
True love to us, and love undying.

SKILFUL ANATOMISTS.—It may not be generally known that the tadpole acts the same part with fish, that ants do with birds; and that, through the agency of this little reptile, perfect skeletons, even of the smallest fishes, may be obtained. To produce this, it is but necessary to suspend the fish by threads, attached to the head and tail, in an horizontal position, in a jar of water, such as is found in a pond, and change it often, till the tadpoles have finished their work. Two or three tadpoles will perfectly dissect a fish in twenty-four hours.

MUSIC AND MENTAL EXERTION.—Alfred often, before he wrote, prepared his mind by listening to music. "Almost all my tragedies were sketched in my mind either in the act of hearing music, or a few hours after,"—a circumstance which has been recorded of many others. Lord Bacon had often music played in the room adjoining his study. Milton listened to his organ for his solemn inspirations; and music was even necessary to Warburton. The symphonies which awoke in the poet sublime emotions, might have composed the inventive mind of the great critic in the visions of his theoretical mysteries. A celebrated French preacher, Bourdaloue or Massillon, was once found playing on a violin, to screw his mind up to the pitch preparatory to his sermon, which within a short interval he was to preach before the court. Curran's favourite mode of meditation was with his violin in his hand; for hours together would he fidget himself, running voluntaries over the strings, while his imagination, in collecting its tones, was opening all his faculties for the coming emergency at the bar.

## A PERSIAN FABLE.

A little particle of rain,  
That from a passing cloud descended,  
Was heard thus idly to complain:—  
"My brief existence now is ended,  
On feast of earth and sky,  
Useless to live, unknown to die."  
It chanced to fall into the sea,  
And there an open shell received it;  
And after years, how rich was he  
Who from its prison-house relieved it!  
The drop of rain had form'd a gem,  
To deck a monarch's diadem.

A WIFE'S PRAYER.—We do not assume that we recognize that which is truly beautiful in all that makes humanity approach to the Divine; but if there is anything that comes nearer to the imploration of Ruth to Naomi than the subjoined, we have not seen it:—"Lord! bless and preserve that dear person whom thou hast chosen to be my husband: let his life be long and blessed, comfortable and holy: and let me also become a great blessing and comfort unto him, a sharer in all his joys, a refreshment in all his sorrows, a meet helper for him in all the accidents and changes in the world: make me amiable for ever in his eyes, and for ever dear to him. Unite his heart to me in the dearest love and holiness, and mine to him in all sweetness, charity, and compliance. Keep me from all ungiveness, all discontentedness, and unreasonableness, of passion and humour; and make me humble and obedient, useful and observant, that we may delight in each other according to Thy blessed word, and both of us may rejoice in Thee, having our portion in the love and service of God for ever."

**RAILWAY PASSENGERS' ASSURANCE COMPANY.** Empowered by special Act of Parliament, 12 and 13 Vic. cap. 40, and 15 and 16 Vic. Capital £1,000,000. Offices, 3, Old Broad-street, London.

**CHAIRMAN.**  
Sir JOHN DEAN PAUL, Bart., 217, Strand.  
**DEPUTY CHAIRMAN.**  
GEORGE BERKELEY HARRISON, Esq., 24, Great Tower-st.

The stock includes TABLE CUTLERY, ELECTRO-PLATE, LAMPS, PAPER MACHE TRAYS, FENDERS AND FIRE IRONS, IRON BEDSTEADS, BRILLIANT METAL, Tin and Japan Ware, Tinnery, Brushes, &c., &c. Established A.D. 1700.**  
DEAN, DEAN, and Co. (opening to the Monument), London-bridge.

"Costly thy habit as thy purse can buy,  
But not expressed in fancy—rich, not pearly;  
For the apparel oft proclaims the man."—*Hamlet*

**EVERY WELL-DRESSED MAN KNOWS** how difficult it is to find a tailor who thoroughly understands the peculiarities of gentlemanly figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste being equally regarded, the eye of the observer is pleased with its graceful lines, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connection has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the split of the age dictates.—F. FOX, practical tailor, 78, Cornhill, same side of the way as the Royal Exchange.

**BENNETT'S WATCH MANUFACTORY.** 65, Chancery, London, to the Royal Observatory, Board of Ordnance, the Admiralty, and the Queen.

**GLENFIELD PATENT STARCH, used**

in the Royal Laundry, and Wetherpoon's Steam-made Confections.—Sold by all respectable Grocers and Druggists.—Glasgow: R. Wetherpoon & Co., 40, Dunlop-street, London. Wetherpoon & Co., 40, King William-street, City.

**PAGE WOODCOCK'S WIND PILLS.**

For WIND in the STOMACH, windy spasms, indigestion, heart-burn, palpitation of the heart, jaundice, biliousness, and all complaints having their origin in a disordered state of the stomach. They are purely vegetable, being composed entirely of vegetable extracts; hence in all cases where the stomach does not rightly perform its office, they are at once the most harmless, pleasant, and efficacious assistant possible. These pills, by their peculiar action, give a tone to the stomach and bowels, disperse wind, assimilate with the food, and purify the blood. The sale of these pills is unprecedented; 2,000 boxes have been sold in Lincolnshire in three months—a sale which no other medicine ever obtained, in so limited a circle, in so short a time. They are a sterling medicine, far superior to the numerous quack medicines of the day, most of which are only intended to enrich the pockets of the makers, and not for the actual cure of diseases.  
(Testimonial from a Clergyman of Lincoln).  
"Mr. WOODCOCK.—Sir, Having derived great advantage from your 'Wind Pills,' I have much pleasure in recommending them to others, in the hope that by so doing it may be the means of alleviating and ultimately removing pain and suffering, and of remunerating you in some degree for the preparation of so useful a medicine."

"A MINISTER OF RELIGION."  
"Mr. WOODCOCK.—Sir, Having derived great advantage from your 'Wind Pills,' I have much pleasure in recommending them to others, in the hope that by so doing it may be the means of alleviating and ultimately removing pain and suffering, and of remunerating you in some degree for the preparation of so useful a medicine."

Sold WHOLESALE and RETAIL in London, at 95, Farringdon-street; 10, Bow Church-yard; 67, St. Paul's Church-yard, and 68, Cornhill; and may be obtained through all Medicine Vendors, or sent free by post on receipt of the price in stamps (pre-paid), by PAGE D. WOODCOCK, Chemist, Lincoln. Price 1s. 1d., 2s. 9d., and 4s. 6d. per box.

**PAINS IN THE BACK, GRAVEL, LUM-**

**BAGO, Rheumatism, Gout, Indigestion, Nervousness, Debility, &c.**

**DR. DE ROOF'S COMPOUND RENAL PILLS**, as their name—Renal, or the kidneys—indicates, are now established as the most safe and efficacious remedy ever discovered for the above dangerous complaints, which, if neglected, frequently end in piles, fistula, stone in the bladder, and a lingering death! For gout, sciatica, rheumatism, the doloureux, erysipelas, dropsy, scrofula, loss of hair and teeth, depression of spirits, blindness, impurity for society, and, or business, confusion, giddiness, drowsiness, sleep with it refreshment, fear, nervousness, and even insanity itself, when, as it often the case, arising from, or combined with, urinary diseases, they are unequalled. By their salutary action on acidity of the stomach, they correct bile and indigestion, purity and promote the renal secretions, thereby preventing the formation of stone, and establishing for life the healthy functions of all their organs. ONE TRIAL will convince the most prejudiced of their surprising properties.

May be obtained at 1s. 1d., 2s. 9d., and 4s. 6d., and 11s. per box, through all Medicine Vendors in the Kingdom; or should difficulty occur, they will be sent free on receipt of the price in postage stamps, by DR. DE ROOF, 8, 1ly place, Holborn-hill, London, where he may be consulted, from 11 to 7, and 5 till 8 (Sunday excepted), unless by previous arrangement.  
N.B. A considerable saving is effected by purchasing the larger boxes.

**HOLLOWAY'S OINTMENT AND PILLS.**

**ASTONISHING REMEDIES for the CURE of ULCEROUS WOUNDS.**—Extract of a letter from John Noble, Esq., Mayor of Boston, dated August 12th, 1852. "To Professor Holloway.—Dear Sir,—Mrs. Sarah Dixon, of Ligonier-street, Boston, has this day deposited before me that she was afflicted with ulcers on her arms, feet, and numerous parts of her body, and although the first medical advice was procured at the cost of a large sum of money, she obtained no relief, but became worse. Being advised to try your invaluable Pills and Ointment, she did so, and recovered in their use; by which means she has been perfectly cured." Sold by all Druggists, and at Professor Holloway's Establishment, 244, Strand.

### Editor's Note-Book.

DOMESTIC HINTS.—No. 26.  
Family Tool Chests.—Much inconvenience, and considerable expense might be saved, if it was the general custom to keep in every house certain tools for the purpose of pur-

forming at home what are called small jobs, instead of being always obliged to send for a mechanic and pay him for executing little things that, in most cases, could be sufficiently well done by a man or boy belonging to the family, provided that the proper instruments were at hand. The cost of these articles in the house are far beyond the expense. For instance, there should be an axe, a hatchet, a saw (a large wood-saw also, with a buck or stand, if wood is burned), a claw-hammer, a mallet, two gimlets of different sizes, two screw-drivers, a chisel, a small plane, one or two jack-knives, a pair of large scissors or shears, and a carpet fork or stretcher. Also, an assortment of nails of various sizes, from large spikes down to small tacks, not forgetting brass headed nails, some larger and some smaller. Screws, likewise, will be found very convenient, and hooks on which to hang things. The nails and screws should be kept in a wooden box, made with divisions to separate the various sorts, for it is very troublesome to have them mixed. No house should be without glue, chalk, putty, common paint, cord, twine, and wrapping paper. And let care be taken to keep up the supply, lest it should run out unexpectedly, and the deficiency cause delay and inconvenience at a time when their use is most wanted. It is well to have somewhere, in the lower part of the house, a deep light closet, appropriated entirely to tools and things of equal utility, for executing promptly such little repairs as convenience may require, without the delay or expense of procuring an artisan. This closet should have at least one large shelf, and that about three feet from the floor. Beneath this shelf may be a deep drawer, divided into two compartments. This drawer may contain cakes of glue, pieces of chalk, and balls of twine of different size and quality. There may be shelves at the sides of the closet for glue pots, paste-pots, and brushes, pots for black, white, green, and red paint, cans of painting oil, paint-brushes, &c. Against the wall, above the large shelf, let the tools be suspended, or laid across nails or hooks of proper size to support them. This is much better than keeping them in a box, where they may be injured by rubbing against each other, and the hand may be hurt in feeling among them to find the thing that is wanted. But when hung up against the back wall of the closet, of course each tool can be seen at a glance. We have been shown an excellent and simple contrivance for designating the exact places allotted to all these articles in a very complete tool closet. On the closet wall, directly under the large shelf that support the tools, is drawn with a small brush dipped in black paint or ink, an outline representation of the tool or instrument belonging to that particular place. For instance, under each saw is sketched the outline of that saw, under each gimlet a sketch of that gimlet, under the screw drivers are slight drawings of screw drivers. So that when bringing back any tool that has been taken away for use, the exact spot to which it belongs can be found in a moment; and all confusion in putting them up and finding them again is thus prevented. Wrapping paper may be piled on the floor under the large shelf. It can be bought very low by the ream, at the large paper warehouses; and every house should keep a supply of it in several varieties. For instance, coarse brown paper for common purposes, that denominated ironmonger's paper, which is strong, thick, and in large sheets, is useful for packing heavy articles; and equally so for keeping silks, ribbons, blondes, &c., as it preserves their colours. Newspapers are unfit for wrapping anything, as the printing ink rubs off the articles inclosed in them, and also soils the gloves of the person that carries the parcel. When shopping, if the person at the counter proceeds to wrap up your purchase in newspaper (a thing rarely attempted in a genteel shop), refuse to take it in such a cover. It is the business of every respectable shopkeeper to provide proper paper for this purpose, and printed paper is not proper. Waste newspapers had best be used for lighting fires, singeing the ends of the hair, and cleaning windows and mirrors. Waste paper that has been written on, cut into slips, and creased and folded, makes very good albumenets or lantern-lighters. These matters may appear of trifling importance, but order and regularity are necessary to happiness.

LIVE.—P. C.—Indeed we cannot compare it to anything more appropriate than a field of blackberry and raspberry bushes. Mean people squat down and pick the fruit, no matter how they black their fingers; while genius, proud and perpendicular, stands heretofore, and gets nothing but scratches and holes torn in its trousers.

LONGEVITY OF QUAKERS.—P. U.—The reasons are obvious enough. Quakers are temperate and prudent, are seldom in a hurry, and never in a passion. Quakers, in the very midst of the week's business (on Wednesday morning) retire from the world, and spend an hour or two in silent meditation at the meeting-house. Quakers are diligent; they help one another, and the fear of want does not corrode their minds. The journey of life to them is a walk of peaceful meditation. They neither suffer nor enjoy intensely; but preserve a composed demeanour always. Is it surprising their days should be long in the land?

WEALTH AND POVERTY.—F. S.—In all questions about the poor it should be considered that law-makers and governors are of the class of the rich, and that to improve the condition of poverty, concessions and sacrifices are demanded on the part of the rich. The most that the laws of wealthy legislation attempt, is to vary the relations of poverty and industry, forgetting that of nothing, nothing ever came. In the society of Great Britain, nine tenths of the property is divided amongst one-tenth of the people, or, in other words, only one-tenth of the property is divided among nine tenths; and we fear that it is too much the study of the TENTH to protect their own rights, at whatever consequence to the NINE-TENTHS. Wealth and property in a community are mere relations of the common stock of property, and there are various ways and means of relieving the poor. These of course it would be useless to enumerate; but, in our opinion there is none which is more heartless than that which is too often evinced in

FEEDING HUNGER WITH A FACT.

NOVEL READING.—P. C.—It does not surprise us at all. Tristram Shandy says that "of all cants, the cant of criticism is the worst." Under the head of this worst of all cants, we register the ill-natured remarks which are so frequently made in the present day about novel reading. You shall hear a fellow who never read a novel in his life, and who can scarcely read at all, speak with an air of infallible disdain about novelists and novels. You shall hear a little editor, somewhere in the region of the Old Bailey, thundering away about love-sick stories, and poisoning the community with over wrought representations of factitious circumstances. In short, all those who are too ignorant to understand, too heartless to feel, or too much absorbed in selfish and worldly pursuits to take any interest in virtue or nobleness, will exclaim against love stories. There are also some self-made writers—we use the term in contradistinction to such as God has made—who have found one peculiar train of thought, and one peculiar style most easy and natural to them, and who differ from the common herd only in having learned to put one word after another in Indian file. You shall hear such writers speak against those books and those stories wherein the best feelings of our nature are portrayed, and whose tendency is to exalt the mind above the paltry considerations of what we shall eat and what we shall put on.

MOUING.—C. F.—It was different in different countries. Among the ancients, mourning was expressed by various signs:—tearing their clothes, wearing sackcloth, laying aside ensigns of honour; thus Plutarch, from the time of his leaving the city with Pompey, neither shaved his head, nor, as usual, wore the crown or garland. Amongst the Romans, a year of mourning was ordained by law, for women who had lost their husbands. The colours of the dress or habit worn to signify grief vary in different countries. In Europe, the ordinary colour for mourning is black, which, being the privation of light, is supposed to denote the termination of life. In China, it is white, the emblem of purity, which colour was the mourning of the ancient Spartan and Roman ladies. In Egypt, it is yellow, which, representing the colour of leaves when they fall, and flowers when they fade, signifies that death is the end of all human hopes. In Ethiopia, brown, which denotes the earth to which all the dead return. In

Turkey, blue, which is an emblem of the happiness which it is hoped the deceased enjoys. Kings and cardinals mourn in purple or violet, which is supposed to express the combination of sorrow and hope. The custom of mourning for the dead in shrieves and howlings is of great antiquity, and prevails almost universally among the followers of Mahomet.

COMMUNICATIONS RECEIVED.—T. F. (true peace is to have peace with virtue, and war with vice). G. A. (you are wrong, we think, in one sense, and may be right in another, but we would recommend you never to blame a friend, without joining some commendation with the reproof). C. H. (Barbarossa was a famous pirate, the history of whom would fill many pages. He proclaimed himself king of Algiers and Tunis, and took possession of the kingdom of Tremecen; but was defeated by Gonzalez, governor of Oran, and put to death, in 1518). S. R. (yes; even in Lapland and Siberia, trees are often found converted into iron ore, and carbonate of copper). R. S. (Mount Ararat is 17,000 feet above the sea level, and 10,000 feet above the table land, on which it stands). X. Y. (no; the mines in Chili are worked by a proprietor, and one who finds capital, called the habilitator). P. C. (the first book of principles of political economy was the treatise of North, in 1691, entitled "Discourses on Trade." Nothing of importance appeared in England from that time till the publication of Stewart's "Principles of Political Economy," which was superseded by Smith's "Wealth of Nations.") J. W. (it is altogether a system of falsity. Glory in war must be derived solely from the justice of the war. Those who are victorious in an unjust war, have no higher glory than अपराधिन to the success of a banditti). C. Y. (a master in the navy has charge of all the ship's material. The gunner, of the ordnance, &c.; the boat-swain superintends the stores, and the purser manages the provisions). HENRY (winter wheat is sown between September and November; and spring, in March and April. The seed is 2½ to 3 bushels per acre). U. K. (all people divide themselves into four classes; husbandmen, traders, soldiers, and clergy. The Hindoo system peculiarly consists in fixing each for life). J. B. (we meet your

### FAREWELL TO REVELRY.

Ye sons of night, of mirth and gl'o,  
Farewell for once, for ever!  
No more I'll join your revelry,  
The hour is come to sever.  
Too long you've been my friendly foe,  
My health and fortune's ruin,  
My path through life with countless woes  
You've ruthlessly been strowin'.  
How fair the days of my youth's years;  
How bright my manhood's dawning—  
No blighted hopes, no dastard fears—  
No Bacchusian fanning.  
A soul of fire, and unoppress'd,  
A heart for any danger;  
A ready hand for the distress'd,  
And aid for the stranger.  
But cold, cold now that poor heart beat,  
Which erst was warm with feeling,  
My summer hour so fastly fleet,  
Life's currents are congealing  
Ye friends, be warned by my ravens,  
And mind that Health's a treasure,  
Be sober while ye may be so,  
And shun the god of Pleasure.)

T. Y. (all animals ruminate which have horns and cloven feet). INQUIRER (the quotation is from Cobbett, when apostrophising and depicting the miseries of a quill-driver in Gray's Inn. You, however have misquoted it. "Gracious Heavens!" says he, "if I am doomed to be wretched, bury me beneath Iceland snows, and let me feed on blubber: stretch me under the burning line, and deny me thy propitious dew; nay, if it be thy will, succumb to me with a infected and pestilential air of a democratical club-room, but save me from the desk of an attorney.") L. W. (we would not advise. Remember that friendships made in misfortune generally last for ever). W. S. (beware of him! the address that conceals hypocrisy is the curse of life.)

*'She heard herself arraigned, with trembling limbs and downcast looks; and many witnesses had appeared against her before she ventured to lift her eyes up to her awful judge.'*

## NATURE AND ART.

BY MRS. INCHBALD.

(Continued from page 307.)

William! in your luxurious dwelling! possessed of coffers filled with gold! relations, friends, joyful around you! delicious viands and rich wines upon your sumptuous board, voluptuousness displayed in every apartment of your habitation! contemplate for a moment, Agnes, your first love, with her son, your first and only child, walking through frost and snow to London, with a foreboding fear on the mother—that, when arrived, they both may perish for the want of a friend.

But no sooner did Agnes find herself within the smoke of the metropolis, than the old charm was renewed; and scarcely had she refreshed her child at the poor inn at which she stopped, than she inquired how far it was to that part of the town where William, she knew, resided.

She received for answer, "About two miles."

Upon this information, she thought that she would keep in reserve, till some new sorrow befall her, the consolation of passing his door (perchance of seeing him), which must ever be an alleviation of her grief. It was not long before she had occasion for more substantial comfort. She soon found she was not likely to obtain a service here, more than in the country. Some objected that she could not make caps and gowns; some that she could not preserve and pickle; some, that she was too young; some, that she was too

pretty; and all declined accepting her, till at last a citizen's wife, on condition of her receiving but half the wages usually given, took her as a servant of all work.

In romances, and in some plays, there are scenes of dark and unwholesome mines, wherein the labourer works, during the brightest day, by the aid of artificial light. There are in London kitchens equally dismal, though not quite so much exposed to damp and noxious vapours. In one of these, under ground, hidden from the cheerful light of the sun, poor Agnes was doomed to toil from morning till night, subjected to the command of a dissatisfied mistress, who, not estimating as she ought the misery incurred by serving her, constantly threatened her servants "with a dismissal;" at which the unthinking wretches would tremble merely from the sound of the words; for to have reflected—to have considered what their purport was—"to be released from a dungeon, relieved from continual upbraidings, and vile drudgery," must have been a subject of rejoicing; and yet, because these good tidings were delivered as a menace, custom had made the hearer fearful of the consequence. So, death being described to children as a disaster, even poverty and shame will start from it with affright; whereas, had it been pictured with its benign aspect, it would have been feared but by few, and many, many would welcome it with gladness.

All the care of Agnes to please, her fear of offending, her toilsome days, her patience, her submission, could not prevail on her; she saved to retain her one hour after, by chance, she had heard "that she was the mother of a child; that she wished it should be kept a secret; and that she stole out now and then to visit him."

Agnes, with swimming eyes and an almost breaking heart, left a place where to have lived one hour, would have plunged any fine lady in the deepest grief.

## CHAPTER XVII.

AGNES was driven from service to service—her deficiency in the knowledge of a mere drudge, or her lost character, pursuing her wherever she went:—at length, becoming wholly destitute, she gladly accepted a place where the latter misfortune was not the least impediment.

In one of those habitations, where continual misery is dressed in continual smiles; where extreme of poverty is concealed by extreme of finery; where wine dispenses mirth only by dispensing forgetfulness; and where female beauty is so cheap, so complying, that, while it inveigles, it disgusts the man of pleasure, in one of those houses, to attend upon its wretched inhabitants, Agnes was hired. Her feelings of rectitude submitted to those of hunger; her principles of virtue (which the loss of virtue had not destroyed) received a shock when she engaged to be the abettor of vice, from which her delicacy, morality, and religion shrunk; but persons of honour and of reputation would not employ her—was she then to perish? That perhaps was easy to resolve: but she had a child to leave behind! a child, from whom to part for a day was a torment. Yet, before she submitted to a situation which filled her mind with a kind of loathing horror, often she paced up and down the street in which William lived, looked wistfully at his house, and sometimes, lost to all her finer feelings of independent pride, thought of sending a short petition to him; but, at the idea of a repulse, and of that frowning brow which she knew William could dart on her petitions, she preferred death, or the most degrading life, to the trial.

It was long since that misfortune and dishonour had made her callous to the good or ill opinion of all the world except his; and the fear of drawing upon her his increased contempt was still, at the crisis of applying, so powerful, that she found she dared not hazard a reproof from him even in the person of his father, whose rigour she had already more than once experienced, in the frequent harsh messages conveyed to her with the poor stipend for her boy.

Avoid by the rigid and pious character of the new bishop, the growing reputation for rising honours of his son, she mistook the appearance of moral excellence for moral excellence itself, and felt her own unworthiness even to become the supplicant of those great men.

Day after day she watched those parts of the town through which William's chariot was accustomed to drive: but to see the carriage was all to which she aspired—a feeling not to be described, forced her to cast her eyes upon the earth as it drew near to her; and when it had passed, she beat her breast and wept, that she had not seen him.

Impressed with the superiority of others, and her own squalor and disgusting state, she cried, "Let me meet with those who won't despise me—let me only see faces whereon I can look without confusion and terror—let me associate with wretches like myself, rather than force my shame before those who are so good, they can but scorn and hate me."

With a mind thus languishing for sympathy in disgrace, she engaged a servant in the house just now desecrated. There, disregarding the fatal proverb against "evil communications," she had not the firmness to be an exception to the general rule. That pliant disposition, which had yielded to the licentious love of William, stooped to still baser prostitution in company still more depraved.

At first she shuddered at those practices she saw, at those conversations she heard; and blessed herself that poverty, not inclination, had caused her to be a witness of such profligacy, and had condemned her in this vile abode to be a servant, rather than in the lower rank of mistress. Use softened those horrors every day—at length self-defence, the fear of ridicule, and the hope of favour, induced her to adopt that very conduct from which her heart revolted.

In her sorrowful countenance and fading charms, there yet remained attraction for many visitors; and she now submitted to the mercenary profligations of love—more odious, as her mind had been subdued by its most captivating, most endearing joys.

While incessant regret whispered to her "that she ought to have endured every calamity rather than this," she thus questioned her nice sense of wrong:—"Why, why respect myself since no other respects me? Why set a value on my own feelings, when no one else does?"

Degraded in her own judgment, she doubted her own understanding, when it sometimes told her she had deserved better treatment—for she felt herself a fool in comparison with her learned seducer and the rest who despised her. "And why," she continued, "should I ungratefully persist to condemn women, who alone are so kind as to accept me for a companion? Why refuse conformity to their customs, since none of my sex besides will admit me to their society, a partaker of virtuous habits?"

In speculation, these arguments appeared reasonable, and she pursued their dictates; but in the practice of the life in which she plunged, she proved the fallacy of the system; and at times tore her hair with frantic sorrow—that she had not continued in the midway of guilt, and so preserved some portion of self-approbation, to recompense her, in a small degree, for the total loss of the esteem of all the reputable world.

But she had gone too far to recede. Could she now have recalled her innocence, even that remnant she brought with her to London, experience would have taught her to have given up her child, lived apart from him, and once more with the Krute creation, rather than to have mingled with her present society. Now, alas! the time for flying was past—all prudent choice was over—even all reflection was gone for ever—or only admitted of such

passions, when it imperiously forced its way amidst the scenes of tumultuous mirth, or licentious passion, of distracted riot, shameless effrontery, and wild intoxication—when it would force its way—even through the walls of a brothel.

Is there a reader so little experienced in the human heart, so forgetful of his own, as not to feel the possibility of the following fact?

A series of uncommon calamities had been for many years the lot of the elder Henry—a succession of prosperous events had fallen to the share of his brother William. The one was the envy, while the other had the compassion of all who thought about them. For the last twenty years, William had lived in a succession bordering upon splendour, his friends, his fame, his fortune daily increasing; while Henry, throughout that very period, had been loved on earth, and was now existing in a society—and yet, during those twenty years, where William was the happy moment, Henry lived in misery.

That the state of the mind, and not outward circumstances, is the nice point on which happiness depends, is but a trite remark; but that intellectual power should have the force to render a man discontented in extraordinary prosperity, such as that of the present bishop, or contented in his brother's extreme of adversity, requires illustration.

The first great affliction to Henry was his brother's ingratitude; but reasoning on the frailty of man's nature, and the force of man's temptations, he found excuses for William, which made him support the treatment he had received with more tranquillity than William's proud mind supported his brother's marriage. Henry's indulgent disposition made him less angry with William, than William was with him.

The next affliction Henry suffered was the loss of his beloved wife. That was a grief which time and change of objects gradually alleviated; while William's wife was to him a permanent grief: her puerile mind, her talking vanity, her affected virtues, soured his domestic comfort; and, in time, he had suffered more painful moments from her society, than his brother had experienced, even from the death of her he loved.

In their children, indeed, William was the happier—his son was a pride and pleasure to him, while Henry never thought upon his without lamenting his loss with the bitterest anguish. But if the elder brother had in one instance the advantage, still Henry had a resource to overbalance this article. Henry, as he lay imprisoned in his dungeon, and when his punishment being settled, he was again allowed to wander and seek his subsistence where he would,—in all his tedious walks and solitary resting-places, during all his lonely days and mournful nights, had this resource to console him:

"I never did a injury to any one; never was harsh, severe, unkind, deceitful: I did not merely confine myself to do my neighbour no harm, I strove to do him service."

This was the resource that cheered his sinking heart amidst gloomy deserts and a barbarous people; lured him to peaceful slumber in the hut of a savage hunter, and in the hearing of the lion's roar, at times impressed him with a sense of happiness, and made him contemplate, with a longing hope, the resurrection of a future world.

The bishop, with all his comforts, had no comfort like this: he had his solitary reflections too; but they were of a tendency the reverse of these.

"I had my brother ill," was a secret thought of most powerful influence: it kept him waking upon his safe and commodious bed; was sure to recur with every misfortune by which he was threatened, to make his fears still stronger; and came, with invidious stabs, upon every successful event, to take from him a part of his joy. In a word, it was conscience which made Henry's years pass happier than William's.

But though, comparatively with his brother, William was the less happy man, yet his self-reproach was not of such magnitude, for an offence of that atrocious nature, as to banish from his breast a certain degree of happiness, sensibility to the smiles of fortune; nor was Henry's self-acquittal of such exquisite kind as to chase away the feeling of his desolate condition.

As he fished or hunted for his daily dinner, many a time in full view of his prey, a sudden burst of sorrow at his fate, a sudden longing for some dear associate, for some friend to share his thoughts, for some kind shoulder on which to lean his head, for some companion to partake of his repast, would make him instantaneously desist from his pursuit, cast him on the ground in a fit of anguish, till a shower of tears, and his conscience, came to his relief.

It was after an exile of more than twenty-three years—when, on one sultry morning, after pleasant dreams during the night, Henry had waked with more than usual perception of his misery—that, sitting upon the beach, his wishes and his looks all bent on the sea towards his native land, he thought he saw a sail swelling before an unexpected breeze.

"Sure I am dreaming still!" he cried. "This is the very vessel I saw last night in my sleep! Oh, what cruel mockery, that my eyes should so deceive me!"

Yet, though he doubted, he leaped upon his feet in transport: held up his hands, stretched at their length, in a kind of ecstatic joy; and as the glorious sight approached, was near rushing into the sea to hail and meet it. For a while hope and fear kept him in a state bordering on distraction. Now he saw the ship making for the shore, and tears flowed for the grateful prospect. Now it made for another point, and he vented shrieks and groans from the disappointment.

It was at those moments, while hope and fear thus possessed him, that the horrors of his abode appeared more than ever frightful. Inevitable evils, which must be borne; but that calamity which admits the expectation of relief, and then denies it, is insupportable.

After a few minutes passed in dreadful uncertainty, which enhanced his wishes for happiness, the ship evidently drew near the land—a boat was launched from her—and while Henry, now upon his knees, wept, and prayed

servently for the event, a youth sprang from the barge on the strand, rushed towards him, and falling on his neck, then at his feet, exclaimed:

"My father! oh, my father!"

William! dear! bishop! what are your honours, what your riches, what all your possessions, compared to the happiness, the transport, bestowed by this one sentence on your poor brother Henry!

The crosses on land, and the perilous events at sea, had made it now two years since young Henry first took the vow of a man, no longer dependent on the will of another, to seek his father. His fatigues, his dangers, were well recompensed. Instead of weeping over a silent grave, he had the inexpressible joy to receive a parent's blessings for his labours. Yet the elder Henry, in any other than the favourite spot, which the younger (keeping in memory every incident of his former life) knew his father had always chosen for his morning contemplations; and where, previously to his coming to England, he had many a time kept him company. It was to that particular corner of the island that the captain of the ship had generously ordered they should steer, out of the general route to gratify the filial tenderness he expressed. But scarcely had the interview between the father and the son taken place, than a band of natives, whom the appearance of the vessel had called from the woods and hills, came to attack the invaders. The elder Henry had no friend with whom he wished to shake hands at his departure: the old negro servant, who had assisted in young Henry's escape, was dead; and he experienced the excessive joy of bidding adieu to the place, without one regret for all he left behind.

On the night of that day, whose morning had been marked by peculiar sadness at the lowering prospect of many cailed years to come, he slept on board an English vessel, with Englishmen his companions, and his son, his beloved son—who was still more dear to him for that mind which had planned and executed his rescue—this son, his attentive servant, and most affectionate friend.

Though many a year passed, and many a rough encounter was destined to the lot of the two Henrys, before they saw the shores of Europe, yet to them, to live or to die together was happiness enough: even young Henry for a time asked for no greater blessing—but, the first glow of filial ardour over, he called to mind, "Rebecca lived in England;" and every exertion which love, founded on the highest reverence and esteem, could dictate, he employed to expedite a voyage, the end of which would be crowned by the sight of her.

#### CHAPTER XVIII.

THE contrast of the state of happiness between the two brothers was nearly resembled by that of the two cousins—the riches of young William did not render him happy; nor did the poverty of young Henry doom him to misery. His affectionate heart, as he had described in his letter to Rebecca, loved persons rather than things; and he would not have exchanged the society of his father, nor the prospect of her hand and heart, for all the wealth and splendour of which his cousin William was the master.

He was right. Young William, though he viewed with contempt Henry's inferior state, was far less happy than he. His marriage had been the very counterpart of his father's; and, having no child to create affection to his home, his study was the only relief from that domestic incumbrance called his wife; and though, by unremitting application there (joined to the influence of the potent relations of the woman he hated), he at length arrived at the summit of his ambitious desires, still they poorly repaid him for the sacrifice he had made in early life of every tender disposition.

Striding through a list of rapid advancements in the profession of the law, at the age of thirty-eight he found himself raised to a preferment such as rarely falls to the share of a man of his short experience—he found himself invested with a judge's robe; and, gratified by the exalted office, curbed more than ever that aversion which her want of charms or sympathy had produced against the partner of his honours.

While William had thus been daily rising in fortune's favour, poor Agnes had been daily sinking deeper and deeper under fortune's frowns; till at last she became a midnight wanderer through the streets of London, soliciting, or rudely demanding, money of the passing stranger. Sometimes hunted by the watch, she affrighted fled from street to street, from portico to portico—and once, unknowing in her fear which way she hurried, she found her trembling knees had sunk, and her wearied head was reclined, against the stately pillars that guarded William's door.

At the sudden recollection where she was, a swell of passion, composed of horror, of anger, of despair, and love, gave reanimated strength to her failing limbs; and, regardless of her pursuers' steps, she ran to the centre of the street, and looking up to the windows of the mansion, cried, "Ah! there he sleeps in quiet, in peace, in ease—he does not even dream of me—he does not care how the cold pierces, or how the people persecute me! He does not thank me for all the lavish love I have borne him and his child! His heart is so hard, he does not even recollect that it was he who brought me to ruin."

Had these miseries, common to the unhappy prostitute, been alone the punishment of Agnes—had her crimes and sufferings ended in distress like this—her story had not, perhaps, been selected for a public recital; for it had been no other than the customary history of thousands of her sex. But Agnes had a destiny yet more fatal. Unhappily, she was endowed with a mind so sensibly alive to every joy, and every sorrow, to every mark of kindness, every token of severity, so liable to excess in passion, that, once perverted, there was no degree of error from which it would revolt.

Taught by the conversation of the dissolute peas, with whom she now associated, or by her own observation on the worldly reward of elevated villany,

she began to suspect that dishonesty was only held a sin to secure the property of the rich; and that, to take from those who did not want, by the art of stealing, was less guilt than to take from those who did want, by the power of the law.

By false yet seducing opinions such as these, her reason estranged from every moral and religious tie, her necessities urgent, she reluctantly accepted the proposal to mix with a band of practised sharpers and rascals, and became an accomplice in negotiating bills forged on a country banker.

But though ingenious in arguments to excuse the deed before its commission, in the act she had ever the dread of some incontrovertible statement on the other side of the question. Intimidated by this apprehension, she was the veriest bungler in her vile profession—and on the alarm of being detected, while every one of her confederates escaped and absconded, she alone was seized, was arrested for issuing notes they had fabricated, and committed to the provincial gaol, about fifty miles from London, where the crime had been perpetrated, to take her trial for—life or death.

The day at length is come on which Agnes shall have a sight of her beloved William! She who has watched for hours near his door, to procure a glimpse of him going out, or returning home; who has walked miles to see his chariot pass; she now will behold him, and he will see her by command of the laws of their country. Those laws, which will deal with rigour towards her, are in this one instance still indulgent.

The time of the assizes, at the county-town in which she is imprisoned, is arrived—the prisoners are demanded at the shire hall—the gaol doors are opened—they go in sad procession—the trumpet sounds—it speaks the arrival of the judge—and that judge is William.

The day previous to her trial, Agnes had read, in the printed calendar of the prisoners, his name as the learned justice before whom she was to appear. For a moment she forgot her perilous state in the excess of joy which the still unconquerable love she bore to him permitted her to taste even on the brink of the grave! After reflection made her check those worldly transports, as unfit for the present solemn occasion. But, alas! to her, earth and William were so closely united, that, till she forsook the one, she could never cease to think, without the contending passions of hope, of fear, of joy, of love, of shame, and of despair, on the other.

Now fear took place of her first immoderate joy:—she feared, that although much changed in person since he had seen her, and her real name now added to many an *alias*—yet she feared that some well-known glance of the eye, turn of the action, or accent of speech, might recall her to his remembrance; and at that idea shame overcame all her other sensations—for still she retained pride, in respect to his opinion, to wish him not to know Agnes was that wretch she felt she was. Once a ray of hope beamed on her, that if he knew her, if he recognized her, he might possibly befriend her cause; and life, bestowed through William's friendship, seemed a precious object! But again, that rigorous honour she had often heard him boast, that firmness to his word, of which she had fatal experience, taught her to know he would not, for any improper compassion, any unmanly weakness, forfeit his oath of impartial justice. In meditations such as these she passed the sleepless night.

When, in the morning, she was brought to the bar, and her guilty land held up before the righteous judgment-seat of William, imagination could not form two figures, or two situations more incompatible with the existence of former familiarity, than the judge and the culprit; and yet these very persons had passed together the most blissful moments that either ever tasted! Those hours of tender dalliance were now present to her mind. His thoughts were more nobly employed in his high office; nor could the haggard face, hollow eye, desponding countenance, and meagre person of the poor prisoner, once call to his memory, though her name was uttered amongst a list of others which she had assumed, his former youthful, lovely Agnes!

She heard herself arraigned, with trembling limbs and downcast looks; and many witnesses had appeared against her before she ventured to lift her eyes up to her awful judge. She then gave one fearful glance, and discovered William, unpitied but beloved William, in every feature! It was a face she had been used to look on with delight; and a kind of absent smile of gladness now beamed on her poor wan visage.

When every witness on the part of the prosecutor had been examined, the judge addressed himself to her:

"What defence have you to make?"

It was William spoke to Agnes! The sound was sweet; the voice was mild, was soft, compassionate, encouraging! It almost charmed her to a love of life!—not such a voice as when William last addressed her; when he left her undone, vowing never to see or speak to her more.

She could have hung upon the present words for ever! She did not call to mind that this gentleness was the effect of practice, the art of his occupation; which, at times, is but a copy, by the unfeeling, from his benevolent brethren of the bench. In the present judge, tenderness was not designed for the consolation of the culprit, but for the approbation of the auditors.

There were no spectators, Agnes, by your side, when last he parted from you as if there had, the awful William had been awed to marks of pity.

Stunned by the enchantment of that well-known tongue directed to her, she stood like one just petrified—all vital power seemed suspended. Again he put the question, and with these additional sentences, tenderly and emphatically delivered:

"Recollect yourself. Have you no witnesses—no proof in your behalf?"

A dead silence followed these questions.

He then mildly, but forcibly, added:—"What have you to say?"

Here a flood of tears burst from her eyes, which she fixed earnestly upon him, as if pleading for mercy, while she faintly articulated:—"Nothing, my Lord."

After a short pause, he asked her, in the same forcible but benevolent tone:—"Have you no one to speak to your character?"

The prisoner answered,—“No.”

A second gush of tears followed this reply, for she called to mind by whom her character had first been blasted. He summed up the evidence; and every time he was compelled to press hard upon the proofs against her, she shrunk, and seemed to stagger with the deadly blow—withered under the weight of his minute justice more than from the prospect of a shameful death.

The jury consulted but a few minutes. The verdict was,—“Guilty.”

She heard it with composure. But when William placed the fatal velvet on his head, and rose to pronounce her sentence, she started with a kind of convulsive motion—retreated a step or two back,—and, lifting up her hands, with a scream exclaimed,—“Oh, not from you!”

The piercing shriek which accompanied these words prevented their being heard by part of the audience; and those who heard them thought little of their meaning, more than that they expressed her fear of dying.

Serene and dignified, as if no such exclamation had been uttered, William delivered the fatal speech, ending with “Dead! dead! dead!”

She fainted as he closed the period, and was carried back to prison in a swoon; while he adjourned the court to go to dinner.

## CHAPTER XIX.

If, unaffected by the scene he had witnessed, William sat down to dinner with an appetite, let not the reader conceive that the most distant suspicion had struck his mind, of his ever having seen, much less familiarly known, the poor offender whom he had just condemned. Still this forgetfulness did not proceed from the want of memory for Agnes. In every peevish or heavy hour passed with his wife, he was sure to think of her: yet it was self-love, rather than love of her, that gave rise to these thoughts: he felt the lack of female sympathy and tenderness, to soften the fatigue of studious labour; to soothe a sullen, a morose disposition—he felt he wanted comfort for himself, but never once considered what were the wants of Agnes.

In the chagrin of a barren bed, he sometimes thought, too, even on the child that Agnes bore him; but whether it were male or female, whether a beggar in the streets, or dead—various and important public occupations forbade him to waste time to inquire. Yet the poor, the widow, and the orphan, frequently shared William's ostentatious bounty. He was the president of many excellent charities; gave largely; and sometimes instituted benevolent societies for the unhappy; for he delighted to load the poor with obligations, and the rich with praise.

There are persons like him, who love to do every good but that which their immediate duty requires. There are servants who will serve every one more cheerfully than their masters: there are men who will distribute money liberally to all except their creditors; and there are wives who will love all mankind better than their husbands. Duty is a familiar word, which has little effect upon an ordinary mind; and as ordinary minds make a vast majority, we have acts of generosity, valour, self-denial, and bounty, where smaller pains would constitute greater virtues. Had William followed the common dictates of charity—had he adopted private pity, instead of public munificence—had he cast an eye at home, before he sought abroad for objects of compassion, Agnes had been preserved from an ignominious death, and he had been preserved from—*Remorse*—the tortures of which he for the first time proved, on reading a printed sheet of paper, accidentally thrown in his way, a few days after he had left the town in which he had condemned her to die.

“March the 12th, 179—

“The last dying words, speech, and confession; birth, parentage, and education; life, character, and behaviour, of Agnes Primrose, who was executed this morning, between the hours of ten and twelve, pursuant to the sentence passed upon her by the Honourable Justice Norwynne.

“Agnes Primrose was born of honest parents, in the village of Anfield, in the county of ———— [William started at the name of the village and county];—“but being led astray by the arts and flattery of seducing man, she fell from the path of virtue, and took to bad company, which instilled into her young heart all their evil ways, and at length brought her to this untimely end. So she hopes her death will be a warning to all young persons of her own sex, how they listen to the praises and courtship of young men, especially of those who are their betters; for they only court to deceive. But the said Agnes freely forgives all persons who have done her injury, or given her sorrow, from the young man who first won her heart, to the jury who found her guilty, and the judge who condemned her to death.

“And she acknowledges the justice of her sentence, not only in respect of the crime for which she suffers, but in regard to many other heinous sins of which she has been guilty, more especially that of once attempting to commit a murder upon her own helpless child; for which guilt she now considers the vengeance of God has overtaken her, to which she is patiently resigned, and departs in peace and charity with all the world, praying the Lord to have mercy on her parting soul.”

## “POSTSCRIPT TO THE CONFESSION.

“So great was this unhappy woman's terror of death, and the awful judgment that was to follow, that when sentence was pronounced upon her, she fell into a swoon, from that into convulsions, from which she never entirely recovered, but was delicious to the time of her execution, except that short interval in which she made her confession to the clergyman who attended her. She has left one child, a youth about sixteen, who has never forsaken

his mother during all the time of her imprisonment, but waited on her with true filial duty; and no sooner was her fatal sentence passed, than he began to droop, and now lies dangerously ill near the prison from which she is released by death. During the loss of her senses, the said Agnes Primrose raved continually on this child; and, asking for pen, ink, and paper, wrote an incoherent petition to the judge, recommending the youth to his protection and mercy. But notwithstanding this insanity, she behaved with composure and resignation, when the fatal morning arrived in which she was to be launched into eternity. She prayed devoutly during the last hour, and seemed to have her whole mind fixed on the world to which she was going. A crowd of spectators followed her to the fatal spot, most of whom returned weeping at the recollection of the fervency with which she prayed, and the impression which her dreadful state seemed to make upon her.

No sooner had the name of “Anfield” struck William, than a thousand reflections and remembrances flashed on his mind, to give him full conviction whom it was he had judged and sentenced. He recollected the sad remains of Agnes, such as he once had known her; and now he wondered how his thoughts could have been absent from an object so pitiable, so worthy of his attention, as not to give him even a suspicion who she was, either from her name, or from her person, during the whole trial.

But wonder, astonishment, horror, and every other sensation, was absorbed by—*Remorse*:—it wounded, it stabbed, it rent his hard heart, as it would do a tender one. It harked on his firm, inflexible mind, as it would on a weak and pliant brain. Spirit of Agnes! look down, and behold all your wrongs revenged! William feels—*Remorse*.

A few momentary cessations from the pangs of a guilty conscience were given to William, as soon as he had despatched a messenger to the goal in which Agnes had been confined, to inquire after the son she had left behind, and to give orders that immediate care should be taken of him. He likewise charged the messenger to bring back the petition she had addressed to him during her supposed insanity; for he now experienced no trivial consolation in the thought that he might possibly have it in his power to grant her a request.

The messenger returned with the written paper, which had been considered by the persons to whom she had intrusted it, as the distracted dictates of an insane mind; but proved to William, beyond a doubt, that she was perfectly in her senses.

## “TO LORD CHIEF JUSTICE NORWYNNE.

“MY LORD,—

“I am Agnes Primrose, the daughter of John and Hannah Primrose, of Anfield. My father and mother lived by the hill at the side of the little brook where you used to fish, and so first saw me.

“Pray, my lord, have mercy on my sorrows; pity me for the first time, and spare my life. I know I have done wrong—I know it is presumption in me to dare to apply to you, such a wicked and mean wretch as I am; but, my lord, you once condescended to take notice of me—and though I have been very wicked since that time, yet if you would be so merciful as to spare my life, I promise to amend it for the future. But if you think it proper I should die, I will be resigned; but then I hope, I beg, I supplicate, that you will grant my other petition. Pray, pray, my lord, if you cannot pardon me, be merciful to the child I leave behind. What he will do when I am gone, I don't know,—for I have been the only friend he has had ever since he was born. He was born, my lord, about sixteen years ago, at Anfield, one summer's morning, and carried by your cousin Mr. Henry Norwynne, to Mr. Rymer's, the curate there,—and I swore whose child he was before the dean, and I did not take a false oath. Indeed, indeed, my lord, I did not.

“I will say no more, for fear this should not come safe to your hand, for the people treat me as if I were mad. So I will say no more, only this, that whether I live or die, I forgive everybody, and I hope everybody will forgive me; and I pray that God will take pity on my son, if you refuse; but I hope you will not refuse.

“AGNES PRIMROSE.”

William rejoiced, as he laid down the petition, that she had asked a favour he could bestow; and hoped, by his protection of the son, to redress, in some degree, the wrongs he had done the mother. He instantly sent for the messenger into his apartment, and impatiently asked, “If he had seen the boy, and given proper directions for his care.”

“I have given directions, sir, for his funeral.”

“How?” cried William.

“He pined away ever since his mother was confined, and died two days after her execution.”

Robbed, by this news, of his only gleam of consolation—in the consciousness of having done a mortal injury for which he never now by any means could atone, he saw all his honours, all his riches, all his proud selfish triumphs fade before him! They seemed like airy nothings, which in rapture he would exchange for the peace of a tranquil conscience!

He envied Agnes the death to which he first exposed, then condemned her; he envied her even the life she struggled through from his neglect, and felt that his future days would be far less happy than her former existence. He calculated with precision.

The progressive rise of William and fall of Agnes, had now occupied nearly the term of eighteen years. Added to these, another year elapsed before the younger Henry completed the errand on which his heart was fixed, and returned to England. Shipwreck, imprisonment, and other ills to which the poor and unfriended traveller is peculiarly exposed, detained the father and son in various remote regions until the present period; and for the

fifteen years, denied them the means of all correspondence with their own country.

The elder Henry was now past sixty years of age, and the younger almost beyond the prime of life. Still length of time had not diminished, but rather had increased their anxious longings for their native home.

The sorrows, disappointments, and fatigues, which, throughout these tedious years were endured by the two Henrys, are of that dull, monotonous kind of suffering, better omitted than described; mere repetitions of the exile's woes, that shall give place to the transporting joy of return from banishment! Yet, often as the younger had reckoned, with impatient wishes, the hours which were passed distant from her he loved, no sooner was his disastrous voyage at an end, no sooner had his feet trod upon the shore of Britain, than a thousand wounding fears made him almost doubt whether it were happiness or misery he had obtained by his arrival. If Rebecca were living, he knew it must be happiness: for his heart dwelt with confidence on her faith—her unchanging sentiments. But death might possibly have ravished from his hopes what no mortal power could have done. And thus the lover creates a rival in every ill, rather than suffer his fears to remain inanimate.

The elder Henry had less to fear or to hope than his son; yet he both feared and hoped with a sensibility that gave him great anxiety. He hoped his brother would receive him with kindness, after his long absence, and once more take his son cordially to his favour. He longed impatiently to behold his brother; to see his nephew; nay, in the ardour of the renewed affection he just now felt, he thought even a distant view of Lady Clementina would be grateful to his sight! But still, well remembering the pomp, the state, the pride of William, he could not rely on his affection, so much he knew that it depended on external circumstances to excite or to extinguish his love. Not that he feared an absolute repulsion from his brother; but he feared what to a delicate mind is still worse, reserved manners, cold looks, absent sentences, and all that cruel retinue of indifference with which those who are beloved so often wound the bosom that adores them.

By inquiring of their countrymen (whom they met as they approached the end of their voyage) concerning their relation the dean, the two Henrys learned that he was well, and had for some years past been exalted to the bishopric of ——. This news gave them joy, while it increased their fear of not receiving an affectionate welcome.

The younger Henry, on his landing, wrote immediately to his uncle, acquainting him with his father's arrival in the most abject state of poverty; he addressed his letter to the bishop's country residence, where he knew, as it was the summer season, he would certainly be. He and his father then set off on foot towards that residence—a palace.

The bishop's palace was not situated above fifty miles from the port where they had landed; and at a small inn, about three miles from the bishop's, they proposed (as the letter to him intimated) to wait for his answer, before they intruded into his presence.

As they walked on their solitary journey, it was some small consolation that no creature knew them.

"To be poor and ragged, father," the younger smilingly said, "is no disgrace, no shame, thank Heaven, where the object is not known."

"True, my son," replied Henry: "and perhaps I feel myself much happier now, unknowing and unknown to all but you, than I shall in the presence of my fortunate brother and his family: for there, confusion at my ill success through life may give me greater pain, than even my misfortunes have inflicted."

After uttering this reflection, which had preyed upon his mind, he sat down on the road-side to rest his agitated limbs, before he could proceed farther. His son reasoned with him—gave him courage; and now his hopes preponderated, till after two days' journey, on arriving at the inn where an answer from the bishop was expected, no letter, no message, had been left.

"He means to renounce us," said Henry, trembling, and whispering to his son.

Without disclosing to the people of the house who they were, or from whom the letter or the message they inquired for was to have come, they retired, and consulted what steps they were now to pursue.

Previously to his writing to the bishop, the younger Henry's heart, all his inclinations, had swayed him towards a visit to the village in which was his uncle's former country seat—the beloved village of Anfield; but respect to him, and duty to his father, had made him check those wishes: now they revived again; and with the image of Rebecca before his eyes, he warmly entreated his father to go with him to Anfield, at present only thirty miles distant, and thence write once more—then again wait the will of his uncle.

The father consented to this proposal, even glad to postpone the visit to his dignified brother.

After a scanty repast, such as they had been long injured to, they quitted the inn, and took the road towards Anfield.

It was about five in the afternoon of a summer's day, that Henry and his son left the sign of the Mermaid, to pursue their third day's journey: the young man's spirits elated with the prospect of the reception he should meet from Rebecca; the elder dejected, at not having received a speedy welcome from his brother.

The road which led to Anfield by the shortest course, of necessity took our travellers within sight of the bishop's palace. The turrets appeared at a distance; and on the sudden turn round the corner of a large plantation, the whole magnificent structure was at once exhibited before his brother's astonished eyes! He was struck with the grandeur of the habitation; and totally forgetting all the unkind, the contemptuous treatment he had ever received from its owner (like the same Henry in his earlier years), smiled with a kind of transport that William was so great a man.

After this first joyous sensation was over, "Let us go a little nearer, my son," said he; "no one will see us, I hope; or, if they should, you can run and conceal yourself; and not a creature will know me; even my brother would not know me thus altered; and I wish to take a little farther view of his fine house, and all his pleasure-grounds."

Young Henry, though impatient to be gone, would not object to his father's desire. They walked forward between a shady grove and a purling rivulet, snuffed in odours from the jessamine banks, and listened to the melody of an adjoining aviary.

The allurements of the spot seemed to enchain the elder Henry, and he at length sauntered to the very avenue of the dwelling; but just as he had set his daring, yet trembling feet upon the turf which led to the palace gates, he suddenly stopped, on hearing, as he thought, the village clock strike seven; which reminded him that evening drew on, and it was time to go. He listened again, when he and his son, both together, said, "It is the toll of the bell before some funeral."

The signals of death, while they humble the rich, inspire the poor with pride. The passing bell gave Henry a momentary sense of equality, and he courageously stepped forward to the first winding of the avenue.

He started back at the sight which presented itself!

A hearse—mourning coaches—mutes—plumed horses—with every other token of the person's importance, who was going to be committed to the earth.

Scarcely had his terrified eyes been thus unexpectedly struck, when a coffin borne by six men issued from the gates, and was deposited in the waiting receptacle; while gentlemen in mourning went into the different coaches.

A standard-bearer now appeared with an escutcheon, on which the keys and mitre were displayed. Young Henry, upon this pathetically exclaimed, "My uncle! it is my uncle's funeral!"

Henry, his father, burst into tears.

The procession moved along.

The two Henrys, the only real mourners in the train, followed at a little distance—in rags, but in tears.

The elder Henry's heart was nearly bursting: he longed to clasp the dear remains of his brother, without the dread of being spurned for his presumption. He now could no longer remember him either as the dean or bishop; but, leaping over that whole interval of pride and arrogance, called only to his memory William, such as he knew him when they lived at home together, together walked to London, and there together almost perished for want.

They arrived at the church: and, while the coffin was placing in the dreary vault, the weeping brother crept slowly after to the hideous spot. His reflections now fixed on a different point.

"Is this possible?" said he to himself. "Is this the dean, whom I ever feared? Is this the bishop of whom, within the present hour, I stood in awe? Is this William, whose every glance struck me with his superiority? Alas, my brother! and is this horrid abode the reward for all your aspiring efforts? Are these sepulchral trappings the only testimonies of your greatness, which you exhibit to me on my return? Did you foresee an end like this, while you treated me, and many more of your youthful companions, with haughtiness and contempt; while you thought it becoming of your dignity to shun and despise us? Where is the difference now, between my departed wife and you? or, if there be a difference, she, perchance, has the advantage. Ah, my poor brother! for distinction in the other world, I trust, some of your anxious labours have been employed; for you are now of less importance in this than when you and I first left our native town, and hoped for nothing greater than to be suffered to exist."

On their quitting the church, they inquired of the by-standers the immediate cause of the bishop's death, and heard he had been suddenly carried off by a raging fever.

Young Henry inquired if Lady Clementina was at the palace, or Mr. Norwynne?

"The latter is there," he was answered by a poor woman; "but Lady Clementina has been dead these four years."

"Dead! dead!" cried young Henry. "That worldly woman! quitted this world for ever!"

"Yes," answered the stranger: "she caught cold, by wearing a new-fashioned dress that did not half cover her, wasted all away, and died the miserablest object you ever heard of."

The person who gave this melancholy intelligence concluded it with a hearty laugh; which would have surprised the two hearers, if they had not before observed that amongst all the village crowd that attended to see this solemn show, not one afflicted countenance appeared, not one dejected look, not one watery eye. The pastor was scarcely known to his flock; it was in London that his meridian lay, at the levee of ministers, at the table of peers, at the drawing-rooms of the great; and now his neglected parishioners paid his indifference in kind.

The ceremony over, and the mourning suite departed, the spectators dispersed with gibes and jeering faces from the sad spot; while the Henrys, with heavy hearts, retraced their steps back towards the palace. In their way, at the crossing of a stile, they met a poor labourer returning from his day's work; who, looking earnestly at the throng of persons who were leaving the churchyard, said to the elder Henry,—

"Pray, master, what are all them folk gathered together about? What's the matter there?"

"There has been a funeral," replied Henry.

"Oh, zooks! what! a burying—ay, now I see it is; and I warrant of our old bishop—I heard he was again ill. It is he they have been putting into the ground! is not it?"

"Yes," said Henry.

"Why, then, so much the better."

"The better!" cried Henry.

"Yes, master; though I should loath to be where he is now."

Henry started—

"He was your pastor, man."

"Ha, ha, ha! I should be sorry that my master's sheep, that are feeding yonder, should have no better pastor—the fox would soon get them all."

"You surely did not know him?"

"Not much, I can't say I did; for he was above speaking to poor folks, unless they did any mischief—and then he was sure to take notice of them."

"I believe he meant well," said Henry.

"As to what he meant, God only knows; but I know what he did."

"And what did he?"

"Nothing at all for the poor."

"If any of them applied to him, no doubt—"

"Oh, they knew better than all that comes to; for, if they asked for anything, he was sure to have them sent to Bridewell or the workhouse. He used to say, 'The workhouse was a fine place for a poor man—the foul good enough, and enough of it;' yet he kept a dainty table himself. His dogs, too, fared better than the poor. He was vastly tender and good to all his horses and dogs, I will say that for him; and to all brute beasts: he would not suffer them to be either starved or struck—but he had no compassion for his fellow-creatures."

"I am sensible you do him wrong."

"That he is the best judge of by this time. He has sent many a poor man to the house of correction; and now 't is well if he has not got a place there himself. Ha, ha, ha!"

The man was walking away, when Henry called to him,

"Pray can you tell me if the bishop's son be at the palace?"

"Oh, yes, you'll find master there, treading in the old man's shoes, as proud as Lucifer."

"Has he any children?"

"No, thank God! There's been enow of the name; and, after the son is gone, I hope we shall have no more of the breed."

"Is Mrs. Norwynne, the son's wife, at the palace?"

"What, master! did not you know what's become of her?"

"Any accident?"

"Ha, ha, ha! yes. I can't help laughing—why, master, she made a mistake, and went to another man's bed—and so her husband and she were parted,—and she has married the other man."

"Indeed!" cried Henry, amazed.

"Ay, indeed; but if it had been my wife, or yours, the bishop would have made her do penance in a white sheet: but, as it was a lady, why, it was all very well—and any one of us that had been known to talk about it would have been sent to Bridewell straight. But we did talk, notwithstanding."

The malicious joy with which the peasant told this story, made Henry believe (more than all the complaints the man uttered) that there had been a want of charity and Christian deportment in the whole conduct of the bishop's family. He almost wished himself back on his savage island, where brotherly love could not be less than it appeared to be in this civilised country.

## CHAPTER XX.

As Henry and his son, after parting from the poor labourer, approached the late bishop's palace, all the charms of its magnificence, its situation, which, but a few hours before, had captivated the elder Henry's mind, were vanished; and, from the mournful ceremony he had since been witness of, he now viewed this noble edifice but as a heap of rubbish piled together, to fascinate weak understandings, and to make even the wise and religious man, at times, forget why he was sent into this world.

Instead of presenting themselves to their nephew and cousin, they both felt an unconquerable reluctance to enter under the superb, the melancholy roof. A bank, a hedge, a tree, a hill, seemed at this juncture, a pleasanter shelter; and each felt himself happy in being a harmless wanderer on the face of the earth, rather than living in splendour, while the wants, the revilings of the hungry and the naked, were crying to Heaven for vengeance.

They gave a heartfelt sigh to the vanity of the rich and the powerful; and pursued a path where they hoped to meet with virtue and happiness.

They arrived at Anfield.

Possessed by apprehensions, which his uncle's funeral had served to increase, young Henry, as he entered the well-known village, feared every sound he heard would convey information of Rebecca's death. He saw the parsonage-house at a distance, but dreaded to approach it, lest Rebecca should no longer be an inhabitant. His father indulged him in the wish to take a short survey of the village, and rather learn by indirect means, by observation, his fate, than hear it all at once from the lips of some blunderer.

Anfield had undergone great changes since Henry left it. He found some cottages built where formerly there were none; and some were no more where he had frequently called, and held short conversations with the poor who dwelt in them. Amongst the latter number was the house of the parents of Agnes—fallen to the ground! He wondered to himself where that poor family had taken up their abode. Henry, in a kinder world!

He once again cast a look at the old parsonage-house; his inquisitive eye

informed him there no alteration had taken place externally; but he feared what change might be within.

At length he obtained the courage to enter the churchyard, in his way to it. As he slowly and tremblingly moved along, he stopped to read here and there a gravestone; as mild, instructive conveyers of intelligence, to which he could attend with more resignation than to any other reporter.

The second stone he came to he found was erected "To the memory of the Rev. Thomas Rymer," Rebecca's father. He instantly called to mind all that poor curate's quick sensibility of wrong towards himself; his unbridled rage in consequence; and smiled to think how trivial now appeared all for which he gave way to such excess of passion.

But, shocked at the death of one so near to her he loved, he now feared to read on, and cast his eyes from the tomb, accidentally, to the church. Through the window of the chancel, his sight was struck with a tall monument of large dimensions, raised since his departure, and adorned with the finest sculpture. His curiosity was excited—he drew near, and he could distinguish (followed by elegant poetic praise), "To the memory of John, Lord Viscount Bendham."

Notwithstanding the solemn, melancholy, and anxious bent of Henry's mind, he could not read these words, and behold this costly fabric, without indulging a momentary fit of indignant laughter.

"Are sculpture and poetry thus debased," he cried, "to perpetuate the memory of a man whose best advantage is to be forgotten; whose no one action merits record, but as an example to be shunned?"

An elderly woman, leaning on her staff, now passed along the lane by the side of the church. The younger Henry accosted her, and ventured to inquire where the daughters of Mr. Rymer, since his death, were gone to live?

"We live," she returned, "in that small cottage across the clover field."

Henry looked again, and thought he had mistaken the word *we*; for he felt assured that he had no knowledge of the person to whom he spoke.

But she knew him, and, after a pause, cried—

"Ahl Mr. Henry, you are welcome back. I am heartily glad to see you—and my poor sister Rebecca will go out of her wits with joy."

"Is Rebecca living, and will be glad to see me?" he eagerly asked, while tears of rapture trickled down his face. "Father," he continued, in his ecstasy, "we are now come home to be completely happy; and I feel as if all the years I have been away were but a short week; and as if all the dangers I have passed had been light as air. But is it possible," he cried, to his kind informer, "that you are one of Rebecca's sisters?"

Well might he ask; for, instead of the blooming woman of seven-and-twenty he had left her, her colour was gone, her teeth impaired, her voice broken. She was near fifty.

"Yes, I am one of Mr. Rymer's daughters," she replied.

"But which?" said Henry.

"The eldest, and once called the prettiest," she returned: "though people now tell me I am altered; yet I cannot say I see it myself."

"And are you all living?" Henry inquired.

"All but one; she married and died. The other three, on my father's death, agreed to live together, and knit or spin for our support. So we took that small cottage, and furnished it with some of the parsonage furniture, as you shall see; and kindly welcome I am sure you will be to all it affords, though that is but little."

As she was saying this, she led him through the clover-field towards the cottage. His heart rebounded with joy that Rebecca was there: yet, as he walked, he shuddered at the impression which he feared the first sight of her would make. He feared what he imagined (till he had seen this change in her sister) he should never heed. He feared Rebecca would look no longer young. He was not yet so far master over all his sensual propensities, as, when the trial came, to think he could behold her look like her sister, and not give some evidence of his disappointment.

His fears were vain. On entering the gate of their little garden, Rebecca rushed from the house to meet them, just the same Rebecca as ever.

It was her mind, which, beaming on her face, and actuating her every motion, had ever constituted all her charms; it was her mind which had gained her Henry's affection. That mind had undergone no change; and she was the selfsame woman he had left her.

He was entranced with joy.

The fare which the Henrys partook at the cottage of the female Rymer was such as the sister had described—mean, and even scanty; but this did not in the least diminish the happiness they received in meeting, for the first time since their arrival in England, human beings who were glad to see them.

At a stinted repast of milk and vegetables, by the glimmering light of a little brushwood on the hearth, they yet could feel themselves comparatively blest, while they listened to the recital of afflictions which had befallen persons around that very neighbourhood, for whom every delicious viand had been procured to gratify the taste, every art devised to delight the other senses.

It was by the side of this glimmering fire, that Rebecca and her sisters told the story of poor Agnes's fate, and of the thorn it had for ever planted in William's bosom—of his reported sleepless, perturbed nights; and his gloomy, or half-distracted days; when, in the fullness of remorse, he has complained—of a guilty conscience! of the weariness attached to continual prosperity! the misery of wanting an object of affection!"

They told of Lord Bendham's death from the effects of intemperance; from a mass of blood infected by high-seasoned dishes, mixed with copious draughts of wine—repletion of food and liquor, not less fatal to the existence of the rich, than the want of common sustenance to the lives of the poor.

They told of Lady Benthams ruin since her lord's death, by gaming. They told "that now she suffered beyond the pain of common indigence, by the cutting triumph of those whom she had formerly despised."

They related (what has been told before) the divorce of William, and the marriage of his wife with a libertine; the decease of Lady Clementina, occasioned by that incorrigible vanity which even old age could not subdue.

After numerous other examples had been recited of the dangers, the evils that riches draw upon their owners, the elder Henry rose from his chair, and, embracing Rebecca and his son, said, "How much indebted are we to Providence, my children, who, while it inflicts poverty, bestows peace of mind; and in return for the trivial grief we meet in this world, holds out to our longing hopes the reward of the next!"

Not only resigned, but happy in their station, with hearts made cheerful rather than dejected by attentive meditation, Henry and his son planned the means of their future support, independent of their kinsman William—nor only of him, but of every person and thing but their own industry.

"While I have health and strength," cried the old man,—"and his son's looks acquiesced in all the father said,—"I will not take from any one in affluence what only belongs to the widow, the fatherless, and the infirm; for to such alone, by Christian laws—however custom may subvert them—the overplus of the rich is due."

## CHAPTER XXI.

By forming an humble scheme for their remaining life, a scheme depending upon their own exertions alone, on no light promises of pretended friends, and on no sanguine hopes of certain success, but with prudent apprehension, with fortitude against disappointment, Henry, his son, and Rebecca (now his daughter), found themselves, at the end of one year, in the enjoyment of every comfort which such distinguished minds knew how to taste.

Exempt both from patronage and from control—healthy—alive to every fruition with which nature blesses the world; dead to all out of their power to attain, the works of art—susceptible of those passions which endear human creatures one to another, insensible to those which separate man from man—they found themselves the thankful inhabitants of a small house or hut, placed on the borders of the sea.

Each morning wakes the father and the son to cheerful labour in fishing, or the tending of a garden, the produce of which they carry to the next market town. The evening sends them back to their home in joy, where Rebecca meets them at the door, affectionately boasts of the warm meal that is ready, and heightens the charm of conversation with her taste and judgment.

It was after a supper of roots from their garden, poultry that Rebecca's hand had reared, and a jug brewed by young Henry, that the following discourse took place:

"My son," said the elder Henry, "where, under heaven, shall three persons be met together, happy as we three are? It is the want of industry, or the want of reflection, which makes the poor dissatisfied. Labour gives a value to rest, which the idle can never taste; and reflection gives to the mind a degree of content, which the unthinking never can know."

"I once," replied the younger Henry, "considered poverty a curse; but after my thoughts became enlarged, and I had associated for years with the rich, and now mix with the poor, my opinion has undergone a total change—for I have seen, and have enjoyed, more real pleasure at work with my fellow-labourers, and in this cottage, than ever I beheld, or experienced, during my abode at my uncle's; during all my intercourse with the fashionable and the powerful of this world."

"The worst is," said Rebecca, "the poor have not always enough."

"Who has enough?" asked her husband. "Had my uncle? No: he hoped for more—and in all his writings sacrificed his duty to his avarice. Had his son enough, when he yielded up his honour, his domestic peace, to gratify his ambition? Had Lady Benthams enough, when she staked all she had, in the hope of becoming richer? Were we, my Rebecca, of discontented minds, we have now too little. But conscious, from observation and experience, that the rich are not so happy as ourselves, we rejoice in our lot."

The tear of joy which stole from her eye expressed, more than his words, a state of happiness.

He continued:—"I remember, when I first came a boy to England, the poor excited my compassion; but now that my judgment is matured, I pity the rich. I know that in this opulent kingdom, there are nearly as many persons perishing through intemperance, as starving with hunger; there are as many miserable in the lassitude of having nothing to do, as there are of those bowed down to the earth with hard labour; there are more persons who draw upon themselves calamity by following their own will, than there are who experience it by obeying the will of another. Add to this, that the rich are so much afraid of dying, they have no comfort in living."

"There the poor have another advantage," said Rebecca; "for they may defy not only death, but every loss by sea or land, as they have nothing to lose."

"Besides," added the elder Henry, "there is a certain joy, of the most gratifying kind that the human mind is capable of tasting, peculiar to the poor; and of which the rich can but seldom experience the delight."

"What can that be?" cried Rebecca.

"A kind word, a benevolent smile, one token of esteem from the person whom we consider as our superior."

To which Rebecca replied, "And the rarity of obtaining such a token is what increases the honour."

"Certainly," returned young Henry; "and yet those in poverty, un-

grateful as they are, murmur against that government from which they receive the blessing."

"But this is the fault of education, of early prejudice," said the elder Henry. "Our children observe us with respect, even reverence, to the wealthy, while we slight or despise the poor. The impression thus made on their minds in youth is indelible during the more advanced periods of life; and they continue to pine after riches, and lament under poverty: nor is the seeming folly wholly destitute of reason; for human beings are not yet so deeply sunk in voluptuous gratification, or childish vanity, as to place delight in any attainment which has not for its end the love or admiration of their fellow-beings."

"Let the poor, then," cried the younger Henry, "no more be their own persecutors—no longer pay homage to wealth—simultaneously the whole idolatrous worship will cease—the idol will be broken."

CONCLUSION.

## • THOMAS BABINGTON MACAULAY.

Few men have occupied a more distinguished position in literature, or displayed greater ability in the various characters of historian, essayist, and poet, than the subject of this memoir. To enter into the details of a life consecrated to study, and still actively engaged in disseminating high principles of intelligence, would exceed the limits to which we are necessarily confined; a few observations on the career and the productions of Mr. Macaulay must therefore suffice. He was born in 1800, and received his early education at Trinity College, Cambridge, where he gave promise of the intellectual eminence to which he has attained. His father, Zachary Macaulay, was a rich merchant, whose commercial prosperity was greatly interested in the African trade, but who, nevertheless, zealously and actively advocated the abolition of slavery, against his own pecuniary advantage. In the year 1822, Mr. Macaulay received his bachelor's degree and a fellowship, and after a brilliant university campaign, applied himself to the law and became a barrister. The grave duties of his profession did not, however, prevent him from pursuing the more interesting, and probably more congenial pursuits of literature, and his "Essay on Milton," contributed to the *Edinburgh Review*, 1826, was the commencement of a series of admirable critical writings, which have justly received the ovation of popularity. The political bias of Mr. Macaulay inclining him to the Whigs, he was speedily invited to join the ranks of that party in Parliament, and he rendered them important services by his effective powers as a public orator. He was appointed a Commissioner of Bankrupts, and in 1834 became Secretary to the India Board. Mr. Macaulay has since rendered valuable services in the Senate, and is generally considered one of its most prominent members.

It was during his college days that the true poetic instinct became evinced to the world by the publication of an admirable heroic ballad, "The War of the League." He afterwards contributed a series of poems, entitled "Lays of the Roundheads," in *Knight's Quarterly Magazine*, a periodical of which Professor Wilson is said to have declared that its four or five volumes were equal in talent to anything in periodical literature.

"The Lays of Ancient Rome," the latest poetical production of Mr. Macaulay, impressed with the broad stamp of genius, at once elevated him into the foremost ranks of the "inspired few." Mr. Gilfillan, in his admirable "Gallery of Literary Portraits," says,—

"These, when published, took the majority of the public by surprise, who were nearly as astonished at this late flowering of poetry in the celebrated critic, as were the Edinburgh people, more recently, at the portentous tidings that Patrick Robertson, also, was among the poets. The initiated, however, acquainted with his previous effusions, hailed the phenomenon (not, as in Patrick's case, with shouts of spurling laughter), but with bursts of applause, which the general voice more than confirmed. The day when the 'Lays' appeared, though deep in autumn, seemed a belated dog-day, so frantic did their admirers become. Homer, Scott, Wordsworth, and Byron, were now to hide their diminished heads, for an old friend under a new face had arisen to eclipse them all. And, for martial spirit, we are free to confess the 'Lays' have never been surpassed, save by Homer, Scott, and by Burns, whose quo epithet, 'red wat shod,' whose one description of the dying Scotch soldier in the 'Earnest Cry,' and whose one song, 'Go fetch for me a pint of wine,' are enough to stamp him among the foremost of martial poets. Written, it is said, in the War-office, the Genius of Battle might be figured bending over the author, sternly smiling on her last poet, and shedding from her wings a ruddy light upon its rapidly and furiously-filling page."

Mr. Macaulay is now engaged upon the great work which has added fresh laurels to his fame—"The History of England," two volumes of which have already appeared, and have excited the eager anticipations of the public.

Many and varied have been the opinions expressed on the peculiar genius of Macaulay; but we cannot do better than quote those of the critic above-mentioned, who, in speaking of the contributions to the *Edinburgh Review*, observes:—

"We confess that, had we been called on while new from reading those productions, our verdict on them would have been much more enthusiastic. Their immediate effect is absolutely intoxicating. Each reads like a new Waverley tale. 'More—give us more—it is divine!' we cry, like the Cyclops when he tasted of the wine of Outis. As Pitt adjourned the court after Sheridan's Begum's speech, so, in order to judge fairly, we are compelled to adjourn the criticism. Days even have to elapse ere the stern question begins slowly to lift up its head—'What have you gained? Have you only risen

from a more refined "Noctes Ambrosianæ"? Have you only been conversing with an elegant artist? or has a prophet been detaining you in his terrible grasp? or has Apollo been touching your trembling ears? As we answer, we almost blush, remembering our tame and sweet subjection; and yet the moment that the enchantment again assails us, it again is certain to prevail.

"But what is the explanation of this power? Is it altogether magical, or does it admit of analysis? Macaulay's writings have one very peculiar and very popular quality. They are eminently clear. You can read them as you run. Schoolboys devour them with as much zest as bearded men. This clearness is, we think, connected with deficiency in his speculative and imaginative faculties; but it does not so appear to the majority of readers. Walking in an even and distinct pathway, not one stumbling-stone or alley of gloom in its whole course, no Hill of Difficulty rising, nor Path of Danger diverging, greeted, too, by endless vistas of interest and beauty, all are but too glad, and too grateful, to get so trippingly along. Vanity, also, whispers to the more ambitious—'What we can so easily understand we could easily equal;' and thus are the readers kept on happy terms both with the author and themselves. His writings have all the stimulus of oracular decision, without one particle of oracular darkness. His papers, too, are thickly studded with facts. This itself, in an age like ours, is enough to recommend them, especially when these facts are so carefully selected—when told now with emphasis so striking, and now with negligence so graceful; and when suspended around a theory at once dazzling and slight—at once paradoxical and pleasing. The reader, beguiled, believes himself reading something more agreeable than history, and more veracious than fiction. It is a very waltz of facts that he witnesses; and yet how consoling to reflect that they are facts after all! Again, Macaulay, as we have repeatedly hinted, is given to paradoxes. But then these paradoxes are so harmless, so respectable, so well-behaved—his originalities are so orthodox—and his mode of expressing them is at once so strong and so measured—that people feel both the tickling sensation of novelty and a perfect sense of safety, and are slow to admit that the author, instead of being a bold, is a timorous thinker, one of the literary as well as political *juste-milieu*. Again, his manner and style are thoroughly English. As his sympathies are, to a great degree, with English modes of thought and habits of action, so his language is a stream of English undiluted. All the territories which it has traversed have enriched, without colouring, its waters. Even the most valuable of German refinements—such as that common one of subjective and objective—are sternly shied. That philosophic diction which has been from Germany so generally transplanted, is denied admittance into Macaulay's grounds, exciting a shrewd suspicion that he does not often require it for philosophical purposes. Scarcely a phrase or word is introduced which Swift would not have sanctioned. In anxiety to avoid a barbarous and mosaic diction, he goes to the other extreme, and practises purism and elaborate simplicity. Perhaps, under a weightier burden, like Charon's skill, such a style might break down; but, as it is, it floats on, and carries the reader with it, in all safety, rapidity, and ease. Again, this writer has—apart from his clearness, his United paradox, and his English style—a power of interesting his readers which we may call, for want of a more definite term, tact. This art he has taught himself gradually; for in his earlier articles, such as that on 'Milton,' and the 'Present Administration,' there were a prodigality and a recklessness—a prodigality of image and a recklessness of statement—which argued an impulsive nature, not likely so soon to subside into a tactician. Long ago, however, is all this over. Now he can set his elaborate passages at proper distances from each other; he peppers his pages more sparingly with the condiments of metaphor and image; and interposes anecdotes to break the blaze of his splendour."

## THE OLD QUEEN.

In a small but magnificent cabinet at Hampton-court, sat Elizabeth, the stern old monarch of England. Upon her forehead—darkening the furrows of age—a frown lowered ominously. Her eyes were vivid in their expression, and her thin lips clung together with the tenacity of stern and long-endured passion—the iron passion of age, in which there is so much pain.

Around her was everything beautiful and costly, enough to gratify even her queenly pride and fastidious taste; hangings of rare old tapestry—cushions glowing with crimson and gold—ebony tables carved to a network and wove over with gold, supporting vases and caskets of the same precious metal, in which the royal jewels were occasionally flung—birds of Paradise, preserved in all the brilliancy of their flowing plumage—and many a rare curiosity from the East filled the royal cabinet. A Persian carpet, gorgeous with arabesque and flowers, covered a small portion of the floor, and upon this stood the great ebony chair, cushioned with purple velvet, in which the old Queen was seated. The light from a large crystal window fell upon her wrinkled brow, shaded, not by the cold and wintry gray of age, but with false ringlets of sunny gold, surmounted by a small crown. Over her bowed but still majestic figure a robe of glowing crimson fell, wave after wave, till it lay a mass of mingled velvet, ermine and jewels, over the cushion on which her foot was pressed. Her withered neck, and the small pale hand, that rested on the arm of her chair, were one blaze of jewels that only kindled up the ravages of time they were intended to conceal. Before her stood a small cabinet of silver, encrusted with a Mosaic of precious stones, whereon lay a jewelled pen and a roll of vellum that seemed to have been freshly written upon.

Everything in the palace seemed moving on with the slow and regular magnificence that always surrounded the Queen. Through an open door which led to the antechamber of her withdrawing-room, several pages and yeomen of the guard, in their crimson vestments and golden roses, were moving about with the listless and indifferent air of persons on easy duties. Beyond might be seen the maids of honour and ladies in attendance, gliding through the gorgeous apartments with that hushed and reverential manner which always bespoke their close neighbourhood to royalty. But now even more than usual silence prevailed among the high-born beauties. Many a wistful glance was cast through the open door, and the colour paled on each fair cheek, as the old Queen sat with that stern frown upon her features, gazing upon the roll of parchment that her minister, Cecil, had just brought for her signature. She reached forth her hand, took up the parchment, and slowly unrolling it, began to read. The light lay broad upon her face, and those who gazed upon it saw that a slight change fell upon her features. Some memory seemed busy with her heart, and, heaving a deep sigh, she laid the parchment down upon the cabinet; and while her hand rested on the edge, allowed it to roll together again, while she fell into a deep thought.

All at once, Elizabeth seemed to remember that she was not entirely alone. The form that had been gradually bowed, as with oppressing thought, was straightway uplifted. She turned her eagle eyes upon the door, and rising, swept across the room, and closed it with her own hand. And now her aged features were sorely troubled; alternate flashes of fierce passion, and tenderness that seemed almost as wild, shot from her eyes. Great emotion swept aside the infirmities of age for a moment, and she paced the floor of her cabinet with a quick and imperious tread that had been so conspicuous in her first queenly days.

"Why is he thus stubborn?" she muttered, clasping her hands, and then dashing them apart, as if ashamed of the feminine act. "He has the ring!—he has the ring, and yet sends it not! To save his own life, will he not bend that stubborn will? and to his Queen, his loving, too loving mistress?" These words seemed to overwhelm the haughty woman with recollections of the past; a tear started to her eye, and with something of lofty pride, she added, "But if the loss of our love and favour bowed him not, what can be hoped from a fear of death? Is that stronger than—than—?" Elizabeth did not finish the sentence, but sinking into her chair, pressed one hand over her eyes, and tears gushed through the jewels that burned upon it.

And Elizabeth gave free course to the tears, that she might indulge in secret without detriment to her queenly pride; for that moment she was all the woman—a weak, trembling, disappointed old woman—in whose wrung heart tenderness had conquered pride. Essex, the petted favourite—the lover of her old age—it was his death-warrant that her counsellors had laid before her. The pen was ready; the deathly black ink welled to the top of her golden standish; the vellum was before her, and lacked nothing but the royal signature. She arose, and while her hands and face were wet with tears, snatched up the scroll with a burst of passionate feeling, and trampled it under her foot.

"May thy Queen perish with thee, Essex, my best, last beloved, if her hand touches this death-paper!" she cried, in a voice that reached the ante-room. "What if thy proud stomach does refuse to send the token, Elizabeth can forgive the pride her favour has fostered. The lowest man may take life, but mercy is a royal prerogative. Let them gibe, if they dare, and say that the Queen could not shed the blood of him she loved. Ha! what intrusion is this?" she added, crushing the vellum beneath her feet, and dashing aside the tears that hung on her cheek. "Who dares thus force themselves on our privacy?"

As she spoke, Elizabeth drew herself up with more than regal majesty, and awaited the approach of two females dressed in deep mourning, who came tremblingly toward her; one a tall and beautiful woman, in the full bloom and summer of life, but pale from emotion, and trembling like an aspen leaf in every delicate limb, seemed to grow desperate as she met the eagle eyes of

the Queen, clasping her hands with a sort of wild and timid grace, she sprang forward and fell at Elizabeth's feet.

"My lady of Essex, here—here in our very presence, and you also, Lady Blunt, or Leicester, or Essex; for of your many husbands, dams, we are puzzled to know whose name befits you. Have you not with received our command not to approach the court?"

"We did receive it, most gracious Lady, most august Queen!" cried the elder female, kneeling by her young and beautiful daughter-in-law, and speaking with that subdued and touching pathos that seems born of the troubled waters in a heart that has been long in breaking. "We did receive it; but despair has made us bold. God, in his mercy, touch your heart in our behalf, for we have no hope save in this disobedience!"

The thin lips of Elizabeth Tudor curled with a cruel and haughty smile. Her rivals—the two rivals of her youth and of her age—were at her feet. The widow of Leicester, her first favourite; the wife of Essex, her last. Ah! how cruelly her heart exulted in the triumphs of that moment! how hard and stern it grew with thought of revenge! An oath broke from her, and she replied with bitter violence:

"Then in this disobedience let all hope perish!"

"Oh, say not, great Queen; say not so!" cried the Countess of Essex, lifting her beautiful face from the floor, where it had fallen, in the bitter anguish of her first repulse. "He has been rash—headstrong; but there is not in all England a heart more loyal, nor one that loves your august person so truly."

"Ay," replied Elizabeth, with a bitter sneer, "he proved it, by wedding with thy baby face!"

"Oh, that he had never seen it!" cried the beautiful woman, in a passion of bitter anguish, and burying the reviled features in her hands; for she saw that her very loveliness pleaded against her. "God help me! I know not how to plead his cause! Will nothing save him? Great Queen, will nothing save him?"

Again that face was lifted from the clasped hands, and the mass of golden ringlets in which it had been for a moment buried. Oh, how piteous, how full of sorrow, were those deep blue eyes, those tender and tremulous lips!

The old Queen shook off the passionate grasp which the wretched woman had fixed upon her garments, and drawing back, bent her keen and diadainful eyes on the poor suppliant, but she made no answer; and Lady Essex read her fate too truly in those stern features. Her hands dropped, and her head sunk forward on her bosom, from which the last gleam of hope had gone forth.

And now the widow of Leicester, the mother of Essex, grew desperate in her anguish. As Elizabeth turned from the lovely form of her last rival to the faded beauty of Essex's mother, a shade of more gentle feeling stole over her face. In those sad and withered features there was nothing to excite envy, or outrage her own self-love. If Elizabeth was old, the suppliant at her feet had also outlived all the bloom and brightness of youth, and a bitter sorrow added its pallor to the marks that time had left.

"And you," said Elizabeth, "methought years ago the Countess of Leicester was informed that her presence would at all times be unwelcome to Elizabeth Tudor."

"I have come," said the Countess, in a voice of meek humility, pathetic with sorrow; but how unlike the passionate grief of Lady Essex! "I have come, knowing that my presence must always be hateful to your Highness."

"And why hateful, pray?" cried the Queen, with a haughty sneer.

"Alas! I know not; for I have ever been an humble and loving subject, —a—"

The poor lady paused, for there was something in the Queen's eye that warned her not to tread upon the ground of difference that existed between them. She bent her forehead till it almost touched Elizabeth's feet, and her demeanour was full of humility.

"I know, your Highness, I know that with this bent form and aching heart I am no longer deemed worthy even of that displeasure which sent the most faithful and loyal subject that ever Queen had to his grave, and now threatens all that is left to me—my last husband and noble son—with a darker death. Oh, that I could but die to save them! How willingly would I be stricken down here at your Majesty's feet!"

There was something in this speech that seemed to move the old Queen. The angry expression of her mouth relaxed a little, and turning her eyes away, she seemed to meditate.

"Oh, Lady, look on me! Am I not sufficiently bereaved?" cried the mother of Essex, sweeping back the raven hair from her temples, where many a silver thread was woven. "My youth was clouded by your displeasure. Must its blight press me to the grave? If so, let me perish; but save my son!"

Still the Queen seemed to ponder; she evidently heard nothing that her rival was saying.

"I was his mother," continued the unhappy woman, "and loved him as only a mother can love. Yet, when he found favour with your Highness—when I saw that his heart was lured by your generous condescension, till even his own mother was as nought, compared to the worship which he lavished upon his Queen, I rejoiced in the sacrifice, and surrendered him willingly; but to death, oh, not to death! Great Queen, say that he is not rendered up to that! It were a cruel return for so much love."

Elizabeth was now greatly disturbed; she withdrew her garments gently from the suppliant's grasp, and sat down. Once more the woman grew strong against the Queen.

"Your son was a traitor," she said, "taken with arms in his hands; he has had a fair trial, and death is but justice!"

"He loved you, lady, and your continued displeasure drove him mad!"

pleaded the mother, searching eagerly for some shadow of hope in the dim eyes of Elizabeth. "When you condemn him, I can but answer, he was guilty; but he loved you beyond all earthly things."

"Beyond all earthly things!" cried the Queen, turning her eyes upon the Countess of Essex, who still knelt upon the carpet, pale and hopeless.

The wretched young Countess lifted her eyes at these words, and a mournful smile crossed her lips.

"Spare but his life," she said, "and I will never see him more. I can give him up, but not to the block! Oh God, not to the block!" and, shuddering from head to foot, she sank to her old position again.

The Queen glanced at her with a sort of impatient motion of the head, and then turning to her cabinet, took up a slip of parchment, and wrote upon it.

"Take this," she said reaching it toward the elder Countess; "it is an order for your admission to the Tower. Go and see your son."

The Countess of Essex almost sprang to her feet, but sank down again as she met the stern eyes of Elizabeth, who, remarking the eager joy that sparkled over her face, coldly added, "Go and see your son, but go alone; and when you leave the Tower, come back hither, and then our answer to your prayer shall be given!"

The Dowager Countess took the order, and cast a supplicating glance from the face of the tortured young wife, which was pale and wild with sudden emotions, to that of the Queen.

"The Lady Essex will remain here," she said, with cruel deliberation, and a grim smile crept over her mouth as she marked the air of keen disappointment with which the poor creature watched her mother-in-law as she rose to depart.

"Oh, for sweet mercy's sake, let me go with her!" cried the agonized wife, as her companion in misery moved toward the door. "Mother, mother! plead for me!"

"Go!" said the Queen, sternly, waving her hand. "The Countess of Essex will await you here."

Still upon her knees, the unhappy wife of Essex watched her mother-in-law as she opened the door and disappeared. Her lips were parted, and her eyes grew wild and eager like those of a newly-prisoned bird, when he seeks to dart through the wires of his cage. The Queen watched her narrowly, and that cold smile deepened around her lips. She found inhuman satisfaction in the torture which she was inflicting on the young and suffering wife whom Essex had dared to marry against her own imperious will. The humble position which the suppliant dared not change, unbidden, even if weakness had not chained her to the floor; the look of keen disappointment that settled on her eloquent face, were all sources of cruel pleasure to the iron-hearted Elizabeth. Her revenge on the youth and beauty that had won the love of Essex from herself, seemed almost perfect. Notwithstanding his contumacy and his pride, she could have pardoned him then, but for the thought that her clemency must remit him to that beautiful young wife.

For some considerable time, Elizabeth sat fostering her revengeful jealousy in silence. Lady Essex had almost fallen upon the floor, and covered, rather than knelt, at her enemy's feet. She seemed withered to the heart by the cruel scorn with which her petition for mercy had been received.

At last the queen arose, and entered her bedchamber, into which the cabinet opened. With her, all struggle was ended; she had resolved how to act, and left the room with a slow but imperious tread, leaving the poor wife faint and heartsick with suspense.

Half an hour after, the Queen was in her audience-chamber, receiving some foreign ambassadors with more than her usual elaborate courtesy; but the reception soon became wearisome, and her heart grew heavy beneath its weight of jewels. She had offered Essex a last chance for life. Would his pride yield? Would he take advantage of his mother's visit to forward the ring that she had given him years before, as a pledge that, in any extremity, she would be merciful to him? She began to fear that he might still hold out—that his haughty pride would bend only beneath the keen edge of the axe. Then another doubt entered her heart, and fired it with fierce passions again. What if Essex no longer possessed the ring? What if he had parted with her gift as a love-token to some other woman? This doubt became insupportable; and, as she stood there in all the pomp of her regal state, it fastened on her like a bird of prey; she could not shake it off; and when Elizabeth returned to her closet hours after, she was almost as much an object of compassion as the wretched woman whom she had forgotten there.

The Countess of Essex had been alone in that gorgeous little room all the time that Elizabeth was occupied with her court. The torturing suspense of each miserable hour as it crept by, no pen can describe. She had neither strength nor courage to go away, and seating herself upon one of the crimson chairs, remained motionless and heart-sick, waiting for her destiny.

It came at last, for the old Queen entered her cabinet, having dismissed her ladies-in-waiting at the door. She, too, was suffering the stern torture of suspense, and had come there for rest and solitude. The unhappy countess arose as she saw the queen. Her clasped hands dropped meekly downwards, and her lips grew pallid, as she was preparing herself for some cruel taunt, some bitter sneer, from the royal lips.

But if Elizabeth could have found it in her heart to increase the affliction that oppressed the poor suppliant, she had no time for such cruelty. Scarcely had she reached her chair, when an aged gentlewoman of the bedchamber opened the door, and announced, "The Lady Blunt, Countess Dowager of Leicester." This lady seemed completely exhausted with the terrible sorrows of that weary day. She approached the queen, tottering in her walk, and knelt at her feet.

"Well," said Elizabeth, sharply, for she was anxious almost at the suppliant at her feet, "our order admitted you, doubtless,—and your son; felt he a proper sense of our clemency in granting the visit?"

"He was grateful, and upon his bended knees besought many a blessing upon the mistress who could thus send comfort to an offending servant. He—"

"But the ring—the ring! Why talk of lesser things, woman? If Essex is in truth penitent, he has sent the ring given with our own hand, under a solemn pledge of mercy, even though his crime were deserving death. If he has sent the ring, render it up at once. It should plead his cause against our whole council,—nay, against all England!"

"Alas! alas!" said the countess, "he gave me no ring!"

"Nor mentioned one?" said the queen, still in a sharp, anxious voice.

"Nor mentioned one," was the faint and heartbroken reply.

"Then God have mercy upon him, for I will have none!"

Elizabeth stooped as she spoke, and took up the roll of parchment, which still lay where she had trampled it on the carpet. She laid it upon the silver cabinet, slowly smoothing it out with both hands: very pale those hands were, and so also was her face, but every feature seemed locked with fierce resolution: she was calm and stern as death.

When the parchment was smoothed, Elizabeth took a pen from the standish before her, and, without a tremor or the pause of a moment, wrote her signature. A cry of terrible anguish broke from the two women as they saw her take up the pen, and they cast themselves at her feet, clinging wildly to her robe.

Elizabeth took no heed, but appended the usual bold flourishes to her signature, and touched a little bell that stood upon the cabinet.

"Take this to the Lord Chancellor, and see that the great seal is affixed," she said to the person who entered; "then conduct these ladies from the palace, and see that they enter it no more."

"That parchment!" cried the Countess of Essex, following the man, as he went forth, with her wild eyes; "Great Queen, in mercy say it is not—it is not—"

The wretched wife could not finish the question that she had begun; her lips seemed turned to ice, and her breath choked her.

"It is the Earl of Essex's death-warrant," said Elizabeth, rising sternly up. "Go!"

She lifted her withered finger, and pointed toward the door.

The young wife knelt motionless, frozen, as it were, with the horrid truth that had been told her; but the mother of Essex stood up; her lips were ashen, her eyes had a terrible light in them.

"Elizabeth of England! the great God of heaven will call you to judgment for this act!"

Before the Queen had rallied from the awe with which these words had filled even her undaunted spirit, Lady Blunt had raised her daughter-in-law from the floor.

"My daughter, let us go. Henceforth we must only trust to the God who will avenge us."

A moment after, and the old Queen was alone.

## CHAPTER II.

It was done; the axe had fallen. The Queen's dignity was saved, and her heart broken. She was at her harpsichord when they brought her tidings of Essex's execution. Her face was turned from the light, and no one saw the spasm of pain that convulsed its stern lineaments. She did not pause even for an instant, but her hand was dashed violently on the instrument, sending forth a harsh, sharp note, that was almost a wail, and then the soft music gushed forth again sweetly, as if nothing had happened. Alas! how slight are sometimes the indications which a proud heart allows the world to see of those struggles that pass through the soul like an earthquake! That moment had left the haughtiest woman, and the most imperious queen that ever trod the soil of England, utterly desolate.

"What ho! what ho! Who claims admittance to the palace at this late hour?" cried the yeoman of the guard, as he arose, an hour after midnight, to answer an abrupt summons at the great portal which opened to the Thames. A few words from without of explanation and entreaty soon prevailed upon the guard to admit the untimely visitor, who paused by the entrance, and taking the yeoman on one side, spoke to him earnestly for some moments.

"What! the old Countess of Nottingham dying, and would have speech of her grace?" exclaimed the royal door-keeper. "Why, think you, the Queen would arise from her couch at this hour of the night, and risk her sacred person on the water at the behest of fifty dying countesses?"

"I tell you," rejoined the man, whose face was pale with excitement, "I tell you, this message of my dying mistress must be brought to her majesty; there is that in it which the boldest man in England dare not keep from Elizabeth an instant. As you value liberty and life, friend, do nothing to hinder me in deliverance of my mission. The soul of my poor mistress will wrestle sorely with the body till I bring back tidings to her death-bed. I must see the Queen!"

"Be it so, then, as your business is so momentous," cried the yeoman; "I will lead you to the ante-room, and arouse some of the ladies; but remember, if evil comes of this I will not hold myself responsible. The man should be bold, and the business weighty, that disturbs Elizabeth from her slumber at this hour."

"The business is weighty, and the scene that I have witnessed this night is enough to make a man brave any earthly peril without shrinking. What is it to ask an audience here, when my poor mistress is summoned before the King of kings!"

"Have you a letter, or bring you only a message by word of mouth?"

said the yeoman, still hesitating, though the agitation of his untimely visitor had made a strong impression upon him.

"Here is the letter!" cried the man, taking a large square missive from his bosom, sealed with the Nottingham arms in black. "Hasten, good friend, hasten, I beseech you, and give it to the Queen. Heaven only knows what torment my wretched mistress will know till the errand is done!"

The guard seemed greatly relieved by this tangible and imposing excuse for disturbing the slumbers of his mistress. He took the letter, and passing through many a state-chamber and richly decorated gallery, paused in an ante-room, where half a dozen pages lay upon their couches asleep, some disrobed, and others muffled in mantles of azure velvet and pillowed upon their own perfumed ringlets.

"What ho!" cried the guard, shaking one of these pages by the arm, and half lifting him from the couch. "Arouse yourself, good master George, and rub open those blue eyes, without loss of time. Here is a letter, which you must give to one of the Queen's bedchamber women this very instant. Say that it is a case of life and death. Do you hear, jackanapes?"

"Do I hear?" cried the lad, rubbing his eyes with a little hand, white as a lady's, and sparkling with rings; "I should be deaf if it were otherwise. Why, man, your voice is like a trumpet. Do you guess what hour of the night it is? coming after this fashion to the very door of her majesty's chamber. This will make you a head shorter some fine day, master yeoman!"

"Take the letter, and leave me to the care of my own head," replied the yeoman, sharply. "Give it to the first lady of the bedchamber, and say that a messenger from the Countess of Nottingham awaits her majesty's pleasure here."

The lad took the letter, held it to the light of a large silver lamp that swung overhead, examined the seal minutely, and then turned his eyes with equal assurance upon the messenger, whose anxiety became each moment more apparent.

"It must be a pressing business, and if one may judge by the white face of our friend there, full of peril! No matter, it shall not be said that the beloved of the fairest and sweetest lady about the court—mind, master yeoman, I mention no name—ever allowed the peril of an enterprise to count anything with him. Rest content, good friend," he added, turning to the messenger, "I will find a lady who, for my sake, would take upon herself greater danger than that of arousing the Queen at midnight; fortunately you have chanced upon the only courtier who could have managed the matter for you."

"Well, jackanapes, get about the errand after your own fashion," cried the yeoman, with an impatient laugh.

"Nay, you would not have me present myself before her without some preparation," said the youth, shaking the scented and glossy ringlets with which his head was adorned, over his shoulders, and arranging the folds of his cloak with an air of the most perfect self-conceit. "Tell me, master yeoman—for, lacking a mirror, I must even take counsel of your ignorance—think you not this garment falls a trifle too much over the right shoulder? Let me step beneath the lamp that you may judge."

"Tush, boy! this is no time for such foppery. Begone upon thy errand, or I will find it in my heart to knock a portion of the conceit from that little body. Go, go! See you not our friend here is fast losing patience?"

This allusion to the messenger from Nottingham-house was well authorised by the appearance of the man. Once or twice, as if bereft of all patience by the boy's foppish airs, he advanced a pace to take the letter from his hand, half determined to enter the Queen's chamber, and, at all peril, present it himself. His cheek grew more and more pale, and his eyes burned with anxiety that nothing could restrain, as the page turned his head superciliously over one shoulder to look at him after the yeoman's remark, still holding the letter carelessly between his thumb and finger. His impatience broke all bounds. He strode forward, and grasping the youth by the arm, gave him a slight shake. "You trifle with a message from the dying," he said, sternly. "No more of this folly! Begone!"

The boy shook himself free, and with a petulant lift of the shoulder muttered something about his cloak being forced awry; but there was something in the deep passion with which he had been addressed, that completely quelled his frivolous spirit, and, without attempting any further excuse for delay, he left the chamber.

The Queen had been ill in health, and becoming daily more infirm, it was necessary that some one of her ladies should remain in attendance at night, ready, at a moment's warning, to answer her summons. Thus it was that the page, on entering the small ante-room, or rather boudoir, which led to the royal bedchamber, found a lovely woman in full dress, but with a rich brocade dressing-gown thrown over her shoulders, sound asleep in a large easy chair heaped with crimson cushions, upon which her fair head had fallen, crushing a mass of beautiful hair, that had cost an artist much labour that morning, beneath the warm roses of her cheek.

"Lady Arabella," whispered the page, stealing toward the fair slumberer, and sinking upon his knees while he touched the little hand that fell over an arm of the chair timidly with his,—"Lady Arabella."

His voice was very low, for the boy could hardly breathe, his agitation was so great. With all his audacious vanity, he was timid as a child in the presence of purity and high-born loveliness like that. "Lady Arabella, I have a letter,—I would speak with you!"

The lady started up in her chair, passed a hand over her eyes, as if to be quite sure that they were not deceiving her, and then bent them, full of sleepy wonder, upon the youth.

"Why, George, how is this? Here, and after midnight!" she said, gently, but with evident surprise, and some displeasure.

"Lady, I have brought this for her majesty," said the boy, holding up the letter with its broad black seal; "a messenger has just arrived from Nottingham-house. He says the countess is dying."

"Dying!" exclaimed the Lady Arabella.

"Aye, dying; and the messenger says the lady, in her extremity, will have speech with the Queen—that this letter must be given to her majesty even now!"

"It cannot be," said the Lady Arabella, putting back the letter with her hand; "our royal mistress is ill at ease since—since his death; she gets but little sleep... I dare not disturb her."

"Shall I take the letter back?" said the page, rising. "The man is waiting without."

"Yet if the poor countess is in such a strait,—if she is in truth dying," said the gentle lady, reluctant to refuse that which she, nevertheless, had not the courage to undertake.

"Who speaks of dying?—what is it? Who speaks of dying?" cried a sharp voice from the royal bedchamber. "Arabella! Arabella!"

"Hush! it is the Queen. Give me the letter," whispered the lady; and she entered an adjoining chamber.

Elizabeth had half risen, and leaned upon her elbow in the midst of her huge bed, her face looking haggard in the crimson shadows cast downward from the cumbrous hangings, and her head shook with an almost imperceptible tremor, that partook both of the infirmities of age, and of the terror that sometimes follows unpleasant dreams. Locks of gray hair streamed down from her nightcap, and she clutched the damask counterpane with a hand that shook like an aspen as it crushed the glowing folds together.

"Did I dream? I did dream of the dead!" she exclaimed, bending her keen eyes upon the lady as she entered, and sinking slowly back to her pillow. "Of the dead—the dying! The Countess of Nottingham,—who told me the Countess of Nottingham was dying?"

"Your highness must have been disturbed by the messenger that just came up from Nottingham-house with this letter," said the Lady Arabella, kneeling by the royal couch. "The hour was so untimely, that I was about to send him back again."

"Give me the letter," cried Elizabeth, starting up, and seizing the folded parchment fiercely, as a bird of prey clutches its spoil; "I tell you, Arabella, I have dreamed things to-night that make the sundering of this seal terrible!" and with shaking hands, the Queen burst the black seal, and tore it apart.

She cast her keen eyes over its contents, and dashing the letter aside, sprang to the floor. "Yon' garments, Arabella; bring yon' garments, and robe me," she cried in a voice that was low, but fearfully concentrated. "Quick! quick! No ruff—no farthingale, but a cloak and hood—one for yourself, too. Who waits in the antechamber?"

"The page, young George Pagot, one of your highness' yeomen, and the messenger from Nottingham-house."

"It is enough! Let the boy go with us—the boy and yourself—that will be sufficient escort for Elizabeth on an errand like this."

"Shall I tell George to give orders that the royal barge be prepared?" said the Lady Arabella.

"No—send hither the messenger."

"Hither?" questioned Arabella, mindful of the disarray which the royal person still exhibited.

"Yes—here, and thus!" replied Elizabeth, and a bitter smile swept over her face as she interpreted the look of her attendant.

Filled with wonder that almost amounted to consternation, Arabella went forth to summon the messenger. Elizabeth received him at the door of her chamber. She had folded a cloak around her person, but the hood was thrown back, and with nothing but her gray hair veiling the aged brow that had never been presented to the gaze of mortal man before, without the disguise of art and a blaze of jewels, she put a few brief questions to him:

"Come you to the palace by water?"

"By water, may it please your highness," replied the man.

"And your barge is here?"

"It is now in waiting, and the tide serves."

"Lead on!" said the Queen. "Arabella, follow us with the boy: and you," she added, turning to the guard, "go attend us to the water, and then stir not from the gate till our return;" and the Queen walked on with a degree of strength and energy which startled those who had witnessed the feebleness that had marked the last few months of her life.

As they went forth into the open air, Arabella moved close to her royal mistress. "Let me draw the hood somewhat over your majesty's head," she pleaded, for the wind was trifling with those snowy tresses, and it pained the young girl to see how careless the proud old Queen seemed of an exposure to which she had always been so sensitive.

"Nay—the cool wind does me good," replied Elizabeth, and with a firm step she descended to the barge, and took a seat upon one of the cushions.

Midnight darkness lay upon the river; clouds, heavy and black were heaped over the sky, and the shores, save here and there a solitary light from some residence, lay in profound night. Amid this wilderness of gloom, the barge swept rapidly downward with the tide. The flow of the waters, heavy and monotonous, was all the sound to be heard; no word was spoken, save when the old Queen bade the rowers make more speed.

At last the barge drew up by a flight of steps that led to a spacious garden, half surrounded by the wings of a fine old mansion-house. Through one of the tall windows a light streamed forth upon the blackness, faint and dim, as if some lamp placed there were just expiring.

"Go on to the sick room," said the Queen, as her conductor would have taken her to another apartment, that her presence might be announced.

"Stay you below, Arabella; we will see this dying countess alone;" and, with a firm step, Elizabeth mounted the stairs, and found herself in the chamber of death.

A huge bed, canopied with masses of purple velvet, so deep tinted that it seemed black in the gloom, stood at an extremity of the chamber; and upon it lay the pale form of a woman struggling in her death agony. A group of persons stood around the bed, silent and awestricken. Toward this group Elizabeth moved slowly, upright and majestic.

"It is the Queen," cried the dying countess, lifting her thin hand. "God has had mercy! It is the Queen,—and I can now die."

"Leave us," said Elizabeth, waving her hand.

The next moment she stood alone with the dying.

"Countess of Nottingham, you have sent for the Queen, and she is here. What have you to say of Essex? In what can your death-bed confessions concern one whose fate is now sealed?"

The Countess of Nottingham clasped her pale hands, and held them imploringly toward the Queen. Those hands were almost transparent, and, as the light fell upon them, upon one of the fingers it revealed a ruby, glowing like a spark of fire upon it. Elizabeth's eyes fell upon the gem, and instantly she became pale as the woman who lay prostrate before her, pleading with mute eloquence, for mercy.

"Woman!" she said, grasping the pale hand of the dying countess, and bending her eyes close to the ruby, whose light made the heart tremble in her bosom: "Woman! how came you possessed of this ring?"

The Countess of Nottingham closed her eyes to shut out the terribly angry that convulsed the aged face bending over her death pillow; her lips moved again and again, before they could utter a word. At length she spoke, but feebly and very low. The Queen bent her head close to those pale lips, that her thirsty ear might drink in every syllable of the confession they were whispering. She held her breath, and a wild fierce expression, like that of a wounded eagle, came to her eyes. When all was told—when the dying woman opened her eyes, and, with a look of most touching entreaty, besought mercy for the fraud which had brought the noble head of Essex to the block;—then the volcano which her words had lighted in the old Queen's heart, blazed forth. Elizabeth stood upright: the infirmities of age were swallowed up in her mighty wrath; her lips grew livid, her eyes burned as with fire, and every vein in her body seemed hardening into iron.

"Mercy!" she cried, in a voice shrill with anguish and wrath; "Woman, God may forgive you, but I never will!"

The wretched countess, terrified even in her death throes, cowered down and grovelled in her bed.

"Oh, God! wilt thou too withhold mercy?" broke from her shivering lips.

"Mercy!" whispered the old Queen, for wrath made her voice very low, and she spoke between her locked teeth, "Mercy!" and, mad with anguish, she seized the dying woman, and shook her, till the huge couch, with its gloomy masses of velvet and its dusky plumes, trembled in every joint.

When the old Monarch withdrew her hands from this unquenchably, they dropped helplessly by her side, for she saw that her violence had done sacrilege to the dead.

Ten minutes went by, during which Elizabeth stood over that death couch: then she turned away, and passing from the chamber, descended the stairs, waving a hand for her young attendants to follow. When Elizabeth entered the dwelling, she wore no jewel of any kind; but, as the light fell upon her hand in going forth, Arabella saw that a ruby blazed upon one of the fingers.

It was night when the Queen of England entered her own palace again—night upon the earth, night in her own heart. She could scarcely walk while passing through the palace grounds, and leaned heavily upon the arm of Lady Arabella all the way to her own chamber. Within the solitude of her room she sat till morning, her face pale and rigid, her limbs bowed as with a heavy weight, gazing intently upon the ring, which burned like a blood-spot on her finger—a blood spot—and so it was. That ring she had given to Essex when highest in her favour, with a promise that, let his fault be what it might, forgiveness should follow its presentation to her. He had sent the ring, a few days before his execution, by the wretched Countess of Nottingham, who withheld it in fraud, and by this treachery Elizabeth became the executioner of one whom she loved better than life.

And now that he was dead, the ring had reached her from the hand of death. Was it strange that the old Queen never smiled again,—that henceforth she called for a staff to support her as she walked about the palace,—or that in a few weeks she lay upon the cushions heaped in her chamber, weary, heart-sick—afraid to die, and yet dying?

PERFECTION.—That writer who aspires to immortality should imitate the sculptor, if he would make the labours of the pen as durable as those of the chisel. Like the sculptor, he should arrive at ultimate perfection, not by what he adds, but by what he takes away; otherwise all his energy may be hidden in the superabundant mass of his matter, as the finished form of Apollo, in the unworked solidity of the block. A friend called on Michael Angelo, who was finishing a statue; some time afterwards he called again; the sculptor was still at his work; his friend, looking at the figure, exclaimed, "You have been idle since I saw you last." "By no means," replied the sculptor; "I have re-touched this part, and polished that; I have softened this feature, and brought out this muscle; I have given more expression to this lip, and more energy to this limb." "Well, well," said his friend, "but all these are trifles." "It may be so," replied Angelo; "but recollect that trifles make perfection, and that perfection is no trifle."

## OUR NEW VOLUME.

WITH No. 53, will be commenced a NEW AND ORIGINAL TALE of great interest, by the EDITOR, entitled, MABEL LEE; OR, THE LIGHTS AND SHADOWS OF AN ORPHAN'S LIFE. All the other Articles will be original, and be written expressly for the HOME COMPANION. Each alternate Number will contain, in addition to the continuous Tale by the Editor, a complete Story, founded upon a popular Drama, under the general title of "TALES FROM CELEBRATED DRAMATISTS." Departments will be found for THE ARTIST, THE MECHANIC, THE FARMER, THE GARDENER, THE HOUSEWIFE, and THE JUVENILE. Essays, Biographies, Letters from Correspondents, Articles upon Natural History, Enigmas, &c., &c., together with a light and agreeable Miscellany, will complete the arrangements for the New Volume of the HOME COMPANION; the whole giving it the highest title to UNIVERSAL RECEPTION BY THE BRITISH PEOPLE.

**TITLE AND INDEX TO VOL. I. OF "THE HOME COMPANION,"** Now Ready, Price One Penny.

## A GREAT LITERARY WONDER.

Now Ready, 200th Thousand,

**THE HOME COMPANION ALMANACK FOR 1853:** undeniably THE GREATEST LITERARY WONDER OF THE DAY. Containing Eighty-One elaborate Engravings, designed expressly for the Work, and including hitherto unpublished Pictorial Enigmas, Charades, Rebuses, Comic Chronology, Amusing Experiments in Natural Philosophy, Comic Cards, &c., &c.

N.B. The Title-page alone contains upwards of ONE HUNDRED humorous Figures. In the centre a large Double Page Engraving, displaying the FLAGS OF ALL NATIONS. The Almanack is exactly the size of "Punch's Almanack," and contains an equal number of Engravings, but will be charged only ONE PENNY. For the purpose of heightening the amusement afforded by the ALMANACK, it has been deemed proper to withhold the Answers to the Pastime. These will appear in No. 53 of "THE HOME COMPANION."

## NOTICE!

WITH No. 53 (commencing the New Volume) of "THE HOME COMPANION," will be presented, GRATIS, No. I. of a New Tale, "THE PRODIGAL; OR, RICHES AND RUIN;" with an Illustration by ANELAY.

To be continued in 1d. Weekly Numbers—each Number illustrated.  
London: JOHN BENNETT, 69, Fleet-street; and all Booksellers.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## CHILDHOOD.

CHILDREN are but little people, yet they form a very important part of society, expend much of our capital, have considerable influence on the world, employ a great portion of our population in their service, and occupy half the literati of our day in labours for their instruction and amusement. They cause more trouble and anxiety than the National Debt; the loveliest of women in her maturity of charms breaks not so many slumbers, nor occasions so many sighs as she did in her cradle; and the handsomest of men, with full-grown mustachios and Stultz for his tailor, must not flatter himself that he is half so much admired as he was when in petticoats. Without any reference to their being our future statesmen, philosophers, and magistrates in miniature disguise, children form, in their present state of pigmy existence, a most influential class of beings; and the arrival of a mewling infant who can scarcely open its eyes, and only opens its mouth, like an unfledged bird, for food, will effect the most extraordinary alteration in a whole household; substitute affection for coldness, duty for dissipation, cheerfulness for gravity, bustle for formality; unite hearts which time had divided, soften feelings which the world had hardened, teach women of fashion to criticise yep, and grave metaphysicians to cackle upon all fours.

It is not only to their parents and near connections that children are interesting and delightful; they are general favourites, and their caresses are slighted by none but the strange, the affected, or the morose. Even men may condescend to sport with children without fear of contempt; and for those who like to shelter themselves under authority, and cannot venture to be wise and happy their ownway, we have plenty of splendid examples, ancient and modern, living and dead, to adduce, which may sanction a love for these pigny playthings. Statesmen have romped with them, orators told them stories, conquerors submitted to their blows, judges, divines, and philosophers listened to their prattle and joined in their sports.

Spoiled children are, however, excepted from this partiality; every one joins in visiting the faults of others upon their heads, and hating these unfortunate victims of their parents' folly. They must be bribed to good behaviour, like many of their elders; they insist upon having your watch,

and spoiling what they do not understand, like numbers of the patrons of literature and the arts; they will sometimes cry for the moon as absurdly as Alexander for more wine, and when they are angry, they have as little mercy for cups and spicers as Bonaparte for Cobentzel's china vase.

We love a child's ball,—that is, a ball for very young children; for when they approach their teens, they begin gradually to throw off their angelic disguise preparatory to becoming men and women; the germs of vanity, dissimulation, and pride, are visible; the young eye roves for admiration, the head is held high on contact with vulgarity; the lips speak a different language from the less deceitful brow. If the object of entertainments was really to entertain, we ought only to invite children; because, if not quite sure of succeeding in our aim, we at least can discover whether or not we have attained it. In the uniform polite satisfaction and measured mirth of a grown-up party, the cold smiles, the joyless laughter, the languid dance, one tale only is told, satiety, contempt, anger, and mortification, may lurk beneath; no clue is afforded to the poor host by which he may discover the quantity of pleasure his efforts and his money have produced; a heart or two may be breaking beside him, but he knows nothing of the matter: a duel or two arranging at his elbow, but he sees only bows and politeness; and he may send away half his guests affronted by his neglect, and the other half ridiculing his hospitality, while he has fatigued and impoverished himself to please them. In these assemblies—

"There's sic parade, sic pomp an' art,  
The joy can scarcely reach the heart;"

while, in a party for children, ninety-nine out of a hundred consider themselves at the summit of human felicity, and take no care to conceal their sentiments; and if the unlucky hundredth happens to fall down, or to be affronted, a few tears and a little outcry show you where your assistance is required, and allow you to set matters right again by coaxing and sugar-plums. Those occasional eccentric movements in the quadrille, proceeding from the exuberance of spirits and of joy; those shouts of merriment which sometimes defy the lessons of politeness and the frowns of a smiling mamma; those peals of young laughter so thrilling and so infectious; those animated voices and bright faces assure the donors of the feast that they have conferred a few hours of exquisite happiness on the dear little beings around them, afforded them food for chattering and mirth for many days, and perhaps planted in their grateful memories one of those sunny spots to which the man looks back with pleasure and wonder, when sated, wearied, and disappointed, he sees with surprise how easily and how keenly he was once delighted.

Little girls are our favourites; boys, though sufficiently interesting and amusing, are apt to be infected, as soon as they assume the manly garb, with a little of that masculine violence and obstinacy, which when they grow up, they will call spirit and firmness, and lose earlier in life that docility, tenderness, and ignorance of evil, which are their sister's peculiar charms. In all the range of visible creation there is no object to us so attractive and delightful as a lovely, intelligent, gentle, little girl, of eight or nine years old. This is the point at which may be witnessed the greatest improvement of intellect compatible with that lily-like purity of mind, to which taint is incomprehensible, danger unsuspected, which wants not only the vocabulary but the very idea of sin. It is true, that—

"Evil into the mind of God or man,  
May come and go, so unapproved, and leave  
No spot or blame behind—"

but, to those who have lived long, and observed what constant sweeping and cleaning their house within requires, what clouds of dust fly in at every neglected cranny, and how often they have omitted to brush it off till it has injured the gloss of their furniture—to these there is something wonderful, dazzling, and precious, in the spotless innocence of childhood, from which the slightest particle of impurity has not been wiped away. Woe to those who, by a single word, help to shorten this beautiful period!

"That man was never born whose secret soul,  
With all its motley treasures of dark thoughts,  
Foul fantasies, vain musings, and wild dreams,  
Was ever open'd to another's scan."

Even the best and purest of women would shrink from displaying her heart to our gaze, while lovely childhood allows us to read us every thought and fancy. Its sincerity, indeed, is occasionally very inconvenient, and let that person be quite sure that he has nothing remarkably odd, ugly, or disagreeable about his appearance, who ventures to ask a child what it thinks of him. Amidst the frowns and blushes of the family, amidst a thousand efforts to prevent or to drown the answer, truth in all the horrors of nakedness will generally appear in the surprised assembly, and he who has hitherto thought in spite of his mirror, that his eyes had merely a slight and not unpleasant cast, will now learn for the first time, that "everybody says he has a terrible squint."

Children may teach us one blessed, one enviable art,—the art of being easily happy. Kind nature has given to them that useful power of accommodation to circumstances which compensates for so many external disadvantages, and it is only by injudicious management that it is lost. Give him but a moderate portion of food and kindness, and the peasant's child is happier than the duke's; free from artificial wants, unsated by indulgence, all nature ministers to his pleasures; he can carve out felicity from a bit of hazel twig, or fish for it successfully in a puddle. I love to hear the epistemonian joy of a troop of ragged urchins whose cheap playthings are nothing more than mud, snow, sticks, or oyster shells; or to watch the quiet enjoyment of a half-clothed, half-washed, fellow of four or five years old, who sits with a large rusty knife and a lump of bread and bacon at his father's door, and might move the envy of an alderman.

## PARLOUR PASTIME.

*A Remarkable Experiment, called Prince Rupert's Drops.*

TAKE up a small quantity of the melted matter of glass with a tube, and let a drop of it fall into a vessel of water. This drop will have a small tail, which being broken, the whole substance of the drop will burst, with great violence, into a fine powder, and give a little pain to the hand, but do no hurt to it.

It is a remarkable circumstance in this experiment, that the bulb or body, will bear the stroke of a hammer without breaking; but when the tail is broken, the above mentioned effect is produced. If the drop be cooled in the air, the same effect will not take place; and if it be ground away on a stone, nothing extraordinary appears; but if it be put into the receiver of an air pump, and then broken, the effect will be so violent as to produce light.

## ENIGMAS.

LADIES, you've seen us in an instant rise  
Perfectly form'd, and of a beauteous size;  
Our end you've in an instant seen,  
With countenance gay and smiling, and serene;  
Our hasty births, to various causes due,  
And what creates us oft destroys us too;  
Yet still with ease the bright successions flow,  
Where numbers die, maturely numbers grow;  
Each temp'rate clime this generation yields,  
Thick as fallen leaves in Autumn, strew the fields,  
Numerous as insects at the evening hours,  
Or drops of rain in soft descending showers;  
Seldom produced on the bleak northern coast,  
Where seas lie stiffen'd in eternal frost:  
Our tender constitution cannot bear  
The cold of one continued wintry year.  
From lands far distant, o'er the briny tide,  
In some tall vessel see us safely ride.  
Should hurricanes now on the ocean roar,  
And roll the deep vast mountains to the shore;  
Should these vast mountains dash the vessel down,  
And men and cargo in the ocean drown;  
Both storms and hurricanes we boldly brave,  
And smoothly sail o'er the proud Alpine wave.  
Now see us round with lively purple glow,  
With all the colours of the painted bow;  
Then see us borne on zephyr's downy wing;  
So larks mount upwards, and essay to sing;  
But what avail these beauties that we boast,  
These various dyes all in a moment lost!  
Ladies, 'tis wondrous strange, but surely true,  
That oft we're seen familiarly with you;  
Though unregarded, 'tis by your command,  
We kiss your rosy lips, or touch your hand;  
Then say what can these short-lived creatures be,  
Which ev'ry day you either touch or see.

## II.

WHAT is that which is a friend and an enemy, a blessing and a curse, which saves life, and takes it away; is long and short, round and square, rough and smooth, straight and crooked, hard and soft, hot and cold, and most wanted where it is in the greatest plenty; which accommodates itself to all palates; is sweet and of a bad smell, strong and weak; sometimes able to bear the greatest burdens, but at other times will not bear a pin. For which men make long journeys, though they have it in the greatest plenty at home. It is subject to reflection, and has the power of dissolving matrimony: it has the privilege to kiss the lips of the fairest ladies, assist them in dressing, and is highly instrumental towards improving their charms. It is subservient and overbearing, death and an antidote, causes famine and plenty, is a fluid and a solid, a mountain and a valley, has a numerous offspring, yet is an enemy to children. It is the theme of poets, an improvement of music, of great use in fortifications, employed in the finest paintings, and produces the noblest architecture in the world?

## CHARAD'S.

## I.

WHEN eve returns, with Betty I will stray,  
Across yon field which marks our flow'ry way;  
My first we then shall see feed careless on,  
In upland meadow, or on daisied lawn;  
My next, to her's I will most sweetly press,  
And thus obtain my greatest, highest bliss;  
Unto these two, you then may view  
A flower of very pretty hue.

## II.

My first is equally friendly to the friend and the lover, the toper and the student. My second is light's opposite; yet they are frequently seen hand in hand; and their union, if judicious, gives much pleasure. My whole, is tempting to the touch, grateful to the sight, but fatal to the taste.

## TRANSFIGURED PLAYING CARDS.

THE SEVEN OF DIAMONDS.—CLOWNISH MANNERS.

## TRANSPPOSITIONS

## I.

COMPLETE, I am an useful article of furniture, sometimes; but by no means always, in the form of a sofa; beheaded, I am what you generally are inclined to do when your dinner is ready; curtailed, I am either a mountain or a plain, according to the state of the weather, but though many miles in extent, have not solidity to support the steps of an infant.

## II.

Six letters, only, form my name,  
Yet more than twice six words I frame.  
I'm used, fair ladies, in your dress,  
But how, I must not here express,  
For fear too much I should confess.  
To Britain's isle I'm a defence;  
Am sometimes substitute for sense;  
To wisdom I a guide was once,  
And now perchance may guide a dunce.  
To form the rainbow I assist,  
And am a most destructive beast.  
The firmament's adorn'd by me;  
And that I'm swift all will agree.  
An humble vehicle am I;  
And am a chariot of the sky.  
I'm food, I'm raiment, show surprise;  
And mark where Portsmouth harbour lies.  
A tale of scandal, you will ow'  
Is often, through my means made known.  
Placed to direct; by infants used  
(Then how dear ma and pa are amused)  
These eighteen words if you make out,  
You'll clever think yourself, no doabt.

## ARITHMETICAL QUESTION.

A traveller left Exeter at eight o'clock in the morning, and walked towards London, at the rate of three miles an hour, without intermission; while another set out from London at four o'clock the same evening, and walked towards Exeter, at the rate of four miles an hour. Now, supposing the distance between these two cities to be 130 miles, on what part of the road will they meet?

## OUR CORNER CUPBOARD!

A barrister observed to a learned brother in court, that he thought his whiskers were very unprofessional. "You are right," replied his friend; "a lawyer cannot be too barefaced."

A party of stout countrymen were playing a game of cudgels in the north of England, when a spectator gravely observed—"The rustic amusement of cudgel-playing should be abolished, as it affects the security of the Crown."

COMPLAINT is no longer confined to the polite circles. A captain of a vessel was lately called out of a coffeehouse at Wapping, by a waterman, with the following address: "An't please your honour, the tide is waiting for you."

"How came such a greasy mess in the oven?" said a tired, fidgety minister to her maid of all work. "Why, look you, missus," said the poor confounded Cornishman, "the candle fell into some water, and I put it in the oven to dry."

WHEN those trusty defenders of the country, the Tower Hamlets militia, were doing duty, a fat shopkeeper having fallen asleep when sentry, was called upon to give the watchword. "The watchword!" said another; "ask him for the counter-sign."

SAYS Tom to Joe, "I've dismissed my servant." "Discharged, you meant to have said," remarked Joe. "No, sir, there is no difference between the terms—they are synonymous." "Well, then," added Joe, "I'll just discharge that small debt I owe you, and call it discharged."

"The sun is all very well," said an Irishman, "but in my opinion the moon is worth two of it: for the moon affords us light in the night time, when we really want it; whereas we have the sun with us in the day time, when we have no occasion for it."

A place under government,  
Was all that Paddy wanted;  
He married soon a scolding wife,  
And thus his wish was granted.

A farce was produced in Bannister's time, under the title of "Fire and Water." "I predict its fate," said he. "What fate?" whispered the anxious author at his side. "What fate?" said Bannister; "why what can fire and water produce but a hiss?"

WHY is a four-quart jug like a lady's side-saddle? Because it holds a gall-on.—Why is a woman living up two pair of stairs like a goddess? Because she is a second Flora.—Why is a man half-asleep like twice six? Because he's a "dore-in." The youth who perpetrated this was drowned on Saturday while fishing.

SHERIDAN is reported to have once fallen into a coal cellar on his way home after a good supper at Drury Lane; and his abuse of the vendor, for not keeping a light at his cellar-door, was warmly retorted by the wife. "D—n it," cried Sheridan, who was not hurt, "do you think I want to pocket your coals?" "No!" retorted the wench, "but your nose may set the coal-hole on fire."

KEEPING HIS PROMISE.—*Farmer's Boy*.—Mr. Blacksmith, did I tell you how that we broke the chain, and John slipped one broken link through the other, and put his finger in for a "toggly," and the oxen started ahead and cut his finger off, and that John felt badder at making a fool of himself than he did about the loss of his finger? *Blacksmith*.—No; you didn't tell of that. *Farmer's Boy*.—No, not aint agoing to; for I promised John I wouldn't!

AN American editor, who has been married about a year, speaking of the babies, says:—"The delight of the days—the torment of the nights—elegant in full dress, but horrible in dishabille—beautiful on the smile, but maddening on the yell—exquisitely in place in the nursery, but awfully de trop in the parlour, stage, or railway car—the well-springs of delight, and the recipients of unlimited spankings—the glory of 'pa'—the happiness of 'ma'—who would 'nt have 'em?"

WHEN we've nothing to dread from the law's sternest frowns,  
How we laugh at the barristers' wigs, bands, and gowns!  
But no sooner we want them, to sue or defend,  
Than their laughter begins, and our mirth's at an end.

MARRIED A SCOTCHMAN.—In the year 1797, when democratic notions ran high, it may be remembered that the king's coach was attacked as his majesty was going to the House of Peers. A gigantic Hibernian, on that occasion, was conspicuously loyal in repelling the mob. Soon after, to his no small surprise, he received a message from Mr. Dundas, to attend at his office. He went, and met with a gracious reception from the great man, who, after prefacing a few encomiums on his active loyalty, desired him to point out any way in which he would wish to be advanced, his majesty having particularly noticed his courageous conduct, and being desirous to reward it. Pat scratched and scraped for a while, half thunderstruck; "The devil take me, I know what I'm fit for," "Nay, my good fellow," cried Harry, "I think a moment, and dinna throw yourself out o' the way o' fortune." Pat hesitated a moment, mulling as if some odd idea had strayed into his noddle, "I'll tell you what, mister, make a Scotchman of me, and by St. Patrick, there'll be no fear of my getting on." The Minister gazed awhile at the Gael-apropos wit: "Make a Scotchman of you, sir! that's impossible, for I can't give you prudence."

## OUR MEMORANDUM BOOK!

CONVERSATION.—It is a poor policy to converse much with your inferiors, unless, as Sir Thomas Browne advises, you wish "by frequent victories and spoils over others' judgments to confirm your own." If you would improve by conversation, seek the society of strong intellects, that can draw out your energies and give you play. It is by grappling with more powerful minds that the faculties of our own are knit into strength. A skilful angler only exults in his sport when he has a strong and troublesome fish upon his hook, that puts him on his mettle, and requires all his art to bring him in.

CLEANLINESS ABOUT THE HOUSE.—As a general rule for living neatly and saving time, it is better to keep clean than to make clean. If you are careful not to drop crumbs of bread or cake on the carpet, you will escape an untidy room, and save the trouble of cleaning it. In working, if you make a practice of putting all the ends of your thread into a division of your work-box, kept for the purpose, and never let one fall on the floor, the room will look very differently at the end of the morning, from what it does when this is not attended to. A house is kept far cleaner when all the family are taught to wipe their feet thoroughly, on coming in from out of doors, than it can be done where this is neglected. There are a thousand ways of keeping clean and saving labour and time, which it is well worth while to learn and practice.

MUTUAL FORBEARANCE.—That house will be kept in turmoil where there is no tolerance of each other's errors, no lenity shown to failings, no meek submission to injuries, no soft answers to turn away wrath. If you lay a single stick of wood upon the hand-irons and apply fire to it, it will go out; put on another stick, and they burn; add half a dozen, and you will have a grand conflagration. There are other fires subject to the same conditions. If one member of a family gets into a passion, and is let alone, he will cool down, and possibly get ashamed, and repent. But oppose temper to temper; pile on the fuel; draw others into the scrape, and let one harsh word be followed by another; and there will soon be a blaze which will envelop them all in its lurid splendours. The venerable Philip Henry understood this well, and when his son Matthew, the commentator, was married, he sent these lines to the wedded pair:—

"Love one another, pray oft together, and see  
You never both together angry be;  
If one speak fire, rather with water come;  
Is one provoked? be the other soft and dumb."

MOTHERLY LOVE.—Last among the characteristics of woman is that sweet motherly love with which Nature has gifted her; it is almost independent of cold reason, and wholly removed from all selfish hope of reward. Not because it is lovely, does the mother love her child, but because it is a living part of herself—the child of her heart, a fraction of her own nature. Therefore do her entrails yearn over his wailings; her heart beats quicker at his joys; her blood flows more softly through her veins when the breast at which he drinks knits him to her. In every uncorrupted nation of the earth, this feeling is the same. Climate, which changes everything else, changes not that. It is only the most corrupting forms of society which have power gradually to make luxurious vice sweeter than the tender cares and toils of maternal love. In Greenland, where the climate affords no nourishment for infants, the mother nourishes her child up to the third or fourth year of his life. She endures from him all the nascent indications of the rude and domineering spirit of manhood with indulgent and all-forgiving patience. The negress is armed with more than manly strength when her child is attacked by savage beasts. We read with astonished admiration the example of her matchless courage and contempt of danger. But it death robs that tender mother, whom we are pleased to call a savage, of her best comfort—the charm and care of her existence—where is the heart that can conceive her sorrow?

THAT WILL DO.—"That will do," is a phrase of modern invention. The ancients knew of no such expression, or the Egyptians would never have raised the pyramids, nor the Greeks and Romans displayed that love of the beautiful which led them to impart a poetic grace even to the meanest utensils for household use, as the remains of Pompeii fully testify. "That will do," is the excuse of mediocrity, unable to soar to better things. "That will do," is the self-dispensation given by the lazy painter, who glosses over the want of anatomical correctness by a showy colouring. "That will do," is the besetting sin of architects who lay their short-comings to the want of a favourable site, or an Italian climate. "That will do," is the precept held in veneration by most servants. "That will do," makes your sloven and your slattern. A man who adopts this motto with regard to dress does not mind being seen with a dirty shirt, and a beard of two days' growth; while the same fatal saying allows a woman to go about the house with curl papers, and slipshod. "That will do," applied to household matters, is equally bad, and more annoying to friends than when applied to dress. You may expect ill-cooked dinners in any house where the heads adopt this maxim—to say nothing of shabby carpets, faded paint, dirty muslin curtains, &c. "That will do," has conjured up a host of inefficient teachers, and a still larger proportion of imperfect scholars. "That will do," has sunk many a ship—caused the downfall of scaffolding holding hundreds of human beings—occasions at least half the fires that take place, and is at the bottom of most railway disasters. "That will do," is the enemy to all excellence, and would see the conscience of the most virtuous man alive, if he hearkened to its dictates. The only persons to whom we recommend it are drunkards, gamblers, and spendthrifts, who may very properly exclaim—"That will do." All should bear in mind that nothing will "do" but the very best in point of excellence.

## Editor's Note-Book.

## DOMESTIC HINTS:—No. 27.

**Carpet.**—In buying a carpet, as in everything else, those of best quality are cheapest in the end. As it is extremely desirable that they should look clean as long as possible,

buy a carpet that has any white in it. Even a small portion of white interspersed through the whole, will in a short time give a dirty appearance to the whole; and certainly no carpet can be worse for use than one with a white ground. A carpet in which all the colours are light, never has a clean, bright, effect, from the want of dark tints to contrast and set off the light.

For a similar reason, carpets whose colours are all of what artists call middle tint (neither dark nor light), do not fail to look dull and dingy, even when quite new.

The caprices of fashion at times bring these ill coloured carpets into vogue; but in apartments where elegance is required, they always have a bad effect. For a carpet to be really beautiful and in good taste, there should be, as in a picture, a judicious disposal of light and shadow, with a gradation of very bright and of very dark tints; some almost white, and others almost or quite black.

The most truly classic, rich, and elegant carpets are those where the pattern is formed by one colour only, but changed in every variety of shade. For instance, we have the Brussels carpet entirely red; the pattern formed by shades of that, varying from the deepest crimson to a black (to the palest pink (almost a white), and all of green only, shaded from the darkest bottle green, in some parts of the figure, to the lightest green in others. Another, in which there was no colour but brown in all its various gradations, some of the shades being nearly black, others of a light buff. All these carpets had much the look of rich cut velvet. The pattern, sofa, &c., of course, were of corresponding colour, and the effect of the whole was noble and elegant.

Carpets that present a great variety of different and gaudy colours, are much less in demand than formerly. They are now only, with the dark and light shades of each, make a very handsome carpet. A very light blue, with the figure of shaded crimson or purple, is extremely well; so does a salmon-colour or buff, with a deep green figure; or a light yellow, with a shaded blue or purple figure. If you cannot get a hearth-rug that exactly corresponds with the carpet, get one entirely different. We have seen very handsome hearth-rugs, with a rich black velvet looking ground, and the figure of shaded blue, or of various tints of red and orange. No carpet decidedly light-coloured, however, has a good effect on the floor, or continues long to look clean.

**IS AN ANTIQUARIAN?**—P. C.—A thorough-paced antiquarian not only remembers what all other people forget, but he also forgets what other people think it proper to remember.

**TO KNOW THE PAINS OF POWER,** you must know those who have it; to know its pleasures, you must know those who are seeking it; the pains of power are its pleasures imaginary; so from this you can draw your solatary.

**TO KNOW THE PAINS OF POWER,** you must know those who have it; to know its pleasures, you must know those who are seeking it; the pains of power are its pleasures imaginary; so from this you can draw your solatary.

the smallest village in Spain, as goats pervade the land; and as tea and beer are indigenous in the remotest corner of Great Britain, so ice or beaten snow is to be found in the meanest hamlet in Spain; for all over the land there are mountains whose heads are ever capped in white. Such drinks bear the names of sorbetes, from the Persian shorbet, to distinguish them from the quesito (literally small cheeses), hard frozen creams and wafers. These are the only things sold at the caf   in Madrid; which do not, as at Paris, profess to give any eatable.

## INTELLECTUAL POWER AND STEAM POWER.—P. E.—

There is a spot in Birmingham, where the steam-power is concentrated on a very large scale, in order to be let out in small parts and parcels to those who may stand in need of it; and something similar to this may be observed of the power of mind in London. It is concentrated and brought together here into one focus, so as to be at the service of all who may wish to avail themselves of it. And Doctor Johnson was not far from the truth, when he observed that he could sit in the smoky corner of Bolt-court, and draw a circle round himself, of one mile in diameter, that should comprise and embrace more energy, ability, and intellect, than could be found in the whole island besides. The circumstance of talent of every kind being so accessible in consequence of its being so contiguous, this it is that designates London as the real university of England. If we wish indeed, to collate manuscripts, we may repair to Oxford or to Cambridge, but we must come to London if we would collate men.

## BUSINESS HINTS.—T. U.—All, at any rate, much,

depends upon the organization of a man to enable him to put on (fairly and completely) the full dress of those habits known, *par excellence*, in this country as business ones. You ask for the "phenomenological definition of such a man's mind." This would require a very minute analysis, and a much greater degree of space than we can allot to such a subject. But in an off-hand way we should think the leading features of his organism would manifest large Causality, Number, Order, Time, and Acquisitiveness, with a Phlegmatic temperament, slightly tinged with the Sanguine. Such fellows may be found upon Change, in Cheapside, the Strand, or Fleet-street, no further West, —at all hours fully habited in their own way, and

## TAKING TIME BY THE FORTLOCK.

**WRITING TO PLEASE.**—M. A.—To write to please the lowest, few would; to write to please the highest, fewer can; we must either stoop to the ignorance of the one, or surmount the envy of the other. You should then strive to steer between them, if you would consult both your fortune and your fame. In the middle classes there is measure of judgment fully equal to any demands you can make upon it—a judgment not too fastidious from vanity, nor too inamiable from ignorance; and he that can balance the centre, may not be fearful as to the two extremes.

**SMALL TALK.**—C. L.—Nobody abuses small talk unless he be a stranger to its convenience. Small talk is the small change of life: there is no getting on without it. There are times when "the folly to be wise;" when a little nonsense is very palatable, and when gravity and sedateness ought to be kicked down stairs. A philosopher cuts a poor figure in a hall-room, unless he leave his wisdom at home. Metaphysics is as intrusive in the midst of agreeable prattle, as a death's head on a festive board. We have met with men who were too lofty for small talk; who would never answer at their servants or—the weather. They would never condescend to play with a ribbon, or flirt a fan. They were above such trifling; in other words, they were above making themselves agreeable, above pleasing, and above being pleased. They were all wisdom, all gravity, and all dignity, and all tediousness, which they bestowed upon company with more than Dogberry's generosity. A man who cannot talk has no more business in society than a statue. The world is made up of trifles, and he who can trifle elegantly and gracefully is a valuable acquisition to mankind. He is a Corinthian column in the fabric of society.

**STEAM NAVIGATION ACROSS THE PACIFIC.**—M. U. F.—Yes; the long-projected scheme for regular steam navigation across the Pacific is now in progress, of being carried into execution. The recently incorporated Australasian Pacific Mail Steam Company has contracted for five iron screw vessels of large burden and great power. The vessels are to be built by Napier, of Glasgow (two); Caird and Co., of Greenock; Reid and Co., of Port Glasgow; and Miller, Ravenshill and Co., of London.

**COMMUNICATIONS RECEIVED.**—D. F. (if you think to arrive at a good end by a bad beginning, then pursue your course; if otherwise, reverse it). A MUSICIAN (yes; more than that, the instrument (the horn) has been played in a concert of two hundred trumpeters, from the size of a penny trumpet, to some of twenty feet long). T. F. F. (no; both Murillo and Velasquez were Spaniards). C. D. (the full time of high-water at the new and full moon at the London Docks, is two hours, two minutes, and ten minutes are added to London Bridge). H. H. (all volcanoes appear to exist near a sea; and by the matter they eject, to have some communication with it). P. Y. (the fossil oyster-beds rest upon the chalk). The strata above contain fresh water and marine shells). E. B. (the wild briar is the parent of the rose; the sloe, of plums, peaches, apricots, and nectarines; the crab, of apples of all kinds; and corn, the improvement of the grass). X. Y. (no; the sea-green turtle is most prolific in the rivers of South America). C. C. C. (we think the opposite; namely, that the miser possesses not, but is possessed by his wealth). S. L. (yes; a blue dye may be given by a solution of indigo in sulphuric acid). P. C. (no; it was General, afterwards Lord Harris, who invented Seringapatam, and took it in a month). R. L. (our business in this department is not with figures of speech, but to inform the judgment, and instruct our numerous correspondents with all the brevity possible). E. E. U. (apply to some medical journal). C. E. (potash softens hard water by decomposing the earthy salts in it). U. F. (to answer your question would require a treatise in itself, so multifarious have been the opinions upon the subject, we must, therefore, decline saying anything of it here). B. A. (yes, frequently; even in Lapland trees are often found in mines converted into ice). P. (mineral is the first part of the daily service; particularly in the Romish church). B. Y. (yes). J. S. (we insert your pleasing verses, entitled "My Own Song;" the lines "On a Dew Drop," we think scarcely suitable).

## MY OWN SONGS.

## THE CALM.

There's a song in the brooks, there's a song in the trees,  
That steals through my soul on the voice of the breeze  
That soothes my proud heart, and subdues into rest  
Those passions that haunt and that torture my breast  
'Tis the sweet song of Nature!—for ever it brings  
New music to me, though the same it eye sings.

## THE TEMPEST.

There's a song in the billows that roll on the sea,  
In the black clouds that o'er them majestically flee;  
In the sweep of the tempest that fierce hurries by,  
There's a wild song of measureless harmony;  
Yet wild though it be, to me it eye brings  
Fresh music, because it is Nature that sings.

## THE WIFE.

There's a song in her eye, in her cheek's blushing glow,  
In her bright cherry lip, in her teeth's glancing snow,  
In her sensitive frame, with her soul gushing through,  
And her heart throbbing high with the love that is true,  
There's a song in all these, and for ever they bring  
A sweet song to me, though the same they eye sing.

## THE HOME.

There's a song on my hearth with my children at play,  
There's a song in my fire as it blazes away,  
In my old rocking chair, in the tick of my clock,  
In my old oaken book-case, that ne'er knew a lock;  
There's a song in all these, and for ever they bring  
A fresh song to me, though the same they eye sing.

G. P. (It might have been so three hundred years ago, but now things are changed, and no one can be ignorant, and at the same time, respectable). T. F. (Jean Paul Richter was a German; his works are numerous, though generally in the form of romances, written with much singularity of style, and treating of abstruse questions in philosophy). P. D. (no).

Printed by WILLIAM TAYLOR, Bolt-court, London; and published for the Proprietor by JOHN BARNARD, 65 Fleet-street, London.

## PREFACE TO THE FIRST VOLUME.

Twelve Months have passed since the HOME COMPANION first presented its claims to popular favour. The present Volume is in many respects an improvement upon the Cheap Literature of the age. Of ENGLISH Standard Works it contains complete and unabridged, *Sir Roger de Cokerley, The Vicar of Wakefield, Picciola, Undine, and Nature and Art.* Of AMERICAN Literature, *Shadow and Sunshine, The Pioneer's Daughter, Lore's Trials, The Californians, and Carolina's Cutharinas.* The cost of these works collectively, in their separate forms, even reckoning the English works at the prices of the cheapest unillustrated editions, would be about TWENTY-FIVE SHILLINGS, the American works being chiefly expensive, and not hitherto reprinted in this country.

In addition to the above, the Volume contains a great number of ORIGINAL Tales, Essays, Enigmas, Biographies, Poems, and Miscellaneous Articles, humorous and instructive, illustrated by THREE HUNDRED ENGRAVINGS.

With No. 53, beginning the Second Volume, will be commenced a NEW AND ORIGINAL TALE of great interest, by the EDITOR, entitled MABEL LEE; OR, THE LIGHTS AND SHADOWS OF AN ORPHAN'S LIFE. All the other Articles will be Original, and be written expressly for the HOME COMPANION. Each Number will contain, in addition to the continuous tale by the Editor, a Complete Story, founded upon a popular drama, under the general title of "TALES FROM CELEBRATED DRAMATISTS," and after the manner of "Lamb's Tales from Shakspeare." These will include, *The Bondman, The Maid of Honour, The Duke of Milan, The Picture, The Fatal Dowry, The Great Duke of Florence, The Alchemist, The Fiend, The Silent Woman, The Broken Heart, The Jew of Malta, Faustus, The Maid's Tragedy, Philaster, King and No King, The Elder Brother, Boudicca, The Love Subject, Wit without Money,* and various others.

The New Volume will also contain a series of ILLUSTRATED TALES OF SCOTTISH SCENERY, by JOHN SHERER, Esq., a Scottish Song; and SKETCHES OF LIFE IN AUSTRALIA, communicated from the spot, with Original Plans and highly interesting to all who intend to emigrate, or whose friends may have already taken their departure.

Departments will be opened for the Artist, the Mechanic, the Naturalist, the Farmer, the Gentleman, the Builder, the Physician, the Juvenile. Under these heads will be given every kind of new discovery, and every fact of interest relating to the several subjects embraced, derived from peculiar and authentic sources. For these departments the Editor earnestly solicits communications from his several friends, in order that the work may be distinguished for originality, and be increasingly useful to all. Simple diagrams of useful inventions and plans in any of the Arts and Sciences, and in the Industrial pursuits, will also be gladly received and will be inserted with careful attention.

Essays, Biographies, Letters from Correspondents, articles upon Natural History, Enigmas, &c., &c., together with a light and agreeable miscellany, will complete the arrangements for the New Volume of the HOME COMPANION, and will give it the highest title to UNIVERSAL RECEPTION BY THE BRITISH PEOPLE.

The Editor returns his heartfelt thanks to those Friends who have assisted his literary labours, and contributed to the prosperity of his Publication. And, in conclusion, he encourages his Patrons to look for such improvements in the New Volume as will place the HOME COMPANION unquestionably at the head of all publications of the class.
